1655 This point assumes, contrary to the fact, that Cargill had a proper and comprehensive understanding of the Operational Practices as at 1 November 2013.

1656 The particulars in question read as follows: (8) The fact that after Completion, Joe White was required to transport varieties of barley between plants in order to supply malt that complied with the required barley varieties in Joe White's malt supply contracts, incurring higher costs; (9) The fact that after Completion, Joe White was required to purchase additional volumes of varieties of barley that complied with the required barley varieties in Joe White's malt supply contracts, and pay a price premium for

court.[1657]

2592 Next, the Viterra Parties referred to the fact that, after 1 November 2013, Joe White was able to secure agreements with Asia Pacific Breweries, Orion Breweries, SAB Miller and Sapporo Vietnam for gibberellic acid to be used despite its previous prohibition. On this basis, it was contended that the Joe White executives could not have assessed the impact of ceasing to use gibberellic acid in any meaningful way as they had not factored in such agreements. This was undoubtedly correct insofar as it went. Naturally, what was stated by the Joe White executives in October 2013 about what would have occurred if Joe White ceased using gibberellic acid when prohibited was nothing more than a forecast. However, Cargill Australia's case did not depend upon such forecasts being entirely accurate. The substantive point was that the Joe White executives anticipated, correctly, that there would be material disruption to the Joe White Business if the Gibberellic Acid Practice ceased immediately.

2593 Further, this submission appeared to assume that procuring such agreements to use gibberellic acid was otherwise not disruptive to the Joe White Business. To the extent that there was evidence on this point, it suggested otherwise.[1658] To elaborate, the evidence suggested that, because Joe White's customers were told of the situation without any prior warning, then it was difficult for those customers to get alternate supply in the short term. Furthermore, there was no dispute that exogenous gibberellic acid reduced total germination time by as much as a day, and that, to the extent Joe White was unable to secure agreements of the nature referred to above, production times and costs must have necessarily been increased.

2594 Next, the Viterra Parties referred to Cargill Australia's reliance upon statements by Joe White executives in 2011 to the effect that the practice of using off-grade barley would make it challenging to produce quality malt within customer specifications.

---

compliant barley varieties; (10) The fact that after Completion, barley that did not meet the requirements in Joe White's malt supply contracts had to be sold through alternative channels and as feed and its value written down.

1657 See, for example, par 1574 above.

1658 See pars 1674, 1677, 1684, 1708-1713, 1739-1742, 1747, 1781, 1786, 1801-1822, 1835 above and fnn 959, 1612-1613 above.

They pointed out that the email referred to in support of this contained a statement not from the Joe White executives, but rather from a representative of Accenture Consulting.[1659] In circumstances where there was no evidence that that representative had any expertise in relation to malt, they submitted the allegation could not be established. They also referred to the evidence of Stewart that he did not really see any noticeable difference in the quality of the malt coming through after the Malt Cost Reduction Transformation Project had been implemented,[1660] and to the fact that Stewart was not taken to this email chain during the course of his evidence.

2595 This submission ignored the evidence of Stewart that he did make objections and statements in 2011 about the challenges of producing quality malt with off-grade barley, and that Hughes agreed with Stewart's position.[1661] Also, Stewart forwarded the email chain in question to Hughes without taking any exception to the observation that had been made by the Accenture Consulting representative who, presumably, made such an observation in light of discussions he had had as part of the Malt Cost Reduction Transformation Project.

2596 Further, it was plain from the evidence at trial that the poorer the quality of the barley and the larger the proportion of low grade barley in a batch, the less likely it would be that a maltster would be able to produce quality malt. Naturally, if it were otherwise maltsters would simply use feed barley or off-grade malting barley (which is usually cheaper) exclusively to produce malt.

2597 Next, the Viterra Parties addressed the issues concerning storage capacity and its connection with the likelihood of producing malt within specification. While acknowledging that storage capacity was a factor that might affect a maltster's ability to produce malt within specification, the Viterra Parties submitted that Cargill Australia had not established that before October 2013 Joe White was unable to produce malt within specification because of its storage capacity. They also submitted

---

1659 The particulars to the Statement of Claim referred to the email chain set out at par 145 above as an example of such statements.

1660 See fn 128 above.

1661 See par 145 above.

Cargill was aware of Joe White's storage capacity and was capable of assessing any limitations before entering into the Acquisition Agreement.

2598 As to the second of these matters, although Cargill knew of the amount of storage capacity before committing to the Acquisition, and initially had some concerns, it had received assurances on a number of occasions that the storage available to Joe White was adequate and that Joe White was capable of meeting customer specifications.[1662] In circumstances where Cargill was not familiar with the Australian market (including the barley varieties that were being used) or the "customer book",[1663] it was perfectly reasonable for Cargill to rely upon the assurances received, particularly in light of the fact that issues concerning storage formed part of the annexures to the Acquisition Agreement.[1664]

2599 In making the first of these 2 submissions, the Viterra Parties failed to refer to 2 documents created both before and after Completion that were integral to the question concerning the relationship between storage capacity and the ability to produce malt within specification. The first of these documents was the product of Stewart's review contained in the Key Recommendations Memorandum, that was agreed to by other Joe White executives involved, and in which it was reported that Joe White did not have adequate barley or malt storage to reliably meet customer specifications.[1665] The second document was created relatively soon after Cargill took control, by which Youil reported that there were 3 Joe White export plants requiring capacity increases so that customer specifications could be met.[1666] Further, the evidence demonstrating the inadequacy of the storage capacity was not confined to these 2 documents.[1667] In short, the evidence was that Joe White's storage capacity was plainly inadequate if customer specifications were to be met regardless of which approach was taken to

malt production testing and reporting.[1668]

2600 Next, the Viterra Parties referred to the changes made to the supply chain as a result of the Malt Cost Reduction Transformation Project. Previous submissions about this project were referred to and the further submission was made that the evidence did not establish that "any such matters" made it more difficult to procure the approved barley.

2601 The evidence was that, by October 2013, Joe White was getting "bad barley" from Glencore and not getting what it wanted.[1669] The inability of Joe White to get precisely the barley it wanted had been the position since the introduction of the Malt Cost Reduction Transformation Project,[1670] and before.[1671] Further, after the Acquisition Joe White was, at times, required to pay a premium to purchase each of the barley varieties it required.[1672] In short, the supply chains in place in 2013 did not adequately meet Joe White's requirements. Further, the supply chains were changed as a result of the Malt Cost Reduction Transformation Project[1673] and were undoubtedly part of the problems Joe White faced in 2013 in supplying malt in accordance with customer requirements and specifications.

2602 Next, the Viterra Parties submitted that after the Acquisition Joe White customers "generally, or at least in many instances" were willing to accept derogated malt. It was correct to contend that there were many instances when Joe White's customers agreed to a derogation and accepted malt out of specification.[1674] However, this fact may be explained, at least in part, by the reality that Joe White's customers needed the malt in order to continue their beer production. Further, the fact that customers

---

1668 For completeness, the Viterra Parties led evidence from an expert to the effect that all Joe White's plants, except the specialty plant at Delacombe and possibly Tamworth, had insufficient malt storage capacity and an insufficient number of storage bin segregations to allow for the reporting and blending policies adopted by Cargill.

1669 See par 1297 above.

1670 See par 234 above.

1671 See par 95 above.

1672 See pars 1574, 1785 above.

1673 See pars 135-141 above.

1674 See pars 1574, 1596-1598, 1623-1624, 1657-1659, 1675-1677, 1741 above.

accepted derogations did not equate to them being satisfied with Joe White's performance or provide any real indication as to their willingness to do so on an ongoing, long-term basis. Furthermore, many customers repeatedly expressed their dissatisfaction with the frequent requests for derogations.[1675]

2603 In summary, it was incontrovertible that the need to request derogations because of an inability to meet customer specifications was harmful to the Joe White Business after the Acquisition. These requests were necessary if Joe White was to discontinue the routine practice of supplying malt that did not comply with customers' requirements and specifications without their permission.

2604 Next, the Viterra Parties submitted that there was no need to rely upon the Viterra Practices and the Viterra Policies to avoid the impact of producing malt out of specification. It was submitted that such a contention by Cargill Australia should be rejected, having regard to the "true purpose" for the Viterra Policies and limitations on testing methodologies. For reasons discussed elsewhere,[1676] this submission must be rejected.

2605 Next, the Viterra Parties referred to Cargill Australia's allegation that Joe White did not tell its customers that it was supplying malt out of specification because Joe White had assessed doing so would have negatively affected its relationship with its customers. Further, they referred to the evidence of Stewart concerning Boon Rawd's understanding that maltsters modified Certificates of Analysis and Stewart's assertion that customers already knew about the "common industry practice" of being supplied with malt that was not what it was represented to be in the Certificate of Analysis.[1677] They contended that the awareness of customers was the reason for not telling customers of the Reporting Practice, and that the evidence did not establish the reasons why the Varieties Practice and the Gibberellic Acid Practice were not disclosed to customers, or what impact such disclosure might have had on customer

---

1675 See, for example, pars 1601-1604, 1625, 1640, 1657, 1677, 1708, 1718, 1728, 1739, 1744, 1747, 1785 above.
1676 See issue 9 above.
1677 See pars 176, 411-413, 1664-1666 above.

relationships.

2606 These submissions must be rejected in their entirety. If customers fully appreciated the implementation of the Reporting Practice, and that was fully understood by Joe White, there could have been no reason to keep the Viterra Policies secret and to positively take steps to ensure that customers and auditors remained ignorant of their existence.[1678] Further, Stewart's evidence in this regard was an attempt to justify his past behaviour, but it was entirely inconsistent with his ongoing consciousness of impropriety in relation to the implementation of the Reporting Practice. If in truth Stewart believed the Reporting Practice was common industry practice of which Joe White's customers were fully aware, there would have been no occasion for him to be troubled by Joe White's adherence to it. His candid evidence about his discomfort in August 2010 and adhering to the Reporting Practice unfortunately being part of his job spoke volumes.[1679]

2607 Further, the submission that the reason for Joe White engaging in the Varieties Practice and the Gibberellic Acid Practice had not been established was without merit. Joe White engaged in each of the Operational Practices, and did not disclose it to its customers, in order to achieve greater returns and avoid the repercussions of routinely not being able to produce malt that complied with customer requirements and specifications. Further, by not disclosing the Operational Practices, Joe White was able to maintain the façade of supplying malt in accordance with customer specifications when the Joe White executives involved in operations (and other employees also involved in operations) knew that this was not a fact. In particular, Hughes as chief executive officer, was instrumental in creating and maintaining this façade both in the conduct of the Joe White Business and in the contents of the Information Memorandum and other communications made in the sale of the Joe White Business.

2608 In summary, none of the Viterra Parties' submissions on this issue can be accepted.

X.10.12.4 Joe White's financial and operational performance was substantially

---

1678 See pars 287-292 above.

1679 See pars 161, 167, 174 above.

underpinned by the Operational Practices

2609 The evidence clearly demonstrated that the financial and operational performance of Joe White from 2010 to 31 October 2013 was substantially underpinned by the Operational Practices. By utilising the various aspects of the Operational Practices, Joe White supplied malt in a far more seamless and cost-effective manner than it would have been able to if it had complied with its contractual obligations, or had attempted to do so and been open with its customers when it could not.

2610 The fact that the Viterra Parties were able to point to some other factors after October 2013 that may have adversely affected the performance of the Joe White Business was of little moment. None of these matters altered the fact that, at the time of the Acquisition, the Joe White Business had significant flaws with its operations and was dependent upon the Operational Practices to maintain a level of performance resembling anything like that portrayed in the Information Memorandum, the Management Presentation Memorandum and each of the other pre-contractual communications as recorded in the Acquisition Agreement.

2611 In my view, this was the only conclusion reasonably open on the evidence. Contrary to the Viterra Parties' submissions, there was no need to call expert or lay evidence on the point given the evidence that was already before the court. Further, having worked closely in the Joe White Business for nearly 4 months in February 2014, Viers referred to the systematic approach that had been adopted in implementing the Operational Practices having been much more pervasive than Cargill could have imagined "to the extent the asset and business system were built on it".[1680]

2612 Before leaving this issue, an observation should be made about the way in which the Viterra Parties put their case based on the Alleged Industry Practices and their contention that the Operational Practices did not substantially underpin the Joe White Business. As the Viterra Parties would have it, all, or nearly all, significant commercial maltsters in the industry engage in the Operational Practices as part of standard industry practice. Their position was that this conduct was entrenched in the malting

[1680] See par 1684 above. The email recording this was tendered as part of both Eden's and Viers' evidence in chief. Neither witness was asked any questions about Viers' assessment. See also par 1685 above.

industry throughout the world, but that such conduct was not significant to the performance of the Joe White Business. These respective positions did not sit together comfortably.[1681] That said, the absence of a finding that the Alleged Industry Practices existed[1682] in no way undermined the cogency of the evidence that the Viterra Practices were integral to the Joe White Business operating in the manner in which it did between 2010 and 31 October 2013.

X.10.13 Joe White was unable to produce and sell malt in the manner that had been represented to Cargill without routinely engaging in the Operational Practices

2613 It is already apparent from what is set out in the previous section that Joe White was unable to produce and sell malt in accordance with customer specifications in the volumes or for the returns as represented in the Information Memorandum, and as represented during the course of the Due Diligence, without routinely engaging in the Operational Practices. To repeat, the financial and operational performance of Joe White would not have been as was reported to Cargill if Joe White had not engaged in the Operational Practices as it did between 2010 and October 2013.

X.10.14 Conclusion

2614 For the reasons stated, Cargill Australia established that each of the material facts identified as part of issue 10 existed at all relevant times; that is, the Undisclosed Matters existed as alleged.

X.11 Was it the fact that, before 22 October 2013, each of the Viterra Parties did not know of any of the matters pleaded in paragraph 30(bb), (bc), (bd) and (be) of the Defence?

2615 As referred to above,[1683] the Viterra Parties admitted the following matters, which they

---

1681 See further issue 34 below.
1682 See issue 13 below.
1683 See par 1854 above.

alleged were not known to the Viterra Parties before 22 October 2013:

(1) The Viterra Policies were written policies of *Joe White*.[1684]

(2) The Joe White Business was generally conducted in accordance with the Viterra Policies as they existed from time to time.

(3) On occasions prior to 31 October 2013, Joe White supplied shipments of malt to customers which were produced in part or whole from barley varieties which had not been approved by the customer in question.

(4) On occasions prior to 31 October 2013, the Joe White Business supplied shipments of malt to customers which were produced using gibberellic acid in circumstances where the customer in question did not permit the use of gibberellic acid.

2616 Both the Cargill Parties and the Viterra Parties made submissions on this issue based on common law principles.

X.11.1 Legal principles

2617 Knowledge on the part of a corporation requires a process of attribution.[1685] The primary (though not universal) rule of attribution of knowledge provides that the knowledge or the state of mind of a person (or persons) may be attributed to a company where that person is (or those persons are) the directing mind and will of the company.[1686] In order to attribute a state of mind to a company it may be necessary to specify persons so closely and relevantly connected with the company that the state of mind of those persons can be treated as being identified with the company.[1687] The person or persons who may be found to be the directing mind and will of the company

1684 That is, it was alleged they were only policies of Joe White and not Viterra's policies.

1685 *QBE Underwriting Ltd v Southern Colliery Maintenance Pty Ltd* (2018) 97 NSWLR 459, 480 [95] (Leeming JA, with whom Macfarlan and Payne JJA agreed).

1686 *Meridian Global Funds Management Asia Ltd v Securities Commission* [1995] 2 AC 500, 506A-E (Lord Hoffmann delivered the judgment of the Privy Council).

1687 *Brambles Holdings Ltd v Carey* (1976) 15 SASR 270, 279.5 (Bright J), quoted in *Krakowski v Eurolynx Properties Ltd* (1995) 183 CLR 563, 582.9–583.1 (Brennan, Deane, Gaudron and McHugh JJ).

may depend on the circumstances in which a particular question of attribution arises.[1688] The primary rules of attribution are generally found in the company's constitution and are also implied by company law.[1689]

2618 The primary rules of attribution are supported by the general rules of attribution, which are the principles of agency.[1690] The circumstances in which knowledge of an agent is imputed to a principal can vary.[1691] Ordinarily, knowledge of an agent will be imputed to the principal where an agent is employed on behalf of the principal and has a duty to communicate such knowledge to the principal.[1692] Further, the agent must be acting within their actual or apparent authority,[1693] and not acting "totally in fraud of the company".[1694]

2619 Although any agreement to have or not have an agency relationship between the 2 persons said to be principal and agent is relevant to the question of whether in fact that relationship does or does not exist as a matter of law, any such agreement is not determinative. The question is to be determined by considering what they have agreed to do in fact and whether that amounts in law to a relationship of principal and agent.[1695]

2620 Furthermore, knowledge may be knowledge of a corporation if it is known by the appropriate officer or agent, or is contained in current official records of the corporation.[1696]

2621 The position is less clear when a corporation's knowledge needs to be considered by reference to the knowledge of 2 or more officers or agents of the corporation. The aggregation of individuals' knowledge for the purpose of attributing liability to an organisation has been considered in several contexts outside fraud, including in tort, contempt of court, and unconscionable conduct.

2622 The authorities below bear out that in most cases, it will not be appropriate to aggregate the knowledge of individuals to then attribute that knowledge to a corporation. However, the authorities leave open the possibility of aggregating knowledge in specified circumstances, where:

(1) The relevant person or people said to have knowledge are the "directing mind and will" of the company to which knowledge is sought to be attributed.

(2) The officer or agent is under a duty and has the opportunity to communicate it to another.

(3) The knowledge is already held in aggregated form.

It is illustrative to refer to a number of authorities on this matter.

2623 In *Australian Competition and Consumer Commission v Radio Rentals Ltd*,[1697] the Commission alleged that the respondents had entered into and enforced a large number of agreements with an intellectually disabled customer, in such a way that constituted unconscionable conduct. The Commission submitted that the

1697 (2005) 146 FCR 292.

respondents knew about the customer's intellectual disability because the knowledge of individual call centre operators who dealt with the customer could be aggregated to establish the knowledge of the corporation.

2624 After referring to *Krakowski v Eurolynx Properties Ltd*[1698] and *Macquarie Bank Ltd v Sixty-Fourth Throne Pty Ltd,*[1699] Finn J rejected the aggregation of the knowledge of the individual call centre operators, noting:[1700]

> If the ACCC's submission were to be accepted to its full extent as put, it would have potentially alarming consequences for large, multi-function, corporations. It could also raise, potentially, rather significant privacy issues.

2625 However, without expressing a concluded view, his Honour accepted that "separate information held by an officer or agent of a corporation can be aggregated with information held by another at least where the first such person has 'the duty and the opportunity to communicate it to the other'".[1701] Finally, Finn J noted that "[t]he contexts can vary widely in which the question of attribution of knowledge to a corporation can arise in virtue of knowledge possessed by one or more of its officers and agents".[1702] Accordingly, his finding was confined to circumstances where "what is sought by the aggregation of the knowledge is to alter the character of that knowledge when it is attributed to the employer corporation where no justification for the aggregation (eg participation by several employees in the same transaction) has been made out".[1703] His Honour indicated the result may have differed if the individual operators who recorded entries were involved in "different aspects of one transaction", or if the records sought to be aggregated had been "contrivedly or artificially kept in a disaggregated form".[1704]

2626 In *Elliott v Nanda,*[1705] the applicant had obtained employment with an employer via

---

the Commonwealth Employment Service, operated by the Commonwealth. In the course of that employment, the applicant had been sexually harassed by her employer. In considering whether the Commonwealth had permitted the employer to discriminate against the applicant, Moore J considered the knowledge of the Commonwealth Employment Service case workers. His Honour considered that "[t]he collective knowledge of officers of the [Commonwealth Employment Service] can be treated as the knowledge of the Commonwealth", citing *Krakowski v Eurolynx Properties Ltd*.[1706] His Honour then contrasted the situation with respect to fraud, stating:[1707]

> In some circumstances, the knowledge of individual employees or officers of a corporation cannot be aggregated in a way that alters the character of the knowledge. For example, a corporation does not act fraudulently where several of its employees (involved in the corporation's conduct) possess discrete pieces of information (by itself innocent information) which, if known to one employee, would evidence fraud.

2627 In the circumstances of *Elliot v Nanda*, it was found that an additional reason that the knowledge could be aggregated was because it was already held in aggregated form in an information file, and was noted in a computer record accessible to case workers.[1708]

2628 In *K & S Corporation Ltd v Sportingbet Australia*,[1709] the plaintiffs claimed a constructive trust over disputed moneys. The defendant denied it had the requisite level of knowledge or notice. On the question of aggregation, Besanko J noted that "[t]he legal position is not clear".[1710] His Honour distinguished between situations where 2 individuals with partial knowledge are part of the directing mind and will of the company (where it appeared that the knowledge could be aggregated and attributed to the company),[1711] and where that is not the case. Then, his Honour recognised that "knowledge may be aggregated if the person who knows one piece of information is

---

1706 Ibid, 295 [170].

under a duty to ascertain the other piece of information known by another officer of the company".[1712] In rejecting that aggregation was possible in the circumstances of the case before him, his Honour said:[1713]

> I do not think that I should find that something is known to a company when part of the information is not known to anyone forming part of the directing mind and will of the company and is known only to an agent who was under no duty to communicate the information to those persons forming part of the directing mind and will.

2629 In *Port Stephens Shire Council v Tellamist Pty Ltd*,[1714] the New South Wales Court of Appeal considered whether exemplary damages should be awarded against a council in relation to a trespass. Ipp JA, with whom Giles JA agreed, doubted whether the requisite mental element could be established by a "theory of collective knowledge", where different acts of 2 or more persons without knowledge of what the others did or would do would be attributed to a corporate body and used to infer contumelious conduct.[1715] By contrast, Santow JA (in dissent) read *Krakowski v Eurolynx Properties Ltd* to indicate that consciousness of fraud could be found by "combining the knowledge of those sufficiently closely and relevantly connected to the corporation".[1716]

2630 In *Optus Administration Pty Ltd v Wright*,[1717] the New South Wales Court of Appeal considered a company's liability in negligence for mental harm suffered by a man, after another man attempted to kill him while the 2 were attending a training course at the premises of the company. Basten JA, with whom Hoeben JA agreed, found that there was no authority for the proposition that knowledge in different employees (operating below the level of senior management) could be aggregated and attributed to a company for the purpose of demonstrating negligence on the part of the company.[1718]

1718 Ibid, 244-245 [49]-[52].

2631 In *GM Global Technology Operations LLC v SSS Auto Parts Pty Ltd*,[1719] in the context of an intellectual property dispute, the principles outlined by Edelman J in *Commonwealth Bank of Australia v Kojic*[1720] were accepted by Burley J.[1721] In so doing, he rejected an approach that would allow a registered owner of rights to "mosaic the knowledge of individuals in a corporation to produce a result".[1722]

2632 In *Farah Custodians Pty Ltd v Commissioner of Taxation*,[1723] Wigney J noted that liability for the tort of misfeasance in public office could not be established by aggregating the acts and knowledge of various officers.

2633 In *J McPhee & Son (Aust) Pty Ltd v Australian Competition and Consumer Commission*,[1724] the Full Federal Court rejected a submission that the trial judge had erred in finding that a company's intention was to be ascertained from an aggregation of the mental state of the individuals involved. Rather, it was found that the trial judge correctly applied the principles in *Krakowski v Eurolynx Properties Ltd* by considering the intention of each individual and attributing it to the company, rather than aggregating the mental state of the individuals involved.[1725]

2634 In *Choundary v Capital Airport Group Pty Ltd*,[1726] in the context of a contempt of court matter against a corporation, Gyles J considered that it was not legitimate to aggregate the knowledge of the individuals identified and attribute the aggregated knowledge to the corporation.[1727]

2635 The mere fact that companies have common directors does not establish common knowledge.[1728] However, an officer's or a director's state of mind may be attributed to more than 1 company in certain circumstances. Common knowledge will be

established where a person is the directing mind of both companies.[1729] Further, common knowledge may also be established where an officer or a director of the first company is under a duty to communicate the knowledge to the second company, and the officer or director of the second company is under a duty to receive the knowledge.[1730] However, knowledge will not be imputed where an officer or a director has a duty not to communicate such knowledge between the 2 companies,[1731] or where an officer or a director is acting totally in fraud of the company.[1732]

2636 In some circumstances knowledge may be imputed where there is an expectation that the director or officer of 2 companies will report knowledge from 1 company to the other.[1733] However, where a director has 2 conflicting fiduciary duties between the 2 companies, they should either refrain from participation if possible, or resign.[1734] In any event, the director's knowledge would not be treated as knowledge of both companies.

2637 Naturally, as part of determining whether or not an agent's knowledge is also knowledge of the principal, it is necessary to consider the basis upon which the agent has been given authority and the scope of that authority. In some circumstances, an agent may be authorised to represent a principal in all respects, and in other circumstances the authority may be limited.[1735] In short, the rules of attribution of knowledge must always be tailored to the situation in which they are applied.[1736] As

was stated in *Australian Securities and Investments Commission v Westpac Banking Corporation (No 2)*,[1737] it is a question of the interpretation of the relevant rule of responsibility, liability or proscription to be applied to the corporation, in light of its context and its purpose. If a particular state of mind of a corporation is required to be established by the relevant rule, the court must determine whose state of mind is to count as the knowledge or state of mind of the corporation for the purpose of the relevant rule.

X.11.2 Attribution – the context

X.11.2.1 The Viterra Parties' submissions

2638 The Viterra Parties submitted that after Viterra's acquisition of Joe White in 2009, Joe White was run as an independent business with minimal connection with the Viterra Group's operations, with Joe White's head office located in a separate building to Viterra's. Initially, there was no elaboration upon what this minimal connection entailed. However, after some questions during oral closing submissions, the Viterra Parties accepted that the connection included a significant number of matters. They also appeared to resile from the contention that Joe White was run "independently", describing it as a "weasel word". However, they submitted Viterra's involvement with matters like the Malt Cost Reduction Transformation Project, was some sort of direction, but was not something in the operations of the Joe White Business. It was suggested it was analogous to a barrister owning a farm and directing to the manager that the farm was only to run sheep. Such a direction was said not to go to how the sheep operation was run.

2639 The Viterra Parties referred to the definition of Business in the Acquisition Agreement.[1738] They submitted what was contained in the Acquisition Agreement reflected the position that it was Joe White that was running the Joe White Business. Reference was also made to a number of recitals, including the statements that the Land Seller was the sole legal owner and, together with Joe White, beneficial owner of the Minto Land and the Buildings, and that the Minto Land and the Buildings were

1737 (2018) 357 ALR 240, 266 [1660] (Beach J).
1738 See par 1022 above.

used by Joe White in the conduct of the Business. Based on this, it was contended this property was not being used by Viterra. Also referring to the recitals concerning the [Joe White] Intellectual Property and the Dom Boxes, the same submission was made about this property having been used by Joe White. In a similar vein, reference was made to Warranty 6.1.[1739]

2640 The Viterra Parties further submitted that the duties of the executives of Joe White were specifically limited to functions related to Joe White and that they had "no other function within the Viterra Group or the Glencore Group", save for an exception the Viterra Parties identified.[1740] They contended the sole exception to this dichotomy was the role of Hughes, in relation to whom it was submitted that there was no evidence as to the level of his involvement in the operations of Viterra after late 2012. Indeed, the position was put as high as "the evidence is that Hughes' duties were limited to duties with Joe White". When it was suggested this submission was inaccurate in light of Hughes' position, including Hughes being part of the Viterra executive, it was submitted Hughes had a duty to report on Joe White; that is, he was reporting on his area of responsibility. The Viterra Parties submitted there was a clear demarcation between the Third Party Individuals (whose functions related solely to Joe White and who remained at Joe White after Completion) and others (whose functions did not relate to Joe White and who remained with Viterra after Completion). As an example of the latter category, Fitzgerald was said not to have any functions of Joe White "in and of itself". A little later in the submission, Mattiske was submitted to be in the same category as Fitzgerald.

2641 In relation to the correct approach to be taken in light of the decision of the High Court in *Krakowski v Eurolynx Properties Ltd*,[1741] the Viterra Parties submitted it would be an error to take the collective knowledge or aggregation approach of numerous individuals of a corporation to determine the knowledge of a corporation.[1742]

1739 See par 1034 above.

1740 See par 52 above.

1741 (1995) 183 CLR 563.

1742 See *Emhill Pty Ltd v Bonsoc Pty Ltd (No 2)* [2007] VSCA 108, [31] (Warren CJ, with whom Buchanan and Ashley JJA agreed); *Macquarie Bank Ltd v Sixty-Fourth Throne Pty Ltd* [1998] 3 VR 133, 145.1 (Tadgell JA, with whom Winneke P agreed).

However, they accepted (correctly) that in light of this decision a corporation may be held to have the requisite knowledge and intent if a single person had such a state of mind which could be attributed to the corporation, whether or not that person engaged in the impugned conduct.[1743] This was referred to in their submissions as the hybrid approach.

2642 In relation to the hybrid approach, the Viterra Parties submitted that a corporation may lose knowledge of a fact after a period of time. While it was acknowledged that a corporation could not shed knowledge by simply shedding people,[1744] it was submitted that "where a company previously had, but no longer has, a connection with a person whose knowledge was attributable to the company, and where there is no evidence that the relevant knowledge was shared with anyone else remaining connected with the company, it should be found that the company does not have the relevant knowledge".

2643 With regard to Hughes' knowledge, the Viterra Parties submitted Cargill Australia needed to establish that either Hughes was the directing mind and will of the relevant entities for the purposes of the transaction or he was acting as an agent. With respect to the latter of these 2 alternatives, it was submitted it was necessary to establish Hughes was selected to be an agent because his own knowledge was relevant to the transaction, or the Viterra Parties or any of them for whom Hughes was acting as agent had a duty to investigate or make disclosure, and those entities or that entity employed Hughes to discharge this duty.

2644 The Viterra Parties submitted that on no view could Hughes be considered the directing mind and will of the Sellers. Further, they submitted Hughes' level of responsibility in the sale process did not support the attribution of knowledge to any of the Viterra entities. The basis of this submission included the following contentions: (1) an inference should be drawn that Hughes would not have given evidence that he was part of a "working group" on behalf of the Viterra Parties for the sale of Joe

1743 This is discussed in more detail in relation to deceit: see issue 22 below.

1744 *Fightvision Pty Ltd v Onisforou* (1999) 47 NSWLR 473, 527 [244] (Sheller, Stein and Giles JJA).

White;[1745] (2) there was no such "working group" for the sale of Joe White; (3) Hughes' participation was not as an agent for any entity other than Joe White; (4) Hughes was not an agent for any of the Viterra Parties by reason of the "Pre-Contractual Disclaimers",[1746] he had no actual or ostensible authority to act as agent in any capacity, and as Hughes had no authority or responsibility to speak for Viterra his knowledge should be found not to count as Viterra's knowledge; (5) shortly before the Acquisition Agreement was finalised, it was agreed by the parties that Viterra's knowledge was limited to the knowledge of identified individuals, which did not include Hughes, and as such Cargill acknowledged that Hughes' knowledge was not included;[1747] and (6) to the extent that Hughes was considered to be acting as an agent, the sale process was run by Glencore, not Viterra, and any agency was limited to Hughes' conduct not his knowledge.

2645 Alternatively, the Viterra Parties submitted that, if Hughes was found to be an agent *for Viterra* for the purposes of the transaction, the scope of that agency was limited such that Hughes' knowledge should not be attributed to Viterra. It was contended the reasons why this was so were: (1) where an agent acts outside her or his authority with a particular knowledge or intention, that knowledge or intention should not be attributed to the principal;[1748] (2) to the extent that Hughes had authority to act as agent for Viterra, that authority was limited to assisting Viterra in providing accurate

---

1745 See pars 3097, 3102 below for the allegations made by Cargill Australia concerning the "working group".

1746 In this regard, the Viterra Parties did not identify any specific clause or term. The "Pre-Contractual Disclaimers" was a reference to terms in the Confidentiality Deed, terms in the Phase 1 Process Letter, the disclaimers in the Information Memorandum, terms in the Phase 2 Process Letter, terms of the Data Room Protocol and the disclaimers in the Management Presentation Memorandum. They submitted that by reason of those pre-contractual disclaimers, Cargill had agreed that Glencore and its subsidiaries had no obligation to undertake any level of disclosure and that there was no guarantee as to the accuracy or completeness of any of the information provided. In their submissions the Viterra Parties referred to "Pre-Contractual Disclaimers", whereas in the Defence, the Viterra Parties used the definition "Sale Process Disclaimers" to refer to the substantially same terms and statements. Some different defined terms were used, but the submissions confirmed that the terminology for these defined terms was used interchangeably. All references in the Viterra Parties' submissions to "Pre-Contractual Disclaimers" will be considered as references to the Sale Process Disclaimers as defined in the Defence: see par 2828 below.

1747 This submission is set out in more detail in considering Cargill Australia's deceit claim against Viterra: see issue 22, and in particular par 3247 below.

1748 *Blackburn, Low & Company v Vigors* (1887) 12 App Cas 531, 537.9-538.2 (Lord Halsbury).

information about Joe White's operations as was shown by Hughes being requested to verify the Information Memorandum and the Warranties;[1749] and (3) if it were found that information provided was misleading and deceptive, then by virtue of Hughes' position he must have known of that fact and therefore was acting outside the scope of his authority when providing inaccurate information to Viterra and then verifying that information as being accurate.

2646 Submissions were also made as to why the knowledge of various other officers or employees of Viterra Ltd, both employed before or during the events of 2013, ought not be attributed to the Viterra Parties. It is unnecessary to set out the detail.

X.11.2.2 The Cargill Parties' submissions

2647 The Cargill Parties made submissions concerning the relevant principles, most of which need not be referred to as they were largely uncontroversial. However, as part of these submissions, it was contended that there may be more than 1 person whose mind should be attributed to a company.[1750] The Cargill Parties submitted the knowledge of 2 people may be capable of aggregation if 1 officer or agent has a duty and opportunity to communicate such knowledge to the other. As for this proposition, reference was made solely to the judgment of Allsop CJ as part of a Full Court of the Federal Court. However, his Honour prefaced this observation by stating "[d]epending on the relevant statutory context or substantive rule …". Further, he made this observation immediately after stating he agreed with Edelman J's reasons concerning aggregation.[1751] For the reasons explained above,[1752] the submission put by the Cargill Parties on this area of the law appeared to oversimplify the position.[1753]

2648 The Cargill Parties submitted the relationship between Joe White, Viterra Malt and

---

1749 See pars 445-451 above and issue 125.6 below.

1750 *Krakowski v Eurolynx Properties Ltd* (1995) 183 CLR 563, 583.2 (Brennan, Deane, Gaudron and McHugh JJ).

1751 *Commonwealth Bank of Australia v Kojic* (2016) 249 FCR 421, 438 [66] (Allsop CJ, with whom Besanko J agreed), noting that Allsop CJ (at 438 [65]) and Besanko J (at 440 [78]) agreed with Edelman J (at 451-457 [119]-[149]) about what was said about aggregation by the majority in the High Court in *Krakowski v Eurolynx Properties Ltd* (1995) 183 CLR 563.

1752 See pars 2621-2634 above.

1753 See also *NIML Ltd v MAN Financial Australia Ltd* (2006) 15 VR 156, 167-168 [38]-[39] (Nettle JA, with whom Buchanan JA and Bongiorno AJA agreed).

Viterra Ltd was symbiotic. The Cargill Parties referred to the fact that Joe White owned its goodwill, but Viterra Malt owned all of the issued capital of Joe White, and Viterra Operations and Viterra Ltd owned assets used in the Joe White Business. They also noted that when Glencore acquired Viterra,[1754] Viterra and Joe White each became a wholly owned subsidiary of Glencore. Further, it was submitted that Viterra Ltd executed the contracts for services to employ staff working in the malt business of Viterra, including the Third Party Individuals.

2649 Furthermore, it was submitted that Viterra Ltd or Viterra Operations, or both, conducted a grain storage and handling business, which supplied barley to Joe White. They noted that after Glencore's acquisition of Viterra, both Glencore and Viterra Operations separately supplied barley to Joe White.

2650 It was submitted that Joe White was Viterra's malt business unit and that there was no relevant distinction between Joe White and the Viterra Malt business unit, other than the corporate ownership structure. In such circumstances it was contended the malt business was run by Viterra and controlled by Viterra Ltd and Viterra Malt, and later by Glencore.

2651 In support of their submissions, the Cargill Parties relied on the following:

(1) Viterra and Glencore management reports treated the malt group as a single entity with no reference to Joe White. (This submission was not entirely correct.)[1755]

1754 See pars 352-353 above.

1755 In relation to documents tendered:

(1) The monthly Viterra management report for April 2010, titled "Viterra Australia/New Zealand Management Report" that was distributed to Fitzgerald, Hughes, Gordon and Argent, contained the term "JWM", which was a reference to Joe White.

(2) Under Glencore's ownership the monthly report for February 2013, titled "Australia/New Zealand Finance Report" used Viterra Malt and "JWM" synonymously when setting out the $1.6 million trading profitability of Viterra Ltd.

(3) The monthly report for September 2013, titled "Glencore Grain/Viterra Australia/New Zealand Finance Report" that was distributed to Fitzgerald, Mattiske and Argent, referred to malt repeatedly, as well as Viterra Malt and the malt business, but did not refer to Joe White.

In any event, each of the above reports referred to "malt" as a business unit of Viterra.

(2) The human resources, finance and legal shared services provided by Viterra continued under Glencore, the cost of which was estimated in the Information Memorandum to be $2 million per annum.

(3) The Viterra Policies, which were available on Pulse, referred exclusively to Viterra Malt and were marked with Viterra Malt's name and logo.[1756]

(4) The Malt Cost Reduction Transformation Project slides and papers, which dealt extensively with the cost of barley, the supply of malt, and related matters such as storage, also referred exclusively to Viterra Malt, and bore the Viterra Malt name and logo.

(5) Viterra Ltd employed all of Joe White's staff.

2652 Further, the Cargill Parties submitted that in addition to being Viterra Ltd's employees, all staff had Viterra email addresses. Furthermore, the Joe White executives' employment documents referred to Viterra Ltd as the employing entity or Viterra Malt as the business for which they worked, and did not refer to Joe White; for employment docs see Stewart, Wicks, Hughes, Youil and Argent.[1757]

2653 Moreover, the Cargill Parties submitted that while the Joe White executives were employed by Viterra Ltd, they provided their services to the malt business. The Cargill Parties noted that in the Viterra Parties' opening of this trial it had been stated that Viterra's malting business was, "for all practical purposes", Joe White. Therefore, it was submitted that the assertion that Joe White's executives were not executives of Viterra was meaningless.

2654 In relation to the refusal by Viterra to accept Cargill's suggested changes to the

---

1756 However, in the reference section of the Viterra Certificate of Analysis Procedure, there was a reference to a folder named "JWM" (that is, Joe White) in giving details of where a malt blend parameters document was saved.

1757 The employment records indicated that Hughes was "Executive Manager, Malt" with Viterra, Youil was "General Manager – Operations" with Viterra Malt, Wicks was "General Manager – Commercial" with Viterra, Stewart was "General Manager – Technical" with Viterra Malt and Argent was "Controller – Processing Australia and New Zealand" with Viterra.

"Knowledge and belief" clause of the Acquisition Agreement,[1758] the Cargill Parties submitted this was not relevant to the issue at hand. In essence, it was contended that the contractual terms upon which the parties agreed was not the end of the enquiry.[1759]

X.11.2.3 Analysis

2655 The attempt by the Viterra Parties to characterise the connection in 2013 between the conduct of the Joe White Business and the Viterra Group as minimal bore no resemblance to the facts. The suggested analogy of a farm owner doing no more than directing the farm manager to run sheep on the land was far removed from the level of involvement Viterra had in the conduct of the Joe White Business. Without seeking to be exhaustive,[1760] the evidence demonstrated that:[1761]

(1) Viterra was involved in the purchase of barley for Joe White.[1762]

(2) From late 2012, Glencore Grain supplied barley to Joe White.

(3) Joe White had access to Viterra's segregations, meaning Joe White did not have to lease an entire silo.

(4) At least some,[1763] if not all, of the employees working in the Joe White Business were employed by Viterra Ltd and their services (in some cases not exhaustively) were provided to Joe White.[1764]

1758 See clause 31.15 of the Acquisition Agreement: par 1033 above. See also pars 979, 989, 992 above.

1759 At 1 point in the Cargill Parties' submissions, reference was made to Hughes' knowledge being attributable to Viterra Ltd and Viterra Malt; that is, there was no reference to Viterra Operations. Whether this was intentional or not, there was no reason to distinguish Viterra Operations and no such distinction was made on the pleadings concerning attribution of Hughes' knowledge. See also pars 992 above and 3542 below.

1760 See, for example, pars 191 (concerning the requirement that Hughes comply with all of Viterra Ltd's operational practices, procedures, policies and directions, as amended from time to time), 195 (concerning Hughes' obligation to deliver up all correspondence to Viterra Ltd upon termination), 535 (concerning Viterra's barley procurement policy), 537 above and fn 491 above regarding the numerous Viterra Malt policies according to which the Joe White Business was required to comply.

1761 These matters are in addition to the fact that Hughes and Argent were formally retained to act for Glencore and Viterra in the sale process.

1762 It was stated in Cargill's closing submissions that Viterra was involved in the purchase of malt, but it must be assumed it was intended to refer to barley in this context.

1763 This was the way in which the position was put in closing submissions. There was no evidence that anyone other than Viterra Ltd employed those engaged in the Joe White Business: see also pars 62, 537 above.

1764 The limited evidence on the issue of which entity paid the Viterra Ltd employees who worked at Joe

(5) The Third Party Individuals, along with all other Viterra employees who worked in the Joe White Business, were subject to the Viterra Code, which included a requirement that a compliance form be completed annually as part of a Viterra employee's performance review.[1765]

(6) The Viterra Code expressly required the Third Party Individuals and all others at Joe White to disclose to Viterra Ltd any violations or any possible violations of the Viterra Code as soon as they became aware of them.[1766]

(7) The Third Party Individuals were required to be the subject of a Viterra performance and development review on an annual basis, which included or may have included a review of the executives' performance by reference to Viterra's objectives and Viterra business procedures used by the Joe White Business.[1767]

(8) The Third Party Individuals were required to perform roles for Viterra, such as: Hughes as a Viterra director and executive, and after December 2012 as a Viterra executive;[1768] Stewart being directed to be involved in research and development for Viterra;[1769] and Argent being appointed to the position of controller of processing for both Viterra Malt's and New Zealand's feed business with the obligation to report directly to Viterra Ltd's finance director.[1770]

(9) Viterra imposed detailed budgets and cost-saving measures with which Joe White was required to comply.[1771]

White suggested Viterra Ltd also paid the salaries of these employees. For example, a letter to Stewart from Viterra Ltd dated 14 February 2012 informed him of a pay increase and that his salary would be paid fortnightly.

1765 See par 62 above.
1766 See par 63 above.
1767 See pars 230-233 above.
1768 See further subparagraph (15) below.
1769 See par 232 above.
1770 See par 51 above and fn 4387 below.
1771 See, for example, par 234 above.

(10) Joe White and Viterra shared the following services:

(a) Computer and information systems, giving Joe White access to Viterra's barley quality data and other information including the location of barley.

(b) A legal department. On the occasions when Joe White engaged external lawyers, approval from the Viterra legal team was required.

(c) A human resources department.

(d) Finance support from Glencore for taxation, payroll and cash management functions, and services in relation to accounts payable and accounts receivable.

(e) Support from Glencore's safety, health and environment department.

(f) A document numbering system implemented by Viterra for storing company documents on Viterra's intranet, Pulse.

(11) Joe White generally sought assistance from Viterra's legal department if contracts needed to be signed by directors or if complicated legal issues arose.

(12) Most of the written communications of the Joe White Business utilised Viterra's communications regime as all staff had Viterra email addresses.

(13) The only Third Party Individual to give evidence, Stewart, had a business card in 2013 that referred to Viterra Malt (rather than Joe White) and he also signed off on his emails using Viterra Malt.[1772] Further,

[1772] When some confusion arose during Stewart's cross-examination about whether it was appropriate to refer to Joe White or Viterra Malt in framing questions concerning certain business or financial interests, Stewart explained that under Viterra's ownership the Joe White Business was known as Viterra Malt.

Stewart's position description issued by "Viterra" in 2013 referred to the Joe White Business as the "Malt business" or "Malt" and also referred to "Viterra Malt", the "Viterra malt commercial team" and the "Malt Group". There was no reference to "Joe White" or "the Joe White Business" as part of his job description.[1773]

(14) The covering letter to the Hughes/Viterra Contract confirmed Hughes' "Permanent Full Time position of Executive Manager, Malt *with Viterra*" (emphasis added), and the terms of the Hughes/Viterra Contract made no mention of Joe White.[1774] Further, as part of Hughes' performance assessment, he was required to meet objectives of Viterra Malt and take "Key Actions" in that regard.[1775]

(15) Pursuant to the Hughes/Viterra Contract, Hughes was required to work at Viterra's head office and there was no provision which suggested there was a separate head office of Joe White.[1776]

(16) Hughes remained on the executive body for Viterra and participated in Viterra's executive meetings for Australia and New Zealand after he ceased to be a director of Viterra and Joe White.[1777]

(17) When Hughes was challenged by Mattiske as to why he and others had not been told about the Operational Practices, Hughes responded that Gordon had either put in place or endorsed the relevant policies and

---

1773 See also fn 63 above and fnn 4171, 4387 below.

1774 See pars 188-189 above.

1775 For example, Hughes' performance and development review in July 2010 included objectives to ensure that Viterra Malt exceeded a certain compliance level in relation to "Regulatory, Safety and Environment", that it complied with regulatory production licensing, that it achieved certain levels of profitability, that it achieved an improvement in "OG&A [being Operating, General and Administrative]/mt across Viterra Malt", and so on. The review referred to "Malt development" and required Hughes to break down the "malt silo reputation through embracing the functional/divisional initiatives targeting grain segregation, safety and malt cost review projects". In short, his review was directed towards the performance of Viterra Malt, and Viterra more generally.

1776 See par 193 above.

1777 See par 52 above. In closing submission, the Viterra Parties accepted Hughes was never asked before 31 October 2013 to cease his role as a Viterra executive and the Viterra Australian and New Zealand committee.

procedures.[1778]

(18) Viterra owned assets used by Joe White, comprising:

(a) Land.

(b) Intellectual property.

(c) Dom Boxes.

2656 In summary, Viterra presented and treated the Joe White Business (known as "Viterra Malt") as its business, and exercised considerable control over it.[1779] As a reflection of this, by way of example only, in Argent's position description it was stated that "Viterra" was 1 of the world's largest malt producers and that with "malting plants across Australia, we proudly supply Australian malt to the world's best brewers". Further, there was no evidence that Joe White had any decision-making executive body that was independent of Viterra (or after late 2012, Glencore and Viterra). It is in this context, including the very significant role Viterra played in the affairs of Joe White (in conjunction with Viterra Malt) and the extent to which the affairs of Joe White were considered to be the affairs of Viterra, that attribution of knowledge must be considered.

2657 The recitals and terms of the Acquisition Agreement did not change the underlying facts. Although the matters relied upon by the Viterra Parties in this regard were plainly relevant to any determination concerning how and by whom the Joe White Business was being operated, there was no case pleaded based upon any issue estoppel by reason of what was agreed between Cargill and Viterra in the Acquisition Agreement. Further, nothing contained in the recitals or Warranty 6.1 demonstrated that the factual matters set out above were incorrect.

2658 Specifically in relation to the submission concerning the functions of the Third Party Individuals,[1780] it did not reflect the facts for a number of reasons. Dealing with

1778 See par 1255 above. But also see par 166 above.
1779 See also pars 230-234 above.
1780 See par 2640 above.

Hughes, during the time he was a director of each of Viterra Ltd, Viterra Operations and Viterra Malt, he necessarily had functions to perform for those companies in that capacity.[1781] Further, there was no evidence to support the contention that after Hughes ceased to be a director of these companies (and Joe White) his role on the executive committee or more generally was confined to merely reporting on the affairs of, and performing functions for, Joe White.[1782] Equally, to the extent that the position descriptions of the other Third Party Individuals were before the court, they also demonstrated that the functions of those individuals were not simply limited to functions related to Joe White.[1783] Furthermore, there was no clear demarcation between the executives working for Joe White and other Viterra Ltd employees who had no involvement in the day-to-day operations of Joe White. Plainly, as its company secretary, Fitzgerald had functions he was required to perform for Joe White,[1784] and yet he remained with Glencore and Viterra after the Acquisition was completed. A like observation may be made in relation to the position of Mattiske, who at all times from December 2012 up until Completion was a director of Joe White.[1785] Moreover, there was no evidence to suggest that, in relation to clause 9.1(d) of the Acquisition Agreement,[1786] someone from Viterra Malt needed to be informed of details about the Joe White Business in order for Viterra Malt to be able to comply with its obligations under that clause.

2659 A further contextual matter was that the Operational Practices had been implemented (and for that matter utilised at a level to constitute the Viterra Practices) by executives who were employed by Viterra Ltd as part of the Joe White Business for the entire time that Viterra had owned Joe White, over which time a number of Viterra

1786 See par 1028 above.

executives (including Hughes) were directors of Joe White.[1787]

X.11.3 Attribution of knowledge

X.11.3.1 Hughes' position

2660 Hughes was clearly not the directing mind or will of any of the Viterra Parties in 2013 for the purposes of the sale process. Both Hughes and Argent were excluded from some of the key meetings concerning the sale,[1788] they were the subject of direction from Glencore and they had no authority to enter into or dictate the terms of any legal relations with any prospective purchaser. However, dealing specifically with Hughes, in addition to his role as a Viterra executive, he had been given authority to assist with the sale of the "Viterra Malt business"; indeed, he had been required to give assistance.[1789] This had been done not only by his employer, Viterra Ltd,[1790] but at the direction of Glencore.[1791] Both his position as a Viterra executive and the specific retainer Hughes agreed to at the direction of both Glencore and Viterra gave Hughes actual authority to assist in the sale on behalf of each of the Viterra Parties. To adopt the evidence of King, in Hughes assisting Glencore and Viterra in the sale he was doing it "for [them]".[1792]

2661 In summary, as to the basis upon which Hughes acted as an agent, the key points include:

(1) Hughes was a director of the Viterra entities and Joe White until 17 December 2012[1793] and after ceasing in those capacities,[1794] he continued to participate as a Viterra executive, by virtue of his role with Viterra (including by reason of his employment with Viterra Ltd and his

---

1787 See pars 47, 142, 359 above and par 4800 below.
1788 See, for example, par 370 above.
1789 See par 1876 above.
1790 See fn 1067 above.
1791 See pars 366-367, 1876 above. See also the concluding words of the retainer letter: par 1876 above.
1792 See par 368 above.
1793 Hughes was a director of Viterra Malt between 20 December 2011 and 17 December 2012 and a director of both Viterra Operations and Viterra Ltd between 24 November 2011 and 17 December 2012. Hughes was a director of Joe White between 20 December 2011 and 17 December 2012.
1794 See par 47 above.

position as an executive manager of Viterra Malt).[1795]

(2) Hughes' service contract with Viterra Ltd made no reference to Joe White.[1796]

(3) Pursuant to his contract of service, Hughes participated in Viterra's schemes, had his remuneration attached to the performance of Viterra and owed duties to Viterra Ltd,[1797] which owned the shares in the companies that owned Viterra's malt business and assets (to the extent they were not owned by Viterra Ltd itself).

(4) In many respects, there was no clear delineation between Viterra Malt's business and the Joe White Business.[1798]

(5) Hughes was retained to act for Glencore and Viterra in the sale process; he was required to assist[1799] and was selected and incentivised to do so because his own knowledge and ongoing participation was relevant to the transaction.[1800] Further, as part of this agreement, Hughes was required to ensure the operations of the Viterra Malt business were conducted "in a professional and efficient manner".[1801]

(6) Hughes was required to verify that the contents of the Information Memorandum were accurate as a relevant person in the Joe White Business with respect to the numerous sections that were allocated to him.[1802]

1795 See par 52 above.
1796 See pars 188-193 above.
1797 Indeed, Viterra Ltd sued Hughes in this proceeding for alleged breaches of some of these duties: see issue 138 below.
1798 The Viterra Parties' submission that the Information Memorandum suggested otherwise was not to the point. In this regard, it should be noted that Viterra Malt was only expressly referred to once in the Information Memorandum as the 100 percent owner of the issued capital of Joe White.
1799 See pars 1876-1877, 2660 above.
1800 See pars 367-369, 393 above.
1801 See par 1876 above.
1802 See pars 446-451 above.

(7) The ultimate manner in which information was to be communicated by Hughes remained the subject of the control or direction of Glencore.[1803] At all times Hughes was required to portray the Joe White Business in positive terms under the supervision and in the presence of Merrill Lynch and he understood, as was the fact, that he was not to "stray" from this and that he was required to ensure others also did not "stray".[1804]

2662 Given his common directorships, the absence of any conflict in these roles (and his related positions) and the manner in which Viterra oversaw Hughes' position as a Viterra Ltd employee, for the period up until 17 December 2012, there was no relevant distinction to be drawn between Hughes' knowledge acquired as a director and an executive officer of Joe White and his knowledge acquired as a director and an executive of Viterra Malt, Viterra Operations or Viterra Ltd.[1805] Equally, after 17 December 2012 up until 31 October 2013 there was no relevant distinction to be drawn between Hughes' knowledge acquired in the more limited role from that previously, as an executive officer of Joe White, and his knowledge acquired in the more limited role as an executive of each of the Viterra entities.[1806] In short, relevantly the duties owed by Hughes to communicate his knowledge of the affairs of the Joe White Business were owed to the Viterra entities to no lesser extent than they were owed to Joe White. Indeed, in light of the duties, responsibilities and obligations Hughes owed directly to Viterra (many of which were recorded in writing), it is difficult to perceive of a duty at a general level that it might be said that Hughes owed to Joe White which in substance was not also owed to Viterra, particularly in light of the fact that there was no suggestion of any conflict at any time between the duties Hughes owed to the various companies.

1803 See, for example, pars 402, 436, 699-700, 766, 872 above. See also, *South Sydney District Rugby League Football Club Ltd v News Ltd* (2000) 177 ALR 611, 646 [136] (Finn J).

1804 See par 872 above.

1805 None was suggested by the Viterra Parties in relation to this period.

1806 It was submitted by the Cargill Parties that there was no evidence to support the assertion that Hughes was employed by Joe White while Viterra was in control, except for when he was an officer of Joe White, between December 2011 and December 2012, when he was also a director of all 3 Viterra companies.

2663 Further, there was no submission put (nor could it have been seriously put) that, when Hughes was both a director and an executive of Viterra up until mid-December 2012, his knowledge of the affairs of the malt business (to use a neutral term) was not the knowledge of Viterra. That knowledge of Hughes as an executive director of all relevant companies was not somehow shed from the knowledge of Viterra when he ceased his directorships (but continued on as a Viterra executive) only a couple of months or so before the decision was made to sell the issued capital in Joe White and Hughes was directed to assist. While the consequence of Hughes ceasing to be a director undoubtedly altered the nature of his role and duties with respect to the Viterra entities, his knowledge was still a relevant matter for consideration in circumstances where he continued as an executive and was assigned specific tasks and a specific role by Viterra (and Glencore) as part of the sale process.

2664 As an aside, at the same time Hughes ceased to be a director of the Viterra entities, he ceased to be a director of Joe White. The Viterra Parties' submissions did not address how it was said that there was no loss of attribution of Hughes' knowledge in relation to the state of mind of Joe White as a result of these simultaneous resignations of all the companies in question, but that attribution of knowledge ceased in relation to the 3 other companies.

2665 Presumably, if it had been specifically addressed, it would have been said by the Viterra Parties that Hughes continued on as an executive of Joe White in the conduct of the Joe White Business, but the response to any such submission would have been that Hughes also continued as an executive of Viterra. To elaborate, during the time Hughes was a director of each of the Viterra companies, he was not just *an* executive of the malt business, but rather was *the* executive manager. After December 2012, he continued on in that executive role for Viterra, in a direct employment relationship with Viterra Ltd, regularly partaking in Viterra executive meetings, and owing duties to Viterra, including duties of disclosure.

2666 As has been touched on already, there was no conflict between Hughes' 2 roles. It was entirely compatible for Hughes to perform his role as an executive, managing the Joe

White Business, and to be an executive of Viterra. Further, there was no conflict in Hughes, in both his positions with Joe White and Viterra, agreeing to assist and then assisting both Glencore and Viterra in the proposed sale.[1807] This was even more so given Joe White was wholly owned by Viterra, and because Viterra Ltd treated the Joe White Business, including the customers, as Viterra's business.[1808]

2667 Furthermore, no part of Hughes' conduct was a fraud *on Viterra*. Hughes was not overseeing the implementation of the Operational Practices for his own gain or to somehow defraud Viterra. On the contrary, the Operational Practices implemented as the Viterra Practices over many years enabled the Joe White Business to function, and achieve a level of profits, for the returns to Viterra in a manner that would and could not have been achieved if the Operational Practices were not in place.[1809] Further, insofar as Hughes was involved in settling the various documents for Glencore and Viterra that were provided to Cargill, and in making representations about the Joe White Business to Cargill, he was acting in accordance with his actual authority in seeking to obtain the best price that could be achieved for Glencore and Viterra. In circumstances where the Viterra Parties seek to maintain that the very agreement that Hughes helped to procure ought to be upheld, there could be no real issue about Hughes acting in total fraud of them.[1810]

2668 It must follow that Hughes' knowledge of the Joe White Business, including the Viterra Practices, was attributable to Viterra,[1811] including during the sale process when he was acting in accordance with the direction to assist with the divestment.

2669 As to the Viterra Parties' submission that Cargill was on clear notice that Viterra's knowledge did not include the knowledge of Joe White's executives and therefore attributing Hughes' knowledge to Viterra would undermine the bargain struck

1811 That is, each of Viterra Ltd, Viterra Operations and Viterra Malt.

between the parties,[1812] this submission was not to the point. What was being or not being agreed to in the last days of negotiations was whose knowledge would be contractually deemed to be the Sellers' knowledge for the purposes of the operation of certain Warranties concerned with a Seller's awareness or knowledge.[1813] Such a circumstance did not somehow alter what had actually occurred before, or retrospectively expunge the conduct that had already been engaged in. Similarly, the existence of the Sale Process Disclaimers[1814] did not change the circumstance that Hughes had the knowledge that he did, that he had that knowledge and retained it in his capacity as an executive of Viterra, that he was making statements in relation to the Joe White Business at the direction of Glencore and Viterra, and that he had been chosen to do so on behalf of Glencore and Viterra because of his knowledge and position.

2670 Of course, if there was actually a limitation on Hughes' authority to make representations regarding the Joe White Business and Cargill was on notice that Hughes had some form of limitation to his authority when making such representations as part of the sale process, then that would be an entirely different matter. The Viterra Parties referred to the Sale Process Disclaimers generally in making their submission in this regard, and did not point to any particular term of any of the Sale Process Disclaimers to identify any such express limitation. Further, the fact that the Sale Process Disclaimers provided that Glencore and its subsidiaries[1815] (or Glencore and its Representatives)[1816] had no obligation to disclose matters and that there was no guarantee as to the accuracy or completeness of the information provided did not specifically address Hughes' authority. If the Viterra Parties chose to disclose information, including by means of expressly authorising Hughes to make representations concerning the Joe White Business after they had ensured Hughes was well instructed by Glencore, was on message and Glencore had

---

1812 See also issue 22 below.
1813 Clause 31.15: see par 1033 above.
1814 See par 2828 below.
1815 As per the Information Memorandum and the Management Presentation Memorandum.
1816 As per the Confidentiality Deed.

established an understanding with him that he was not to stray from that message,[1817] then they could not escape the fact that he was acting within authority when he did what he did as instructed. This conclusion is supported by the fact that Hughes fell within the definition of "Discloser" in the Information Memorandum and the Management Presentation Memorandum, and of "Representative" in the Confidentiality Deed.[1818] It is further supported by the requirement imposed by Glencore that Merrill Lynch be present, as Glencore's (and Viterra's) representative, at any meetings at which Hughes made representations about Joe White.[1819] At no time did the omnipresent Merrill Lynch make any suggestion that Hughes was stating anything he was not authorised to convey.

2671 It follows that as a Viterra Ltd employee and Viterra executive, retained and directed in the manner that he was to assist with the sale, Hughes' state of mind must be attributed to Viterra in determining whether Viterra had knowledge of the Operational Practices before 22 October 2013.

2672 The position was not as straightforward with respect to Glencore. Clearly, different considerations applied as Hughes was never an employee, a director or an executive of Glencore. However, as Hughes was chosen by Glencore to assist Glencore itself (as well as Viterra) in seeking to sell the shares in Joe White and the related assets, including by being authorised to assist with drafting and finalising the marketing documents and make oral presentations about the Joe White Business to enable Glencore to facilitate the sale, Hughes' state of mind concerning his knowledge of Joe White operations must also be attributed to Glencore.

1817 See pars 367, 700, 872 above.

1818 See pars 475, 588 above respectively and see also pars 2174, 2181 above and par 4809 below. Further, it was noteworthy that the Viterra Parties did not seek to identify the wording in the Information Memorandum or the Management Presentation Memorandum under the heading "Acknowledgments" as indicating that Hughes did not have authority despite that sentence specifically addressing the question of authority. No doubt, this was because Hughes fell within the definition of "Discloser" and accordingly was being referred to as a person who had not given authority in the circumstances identified (rather than as a person who did not have authority).

1819 See par 367 above.

X.11.3.1.1 Hughes' knowledge

2673 A further question that arose under this issue was whether Hughes himself had knowledge of the matters pleaded in paragraph 30(bb), (bc), (bd) and (be) of the Defence.[1820]

2674 The Cargill Parties referred to the evidence that Stewart and McIntyre had raised concerns with Hughes, both personally and on behalf of other staff, about signing the Viterra Code given the use of the Malt Blend Parameters Procedure, the pencilling of Sign-Out Reports and the corresponding reporting of "results" in Certificates of Analysis.[1821] Further, it was submitted that Hughes had described the practices to Gordon and on this basis it should be inferred that he relayed to Gordon the concerns about which he was informed by Stewart.[1822]

2675 The Viterra Parties submitted that the evidence did not support a finding that Hughes had knowledge of all the aspects of the Undisclosed Matters. However, these submissions were not really responsive to the issue raised and went well beyond the specific matters pleaded in paragraphs 30(bb), (bc), (bd) and (be) of the Defence, which were simply confined to the existence of the Operational Practices.[1823]

2676 As is explained below,[1824] the evidence overwhelmingly established that Hughes did have knowledge of the matters pleaded in paragraphs 30(bb), (bc), (bd) and (be) of the Defence.[1825] In addition to numerous other indicia, such as his communications regarding the concerns in 2010,[1826] and his involvement generally in the Joe White Business as a "hands-on" executive manager,[1827] the matters that were disclosed to

---

1820 See par 2615 above.
1821 See pars 84, 158-161 above.
1822 See pars 161-163 above.
1823 This submission was made in relation to issue 22, but was incorporated by way of cross-reference into this issue.
1824 See issue 22 below and in particular the references in fn 2454 below.
1825 See par 1854 above. This finding does not equate to Hughes knowing the Viterra Policies were policies of Joe White alone; the evidence showed that at all relevant times the Viterra Policies were written policies of Viterra.
1826 See pars 162-163 above.
1827 See par 47 above.

Cargill on 15 October 2013[1828] and as recorded by Lindner on 23 October 2013[1829] demonstrated Hughes was fully across the existence and implementation of the Operational Practices.[1830]

2677 In light of these findings, it is unnecessary to consider the submissions made in relation to other Viterra employees and officers. As it has been found that Hughes' knowledge was attributable to the Viterra Parties, whether the same knowledge was also attributable because of the knowledge of others is somewhat academic given that Hughes was the key person identified by Cargill Australia for these purposes. That said, given the important role Fitzgerald played in relation to a number of events, the submissions in relation to him will be addressed.

X.11.3.2 Fitzgerald's position

2678 In addition to his roles for Viterra, Fitzgerald was the secretary of Joe White from 10 March 2010 to 31 October 2013.[1831]

2679 The Viterra Parties did not dispute that Fitzgerald's knowledge would be attributed to Glencore and Viterra. Thus, this question turned on whether Fitzgerald had knowledge of the matters pleaded in paragraphs 30(bb), (bc), (bd) and (be) of the Defence before 22 October 2013.

X.11.3.2.1 The Cargill Parties' submissions

2680 The Cargill Parties submitted that Fitzgerald was instrumental in the events that led to the creation of the Viterra Certificate of Analysis Procedure. They referred to an email chain, the last email of which was sent to Fitzgerald,[1832] in which it was stated that employees were being asked to certify they were using exclusively malt-grade barley when they were in fact using "non malt grade barley".[1833] The Cargill Parties contended that the email chain demonstrated the employees did not consider they

---

1828 See, for example, pars 1102-1155, 1251, 1257 above.

1829 See pars 1279-1288 above.

1830 The issue of Hughes' knowledge of the implementation of the Operational Practices at a level and in such a manner such that they amounted to the Viterra Practices is dealt with in issue 22 below.

1831 See par 114 above.

1832 See pars 156-157 above.

1833 The Cargill Parties also noted that Gordon was informed of the practice of making changes to Certificates of Analysis.

were being honest in their dealings with customers. Two of the emails in the chain recorded that Fitzgerald's advice was being sought on the issues raised.

2681 Further, the Cargill Parties submitted that it could be inferred from Fitzgerald's involvement in the events leading to the creation of the Viterra Certificate of Analysis Procedure that Fitzgerald was aware that the Joe White Business was conducted in accordance with the Viterra Policies. It was submitted that although Fitzgerald's involvement concerning issues with the Viterra Code occurred before the creation of the Viterra Certificate of Analysis Procedure, the procedure itself was established for the purpose of codifying and thereby endorsing the way Joe White was doing business.

X.11.3.2.2 The Viterra Parties' submissions

2682 The Viterra Parties submitted that whilst Fitzgerald had some involvement in the Malt Cost Reduction Transformation Project, his involvement provided no basis for finding that he had any knowledge of the relevant matters. It was submitted that although he was on the steering committee, Fitzgerald was not listed as a person involved in the Malt Cost Reduction Transformation Project, nor was there any evidence to suggest that he reviewed the project in any detail. Further, it was submitted that there was nothing in the material relevant to the Malt Cost Reduction Transformation Project that could have given Fitzgerald reason to suspect that Joe White was engaging in any of the alleged practices the subject of this proceeding.

2683 Furthermore, it was submitted the evidence did not establish that Fitzgerald was aware of the Viterra Certificate of Analysis Procedure, nor that Fitzgerald had any knowledge of the Malt Blend Parameters Procedure.[1834]

X.11.3.2.3 Analysis concerning Fitzgerald's knowledge

2684 As part of Fitzgerald's involvement in the Malt Cost Reduction Transformation Project, he was consulted with regard to assessing legal requirements that were

---

1834 The Viterra Parties made submissions in respect of clause 31.15 of the Acquisition Agreement to the extent the Cargill Parties sought to rely on it in relation to this issue. As no submissions referring to clause 31.15 were made by the Cargill Parties with respect to this topic, they need not be addressed here.

missed from the global agreement and coordinated a response to the review of the Viterra Code.[1835] During his involvement, Fitzgerald became aware of the fact that employees were being asked to certify they were using exclusively malt-grade barley when they were not in fact doing so, and that employees did not consider that they were being honest with customers when it came to the reporting practices. Further, it is highly probable, given his involvement in the Malt Cost Reduction Transformation Project, that Fitzgerald was made aware of the policy of increasing Joe White's use of off-grade barley to reduce malt costs.[1836]

2685 Further, Fitzgerald was heavily involved in the sale process in 2013, including finalising the Information Memorandum. According to Mattiske's evidence, in order for Fitzgerald to fulfil his role as part of the sale process, he needed to be aware of corporate policies within Viterra.

2686 Accordingly, it was highly likely that Fitzgerald had some knowledge of some practices or strategies of Joe White. That said, the evidence did not establish that he had full knowledge of the extent of any such practices or strategies, nor specific knowledge of the matters pleaded in paragraphs 30(bb), (bc), (bd) and (be) of the Defence. Nothing the Cargill Parties relied upon demonstrated Fitzgerald was informed of any of the Operational Practices. Although Fitzgerald was an obvious witness for the Viterra Parties and was not called, the limited evidence concerning his own knowledge did not provide a proper basis to draw any inference that he personally knew or was on notice of the Operational Practices.

2687 The findings concerning Fitzgerald regarding this issue are confined to his position alone. Further, they do not amount to a positive finding that he did not know about the Operational Practices, but rather that it has not been proven that there was any basis to find that he did.

X.11.4 Further observations

1835 See pars 156-157 above.

1836 See par 251 above.

2688 In circumstances where the Operational Practices were such a fundamental and entrenched part of the Joe White Business, and had been managed and overseen by Viterra for a number of years by senior employees of Viterra, it is difficult to conceive how the Operational Practices could be said not to be part of Viterra's knowledge. Further, in relation to the Reporting Practice, although the evidence was a little unclear as to which persons had access to precisely what documents on Pulse, it was relevant that the Viterra Policies were actually maintained, updated and stored on Viterra's intranet as well as the Records System, albeit on less than a satisfactory basis.[1837] They were also available at every Joe White plant.[1838]

X.12 Did (a) Glencore and/or (b) Viterra disclose to Cargill, in the Information Memorandum or during the Due Diligence, any, and if so which, of the matters alleged to be the Undisclosed Matters?

X.12.1 Introduction

2689 This issue will be addressed by sequentially referring to each of the Undisclosed Matters.[1839] Cargill Australia alleged that Glencore or Viterra, or both, failed to disclose the Undisclosed Matters in the Information Memorandum or during the Due Diligence.

2690 The Cargill Parties submitted that the Viterra Parties did not allege that the Undisclosed Matters were expressly disclosed. The Cargill Parties were correct in this respect. The Viterra Parties instead invited the court to infer that most of the Undisclosed Matters were disclosed, by submitting that: (1) a number of statements were made to Cargill; (2) these statements conveyed to Cargill certain information; and (3) this information (coupled with Cargill's pre-existing knowledge of the industry) amounted to substantial disclosure of matters relevant to the Undisclosed Matters.

2691 The Viterra Parties made a number of preliminary submissions before engaging with

---

1837 See pars 206, 249, 277-278, 286-290, 1533, 2113 above. For completeness, see par 4803 below.
1838 See, for example, par 271 above.
1839 The Undisclosed Matters as alleged are set out in full at par 1851 above.

the substance of the Undisclosed Matters.

2692 *First*, the Viterra Parties submitted that the existence and extent of the Undisclosed Matters remained unknown even at the end of the trial. As already noted,[1840] the Viterra Parties admitted that Joe White generally conducted its business in accordance with the Viterra Policies. They also conceded that "on occasions", prior to Completion, Joe White supplied malt produced from barley varieties not approved by the customer or produced malt using gibberellic acid when not permitted by the customer. Beyond these admissions, the Viterra Parties submitted that there was insufficient evidence to establish the existence of the Undisclosed Matters. Given this uncertainty, the Viterra Parties submitted that it was "not precisely clear" what the Cargill Parties asserted ought to have been disclosed.

2693 It has been determined that the Undisclosed Matters existed as alleged by Cargill Australia.[1841] Further, what amounted to the Undisclosed Matters was clearly set out in the Statement of Claim and repeated in identifying issue 10 above.

2694 *Secondly*, the Viterra Parties submitted they had no knowledge of the Undisclosed Matters and therefore their non-disclosure by the Viterra Parties was not relevant conduct for the purposes of the Australian Consumer Law. This submission is considered in issue 15 below.

2695 *Thirdly*, to the extent that certain information was disclosed to Cargill, Inc, the Viterra Parties made 2 submissions in relation to attribution. *First*, it was submitted the information disclosed by means of the Information Memorandum, the Data Room, the Q&A Process and the site visits was disclosed by Glencore, as opposed to Viterra. This was submitted on the basis that Glencore was the entity that conducted the sale process and there was "no evidence" that the information was provided by any of the Viterra entities. *Secondly*, in relation to information disclosed in the Management

---

1840 See par 1854 above.

1841 See issue 10 above. Although such a finding does not equate to a determination of precisely the extent to which the Viterra Practices were engaged in, it was not part of Cargill Australia's case to prove the exact proportion or the exact amount of times the relevant conduct occurred.

Presentation, the Operations Call, the Commercial Call and the Barley Inventory Call, the Viterra Parties submitted that this was disclosed by Joe White, and not any of the Viterra Parties. These issues have already been addressed.[1842] As the Viterra Parties' position has been rejected, they need not be discussed further. (The Viterra Parties acknowledged that the information they alleged was provided by Joe White and not by them did not fall within the question posed, but it was contended it was highly relevant to Cargill's knowledge.)

X.12.2 The Viterra Practices regarding contractual requirements and specifications

X.12.2.1 Statements alleged to have been made to Cargill

2696 In relation to non-compliance with customer contractual requirements and specifications, the Viterra Parties submitted that the evidence demonstrated a number of statements were made to Cargill, Inc in relation to the barley available to, and used by, Joe White.

2697 The first such statement was that Joe White's customers included SAB Miller "and Heineken subsidiaries Oriental Brewery and Asia Pacific Breweries". The Viterra Parties submitted that Cargill was aware of the variety specification requirements for at least these Joe White customers.

2698 It is correct that SAB Miller and Oriental Brewery were listed as "International Customers" of Joe White in the Information Memorandum.[1843] It is also correct that De Samblanx noted seeing "APB", a reference to Asia Pacific Breweries, in a list of customers visible during a site visit and that he was aware that "Heineken" was a Joe White customer.[1844]. However, as already noted, [1845] there was no evidence that Oriental Brewery was a Heineken subsidiary, and therefore no basis to conclude that Cargill was aware of its specific requirements because of any such relationship. Further, with respect to Asia Pacific Breweries and SAB Miller, although Cargill had

---

1842 Including at pars 2176-2179 above. See also issue 124 below.
1843 See fn 391 above.
1844 See pars 788-789 above.
1845 See fn 391 above.

some knowledge from its own dealings about those customers' requirements, the relevant information provided throughout the Due Diligence, when considered as a whole, gave no indication that Joe White was not complying with the requirements (as specified to Joe White) of these customers.[1846]

2699 The next alleged statement concerned Joe White's contracts for the purchase of malting barley that did not specify any particular variety. The Viterra Parties relied on barley purchase spreadsheets recording Joe White's barley purchases from 2010 to 2013. These spreadsheets were included in the Data Room and were said to show about half of Joe White's contracts for the purchase of barley did not specify particular varieties to be used. This statement has largely been established by reason of the information provided during the Due Diligence.[1847]

2700 The next alleged statement was that Joe White purchased significant quantities of non-grade 1 malting barley. Again, the barley purchase spreadsheets were relied upon.

2701 The next alleged statement (which was closely linked to the previous statement) was that Joe White considered that it could use up to 30 percent of non-malt 1 varieties of barley. There was no dispute about this. Argent made this statement in the Barley Inventory Call on 23 July 2013, as recorded in the agreed summary at annexure E of the Acquisition Agreement.[1848]

2702 The next alleged statement was that Joe White regularly purchased Hindmarsh barley, being non-malting barley. The Viterra Parties again relied on the barley purchase spreadsheets included in the Data Room.[1849] According to these records, Joe White made 2 purchases of Hindmarsh barley in the 2010-2011 season, 1 in the 2011-2012 season and 2 in the 2012-2013 season, each order being over 1000 tonnes. Accordingly, the evidence showed Joe White purchased significant tonnage of Hindmarsh barley throughout the relevant period.[1850]

1846 See pars 789, 819-821, 871-874, 877, 884-885, 893-897 above.
1847 See par 1003 above.
1848 See par 924 above.
1849 See par 1003 above.
1850 See par 954 above.

2703 The next alleged statement was that challenges Joe White faced included "barley prices impacted by Australian weather" and the "ability to source barley of correct variety, quality and specification". Both these statements were made in the Management Presentation Memorandum.

2704 The next alleged statement was, as at the time of the Management Presentation, Joe White could not obtain its desired barley varieties in New South Wales. This statement was recorded in the Goldman Sachs summary of the Management Presentation.[1851]

2705 The final alleged statement regarding barley availability and use was that Joe White's ability to compete in Japan had been significantly limited due to its inability to source quality barley as compared with Canadian competitors. This statement was made by Hughes to representatives of Cargill in the Commercial Call, as recorded in the agreed summary at annexure E to the Acquisition Agreement.[1852]

2706 In relation to processing conditions used by Joe White, the Viterra Parties submitted that Cargill, Inc was told of 2 matters.

2707 *First*, Joe White was only steeping/germinating its malt for 5 to 6 days, as compared to Cargill's facilities which steeped/germinated malt for 6 to 7 days, and De Samblanx and Hermus considered that this "might mean a process non-conformance that can be addressed either by waiver or by reducing plant capacity".

2708 The statement in quotes was made in relation to germination times of 4 days for most plants, and was contained in the Operations Spreadsheet, finalised by De Samblanx with input from Hermus, in the context of observing some clients like Heineken required a period of 5 days for germination.[1853] Further, Eden, together with De Samblanx, referred to Joe White's "steeping/germination" period of 5 days and Cargill being at "6/7" days in an email sent 27 June 2013.[1854] No reference was made

---

1851 See fn 520 above.
1852 See par 914 above.
1853 See pars 771, 819 above.
1854 See par 755 above.

to Joe White steeping/germinating malt for "5 to 6" days in the material relied on by the Viterra Parties. However, in substance Cargill became aware in late June or early July 2013 that Joe White's "steeping/germination" times were shorter than Cargill's.

2709 *Secondly*, the Viterra Parties submitted Cargill was informed that Joe White used temperatures and allowed for changes in the temperatures in its processing conditions, which could compensate for the short processing times Joe White was using. Further, they submitted De Samblanx knew this conduct was not consistent with the processing conditions required by Cargill's customers, such as Heineken.

2710 The relevant evidence was also in the Operations Spreadsheet. De Samblanx noted that there were high temperatures in steeping and germination. He stated that this could compensate for the short process time but was not in line with processing parameters of global customers "like Heineken". He also noted that the "Delta T over the malt bed" in at least 1 plant was not allowed by some customers "like Heineken".[1855]

2711 Finally, on the issue of the prohibited use of gibberellic acid, the alleged statement was that Joe White used gibberellic acid as an additive, which Cargill believed was "normally not allowed by most of international brewers", with the consequence that De Samblanx and Hermus formed the view that there was "some potential risk that Cargill Guiding Principles are compromised".[1856] The comments as quoted were made in the Operations Spreadsheet as at 8 July 2013.

2712 In summary, most of the statements as alleged by the Viterra Parties were made.

X.12.2.2 Information conveyed by the matters alleged

2713 The Viterra Parties submitted that, as a result of the above statements, Cargill was informed of various matters, much of which was established on the evidence.

2714 *First*, Joe White was using significant quantities of off-grade barley, as well as some non-malting barley, and around half of Joe White's contractual arrangements for

1855 See pars 779, 819 above.
1856 See par 819 above.

procurement of barley did not permit Joe White to specify the variety to be supplied.

2715 In relation to off-grade barley, as noted above,[1857] the purchase of off-grade barley did not suggest that Joe White supplied malt contrary to customer specifications. In relation to non-malting barley, Cargill was told that Joe White purchased Hindmarsh barley. However, the barley purchase spreadsheets relied on did not specify that Hindmarsh barley was a non-malting barley variety. Only a person who knew Hindmarsh barley was a non-malting barley would have been informed of the use of non-malting barley from the spreadsheets.

2716 Viers gave evidence that at the time he read 1 of the spreadsheets he did not know that Hindmarsh was not a malting grade barley.[1858] Purser gave evidence that, although she did not recall the spreadsheet, she would not have been concerned about the purchases of Hindmarsh barley for a variety of reasons.[1859] There was no evidence from any Cargill witness other than Purser that indicated they knew that this Australian barley variety was a non-malting variety.

2717 In any event, in circumstances where Cargill did not know and was not informed of the specific varieties required by each of Joe White's customers (to the extent such requirements existed), any knowledge it acquired concerning off-grade barley, or varieties that were non-malting barley, did not put Cargill on notice, or provide grounds for it to reasonably suspect, that Joe White was engaged in the Varieties Practice or that it was supplying malt in breach of contract because it did not comply with customer specifications.

2718 In relation to Joe White's procurement arrangements, Cargill was informed that Joe White could not specify the variety to be supplied for all its purchases. But this information did not carry with it anything beyond that in the circumstances outlined above. Further, it implicitly conveyed Joe White could choose barley varieties to be

---

1857 See par 928 above.

1858 See par 954 above. The spreadsheets were 2 different versions which presented the same data. There were minor differences not relevant to these issues.

1859 See par 955 above.

used for some of its customers.

2719 *Secondly*, there was no doubt Cargill was expressly told Joe White had difficulties sourcing the varieties it wanted at times, including in New South Wales, and that Joe White had difficulty competing for Japanese customers due to limitations on the availability of barley. But this information of itself, or in combination with the other information provided, did not indicate to Cargill that there was an ongoing problem or that, as a result, Joe White was routinely not complying with customer requirements and specifications, much less that it was deliberately concealing the varieties of malt being supplied.

2720 *Thirdly*, as to the statement that Joe White was using processing conditions which, to Cargill's belief, were not permitted by customers, including some of Joe White's customers, Cargill was informed of matters early on in the Due Diligence that gave rise to a suspicion that such processing conditions were being used. However, the matter did not rest there. After 8 July 2013, when such suspicions were clearly held, further enquiries were made and information was obtained which satisfied the relevant Cargill employees that Joe White was not supplying malt other than in the manner it was required to.[1860]

2721 *Fourthly*, on the issue of Joe White using gibberellic acid, the Viterra Parties were correct in contending this information was conveyed in the context where Cargill believed most international brewers did not permit its use.[1861]

X.12.2.3 Did the statements as made amount to disclosure of the Viterra Practices in relation to customer requirements and specifications?

2722 As is clear from what has already been stated, the information conveyed did not amount to disclosure that Joe White supplied malt to customers that did not comply with contractual requirements and specifications. In summary, in relation to the first and second matters, the information relating to barley grades and barley varieties did not suggest, either expressly or impliedly, that Joe White supplied malt to its

1860 See pars 882, 891-903 above.
1861 See par 819 above.

customers contrary to customer specifications.[1862]

2723 In relation to the third point, while some information provided alerted Cargill to the possibility of processing conditions being different to what was permitted by some customers, ultimately any concerns were alleviated by further information provided during the Due Diligence, and in relying on this further information Cargill was acting reasonably.

2724 Finally, in relation to the fourth point regarding gibberellic acid, the information conveyed did not amount to a disclosure that the use of gibberellic acid was non-compliant with customer contracts or it was used without customers' knowledge. In fact, Cargill was expressly assured this did not occur.[1863] Further, the fact that a significant amount of gibberellic acid formed part of Joe White's inventory did not put Cargill relevantly on notice when many customers permitted its use.[1864]

X.12.3 The Viterra Practices regarding misstatement of results in Certificates of Analysis

X.12.3.1 Statements alleged to have been made to Cargill

2725 In relation to the misstatement of results in Certificates of Analysis, the Viterra Parties submitted that Cargill, Inc became aware of some further matters.

2726 They referred to the fact that Cargill was told: (1) most of Joe White's facilities had only a fifth or a sixth as much storage as facilities in Canada;[1865] (2) Joe White had low silo capacity and, with the exception of Tamworth, Joe White's plants had only around a third of the storage capacity of Cargill Malt's plants;[1866] (3) Joe White did not have

---

1862 See also pars 920-921 above.

1863 See pars 788, 1099 above.

1864 See par 40 above.

1865 See fn 520 above.

1866 See par 682 above. Curiously, in making this submission the Viterra Parties relied on evidence given by De Samblanx that he asked a question about low silo capacity during the Management Presentation: see par 737 above. In making submissions in response to issue 4 above, the Viterra Parties submitted the court should find that the answer to this question was not given as De Samblanx had suggested: see pars 2169-2171 above. Accordingly, the Viterra Parties' position appeared to be that De Samblanx's evidence should be accepted insofar as he deposed that he raised the issue, but not insofar as he deposed to the answer given. In any event, the Viterra Parties did not suggest there was any response given by Hughes which informed Cargill the storage capacity was inadequate. Such a suggestion

independent laboratories (which gave De Samblanx concerns in relation to the integrity of Joe White's Certificates of Analysis);[1867] and (4) Joe White used the Malt Proficiency Scheme procedure which, it was submitted, showed that Joe White's analytical approach was to record a result as being non-conforming only if the result was plus or minus more than 2 standard deviations from the target parameter.[1868]

2727 Except for the last statement, it was clear each statement was made as alleged. As to the last, it went beyond what was actually disclosed. Item 12.4 of the Data Room index was listed as "Malt Analytes Proficiency Testing Scheme (MAPS) Participation". The document containing the Malt Proficiency Scheme was attached. The disclosure of this document, together with its description in the index, disclosed no more than Joe White participated in the Malt Proficiency Scheme.[1869]

X.12.3.2 Information conveyed by the matters alleged

2728 The Viterra Parties submitted that the following information was conveyed by the above statements.

2729 *First*, Joe White had significantly lower storage capacity than Cargill or Canadian facilities generally had, between a third and a sixth of the storage. This was conveyed.

2730 *Secondly*, Joe White's malt testing was not done in laboratories located independently from the malting facilities. This was conveyed.

2731 *Thirdly*, Joe White's analytical approach was to record a result as non-conforming only when the result was more than 2 standard deviations from the target (and by inference, a result within 2 standard deviations was considered to be in conformance). No such information was conveyed. By disclosing the Malt Proficiency Scheme in the manner that it was, Cargill was told no more than Joe White participated in the

---

would have been contrary to the evidence.

1867 See pars 776-778 above.

1868 The Malt Analytes Proficiency Testing Schemes Procedure was disclosed in the Data Room: see par 210 above. It was accepted that it would have alerted a reader to the analytical approach relating to 2 standard deviations, however it said nothing about the existence of the Reporting Practice: see par 223 above. See also pars 209, 1380 and fn 1001 above.

1869 See pars 207-210, 215-216, 218-223, 1015, 1019, 1380 above.

scheme, and thereby tested the accuracy of its testing equipment by means of a well-known, industry-accepted scheme.[1870]

X.12.3.3 Did the statements as made amount to disclosure of the Viterra Practices in relation to misstatement of results in Certificates of Analysis?

2732 In relation to the *first* point, regarding Joe White's lower storage capacity relative to Cargill or Canadian facilities, this simply did not amount to disclosure of the misstatement of results of analytical testing in Certificates of Analysis. Further, De Samblanx was told by Hughes that there was "no real quality issues" as a result of the "limited storage".[1871] If the circumstances were as stated by Hughes, there would be no occasion to misstate results.

2733 Equally, the *second* point, that Joe White's malt testing was not done in independent laboratories, did not disclose that Joe White was misstating results of analytical testing in Certificates of Analysis. As described above,[1872] this provoked concern for De Samblanx around the integrity of Certificates of Analysis; however, this fell far short of disclosure of a routine practice of misstating results in Certificates of Analysis without informing customers. Further, whatever concerns De Samblanx had were addressed in subsequent discussions.

2734 In relation to the *third* point, regarding Joe White's analytical approach, neither the existence of the Malt Proficiency Scheme procedure and reference to it in the Data Room, nor Joe White's participation in the Malt Proficiency Scheme itself, would have alerted the reader to Joe White's overall approach or amounted to disclosure of the practice of secretly misstating results in Certificates of Analysis whether within 2 standard deviations or otherwise. The procedure said nothing about changing results on Sign-Out Reports or in Certificates of Analysis. Therefore, neither the procedure, nor the limited manner that it disclosed something about Joe White's approach, amounted to disclosure of the existence of the Viterra Practices.

1870 Ibid.
1871 See pars 2169-2171, 2180-2183 above.
1872 See pars 772-773 above.

X.12.4 The Viterra Policies were not disclosed

2735 Joe White engaged in the Viterra Practices,[1873] which were partly recorded in and endorsed by the Viterra Policies.[1874] The existence of the Viterra Policies was not disclosed to Cargill in the Information Memorandum or during the Due Diligence. The Viterra Parties effectively conceded this when dealing with another issue and, in response to this issue, made no submissions on this point.[1875]

X.12.5 The remaining Undisclosed Matters

2736 The next Undisclosed Matter alleged was that Joe White's financial and operating performance for the financial year 2010 to part of the financial year 2013 was substantially underpinned by Joe White's practice of supplying malt to customers, pursuant to the Viterra Practices and the Viterra Policies, which did not comply with the customer contracts. The final Undisclosed Matter alleged were that, but for the Viterra Practices, Joe White could not produce and sell malt in the volumes and to the specifications required by customers, or in the volumes and for the returns reflected in the Financial and Operational Information.

2737 These Undisclosed Matters were addressed together in the Viterra Parties' submissions.

X.12.5.1 Statements alleged to have been made

2738 The Viterra Parties submitted that Cargill, Inc was told the following statements relevant to these matters, each of which was made or recorded in writing:

(1) The historical financial information in the Information Memorandum had primarily been sourced from Joe White's general ledger and extracted from the Administration System used by Joe White.[1876]

1873 See issue 10 above.

1874 See pars 1854-1858 above. See also pars 158-201 above for discussion of the relationship between the Viterra Practices and the Viterra Policies.

1875 See par 3294 below.

1876 See pars 523-524 above.

(2) The financial information provided in the Management Presentation was subject to specified pro forma and normalised adjustments (upon which Cargill, Inc could undertake further due diligence enquiries).[1877]

(3) The Data Books provided in the Data Room were primarily prepared using Joe White's general ledger and trial balance, as well as information extracted from Joe White's Administration System, and the pro forma and normalised adjustments used were as set out in the Data Books.[1878]

(4) The challenges and risks Joe White faced included:

(i) Barley prices impacted by Australian weather.[1879]

(ii) The ability to source barley of correct variety, quality and specification.[1880]

(iii) As at the time of the Management Presentation, Joe White could not get its desired barley varieties in New South Wales.[1881]

(5) Joe White's barley and accumulation margin was underpinned by Joe White's use of blending.[1882]

(6) Joe White's margin could be achieved "because of price difference between Malt1 and non-Malt1 … and blending".[1883]

(7) Over a historical period, Joe White had engaged in a disciplined

---

1877 See par 728 above. To be precise, the Management Presentation Memorandum stated that pro forma normalisation adjustments were made to the financial information for the 2011 and 2012 financial years. Further, the words in parenthesis in subparagraph (2) were not stated in the Management Presentation Memorandum, but the Phase 2 Process Letter which proceeded it provided for due diligence questions and answers: see par 640 above.

1878 See par 678 above, and in particular the references to "Viterra Malt" rather than "Joe White".

1879 See par 720 above. But also see what Cargill was told during the Commercial Call about the ability to always manage to secure the required barley during adverse weather conditions, the unlikelihood of drought impacting the whole of Australia and Joe White's general ability to manage weather conditions: pars 914, 919 above. See also pars 926, 947 above.

1880 See par 733 above.

1881 See fn 520 above.

1882 See par 730 above.

1883 See par 929 above.

approach to cost reduction by way of a transformation project, designed to drive efficiency gains.[1884]

(8) Since 2000, Joe White's focus had moved from quality to cost reduction.[1885]

2739 Further, the Viterra Parties relied upon their submissions regarding the inferences to be drawn from the fact that Hermus and Christianson were not called as witnesses. For the reasons outlined above,[1886] such inferences should not be drawn in relation to either Hermus or Christianson.

X.12.5.2 Information conveyed by the matters alleged

2740 The Viterra Parties submitted, on the basis of the above statements, Cargill, Inc was informed that the Financial and Operational Information provided to Cargill, Inc in the course of the sale process was based on Joe White's records of its actual results. As such, the Financial and Operational Information therefore reflected, and was based upon, Joe White's actual operating practices, including cost reduction initiatives. This was conveyed by the statements referred to in paragraph 2738(1) to (8) above.

2741 Further, they submitted Cargill, Inc was told Joe White had difficulties at times obtaining the barley varieties it required. This was conveyed by the statements in paragraph 2738(4) above, but in a somewhat qualified manner.[1887]

X.12.5.3 Did the statements as made amount to disclosure of the remaining Undisclosed Matters?

2742 The information of which Cargill, Inc was informed did not amount to disclosure of the remaining Undisclosed Matters for the following reasons.

2743 *First*, neither the fact that Joe White's financial information was based on its actual results or operating practices, nor the provision of the information that, at times, Joe White had difficulty obtaining barley varieties it required, conveyed that Joe White's

---

1884 See par 731 above.

1885 This concise summary was correct, but so it is not misunderstood, the precise words stated were as set out in fn 520 above which indicated quality was no longer the main issue, with cost reduction more important; that is, it was not stated that there was not any focus at all on quality.

1886 See pars 1997-2100 above.

1887 See fn 1879 above.

financial and operating performance was underpinned by the Viterra Practices or the Viterra Policies. Nor did this information convey that, but for the Viterra Practices, Joe White could not produce and sell malt to customers' specifications, or in the volumes, or for the returns reflected in the Financial and Operational Information. This is self-evident and does not require further explanation.

2744 *Secondly*, this conclusion was fortified by the fact that the existence of the Viterra Practices and the Viterra Policies was not disclosed in the Information Memorandum or the Due Diligence. In the absence of such disclosure, the information conveyed gave no suggestion that the financial and operating performance was underpinned by either the Viterra Practices or the Viterra Policies, or that Joe White could not produce and sell malt to the same specification, volumes or returns without them.[1888]

2745 *Thirdly*, although later in time it was material that Cargill was specifically assured of Joe White's ability to produce and sell malt in the volumes and to the specifications required by customers, and in the volumes and for the returns reflected in the Financial and Operational Information.[1889]

X.12.6 Conclusion

2746 In conclusion, none of the matters raised by the Viterra Parties provided any basis for suggesting that the Undisclosed Matters were disclosed in the Information Memorandum or during the Due Diligence. The answer to the question posed by issue 12 is an unqualified no.

X.13 Prior to 4 August 2013:

(1) Were the Alleged Industry Practices engaged in by other commercial malthouses throughout the world who were in the business of

1888 See par 494 above.
1889 See issue 24 below.

supplying malt to customers, not including internal malt production facilities/units within brewing businesses and, if so, to what extent?

(2) Were the Alleged Industry Practices not ordinarily disclosed to customers?

(3) If the Alleged Industry Practices were engaged in by other commercial malthouses in the commercial malting industry, were the Alleged Industry Practices known to:

(a) other maltsters in the commercial malting industry and, if so, to what extent; and

(b) Cargill, Inc and Cargill Australia?

X.13.1 Did the Alleged Industry Practices exist?

X.13.1.1 An overriding problem with the Viterra Parties' position

2747 There was a temptation to deal with much of this issue very briefly in light of the underlying problem the Viterra Parties faced in seeking to establish that each of the Alleged Industry Practices were standard practices in the malting industry in the period leading up to 4 August 2013 (when the Acquisition Agreement was executed). There was a mismatch between the expert evidence called by the Viterra Parties and a substantial part of the case they sought to advance. In essence, in seeking to justify the conduct of Joe White (while owned by Viterra and then Glencore and Viterra), the Viterra Parties contended that the Operational Practices were standard industry practices that were *not ordinarily disclosed to customers*.[1890]

2748 The expert called by the Viterra Parties, Bruce French ("French"),[1891] gave evidence on this topic. He stated that transparency with customers was important and that maltsters generally adopted this position.[1892] His evidence was that the industry

---

1890 For clarity, the Viterra Parties did not contend that the Alleged Industry Practices were the same as the Operational Practices. Rather, they contended that the Operational Practices (and, if they were proven to have existed, the Viterra Practices) were similar to the Alleged Industry Practices such that they could be described as being, or being akin to, standard industry practices.

1891 French has a bachelor of science degree in agriculture from the University of Guelph, Ontario and a certificate in management from the Canadian Institute of Management, Calgary, Alberta.

1892 This evidence was adduced in the context of French being cross-examined about his evidence on "Certificate of Analysis Practices". Given the broad and unqualified manner in which this evidence was given, it was unclear whether this "important" practice also applied to the use of barley varieties other than those specified. The Viterra Parties submitted the evidence was confined to practices relating to Certificates of Analysis because French's primary report referred to "non-approved malting varieties" when expressing his opinion, however it is difficult to reconcile why transparency would be important with respect to Certificates of Analysis in seeking to satisfy customer specifications, but would not be important in relation to barley varieties used in seeking to satisfy customer specifications. That said, necessarily this evidence could not apply with respect to the use of gibberellic acid when prohibited. Further, French's evidence was that to the extent the Gibberellic Acid Practice was engaged in it was done in a non-compliant manner.

practice concerning Certificates of Analysis did not involve making deliberate misrepresentations to customers about the quality of the malt, or knowingly shipping malt that was out of specification without discussing it with the customer and obtaining a derogation. In explaining this evidence, he said that if there was a problem with test results because of a known bias, then a maltster would usually have an objective discussion with the affected customers to understand the problem, and to "agree exactly" on what it was *and* the reporting basis of the testing.[1893] French's account of such a usual industry position bore virtually no resemblance to how things occurred at Joe White up to 31 October 2013.[1894]

2749 The Viterra Parties sought to overcome this difficulty by contrasting French's experiences with those of the expert called by the Cargill Parties, Hertrich. They submitted that the only rational way to reconcile French's evidence regarding the existence of the Alleged Industry Practices with Hertrich's evidence was to focus on Hertrich's experience. That is, as a person who had always worked in breweries, Hertrich was not aware of them, which would have followed from the fact that the Alleged Industry Practices were not ordinarily disclosed to customers. This submission cannot be accepted. It was directly contrary to the evidence of French, at least in relation to practices that related to reporting results in Certificates of Analysis. In other words, the court would be required to reject the clear, unequivocal and unchallenged evidence of French concerning the importance of transparency in order to accept this submission. There could be no juridical basis to adopt this approach.[1895]

1893 For completeness, French gave evidence that some customers would not even recognise the fact that sampling, blending and laboratory analysis variance existed and would not allow out-of-specification values to be reported, so they would simply not get involved in any discussion which permitted out-of-specification malt.

1894 The word "virtually" is included in this proposition as there was evidence that Stewart and others spoke to Joe White's customers at times about some issues relating to malt production. However, there was no evidence that the adjustments made to specifications by way of the Malt Blend Parameters Procedure, or by way of pencilling either before or after the introduction of the Viterra Certificate of Analysis Procedure, were ever disclosed to customers, let alone agreed upon. Quite the contrary, the Reporting Practice was deliberately concealed from Joe White's customers and auditors, something French acknowledged was not a feature commonly adopted in industry policies.

1895 In making this observation, the evidence French gave about not talking a lot about the position with customers has not been ignored. French's evidence was that if there was a need to talk about adjusting results or it was appropriate to talk about it then it would certainly be raised. He also stated that it was

2750 However, given the extensive amount of evidence directed towards this issue and the fact that it was a key plank in the Viterra Parties' defence to a number of matters, a more detailed consideration follows.

X.13.1.2 Some preliminary matters

2751 French provided 3 reports. His primary report was originally dated 8 November 2018, and was the subject of amendments before being finalised on 4 March 2019. He also prepared a supplementary report dated 21 November 2018. In addition to his reports, he co-authored a joint expert report with Hertrich. Before considering the substance of French's evidence, 4 points must be noted.

2752 *First*, this part of the Viterra Parties' case amounted to a contention that all commercial malting houses throughout the world (other than internal malt production facilities) were involved in conduct ordinarily consisting of secretly: (1) changing reported results which sometimes had the effect of reporting that malt was within specification when the test results indicated it was not; (2) using barley varieties contrary to customers' specifications; and (3) using gibberellic acid when it was prohibited by customers. The seriousness of such a contention is manifest.

2753 *Secondly*, there was a very significant mistake in French's primary expert report. In this report he stated that, having trained as a malt master and worked for a limited number of maltsters for a number of years, he had been self-employed as a consultant in the malting industry since 2013. Obviously, on its face, such consultancy experience would provide a significant ground for him to be expressing expert opinions about the industry in 2013 (being the latest relevant year for the substance of the allegations about the malting industry up to 4 August 2013). However, at the outset of his cross-examination this suggested experience was exposed as being incorrect. French did

---

not something that was put first and foremost in discussions with customers. Such evidence was entirely consistent with his evidence that there was transparency in relation to such conduct occurring, and if the conduct were disclosed and agreed to, there would be no need to discuss it on every occasion when speaking with customers. Further, the evidence of Stewart to the effect that the Reporting Practice was not disclosed to customers because they already knew about it has also been taken into account. Given the material differences between what was described by French on the 1 hand and the Reporting Practice on the other hand, there was no proper basis, despite Stewart's evidence, to infer that Joe White's customers knew of the manner in which Joe White pencilled and misreported results.

not commence being a consultant in the malting industry until 2015. He apologised for the error.[1896] In short, the opinions expressed by French were based on a narrower experience of the industry at the relevant times than appeared to be the position on the face of his primary report.[1897]

2754 *Thirdly*, the cross-examination of French also exposed that much of what was contained in his expert reports was not based on his own direct personal experience or learning as an expert in the industry, but rather was based on a hypothesis. French gave evidence that he simply proceeded on the basis that the experience he had had at a limited number of organisations reflected the experience of commercial maltsters in the industry more generally. As he explained, rather than having specialised knowledge of these matters, French assumed for the purposes of giving his evidence that commercial maltsters in the industry encountered similar problems to those he had encountered; and further assumed that they would have sought to find similar solutions. To be clear, it may often be appropriate for an expert to express a general opinion in order to assist a court by way of expert evidence.[1898] Although there was no question that French had specialised knowledge of malting and the malting industry based on his training, study and experience, his experience did not extend to almost the entirety of the industry about which he was giving his evidence.

2755 *Fourthly*, while initially declining to comment on whether or not the conduct referred to in paragraph 44 of the Defence was ethical,[1899] French gave evidence that Graincorp did in fact engage in "some of the alleged practices". Later in his evidence, French asked the court if he could revisit his answer and made a distinction between ethics and legality. After confirming the ambit of his primary report, French then gave evidence that "we engaged in unethical practices". He gave further evidence that he

---

1896 There was extensive argument about the admissibility of the industry expert reports: see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 20)* [2019] VSC 44. The statement in the expert report that French had been a consultant since 2013 was expressly referred to in this ruling (at [45]), and was relied upon by me as a relevant matter in determining that French's report was admissible.

1897 See further par 2823 below.

1898 See, for example, *Arnotts Ltd v Trade Practices Commission* (1990) 24 FCR 313, 350.2-351.2 (Lockhart, Wilcox and Gummow JJ).

1899 See par 2757 below.

believed that each of the companies listed in schedule A to his primary report (in relation to which he had given evidence about their practices)[1900] had engaged in misleading customers to the extent that they engaged in the practices identified and also had behaved unethically.[1901]

2756 Each of these second, third and fourth matters referred to above detracted from any weight that might otherwise have been given to French's evidence.

X.13.1.3 The Viterra Parties' allegations, the evidence relied upon and their submissions

X.13.1.3.1 The allegations

2757 The relevant allegations were made in paragraph 44 of the Defence, which ultimately read as follows:

> They deny paragraph 27,[1902] refer to and repeat paragraphs 12, 15 to 21 and 25 to 33 above and say further that the alleged representations were not conveyed because:
>
> (a) prior to 4 August 2013, practices of the following kind were engaged in by other commercial malthouses throughout the world who were in the business of supplying malt to customers (**the commercial malting industry**), not including internal malt production facilities/units within brewing businesses (with the "commercial malting industry" being all commercial malthouses throughout the world who were in the business of supplying malt to customers, not including internal malt production facilities/units within brewing businesses):
>
> (i) practices involving the routine making of adjustments to analytical test results (in a subjective and/or objective manner, such as adjustments within two standard-deviation units) due to the inherent variability of malt and testing procedures (including the inability to repeat or reproduce precisely the same result when malt is tested more than once, and to account for anticipated or known differences between the malthouse's testing results and the customer's testing results), before reporting the qualities of the malt to customers, which sometimes have the effect of changing the recorded value from

1900 French did not give any evidence in relation to Cargill Malt or Joe White in schedule A.

1901 The Cargill Parties submitted that the court should find French's first account as to the ethics of the conduct ought to be accepted on the basis that the substance of his report was that the practices he referred to were justified and explicable. No doubt, this was part of the Cargill Parties seeking to distinguish the Operational Practices from those practices the subject of French's evidence. It is unnecessary to make any finding about which account was French's "genuine" evidence. He expressed some confusion in giving his evidence, and, in any event, his personal opinion about whether or not the conduct in question was ethical was not probative of any of the matters required to be determined.

1902 Paragraph 27 of the Statement of Claim set out the allegation that by making various statements Glencore or Viterra, or both, conveyed certain representations concerning the financial and operational performance of Joe White: see issue 15 below.

outside of the customer's specification, to within the customer's specification;

(ii) practices involving the supply of malt to customers which was produced from barley varieties other than those specified by the customer, as and when required from time to time in order to achieve the customer's specifications and requirements for malt, other than the specified barley variety, for example where the specified barley variety was no longer available; and

(iii) practices involving the use of gibberellic acid in breach of customer agreements, as and when required from time to time in order to achieve the customer's desired performing malt,

(collectively, [the Alleged] **Industry Practices**);

(b) the [Alleged] Industry Practices were not ordinarily disclosed to customers; and

(c) the existence of the [Alleged] Industry Practices:

(i) was known to most participants in the commercial malting industry, including Cargill Inc and Cargill Australia;[1903] and

(ii) the [Viterra Parties] (including, in particular and without limitation, the four "knowledge" individuals referred to in clause 31.15 of the Acquisition Agreement)[1904] did not have any awareness or knowledge of the [Alleged] Industry Practices prior to 22 October 2013.

Particulars

The [Viterra Parties] refer to Schedule A.

2758 Schedule A listed 30 maltsters, including Cargill Malt and Joe White.[1905] With respect to each maltster, the schedule identified the countries in which it operated before August 2013.[1906] The list identified whether it was said the maltster used: prohibited gibberellic acid; non-approved barley varieties; and malt blend and Certificate of Analysis procedures similar to Joe White. In relation to gibberellic acid, French's

---

1903 The reference to "most participants" in par 44(c)(i) was particularised as being 85 to 100 percent of the participants in relation to the practices referred to in par 44(a)(i), as being 65 to 100 percent of the participants in relation to the practices referred to in par 44(a)(ii), and as being 75 to 100 percent of the participants in relation to the practices referred to in par 44(a)(iii) of the Defence. In relation to the knowledge of the industry participants other than Cargill pleaded in par 44(c)(i), reference was made to a large number of paragraphs of French's primary expert report and to some of Stewart's evidence on the topic. In relation to Cargill's knowledge pleaded in par 44(c)(i), 9 pages of particulars were provided by reference to documents tendered and evidence given at trial.

1904 See par 1033 above.

1905 It did not include smaller participants in the industry, which was explained on the basis that the Viterra Parties were not aware of them.

1906 The list of the 30 maltsters and where they were said to operate was compiled by Mallesons, not French.

position was that he had insufficient knowledge to comment with respect to 13 of the 28 maltsters listed. In relation to use of non-approved barley varieties, French also stated he had insufficient knowledge to comment in relation to 14 of the 28 maltsters. As to the procedures adopted in relation to blending and Certificates of Analysis, French's position was that he stated affirmatively that all 28 maltsters used procedures similar to Joe White.

2759 As already noted, the Viterra Parties primarily relied upon the evidence of French to establish this part of its case. Commencing in 1980, French had had 38 years of experience in the malting industry "with companies eventually owned by Graincorp". This time was spent at 3 Canadian locations for 12 years, and then in technical and operational roles in Canada, the United States and Germany.[1907] As at August 2012, Graincorp produced 6.6 percent of the world's malt.

2760 For the purposes of this primary report, the first question put to French was in the following terms:

> [T]o what extent were the Viterra Policies, or any of the alleged Viterra Practices, similar to practices adopted by other malthouses prior to 4 August 2013?

2761 In addressing this question, French dealt with the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice separately.

X.13.1.3.2 The Reporting Practice

2762 French gave evidence that most malting companies had either undocumented or written procedures with respect to blending, similar to the Malt Blend Parameters Procedure. He said such procedures were designed to ensure blends were calculated to a customer's specification, which he said was an important feature commonly adopted in the industry.

2763 French then identified a number of factors he said experienced persons creating a malt blend would take into consideration in creating a blend with the capability of being

[1907] In relation to working in Europe, French had only worked for 1 European malthouse, namely Schill Malz, and did not commence that employment until September 2013.

within specification.[1908]

2764 During his cross-examination, French was taken to the Malt Blend Parameters Procedure. He agreed that, in its terms, this procedure authorised Joe White staff to use the parameters stated in place of customer specifications. He further agreed that Joe White's procedure operated as a standing authority to be able to pack and ship malt where all of the analytes were within the specifications created pursuant to the Malt Blend Parameters Procedure rather than in accordance with the customer's specifications. French acknowledged that such a standing authority was not a feature that he set out in his report which identified what he said was common industry practice. He further acknowledged that concealing the procedure from auditors and customers was another feature not commonly adopted in industry.

2765 Having given this evidence, French also stated that he thought the Malt Blend Parameters Procedure was designed so that malt met customer specifications. He stated that his evidence was given on the assumption that adhering to the Malt Blend Parameters Procedure would ensure that customer specifications would be met. But he then acknowledged that he would have to go through the document and compare its details with the customer specifications, and that he had not done that because the customer specifications were never provided to him. Further, French made no attempt to address that part of the Malt Blend Parameters Procedure which permitted a plant manager "where appropriate" to ship malt if a parameter fell outside the identified parameters or if an analysis value for a parameter was not available.[1909] Self-evidently, this aspect of the procedure was not concerned with complying with customer specifications or even with the alternate parameters stipulated in the Malt Blend Parameters Procedure.[1910]

1908 These factors included: variability of analysis between bins; variability within bins; the inclusion rate of malt from a bin; known changes in theoretical blend analysis (when compared to analysed analysis); bias between the maltster's laboratory and the customer's laboratory; and the method of calculation of the theoretical blend within the blending software.

1909 See par 236 above.

1910 In order to determine appropriateness, a plant manager was directed that she or he should assess the potential impact of an approved blend on customer shipment quality and its impact on all parameters: ibid. Such an assessment proceeded on the basis that the malt did not comply with the parameters as specified.

2766 In short, contrary to the position expressed in his report, French was unable to give meaningful evidence as to whether or not the Malt Blend Parameters Procedure was designed to ensure customer specifications were met. Accordingly, for this reason alone, his statement in his primary report that, based on his experience, he was of the opinion that Joe White's blending procedures as documented in the Malt Blend Parameters Procedure were similar to practices adopted by 85 to 100 percent of malthouses, was not soundly based. Further, and in any event, the manner in which French formed the opinion that 85 to 100 percent of the commercial malting industry utilised the particular blending procedures referred to was completely unexplained. In these circumstances, little, if any, weight can be given to such an opinion.[1911]

2767 French also expressed opinions with respect to the Malt Proficiency Scheme.[1912] After giving some details, he stated that the commercial malting industry operated on the basis that any test result within 2 standard deviations was acceptable. French narrowed this very general statement during his oral evidence.

2768 Initially, he stated that any result within 2 standard deviations "can be within specification", but then asked to change his answer. Next, he stated results would be within specification if they were "then 2 standard deviations of their upper or lower spec as appropriate". In further clarifying the position, French gave evidence that there was also a need to look at the trend line, because if there was a trend of a number of data points sequentially that were out of specification but within 2 standard deviations then the result could actually be out of specification notwithstanding it was within 2 standard deviations. In expanding on the last of this series of answers, French stated it was not permissible to simply look at a result on a one-off basis, but rather there were a lot of factors that were required to be taken into account when a competent maltster made adjustments to results. French then acknowledged that a

---

1911 Particularly in light of the matters set out in pars 2753-2754 above.

1912 He prefaced this by stating it was well accepted in the commercial malting industry that the malting analytical testing either by the methods of the European Brewing Convention or of the American Society of Brewing Chemists was not precision testing and had a high degree of variation both within a laboratory and between laboratories.

result that read within 2 standard deviations could still be out of specification.[1913] Equally, he gave evidence that due to variability, it was common to get out-of-specification test results when in fact the malt was within specification.

2769 Under cross-examination, French agreed that laboratories participated in the Malt Proficiency Scheme in order to determine whether they were performing satisfactorily by reference to their peers. He also agreed that it was not part of such schemes to justify maltsters misrepresenting the results of testing.

2770 With respect to the capability of analytical testing, French said there were inherent limitations in some testing methodologies. He gave evidence of a lack of understanding of this by some breweries, which resulted in specifications being provided for some analytes with lower or upper limits that were beyond the capability of analytical testing. He said that, as a result of this, it was accepted in the commercial malting industry that results could be adjusted with an objective or subjective approach and that most maltsters had procedures allowing for this. French noted that the adjustment of results was sometimes referred to in the commercial malting industry as pencilling. French then directed his attention to the Viterra Certificate of Analysis Procedure and stated that this procedure ensured that there were clear objective guidelines for employees to follow with clear responsibilities and approval authority.[1914]

2771 A critical part of French's primary report identified the factors that he said must be taken into consideration "and are considered by all maltsters" when making adjustments to malt analyses. Those factors were:

a. Does the theoretical blend have the capability to be within specification?[1915]

1913 In giving this answer, French said he had been told by statisticians that if there were 7 results out of specification but within 2 standard deviations then statistically a result could be out of specification.

1914 An assessment of the objectivity or otherwise of the Viterra Certificate of Analysis Procedure is provided in issue 9 above.

1915 As an aside, French gave evidence of his direct experience of occasions where some of his customers' specifications were reported based on the results of the theoretical blend when the shipping time did not allow for wet chemistry testing to occur. He said this was done with the customers' permission.

b. Is the sample representative of the malt shipment? Is it appropriate to take another sample if possible, for retesting?

c. Was there a problem in the laboratory that could impact results[?] Was there any shift in the analysis of the control sample[?] Is a retest warranted?[1916]

d. Is the malt analyte out of specification consistent with other malt analysis for that customer?

e. Will this be an outlier in the overall shipping trend?

f. Were there any known problems with the blend, for example:

i. Bin running long or short;

ii. Bin unexpectedly going empty.

g. Should an analyte be out of specification how sensitive is the brewery to this analytical parameter?

h. Has there been a discussion about this analytical parameter being difficult to achieve with a customer, with either a formal or informal derogation?

i. Is there a trend (either up or down) in a number of shipments based on the wet chemistry analysis or is there a shift in the process based on a number of shipments?

2772 After identifying these, French stated that he understood that Joe White's staff appeared to be well aware of these factors and observed that some of them were "partly documented" in the Viterra Certificate of Analysis Procedure.[1917]

2773 Under cross-examination, French acknowledged that the practice that he believed was industry practice that gave rise to adjustments being made necessarily involved a maltster going through a process of investigation of these factors he had identified. He agreed that part of this process would involve investigating the reason for the variance and determining whether retesting might be required. With respect to the existence of variance in sampling, blending and laboratory analyses, he said this did

---

1916 During cross-examination, French was taken to McIntyre's evidence about Joe White informing customers that malt had been re-analysed when it had not been and different results were pencilled without any further testing: see par 86 above. Further, there was no evidence given by any witness to suggest such conduct was standard or acceptable. French said it was never part of his practice to engage in such conduct.

1917 This understanding was based on reviewing Stewart's and McIntyre's witness statements, however French was not given access to the oral evidence Stewart gave at trial.

not justify adjustments to every laboratory result in every situation prior to reporting to customers.[1918] In confirming this position during cross-examination, French went on to say that a variance would require a complete investigation as to whether the malt was truly within the specification before any adjustment was made. He continued, "[i]n other words, what we were doing was using this knowledge to adjust based on analytical variation, partly, to properly describe the malt as being within specification".

2774 Further, French stated that any pencilling of results could not be properly done simply to make results look as if they were within specification without going through an investigation of the factors he had identified, and such an investigation would not involve the participation of unqualified persons.[1919] Furthermore, he stated that the process did not involve making adjustments for commercial reasons alone.[1920] Moreover, French gave evidence that to the extent Joe White's practices involved any of the conduct referred to in this paragraph, he would have to qualify his opinion about what he understood to be Joe White's practices being similar to practices followed by Graincorp (and therefore, by extension, most malthouses).

2775 Even without this qualification of his evidence, most if not all of the factors identified by French said to form part of the industry practice of pencilling were non-existent at Joe White in the implementation of the Reporting Practice. Certainly, none of them were engaged in as part of a structured procedure, in stark contrast to the "necessary" steps that were identified as part of French's evidence.

2776 For completeness, French said that in his experience on occasions there were results that were adjusted even when the results were outside 2 standard deviations "after appropriate consideration of the factors enumerated above".

2777 The matters referred to in paragraphs 2763 to 2772 above were discussed in paragraphs 32 to 40 of French's primary report. Later in his report, French stated as

---

1918 This was the agreed position of the experts.
1919 Compare fn 77 above.
1920 Contrast pars 2237-2238 above.

follows:

> For the reasons provided in paragraph[s] 32-40 above, I am of the opinion that the policies, procedures and practices in place at [Joe White] with respect to the Certificate of Analysis generation, as documented in the Viterra [Certificate of Analysis Procedure] were similar to practices followed by most malthouses prior to and on or about August 4, 2013. By most malthouses, I mean 85%-100% of maltsters in the commercial industry, including those identified in Column C of Confidential Schedule A.

2778 Yet again, how French arrived at this conclusion was not explained. For example, how French chose 85 percent (as opposed to 80 percent or some other number) remained a complete mystery.

2779 French recorded a similar conclusion based on paragraphs 24 to 45 of his primary report. For the reasons already explained,[1921] these conclusions can be given little, if any, weight.

X.13.1.3.3 The Varieties Practice

2780 In addressing this topic, French stated that most customers would stipulate the varieties of barley to be used in the terms of the malt purchase contract. He also stated that most maltsters put in place a planning process "similar to that which was undertaken by Joe White" to ensure barley varieties were purchased so that the correct varieties could be supplied at the proper time. Under cross-examination, French indicated that he had assumed Joe White's processes could be described this way. Further, he acknowledged that purchasing non-approved barley varieties for customer use was not part of the planning process he was referring to.

2781 French also gave evidence of a practice of using varieties not approved by customers "to ensure that malt shipments [met] analytical specifications and that brewing performance requirements [were] met". Further, he said the industry recognised that the contribution to brewery performance of a particular barley variety was of less importance than the "malt analytical analysis". In this regard, his evidence was that the values of the relevant analyte levels of each batch contributing to the malt shipment were of greater impact on the final performance in the breweries.

1921 See pars 2766, 2778 above.

Furthermore, French spoke in terms of non-approved varieties being used for the purpose of producing better quality malt. During cross-examination, French accepted that none of the reasons given for using non-approved varieties was to acquire barley more cheaply in an effort by the maltster to save money.

2782 It must also be noted that, in referring to non-approved barley varieties being used, French confined himself to non-approved varieties that were accredited as a malting variety. The practice of which he spoke said accredited varieties would "always" be used unless the customer agreed otherwise. It followed that, unless a customer had expressly approved the use of Hindmarsh,[1922] then Joe White's regular use of that barley variety in substitution for an approved variety would never fall within French's description of how non-approved varieties were used in the industry.[1923]

2783 Accordingly, none of the reasons given for using non-approved varieties matched the underlying reason for much of Joe White's non-compliance with barley varieties required. Further, French's evidence did not disclose the extent to which he said non-approved varieties were used in the industry as a percentage of total volumes of malt supplied, or generally in what percentage in any particular batch or batches.

2784 After giving the evidence referred to above, French then made the statement that 60 to 100 percent of malthouses in the commercial malting industry used non-approved malting varieties. How these percentages were arrived at was completely undisclosed in his report.[1924] In light of his evidence about this conclusion being based on a hypothesis,[1925] and the fact that the basis of any such hypothesis had not been disclosed in his report,[1926] very little, if any, weight can be placed upon this conclusion.

1922 There was no evidence that a Joe White customer ever did.

1923 Indeed, French expressed the opinion that the use of Hindmarsh barley was not in accordance with industry practice, except in respect of contracts that permitted the use of feed-grade barley.

1924 Including how he was able to reach this conclusion when he had insufficient knowledge in relation to 14 of the 28 maltsters identified.

1925 See par 2754 above.

1926 As to the assumption he made as revealed during cross-examination (see par 2754 above), there was no proper basis for the court to decide whether that assumption was soundly based.

X.13.1.3.4 The Gibberellic Acid Practice

2785 French's evidence on this topic was very limited. He stated that he was aware, generally without saying how, that gibberellic acid was used in the commercial malting industry worldwide for some customer contracts that stipulated it was not to be used. He then gave a single example of a "major brewer" in Japan initiating a testing program before 4 August 2013 to detect the use of exogenous gibberellic acid.[1927] Later in his report, French stated that, to his knowledge, gibberellic acid was detected in a number of shipments and that the testing was industry knowledge. Beyond these statements, no further details were given.[1928] In short, French's report did not record any observations that he made directly about the use of gibberellic acid in relation to any of the maltsters listed in schedule A other than those about which he said that he had insufficient information.

2786 After providing this very limited information, French stated that he was not surprised to see the non-compliant application of gibberellic acid by Joe White. French then stated that "[t]herefore" it was his opinion that using gibberellic acid when it was not permitted was a practice adopted in the industry before 4 August 2013 by 70 to 100 percent of malthouses. Again, French failed to disclose any reasoning or explanation as to how he reached those figures.[1929] For similar reasons to those expressed with respect to non-approved barley varieties, in the absence of any real reasoning for the opinion expressed, very little, if any, weight may be attached to this opinion for the purposes of this case.

2787 In his re-examination, French gave evidence that he had direct knowledge of Graincorp companies using gibberellic acid when it was prohibited. However, consistent with his evidence about hypothesising about other maltsters, there was no suggestion that he had any such knowledge with respect to any of the other companies that he identified in schedule A.

1927 French gave evidence that he had been told confidentially by the brewer that it was doing the testing program.

1928 Under cross-examination, French stated he was unaware how many times the testing took place.

1929 Again, there was no attempt to explain how he was able to reach this conclusion when he had insufficient knowledge in relation to 13 of the 28 maltsters identified.

X.13.1.3.5 The position adopted by the Viterra Parties

2788 In their closing submissions, the Viterra Parties failed to address any of these substantial difficulties. In essence, for various reasons, the Viterra Parties submitted that French's evidence should be preferred to Hertrich's evidence. Regardless of whether or not Hertrich's evidence was adversely affected by the matters raised, that did not assist the Viterra Parties to address or overcome the significant and fundamental inadequacies in French's evidence.

X.13.2 Knowledge of practices similar to the Viterra Practices

2789 A further question asked of French was, to what extent were practices such as the Viterra Practices, or similar practices, engaged in sufficiently by malthouses such that participants in the malting industry on or around 4 August 2013 would have been likely to have been aware of them as practices sometimes engaged in by malthouses? This question was also addressed separately with respect to the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice.

2790 By way of general observation, as it has not been established that the Alleged Industry Practices existed, this question does not arise. For completeness, whatever practices existed in the industry with respect to changing test results or substituting barley varieties, there was no probative evidence at all, beyond the clandestine conduct of Joe White itself, to support a finding that any such conduct was ordinarily not disclosed to customers.[1930] Outside the procedures of Joe White, the evidence unequivocally indicated that if a maltster was mindful to supply malt with specifications other than in accordance with a supply contract, then it would ordinarily disclose that to its customer and seek agreement to the non-complying shipment.[1931] Notwithstanding this fundamental obstacle to this part of the Viterra Parties' case, even if the Viterra Parties had established the Alleged Industry Practices existed, there were further material difficulties concerning the Reporting Practice and the Varieties Practice because of this issue.

1930 This comment concerning the lack of probative evidence includes a reference to the tentative views expressed by Viers in November 2013: see pars 1589-1590 above. See also pars 2804-2805 below.

1931 See par 2748 above.

2791 French's position in relation to the Reporting Practice and the Varieties Practice proceeded on the assumption that, contrary to what has been found above, the practices adopted by Joe White reflected the common practices in the commercial malting industry which French described in his evidence. Accordingly, the opinions he expressed about knowledge of what he said were common practices did not have a sufficient nexus to either the Reporting Practice or the Varieties Practice to be relevant. Further, similar to the serious deficiencies noted about the opinions expressed above, French again expressed his views about knowledge of "most participants" in the commercial malting industry without identifying how he arrived at the percentages that did.[1932] For this reason alone, no real weight could properly be attached to these opinions.

2792 In relation to the Reporting Practice, French also commented upon the draft presentation circulated by Evers within Cargill in February 2014.[1933] French referred to his experience in stating that the "solutions" identified in that draft presentation[1934] were similar to practices utilised within the commercial malting industry. By way of examples, he stated that: (1) where an analysis was required before laboratory results were available, customer approval would be gained to report the theoretical blend followed by the laboratory testing of samples representing each blend; and (2) some customers were open to discussion about analytical capability and would adjust or widen specifications to allow for analytical variability.[1935] It is sufficient for present purposes to note that what was contained in the draft presentation were not "solutions" being put forward by Cargill, but were suggestions of possible solutions by Evers, a mechanical engineer and a reliability excellence leader responsible for efficiency and reliability of assets. He was not a qualified maltster and he did not

---

1932 Again, French expressed the view that 85 to 100 percent of participants knew of the Reporting Practice and 65 to 100 percent knew of the Varieties Practice, or practices similar to those practices.

1933 See par 1644 above.

1934 See pars 1649-1650 above.

1935 French also said that in his experience most customers would have 1 or more analytic specification "that fell outside the capability of the testing model, in which the specification limits were within [2] standard deviations of the testing method". Leaving aside the limited nature of French's relevant experience (see pars 2753-2754 above), beyond this very broad statement no further details were given. In these circumstances, the evidence was of limited probative value.

work with customers.[1936] Further, the unequivocal evidence was that none of the possible solutions were being contemplated other than on the basis that, if they were to be adopted, it would only be with the consultation and approval of customers.[1937]

2793 In relation to the Varieties Practice, French's primary report gave 3 examples to demonstrate why it was that he said that the common practice of using non-approved varieties was known.

2794 *First*, French referred to the conduct of Asahi in about 2010 or 2011 of initiating tests of malt shipped to it from Australia, Europe and Canada for varietal purity inclusion rates. French stated that these tests allowed Asahi to objectively compare suppliers' analyses and malt brewery performance from a given geography and investigate differences which arose after taking into account known disparities of malthouses or barley supply within the region. French did not identify how many times Asahi tested its malt or what proportion of malt was tested over any given period of time. Further, French provided no results of any testing.[1938]

2795 *Secondly*, French referred to a "major importer of a significant quantity of malt into Africa, mostly from the European Union" that had variety specifications. This importer was said to perform random analyses of third-party samples, using a method known as polymerase chain reaction, to determine the varieties in a malt shipment. French said that he was aware this process was put in place "prior to and on or around" August 2013 due to non-compliance issues with variety integrity. Although his report gave no such detail, under cross-examination French said that he knew this particular importer tested the majority of shipments. He provided no details of how he knew this or the results of any such testing.

2796 *Thirdly*, French gave another example of polymerase chain reaction testing being made

---

1936 See pars 1611, 1645, 1649-1655 above.

1937 See par 1617, 1655 above.

1938 Although not put to French, it would appear that the decision of Asahi to test malt for varietal purity would be equally consistent with Asahi checking whether minimum varietal purity levels of 95 percent were being met without necessarily being concerned that maltsters were deliberately using more significant quantities of unauthorised barley varieties: see par 2422 above.

available to brewers by an organisation in Nancy, France.[1939] However, his report did not state how many brewers had utilised the test, what proportion of malt might have been tested or what the results of any tests might have been.

2797 In summary, the limited and opaque information provided with respect to each of these examples meant that the probative value of the evidence was equally limited.

2798 Finally on this question, French addressed gibberellic acid. He referred to earlier matters in his report in repeating that, in his experience, gibberellic acid was used throughout the commercial malting industry "as required, in a non-compliant manner on a worldwide basis". Obviously, this took things no further in relation to the pre-existing deficiencies on this topic. However, he introduced further matters.

2799 In addition to referring to a major Japanese brewer,[1940] French gave 3 other examples of the use of gibberellic acid. The first of these concerned the use of gibberellic acid in certain circumstances in North America, but said nothing about whether or not customers consented to its use. The second example referred to French's experience in Europe "to produce malt to specification and sometimes … in a manner not compliant with customer contracts"; but French had no experience of working in Europe before September 2013. The third example referred to an independent organisation in the United Kingdom, Brewery Research International, which offered a service to detect any exogenous gibberellic acid in malt. Further, French gave evidence that he was informed by that organisation that the service was being offered as a result of demand from the industry. Notably, again, French gave no evidence about how many brewers used the service, the number of tests that had been carried out or the result of any testing.

2800 After referring to these matters, French then stated:

> Therefore, I am of the opinion that the use of [gibberellic acid] similar to the Viterra practice was sufficiently engaged in by some malthouses prior to and on or around August 4, 2013, such that participants in the commercial malting

---

1939 IFBM was referred to as the organisation, which French said in part stood for International Fermentation Beverage but he did not know for what the "M" stood.

1940 See par 2785 above.

> industry would likely have been aware of these practices. In my opinion 75-100% of participants in the commercial industry would have been aware of these practices.

2801 Yet again, the reasoning behind this opinion was far from apparent. What was clear was that, given French's limited exposure to the industry at large, this opinion necessarily contained a great degree of speculation and could be given very little weight, if any.

2802 Another question asked of French concerned information disclosed during the Due Diligence. Most of this evidence was ruled inadmissible.[1941] An observation made by French concerning the Varieties Practice remained. French stated his understanding that Cargill had a policy of strict variety compliance. He stated that this would not be typical of industry practice. Beyond this very broad statement of his understanding, precisely what French knew of Cargill's policy was not identified in his report. Further, this opinion must necessarily be confined to French's experience in the industry generally up to 2013, which was exposed during cross-examination to be limited.[1942]

X.13.3 If the Alleged Industry Practices existed, were they known to other maltsters, including Cargill?

2803 Again, this question does not arise. But to be clear, although key decision-makers of Cargill was aware of the alteration of Certificates of Analysis, including by pencilling, the use of barley varieties in substitution for contractually specified barley varieties and the use of prohibited additives to assist in meeting customer specifications in some parts of the malting industry, none of this amounted to knowledge of anything like the Alleged Industry Practices (or the Viterra Practices). In other words, Cargill's knowledge of some conduct in the industry, ranging from nefarious to dubious, did not equate to knowledge, or even grounds for suspicion, that Joe White was engaged in such activities. Further, for reasons discussed elsewhere,[1943] Cargill was not put on

---

1941 *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 20)* [2019] VSC 44, [50(27)].
1942 See par 2753 above.
1943 See issue 12 above.

notice before executing the Acquisition Agreement that any such conduct was occurring at Joe White.

2804 The Viterra Parties' submissions concerning industry knowledge proceeded on the premise that the Alleged Industry Practices had been established by the evidence of French, together with some related evidence of Stewart, McIntyre and Testi. It suffices to say that the evidence of none of these further witnesses was probative of industry practices as alleged.[1944]

2805 For completeness, they also referred to evidence of Cargill employees. In relation to Eden's evidence, this included his evidence about "malt lore" concerning "smoothing", but that evidence was confined to a single instance with respect to a Chinese business and, in Eden's own words, was based on hearsay. They also referred to his evidence about the way Cargill ran its malt business,[1945] and Cargill's own experience with "smoothing" by businesses it had acquired.[1946] As for De Samblanx, they referred to his evidence about customers assuming a precision with analytical capabilities that could not be delivered,[1947] and the fact that there are numerous sources of analytical variance in the testing of malt, including various examples. With respect to Viers, they referred to his evidence that Cargill would see the performance of a competitor very rarely, he guessed maybe once or twice a year, and would wonder whether or not they had engaged in changing results in order to make it appear that they complied with specifications.[1948] Finally, they referred to a case study prepared by Cargill in November 2012.[1949]

2806 By reason of these matters, it was submitted that Cargill had knowledge of the Alleged Industry Practices in relation to Certificates of Analysis. As already discussed, Cargill's limited knowledge of actual or possible improper practices in the commercial malting industry and knowledge of the variability of test results did not equate to, or

1944 See, for example, par 176 and fn 195 above.
1945 See par 1645 above.
1946 See, for example, pars 1091-1094 above.
1947 See par 1646 above.
1948 See par 1093 above.
1949 See fn 686 above.

come close to, knowledge of the Alleged Industry Practices.[1950]

2807 In relation to the Alleged Industry Practices concerning barley varieties, the Viterra Parties referred to evidence concerning Cargill's knowledge in June 2013 of a Cargill malthouse in Argentina blending up to 5 percent of old crop and not reporting this in Certificates of Analysis, with the possible consequence that the guiding principles of the Cargill Code had been compromised.[1951] In relation to this evidence, there was nothing to suggest that this conduct was anything other than an isolated matter with respect to only 1 customer or that it involved misstating individual specifications or barley varieties used. In short, it did not provide any basis for the existence of the Alleged Industry Practices.

2808 Next, reference was made to Hughes' notes of the 15 October Meeting and his reference to Cargill raising the issue of barley suitability on several occasions.[1952] For reasons stated above,[1953] including the fact that Hughes did not give evidence, the weight that can be attributed to these notes was limited where the notes were in direct conflict with the sworn testimony of trial witnesses. In any event, the notes did not identify what it was that Hughes was stating Cargill understood was the industry practice with respect to barley substitutability. Without any evidence from Hughes, it was entirely unclear as to what it was that Hughes was noting. To the extent that it might be said these notes suggested that Cargill representatives understood that there was a standard industry practice in existence in October 2013 which was the same or similar to the Varieties Practice, I do not accept that this was an accurate statement of Cargill's position.

2809 Next, the Viterra Parties referred to the evidence concerning the use of Hindmarsh after Cargill took control of Joe White.[1954] However, it was not established that after 1 November 2013 Hindmarsh (being a barley variety not accredited for malting) was

---

1950 See par 2803 and fn 824 above.
1951 See pars 632-635 above.
1952 See pars 1120-1121 above.
1953 See pars 1148-1154 above.
1954 See par 1562 above.

included in blends without disclosure to the relevant customers.[1955]

2810 In conclusion, none of the matters put forward by the Viterra Parties established that Cargill was aware of anything that resembled the Alleged Industry Practices concerning barley varieties.

2811 Finally, in relation to gibberellic acid, the Viterra Parties referred to an email chain in April 2012 to which Viers was a party and contended that, based on its contents, Cargill suspected that some of its competitors, including Rahr Malting, may have been using gibberellic acid in a non-compliant manner in order to improve malt quality and obtain an advantage over Cargill. This contention was not put to Viers, or any other Cargill witness. Although an email in the chain referred to the use of a green pencil,[1956] and that testing for gibberellic acid was "supposedly difficult to do", that same email suggested that Rahr Malting usually selected high-quality barley, had a good malting team and excellent customer relations. Further, there was nothing in the email chain that stated that Cargill suspected use of gibberellic acid when it was prohibited.[1957] Furthermore, a later email in the chain identified a number of Japanese customers that also, it was said, were capable of analysing the presence or otherwise of gibberellic acid.

2812 In these circumstances, a single email chain referring to a single competitor in such terms did not amount to probative evidence that Cargill suspected "competitors" may have been using gibberellic acid where prohibited by breweries; much less that an industry practice of the type alleged existed.

2813 Next, the Viterra Parties referred to the fact that gibberellic acid was present in Joe White's chemical register, which was apparent during the Due Diligence and

---

1955 See fnn 952, 1021 above.

1956 This was apparently a reference to changing test results of an analysis in order to make it appear that a specification had been met when it had not.

1957 The Viterra Parties contended it could be inferred that the email chain was referring to non-compliant use of gibberellic acid on the basis that the email discussed malt supplies to Japanese brewers who generally prohibited use and the extent to which brewers were able to test for the presence of exogenous gibberellic acid.

additional evidence in that regard.[1958] However, in circumstances where many customers permitted the use of gibberellic acid, this fact gave no indication of prohibited use.[1959]

2814 Lastly on this topic, the Viterra Parties referred to the evidence concerning De Samblanx's lack of surprise during the 15 October Meeting when being told of the use of gibberellic acid contrary to customer requirements. For reasons stated above,[1960] that account of De Samblanx's reaction has not been accepted.

2815 In summary, these additional matters raised by the Viterra Parties did not take the position any further.

X.13.4 Conclusion

2816 French's evidence and the other evidence relied upon by the Viterra Parties did not establish the Alleged Industry Practices existed, or that anything remotely resembling such practices were common practice in the commercial malting industry.

X.13.5 Some further remarks

2817 In light of the conclusions reached, it is unnecessary to consider the evidence of Hertrich.[1961] Suffice to say that he rejected the suggestion that any of the Alleged

---

1958 See pars 819, 1003 above.

1959 Eden was cross-examined at length on the issue. He could not recall whether he was told that Joe White was only using gibberellic acid when permitted. His evidence was there was no way Cargill could have known about gibberellic acid being used when prohibited because Cargill did not have access to the customers' contracts. When he was asked why he proceeded in such circumstances, Eden said Cargill was told Joe White had systems, processes and an outstanding high-performing team that meant it was a really well-run business. Eden acknowledged the possibility that a high-performing team of a well-run business could use gibberellic acid when not permitted, but he gave evidence he accepted on trust that this would not be occurring. See also par 788 above.

1960 See pars 1133-1140, 1148-1154 above.

1961 Hertrich's background was as a customer of malthouses in working for 3 large brewing companies in the United States. He initially spent 15 years of training and holding operational positions in breweries, and then for the next 28 years (until his retirement in 2009) he worked in senior brewing and head office positions. In his supervisory roles, he worked with every commercial malting company in the United States and Canada. Further, when employed by Anheuser-Busch, Inc the largest global brewing operation (until it was taken over), his supervision included malt plants in Ireland, England, Belgium, Spain, Hungary, Argentina and China. His technical supervision responsibility functions included developing malt purchasing contract shipment specifications, engaging with malting companies on their ability to meet contract specifications, resolving issues concerning compliance with specifications, evaluating and approving new malting barley varieties, attending annual specification meetings with

Industry Practices were standard practices in the malting industry. In broad summary, his evidence was to the following effect:

(1) It was not widespread or generally accepted practice in the malting industry to make adjustments to test results, including altering reported test results, so as to record them as being within specifications when they were not.

(2) Although he recognised the limitation of his opinion because he worked for breweries rather than inside a malting company laboratory, in his experience in managing internal brewery malting plant operations test results were not adjusted.

(3) Adjusting results by standard deviation as a formal procedure was not a recognised methodology.

(4) It was not widespread or generally accepted in the malting industry to substitute barley varieties not detailed in the supply contract or to substitute non-approved varieties without the customer's knowledge or consent.

(5) It was a further step away from accepted practice to substitute malt made from feed barley, as such barley had not even met the minimum standards for accreditation as a malting barley.

(6) When the brewer supply contract specifically prohibited its use, it was not widespread or generally accepted in the malting industry to use gibberellic acid in the production of malt without the customer's

---

malting companies, carrying out regular visits to every major malt plant in North America, representing 3 brewing companies at the American Malting Barley Association, representing Anheuser-Busch, Inc at the Canadian Brewing and Malting Barley Research Institute, developing malting plant processing specifications, the development of finished malt shipment blends, supervising the operation of internal malting plant laboratories in the generation of Certificates of Analysis, ensuring the resolution of any brewery performance process issues, and evaluating malt plant engineering with respect to processing capability, renovation design, new plant design and construction.

knowledge or consent.[1962]

(7) Reputable malting companies take a contractual requirement prohibiting gibberellic acid very seriously.

(8) Inherent limitations of testing methodology and sampling did not provide justification to make adjustments to test results without disclosing that to the customers.[1963]

(9) It was a widespread and generally accepted practice within reputable malting companies that, when malt was produced out of specification, the customer would be informed of that and permission would be sought to release the shipment on the disclosed specifications.

2818 It is also instructive to refer to Hertrich's evidence about the relationship between malt supplied, beer produced and Certificates of Analysis. His evidence was that the brewing process control was based on managing the natural brewing process to limit the range of outcomes into as narrow a band as possible. To control variation, brewers created specifications that detailed target values, maximum values and minimum values on multiple measurement parameters. Further, brewers formulated malt specifications with the knowledge of the relationship between malt supplied and the beer to be produced, including the malt drivers of beer outcomes, with the goal of setting malt specifications that would deliver reliable results for each brewer's specific process for a specific beer. A Certificate of Analysis was provided to the brewer as confirmation that its specifications had been met.[1964]

2819 Further, in his experience, very few brewing companies performed malt analysis on

---

1962 Hertrich gave evidence that the brewers for whom he had worked had audit programs which included unannounced inspections of maltsters operations 4 times a year at every malting company in North America and twice a year for all other malting companies supplying malt. The inspections included looking at additive equipment and the presence of additives. He said "we" had a no additive policy and he was confident additives were not used, although he conceded if it were used in a particular shipment, it would not be apparent to the brewer unless the individual shipment was tested.

1963 Hertrich suggested that limitations in testing methodology were not a foreign concept to brewers, who understood the limits of sampling method accuracy at a higher level than maltsters based on the large number of complex tests that were run on beer during its brewing, packaging and release for shipment.

1964 Subject to the understanding referred to in fn 1963 above.

incoming malt shipments to confirm the shipment analysis, but rather relied on the accuracy of the Certificate of Analysis.

2820 On the issue of variance, Hertrich gave evidence that brewing was a natural process that employed agricultural raw materials. In addition to this source, there were multiple sources of variation throughout the brewing process. The brewing process control was based on managing the natural process to limit the range of outcomes. In order to control variation from all raw materials, not only malt, brewers created shipment specifications.

2821 Strict adherence and compliance to specifications did not guarantee success. Equally, non-compliance with specifications did not guarantee failure. However, diligence in the application of specifications limited the range of potential outcomes in the malting process and the brewing process.

2822 On another matter, Hertrich prepared a short report in November 2018 responding to French's amended report dated 8 November 2018 (which preceded French's amended expert report tendered at trial). In addition to Hertrich stating that nothing in French's 8 November 2018 report altered the views he had previously expressed, he referred to a new paragraph inserted by French. This new paragraph referred to French's experience that it was common to adjust Certificates of Analysis based on analytical testing variability, which French said was done in part by reviewing the trend line of each particular analyte.[1965] Hertrich stated he did not agree with this opinion. He referred to his own experience and expressed the opinion that analytical results in Certificates of Analysis were not adjusted at all, including any possible adjustments with respect to analytical testing variability or by the use of trend line analysis. By reference to the European Brewing Convention[1966] and the American Society of Brewing Chemists, Hertich explained why there was no justification to alter any specific result as part of a properly run laboratory process. Hertich made it clear under cross-examination that his evidence in this regard was not confined to vertically-

1965 See also pars 2768-2771 above.

1966 This convention was also referred to in the evidence as the European Brewery Convention.

integrated operations where the maltster and the brewer were part of the same enterprise.

2823 Finally, before leaving this topic, an observation must be made about the status of French's evidence generally. The court was required to make rulings with respect to admissibility before French gave his evidence. While some of his evidence was ruled inadmissible, much of the evidence was permitted to be adduced based on the contents of his reports as they stood.[1967] I feel compelled to state that if the evidence given by French at trial had been given by way of a voir dire before any ruling on admissibility, it would have been highly likely that substantially more, if not all, of French's evidence would have been ruled to have been inadmissible as it became apparent that the opinions he expressed were largely speculative and based on, relevantly, very limited specialised knowledge.[1968]

X.14 Was it the fact that each of the Viterra Parties did not have any awareness or knowledge of the Alleged Industry Practices prior to 22 October 2013, including that none of Rees, Fitzgerald, Mann and/or Mattiske had any such awareness or knowledge?

2824 In light of the conclusions reached in issue 13 above, this issue necessarily fell away.

2825 For completeness, the references to Rees, Fitzgerald, Mann and Mattiske in the question as posed were a consequence of those persons being referred to in clause 31.15 of the Acquisition Agreement.[1969] If I am incorrect in the determination of issue 13 above, and the Alleged Industry Practices existed on and before 4 August 2013, then there was no evidence to suggest that any of Rees, Fitzgerald, Mann or Mattiske were actually aware of the Alleged Industry Practices or any common industry practices similar to the Alleged Industry Practices.[1970]

1967 *Cargill Australia Ltd v Viterra Malt Pty Ltd* (No 20) [2019] VSC 44, [50].

1968 In making this observation, it is not intended to make any comments about the expertise of French as a maltster or the veracity of his evidence with respect to how practices were engaged in at Graincorp.

1969 See par 1033 above.

1970 This finding is confined to actual knowledge and does not otherwise touch upon deemed knowledge for the purposes of cl 31.15 of the Acquisition Agreement.

X.15 Did Glencore and/or Viterra make any, and if so, which, of the representations pleaded in paragraph 27 of the Statement of Claim, including in light of: the Sale Process Disclaimers (pleaded in paragraph 31 of the Defence); the Acquisition Agreement Liability Terms (pleaded in paragraph 37 of the Defence); and the Alleged Industry Practices?

X.15.1 The pleadings

2826 By paragraph 27 of the Statement of Claim, Cargill Australia alleged that by:

(1) The Information Memorandum Statements.

(2) Disclosing the Financial and Operational Information.

(3) Further or alternatively, the Operations Call Statements.

(4) Further or alternatively, the Commercial Call Statements.

(5) Further or alternatively, the Management Presentation Statements.

(6) Further or alternatively, failing to disclose the Undisclosed Matters,

"Glencore and/or Viterra" conveyed representations ("the Financial and Operational Performance Representations") that:

(7) The production, sales and earnings figures stated in the Financial and Operational Information were based upon strict quality control procedures and analysis.

(8) The production, sales and earnings figures stated in the Financial and Operational Information were based upon customer contracts including customer specifications being complied with.

(9) By reason of the matters set out in the 2 preceding subparagraphs, the production and sales figures stated in the Financial and Operational Information had been properly and lawfully achieved.

(10) Joe White had not withheld or concealed material information from customers.

(11) The assets of the Joe White Business were sufficient for Joe White to sell malt in the volumes and for the returns stated in the Financial and Operational Information.

(12) Joe White had low future capital expenditure needs in the short to medium term.

(13) When procuring barley, Joe White gave priority to obtaining barley that best met its customers' specifications and requirements.

(14) Joe White employed technical analysis and strict quality control procedures to ensure that the malt it produced consistently met its customers' specifications.

(15) A central reason for Joe White's ability to achieve the performance described in the Information Memorandum was its ability to produce malt that met its customers' exact specifications and requirements, and its focus on doing so.

(16) The Undisclosed Matters did not exist.

2827 Pausing here, it is important to be clear about precisely what this definition in the Statement of Claim encapsulated by its reference to other definitions in the Statement of Claim. Each of the Information Memorandum Statements, the Operations Call Statements, the Commercial Call Statements and the Management Presentation Statements were defined by reference to specific pleaded statements. In contrast, the definition of Financial and Operational Information and of the Undisclosed Matters were defined to include all or any, or any combinations of the pleaded matters.[1971]

2828 The Viterra Parties denied these allegations. They also cross-referred to the Phase 1

[1971] See par 1851 above.

Process Letter Statements, to the Information Memorandum Disclaimers, to the Confidentiality Deed Terms, to the Phase 2 Process Letter Statements, to the Data Room Protocol Terms, to the Management Presentation Memorandum Disclaimers (together, "the Sales Process Disclaimers"), as well as to their defences to the allegations concerning the Operations Call and the Commercial Call, to their allegations concerning the justification of the Viterra Practices and the Viterra Policies,[1972] to their allegation that by reason of the Sale Process Disclaimers there was no requirement of disclosure, and no requirement of withdrawal or qualification of the statements made, and to their allegations concerning the Alleged Industry Practices,[1973] in alleging that the Financial and Operational Performance Representations were not made. By paragraph 31 of the Defence, the Viterra Parties alleged that if any of the matters pleaded in paragraph 19 of the Statement of Claim was the fact then, by reason of the Sale Process Disclaimers, not only was there no requirement for disclosure to Cargill of any of those matters, but there were also no consequences by reason of any non-disclosure.

2829 Although the Defence to the allegations in paragraph 27 of the Statement of Claim did not refer to any terms of the Acquisition Agreement, the issue as defined did so by reference to paragraph 37 of the Defence; and for completeness the issue will be dealt with on that basis. Paragraph 37 of the Defence referred to clauses 1.1, 7.2(f)(iii), 8.1(d), 13.2, 13.3(b), 13.4(a)-(g), 13.5(a) and (b), 15.2(a), 15.2(d), 15.4(a), 15.8(b), 15.9, 15.11 and 31.12 ("the Acquisition Agreement Liability Terms").[1974]

2830 Before continuing, it is convenient to define the Information Memorandum Statements, the Financial and Operational Information, the Management Presentation Statements, the Operations Call Statements and the Commercial Call Statements collectively as "the Pre-Execution Statements".[1975]

1972 See issue 9 above.
1973 See issue 13 above.
1974 See pars 1022, 1027, 1029, 1030, 1033 above.
1975 The definition of Pre-Execution Statements is a neutral cumulative definition to distinguish these components of the definition from various other ways in which they have been defined in the pleadings.

X.15.2 Were the Financial and Operational Performance Representations made?

X.15.2.1 Introduction

2831 The first step is to ascertain whether the matters relied upon by Cargill Australia were capable of conveying, and did or would have (subject to the matters raised by the Viterra Parties) conveyed, the representations as alleged. If not, then there is no need to consider the Sale Process Disclaimers or the other matters raised in opposition.[1976]

2832 With some very minor exceptions, there could be no real dispute about what was stated and disclosed, and what was not disclosed, to Cargill as part of the sale process. This was because most of the Financial and Operational Performance Representations pleaded were based either on written statements or oral statements the substance of which was reduced to writing and agreed between the parties as part of the Acquisition Agreement, or were based on the non-disclosure of certain information in those written or oral statements and the other materials provided to Cargill.[1977] In other words, there were a large number of contemporaneous written records which recorded what was or was not disclosed, the contents of which could not be disputed.

2833 Following on from this, most of the allegations made by Cargill Australia concerning what was expressly stated have been determined in their favour. With the exception of 2 representations alleged to have been made during the Operations Call (1 of which was not proven as pleaded at all and the other was only established in part),[1978] Cargill Australia has been successful in proving the allegations which were alleged to give rise to the Financial and Operational Performance Representations.

2834 On this premise, it is necessary to address each of the alleged representations separately, but before doing so, some general observations should be made. The

---

1976 This approach was not adopted by the Viterra Parties in their closing submissions, in which they considered this question last (after making submissions about the other matters relied upon). The ultimate question as to whether or not the Financial and Operational Performance Representations were made in light of the various matters relied upon by the Viterra Parties necessarily means those matters must also be considered before any final determination on the issue can be made. However, in my view, the more efficacious approach was first to identify the statements that were made and determine whether they were capable of giving rise to the representations alleged to have been implied.

1977 As to the exception to the written record, see par 737 above.

1978 See pars 2152-2158 above.

parties agreed, correctly, that in considering whether the Financial and Operational Performance Representations were made, the overall context needed to be considered. Naturally, particular words used in a particular context may have a different meaning if those same words were used in another context. Further, broadly speaking, the contents of the Information Memorandum and the Management Presentation Memorandum (together with what was stated at the Management Presentation) were largely directed towards stating why Joe White had been able to perform in the manner in which it had, including as a basis to present what the "normalised" position was. In addition, this largely historical presentation was used as a base to indicate what Joe White's prospects were of performing satisfactorily in the short-to-medium term future. As was recorded in the document prepared by Merrill Lynch in October 2012, and explained by King in his evidence, these sales documents were marketing material employed as part of the marketing strategy to sell the Joe White Business.[1979]

X.15.2.2 The submissions based on the matters pleaded by Cargill Australia and the conclusions as to whether those matters were capable of conveying the Financial and Operational Performance Representations

2835 The first implied representation, that *the production, sales and earnings figures stated in the Financial and Operational Information were based upon strict quality control procedures and analysis* was alleged to have been implied from the Information Memorandum by the matters set out in paragraph 2146(2), (12), (13), (14), (15), (16), (18), (24) and (25) above, and the Management Presentation by the statements referred to in paragraph 2168(4) and (11) above.

2836 The Viterra Parties submitted that the statements in question were plainly general statements about business "aspirations" which should not be interpreted as specific statements about business practices. It was contended that Cargill Australia's allegation ignored the difference between a statement of aspiration, which was said to describe Joe White's aspirations to give effect to a particular business model, and a contrasting statement of fact concerned with describing details of production, sales and earnings figures that Joe White actually achieved. It was submitted that the

1979 See pars 371-373 and fn 364 above.

statements relied upon only represented that the business model was based on strict quality control procedures, rather than the statements being a reflection of production, sales or earnings figures. Further, it was submitted that there was no representation that the production, sales and earnings figures resulted from the business model being successfully achieved.

2837 The Viterra Parties' closing submissions continued:

> On a reasonable reading of those *general, aspirational statements* about Joe White's business model, the statements did not convey the far more specific representation that Cargill Australia now alleges in respect of Joe White's production, sales and earnings figures.
>
> (Emphasis added.)

2838 During oral closing submissions, the Viterra Parties' lead senior counsel was asked whether "aspirational" was the correct word in this context. In response, the court was frankly told that he had a recollection of seeing the word (when reading a draft of the submissions) and "thought it had been dealt with". In short, the court was told the passage set out above should be read without any reference to the statements being aspirational. It was correct to make this adjustment to this submission. On no view could statements made about the "proven effective business model", which was said to have been underpinned by a commitment to quality, be properly characterised as aspirational. Further, the statements relied upon by Cargill Australia in this context were not confined to the business model, but were also directed to Joe White's production function, technical analysis, strict quality control procedures and stringent internal protocols.

2839 The Viterra Parties further submitted it was important that none of the passages relied upon appeared in the section of the Information Memorandum headed "Key Financial Highlights". It was submitted that, to the extent that the Information Memorandum made any statements about the factors that underpinned the key financial highlights or the production, sales and earnings figures, it was made by the statement that earnings performance was achieved through expansion of malt margins and a

disciplined approach to cost reduction.[1980] However, such a statement did not exclude other factors which might be said to have contributed to production, sales and earnings figures. To speak in terms of expansion of malt margins and a disciplined approach to cost reduction was not inconsistent and said nothing to undermine the other statements made about how the Joe White Business was operated and how it achieved its results.

2840 Similarly, the Viterra Parties referred to page 41 of the Information Memorandum which recorded that the financial information for the forecast period had been used by a "bottom-up, plant-by-plant approach, including …". The various matters referred to did not include "strict quality control procedures and analysis". By reason of this, it was submitted that Cargill was told the production, sales and earnings figures had not been based on matters of quality control and analysis. For the same reason the previous submission was rejected, an inclusive and non-exhaustive statement about some of the matters that were part of a bottom-up, plant-by-plant approach did not exclude quality control procedures or analysis procedures. Quite the contrary, a description of using a bottom-up, plant-by-plant approach sat comfortably with strict quality control procedures and analysis being in place across the operations of Joe White.

2841 In addition, the Viterra Parties submitted that the only statements made in the Information Memorandum about "strict quality control procedures" were statements made in respect of the business model. Various examples were given. However, statements about what the business model was focused upon did not detract from the unequivocal statements made about quality control procedures and analysis. The first example referred to by the Viterra Parties illustrated this. The sentence in the Information Memorandum, "Business model focused on developing relationships with key global and regional brewers underpinned by Joe White's high-quality product and tailored service offering", contained within it the statement of fact that Joe White had high-quality product. This was not an aspirational statement, but was

---

1980 See par 492 above.

a representation about something that was said to be in existence and to actually underpin the business model.

2842 In another example, the Viterra Parties referred to the following:

> Focus on Quality and Technical Capability Underpins the Business Model … Quality and Technical Capabilities Underpin the Business Model
>
> Joe White has an unrelenting focus on quality across all areas of its business to ensure it meets customers' requirements
>
> …
>
> Technical analysis and strict quality control procedures ensure customer specifications are consistently met.

2843 The Viterra Parties submitted "[t]his statement was expressed in aspirational terms (ie so as to convey Joe White's aspiration of consistently meeting its customers' requirements)". It was further submitted that this was clear from the fact that "the statement" was made under a heading and a subheading both expressed to be about Joe White's business model.

2844 There are a number of responses to this submission. *First,* what was quoted did not represent a single statement. The last sentence of the passage set out above appeared under the further headings "Production" and "Best-in-class manufacturing facilities consistently produce high-quality malt". *Secondly,* this last sentence was not in aspirational terms, but was a statement of fact about the analysis and procedures actually in place and their ability to "ensure" customer specifications were consistently met. *Thirdly,* although what was contained in this part of the Information Memorandum was concerned with Joe White's business model, the headings and the other content on this page reported that existing quality and technical capability resulted in customers' specifications and requirements actually being met.

2845 It is unnecessary to deal with the other examples provided by the Viterra Parties. The substance of the submissions were the same. In short, for the reasons stated, the attempt by the Viterra Parties to characterise the statements relied upon as aspirational or general, or both, and as strictly confined to the business model, is rejected.

2846 In relation to the Management Presentation Memorandum, the Viterra Parties correctly observed that it was relevantly in the same terms as the Information Memorandum. Similar submissions were made concerning the statements being attributable only to the business model.

2847 The Viterra Parties relied upon the fact that the first statement concerning Joe White having best-in-class manufacturing facilities was to be found in a page of the Management Presentation headed "Business Model". The opening words under the heading read, "Joe White's business model is focused on ensuring customers receive the highest quality malt to meet their exact specifications and requirements". The page was then divided into 4 boxes with headings "Sales and Marketing", "Procurement", "Production" and "Quality & Technical".[1981] Under the heading "Sales and Marketing", it was stated: "Top-down approach to understand each customer's unique requirement". Under the heading "Procurement", it was stated: "Selection of and access to high-quality barley that best meets customer specifications". Under the heading "Production", it was stated: "[B]est-in-class manufacturing facilities producing consistently high quality malt". Under the heading "Quality & Technical", it was stated: "[Q]uality and technical capabilities underpin each operating function".

2848 The Viterra Parties submitted that the statements that appeared diagrammatically on this page should be interpreted as a statement about Joe White's business model rather than assumptions upon which Joe White's actual and forecast financial and operational performance was or would be premised. While the subject matter of this page was undoubtedly concerned with Joe White's business model, the statements made in each of the boxes entitled "Procurement", "Production" and "Quality & Technical" were unequivocal statements of fact. The circumstance that they appeared on a page concerned with the business model did not alter this.

2849 The Viterra Parties' submissions then referred to a number of other statements in the

---

1981 There was an arrow running from the Sales and Marketing box to each of the Procurement box and the Production box, but not to the Quality & Technical box.

Management Presentation Memorandum, but these further statements were not relied upon by Cargill Australia in order to seek to establish this particular representation. Accordingly, as they were not relied upon by Cargill Australia these submissions will not be addressed in any detail here. It suffices to say, the content of those statements did not affect the conclusions otherwise reached in relation to this allegation.

2850 In relation to the statements concerning risk management that were relied upon by Cargill Australia, the Viterra Parties submitted that the statements identified were not capable of conveying that Joe White's production, sales and earnings figures were in any way referable to Joe White's risk management procedures, or the extent to which Joe White had managed to implement any such procedures. It was submitted that the statement concerning risk management strategies to manage risks associated with barley varieties and specifications did not entail or imply any statement about the frequency with which Joe White encountered those risks. Accordingly, it was submitted, such a statement could therefore not have entailed or implied any statement about the extent to which Joe White's financial or operational performance depended upon those risk management strategies. Further, it was submitted that there was no basis for Cargill Australia to have inferred that describing risk management strategies concerning barley sampling was describing Joe White's "strict quality control procedures and analysis".

2851 The Viterra Parties were correct in submitting that the statements relied upon did not identify how often Joe White encountered the operational, business and financial risks, or the operational risk of being unable to source barley of the correct variety, quality and specification. However, it did not really matter that it was not stated how often these risks materialised. Whether or not the statements as made implied that the risks identified were material, the message being conveyed was that, to the extent they existed, they were well-controlled and that Joe White was able to perform accordingly. Further, these statements were not to be read in isolation, but in the context of the other statements relied upon in seeking to establish the implied representation.

2852 In addition, it was submitted that Cargill Australia could not have extrapolated from the statements identified the implied representation because Cargill Australia knew of the features of the malting industry that made such an extrapolation illogical. This submission was based in part upon the Viterra Parties' case concerning features of the malting industry in accordance with the Alleged Industry Practices (that have not been established). Further, it relied upon a memorandum produced within Cargill in January 2014, which was demonstrated on the evidence not to reflect accurately the features of the malting industry in significant respects, much less Cargill's knowledge or understanding of the malting industry.[1982]

2853 Finally, in oral closing submissions, the Viterra Parties' senior counsel asked rhetorically "What does that mean, 'based'?". It was submitted there was no attempt to make the connection between the production, sales and earnings figures stated and the strict quality control procedures and analysis. In response, the Cargill Parties submitted "based on" bore its ordinary English meaning and that "founded on" would be a synonymous expression. In my view, there was no need for direct evidence on this point to make the connection the subject of the implied representation. Naturally, production, sales and earnings figures of a manufacturing business over an extended period must be based upon the manner in which the underlying business has been operated.

2854 The statements identified by Cargill Australia, including by reference to technical analysis and the strict quality measures, unrelenting focus on quality, the disciplined approach, uniformity, consistency, the stringent internal protocols and control measures across the entire production cycle, regular compliance and audits, and the ability to produce malt to customers' exact specifications and requirements necessarily and unequivocally represented the strict and controlled basis upon which the performance of the Joe White Business, and therefore the consequential production, sales and earnings figures, was achieved; namely, through strict quality control procedures and analysis.

1982 See pars 1644-1655, 2792 above.

2855 For completeness, the meaning of "exact specifications" needed to be considered in circumstances where it was generally understood that there could be variability in test results with respect to the same batch of malt when the malt to be delivered was tested. Thus, "exact specifications" representations in the context of selling a malt business could not have been sensibly understood to mean that issues with variability and testing did not exist. Rather, the representations concerning "exact specifications" were objectively conveying Joe White exactly meeting the specifications in accordance with the terms in the customers' contracts.

2856 The second implied representation, that the *production, sales and earnings figures stated in the Financial and Operational Information were based upon customer contracts including customer specifications being complied with*, was alleged to have been implied from the Information Memorandum by the matters set out in paragraph 2146(2), (4), (5), (7), (12), (13), (14), (15), (16), (17), (18) and (23) above, and the Management Presentation from the statements in paragraph 2168(1), (3), (4), (6) and (8) above, and Hughes' statement during the Management Presentation, in response to De Samblanx's question on silo capacity, that there were no real quality issues.[1983]

2857 Similar to their submissions with respect to the first implied representation, the Viterra Parties submitted that Cargill Australia sought to turn what they submitted were aspirational statements about Joe White's business model into a representation about Joe White's actual business performance. This submission cannot be accepted for the reasons already stated.[1984]

2858 Further, they submitted that the inference that Cargill Australia asked to be drawn from the statements identified was not capable of being drawn. They submitted that "the fact of a customer's specifications 'being complied with' [was] not a simple fact whose truth or falsity [was] capable of ready, simplistic verification; and it [was] therefore not a fact on which general statements about 'production, sales and earnings figures' could be impliedly premised". This submission was made on the basis that

1983 See pars 737, 2168(12), 2169-2172 above
1984 See pars 2837-2838 above.

the process of examining customer specifications was complex and not capable of any simplistic determination. In support of this premise, the Viterra Parties referred to the evidence of French, including his suggested prevalence of the use of pencilling and his alleged knowledge of that conduct by between 85 to 100 percent of participants in the commercial malting industry.[1985] Accordingly, so it was submitted, the question of whether Joe White complied with customer contracts, including customer specifications, could only be answered in a qualified way by reference to any limitations in testing methodology or any pencilling practice, and perhaps only after using subjective analysis.

2859 In light of these matters, the Viterra Parties submitted that whether or not Joe White complied with customer contracts was "not a fact that [was] necessarily capable of easy, absolute and objective verification". They further contended that in reality the substance of the representation in the context it was made must be understood as being that Joe White's customers did not reject its malt shipments.

2860 In a similar vein, the Viterra Parties' submissions continued:

> The only statements in the Information Memorandum in relation to the frequency with which customer contracts or specifications were complied with or met were statements that Joe White's business model **aimed** to "*consistently*" (though not "*uniformly*") meet its customers' requirements.
>
> (Original emphasis.)

2861 During oral closing submissions, it was raised with the Viterra Parties' senior counsel that the Information Memorandum used the word "ensured" rather than "aimed". When it was suggested to him that the meaning of "aimed" was quite different, it was agreed that it carried a different meaning. In short, this written submission did not reflect what was stated in the Information Memorandum; the meaning sought to be attributed to the relevant words in the Viterra Parties' written submissions was significantly different and suggested an equivocality that was not conveyed by the words used.

1985 See pars 2777, 2791 above.

2862 Equally, the contention that the substance of the representation about meeting customers' exact specifications could only be understood as suggesting Joe White's customers did not reject malt delivered to them sought to attribute a significantly different meaning from what was conveyed. While it may be accepted that it was implied that Joe White's customers were satisfied with the malt delivered to them, the reason given for this in the Information Memorandum was that Joe White met the exact specifications and requirements of its customers. Plainly, what was stated went much further than simply implying customers did not reject malt shipments from Joe White. Further, the submission made in this regard was largely premised on French's evidence, with respect to the Alleged Industry Practices concerning pencilling and the prevailing knowledge of such conduct throughout the industry, which evidence has not been accepted.[1986]

2863 In relation to the Management Presentation Memorandum, the Viterra Parties submitted the only statements made about customer contracts or specifications being complied with were statements about Joe White's reputation. They referred to the statement at page 22 of the Management Presentation Memorandum that Joe White had a "[r]eputation for production uniformity, consistency and ability to meet exact specifications". This was a curious submission in light of the fact that this particular statement was not relied upon by Cargill Australia in seeking to establish this implied representation. Further, reference to Joe White meeting exact specifications and requirements and obtaining barley that best met customer specifications was made elsewhere in the Management Presentation Memorandum.[1987]

2864 In any event, dealing with the submission made, it was contended that to state that Joe White had a reputation for meeting exact specifications did not state that the reputation was well-founded. Further, it was submitted that even if it did imply that it was well-founded, the statement made was that Joe White had *the ability* to meet exact specifications, rather than stating that it uniformly, consistently or with any other frequency, did so; or that Joe White's production, sales and earnings figures

1986 See pars 2775-2779 above.
1987 See, for example, pars 716, 718 above.

depended upon it doing so.

2865 There was no substance to the suggestion that the statement in question was implying anything other than the reputation referred to was well-founded. This conclusion is based on the reference to Joe White's representation in the context of the full sentence,[1988] and in the Management Presentation Memorandum more broadly. Plainly, Joe White was being presented in very positive terms to demonstrate the reputation was objectively very well-founded. Further, "the ability to meet exact specifications" was preceded by reference to production uniformity and consistency. When read in its context, the statement concerning exact specifications was not referring to some mere possibility, but was making reference to a reputation for actually performing in such a manner. Nevertheless, to reiterate, whatever the position might have been with this particular statement, it was not relied upon by Cargill Australia in order to establish this implied representation.

2866 It was submitted that the Management Presentation Memorandum was silent as to Joe White's actual operational performance in respect of customers' contract requirements. Further, the submissions concerning page 41 of the Information Memorandum were repeated.[1989] For the reasons already stated, a non-exhaustive statement about matters relied upon did not exclude other matters also forming the basis of the production, sales and earnings figures.[1990]

2867 Finally, the Viterra Parties made submissions about the Operations Call, the Commercial Call and other matters not responsive to the basis upon which Cargill Australia put this aspect of the case. Accordingly, it is unnecessary to respond directly to these submissions here.

2868 In responding to the Viterra Parties' submissions on this point, the Cargill Parties submitted that it was an astonishing claim that the statement about compliance with customer specifications was not a simple fact of truth or falsity which could be

---

1988 See par 727 above.
1989 See par 2840 above.
1990 See pars 2839-2841 above.

verified, and thereby was incapable of providing a premise for the implied representation. The Cargill Parties contended that, in essence, such a submission amounted to adopting a position that despite the fact that Joe White's customers required Joe White to meet specifications, and stipulated as much in their contracts, that was not what Joe White did; and that this was successfully managed with their customers so as to not impede Joe White's ability to make a profit; and that all of this ought to be understood from what was stated in the Information Memorandum. Further, the Cargill Parties submitted that arguing that customer specifications could not be met was an illegitimate means of undermining what was said in very plain terms about Joe White, which was far more than simply that Joe White kept its customers happy.

2869 Turning to the statements relied upon themselves, they contained assurances about stability, long-term customer relationships and long-term contracts, the ability of Joe White to meet customer specifications and that Joe White ensured exact specifications and requirements were met. Again, for the reasons discussed with respect to the first implied representation, it was implicit that the production, sales and earnings figures as stated in the Financial and Operational Information must have been based upon such matters.

2870 Before leaving this implied representation, a further submission of the Viterra Parties should be addressed briefly. As a result of the Warranties agreed upon for the purposes of the Acquisition Agreement,[1991] the Viterra Parties contended that Cargill accepted the risk concerning Joe White in relation to whether there had been a breach of any non-material contracts, a non-material breach of any Material Contracts, historical defaults of any Material Contracts (where the default no longer subsisted as at the date the Warranty was given), a breach of a material contract not known to Viterra Malt, and whether Joe White's assets were sufficient for it to be conducted in a way different from the way Joe White had been operating in the year leading up to the Acquisition Agreement.[1992] Thus, it was submitted that Cargill knew Viterra made

1991 See par 1034 above.
1992 See Warranties 6.1(e), 7.3: ibid.

no representation in relation to any of these matters and therefore knew Viterra was not conveying any representation to the effect that the production, sales and earnings figures stated in the Financial and Operational Information were based upon customer contracts including customer specifications being complied with.

2871 Obviously, all surrounding circumstances need to be considered. However, the negotiations at the 11th hour in relation to what the Sellers were willing to make the subject of a Warranty for the purposes of the Acquisition Agreement (and the contractual obligations that flowed from such a willingness) were of marginal relevance to the question of whether or not the representation as alleged had been made as a matter of fact. In the way in which the negotiations and bidding process unfolded in this case, the existence of any Warranty of the kind identified could not have had the effect of vitiating the clear and unequivocal position previously conveyed that Joe White met its customers' specifications in achieving the production, sales and earnings figures as reported as part of the sale process.

2872 The third implied representation, namely that the *production and sales figures stated in the Financial and Operational Information had been properly and lawfully achieved*, was said to follow from the matters alleged as the basis of the 2 preceding implied representations.

2873 The Viterra Parties submitted there was no basis for the pleaded allegation. It was submitted that no statement had been made in the Information Memorandum or the Management Presentation Memorandum about the propriety or lawfulness of the way in which Joe White achieved its figures. They also referred to Warranty 7.3 of schedule 4 of the Acquisition Agreement[1993] as a means of demonstrating that the parties agreed that Cargill had no protection in respect of any default by Joe White which was outside Viterra Malt's knowledge.

2874 It was correct to submit that no express statement was made about propriety or lawfulness, however that did not address whether or not a representation was implied

---

1993 See par 1034 above. See also issue 43 below.

from what was in fact said. Further, what was subsequently agreed to form part of the Acquisition Agreement pursuant to negotiations held in late July and early August 2013, many weeks after the statements in the Information Memorandum and the Management Presentation Memorandum had been made, was not relevant to whether the implied representation alleged was made by the 2 documents at the time they were disseminated.

2875 The Cargill Parties simply submitted that the references to strict quality control procedures and analysis, and complying with customer specifications implied that things were being done properly and lawfully.

2876 In my view, it is plain that a representation in the terms alleged was made, given the statements made about quality, control, compliance, auditing and the like. There was nothing in the statements made to suggest that the Joe White Business was being conducted other than properly and lawfully. Quite the contrary, there were numerous positive statements that indicated the Joe White Business was conducted in a strict and controlled manner, and in compliance with customers' contracts. It must follow from that that the production and sales figures were also represented to be properly and lawfully achieved.

2877 The fourth implied representation alleged to have been made was that *Joe White had not withheld or concealed material information from customers*. In part, this was said to be implied from the statements alleged to have been made during the Operations Call. To the extent that those statements have been found not to have been made as pleaded,[1994] they will not be taken into account in determining whether this implied representation was made. By reference to the statements that have been established, Cargill Australia relied upon the Information Memorandum and the matters set out in paragraph 2146(6), (8), (12), (13), (15), (16), (17), (18), (20), (21), (22) and (23) above, the Operations Call Statements in paragraph 2149(b)(i), (ii), and (iv) in part, each of the Commercial Call Statements set out in paragraph 2165 above, and statements made during the Management Presentation as set out in paragraph 2168(6) and (10)

1994 See par 2152-2158 above.

above. Cargill Australia also referred to the fact that at no time before 4 August 2013 did any of the Viterra Parties withdraw or qualify any of the statements made in the Information Memorandum, the Data Room, the Management Presentation, the Operations Call or the Commercial Call; which was submitted to have reinforced the fourth implied representation.

2878 On the basis that neither the Information Memorandum nor the Management Presentation Memorandum stated that it contained any statement as to the completeness of the information that Joe White had provided to its customers, the Viterra Parties submitted there was no basis to plead that Joe White had not withheld or concealed material information from them.

2879 In my opinion, statements made to the effect that Joe White identified and focused on a detailed understanding of specific customer requirements, that Joe White met customers' exact specifications and requirements, and that it had established long-term relationships with customers, in the context in which they were made, necessarily implied that Joe White was not withholding or concealing material information from its customers. Indeed, in such circumstances as represented, it was difficult to perceive a basis upon which it might be said that material information might have been withheld. To put it another way, it must follow that it is highly likely, if not inevitable, that withholding or concealing *material* information from a customer would mean that its requirements were not being met.

2880 For completeness, establishing that this alleged implied representation was made was not dependent upon Cargill Australia proving that each of the alleged statements in the Operations Call was made. In my view, the implied representation was necessarily made as a result of the matters relied upon by Cargill Australia other than those in the Operations Call that were not established.

2881 In seeking to establish the fifth implied representation was made, namely that the *assets of the Joe White Business were sufficient for Joe White to sell malt in the volumes and for returns stated in the Financial and Operational Information*, Cargill Australia also relied

upon the statements alleged to have been made in the Operations Call. Again, the statements that have not been found to have been made as pleaded will not be taken into account.

2882 In support of this allegation, Cargill Australia referred to the Information Memorandum and the matters set out in paragraph 2146(9), (10), (11), (12), (13) and (14) above, the Operations Call and the matters set out in paragraph 2149(b)(i), (ii), and (iv) in part, and statements made during the Management Presentation as referred to in paragraph 2168(4) and (8) and paragraph 2169 above.

2883 The Viterra Parties submitted there were 2 reasons why this implied representation was not made. *First,* none of the statements relied upon referred to *sufficiency* of the assets of Joe White, but were confined to their relative modernity compared to other facilities. *Secondly,* it was submitted that if the first submission was not accepted, nothing said to Cargill would have provided a viable basis for an implication that any statement about sufficiency of assets could have been a statement about the way in which the assets could enable malt to be sold either in a particular volume or for any particular amount of returns.

2884 Essentially, the Viterra Parties contended that statements about the need for only limited future capital investment said nothing about the sufficiency of the assets because any statement about sufficiency was necessarily relative to the particular standard by which the assets could be measured as sufficient. Further, if any measure was referred to, it was submitted it was confined to capital investment necessary to ensure that the facilities remained modern, state-of-the-art, best-in-class or well-maintained and capitalised. In short, it was contended that none of these measures, to the extent that they might have been referred to (contrary to the primary submission), represented that the assets of the Joe White Business were sufficient for the volumes and the returns stated.

2885 In addition, the Viterra Parties submitted that even if it were found that Hughes stated at the Management Presentation that Joe White was managing its customers well and

that there were no real quality issues,[1995] such a statement did not entail any implied statement that the business assets were sufficient for Joe White to sell malt in the volumes and for the returns stated.

2886 Finally, the Viterra Parties correctly pointed out that the contemporaneous notes of the Operations Call and the evidence more generally did not support the allegation that it was expressly stated during the Operations Call that Joe White's plants were sufficient to produce malt to customer specifications.[1996]

2887 The Viterra Parties' submissions on this point sought to artificially confine any implied representation to what was strictly said expressly.

2888 In broad summary, in the statements identified Cargill Australia was told that Joe White had a particular annual production capacity for each of the financial years from 2010 to 2013. Obviously, that annual production capacity had been able to be achieved with the assets that Joe White had at the relevant times. In addition, it was stated that the assets of Joe White were of a very high standard and operational efficiency which underpinned Joe White's production and its ability consistently to meet customers' specifications, and that there were low future capital needs in the short to medium term. It was implicit from such statements that the assets of the Joe White Business were sufficient to sell malt in the volumes and for the returns stated.

2889 The sixth implied representation, that *Joe White had low capital expenditure needs in the short to medium term*, was based on 4 statements which have been established to have been made. Cargill Australia relied upon statements in the Information Memorandum set out in paragraph 2146(9), (10) and (11) above, and in paragraph 2168(9) above with respect to the Management Presentation.

2890 The Viterra Parties referred to 2 statements made in the Information Memorandum in which it was stated that Joe White had low future capital needs in the short to medium term, and then noted that similar statements were made in the Management

1995 As it has been: see par 737 above.
1996 See issue 2 above.

Presentation Memorandum. They also referred to the fact that it was stated during the Operations Call that Joe White's plants (except for Sydney) had malt storage that was more than sufficient for their requirements.

2891 Having made these observations, the Viterra Parties then submitted that the statements that were made only related to the way in which Joe White was operating at the time. They further submitted that Cargill knew Joe White was engaging in the Alleged Industry Practices and that Cargill did not intend to permit Joe White to engage in those practices after it had completed the Acquisition.

2892 For reasons stated above,[1997] submissions based upon Cargill knowing of the Alleged Industry Practices cannot succeed. Further, while it was correct to submit that Cargill had no intention of permitting Joe White to engage in practices similar to the Alleged Industry Practices after Completion, such a submission was not to the point in circumstances where Cargill was not told, and did not know, of the Viterra Practices (or even the Operational Practices).

2893 It follows from this that the submission based upon how Joe White was operating at the time necessarily fell away. Further, how Cargill might have intended to operate Joe White in the future did not affect the nature of the representation being made about Joe White's capital expenditure needs as it was then being conducted.

2894 In summary, statements to the effect that Joe White had low future capital needs in the short to medium term were expressly made, as well as being implicit in the statements identified concerning well-capitalised, state-of-the-art, best-in-class facilities.

2895 Significantly, in oral closing submissions, the Viterra Parties' lead senior counsel expressly acknowledged that the sixth implied representation had been made. This acknowledgement, which was unqualified and plainly correct, also implicitly acknowledged that the Sale Process Disclaimers did not have the effect of resulting in

---

1997 See issue 13 above.

no representations being made at all.

2896 The seventh implied representation, that *when procuring barley, Joe White gave priority to obtaining barley that best met its customers' specifications and requirements*, was alleged to have been implied from statements in the Information Memorandum set out in paragraph 2146(19), (20), (21), (22) and (23) above, the Commercial Call Statements set out in paragraph 2165 above, and the Management Presentation as set out in paragraph 2168(3) and (7) above.

2897 In addressing this alleged implied representation, the Viterra Parties did not submit that an analysis of the express statements relied upon, in themselves, did not give rise to the implied representation. Rather, they made 2 submissions as to why the implied representation should not be found to have been made.

2898 *First,* it was noted that this allegation was not made by Cargill Australia until the Statement of Claim was amended in August 2018, more than 5 years after the events in question and a number of weeks after the trial had commenced. *Secondly,* the Viterra Parties referred to matters about which Cargill was informed during the Due Diligence.

2899 In relation to the first of these matters, although a delay in making the allegation may give rise to issues concerning reliance and causation, it did not affect an exercise of determining whether, objectively, an implied representation was made by reason of a series of express statements.

2900 As to the second matter, a number of issues were raised.

2901 The Viterra Parties referred to the statement in the Management Presentation Memorandum that an operational risk for Joe White was the ability to source barley of the correct variety, quality and specification. However, this statement needed to be read in the context where, under the heading "Risk Management Discipline", it was stated that this exposure was managed.

2902 Next, the Viterra Parties referred to Goldman Sachs' summary of the Management

Presentation, which recorded that Joe White's ability to service key accounts was limited by "the fact that it could not get its desired barley varieties out of New South Wales". The note actually recorded that Joe White could not "currently" get the desired varieties out of New South Wales.[1998] There was no suggestion that it was an ongoing or more general problem.

2903 Next, the Viterra Parties referred to what was stated during the Commercial Call about the ability of Joe White to compete in Japan, which was negatively affected by the quality of the barley available in Australia. However, such a representation, particularly when understood in the context that it was made,[1999] was entirely consistent with an implied representation that Joe White gave priority to obtaining barley that best met its customers' specifications and requirements.

2904 Next, the Viterra Parties referred to Cargill being provided with a spreadsheet setting out Joe White's barley purchasing contracts.[2000] This spreadsheet indicated "around half" of Joe White's contracts for the purchase of malting barley did not specify a particular variety. In addition to this point, the Viterra Parties referred to Cargill being informed about the purchase of significant quantities of non-grade 1 malting barley, and of "thousands of tonnes of non-malting barley each year for the past 3 years" (which was presumably a reference to Hindmarsh).

2905 In relation to the disclosure of Hindmarsh in Joe White's inventory, it has been found that, with the possible exception of Purser,[2001] this did not put Cargill on notice of Joe White using non-malting barley.[2002] Further, there was no indication from the fact that the barley variety (as distinct from the grade of barley) was often not specified in purchasing contracts, nor from the purchases of non-grade 1 malting barley, that

---

1998 See fn 520 above.

1999 See par 914 above. The full agreed summary on this issue stated that, in substance, historically Joe White's ability to compete in Japan was significantly limited due to sourcing of quality barley when compared to Canadian competitors. Further, the construction of the Minto plant had been designed specifically to target the North Asian and Japanese markets. Furthermore, Joe White had a good working relationship with brewers in Japan and had worked with Kirin for several years. Moreover, new barley varieties in Australia would see an improvement in Australia's competitiveness in this market.

2000 See par 952 above.

2001 But, as to her position, see pars 955, 2716 above.

2002 See pars 2715-2717 above.

customer specifications were not being met or that Joe White was not obtaining barley that best met the requirements and specifications. Absent the express statements as identified by Cargill Australia, such facts may have suggested that position was a possibility, but in the context where such express statements had been made Cargill was not informed otherwise by this information.

2906 A review of the statements that were made, namely that Joe White consistently had access to, was focused upon selecting, and purchased, barley which was of high quality, which barley best met customers' specifications, also represented that this was the manner in which Joe White conducted its operations. It was implicit in such statements that Joe White gave this priority when procuring barley.

2907 The eighth implied representation, that *Joe White employed technical analysis and strict quality control procedures to ensure that the malt it produced consistently met its customers' specifications*, was alleged to have been implied from statements in the Information Memorandum as set out in paragraph 2146(12), (13), (14), (16), (18) and (24) above, and the Management Presentation as set out in paragraph 2168(2) and (5) above.

2908 The Viterra Parties again emphasised that this alleged implied representation did not find its way to the Statement of Claim until August 2018. Be that as it may, the submissions dealing with the substance of the allegation stated that the Viterra Parties relied upon earlier submissions addressing what was said to be the flaws inherent in seeking to interpret general statements of aspiration as specific statements of fact, and conflating a statement as to Joe White's reputation with the statement as to Joe White's actual operations. As these submissions have been addressed above,[2003] nothing further needs to be added in rejecting them.

2909 It was plain that such a representation was implied from the statements pleaded by Cargill Australia, which included that Joe White utilised technical analysis and strict quality control procedures to ensure that the customer specifications were consistently met.

2003 See pars 2836-2845, 2863-2864 above.

2910 The ninth implied representation, that *a central reason for Joe White's ability to achieve the performance described in the Information Memorandum was its ability to produce malt that met its customers' exact specifications and requirements, and its focus on doing so*, was alleged to be implied from the statements in the Information Memorandum set out in paragraph 2146(6), (8), (12), (15), (16), (17), (18), (20), (21), (22) and (23) above, and in the Management Presentation as set out in 2168(1), (3) and (10) above.

2911 Again the Viterra Parties identified that this allegation was not made until August 2018. More substantively, they submitted that no statement was made about any central reason for Joe White's ability to achieve the performance described in the Information Memorandum. It was submitted that such a representation ought not be implied from the material provided to Cargill in light of the "subjective terms" in which any statement about customer specifications would necessarily be made. This was a reference back to an earlier submission,[2004] which has already been rejected.

2912 Further, the Viterra Parties submitted there were 2 reasons why the statements relied upon concerning Joe White's reputation could not be the basis of the implied representation. These were in substance a repetition of earlier submissions which have been rejected.[2005]

2913 The statements identified by Cargill Australia demonstrated that Cargill was told repeatedly how Joe White was able to meet its customers' exact specifications and requirements, and its focus upon doing so. The implied representation was made.

2914 Finally, the tenth implied representation that the *Undisclosed Matters did not exist* was alleged to have been arisen from the failure of the Viterra Parties to disclose the Undisclosed Matters during the Due Diligence, coupled with the statements made in the Information Memorandum as set out in paragraph 2146(4), (7), (8) and (17) above, and in the Management Presentation as set out in paragraph 2168(2), (6), (7) and (10) above. Cargill Australia also relied upon the fact that at no time prior to 4 August 2013 did any of the Viterra Parties withdraw or qualify the statements made in the

---

2004 See par 2858 above.

2005 See pars 2863-2864 above.

Information Memorandum, the Data Room, the Operations Call, the Commercial Call and the Management Presentation.

2915 The Viterra Parties emphasised that this allegation was not simply concerned with silence or a failure to disclose information. They submitted the manner in which this allegation was pleaded required the court to find the representation as identified was made.[2006] In response, the Cargill Parties submitted that the positive representation and the non-disclosures were 2 sides of the 1 coin as the true state of affairs could not sit compatibly with the positive representations. It was submitted that the relevant non-disclosures were correctly described as representations in the situation where the making of positive representations impliedly represented that an incompatible state of affairs did not exist. It was submitted the Undisclosed Matters went to the very heart of the Joe White Business and were completely and utterly incompatible with the positive statements made.

2916 It has already been found that the Undisclosed Matters existed and that they were not disclosed.[2007] The Undisclosed Matters were material to the Joe White Business as they went to the very basis upon which Joe White was able to achieve the financial results that it did leading up to 4 August 2013. By making the positive statements in the Information Memorandum and the Management Presentation as referred to by Cargill Australia, including concerning the effectiveness of the business model, the strong track record, the long-term relationships and contracts in place and the ability to meet customer specifications and requirements, and not disclosing information during the Due Diligence which indicated to a prospective purchaser a material, indeed fundamental, means of operations by which these things were achieved or purported to be achieved (as the case may be), it was implicitly represented that there were no practices in existence that would have undermined or falsified the ability of Joe White to meet customer specifications and requirements, such as the Viterra Practices.

2917 In summary, Cargill Australia has established that each of the Financial and

---

2006 In making this submission, the Viterra Parties' senior counsel of his own volition said he conceded the case had not been run the way it had been pleaded: see issues 15.3.6-15.3.7 above.

2007 See issues 10 and 12 above.

Operational Performance Representations was made.

X.15.3 The effect of the Sale Process Disclaimers, Acquisition Agreement Liability Terms and the Alleged Industry Practices

X.15.3.1 The submissions

2918 The Cargill Parties submitted that precisely how the matters relied upon by the Viterra Parties were said to modify the statements made during the course of negotiations was not clear.

2919 By reference to the manner in which the Viterra Parties opened their case, the Cargill Parties submitted that nothing said in any of the disclaimers or similar terms of other documents operated to affect the meaning conveyed by the representations made.

2920 In relation to issue 15 as formulated referring to certain terms of the Acquisition Agreement despite not having been pleaded,[2008] the Cargill Parties referred to this fact, before submitting that nothing contained in those terms could affect the meaning conveyed by the various matters relied upon.

2921 With respect to the Alleged Industry Practices, the Cargill Parties submitted that any industry practices were incapable of negating the representations made to the effect that Joe White met customers' exact specifications. However, as the Alleged Industry Practices have not been found to have existed,[2009] it is unnecessary to address this submission.

2922 The primary submission made by the Viterra Parties was that, as a matter of fact, only Glencore made the statements contained in the Information Memorandum and only Glencore provided the Financial and Operational Information. For reasons already discussed,[2010] the underlying bases of such a submission have been rejected. In circumstances where it was expressly stated that both the Information Memorandum and the Management Presentation Memorandum had been prepared by Glencore and its subsidiaries (being Viterra) as a means of providing background to assist a recipient

---

2008 See par 2829 above.
2009 See issue 13 above.
2010 See pars 475-483 above.

in deciding whether to further consider the acquisition of Glencore's and its subsidiaries' interest (being Viterra's interest) in the malt business, the Information Memorandum Statements and the Management Presentation Statements were made by both Glencore and Viterra. In addition, to the extent Hughes or Argent made statements that formed part of the basis of the Financial and Operational Performance Representations, those statements were also made on behalf of both Glencore and Viterra.[2011]

2923 They further submitted that it was incorrect to allege that none of the Undisclosed Matters were disclosed before the Acquisition Agreement was entered into. This has also been rejected.[2012] Furthermore, it was submitted as the Viterra Parties were unaware of the Undisclosed Matters before the Acquisition Agreement was entered into, "any failure" to disclose them should be found to be incapable of giving rise to misleading or deceptive conduct.

2924 Moreover, the Viterra Parties submitted there were 3 independent reasons for finding that the Financial and Operational Performance Representations were not made.

2925 *First,* they submitted that the Sale Process Disclaimers and Acquisition Agreement Liability Terms relied upon by the Viterra Parties made it clear to Cargill Australia that the statements relied upon by Cargill Australia were not capable of giving rise to the Financial and Operational Performance Representations.

2926 *Secondly,* it was submitted that, if the Financial and Operational Performance Representations were made to the extent that they were, then the context in which they were provided ensured Cargill knew the statements made were not made as statements of fact capable of being used to draw further inferences of fact, but rather as statements that were capable of being used as no more than the starting point for any investigation into the facts. During oral closing submissions, the Viterra Parties' senior counsel stated that the Information Memorandum was a starting point "in the sense that it could be relied upon" for the purpose of an indicative offer, and that was

---

2011 See issue 11 and pars 475-476 above and pars 3106-3108, 3110-3111 below.

2012 See issue 12 above.

what "everything says". However, it was contended that thereafter, Cargill was permitted to conduct its own due diligence and had stated that it would rely exclusively on its own investigations and assessments.[2013]

2927 *Thirdly*, it was submitted that the statements relied upon were not capable of conveying the implied representations as alleged. This was contended to be the case especially given Cargill's significant expertise and decades of experience in the malting industry and its knowledge of the Alleged Industry Practices. On this basis, it was submitted that Cargill must have understood that the statements made provided an unreliable basis from which any inferences could be drawn.

2928 Working backwards, in relation to the third reason given, this submission has been rejected for the reasons already stated.[2014] Further, the fact that Cargill had significant expertise and experience in the malting industry did not equate to having knowledge of Joe White's financial or operational performance, nor did not alter the representations that were in fact conveyed or the objective meaning conveyed by the making of the Financial and Operational Performance Representations. There was nothing about Cargill's position or knowledge to suggest Cargill would have understood the Financial and Operational Performance Representations in a way which was different to the objective meaning.

2929 With respect to the second reason put forward, this can be dealt with succinctly. The submission as to when, or the extent to which, the contents of the Information Memorandum could be relied upon carried with it an acceptance that it could be relied upon at least up to a particular point. Thus, even on the Viterra Parties' approach, it was accepted statements were made with the intention they could be relied upon for the purpose of formulating an indicative bid. In my view, this acceptance of representations having been made for at least this purpose (which was plainly correct) amounted to an acceptance that conduct had been engaged in in trade or commerce such that it was open to consider whether the Financial and Operational Performance

---

2013 See further par 3047 below. See also issue 105 below.

2014 See pars 2835-2916 above.

Representations were made even for the limited purpose for which the Viterra Parties contended. Whether they were made (or continued to be made) beyond Phase 1 may be considered separately.[2015]

2930 Before the first reason of the Viterra Parties and the remainder of the Viterra Parties' submissions on this issue are addressed, it is necessary to refer to the relevant legislation relied upon by Cargill Australia together with the principles applicable to the construction and operation of that legislation.[2016]

X.15.3.2 Legislation and related principles

2931 Cargill Australia alleged that the making of the Financial and Operational Performance Representations was conduct in trade or commerce of Glencore or Viterra, or both, that was misleading or deceptive in contravention of section 18 of the Australian Consumer Law. Section 18(1) provides:

> A person must not, in trade or commerce, engage in conduct that is misleading or deceptive or is likely to mislead or deceive.

2932 To the extent that the Financial and Operational Performance Representations were representations as to future matters, Cargill Australia also relied upon section 4 of the Australian Consumer Law, which provides:

> (1) If:
>
> (a) a person makes a representation with respect to any future matter (including the doing of, or the refusing to do, any act); and
>
> (b) the person does not have reasonable grounds for making representation;
>
> the representation is taken, for the purposes of this Schedule, to be misleading.
>
> (2) For the purposes of applying subsection (1) in relation to a proceeding concerning a representation made with respect to a future matter by:

2015 As was observed in *CCP Australian Airships Ltd v Primus Telecommunications Pty Ltd* [2004] VSCA 232, [29], once conduct is engaged in, subsequent events cannot change what has occurred (Nettle JA, with whom Batt and Vincent JJA agreed).

2016 To be clear, the issue of whether the making of the Financial and Operational Performance Representations was misleading or deceptive is dealt with in issue 16. However, the authorities relevant to that issue are also relevant to whether or not a representation was in fact made or not made by reason of a disclaimer or disclaimers.

(a) a party to the proceeding; or

(b) any other person;

the party or other person is taken not to have had reasonable grounds for making the representation, unless evidence is adduced to the contrary.

(3) To avoid doubt, subsection (2) does not:

(a) have the effect that, merely because such evidence to the contrary is adduced, the person who made the representation is taken to have had reasonable grounds for making representation; or

(b) have the effect of placing on any person an onus of proving that the person who made the representation had reasonable grounds for making the representation.

(4) Subsection (1) does not limit by implication the meaning of a reference in this Schedule to:

(a) a misleading representation; or

(b) a representation that is misleading in a material particular; or

(c) conduct that is misleading or is likely or liable to mislead;

and, in particular, does not imply that a representation that a person makes with respect to any future matter is not misleading merely because the person has reasonable grounds for making the representation.

X.15.3.3 Disclaimers

2933 Very broadly speaking, this proceeding involved 2 separate types of clauses that the parties collectively referred to as "the disclaimers". The first category comprised disclaimers as to the accuracy of information provided to Cargill. The second comprised clauses termed "no reliance" clauses, by which Cargill agreed to accept information on the basis that it would not rely on statements made or other information provided to it in the course of the transaction (outside of the contractual Warranties).

2934 A disclaimer as to accuracy goes towards whether the conduct complained of can be considered misleading or deceptive. The question for resolution is whether, considering the whole of the conduct including the existence and wording of any disclaimer, the conduct in question is misleading.

2935 By contrast, ordinarily "no reliance" clauses are particularly relevant when considering causation.[2017] The question to be answered is whether a "no reliance" clause agreed to by a person receiving information[2018] is evidence that that party *in fact* did not rely on representations made by the other. This type of "disclaimer" is considered below.[2019] It suffices to say for present purposes that, generally speaking, no reliance clauses would not alter the conduct (or the proper characterisation of the conduct) engaged in, such as the making of a representation,[2020] but rather they may be relevant to whether any loss suffered was "because of" the relevant conduct.[2021]

2936 As discussed below, the cases clearly demonstrate that the role of disclaimers in a context of claimed misleading or deceptive conduct is primarily, if not exclusively, evidentiary.[2022] The existence or otherwise of disclaimers may give rise to an inference as to the relevant party's or parties' actual state of mind at the time the transaction was concluded, or be relevant to determining what a reasonable person in the position of the recipient would have done or understood. However, they are not in and of themselves exhaustively legally determinative of whether a plaintiff has an enforceable claim based on a contravention of section 18 of the Australian Consumer Law.

X.15.3.4 Disclaimer as to accuracy

2937 A key case concerning the effect of disclaimers as to accuracy, *Butcher v Lachlan Elder Realty Pty Ltd*,[2023] concerned a claim for misleading or deceptive conduct arising out of a contract for the sale of land. The real estate agent had produced a brochure that reproduced a survey diagram of the land, which was provided to the purchasers before sale. The survey diagram depicted a pool on the property as being above the

---

2017 See, for example, *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 320-321 [30]-[31] (French CJ).

2018 Such an agreement may be before, simultaneous with, or after, the provision of the information.

2019 See issue 20 below.

2020 Compare *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592, 612-613 [69] (Gleeson CJ, Hayne and Heydon JJ).

2021 See Australian Consumer Law, s 236(1)(a).

2022 *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 320-321 [28]-[32], 341-342 [102], 348 [130] (Gummow, Hayne, Heydon and Kiefel JJ).

2023 (2004) 218 CLR 592.

mean high water mark when in fact it was not. The real estate agent stated in the brochure that although it believed the information contained within it was reliable, it had been produced by others and its accuracy could not be guaranteed.

2938 The plaintiffs' case was run on the basis that the agent itself had made positive misrepresentations as to the title to the land and that the swimming pool on the property lay above the high water line.[2024] The fact that the pool was below the high water mark meant that the purchasers were unable to relocate the pool as planned. The purchasers only discovered this fact after signing a contract and paying a deposit of $200,000.

2939 There were 2 disclaimers on the brochure, on the front and on the back of the double-sided single sheet. They contained substantially similar language. The disclaimer on the front page stated:[2025]

> Lachlan Elder Realty Pty Ltd ACN 002 332 247. All information contained herein is gathered from sources we believe to be reliable. However we cannot guarantee it's (sic) accuracy and interested persons should rely on their own enquiries.

2940 Gleeson CJ, Hayne and Heydon JJ held that, considering all of the conduct of the agent and other circumstances which might qualify its character, including the nature of the parties, the character of the transaction and the contents of the brochure itself, the agent "did no more than communicate what the vendor was representing, without adopting it or endorsing it".[2026]

2941 After referring to the principle that a corporation which purports to do no more than pass on information supplied by another (which information turns out to be false) need not have engaged in misleading or deceptive conduct if the corporation has made it apparent that it is not the source of the information and disclaimed any belief as to its truth or falsity,[2027] their Honours stated that it was important the agent's

---

2024 Ibid, 603 [32].
2025 Ibid, 596-597 [7]. See also at 597 [10].
2026 Ibid, 605 [40].
2027 Ibid, 605 [38], referring to *Yorke v Lucas* (1985) 158 CLR 661, 666 (Mason ACJ, Wilson, Deane and Dawson JJ).

conduct be viewed as a whole. They continued:[2028]

> It is not right to characterise the problem as one of analysing the effect of its "conduct" divorced from "disclaimers" about that "conduct" and divorced from other circumstances which might qualify its character. Everything relevant the agent did up to the time when the purchasers contracted to buy the … land must be taken into account.

2942 Considering the question of whether the purchasers saw the disclaimers, their Honours stated:[2029]

> The Court of Appeal declined to "accord [the disclaimers] decisive significance", but they do have some significance. If the "conduct" of the agent is what a reasonable person in the position of the purchasers, taking into account what they knew, would make of the agent's behaviour, reasonable purchasers would have read the whole document, given its importance, its brevity, and their use of it as the source of instructions to professional advisers.
>
> (Citation omitted.)

2943 They concluded it would have been plain to the reasonable purchaser, in the position of the plaintiffs, that the real estate agent was not the source of the information that was said to be misleading, as the agent had done nothing more than pass on the information supplied by others and had both expressly and impliedly disclaimed any belief in the truth or falsity of that information.[2030]

2944 Their Honours' reasons went on to consider earlier cases dealing with disclaimers in the context of a misleading or deceptive conduct claim, and specifically where the disclaimers stated that information conveyed to purchasers had been obtained from other sources. Further, they referred to the level of analysis of the wording of disclaimers, and stated that the appropriate level might vary from case to case.[2031] On the facts of the case, they found that it was not inappropriate to closely consider the contents of the brochure in determining whether the agent had made a representation.

2945 Importantly, their Honours distinguished *John G Glass Real Estate Pty Ltd v Karawi Constructions Pty Ltd*,[2032] where the Full Court of the Federal Court held that a

---

2032 (1993) ATPR 41-249 (Davies, Heerey and Whitlam JJ).

disclaimer as to the accuracy of information relating to real estate in a brochure distributed by the real estate agent did not prevent a successful claim for misleading or deceptive conduct. In that case, the disclaimer, which appeared on the inside of the back cover, provided:[2033]

> The information contained herein has been prepared with care by our Company or it has been supplied to us by apparently reliable sources. In either case *we have no reason to doubt its completeness or accuracy*.
>
> However, *neither John G Glass Real Estate Pty Limited, its employees or its clients guarantee the information* nor does it, or is it intended, to form part of any contract. Accordingly, all i*nterested parties should make their own enquiries to verify the information as well as any additional or supporting information supplied* and *it is the responsibility of interested parties to satisfy themselves in all respects*.
>
> (Emphasis added.)

2946 The agent had held itself out in the brochure to be "consultants to institutional investors and to developers of major properties". The Full Federal Court had held that such an agent "would not be regarded by potential purchasers of properties as merely passing on information about the property 'for what it is worth without any belief in its truth or falsity'".[2034] Further, the alleged misleading conduct in that case was a misstatement of the net lettable area of a commercial property – a matter the Full Federal Court considered was 1 of "hard physical fact".[2035] It was upon these bases that Gleeson CJ, Hayne and Heydon JJ held that that case was not comparable with the situation before them. The agent in *Butcher v Lachlan Elder Realty Pty Ltd* had not claimed to have any special expertise and the location of the water line was not necessarily easily ascertainable.[2036]

2947 Further the majority stated that a finding of fact of the Full Federal Court in that case was questionable in light of the terms of the disclaimer. In so doing, the following observation was made:[2037]

2033 Ibid, 41,358 col 1.4.

2034 Ibid, 41,359 col 1.4, paraphrasing *Yorke v Lucas* (1985) 158 CLR 661, 666, which was referred to in *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592, 611 [64].

2035 Ibid, 41,359 col 2.1.

2036 *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592, 611-612 [64]-[65].

2037 Ibid, 612 [67].

> It does not seem quite correct to describe an estate agent which says it has no reason to doubt the accuracy of information but says it does not guarantee it, advises interested parties to make their own inquiries, and says interested parties have the responsibility of satisfying themselves in all respects, as making an ''express assertion'' of belief in the information.

2948 After discussing this and various other cases, their Honours held that the agent in *Butcher v Lachlan Elder Realty Pty Ltd* had not engaged in misleading or deceptive conduct.

2949 By contrast, McHugh J decided that the agent's conduct had been misleading or deceptive and the disclaimer did not result in the agent avoiding liability.[2038] Although McHugh J was in dissent on the facts of the case, his Honour's statements as to the effect of disclaimers generally are useful and have been cited in subsequent cases as statements of authority.[2039] In relation to disclaimers, his Honour said:[2040]

> Where a corporation passes on information supplied by another, one circumstance that may preclude a finding of a contravention of s 52 [being the predecessor of section 18 of the Australian Consumer Law] is where the corporation *expressly or impliedly disclaims any belief in the truth or falsity* of the information. Another circumstance is where the corporation expressly or impliedly *disclaims personal responsibility* for what it conveys. The presence and impact of a disclaimer are *particularly relevant where the impugned conduct is alleged to have induced a particular course of conduct by the complainant*.
>
> …
>
> … the intent of the corporation is not relevant for the purposes of s 52. As a result, a disclaimer as to the truth or otherwise of a representation does not, of itself, absolve the corporation from liability.
>
> This is not to say that a disclaimer should be ignored for the purposes of assessing whether a contravention of s 52 has occurred. As Miller notes in *Miller's Annotated Trade Practices Act*, the conduct must be considered as a whole. This requires consideration of whether the conduct in question, including any representations and the disclaimer, is misleading or deceptive or is likely to mislead or deceive. *If a disclaimer clause has the effect of erasing whatever is misleading in the conduct, the clause will be effective, not by any independent force of its own, but by actually modifying the conduct*. However, a formal disclaimer would have this effect only in rare circumstances.

2038 In writing a separate judgment, Kirby J also found that the agent had been engaged in misleading or deceptive conduct.

2039 See, for example, *Jewelsnloo Pty Ltd v Sengos* [2016] NSWCA 309, [63] (Macfarlan JA, with whom Beazley ACJ and Payne JA agreed). In this case, it was noted that the trial judge correctly had not treated a disclaimer (being a "no reliance" clause) as an absolute bar to the plaintiff succeeding on its misleading or deceptive conduct claims.

2040 *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592, 638-639 [150]-[152].

(Emphasis added, citations omitted.)

2950 In concluding that the agent ought to be held liable for misleading or deceptive conduct, his Honour stated:[2041]

> … once misleading or deceptive conduct is shown, the [Trade Practices] Act prevails over the disclaimer. It would be contrary to the consumer protection objects of the statute and to public policy for disclaimers to deny a statutory remedy for offending conduct under the Act.

X.15.3.5 Additional case law

2951 There are, unsurprisingly, a surplus of cases considering the efficacy or otherwise of disclaimers in the context of claims for misleading or deceptive conduct. It is unnecessary to give a discursive account of the many cases that have considered the issue over the last 4 or so decades. As is plain from what it set out above, ultimately the issue for the court is a question of fact and "everything must depend on an appropriately detailed examination of the specific circumstances".[2042] That said, there are some further cases that are of some assistance to the issues presently before the court.

2952 In *Downey v Carlson Hotels Asia Pacific Pty Ltd*,[2043] Keane JA considered the impact of a disclaimer that stated that the information provided by the owners of a hotel chain to the plaintiffs was "given as a guide only and no responsibility will be taken for any errors or omissions".[2044] Quoting both McHugh J and the majority in *Butcher v Lachlan Elder Realty Pty Ltd* respectively, his Honour observed:[2045]

> It has been recognised, however, that disclaimers can be effective "if the clause actually has the effect of erasing whatever is misleading in the conduct"; in other words, if the effect of the disclaimer is to make clear something that, if allowed to remain vague or ambiguous, could have led a person into error. Disclaimers had this effect in *Butcher* where it was held that the effect of reading an entire brochure, including the disclaimers, was *to make it clear that the survey report included in the brochure had not been prepared by the producer of the brochure but was simply being passed on* without any representations being made

2042 *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592, 615 [74] (Gleeson CJ, Hayne and Heydon JJ).

2043 [2005] QCA 199.

2044 Ibid, [81].

2045 Ibid, [83].

> as to its truth or falsity. It is apparent that if a disclaimer is to function in this way it must be worded unambiguously, feature prominently and it must be communicated to the reader that the disclaimer is relevant to the information it is seeking to qualify. As Jacobson and Bennett JJ noted in *National Exchange*:[2046]
>
> > Where the disparity between the primary statement and the true position is great it is necessary for the maker of the statement to draw the attention of the reader to the true position in the clearest possible way.
>
> (Emphasis added, citations omitted.)

Ultimately, Keane JA held that the respondent had engaged in misleading or deceptive conduct, despite the inclusion of the disclaimers in the promotional material, by reason of a representation made about the prospects of the proposed development.[2047]

2953 The legal principles outlined above are of broad application, but dealt with factual circumstances that were materially different to the present case. In both *Butcher v Lachlan Elder Realty Pty Ltd* and *Downey v Carlson Hotels Asia Pacific Pty Ltd*, the plaintiffs were couples (although in the former case the High Court noted that the couple in question were intelligent, shrewd and self-reliant, and had the benefit of professional advice about their purchase).[2048] The nature of the parties in this case as sophisticated commercial multinationals, with Cargill as proposed purchaser being extensively experienced and knowledgeable of the malting industry,[2049] and the amount of the purchase price for Joe White, are relevant considerations to be taken into account when considering the whole of the conduct in the context of the relevant surrounding circumstances.

2954 Equally, these cases were distinguishable because this proceeding was not concerned with a person who was merely an agent purporting to convey the position of the owner for whom the agent was acting. Glencore, itself, was the ultimate owner of the

2047 [2005] QCA 199, [85]-[90] (Williams JA and Atkinson J agreeing).

2048 *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592, 605-606 [41], 607 [45] (Gleeson CJ, Hayne and Heydon JJ); compare 648 [188]-[189] (Kirby J, dissenting).

2049 Though, not all aspects of the Australian malting industry specifically.

business being sold. Further, the information it disseminated was expressly stated to have been prepared by it and its subsidiaries (as was the fact), which entities were the owners of the shares and assets being sold. These were shares and assets that the subsidiaries had owned for a number of years, a fact which was disclosed on the face of the Information Memorandum. In short, for these and other reasons, the facts of this proceeding were far removed from those discussed in the authorities referred to above.

X.15.3.6 Refraining from doing an act

2955 In identifying "conduct" for the purposes of section 18, the Viterra Parties also relied upon section 4(2) of the *Competition and Consumer Act*, which provides:[2050]

> In this Act:
>
> (a) a reference to engaging in conduct shall be read as a reference to doing or refusing to do any act, including …;
>
> (b) a reference to conduct, when that expression is used as a noun otherwise than as mentioned in paragraph (a), shall be read as a reference to the doing of or the refusing to do any act, including …;
>
> (c) a reference *to refusing to do an act* includes a reference to:
>
> (i) *refraining (otherwise than inadvertently) from doing that act*; or
>
> (ii) making it known that that act will not be done; and
>
> (d) ...
>
> (Emphasis added.)

2956 The Viterra Parties contended that any non-disclosure of the Undisclosed Matters was not relevant by reason of section 4(2)(c)(i).[2051] In so submitting, they referred to McHugh J's dissenting judgment in *Butcher v Lachlan Elder Realty Pty Ltd* "in a passage of obiter with which the majority did not disagree", as follows:[2052]

> Section 4(2) imposes one important limitation on the meaning of "conduct". Inadvertent refraining from doing an act does not constitute conduct for the purposes of s 52 [of the *Trade Practices Act 1974 (Cth)*]. Section 4(2) requires

---

2050 The Australian Consumer Law contains s 2(2) which is in substantially the same terms (the differences are of no materiality). It is convenient to simply refer to s 4(2) of the *Competition and Consumer Act*.

2051 See also s 2(2)(c)(i) of the Australian Consumer Law.

2052 (2004) 218 CLR 592, 622-623 [101].

actual knowledge for a failure to disclose to be actionable.

2957 The Viterra Parties also referred to 2 earlier decisions in support of the contention that before Cargill Australia could rely upon any non-disclosure it was required to prove by evidence that the Viterra Parties had actual knowledge of the Undisclosed Matters.[2053]

2958 In considering this issue, it is useful to keep in mind the manner in which section 4(2) operates in the legislative scheme concerning section 18. As Gummow J stated nearly 3 decades ago in *Demagogue Pty Ltd v Ramensky*:[2054]

> "Conduct" within the meaning of s 52 *includes* refusing to do an act and refusal to do an act includes a reference to "refraining (otherwise than inadvertently) from doing that act": s 4(2). But *in any case where a failure to speak is relied upon* the question must be whether in the particular circumstances the silence constitutes or is part of misleading or deceptive conduct. *The expanded meaning* given by s 4(2) to "conduct" *should not distract attention from the fundamental issue* in the case at hand.
>
> (Emphasis added.)

2959 Equally, conduct for the purposes of section 18 may be a combination of what was stated as well as what was left unsaid. In objectively assessing whether this combination was conduct that was misleading or deceptive, such conduct that would otherwise be misleading or deceptive does not cease to have that character because the representatives of a company engaged in that conduct did not have knowledge of the undisclosed facts.[2055] That said, knowledge may be relevant where something was left unstated, which in the particular circumstances the failure to disclose may have conveyed the implication that what was not stated was not known.[2056] Such an implication might be conveyed when it would reasonably be expected in the

2053 *Peninsula Balmain Pty Ltd v Abigroup Contractors Pty Ltd* (2002) 18 BCL 322, 339-340 [58] (Hodgson JA, with whom Mason P and Stein JA agreed); *Semrani v Manoun* [2001] NSWCA 337, [62] (Beazley JA, with whom Mason P and Ipp AJA agreed). Later in their written submissions, in the context of issue 18, reference was also made to *Australian Competition and Consumer Commission v Homeopathy Plus! Australia Pty Ltd* (2014) 146 ALD 278, 303 [112] (Perry J), however in this last case there was no dispute that the respondents had both engaged in conduct within the meaning of s 18 of the Australian Consumer Law.

2054 (1992) 39 FCR 31, 40.2.

2055 *Johnson Tiles Pty Ltd v Esso Australia Pty Ltd* (2000) 104 FCR 564, 591 [66] (French J, with whom Beaumont and Finkelstein JJ agreed); *Fraser v NRMA Holdings Ltd* (1995) 55 FCR 452, 467E (Black CJ, von Doussa and Cooper JJ), citing *Parkdale Custom Built Furniture Pty Ltd v Puxu* (1982) 149 CLR 191, 197 (Gibbs CJ).

2056 *Johnson Tiles Pty Ltd v Esso Australia Pty Ltd* (2000) 104 FCR 564, 591 [66].

circumstances that the undisclosed fact or facts would be disclosed if they were known.[2057] However, if there was a failure to disclose a fact which, in the circumstances of the case would reasonably be expected not to exist absent disclosure, then that non-disclosure might have conveyed the misleading impression that the fact did not exist.[2058]

2960 Returning to the cases relied upon by the Viterra Parties, as was effectively acknowledged by them, the observation made by McHugh J in *Butcher v Lachlan Elder Realty Pty Ltd* in no way represented binding authority. In addition to it being obiter dictum and in a dissenting judgment, the statement made was very broad. It may be said without fear of contradiction that whatever his Honour intended by his observation, he could not have intended to brush aside many established authorities about what amounts to conduct for the purposes of section 18.

2961 Further, in addressing this issue, a review of the other 2 cases referred to is instructive.

2962 *Semrani v Manoun,*[2059] a decision of the New South Wales Court of Appeal in 2001, concerned a claim of misleading or deceptive conduct arising out of a sale of manufacturing machinery. The appellant, Semrani, had offered to purchase the machinery for under $60,000 from a defunct partnership through his agent, Williams. Semrani then represented to the respondent, the claimant Manoun, that the machinery was worth in excess of $1 million (amongst other representations). In reliance on that representation, Manoun invested $200,000 in a business venture that it was anticipated would use the machinery.

2963 A meeting was held between Semrani, Manoun and Williams. Manoun told Williams that Semrani claimed the machinery was worth more than $1 million, and Williams did not query or contradict this claim. At the request of Semrani and Manoun, Williams drafted an expression of agreement relating to the proposed business venture that recorded the value of the machinery as $1 million, which was the amount

---

2057 Ibid.
2058 Ibid, 592 [70].
2059 [2001] NSWCA 337.

it was agreed the investment vehicle would pay to Semrani. Williams said nothing at that meeting about the value of the machinery, even though he had been involved in Semrani's offer to purchase the machinery for under $60,000.

2964 The trial judge held that the conduct of both Semrani and Williams was misleading or deceptive. Semrani appealed on the basis that the trial judge had applied the incorrect test for causation, which was dismissed. Williams also appealed, based on the premise that his silence at the meeting as to the value of the machinery was not misleading or deceptive conduct. It was also dismissed. In relation to silence, it was held that:[2060]

> The combined effect of the Act and the authorities therefore, is that for Williams' silence to be actionable, he must have had actual knowledge of a matter which he intentionally refrained from telling Manoun in circumstances where there was either a duty to disclose or where Manoun had a reasonable expectation that such information would be disclosed to him.

2965 There was no direct evidence at trial that Williams had knowledge that the machinery spoken about at the meeting as being worth in excess of $1 million was the same machinery that he knew Semrani had proposed to buy for around $60,000. The trial judge drew an inference that Williams did in fact know it was the same machinery, and the Court of Appeal held that inference was open and should not be disturbed.[2061] The Court of Appeal upheld the decision that Williams' omission at the meeting was advertent, and he had engaged in misleading or deceptive conduct.[2062]

2966 In *Peninsula Balmain Pty Ltd v Abigroup Contractors Pty Ltd*,[2063] decided the following year by the New South Wales Court of Appeal, the appellant Peninsula, a developer, and the respondent Abigroup, a construction company, had entered into a contract by which Abigroup agreed to perform construction works on a development project

2063 (2002) 18 BCL 322 (Hodgson JA, with whom Mason P and Stein JA agreed).

carried on by Peninsula. The contract stated a "superintendent", to be appointed by Peninsula, was empowered to give directions to Abigroup and to determine various claims arising out of the performance of the contract; including in relation to variations to the construction works, defects in the works, insolvency and delays beyond the specified completion date. The superintendent was required to act honestly and fairly and arrive at a reasonable measure or value of work, quantities or time.[2064]

2967 The superintendent that Peninsula appointed under the contract was a related company that had entered into a project management agreement with Peninsula in relation to the development. Peninsula did not disclose to Abigroup that the superintendent appointed under the construction contract was at all material times its agent, and therefore not an independent third party.

2968 The construction works were beset by delays and the contract was ultimately terminated by Peninsula. In the litigation that followed, Abigroup claimed Peninsula had engaged in misleading or deceptive conduct by failing to disclose the nature of its relationship with the company appointed as superintendent. This misleading or deceptive conduct claim was upheld at trial but was subsequently overturned.

2969 On the appeal, Peninsula submitted that the trial judge had made no finding of intentional non-disclosure and, relying on *Semrani v Manoun*, contended "in the absence of a finding of intentional non-disclosure, there was no basis for a finding of misleading or deceptive conduct".[2065] Counsel for Abigroup submitted:[2066]

> [T]his was not a case of Peninsula refusing to do an act but rather one of Peninsula doing an act, that is entering into the building contract without disclosing the project management agreement, thereby representing that the nominated superintendent was clear of any inhibition from acting impartially other than being a related company. Accordingly, the requirement that the withholding of information be intentional, suggested in *Semrani*, had no application.

2970 It was held that Peninsula had not engaged in misleading or deceptive conduct,

---

2064 Ibid, 325 [8].
2065 Ibid, 337 [41].
2066 Ibid, 337-338 [46].

primarily because there was no requirement to make disclosure of the project management agreement between Peninsula and the superintendent and its non-disclosure did not give rise to misleading or deceptive conduct.[2067] After referring to problems Abigroup faced with causation, the issue of non-disclosure by silence was addressed in the following terms:[2068]

> In my opinion, there is also a difficulty faced by Abigroup arising from the referee's *failure to find that the non-disclosure was intentional*. I accept [Peninsula]'s submission that, in so far as what is alleged to be misleading or deceptive conduct arises from Peninsula's refraining from disclosing the project management agreement, Abigroup needs a finding that this refraining was not inadvertent … [I]n my opinion, the requirement in s 4(2)(c) that a refraining be otherwise than inadvertent *requires that there be actual advertence to the question of whether something should be done or not and the formation of an intention that it not be done. I think this is in accordance with the decision in* Semrani.
>
> (Emphasis added.)

2971 Also in rejecting Abigroup's submission that the "conduct" in question had not been silence or "refraining" but "doing" (that is, entering into the contract without disclosing the project management agreement), because Abigroup had not identified how this conduct was alleged in and of itself to be misleading, it was stated:[2069]

> In my opinion, if Abigroup wished to rely on the positive conduct as being misleading, it would have been necessary to allege and prove what representation was conveyed by the positive conduct. For example, Abigroup could have alleged and sought to prove that the positive conduct conveyed that…there was nothing inhibiting [the superintendent] from performing its duties as superintendent honestly and impartially. Abigroup gave no evidence as to what it understood to have been conveyed or represented by the positive conduct, but only gave evidence that if some disclosure had been made, it would have acted differently. That evidence, in my opinion, was appropriate to a case of "refraining", but not of "doing".

2972 Notably, it was not held that this alternate way of putting the case had not been a possibility (if the facts had supported it). Instead, it was emphasised that Abigroup had not adequately pleaded their case or given evidence in this manner at trial.

2973 In response to the submissions based on these decisions, the Cargill Parties referred to

---

2067 Ibid, 339 [54]-[55].
2068 Ibid, 339-340 [58].
2069 Ibid, 340 [59].

a later decision of the Victorian Court of Appeal, *CCP Australian Airships Ltd v Primus Telecommunications Pty Ltd*.[2070] This case concerned a contract by which the appellant agreed to provide an airship for the purpose of Primus advertising during the Sydney Olympic Games in 2000. A "non-refundable" deposit of $400,000 was paid by Primus. At the time the contract was entered into, the appellant had no airship, nor any arrangements in place by which it could obtain an airship in time for the Sydney Olympics. The appellant failed to supply the airship and Primus accepted that conduct as a repudiation of the contract and sued for recovery of the deposit. In addition to contractual and restitutionary claims, Primus sued the appellant for misleading or deceptive conduct, in essence on the basis that the appellant remained silent about its inability to secure an airship in time for the Olympic Games.

2974 Relevantly, Primus alleged representations were made that: (1) the airship would be available for use by Primus at the Olympics; and (2) if the deposit were paid, the appellant would be able to guarantee the delivery of the airship.[2071]

2975 In dismissing the appeal, Nettle JA observed that section 52 of the *Trade Practices Act* did not strike at the traditional secretiveness and obliquity of the bargaining process in pre-contractual negotiations. By reference to earlier authority,[2072] his Honour confirmed that a purpose of the legislative provision was to ensure that such a bargaining process was not seen as a licence to deceive.[2073] More specifically to the issue at hand, both on the facts and the law his Honour rejected the appellant's submission that silence could not constitute actionable misleading or deceptive conduct unless that silence was intentional. In so doing, he stated:[2074]

> As to the law, the misleading and deceptive quality of remaining silent inheres in the non-disclosure of information; not in any refusal to provide it. Consequently, it does not follow from the fact that a failure to act must be intentional in order to be actionable, that silence must be intentional in order

---

2070 [2004] VSCA 232 (Nettle JA, with whom Batt and Vincent JJA agreed).

2071 The second of these representations was alleged to have been implied, the detail of which is not necessary to refer to: ibid, [22]-[24].

2072 *Poseidon Ltd v Adelaide Petroleum NL* (1991) 105 ALR 25, 26 (Burchett J).

2073 *CCP Australian Airships Ltd v Primus Telecommunications Pty Ltd* [2004] VSCA 232, [33]. See also *Miller & Associates Insurance Broking Pty Ltd v BMW Australia Finance Ltd* (2010) 241 CLR 357, 369-371 [20]-[22] (French CJ and Kiefel J).

2074 Ibid, [34].

> to be actionable. It is plain in principle and authority that it is not necessary that silence be intentional in order that it may constitute misleading and deceptive conduct for the purposes of s 52.

2976 Thus, what was stated in this passage was in direct conflict with the 2 New South Wales decisions referred to above insofar as they related to intention. However, it must be noted that there was no issue in *CCP Australian Airships Ltd v Primus Telecommunications Pty Ltd* that the appellant knew of the matters about which it remained silent.

2977 Interestingly, in *Green* v *AMP Financial Planning Pty Ltd*,[2075] Hammerschlag J rejected the proposition that silence cannot constitute misleading or deceptive conduct within the meaning of section 52 unless it is intentional. His Honour noted that this proposition had been derived from a certain construction of section 4(2)(a) or (b) and (c) of the *Trade Practices Act*, and that that proposition had been expressly rejected by the Victorian Court of Appeal in *CCP Australian Airships Ltd v Primus Telecommunications Pty Ltd*. His Honour considered himself bound to follow that decision, noting that far from being convinced that the decision was wrong, it seemed to him that it was correct.[2076]

2978 Similarly, in *Tuggeranong Town Centre Pty Ltd v Brenda Hungerford Pty Ltd (No 2)*,[2077] Refshauge ACJ noted that "[t]he weight of authority is now in favour of the approach that the non-disclosure need not be intentional".[2078] In addition to noting that he considered himself bound by *CCP Australian Airships Ltd v Primus Telecommunications Pty Ltd*, his Honour also nevertheless considered it correct.

2979 And in the same vein, in *Clarkson Williams Partners Pty Ltd v Vaughan*,[2079] it was noted *Semrani v Manoun* and some subsequent authority held that a defendant must have actual knowledge of a matter "which he intentionally refrained from telling the

2078 Ibid, [950]-[956].
2079 [2016] ACTCA 1 (Penfold, Burns and Rangiah JJ).

plaintiff".[2080] However, reference was also made to *CCP Australian Airships Ltd v Primus Telecommunications Pty Ltd* as well as *Owston Nominees No 2 Pty Ltd v Clambake Pty Ltd*,[2081] before stating:[2082]

> The issue is fairly arguable either way, but we respectfully agree with the view taken in *CCP Australian Airships* and *Owston*. An inadvertent failure to disclose relevant information is capable of being just as misleading or deceptive as the deliberate withholding of the same information. It seems unlikely that there was a legislative intention to restrict the reach of [the equivalent of section 18] to the latter situation.

2980 Another later case relevant to this issue was *Noor Al Houda Islamic College Pty Ltd v Bankstown Airport Ltd*.[2083] The first plaintiff, the college, leased land from the defendant, Bankstown Airport, to operate a school on the site proximate to the airport. The second plaintiff was the principal of the school. Before a lease was negotiated between the parties, the defendant's agent brought to the attention of the plaintiffs difficulties with their proposal to use the site to operate a school, including noise issues and a lack of services. In discussions with the agent, the prospect of construction on the site was raised if the plaintiffs were ultimately able to secure a long term lease. However, the defendant did not bring to the plaintiffs' attention that the site had soil contamination issues, despite being in possession of an environmental report indicating contamination that predated the lease. The defendant's agent did not know of the report. As a result of the contamination, the college was unable to develop the site and was forced to move.[2084] Broadly, the losses associated with the need to move were claimed.

2981 The plaintiffs claimed that the defendant had engaged in misleading or deceptive conduct by leasing the site to them without disclosing the contamination. It was held that if permanent buildings were to be constructed for the college, construction costs would have been significantly greater than those applicable to an uncontaminated

2084 Some trench work had been carried out before the college became aware of the contamination issues: 645-646 [113].

site.

2982 The lease signed by the parties contained a number of disclaimers, including "non-reliance" clauses to the effect that the college had not relied on any representations as to how the premises might have been used and that it had made its own appraisal of the land and its suitability for a school.

2983 Hoeben J held that the defendant did not make any positive misleading or deceptive statements about a lack of contamination of the land to the plaintiffs. However, his Honour held that the defendant certainly knew of the contamination, by reason of its possession of the environmental report (and regardless of the fact that its agent who negotiated the lease did not know of it).[2085] The question was therefore whether the defendant's silence was misleading.

2984 The defendant relied on a number of cases in submitting that in order for its silence to be misleading it must have been deliberate.[2086] Referring to *Fraser v NRMA Holdings Ltd*,[2087] his Honour expressed doubt that "such a broad proposition were correct".[2088] He noted in any event that the defendant had knowledge of the contamination.

2985 Considering *Costa Vraca Pty Ltd v Berrigan Weed and Pest Control Pty Ltd*,[2089] his Honour observed that Finkelstein J's reasoning in that case was premised on the words "refusing to do any act" included "refraining (otherwise than inadvertently) from doing an act".[2090] His Honour further noted that in the circumstances of that case on the basis of those definitions it was decided that unintentional non-disclosure did not amount to a breach of section 52.[2091] However, his Honour continued:[2092]

2085 His Honour stated that he did not understand the defendant to argue that it was not aware of the environmental report disclosing the contamination. However, he stated that if such an argument was sought to be made it was rejected on the basis that the defendant's environmental personnel (none of whom were called) were aware of its contents before the lease was entered into: see 638 [86].

2086 These cases included *Costa Vraca Pty Ltd v Berrigan Weed and Pest Control Pty Ltd* (1998) 155 ALR 714, 722 (Finkelstein J); *Rhone-Poulenc Agrochimie SA v UIM Chemical Services Pty Ltd* (1986) 12 FCR 477, 489 (Bowen CJ).

2091 Ibid.

2092 Ibid, 656 [187].

> As has been pointed out by Colin Lockhart in *The Law of Misleading or Deceptive Conduct*…this exclusionary construction of the definition of "conduct" sits uneasily with the principle that proof of intention is generally not required in order to establish that s 52 has been contravened. As that author demonstrated, it was not unusual for the alleged breach of s 52 to arise out of a course of conduct, *including both positive conduct and non-disclosure*. It was by no means clear how such conduct was to be assessed pursuant to the restrictive approach to the definition of "conduct". To require that conduct "must have been deliberately engaged in" in order for it to amount to a contravention of s 52 required proof of intention wherever a breach was alleged by conduct that included non-disclosure with the effect that accompanying positive conduct was also subject to the intention requirement.
>
> (Emphasis added, citation omitted.)

2986 Hoeben J then referred to *Johnson Tiles Pty Ltd v Esso Australia Pty Ltd* concerning the absence of any need for a person who made a misleading representation to have knowledge of the undisclosed facts for the conduct in question to be misleading.[2093] He then adopted a passage from Colin Lockhart's work concerning the expanded meaning of conduct in section 4(2),[2094] including that "the impugned actor's intention or knowledge will be *a relevant, but not decisive consideration* in the determination of whether a contravention by non-disclosure has occurred" (emphasis added).[2095]

2987 His Honour then stated:[2096]

> It seems to me that the qualification suggested by Merkel J in *Johnson Tiles Pty Ltd v Esso Australia Ltd* … is correct, namely that the requirement for conduct to be deliberately engaged in only applies where "silence alone" is relied upon as constituting the misleading or deceptive conduct. That is not the situation here. What is relied upon by the plaintiffs is the combination of the full disclosure by [the defendant's agent] of disadvantages affecting the proposed lease site of which she was aware that is lack of services and noise combined with the absence of any mention of the risk of the site being contaminated.[2097]

2093 (2000) 104 FCR 564, [66] (French J, with whom Beaumont and Finkelstein JJ agreed); see par 2959 above.

2094 C Lockhart, *The Law of Misleading or Deceptive Conduct* (2nd ed, 2003), [5.3].

2095 See also *OXS Pty Ltd v Sydney Harbour Foreshore Authority* [2016] NSWCA 120, [214]-[216] (Gleeson JA, with whom Macfarlan and Leeming JJA relevantly agreed).

2096 (2005) 215 ALR 625, 657 [190].

2097 As to issues in relation to the approach of seeking to discern cases involving "silence alone", see, for example, *Owston Nominees No 2 Pty Ltd v Clambake Pty Ltd* (2011) 248 FLR 193, 206-208 [54]-[66] (McLure P, Pullin and Murphy JJA agreeing that there had been no misleading conduct); *Demagogue Pty Ltd v Ramensky* (1992) 39 FCR 31, 32.3 (Black CJ). In the circumstances of this case where there could have been no suggestion that silence alone was engaged in, it is unnecessary to consider this line of authority. See also *Fabcot Pty Ltd v Port Macquarie-Hastings Council* [2011] NSWCA 167, [209(iii)] (Sackville AJA, with whom Beazley and Campbell JJA agreed).

(Citation omitted.)

2988 The plaintiffs' claim based on misleading or deceptive conduct was upheld, including on issues of causation.[2098]

2989 For completeness, reference should also be made to *Miller & Associates Insurance Broking Pty Ltd v BMW Australia Finance Ltd*.[2099] In that case, it was held that there was no misleading or deceptive conduct when the fact that an insurance policy was not cancellable was not disclosed by a broker in details supplied to a financier providing premium funding. In the joint judgment of French CJ and Kiefel J, their Honours referred to "refraining (otherwise than inadvertently) from doing that act" as part of "refusing to do any act" in the definition of "conduct" in section 4(2).[2100] In so doing, they expressly referred, with apparent approval, to the relevant passages of the decisions of *Johnson Tiles Pty Ltd v Esso Australia Pty Ltd*[2101] and *Noor Al Houda Islamic College Pty Ltd v Bankstown Airport Ltd*.[2102] Further, they noted that in relation to inadvertence no issue had been agitated in the case before them concerning unintentional or unknowing non-disclosure.[2103]

X.15.3.7 Conclusion

2990 In my view, there are a number of reasons why the operation of section 4(2) is not determinative of the issues in this case.

2991 *First and foremost*, the Financial and Operational Performance Representations were positive representations as to the state of the Joe White Business in and of themselves whether or not there was any disclosure of the Undisclosed Matters. These were positive acts that were conduct for the purposes of section 18, and the issue of refraining did not arise in determining the question of whether conduct had been engaged in.[2104] By way of example, the first implied representation in question, that

2104 See, for example, *Owston Nominees No 2 Pty Ltd v Clambake Pty Ltd* (2011) 248 FLR 193, 208 [64]-[66] (McLure P, Pullin and Murphy JJA agreeing that there had been no misleading conduct).

the production, sales and earnings figures stated in the Financial and Operational Information were based upon strict quality control procedures and analysis,[2105] was a positive representation about how control procedures and analysis were implemented which was implied from a series of positive statements about the Joe White Business. It was a representation that was made (and either was misleading or it was not), regardless of any refraining from disclosure of other information relevant to the issue.[2106] In other words, whether or not a representation was made (or to use the language of the provision, conduct was engaged in) was not in any way dependent upon or relevantly connected to non-disclosure or any refraining, inadvertent or otherwise, from doing an act. The same observation may be made in relation to each of the first 9 of the other Financial and Operational Performance Representations.[2107] In short, each of those implied representations was alleged to have been made, and has been found to have been made, based upon positive statements made in relation to the Joe White Business rather than upon the Viterra Parties refraining from any act.

2992 In relation to the tenth Financial and Operational Performance Representation, that *the Undisclosed Matters did not exist*,[2108] the position was more nuanced. The implied representation as alleged, and found to have been made, was different because it expressly incorporated the fact of non-disclosure of the Undisclosed Matters. However, it was the positive statements made that were the relevant conduct. In other words, the non-disclosure of the Undisclosed Matters was not the factor which meant that the conduct that would otherwise not be misleading was in fact misleading by reason of the non-disclosure. That is, each of the statements relied upon that were actually expressly made was positive conduct for the purposes of section 18. In

---

2105 See par 2835 above.

2106 Obviously, if further information relevant to the issue had been disclosed beyond what was contained in the Information Memorandum or other relevant conduct, it would have to be considered in determining what had been conveyed by the statements relied upon.

2107 See pars 2856-2913 above. In relation to the fourth implied representation (see par 2877 above), an additional factor was introduced, namely it was pleaded that the representation was implied in part because none of the statements relied upon were withdrawn or qualified. However, this additional particular did not introduce any issue about refraining from the disclosure of any particular fact or matter.

2108 See par 2914 above.

essence, the silence in not disclosing the Undisclosed Matters was positive or affirming, in that it confirmed there was nothing to prevent the representations from arising based on the positive statements about the Joe White Business.[2109]

2993 To elaborate, the Information Memorandum Statements and the Management Presentation Statements identified in alleging the tenth implied representation were, broadly speaking, to the effect that Joe White had a strong track record in relation to customer contracts, in supplying high-quality malt and in meeting its customers' specifications. The making of these statements was plainly conduct which did not involve any refusal to act or refraining from any act. That conduct did not cease to be conduct for the purposes of section 18 simply because the Viterra Parties did not disclose the Undisclosed Matters.

2994 *Secondly,* and in any event, for reasons discussed below,[2110] it has been found that there was no inadvertence in the refraining from disclosing the Undisclosed Matters, including the non-disclosure of the Viterra Practices and the Viterra Policies.

2995 *Thirdly*, even if it were accepted that knowledge of each of the Undisclosed Matters could not be attributed to Glencore and that Glencore was in complete ignorance of them, when considering the position of the Sellers, any lack of knowledge on Glencore's part was not determinative of whether or not the relevant conduct was misleading on the part of the Sellers.[2111]

2996 *Fourthly*, to the extent that authority in this jurisdiction was inconsistent with New South Wales authority, naturally I am bound to follow the Victorian Court of Appeal. Therefore, the Viterra Parties' submissions concerning the need for intention to refrain for "otherwise than inadvertently" not to apply for the purposes of section 4(2)(c)(i) must be rejected.[2112]

2109 See *Owston Nominees No 2 Pty Ltd v Clambake Pty Ltd* (2011) 248 FLR 193, 206-208 [54]-[66] (McLure P), and the authorities there referred to.

2110 See issues 22, 23 below.

2111 *Noor Al Houda Islamic College Pty Ltd v Bankstown Airport Ltd* (2005) 215 ALR 625.

2112 See par 2975 above. See also *Cityrose Trading Pty Ltd v Booth* [2013] VSC 504, [102]-[104] (Emerton J).

2997 For those familiar with the relevant authorities, it will be apparent that the above discussion does not include any relevant reference to authorities concerned with whether objectively a reasonable expectation arose for there to be disclosure of any of the Undisclosed Matters.[2113] In circumstances where it has been found that the Viterra Parties positively made the representations as alleged, it is unnecessary to discuss this line of authority concerned with this objective "aid to characterising non-disclosure" here.[2114]

2998 However, if I am incorrect, in my view such an expectation arose in this case. Whether it arose at the time when the Information Memorandum was first disseminated, or at some later time in the sale process, need not be decided. The expectation arose before the completion of the Due Diligence. This finding reflects the evidence of Glencore's own witness, King,[2115] a person who was presented as an expert in mergers and acquisitions.[2116]

2999 The circumstances requiring such disclosure were heightened by a number of further matters. Without being exhaustive, they included: (1) the conscious strategy of Glencore to present the Joe White Business in a manner that created massive competitive tension between prospective purchasers, including Cargill;[2117] (2) the information concerning the Viterra Practices never being disclosed despite being implemented routinely as part of Joe White's usual operations, and thus material to Joe White's operations;[2118] (3) Glencore expressly representing that the Information Memorandum and the Management Presentation Memorandum had been prepared

2113 See, for example, *Miller & Associates Insurance Broking Pty Ltd v BMW Australia Finance Ltd* (2010) 241 CLR 357, 369-371 [19]-[23] (French CJ and Kiefel J), 385-386 [95]-[96] (Heydon, Crennan and Bell JJ). See also *Traderight (NSW) Pty Ltd v Bank of Queensland Ltd* [2015] NSWCA 94, [173] (Barrett JA, with whom Bathurst CJ and Beazley P agreed). See also pars 3382-3384 below.

2114 *Miller & Associates Insurance Broking Pty Ltd v BMW Australia Finance Ltd* (2010) 241 CLR 357, 370 [20].

2115 See pars 365, 496 above. See also par 484 above.

2116 See par 110 above. His evidence as to his expertise was not challenged. Further, his evidence reflected that of a person who had had considerable experience in this field.

2117 See pars 110, 766 above.

2118 This fact is to be contrasted with the facts in *Miller & Associates Insurance Broking Pty Ltd v BMW Australia Finance Ltd* (2010) 241 CLR 357, where the information was available in the documentation but the claimant financier did not read it: 371-372 [26] (French CJ and Kiefel J), 386 [96] (Heydon, Crennan and Bell JJ).

by Glencore and its subsidiaries, it being a known fact that these subsidiaries included the Viterra entities which had owned and been involved in the conduct of the Joe White Business for a number of years;[2119] (4) the levels of control exercised by the Viterra Parties in the sale process at the direction of Glencore, including the regulated manner in which Cargill was able to get access to relevant information about the Joe White Business and the requirement for Cargill to keep all information it was supplied confidential; and (5) the Operational Practices (forming part of the Undisclosed Matters), which on any view of the evidence involved dishonest business practices that, in the absence of any notice, could not have reasonably been anticipated by a prospective purchaser.[2120] Further, although the wording of the Sale Process Disclaimers was relevant to any consideration of whether a reasonable expectation of disclosure existed, when materially misleading representations were positively made in relation to the underlying operations of the Joe White Business in such a context,[2121] the language of the Sale Process Disclaimers could not remove the statutory requirement of disclosure in circumstances where the misleading or deceptive conduct was being engaged in.

X.15.3.8 Other matters

3000 In closing submissions, the Viterra Parties referred to the fact that Glencore acquired Joe White as part of the Viterra acquisition in December 2012 and intended to sell without any vendor due diligence, in submitting the position was analogous to a person who was selling a used car which she or he had inherited from a family member's estate. It was contended that Glencore effectively stated to the prospective purchasers that, "Look, this is it. Don't know anything about it. You'll have to make your own enquiries. I can tell you some things that I know about it, but don't rely on them."

3001 There were a number of obvious problems with this analogy. *First,* no one had died or was otherwise unavailable; the owner of the assets being sold was alive and well,

---

2119 See par 2954 above.

2120 Each Operational Practice involved the deception of Joe White's customers. Indeed, both the Varieties Practice and the Gibberellic Acid Practice inherently involved Joe White deliberately deceiving its customers.

2121 See par 2954 above.

fully operational and still in control. *Secondly*, Glencore stated, as was the fact, that it had had the benefit of access to its subsidiaries in preparing the relevant information. *Thirdly*, Glencore was not the direct owner who was actually going to sell the asset. *Fourthly*, not only Glencore, but also the owners, Viterra, were providing the information to assist potential purchasers in their considerations as to a possible acquisition.[2122] *Fifthly*, in the suggested analogy given, the owner had not been driving the car for 4 years.[2123] *Sixthly*, the sale of the car apparently did not involve any due diligence on the part of the purchaser before acquisition, pursuant to which the purchaser would be provided with further information in response to its requests.

3002 In these circumstances, little assistance can be derived from the analogy given.

3003 The existence of disclaimers as to accuracy or absence of personal responsibility, separately or in combination, are important when considering the nature of the conduct as a whole. However, although a disclaimer may alter or modify the conduct or its correct characterisation, it cannot operate to "correct" or transform conduct that was otherwise misleading or to avoid the operation of the Australian Consumer Law. For public policy reasons, the courts will not give effect to a disclaimer that purports to exclude liability for conduct that has been found *in fact* to be misleading or deceptive. To put it another way, a clause which states (in whatever form) that a discloser of information shall not be engaging, or has not engaged, in certain conduct immediately before or after that conduct has actually been engaged in as a matter of fact will not operate to lead to a finding that the conduct has not been engaged in if in fact it has. Presumably, the authors of the Information Memorandum Disclaimers and

---

2122 See pars 475, 711 above.

2123 The Viterra Parties sought to make much of Glencore's lack of experience in the malting industry. They even suggested in closing submissions that Cargill was not only aware of this but that Cargill knew Glencore would be reliant upon information provided by Joe White. This submission completely ignored the involvement of Viterra for the 4 years leading up to the Acquisition. Further, it ignored the evidence of Hawthorne, who said Cargill expected information to be provided (including questions to be answered) by a mix of Joe White, Viterra and Glencore personnel, as well as their advisers. Equally, while Eden acknowledged Glencore's recent acquisition of Joe White and its limited knowledge of the malting industry, the evidence that he expected information to come from within the Joe White Business did not exclude Viterra from being a source of information: see par 513 above. Similarly, Van Lierde acknowledged Glencore's ownership of Joe White through its acquisition of Viterra was recent in 2013, but did not make any assumption about Glencore's lack of knowledge of the Joe White Business.

the Management Presentation Memorandum Disclaimers were fully aware of this by seeking to exclude the making of or responsibility for any representation to the maximum extent permitted by law rather than to provide that no representations were being made at all (when they clearly were) or that there could be no liability in relation to any misleading representations made (when that would be contrary to law).

X.15.3.9 The English position

3004 The Viterra Parties referred to several cases in the United Kingdom concerning alleged misrepresentations in commerce, including in particular *IFE Fund SA v Goldman Sachs International*,[2124] *Taberna Europe CDO II plc v Selskabet AFI*[2125] and *Raiffeisen Zentralbank Osterreich AG v Royal Bank of Scotland plc*.[2126]

3005 Before discussing these cases, the Viterra Parties' submissions emphasised this case was dealing with a "Wall Street" deal.[2127] While they acknowledged that some commercial dealings may involve a person unaware of, or unable to, protect its rights, they submitted this particular transaction was far removed from that situation. In making this point, it was noted that the transaction involved some of the world's largest and most sophisticated corporate entities utilising well-resourced internal acquisition teams as well as high-quality external advisers. They submitted that such entities should be free to use legalistic disclaimers based on common assumptions and practices[2128] to determine where the risks and liabilities that arise out of a transaction should lie. They also referred to King's evidence to the effect that receiving an information memorandum was like getting a brochure for a house being sold, in that a prospective purchaser would ordinarily visit the house and get a survey done to get a better understanding of the house and the property rather than just relying upon the

2124 [2007] 2 Lloyd's Rep 449 (Waller, Gage and Lawrence Collins LJJ).

2125 [2017] QB 633 (Moore-Bick LJ, with whom Tomlinson and Simon LJJ agreed).

2126 [2011] 1 Lloyd's Rep 123.

2127 Le Binh gave evidence that the transaction (with major banks involved) was talked about on Wall Street, New York, and that he would call it "a Wall Street deal".

2128 In alluding to such assumptions and practices, reference was made to *Miller & Associates Insurance Broking Pty Ltd v BMW Australia Finance Ltd* (2010) 241 CLR 357, 370 [20] (French CJ and Kiefel J) and that Cargill had used similar disclaimers in the sale of Cargill Malt.

brochure.[2129]

3006 Then the Viterra Parties referred to the above cases in support of a submission that the pre-contractual disclaimers, such as those included in the Information Memorandum, could not have their relevance marginalised by being characterised as "boilerplates". It was contended that the English courts were likely to have had cause to interpret disclaimer statements in the context of 2 "large, super-resourced multinational companies more frequently [than] our High Court".

3007 The Viterra Parties submitted that these cases stood for the principle that English courts are eager to ensure that parties are free to strike their own bargains and it is the role of the courts to interpret fairly the words that have been used.[2130] In a somewhat proleptic submission, they also submitted that the English courts have been stronger about disclaimers than the Australian courts, and commended the English approach.

3008 The Viterra Parties' submissions accurately reflected the English approach, but, even leaving aside issues relating to stare decisis, the cases cited by the Viterra Parties were not on all fours with the issues at hand.

3009 In *IFE Fund SA v Goldman Sachs International*,[2131] the Court of Appeal held that disclaimers in a syndicate information memorandum were effective to prevent any misrepresentation (express or implied) having been made in circumstances where relevant information had not been provided to IFE about the true financial position of the entity seeking the funding. The memorandum had been provided by Goldman Sachs as arrangers and underwriters of a syndicated loan.

3010 At trial, Goldman Sachs' counsel had established, during cross-examination of a

---

2129 King gave this evidence under cross-examination (in accepting the proposition that it was not "all about the Information Memorandum" and that 1 had to look further to what was revealed during the Due Diligence and at what was said "on behalf of the vendor[s]" during the Management Presentation in order to know what was going on by way of operational practices in Joe White), and volunteered an analogy; perhaps it was just a coincidence that the example he gave in evidence happened to coincide with the facts in *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592.

2130 *Taberna Europe CDO II plc v Selskabet AFI* [2017] QB 633, 647 [23] (Moore-Bick LJ, with whom Tomlinson and Simon LJJ agreed).

2131 [2007] 2 Lloyd's Rep 449 (Waller LJ, with whom Gage and Lawrence Collins LJJ agreed).

member of IFE's senior management, that the standard terms that were contained in Goldman Sachs' information memorandum were in fact the exact same standard terms adopted by IFE when it acted as an arranger or underwriter in other transactions. This fact led to a number of concessions from this senior manager, who was the person who signed the relevant agreement on behalf of IFE.[2132] These included that he understood Goldman Sachs had not made any representations upon which he could rely; that he understood Goldman Sachs had stated it would have no legal responsibility, including for any loss suffered by reason of the transaction; and that he proceeded with the transaction on that basis, it being perfectly standard and acceptable.[2133] In those circumstances, both the trial judge[2134] and the Court of Appeal[2135] held that IFE could not have disregarded contractual disclaimers that it itself regularly used and that no misrepresentation was made.[2136]

3011 In *Taberna Europe CDO II plc v Selskabet AFI*,[2137] the Court of Appeal held that disclaimers contained in an investor presentation on a website for subordinated loan notes issued by a bank were effective in and of themselves to exclude reliance.[2138] It was held that the defendant was entitled to rely on them as an answer to the plaintiff's claim.

3012 The issues as pleaded were wide-ranging, but on appeal the main issues were confined to: (1) whether a representation had been made about non-performing loans; (2) if so, whether the investor was entitled to recover under section 2(1) of the *Misrepresentation Act 1967* (UK) in the amount paid for the loan notes; and (3) if so, whether the loss ought to have been apportioned under section 1 of the *Law Reform (Contributory Negligence) Act 1945* (UK) because the plaintiff was partly to blame for

---

2132 Ibid, 454 [14]-[15]; 457 [33].
2133 Ibid, 454 [14].
2134 Ibid, 456 [16].
2135 Ibid, 457-458 [29]-[37].
2136 For completeness, IFE could not establish any duty of care owing to it and accordingly any case based on a misrepresentation was based on s 2(1) of the *Misrepresentation Act 1967* (UK) (ibid, [30]), which was in terms fundamentally different to s 18 of the Australian Consumer Law: see pars 3019-3020 below.
2137 [2017] QB 633 (Moore-Bick LJ, with whom Tomlinson and Simon LJJ agreed).
2138 The disclaimers were not incorporated into the subsequent contract: ibid, 645 [16].

its loss.[2139] This statutory scheme was markedly different to the relevant provisions of the Australian Consumer Law.

3013 On the first issue, in considering whether a duty of care arose, the Court of Appeal upheld the trial judge's decision that the bank had actively invited potential investors in a secondary market to make use of information, originally produced for a different purpose, and could hardly complain that it was so used.[2140] In those circumstances, it was held that representations had been made to the plaintiff.

3014 Further, it was held that the plaintiff must have been aware that the effect of the relevant disclaimers was that, fraud apart, the bank was not willing to accept liability for the accuracy of the document's contents.[2141] It was then observed that, in principle, there was no reason why a person should not be able to publish investment-related information on the basis that it is not willing to take responsibility for it (if reasonable to do so) if the publisher's position is made clear.[2142]

3015 In order to demonstrate how different the statutory regime being considered was, it is necessary to set out the relevant provisions. Sections 2 and 3 of the *Misrepresentation Act* relevantly stated:

> **2 Damages for misrepresentation**
>
> (1) Where a person has entered into a contract after a misrepresentation has been made to him by another party thereto and as a result thereof he has suffered loss, then, if the person making the misrepresentation would be liable to damages in respect thereof had the misrepresentation been made fraudulently, that person shall be so liable notwithstanding that the misrepresentation was not made fraudulently, unless he proves that he had reasonable ground to believe and did believe up to the time the contract was made the facts represented were true.
>
> …
>
> **3 Avoidance of provision excluding liability for misrepresentation**

2139 Ibid, 640 [4].

2140 Ibid, 643 [9]-[11]. The wording in the investor presentation stated it was only directed to investors who participated in a "non-deal roadshow" and were persons who had professional experience in matters relating to investments (641 [5]), and, although the plaintiff was experienced professional investor (see 645 [16]), it belonged to the secondary market.

2141 Ibid, 645 [16].

2142 Ibid, 647 [22].

(1) If a contract contains terms which would exclude or restrict –

(a) any liability to which a party to a contract may be subject by reason of any misrepresentation made by him before the contract was made; or

(b) any remedy available to another party to the contract by reason of such a misrepresentation,

that term shall be of no effect except in so far as it satisfies the requirement of reasonableness as stated in section 11(1) of the *Unfair Contract Terms Act 1977*; and it is for those claiming that the term satisfies that requirement to show that it does.

(2) This section does not apply to a term in a consumer contract within the meaning of Part 2 of the *Consumer Rights Act 2015* (but see the provision made about such contracts in section 62 of that Act).

3016 Section 3 was concerned with attempts to exclude liability for misrepresentation after the event, and not with the question as to whether a misrepresentation had in fact been made.[2143]

3017 Section 11(1) of the *Unfair Contract Terms Act 1977* (UK) stated:

11 The "reasonableness" test

(1) In relation to a contract term, the requirement of reasonableness for the purposes of this Part of this Act, section 3 of the *Misrepresentation Act 1967* and section 3 of the *Misrepresentation Act (Northern Ireland) 1967* is that the term shall have been a fair and reasonable one to be included having regard to the circumstances which were, or ought reasonably to have been, known to or in the contemplation of the parties when the contract was made.

3018 Part 2 of the *Consumer Rights Act 2015* (UK) relevantly stated:

61 Contracts and notices covered by this Part

(1) This Part applies to a contract between a trader and a consumer.

3019 The combined effect of the above provisions is that the statutory scheme provided for the legal validity of disclaimers purporting to exclude liability for pre-contractual misrepresentations, provided that:

(1) the party attempting to enforce the term was able to discharge the onus

---

2143 Ibid, 646 [20].

of proving that the term was reasonable in all the circumstances; and

(2) the term was not a term in consumer-to-trader contracts (that is in substance, the term was in a contract negotiated between businesses).

3020 The Australian Consumer Law contains no such exemptions. This context is important in considering the statement extracted in the Viterra Parties' closing submissions.[2144] The relevant passage, which follows Moore-Bick LJ's detailed analysis of the content of the exclusion clauses in the context of s 3 of the *Misrepresentation Act*, read in its entirety:[2145]

> In the past judges have tended to invoke the contra proferentem rule as a useful means of controlling unreasonable exclusion clauses. The modern view, however, is to recognise that commercial parties (which these were) are entitled to make their own bargains and that the task of the court is to interpret fairly the words they have used. The contra proferentem rule may still be useful to resolve cases of genuine ambiguity, but ought not to be taken as the starting point…

3021 In the above passage, Moore-Bick LJ was not making a generalised observation about the intentions of parties applicable to all exclusion clauses negotiated by commercial parties or how those clauses might operate come what may. Instead, in the context of section 3 of the *Misrepresentation Act* and contractual exclusion clauses, his Lordship was discussing whether judges ought to construe potentially unreasonable exclusion clauses against the party that drafted them. In any event, more significantly, the analysis conducted in his Lordship's reasons related to questions which are fundamentally different to the question of whether, in fact, a person has engaged in conduct that was misleading or deceptive or likely to mislead or deceive.

3022 Similarly, *Raiffeisen Zentralbank Osterreich AG v Royal Bank of Scotland plc*[2146] concerned whether or not a particular exclusion clause fell within section 3 of the *Misrepresentation Act*.[2147] In that case, Clarke J made the following observation:[2148]

> If sophisticated commercial parties agree, in terms of which they are both

---

2144 See par 3005 above.
2145 [2017] QB 633, 647 [23].
2146 [2011] Lloyd's Rep 123.
2147 Ibid, 172 [272].
2148 Ibid, 177 [314].

> aware, to regulate their future relationship by prescribing the basis on which they will be dealing with each other and what representations they are or are not making, a suitably drafted clause may properly be regarded as establishing that no representations (or none other than honest belief) are being made or are intended to be relied on. Such parties are capable of distinguishing between statements which are to be treated as representations on which the recipient is entitled to rely, and statements which do not have that character, and should be allowed to agree among themselves into which category any given statement may fall.

Clarke J considered whether or not particular exclusion clauses were "unreasonable" for the purpose of determining whether or not they were void by operation of the statute, and concluded they were not.[2149] In that context, the commercial nature of the parties was important for determining whether or not the clause was likely to be reasonable.[2150] His Honour's reasons did not extend beyond the confines of the particular statutory provision.

3023 Further, the passage quoted above as a general proposition for a satisfactory means of doing business between sophisticated commercial parties, whatever its status,[2151] or its general commercial appeal or otherwise, does not provide a basis for this court to decline to adopt the required approach; namely, to carefully analyse both the terms of the relevant disclaimers and the circumstances in which they were agreed or imposed, in the overall context (including the various points in time and the different means) in which the relevant information was disclosed and (if it be the fact) relied upon.

3024 Some of the submissions of the Viterra Parties appeared to suggest the court could look at the terms of the disclaimers and the circumstances in which they were agreed or imposed, and end the enquiry there if it was satisfied that the disclaimers were intended to operate strictly according to their terms. In my view, such an approach would be entirely contrary to the principles identified over a number of years by Australian courts, including the High Court.

2149 Ibid, 179 [327].
2150 Ibid, 177 [314].
2151 See also *Wilkie v Gordia Runoff Ltd* (2005) 221 CLR 522, 529 [17] (Gleeson CJ, McHugh, Gummow and Kirby JJ).

3025 As a result of the High Court handing down its decision in *Price v Spoor*,[2152] the Viterra Parties made a further submission in relation to the treatment of disclaimers. They submitted that the court should have regard to this decision in determining the terms, meaning, enforceability and effect of the parties' bargain in this proceeding.[2153] In that case, the principal issue for determination was whether an agreement to contract out of rights conferred by the *Limitation of Actions Act 1974* (Qld) was unenforceable as contrary to public policy. It was held that the *Limitation of Actions Act* in no way prohibited contracting out, and rather achieved its policy objective of ensuring finality in litigation by conferring an individual right on a defendant to elect to plead a limitation period.[2154] The Viterra Parties drew further attention to Steward J's comments in relation to parties' freedom of contract.[2155] Noting that freedom of contract remains "an important attribute of the law",[2156] and that exceptions from freedom of contract require good reason to attract judicial intervention,[2157] his Honour quoted *Sidhu v British Airways Plc*[2158] for the proposition that:[2159]

> Any person is free, unless restrained by statute, to enter into a contract with another on the basis that his liability in damages is excluded or limited if he is in breach of contract. Exclusion and limitation clauses are a common feature of commercial contracts …

3026 The findings in *Price v Spoor* are of little relevance to the present context. Principally, the legislative scheme and public policy underpinning the *Limitation of Actions Act* is materially different to that of the Australian Consumer Law. As the reasoning of the High Court in *Price v Spoor* demonstrates, each legislative scheme must be considered separately to discern the public policy applicable, if any, to the particular circumstances of the case.[2160]

3027 To reiterate, Australian courts have held that it is not possible to automatically exclude

the operation of the Australian Consumer Law (or other consumer protection legislation formerly in effect, such as the *Trade Practices Act*), on the basis that to allow contracting parties to do so would impermissibly undermine the public policy of the legislation. Whatever commercial parties might agree to, none of them is entitled to engage in conduct in trade or commerce that is misleading or deceptive or likely to mislead or deceive. This approach is distinct from that taken in the United Kingdom, where the legislation, as interpreted by the courts, allows for the exclusion of liability for misrepresentation so long as the contracting parties are commercial and the operative disclaimers are reasonable.

3028 In short, the English cases referred to above are neither factually nor legally of much assistance in determining the issues in this case.

3029 On a final note, and related to the topic of these English authorities, the Viterra Parties made the broader submission that Cargill, being sophisticated and well-advised, was fully cognisant of the fact that Glencore was not familiar with the Joe White Business and nonetheless agreed to an allocation of risk which involved Cargill accepting financial responsibility for any matters falling outside the scope of the Warranties.[2161] They contended that this proceeding was nothing more than an attempt by Cargill Australia to overturn an allocation of risk effected by agreements between the parties. The Viterra Parties submitted that this situation bore resemblance to *Minera Las Bambas SA v Glencore Queensland Limited*,[2162] which recognised that "[t]here is no inherently right or reasonable allocation of the risk" in the sale of a business, and accordingly that "[w]ithin very wide limits, English law leaves the parties free to make their own bargain and affords them the respect, when they have entered into a formal, professionally drafted and commercially negotiated agreement, of treating them as having meant what they said".[2163]

3030 There could be no dispute with the proposition that it is not within the remit of the

---

2161 As to the factual accuracy of this submission, see the fifth point in par 3001 above. See also par 3190 below.

2162 [2019] EWCA Civ 972.

2163 Ibid, [89] (Leggatt LJ, with whom Longmore LJ and Vos C agreed).

court to undermine a fairly agreed bargain between sophisticated commercial parties. However, that is not the beginning and the end of the issues raised in this proceeding. Generally speaking,[2164] the concepts of freedom of contract and any allocation of risk do not provide a platform for parties to act contrary to the law, whether by contravention of the Australian Consumer Law or by deceit.[2165]

X.15.4 Summary and general observations

3031 For the reasons set out above, both Glencore and Viterra made each of the Financial and Operational Performance Representations as alleged in paragraph 27 of the Statement of Claim.

3032 In light of the Viterra Parties' submissions concerning section 4(2), it must be noted that the Viterra Parties made a series of very positive statements about the financial and operational performance of Joe White. Without being exhaustive, in substance these included that Joe White produced high-quality product, understood its customers' specifications and requirements and met them consistently and exactly, had stringent controls in place, and that the Joe White Business had limited capital expenditure requirements in the short term. The making of each of the statements, amongst others, that collectively referred to such a financial and operational performance was plainly conduct in trade or commerce.

3033 Finally, if the submissions of the Viterra Parties were accepted in relation to the absence of "conduct" for the purposes of section 18, it would give rise to a most unsatisfactory position. It would mean that a parent company (including a large multinational like Glencore with substantial resources and expert advice) could decide to remain in ignorance of the relevant facts and make various representations about a business and simply fall back on section 4(2) of the *Competition and Consumer Act* to contend that its conduct was not conduct for the purposes of the Act no matter how misleading the representations or statements, provided that the parent company did not intentionally or knowingly fail to disclose relevant matters. Such an approach

---

2164 The issues pertaining to releases and like agreements are discussed below: see issue 84 below.

2165 See further issue 144 below.

and outcome would be entirely inimical to the public policy underlying the legislation and also to the direct answer to the basal question of whether, in light of all the relevant circumstances, there has been conduct which was misleading or deceptive or likely to mislead or deceive.

X.16 Were the Financial and Operational Performance Representations false for the reasons pleaded in paragraph 30 of the Statement of Claim, including in light of the Sale Process Disclaimers, the Acquisition Agreement Liability Terms, and the Alleged Industry Practices and did Glencore and/or Viterra thereby engage in misleading or deceptive conduct within the meaning of section 18 of the Australian Consumer Law?

X.16.1 Introduction

3034 As seen in issue 15, Cargill Australia relied predominantly on the written record when it pleaded that various statements made, and consequentially matters represented, including matters not disclosed, which comprised the "Financial and Operational Performance Representations".[2166] Although there could be no real issue about what was written, a key difference between the parties was what each contended arose from the context and basis upon which certain statements were made or not made. The competing characterisations of these circumstances formed a large part of why the Cargill Parties contended that the Financial and Operational Performance Representations were misleading or deceptive, and the Viterra Parties contended that (if they were made) they were not.

3035 By paragraph 30 of the Statement of Claim, Cargill Australia alleged that the Financial and Operational Performance Representations were false because certain matters followed by reason of the alleged facts pleaded in paragraph 19 of the Statement of Claim, namely:

(1) The production, sales and earnings figures stated in the Financial and Operational Information were based upon Joe White supplying malt to

2166 See par 2826 above.

customers that did not comply with relevant customer contracts, and could not be achieved if Joe White complied with the relevant customer contracts.

(2) By reason of the matter pleaded in the preceding subparagraph, the production, sales and earnings figures stated in the Financial and Operational Information had not been properly and lawfully achieved.

(3) Joe White had concealed from customers its inability and failure to comply with customer contracts, including contractor specifications.

(4) The assets of the Joe White Business, particularly: (a) the plant and equipment; (b) Joe White's malt inventory, malt supply contracts and customer relationships; and (c) Joe White's barley inventory and barley supply contracts, were insufficient for Joe White to produce and sell malt in the volumes and for the returns stated in the Financial and Operational Information that complied with the specifications of its customers.

(5) Joe White needed to invest capital expenditure in storage and blending capacity to achieve the production, sales and earnings figures stated in the Financial and Operational Information consistent with the terms of the relevant customer contracts.

(6) When procuring barley, Joe White did not in fact give priority to obtaining barley that best meet its customers' specifications and requirements.

(7) Joe White did not in fact employ technical analysis and strict quality control procedures to ensure that the malt it produced consistently met customer specifications.

(8) Joe White's ability to achieve the performance described in the Information Memorandum was not in fact centrally attributable to its ability to produce malt that met its customers' exact specifications and requirements.

3036 The particulars to paragraph 30 were extensive and included numerous references to

the particulars to paragraph 19 of the Statement of Claim. These particulars are referred to in some detail below as part of the conclusion on this issue.[2167]

X.16.2 The Cargill Parties' submissions

3037 The Cargill Parties referred to the fact that the Viterra Parties made positive statements about the state of the Joe White Business while, at the same time, they withheld material facts underlying its financial and operational performance. They submitted that the Undisclosed Matters went to the heart of the Joe White Business and that the silence concerning the Undisclosed Matters undermined most of the information provided about the state of the Joe White Business, including the positive representations relied upon.

3038 The Cargill Parties acknowledged that both Cargill, Inc and Glencore were large multinational corporations worth billions of dollars, and that both corporations devoted considerable resources to the transaction. However, they submitted that relevantly that was where the similarities ended.

3039 As for Glencore's role, the Cargill Parties submitted that Glencore was not a mere conduit of information but rather was actively involved in the sale of the Joe White Business "and its practices". Alternatively, they submitted that whatever role Glencore played, Viterra was plainly responsible for the representations made as it had owned and operated the Joe White Business for years, and it had also been intimately involved in the sale process.

3040 The Cargill Parties referred to Glencore's decision, contrary to advice received, not to conduct a vendor due diligence. It was submitted that, by doing so, Glencore consciously accepted the risk that there might be questionable or improper practices which would be discovered later that would expose it to liability.[2168] Having made this decision, it was submitted that the Viterra Parties provided historical and forecast financial operational information dealing with the Joe White Business' performance.

2167 See pars 3062-3075 below.

2168 See par 394 above.

The Cargill Parties submitted that, as a matter of fact, such information was provided by the Viterra Parties so that Cargill could rely upon it to determine the value of the Joe White Business.

3041 The Cargill Parties accepted that Cargill carried out its own assessment of the Joe White Business, but submitted that the key sources of information available to Cargill contained the misleading representations. Further, it was submitted that Cargill had no way of knowing or discovering the true position and that as a result Cargill was simply not able to accurately assess the Joe White Business or determine its true value.

3042 In addition, the Cargill Parties submitted that the fact that Cargill was relying upon information provided to it was demonstrated by the Warranties sought as part of the Acquisition Agreement. Those Warranties included that: the records of the Joe White Business were complete and maintained in good faith and did not contravene any law; the Joe White Business assets were sufficient to enable the effective conduct of its business after Completion; the Data Room Documentation was true and accurate and no material information had been omitted; and the Joe White Business had been conducted in a proper and efficient manner, and in accordance with applicable laws and the International Organisation for Standardisation's standards.[2169]

3043 In light of all the circumstances, including the non-existence of the Alleged Industry Practices, the Cargill Parties submitted that Cargill's experience in the malting industry and the comparative lack of experience of Glencore was irrelevant because Cargill's experience did not enable it to identify the falsity of the information provided to it. By reason of the manner in which the information was provided and the responses Cargill received with respect to its questions during the Due Diligence, it was submitted that Cargill could not have discovered the matters that were concealed from it.

X.16.3 The Viterra Parties' submissions and why they are rejected

3044 The Viterra Parties' primary position was if, contrary to their submissions the

[2169] See Warranties 4.2, 6.1(e), 12, 13.4 and 17(a) in par 1034 above.

Financial and Operational Performance Representations were made, they were not misleading or deceptive or likely to mislead or deceive and ought not be found to be false because Cargill Australia had not established the Undisclosed Matters existed. As it has been found in issue 10.14 above that the Undisclosed Matters did in fact exist, the basis of this submission is contrary to the court's findings.

3045 Further, the Viterra Parties submitted that the court ought to infer from the fact that he was not called as a witness that Hughes, as the executive manager of Joe White at all relevant times, was therefore, on Cargill Australia's case, likely to have been aware of the Undisclosed Matters if they existed. They further submitted it should be inferred that he believed at the time that each relevant statement was made that it was true and correct. Although Hughes may have been defensive of what was stated and what was not disclosed if he had given evidence, and may have also sought to justify the implementation of the Viterra Practices,[2170] the inference suggested by the Viterra Parties shall not be drawn as it would be entirely contrary to the objective facts before the court. Furthermore, it was surprising that such a blanket submission was made when the evidence and admissions belatedly made by the Viterra Parties demonstrated unequivocally that some of the statements underlying the issues related to the Undisclosed Matters were patently incorrect.[2171]

3046 Alternatively, the Viterra Parties submitted that each of the Financial and Operational Performance Representations needed to be understood in the context in which it was made and that, on that basis, even if it were found that the Undisclosed Matters existed, each such representation "remain[ed] accurate". In seeking to make good this submission, the Viterra Parties repeated their contention that each of the Financial and Operational Performance Representations was a starting point statement only and that section 18 of the Australian Consumer Law did not require every representation to be accurate, but only as accurate or reliable as it was represented to be. It was

---

2170 See par 2126 above.

2171 Consider by way of example only, the statement made on numerous occasions that Joe White met its customers' exact specifications and requirements when it was uncontroversial that (leaving aside the frequency) Joe White engaged in each of the Reporting Practice in relation to results beyond 2 standard deviations, the Varieties Practice and the Gibberellic Acid Practice: see further par 3278 below.

submitted that it could only be said that they were capable of being misleading or deceptive if the evidence established that the Financial and Operational Performance Representations were useless for Cargill as a starting point for its investigations. Having made this submission, the Viterra Parties noted that Cargill Australia did not allege that Cargill conducted futile investigations that inevitably caused Cargill to fail to discover facts they should have discovered during the Due Diligence.[2172]

3047 During oral closing submissions, the concept of whether or not making statements only as a starting point could be misleading or deceptive was explored. A question put to the Viterra Parties' senior counsel was whether the success or otherwise of Cargill Australia's case came down to the Confidentiality Deed Terms and the Information Memorandum Disclaimers (which disclaimers were replicated in the Management Presentation Memorandum Disclaimers). In response, senior counsel stated that the case may come down to that and that it was the basis upon which the case was opened and was being closed. However, when it was suggested to him that the contents of the Information Memorandum concerning the Joe White Business on their own would have been misleading if there had been no reference to the Information Memorandum Disclaimers or to the Confidentiality Deed Terms that preceded its dissemination, it was submitted that this was not correct. As part of this discussion, the Viterra Parties submitted that the Information Memorandum was provided to enable a recipient to consider making a non-binding offer, and that it had no other purpose.[2173] The following exchange then took place:

> Let me just test that. That's not an inexpensive exercise, to go through that process [of evaluating the information provided and providing a non-binding indicative offer]. Making representations that Joe White was meeting the exact specifications of its customers, I think I can safely say on the evidence before me, that was incorrect, leaving aside whether it was misleading or not in the context in which it was given. But, absent the way in which the document was to be used as explained in the disclaimers, surely some of the contents of some parts of that Information Memorandum would have been misleading.
>
> MR MYERS: As it was explained in the [Phase 1 Process Letter] without

---

2172 However, this was the substance of the Cargill Parties' closing submissions: see par 3043 above.

2173 The Viterra Parties acknowledged that the Information Memorandum could be relied upon by a prospective purchaser for the purpose of formulating and submitting an indicative offer as part of Phase 1: see par 2926 above.

> disclaimers, without [the] Confidentiality Deed, it was put forward – … "Thank you for your interest in the possible acquisition of [Joe White] and the assets used exclusively in connection with the Joe White Business and for executing the Confidentiality Deed." So it says that. "This letter is an invitation to submit a non-binding indicative proposal. On the basis of the indicative bids received, Glencore intends to select a short list of parties who will be invited to participate in Phase 2 of the proposed transaction." This is just to get through the gate.

3048 As may be seen, none of the responses really grappled with the underlying question as to whether any of the representations made in the Information Memorandum (either expressly or implicitly) were, in themselves,[2174] misleading because they were not correct or were an inaccurate statement in relation to the Joe White Business. In short, when the Viterra Parties were given the opportunity to explain why it might be that the representations in the Information Memorandum identified by Cargill Australia were a true reflection of the Joe White Business, that opportunity was not taken.[2175]

3049 In making this observation, no criticism is intended. On the evidence, and given the concessions properly made by the Viterra Parties with respect to the existence of each of the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice, it could not have been responsibly contended by counsel that, by way of example only, it was accurate to state that Joe White supplied the highest quality malt or that Joe White met the exact specifications and requirements of its customers.

3050 Also on the question of whether or not the Financial and Operational Performance Representations were misleading or deceptive, the Viterra Parties relied upon their submissions concerning Cargill's alleged knowledge of the Alleged Industry Practices. They contended that such knowledge ought to have alerted Cargill to the fact that Cargill needed to use the Due Diligence to conduct investigations to

---

2174 Acknowledging that this is not the ultimate question for determination as the context must also be considered.

2175 Naturally, the ultimate question as to whether any representations were misleading or deceptive must be considered in the context of the surrounding circumstances as a whole, including the entirety of the contents of any document said to contain the representations, but that still left the question as to whether the statements themselves, either individually or collectively, or any implied representations based on such statements, were correct or accurate.

determine the validity of any of the assumptions about Joe White's use or non-use of the Alleged Industry Practices.

3051 As it has been found that the Viterra Parties failed to establish the existence of the Alleged Industry Practices,[2176] this submission has largely become otiose. However, for completeness, it should be noted that the knowledge of some Cargill employees of very limited examples in the industry of unsatisfactory conduct consistent with or similar to an Alleged Industry Practice only went so far. Effectively, Cargill was on notice that some limited number of employees or organisations in the industry acted dishonestly or unethically. But such knowledge did not put Cargill on notice, or give Cargill a reasonable basis to suspect, that such conduct was likely to be occurring at Joe White or that, absent discovering something during the Due Diligence indicating to the contrary, it ought to have been on the lookout with an expectation of finding such unsatisfactory conduct was being engaged in. All the more so when Joe White was a well-established company of good reputation that had been presented to Cargill in such glowing terms by its existing owners and stakeholders.[2177]

3052 Finally, the Viterra Parties submitted that the representations, made as starting point statements, not only had to be seen in the context in which they were made including the Alleged Industry Practices, but also suggested that the failure to identify any inaccuracies with the Financial and Operational Performance Representations was the fault of Cargill because it failed to properly complete its investigations as part of the Due Diligence. For reasons discussed elsewhere,[2178] it has not been found that Cargill failed to take reasonable care in conducting the Due Diligence before the execution of the Acquisition Agreement.

3053 In summary, none of the Viterra Parties' submissions on this issue have been accepted.

X.16.4 Conclusion

2176 See issue 13 above.

2177 The language of owners and stakeholders is used to distinguish between Viterra, collectively the owners for a number of years of what was sold pursuant to the Acquisition Agreement, and Glencore as the ultimate holding company and the entity driving the sale.

2178 See par 1018 above and issue 80 below.

3054 The Financial and Operational Performance Representations were misleading or deceptive conduct within the meaning of section 18 of the Australian Consumer Law. Speaking generally, each of the representations made portrayed a misleading position as to the financial and operational performance of Joe White.[2179] Put simply, the Viterra Practices were utilised to underpin the production, sales and earnings figures stated in the Financial and Operational Information, as well as give the false appearance of compliance with customers' contracts, including their specifications. It followed that most of the Financial and Operational Performance Representations were necessarily misleading as a result of these circumstances.

3055 Before turning to paragraph 30 of the Statement of Claim, it is instructive to consider the individual representations themselves. The first 3 implied representations were misleading for the reason stated in the preceding paragraph, including that Joe White did not have strict quality control procedures, Joe White's figures were not the result of compliance with customer contracts and the Viterra Practices were improper and unlawful. It barely needs to be said that conduct that involved deliberately misrepresenting a barley variety or barley varieties used, or representing that gibberellic acid had not been used when it knowingly had been in circumstances where the customer expressly prohibited its use, was both improper and unlawful. Further, for reasons explained in issues 9, 10 and 13 above, the Reporting Practice was improper and unlawful.

3056 In relation to the fourth implied representation, each of the Operational Practices involved material information being withheld and concealed from customers. With respect to the Reporting Practice, the visibility of the Viterra Policies to customers and auditors was deliberately obstructed.[2180] Further, by definition the Varieties Practice and the Gibberellic Acid Practice were not disclosed to customers. Any representation to the contrary was plainly misleading.

3057 As to the fifth implied representation, the evidence indicated overwhelmingly that the

---

2179 See par 2826(7)-(16) above.
2180 See pars 90, 287-292 above.

assets of the Joe White Business were not sufficient for Joe White to sell malt in the volumes and for the returns stated in the Financial and Operational Information.[2181] A representation to the contrary effect was misleading.

3058 With respect to the sixth implied representation, the future capital expenditure needs were not low.[2182] Accordingly, this representation was misleading.

3059 With regard to the seventh implied representation, in circumstances where Joe White routinely used non-approved barley varieties (including barley not approved for malting) and represented otherwise to its customers as its means of doing business, a representation to the effect that, when procuring barley, Joe White gave priority to obtaining barley that best met its customers' specifications and requirements was necessarily misleading.[2183]

3060 In relation to the eighth and ninth implied representations, there was no ability of Joe White to meet its customers' exact specifications. Any representation to the effect that Joe White's technical analysis and strict quality control procedures ensured the malt it produced consistently met its customers' specifications was patently misleading when the evidence demonstrated that from 2010 to 2013 Joe White rarely met all the specifications of its customers when a batch of malt was delivered.[2184] In such circumstances, Joe White's ability to produce malt that met customers' specifications was not a reason for the performance described in the Information Memorandum, let alone a central reason.

3061 Finally, in relation to the tenth implied representation, as it has been found that at all material times the Undisclosed Matters existed,[2185] this representation was also

---

2181 See, for example, pars 1216, 2599 above.

2182 See, for example, pars 436, 536, 1216 above. This conclusion is not ignoring the choice of words "relatively low", as the objective fact was that King considered management's estimate of $30 million to be of sufficient materiality that it would have been likely to result in a reduction in any purchase price of $3.5 million. On the issue of capital expenditure needs, see also issue 73 below.

2183 As to the lack of priority in seeking to meet the barley varieties required, see, for example, pars 82, 170, 410, 415, 1335 above.

2184 See issue 10 above; and in particular pars 2381-2392 above, together with the conclusions derived from that evidence at pars 2400-2414 above.

2185 See issue 10 above.

misleading.

3062 Accordingly, each of the Financial and Operational Performance Representations have been found to be false and misleading in light of the evidence adduced in this proceeding. I now turn to consider whether Cargill Australia has established the falsity of the Financial and Operational Performance Representations as alleged, by reference to paragraph 30 of the Statement of Claim.[2186]

3063 In relation to the first to third implied representations,[2187] there was little divergence between the pleadings and the findings as set out above. Cargill Australia pleaded that each was proved by an extensive range of facts in support of the propositions that Joe White variously saved costs, increased production volumes, decreased production times and maximised sale volumes and earnings by adopting and implementing the Viterra Practices. It was pleaded that the production volumes, sales volumes and earnings figures reported in the Financial and Operational Information between the 2010 financial year and 31 October 2013 could not have been made without the Viterra Practices and Policies.[2188]

3064 It has been found that the Viterra Practices underpinned the production, sales and earnings figures stated in the Financial and Operational Information.[2189] The false appearance of compliance with customers' contracts by the improper and unlawful means adopted meant that the 3 representations were misleading.

3065 In relation to the fourth implied representation,[2190] Cargill Australia relied on facts said to prove the Viterra Practices. Further to those allegations, the allegation was also

---

2186 See par 3035 above.

2187 See pars 2835, 2856, 2872 above.

2188 This statement was said to be inferred from, amongst other things, the facts used to demonstrate the existence of the Viterra Practices, an analysis of out-of-specification malt after Completion between November 2013 and December 2016 (see fn 1034 above), a decline in production utilisation rates after Completion when compared to the period between 2010 and 2013 (see pars 1703, 1720, 1723, 1736, 1743, 1763, 1779-1781, (1799), 1823, 1839 above), a decline in production, sales volumes and performance after ceasing the Viterra Practices (ibid), the need for additional capital expenditure on storage (see pars 890, 1216, 1670-1671, 1673, 1718, 2599 above and issue 73.9 below), and the decreased earnings of Joe White after Completion: see pars 1626, 1704, 1721, 1756-1761, 1794, 1828, 1837 above.

2189 See issue 10.12 above.

2190 See par 2877 above.

grounded in the fact that, in relation to the Reporting Practice, the Viterra Policies were deliberately concealed from customers and auditors.[2191] Thus, for the reasons already stated,[2192] the fourth representation was misleading as alleged.

3066 In relation to the fifth implied representation,[2193] Cargill Australia's particulars of the allegation referred to Joe White's barley inventory and barley supply contracts for varieties other than those required by its malt supply contracts with its customers, and Joe White having insufficient storage, blending and production capacity to enable it to produce malt to the specifications and in the quantities required by its malt supply contracts, and for the returns stated in the Financial and Operational Information.

3067 There was a substantial volume of evidence on this topic. It demonstrated that the existing malt inventory at Completion did not have the required barley varieties so that all customers' requirements in that regard could be met, and that there was universality amongst the Joe White operational executives that the insufficiency of the required barley varieties would be an ongoing problem for many months.[2194] In relation to customer relationships, it also showed beyond controversy that the Viterra Practices were concealed from customers. Specifically: (1) the Viterra Policies were effectively hidden from customers and auditors;[2195] (2) customers who specified required barley varieties were not told that their contracts were being breached because incorrect barley varieties were being used; and (3) customers who prohibited gibberellic acid were not told that their contracts were effectively being flouted by the deliberate use of gibberellic acid in breach of contract.[2196] Thus, it was alleged that, as Joe White had maximised sales volumes and earnings by concealing the Viterra Practices, the act of revealing those practices would negatively impact customer relationships and decrease sales volumes. The negative impact on customer relationships arising from the revelation of the Viterra Practices was ineluctable, as

2191 See, for example, pars 90, 287-292 above.
2192 See also par 3067 below.
2193 See par 2881 above.
2194 See pars 1212-1213, 1216, 1218 above.
2195 See pars 90, 283-285, 287-292, 1533, 2113 above.
2196 See, for example, pars 170, 272, 281, 1129-1130, 1224, 1263, 1282, 1293, 1308, 1373(27)-(32), 1555-1556, 2544 above.

was demonstrated after Completion when Cargill had to deal with the fallout of being unable to produce malt within specifications.[2197] In relation to storage and production capacity, these matters have been addressed in relation to the first to third implied representations.

3068 In summary, the substance of each of the matters relied upon to establish the fifth representation was false was proved.

3069 In relation to the sixth implied representation,[2198] Cargill Australia referred to the memorandum prepared by Youil in February 2014, and subsequent storage constructed at the Sydney, Adelaide and Perth plants after Completion. It has been found that the Viterra Parties' awareness of future capital expenditure needs alone was sufficient to prove this representation was misleading, without regard to the subsequent capital expenditure undertaken by the Cargill Parties.[2199]

3070 In relation to the seventh implied representation,[2200] Cargill Australia referred to Joe White's barley inventory and barley supply contracts for varieties other than those required by Joe White's malt supply contracts, the Parameters Analysis and the Deviation Analysis, and various facts said to demonstrate that Joe White saved costs using off-grade and non-approved varieties of barley.[2201]

3071 Based on the evidence, there was a myriad of ways in which it has been established consistent with the pleading that this representation was false.[2202] Put simply, there were many aspects of the manner in which Joe White was operated from the 2010

2197 See, for example, pars 1601-1604, 1607, 1623-1625, 1657, 1660, 1663, 1677 above.

2198 See par 2889 above.

2199 See pars 1216, 1670 above. The capital expenditure after Completion was consistent with this conclusion, albeit with the sales volumes having dropped the amount expended was not as large as it otherwise might have been: see par 1823 above. See also issue 73.9 below.

2200 See par 2896 above.

2201 These included the development and implementation of the Malt Cost Reduction Transformation Project, the incorporation of cost savings in Joe White's 2011 budget, Joe White's practice of applying discounts to off-grade barley purchases, Joe White's adoption of the Varieties Practice and the Reporting Practice, and a range of information supplied by the Joe White executives in October 2013 and after Completion in relation to the nature, assessment of, transport, and purchase of certain varieties of barley.

2202 See, for example, pars 1211-1213, 1220-1223, 1281, 1286, 1299, 1373(11), (17)-(26), 1387, 1549, 1768, 1830 above. See also issue 10.7 above.

financial year to 31 October 2013, not least of all being the implementation of the Viterra Practices, which showed priority was not given to meeting customers' specifications and requirements. This representation was misleading because of this, despite the fact that the use of off-grade barley was disclosed to Cargill as part of the Due Diligence.[2203]

3072 In relation to the eighth implied representation,[2204] Cargill Australia pleaded that Joe White did not employ technical analysis and strict quality control to ensure malt consistently met customers' specifications, which was reflected in the Parameters Analysis. Further, Cargill Australia referred to the Reporting Practice and that Joe White was not capable of reliably producing malt within customers' specifications after ceasing to implement the Reporting Practice. This was said to be inferred from assessments made by the Joe White executives after the Malt Cost Reduction Transformation Project, and from the Customer Review Spreadsheet, Joe White's limited storage capacity, and the aftermath of ceasing the Viterra Practices and Policies after Completion. Again, the allegation that, as Joe White had maximised sales volumes and earnings by concealing the Viterra Practices, the act of revealing those practices would negatively impact customer relationships and decrease sales volumes was relied upon.

3073 It was proved that Joe White was unable to meet its customers' exact specifications to a very significant extent,[2205] and in these circumstances any representation regarding the use of technical analysis and strict quality control procedures to ensure malt complied with specifications was necessarily misleading. In any event, the Viterra Certificate of Analysis Procedure itself demonstrated that Joe White's technical analysis procedures were materially deficient and that there were not strict quality control procedures in place.[2206]

2203 That disclosure did not entail informing Cargill that this was concealed from customers or that it coincided with Joe White routinely failing to meet customers' specifications.

2204 See par 2907 above.

2205 See, for example, pars 1216, 1226, 1232, 1279, 1291, 1309, 1343, 1373(1), (4), (8), (23), (30), 1567, 1572-1573, 1601-1602, 2323, 2411-2412 above.

2206 See, for example, pars 199-201, 2237-2238 (and issue 9 more generally), 2773-2776 above.

3074 In relation to the ninth implied representation,[2207] Cargill Australia pleaded that Joe White's ability to achieve the performance described in the Information Memorandum was not centrally attributable to its ability to meet customers' exact specifications, based on the nature and effect of the Viterra Practices. In circumstances where it has been found that Joe White did not have the ability to comply with customers' specifications between the 2010 financial year and 31 October 2013, and made false statements to the contrary, it followed that the performance described in the Information Memorandum was not even remotely based on Joe White's ability to meet customers' exact specifications.

3075 There was no independent allegation in paragraph 30 of the Statement of Claim directed specifically to the tenth implied representation,[2208] which has also been found to be misleading by reason of the matters pleaded in paragraph 19 of the Statement of Claim. Presumably this was because (as pleaded in paragraph 27) the representation was alleged to have been made by the failure to disclose the Undisclosed Matters.

X.17 Were the Financial and Operational Performance Representations made in trade or commerce in Australia?

3076 The Viterra Parties accepted that if, as has been found, the Financial and Operational Performance Representations were made, then they were made in trade or commerce in Australia.

X.18 If the Financial and Operational Performance Representations or any of them were made by Merrill Lynch,[2209] Mattiske,[2210] Hughes, Youil, Argent and/or Viterra, is that conduct deemed to be Glencore's conduct under section 139B(2) of the *Competition and Consumer Act*?

X.18.1 Legislation and relevant principles

2207 See par 2910 above.

2208 See par 2914 above.

2209 It was admitted that Merrill Lynch's conduct in sending the Phase 1 Process Letter, the Information Memorandum and the Phase 2 Process Letter was deemed to be Glencore's conduct.

2210 It was admitted that Mattiske's conduct in sending the Reply Letters was deemed to be Glencore's conduct.

3077 An individual's conduct may be attributed to a corporation by the operation of section 139B(2) of the *Competition and Consumer Act*. Section 139B(2) provides:

> Any conduct engaged in on behalf of a body corporate:
>
> (a) by a director, employee or agent of the body corporate within the scope of the actual or apparent authority of the director, employee or agent; or
>
> (b) by any other person:
>
> (i) at the direction of a director, employee or agent of the body corporate; or
>
> (ii) with the consent or agreement (whether express or implied) of such a director, employee or agent;
>
> if the giving of the direction, consent or agreement is within the scope of the actual or apparent authority of the director, employee or agent;
>
> is taken, for the purposes of this Part or the Australian Consumer Law, to have been engaged in also by the body corporate.

3078 Although the wording is slightly different, section 139B(2) reflects section 84(2) of the *Competition and Consumer Act*.[2211] Authorities concerned with the interpretation of section 84(2) of the *Competition and Consumer Act*, and its predecessor, the *Trade Practices Act*,[2212] are therefore relevant for the purposes of determining the meaning and scope of section 139B(2) of the *Competition and Consumer Act*.[2213] As was the position with section 84(2),[2214] the statutory test of attribution in section 139B(2) does not operate to exclude the ordinary principles of common law. Rather, it is an "enlarging provision" intended to make proving or attributing corporate responsibility for a person's conduct easier than it is at common law.[2215]

3079 Section 139B(2) can be broken down into 3 component parts, each of which must be

2211 Explanatory Memorandum, Trade Practices Amendment (Australian Consumer Law) Bill (No 2) 2010 (Cth), 390 [18.35].

2212 Formerly, s 84(2) of the *Trade Practices Act*: Explanatory Memorandum, Trade Practices Amendment (Australian Consumer Law) Bill (No 2) 2010 (Cth), 4.

2213 *Australian Competition and Consumer Commission v Cornerstone Investment Aust Pty Ltd (in liq) (No 4)* [2018] FCA 1408, [280] (Gleeson J).

2214 *Trade Practices Commission v Queensland Aggregates Pty Ltd* (1982) 44 ALR 391, 404.6 (Morling J).

2215 *NMFM Property Pty Ltd v Citibank Ltd (No 10)* (2000) 107 FCR 270, 549 [1241] (Lindgren J). See also *Australian Competition and Consumer Commission v Cornerstone Investment Aust Pty Ltd (in liq) (No 4)* [2018] FCA 1408, [281], cited in *Harvard Nominees Pty Ltd v Tiller (No 2)* [2020] FCA 604, [484] (Jackson J); *Walplan Pty Ltd v Wallace* (1986) 8 FCR 27, 38.4 (Lockhart J, with whom Sweeney and Neaves JJ agreed).

satisfied in order to attribute any of the Financial and Operational Performance Representations to Glencore (to the extent they were made by the persons identified for this issue).

3080 *First*, the court must consider whether the relevant individual (be it a person or a body corporate) engaged in conduct *on behalf of* Glencore.

3081 If this first question is answered in the affirmative, then the court must *secondly* turn to *who* engaged in the conduct. The relevant question is whether the conduct was engaged in by:

(1) A director, employee or agent of Glencore.

(2) Alternatively, any other person at the direction, or with the consent or agreement (express or implied) of a director, employee or agent of Glencore.

3082 *Thirdly*, turning to the final component of section 139B(2), the court must be satisfied that the conduct, or the direction, consent or agreement (express or implied) given, was *within the scope of authority* (actual or apparent) of the relevant director, employee or agent of Glencore.

3083 Turning to the first question, the phrase "on behalf of" has no strict legal meaning.[2216] Rather, the meaning will depend on the circumstances of a particular case and it can apply to a wide range of relationships which involve, in some way, the standing of a person as auxiliary to or representative of another person or thing.[2217] It has generally been accepted that, without being exhaustive,[2218] conduct will be "on behalf of" a

corporation if:[2219]

(1) The individual – a director, employee or agent – engaged in the relevant conduct intending to do so *for* or *as a representative of* the corporation.

(2) Alternatively, the individual engaged in the relevant conduct in *the course of the corporation's business affairs or activities*.

3084 It is sufficient that there is "some" involvement that is "real or genuine" of the individual in the relevant conduct; there is no requirement that it be significant involvement.[2220] The question may be determined objectively, in addition to considering the individual's subjective intention.[2221] That said, it is neither necessary nor sufficient that the person whose conduct is in question intended to benefit the corporation, and nor is it determinative whether or not the conduct did in fact benefit the corporation.[2222]

3085 In respect of the second part of section 139B(2), concerning "any other person" in paragraph (b), there is an additional question to be considered: whether the individual engaged in the relevant conduct at the "behest" of the corporation (ie at the behest of a director, employee or agent of the corporation).[2223]

3086 Thus, for section 139B(2) to apply the individual must be a director, employee or

2223 *Bennett v Elysium Noosa Pty Ltd (in liq)* (2012) 202 FCR 72, 134-135 [223], where Reeves J stated that behest was "an apt and succinct way of encapsulating the words in that subsection: 'at the direction or with the consent or agreement (whether express or implied) of'", remaining mindful that it is the words of the statute itself which are to be construed and applied. See also *Walplan Pty Ltd v Wallace* (1985) 8 FCR 27, 37.5.

agent,[2224] or any other person, so long as she or he is acting at the behest of a director, employee or agent of the corporation.[2225] The term "director" takes its meaning from the *Corporations Act 2001* (Cth).[2226] Neither "employee" or "agent" is defined and so their ordinary meanings will apply.

3087 Answering the third question requires the court to examine the authority of the individual (as director, employee, agent or "other person"). In short, the conduct of the director, employee or agent, or the conduct of the "other person" together with the direction, consent or agreement in question, must be within the scope of the person's *actual* or *apparent authority*, both of which take their meaning from common law. The legal principles underpinning actual and apparent authority are well established.

3088 Actual authority is established on the basis of a consensual legal relationship between principal and agent,[2227] under which the agent is conferred with authority to act on behalf of the principal.[2228] Consent may be express, or implied when it is inferred from the conduct of the principal and agent and the circumstances of the case.[2229] The scope

---

2224 Thereby satisfying s 139B(2)(a).

2225 Thereby satisfying s 139B(2)(b).

2226 Section 9 of the *Corporations Act* defines "director" of a company or other body as a person who is appointed to the position of a director, or is appointed to the position of an alternative director and is acting in that capacity, regardless of the name that is given to their position. "Director" also means, unless the contrary intention appears, a person who is not validly appointed as a director if they act in the position of a director, or the directors of the company are accustomed to act in accordance with the person's instructions or wishes.

of authority is to be determined by the ordinary principles of construction of contracts, and by reference to any proper implication from the course of business between the principal and its agent.[2230] Further, not every particular act or individual piece of conduct need be authorised; if an act or class of acts (or conduct or a class of conduct) is within an agent's actual authority, the principal is bound.[2231]

3089 Apparent authority, on the other hand, is not based on a consensual relationship between principal and agent. Instead, apparent authority arises when there is an appearance or representation of authority to a third party, created by the principal in respect of her or his agent.[2232] Succinctly expressed in the context of contractual relations:[2233]

> … "apparent" or "ostensible" authority … is a legal relationship between the principal and the contractor created by a representation, made by the principal to the contractor, intended to be and in fact acted upon by the contractor, that the agent has authority to enter on behalf of the principal into a contract of a kind within the scope of the "apparent" authority, so as to render the principal liable to perform any obligations imposed upon him by such contract. To the relationship so created the agent is a stranger. [She or he] need not be (although [she or he] generally is) aware of the existence of the representation … The representation, when acted upon by the contractor by entering into a contract with the agent, operates as an estoppel, preventing the principal from asserting that [she or he] is not bound by the contract.

Although this original expression of apparent authority was confined to an agent's authority to enter into contracts, the underlying principles are relevant, and have been applied, to any conduct that an agent purports to perform on behalf of her or his

See also *NMFM Property Pty Ltd v Citibank Ltd* (2000) 107 FCR 270, 384 [511]-[512], 453-454 [843]. Note, apparent authority has been described as a manifestation estoppel, which operates to preclude a principal from denying her or his agent's authority when the representation has been acted upon by a third party: see *Freeman & Lockyer v Buckhurst Park Properties (Mangal) Ltd* [1964] 2 QB 480, 498.6 (Pearson LJ), 503.5 (Diplock LJ) quoted in *Pacific Carriers Ltd v BNP Paribas* (2004) 218 CLR 451, 466 [36]; *New South Wales v Lepore* (2003) 212 CLR 511, 554 [108] (Gaudron J).

2233 *Freeman & Lockyer v Buckhurst Park Properties (Mangal) Ltd* [1964] 2 QB 480, 503.3.

principal.[2234]

3090 The scope of apparent authority therefore fundamentally relies on the representation made by the principal to a third party.[2235] Crucially, the representation must be made by the principal or a person to whom the principal has conferred actual authority.[2236] Without more, a mere representation by a person purporting to act as an agent as to that person's own authority to act on behalf of a principal is insufficient to establish apparent authority.[2237] For apparent authority to exist, the representation itself may be made through words or conduct, expressly or impliedly, or by acquiescence;[2238] and it is sufficient that the agent is placed in a position by the principal to allow her or him to give the appearance of authority.[2239] However, the scope of apparent authority is at all times limited by the third party's knowledge of limitations imposed on the agent's authority. If the third party knows that the agent is acting in violation of her or his actual authority, apparent authority cannot be established.[2240]

2235 *Pacific Carriers Ltd v BNP Paribas* (2004) 218 CLR 451, 466-467 [36]; *Crabtree-Vickers Pty Ltd v Australian Direct Mail Advertising & Addressing Co Pty Ltd* (1975) 133 CLR 72, 78.6 (Gibbs, Mason and Jacobs JJ).

2236 *Pacific Carriers Ltd v BNP Paribas* (2004) 218 CLR 451, 466 [36] (Gleeson CJ, Gummow, Hayne, Callinan and Heydon JJ); *Northside Developments Pty Ltd v Registrar-General* (1990) 170 CLR 146, 173.6-174.5; *Crabtree-Vickers Pty Ltd v Australian Direct Mail Advertising & Addressing Co Pty Ltd* (1975) 133 CLR 72, 78.5, 80.6; *Freeman & Lockyer v Buckhurst Park Properties (Mangal) Ltd* [1964] 2 QB 480, 504.2-505.4 (Diplock LJ).

2237 *Pacific Carriers Ltd v BNP Paribas* (2004) 218 CLR 451, 466 [36], citing *Freeman & Lockyer v Buckhurst Park Properties (Mangal) Ltd* [1964] 2 QB 480, 503; *Northside Developments Pty Ltd v Registrar-General* (1990) 170 CLR 146, 187.3 and *Crabtree-Vickers Pty Ltd v Australian Direct Mail Advertising & Addressing Co Pty Ltd* (1975) 133 CLR 72, 78.5.

2238 In the case of acquiescence, this may give rise to actual authority, the 2 concepts not being mutually exclusive (see par 3092 below): see, for example, *Hely-Hutchinson v Brayhead Ltd* [1968] 1 QB 549, 584F (Lord Denning MR), 588F (Lord Wilberforce), 593E (Lord Pearson); *Freeman & Lockyer v Buckhurst Park Properties (Mangal) Ltd* [1964] 2 QB 480, 509.5-510.4. In the case of impliedly by a course of conduct: see, for example, *Royal-Globe Life Assurance Co Ltd v Kovacevic* (1979) 22 SASR 78, 82.7 (Walters J); or not: see *Derham v AMEV Life Assurance Company Ltd* (1981) 56 FLR 34, 51.7-55.3 (Kelly J). See also *Crabtree-Vickers Pty Ltd v Australian Direct Mail Advertising & Addressing Co Pty Ltd* (1975) 133 CLR 72, 78.5 (Gibbs, Mason, Jacobs JJ).

2239 *Pacific Carriers Ltd v BNP Paribas* (2004) 218 CLR 451, 467 [38], 469 [44] (Gleeson CJ, Gummow, Hayne, Callinan and Heydon JJ).

2240 *Powercor Australia Ltd v Pacific Power* [1999] VSC 110, [1224], [1234] (Gillard J), quoting *Armagas Ltd v Mundogas SA* [1986] AC 717, 777C (Lord Keith), in turn citing *Russo-Chinese Bank v Li Yau Sam* [1910] AC 174. In *Russo-Chinese Bank v Li Yau Sam*, Lord Atkinson stated on behalf of the Privy Council that "a person who deals with an agent, whose authority he knows to be limited, ... does so at his peril, in this sense, that should the agent be found to have exceeded his authority his principal cannot be made responsible": at 184.4. See also *Lysaght Bros & Co Ltd v Falk* (1905) 2 CLR 421, 430.6-432.3 (Griffith CJ), 441.5 (O'Connor J).

3091 For completeness,[2241] additional observations may be made in relation to attribution of conduct to a corporation: (1) generally, the principles of attribution are subject to a corporation's constitution, which may define or determine the authority that can be conferred on an agent;[2242] and (2) actual authority is conferred by the corporation's constitution or some antecedent act such as a resolution, or by those who have authority and are permitted to delegate this authority.[2243]

3092 Actual and apparent authority are not mutually exclusive; it is often the case they will coincide, but they can exist independently and the scope of authority of each may differ.[2244] Further, as between 2 corporations within a corporate group, the question of any relationship of principal and agent must be approached applying the relevant principles as the corporations are separate legal entities despite the connection to the same group.[2245]

X.18.2 The persons in issue

X.18.2.1 Merrill Lynch

3093 In the Statement of Claim, it was alleged that, to the extent that the Financial and Operational Performance Representations were made by Merrill Lynch, such conduct was deemed to be conduct of Glencore by operation of section 139B(2). The conduct identified in the particulars to this allegation included preparatory work for the sale process from September 2012 to February 2013, the provision of the Information

---

2241 There was no issue raised in this proceeding concerning Glencore's or Viterra's constitutions or the scope of any actual authority of Glencore or Viterra consequent upon each company's constitution.

Memorandum to Cargill under cover of the Phase 1 Process Letter, the making of the Information Memorandum Statements, the sending of the Cargill Indicative Bid to Merrill Lynch, the forwarding of the Phase 2 Process Letter to Cargill, and the making of the Management Presentation Statements.

3094 As already noted,[2246] there was no issue that Merrill Lynch's role in preparing and distributing each of the Information Memorandum, and the Phase 1 and Phase 2 Process Letters was attributable to Glencore. Although formally not admitted on the pleadings, there could also be no issue with respect to the Management Presentation Statements. In substance, Merrill Lynch's authority and role in the preparation and dissemination of the Management Presentation Memorandum reflected that with respect to the Information Memorandum.[2247] Further, in their written submissions, the Viterra Parties accepted that the provision of the information in the Data Room by Merrill Lynch was conduct that could be attributed to Glencore.

3095 However, in contrast to what was contained in the documents provided to Cargill, there was no evidence that any representative of Merrill Lynch made any of the oral statements to the extent they were made as part of the Management Presentation Statements,[2248] the Operations Call Statements or the Commercial Call Statements. In short, that conduct involving oral representations has not been established as having been engaged in by Merrill Lynch, so the question of attribution did not arise in this regard.

3096 Nothing more need be said on this topic as there was no real issue that Merrill Lynch's involvement in the sale process was on behalf of Glencore. Both the Information Memorandum and the Management Presentation Memorandum expressly stated

---

2246 See fn 2209 above.

2247 To the extent Merrill Lynch engaged in such conduct, the Cargill Parties accepted that the mere passing on of information, or collating information without more, may not amount to any representation about the accuracy of any information: see, for example, *Downey v Carson Hotels Asia Pacific Pty Ltd* [2005] QCA 199, [46]-[47] (Keane JA, with whom Williams JA and Atkinson J agreed).

2248 Although Eden gave evidence concerning Merrill Lynch speaking at the Management Presentation, no detail was elicited and it was not relied upon to establish the Management Presentation Statements: see par 709 above.

Merrill Lynch was acting for Glencore in connection with each document respectively.[2249] Further, to the extent that the particulars in support of this allegation went beyond what was said to give rise to the Financial and Operational Performance Representations, they need not be considered.

X.18.2.2 Mattiske

3097 It was alleged that, to the extent the Financial and Operational Performance Representations were made by Mattiske, such conduct was deemed to be conduct of Glencore by operation of section 139B(2).[2250] The particulars in support of this allegation referred to Mattiske's senior position in Glencore's "working group" for the sale process,[2251] his position as managing director of Glencore Grain, and his directorships of each of the Viterra entities and of Joe White, amongst other things.

3098 Further, Cargill Australia provided particulars of Mattiske's alleged knowledge from around December 2012, including by reference to his involvement in the sale process, an email he received on 16 January 2013 from Hughes,[2252] the Customer Review Spreadsheet and the Key Recommendations Memorandum, in seeking to establish Mattiske's knowledge of the Viterra Practices. Cargill Australia alleged this knowledge, together with the knowledge obtained by Mattiske during the course of the investigations after his receipt of the Cargill 22 October Letter, was attributable to Glencore.

3099 As noted above,[2253] there was no issue that Mattiske's conduct in sending the Reply Letters was conduct of Glencore. Nor could there be any issue that, to the extent that Mattiske learnt of various matters as part of the investigations conducted in late October 2013, such knowledge was knowledge of Glencore.

2249 See pars 475, 711 above.

2250 The allegations against Mattiske also were concerned with the Pre-Completion Representations, as to which see issues 25, 28 below.

2251 See pars 367, 369-370, 440 above. Whilst the Viterra Parties admitted a working group list of various persons, including Mattiske, was prepared by Merrill Lynch in April 2013, it was contended that it was no more than a contact list for individuals and did not comprise a group of decision-makers. Save to say that not all persons on the list were decision-makers, it is unnecessary to address this peripheral issue as part of considering Mattiske's role: see pars 370, 392, 440 above.

2252 See par 375 above.

2253 See fn 2210 above.

3100 The Viterra Parties' submissions on Mattiske's conduct being that of Glencore were essentially confined to Mattiske's lack of knowledge of the Undisclosed Matters before the Cargill 22 October Letter. It was submitted that any failure by Mattiske to inform Cargill of facts of which he had no knowledge could not constitute conduct for the purposes of section 139B(2).

3101 It suffices to say that Mattiske's involvement in the preparation of the Information Memorandum and the Management Presentation Memorandum, as well as the preparation for the Management Presentation itself,[2254] was conduct that was incontrovertibly engaged in on behalf of Glencore.[2255] However, there was nothing to suggest that Mattiske knew of any of the Undisclosed Matters before 22 October 2013. In fact, the evidence made it clear he was not told before this time.[2256]

X.18.2.3 Hughes

X.18.2.3.1 The allegations and the Cargill Parties' submissions

3102 It was alleged that, to the extent the Financial and Operational Performance Representations were made by Hughes, such conduct was deemed to be conduct of Glencore by operation of section 139B(2). The conduct Cargill Australia sought to have attributed to Glencore related to Hughes' making of the Management Presentation Statements, the Operations Call Statements and the Commercial Call Statements. Further, Cargill Australia relied upon Hughes being an agent of Glencore by reason of him being a member of the "working group" from around January 2013,[2257] and because of the agreement he entered into in May 2013 to assist in the sale process and the fact that he actually assisted in accordance with that agreement.[2258]

3103 The Cargill Parties' submissions were concise. They simply referred to the fact that Hughes had been requested by Glencore to make each of the statements referred to in the preceding paragraph and to assist in the sale process, and that Hughes did so

---

2254 See par 699 above.

2255 This finding does not suggest this was to the exclusion of Viterra, as Mattiske, as a director of each of the Sellers, was also acting on behalf of them: see issue 19 below.

2256 See pars 1247, 1281, 1295, 1299 above.

2257 See par 3097 above.

2258 See par 1876 above.

within the scope of their actual authority on Glencore's instructions.

X.18.2.3.2 The Viterra Parties' submissions

3104 The Viterra Parties submitted that Hughes was not acting on behalf of Glencore during the Operations Call, the Commercial Call or the Management Presentation because he was expressly representing Joe White on each of those occasions. Further, they submitted that Cargill was aware that Hughes had no authority to make any representation binding on Glencore.

3105 Further or alternatively, reference was made to the Hughes/Viterra Contract by which Hughes agreed to act ethically and honestly and in the best interest of Viterra Ltd.[2259] Noting that Glencore was the ultimate holding company of Viterra Ltd, they submitted that any conduct of Hughes was not done on behalf of Glencore and was otherwise outside the scope of his employment contract in that he did not act ethically or honestly or in the best interest of Viterra Ltd and its holding company, Glencore. On this basis, it was submitted that Hughes' conduct could not be attributable to Glencore under section 139B(2).

X.18.2.3.3 Analysis

3106 For the purpose of determining this issue, it was inconsequential whether Hughes was acting on the relevant occasions for Joe White or not. Even on the assumption that he was so acting,[2260] in making the Financial and Operational Performance Representations to the extent that he did his conduct was deemed to be that of Glencore by operation of either or both of paragraphs (a) and (b) of section 139B(2). For reasons already discussed in issue 11 above, Hughes was an agent of Glencore who was expressly authorised to make representations about the Joe White Business for the purposes of the sale process. Whatever his contractual arrangements were with Viterra, they could not alter the fact that he was authorised by Glencore to assist in the drafting and finalisation of the written statements contained in the Information Memorandum and the Management Presentation Memorandum, and to make the oral statements concerning the Joe White Business, all of which conduct gave rise to the

2259 See further issue 136 below.

2260 Findings to the contrary are made in issue 124 below.

Financial and Operational Performance Representations. Alternatively, even if Hughes was not an agent, he was clearly a person who was acting on behalf of Glencore at the direction of employees and agents of Glencore,[2261] as well as with their consent and agreement, which was within the actual authority of those employees and agents.[2262] Under any of these scenarios, section 139B(2) operated so that his conduct was taken to have been engaged in by Glencore.

3107 The Viterra Parties did not identify the specific basis upon which they contended that Cargill knew Hughes had no authority to make any representations binding upon Glencore. No evidence of any witness was referred to as part of this submission.[2263] Presumably, this was submitted in reliance upon the Sale Process Disclaimers, or at least some of them.[2264] As the authorities make plain, the mere fact that it is stated that someone is not acting as an agent is not determinative. The facts of this case were that Glencore decided to have the benefit of the services of Hughes and Argent in order to facilitate the sale for the Viterra Parties in a manner to achieve maximum and massive competitive tension.[2265] As part of Glencore's endeavours to achieve this outcome, a specific retainer was put in place to secure Hughes' services and continuity. This retainer was not between Hughes and Joe White, but was between Hughes and Viterra at the direction of Glencore.[2266] The conduct engaged in to facilitate this was being done on behalf of Glencore so that Glencore (through Viterra) could achieve its desired outcome of a sale price of US$400 million. Any disclaimer as between the Viterra Parties and Cargill that suggested to the contrary did not reflect the reality and could not thwart or override the operation of section 139B(2).

3108 Further, even if the terms of the Hughes/Viterra Contract were relevant to Glencore's position (Glencore not being a party to that agreement), it did not take the matter any

---

2261 Such as Merrill Lynch, King and Mattiske.

2262 The employees of Glencore included Walt, Mostert, Roelfs, Mattiske and King and the agents included Merrill Lynch.

2263 For completeness, there was evidence that Cargill knew Hughes was in attendance at the Management Presentation because of his position at Joe White, but as explained above this did not exclude Hughes acting for Glencore or Viterra: see fn 1298 above.

2264 But see par 2670 above concerning Hughes' position as a "Discloser" and a "Representative".

2265 See pars 110, 368, 766 above.

2266 See par 1876 above.

further. Clauses to the effect that Hughes was required to act ethically and honestly and in the best interest of Viterra Ltd could not have the result that, if Hughes was authorised to engage in conduct on behalf of Glencore with respect to providing information about Joe White for the purposes of the sale process, his conduct ceased to be on behalf of Glencore whenever that conduct became misleading in such a manner that it was unethical or dishonest or not in the best interest of Viterra Ltd. If this were the position, in cases involving silence and alleged lack of knowledge, corporations could avoid the consequences of misleading conduct being engaged in by simply requiring employees or agents to enter contracts with their employer or principal requiring them to act ethically and honestly and in its best interest,[2267] while still taking the benefit of any misleading conduct which may result in a sale if that term were breached. In any event, the Viterra Parties cited no authority in support of this submission. There is longstanding authority to the contrary.[2268]

X.18.2.4 Youil

3109 For reasons discussed below,[2269] it has not been found that Youil made any of the representations or statements in trade or commerce that gave rise to the Financial and Operational Performance Representations. Accordingly, it is unnecessary to consider this issue in relation to him.

X.18.2.5 Argent

3110 In alleging that, to the extent the Financial and Operational Performance Representations were made or provided by Argent that conduct was deemed to be conduct of Glencore, Cargill Australia put forward the same reasons alleged concerning Hughes. As to Argent's conduct, Cargill Australia referred to the Management Presentation.

3111 The Viterra Parties relied upon precisely the same submissions referable to Hughes in contending that Argent's conduct should not be attributed to Glencore. For the reasons those submissions were rejected concerning Hughes,[2270] to the extent that

---

2267 If such a term of employment were not already implied.
2268 See fn 3156 below.
2269 See issue 126 below.
2270 See pars 3106-3108 above.

Argent engaged in conduct which gave rise to the Financial and Operational Performance Representations, they are also rejected in relation to him.

X.18.2.6 Viterra

3112 Finally, Cargill Australia alleged that, to the extent the Financial and Operational Performance Representations were made by Viterra, that conduct was deemed to be conduct of Glencore.[2271] The conduct relevant to this allegation was the sale process itself, the preparation and provision of the Information Memorandum, the preparation and distribution of the Phase 1 and Phase 2 Process Letters, Viterra's involvement in the Due Diligence (including the Data Room Documentation and the provision of the Data Books), the Management Presentation, the Operations Call, the Commercial Call, and generally the failure to disclose the Undisclosed Matters. In alleging Viterra acted as agent for Glencore, Cargill Australia also referred to the corporate relationship between Glencore and Viterra, the Phase 1 Process Letter and the Information Memorandum (including alleging that the Information Memorandum stated it was prepared on behalf of the subsidiaries of Glencore),[2272] the fact that Viterra owned the assets that were to be sold, and finally that the sale process was managed by Mattiske, Fitzgerald and Rees who were each officers and employees of Viterra. In relation to the direction, consent or agreement by a director, employee or agent of Glencore, such direction, consent or agreement was said to be inferred by reason of the matters referred to immediately above.

3113 Without going through the matters individually, essentially the Cargill Parties contended that by reason of the incentivisation of Hughes and Argent, to the extent that either or both of them were engaged in making the Financial and Operational Performance Representations, they were made by the 3 Viterra entities, and in turn those entities were so engaged on behalf of Glencore.

3114 In the Viterra Parties' closing submissions, they conceded that Viterra's conduct in carrying out the sale process and providing the Information Memorandum, the Phase

---

2271 The allegations against Viterra also were concerned with the Pre-Completion Representations, as to which see issues 25, 28 below.

2272 In fact, the Information Memorandum did not expressly state this: see par 475 above.

2 Process Letter and the information in the Data Room, was all directly attributable to Glencore. In oral submissions, the Viterra Parties accepted that to the extent that any of this conduct was done by Viterra, it was done on behalf Glencore.

3115 However, Glencore also submitted that, to the extent that it might be found that Viterra engaged in any positive conduct referable to the Management Presentation, the Operations Call and the Commercial Call, Cargill knew that no agent had authority to make any representation to Cargill that was binding on Glencore. For the same reasons as this submission was rejected in relation to Hughes and Argent,[2273] it is rejected here.

X.18.3 Conclusion

3116 For these reasons, section 139B(2) was satisfied with respect to Merrill Lynch, Mattiske, Hughes, Argent and Viterra. In short, to the extent that any of these persons engaged in conduct that gave rise to the Financial and Operational Performance Representations, that conduct was engaged in on behalf of Glencore and, by operation of section 139B(2), taken to have been engaged in by Glencore for the purposes of the Australian Consumer Law.

X.19 If the Financial and Operational Performance Representations, or any of them, were made by Merrill Lynch, Mattiske, Hughes, Youil, Argent and/or Glencore, is that conduct deemed to be Viterra's conduct under section 139B(2) of the *Competition and Consumer Act*?

X.19.1 Introduction

3117 In addition to alleging the conduct of Merrill Lynch, Mattiske, Hughes, Youil and Argent was attributable to Glencore, Cargill Australia alleged the relevant conduct of these persons was attributable to Viterra pursuant to section 139B(2). Further, it was alleged that Glencore's conduct was attributable to Viterra.

2273 See par 3107 above.

3118 An agent may act for more than 1 principal. Equally, in relation to the operation of section 139B(2), conduct may be engaged in on behalf of 2 or more bodies corporate.[2274] Naturally, whether or not a person is acting on behalf of 2 bodies corporate is to be determined on the particular facts of the case.

X.19.2 The Cargill Parties' submissions

3119 The Cargill Parties dealt with issues 18 and 19 together. In other words, for essentially the same reasons they contended each relevant person was acting on behalf Glencore, they also contended it or he was acting on behalf of Viterra. The Cargill Parties submitted that Viterra was primarily responsible for drafting the Information Memorandum Statements, as it was Viterra employees that assisted. Further, they noted that the Information Memorandum made no distinction between Glencore and Viterra as "Glencore" was defined to include Viterra. The key difference in the submissions was that, instead of referring to Glencore's requests and instructions to Hughes and Argent,[2275] the Cargill Parties referred to the fact that Mattiske was a director of each of the Viterra entities and submitted Hughes and Argent carried out the relevant tasks within the scope of their actual authority at the direction of Mattiske.

X.19.3 The Viterra Parties' submissions and determination of attribution of each person's conduct

3120 The Viterra Parties made general submissions consistent with those they made in relation to issue 18. There is no need for repetition.

X.19.3.1 Merrill Lynch

3121 While the Viterra Parties accepted Merrill Lynch's conduct was attributable to Glencore, they submitted there was no evidence Merrill Lynch was "considered to be, or in fact was, acting for any of" Viterra. It was then simply contended that accordingly the conduct of Merrill Lynch ought not be deemed to be Viterra's conduct.

2274 Cf *Cassidy v Saatchi & Saatchi Australia Pty Ltd* (2004) 134 FCR 585, 592 [31], [37] (Moore and Mansfield JJ). See also *Downey v Carlson Hotels Asia Pacific Pty Ltd* [2005] QCA 199, noting in that case that the issue of whether or not s 84(2) was enlivened was put in the alternative to the primary position that there were 2 principals: [54] (Keane JA, with whom Williams JA and Atkinson J agreed).

2275 See pars 3103, 3110 above.

In making this submission, there was no attempt to grapple with the language of section 139B(2) or the wording of the Information Memorandum Disclaimers and the Management Presentation Memorandum Disclaimers.

3122 As to the latter, the Viterra Parties' submission that Merrill Lynch was not acting for Viterra flew in the face of the contents of the Information Memorandum and the Management Presentation Memorandum. Both these documents expressly provided that Merrill Lynch was acting for "Glencore", which was unequivocally defined to include Viterra.[2276] These express acknowledgements reflected the true position.

3123 It suffices to say that Merrill Lynch, in facilitating the provision of information to assist prospective purchasers in deciding whether to acquire assets collectively owned by Viterra, was acting with the consent or agreement (at the very least implied) of Mattiske, a director of each of the Viterra entities who was charged with responsibility of, amongst other things, ensuring that the sale process went smoothly.[2277] In the circumstances, where Viterra (at the direction of Glencore) consented or agreed to the sale process, Merrill Lynch's conduct must be taken to be engaged in on behalf of Viterra and thus be taken to be conduct of Viterra pursuant to section 139B(2).

X.19.3.2 Mattiske

3124 The Viterra Parties' submissions concerning Mattiske were confined to his lack of knowledge of the Undisclosed Matters. Obviously, his conduct was attributable to Viterra as at all relevant times he was a director of each company. As it has been found Mattiske lacked knowledge of the Undisclosed Matters before the Cargill 22 October Letter,[2278] it is unnecessary to discuss this issue further.

2276 See pars 475, 711 above. For completeness, later in the Information Memorandum it was stated that "Glencore" had retained Merrill Lynch as "its" financial adviser to assist with the proposed transaction. The reference to the singular might be said to have suggested Glencore alone rather than Glencore and its subsidiaries. The better view is that it did not, as Glencore was a defined term that plainly went beyond referring to a single entity. But even if the contrary view were taken as to the use of "Glencore" in this context, that statement was not inconsistent with the earlier statement that Merrill Lynch was acting for Glencore and its subsidiaries "in connection with this document".

2277 See pars 363, 392 above.

2278 See par 3101 above.

X.19.3.3 Hughes

3125 The Viterra Parties maintained the position that, at all times during the Management Presentation, the Operations Call and the Commercial Call, Hughes was either acting for Joe White or, if he acted other than ethically or honestly, he was acting outside his service contract or failed to act in the best interest of Viterra Ltd. They submitted that, despite the fact that Hughes was an employee of Viterra Ltd, his conduct could not be attributed to his employer. For the reasons discussed above,[2279] there was no merit in this submission.

3126 Turning to the specific allegation made, it was alleged that Hughes, as an employee of Viterra Ltd or as an agent of each of the Viterra entities, or both, engaged in the relevant conduct that conveyed the Financial and Operational Performance Representations.[2280] In circumstances where each of the Viterra entities (at the very least by their common director, Mattiske) was consenting or agreeing to the sale process being conducted in the manner that it was, including by means of the active involvement of Hughes as directed or overseen by Mattiske, King and Merrill Lynch, the relevant conduct of Hughes must be taken to be conduct of each of them.

X.19.3.4 Youil

3127 The position in relation to attributing Youil's conduct to Viterra is the same as it was in relation to Glencore. For reasons discussed below,[2281] it has not been found that Youil made any of the representations or statements in trade or commerce that gave rise to the Financial and Operational Performance Representations. Therefore, no findings on this issue are necessary.

X.19.3.5 Argent

3128 The position is identical to that of Hughes referred to above.[2282] Argent was an employee of Viterra Ltd directed to assist in the sale of the assets of the 3 Viterra entities. His conduct was plainly attributable to Viterra.

2279 See par 3108 above.

2280 This allegation as referred to in some parts of the Cargill Parties' submissions appeared to contend that Hughes only acted on behalf of Viterra Ltd and Viterra Malt, while no reference was made to Viterra Operations.

2281 See issue 126 below.

2282 See pars 3110-3111, 3126 above.

X.19.3.6 Glencore

3129 The Viterra Parties noted that the conduct alleged to be attributable to Viterra was identical to the conduct of Viterra said to be attributable to Glencore as discussed in issue 18 above.

3130 The Viterra Parties again acknowledged that Glencore's involvement in the sale process, and the provision of the Information Memorandum, the Phase 2 Process Letter and the information in the Data Room, was all conduct attributable to Glencore. However, they submitted that this conduct was not attributable to Viterra. They further submitted that the Cargill Indicative Bid was not conduct of Glencore and therefore should be disregarded for the purposes of this issue. Again, they maintained that the relevant conduct in the Management Presentation, Operations Call and the Commercial Call was conduct of Joe White and therefore there was no basis for attributing it to Viterra.

3131 The Viterra Parties referred to each of the Viterra entities being party to the Acquisition Agreement for a different and specific purpose and that the sale process was run and managed by Glencore prior to the execution of the Acquisition Agreement. They then submitted the Cargill Parties did not adduce any evidence in relation to the corporate relationship between the 3 Viterra entities and contended there was nothing to suggest there was any lack of corporate separation between them. They further contended that there was no evidence of Glencore acting as agent for Viterra or having any actual or inferred authority to make any binding representations on Viterra's behalf. Again without identifying any particular term, they submitted the Sale Process Disclaimers were inconsistent with the existence of any such authority.

3132 For the purposes of the Financial and Operational Performance Representations, it is unnecessary to determine whether Glencore was acting as an agent of Viterra.[2283] The operation of section 139B(2) is such that it is sufficient if Glencore was engaging in conduct on behalf of Viterra with the consent or agreement of a director of Viterra and

---

[2283] A related issue is discussed in a different context below: see pars 3826-3832 below. See also issue 85 below where the Viterra Parties positively submitted Glencore was acting as Viterra's agent in accepting the Confidentiality Deed as executed and delivered by Cargill, Inc: see esp par 4525 below.

that consent or agreement was within the scope of the director's authority. The evidence of Mattiske, at all material times a director of each of the Viterra entities, was that he agreed with the initial strategy and the decision that the Joe White Business ought to be sold.[2284] He also consented to the sale process being conducted by Glencore.[2285] Further, Mattiske was the director of Viterra with responsibility for ensuring the sale process went smoothly.[2286] There was no evidence whatsoever to suggest that in Mattiske performing his role, wearing his various hats including that of director of each of the Viterra entities, that he was acting other than within the scope of his actual authority. On the contrary, it was plain that at all times right up until Completion, Mattiske was authorised both by Glencore and Viterra to ensure to the extent that he was involved that the necessary steps were taken for the sale to take place.

3133 Dealing with the particular submissions of the Viterra Parties, little if anything turned on whether or not the making of the Cargill Indicative Bid was conduct of Glencore (or Viterra).[2287] Obviously, conduct confined to the actual making of the Cargill Indicative Bid was not conduct of either of them. The relevance of the Cargill Indicative Bid was that it preceded the Phase 2 Process Letter being sent, which indicated that the Cargill Indicative Bid had been accepted and that Cargill was permitted to participate in Phase 2.[2288]

3134 For reasons discussed elsewhere,[2289] the making of the Management Presentation Statements, the Operations Call Statements and the Commercial Call Statements was not conduct of Joe White.

3135 In relation to each of the Sellers being party to the Acquisition Agreement for a

2287 See par 3130 above.
2288 The covering email to the Phase 2 Process Letter thanked Cargill for the Cargill Indicative Bid before confirming that Cargill had been invited to participate in Phase 2.
2289 See in particular issue 124 below.

different and specific purpose,[2290] this could not serve to carve out any of them from the operation of section 139B(2) in relation to Glencore's conduct. Both collectively and individually, the Sellers had decided to sell whatever assets they owned which collectively allowed for the sale of the shares in Joe White and the Joe White Business. They had also agreed to be liable jointly and severally for any obligation or liability imposed on any of them under the Acquisition Agreement.[2291] Further, each of the Viterra entities was an active participant in Glencore presenting and facilitating the sale process. Without being exhaustive, it was represented with the knowledge of Viterra that Glencore's subsidiaries (that is, Viterra) had been directly involved in the preparation of the Information Memorandum and the Management Presentation Memorandum.[2292] As part of this, they also permitted it to be represented in both documents that Merrill Lynch was acting on behalf of each of them.[2293] Furthermore, given Mattiske's direct involvement, they agreed and consented to their interests in Joe White and the Joe White Business being offered for sale by Glencore as part of "Glencore's interest in the malt business" and to the dissemination of relevant information to facilitate that sale. As the Information Memorandum itself stated,[2294] the proposed transaction was for the sale of all the issued capital of Joe White (owned by Viterra Malt) together with any assets not owned by that entity but used exclusively in connection with Joe White.

X.19.4 Conclusion

3136 For these reasons, by operation of section 139B(2), the conduct of each of Merrill Lynch, Mattiske, Hughes, Argent and Glencore in engaging in conduct that gave rise

---

2290 See par 3131 above. For completeness, as part of this submission, the Viterra Parties contended that Cargill did not adduce any evidence of the corporate relationship between the Viterra entities. Leaving aside that it was admitted on the pleadings that Viterra Ltd was the holding company of Viterra Operations and that Viterra Operations was the holding company of Viterra Malt, there was direct evidence of their corporate relationship. A current and historical extract from the Australian Securities and Investment Commission was tendered in relation to each entity. These extracts provided evidence of the relevant shareholdings, as well as the extensive overlapping of the positions held by the directors and secretaries of Viterra. There was also oral evidence at trial on this subject matter. It is unnecessary to go into the detail, but this evidence also showed this further submission contending an absence of evidence was without substance.

2291 See fn 648 above.

2292 See pars 475, 711 above. See also par 457 above.

to the Financial and Operational Performance Representations to the extent that each of them did is taken to be conduct engaged in by each of the Viterra entities for the purposes of the Australian Consumer Law.

X.20 Did Cargill Australia enter into the Acquisition Agreement in reliance on the Financial and Operational Performance Representations, including in light of the Sale Process Disclaimers, the Acquisition Agreement Liability Terms, and the Alleged Industry Practices?

X.20.1 A broad overview of the pleadings[2295]

3137 The Cargill Parties alleged that in reliance, at least in part,[2296] on the Financial and Operational Performance Representations Cargill Australia entered into the Acquisition Agreement.[2297] They further alleged that the Financial and Operational Performance Representations were false by reason of the same pleaded matters identified in issue 10 above.[2298]

3138 Broadly speaking, in the Defence the Viterra Parties denied these allegations and relied upon the Sale Process Disclaimers and the Acquisition Agreement Liability Terms in order to establish the absence of reliance. They further pleaded there was no reliance because of their allegations concerning the Alleged Industry Practices. As to the last of these matters, the Viterra Parties have failed to establish that the Alleged Industry Practices existed;[2299] and the related allegations need not be considered further.

3139 Further, in response to allegations concerning negligent misrepresentation, the Viterra Parties admitted that they had control over what information and documents in their possession, custody or power were disclosed to Cargill during the Due Diligence and

---

2295 The summary of the pleadings set out below does not purport to be exhaustive of the matters pleaded, but rather is an overview so that the matters the subject of submissions are put in context.

2296 See also issue 49 below.

2297 The Statement of Claim also contained allegations concerning reliance upon the Financial and Operational Performance Representations as part of a claim based on negligent misrepresentation. In closing submissions, this claim was not pursued.

2298 See also issue 16 above.

2299 See issue 13 above.

prior to Completion.

3140 In the Reply, Cargill Australia alleged that the Phase 1 Process Letter was premised on the fact that Cargill, Inc would be able to make an indicative bid, and to determine the amount of any such bid, based upon the financial and operational information of Joe White provided by either Glencore or Viterra or both.[2300] Further, they alleged the Phase 2 Process Letter was premised on the fact that Cargill, Inc would make a final bid and determine the amount of any such bid based upon the financial and operational information of Joe White provided by either Glencore or Viterra or both during the Due Diligence.[2301]

3141 Reference was made to clauses 1.3, 3, 6 and 9.1 of the Confidentiality Deed[2302] in alleging that restrictions were imposed upon Cargill, Inc's ability to use or disclose, or to conduct independent investigations into the accuracy of, the Financial and Operational Information provided by Glencore and Viterra.

3142 In addition, Cargill Australia pleaded that Cargill, Inc stated that Cargill had based the Cargill Indicative Bid on the information and forecasts contained within the Information Memorandum and the Phase 1 Process Letter, that it had assumed the information provided was true and accurate and supported by due diligence findings, and that Cargill assumed Joe White was being acquired on a going concern steady-state basis without issues (as identified) or any other matters that could result in a material adverse change to the Joe White Business or significantly affect the value of Joe White.[2303]

3143 The Reply also referred to the position in late July 2013. Cargill Australia pleaded that the First Final Bid expressly stated that it was based on the Due Diligence and discussions with Joe White management, which had confirmed Cargill's view that it was an impressive business with a portfolio of top-tier assets and a strong strategic fit with Cargill, and that Cargill had conducted the Due Diligence based on information

2300 See par 466 above.
2301 See pars 639-641, 644 above.
2302 See pars 587, 590 above.
2303 See par 623 above.

provided, including a review of the information provided in the Information Memorandum, management presentations, site visits, the Data Room, the Q&A Process and some public registers.[2304]

3144 The Reply further alleged the Financial and Operational Information of Joe White was solely within the control and possession of Glencore and Viterra, that it was commercially sensitive information and that by reason of all of these matters pleaded, Cargill relied on the accuracy of the Financial and Operational Information provided and made that fact known to Glencore and Viterra.[2305]

3145 The Reply alleged the state of knowledge of Cargill in relation to matters relevant to the Operational Practices. Collectively with regard to all of the Operational Practices, Cargill Australia alleged that Cargill was never informed by the Viterra Parties and was not aware that Joe White, routinely and without informing its customers, supplied malt and Certificates of Analysis in accordance with the Operational Practices. Specifically, in relation to the Reporting Practice, the following was pleaded:

(1) Cargill was aware that the results of an analysis undertaken on malt could vary depending on the equipment used to undertake the analysis.

(2) Cargill was concerned as to how Joe White reprocessed malt that was not within customer specifications in light of its apparent storage limitations but was assured by the Viterra Parties that Joe White had a customer base with a wide range of specifications that enabled malt to be reassigned to another customer in the event it did not meet the specification of the original customer, and that Joe White plants had more than sufficient storage other than Sydney which was in the process of building 2 additional silos.[2306]

2304 See pars 976-977 above.

2305 Cargill Australia also pleaded issues concerning public policy in relation to the Sale Process Disclaimers.

2306 See issue 2 above.

3146 In relation to the Varieties Practice, the following was pleaded:

(1) Cargill was not aware that Joe White used non-approved malting barley varieties to manufacture malt supplied for customers without the customers' agreement, knowledge or consent.

(2) Cargill was informed by the Viterra Parties of certain matters during the Commercial Call.[2307]

(3) In response to a question as to whether there was a potential to achieve additional margin on barley, Cargill was informed by the Viterra Parties during the Barley Inventory Call that Joe White could blend lower and higher graded barley and up to 30 percent of non-grade 1 barley could be used.[2308]

3147 In relation to the Gibberellic Acid Practice, the following was pleaded:

(1) Cargill was aware that gibberellic acid was an additive that had the effect of speeding up the germination time of some barley.

(2) Cargill was aware that the use of gibberellic acid was not normally allowed by most international brewers but that gibberellic acid was able to be used with the agreement of the customer concerned.

(3) Cargill was informed by the Viterra Parties during the site visit to the Port Adelaide plant that Joe White used gibberellic acid in the production of malt, but only when allowed by customers.[2309]

(4) Cargill was informed by the Viterra Parties before 8 July 2013 as part of the Due Diligence that Joe White's germination and steeping time of Australian barley was approximately 5 days (with less than 1 day of

2307 See par 914 above.
2308 See par 926 above.
2309 See pars 788, 1099 above.

steeping and 4 days of germination).[2310]

(5) Cargill was aware that 1 of its customers, Heineken, required a minimum of 5 days germination for Heineken A Malt and was concerned that if Heineken was or was to become a customer of Joe White it might have been necessary to obtain a waiver of that requirement, but was subsequently informed on 18 July 2013 by the Viterra Parties that Joe White did not produce Heineken A Malt.[2311]

X.20.2 Legal principles

3148 To recover loss or damage for contravention of section 18 of the Australian Consumer Law, it must be shown that the loss or damage was "because of" the contravening conduct.[2312] Therefore, the satisfaction of causation is necessary before any entitlement to compensation arises. For causation to be satisfied it is not necessary to show that the contravening conduct is *the* cause; it is sufficient if it is *a* cause of the loss or damage claimed.[2313] The determination of this issue is a question of fact.[2314]

3149 Reliance is a "tool of analysis" that may usefully assist in determining whether the causation requirement is met.[2315] It may offer greater assistance where the impugned conduct consists of a positive representation or representations; generally it offers less assistance where the impugned conduct consists of non-disclosure.[2316] In any event, the concept of reliance must be deployed with care, and not as a substitute for the essential question of causation.[2317] The 2 concepts are not interchangeable: the

See also *Sellars v Adelaide Petroleum NL* (1994) 179 CLR 332, 356.8-357.2 (Brennan J).
2314 See, for example, *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 321 [31] (French CJ).
2315 Ibid, 341 [102] (Gummow, Hayne, Heydon and Kiefel JJ).
2316 See *Italform Pty Ltd v Sangain Pty Ltd* [2009] NSWCA 427, [42] (Macfarlan JA, which whom Hodgson JA and Sackville AJA agreed), referring to *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 341-342 [102], 351-352 [143].
2317 See *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 351 [143] (Gummow, Hayne, Heydon and Kiefel JJ).

causation requirement may, in some cases, not be met despite reliance;[2318] it may, in others, be met notwithstanding a lack of reliance.[2319]

3150 That said, as a general rule, where the impugned conduct consists of a positive representation or representations, the causation requirement will be met if the decision or other action taken by the representee which led to its loss or damage is "done by the representee *in reliance upon* the misrepresentation".[2320]

3151 In applying that general approach, some additional principles are presently relevant.

3152 *First,* the onus of establishing reliance falls on the party asserting it.[2321]

3153 *Secondly,* for *a* cause to satisfy causation, the conduct must have "materially contributed" to the representee's decision.[2322] That said, a representee may establish reliance on the impugned representation despite there being other matters upon which the representee *also* relied, and even other matters upon which the representee relied more heavily.[2323]

3154 *Thirdly,* it is not necessary that there be specific evidence of reliance.[2324] The court may, in appropriate circumstances, draw a fair inference that a representee has relied on a representation.[2325] Such an inference may be drawn where "common sense dictates" that the relevant representation played at least some part in inducing the

representee to make the relevant decision.[2326] This conclusion may be reached even where some relevant factors grounding such an inference go "unanswered",[2327] that is, where the representee fails to establish relevant factors underpinning the inducement.

3155 Whether such an inference is available will depend on the quality of the representation. In assessing this, it is relevant to ask whether the representation was calculated to induce the representee to do what it ultimately decided to do.[2328] It will also depend on the surrounding facts and circumstances,[2329] including: the entire course of conduct of which the representation forms a part;[2330] the parties' respective attributes and roles;[2331] the state and extent of the representor's and representee's knowledge arising from their dealings;[2332] and the underlying commercial realities.[2333]

3156 Further, there is a particular type of inference that may be available where a positive representation is said to have been relied upon by the representee in deciding to enter into a contract. The principles governing the availability of such an inference are derived from the context of a common law action in deceit,[2334] but are equally applicable in the present context.[2335] Although there is some overlap with what has already been said concerning the principles to be applied more generally, it is

2335 *Jafari v 23 Developments Pty Ltd* [2019] VSCA 201, [131] (Whelan and Niall JJA and Sifris AJA).

convenient to articulate, in brief terms, that those principles include:[2336]

(1) If a material representation is made which is calculated to induce the representee to enter into a contract, and that person in fact enters into the contract, there arises a fair inference of fact that they were induced to do so by the representation.[2337] This inference may be more readily drawn if the representor's business benefits if the representation is acted upon.[2338]

(2) A material representation may be treated as calculated to induce the representee to enter into a contract if it is objectively likely to do so.[2339]

(3) The inference described in subparagraph (1) above may be rebutted on the facts of the case. It will be rebutted if the representor discharges an evidentiary onus to sufficiently identify facts inconsistent with the inference. For example, the inference may be rebutted if it is established that the representee, prior to entry into the contract, had knowledge of the true facts and the truth of those facts. Alternatively, it may be rebutted if it is established that the representee expressly disavowed reliance on the material representation, such as by means of an express disclaimer of reliance, which disavowance represented the true position of the representee.[2340] In both examples, such facts may amount to evidence of non-reliance and the want of the required causal link.[2341]

2336 See also the more detailed enumeration of applicable principles in *Lord Buddha Pty Ltd (in liq) v Harpur* (2013) 41 VR 159, 197-198 [159] (Vickery AJA, with whom Weinberg and Tate JJA agreed).

2337 *Jafari v 23 Developments Pty Ltd* [2019] VSCA 201, [131] (Whelan and Niall JJA and Sifris AJA).

2338 *Australian Competition and Consumer Commission v TPG Internet Pty Ltd* (2013) 250 CLR 640, 657 [55] (French CJ, Crennan, Bell and Keane JJ).

2339 See *Hanave Pty Ltd v LFOT Pty Ltd* (1999) 43 IPR 545, 556 [45] (Kiefel J, with whom Wilcox J agreed). See also *Ricochet Pty Ltd v Equity Trustees Executor Agency Co Ltd* (1993) 41 FCR 229, 234.2 (Lockhart, Gummow and French JJ).

2340 It has been observed that non-reliance or similar disclaimers cannot defeat a claim for relief from the consequences of a contravention of s 18 of the Australian Consumer Law; and that the evidentiary weight accorded to such a disclaimer may vary and may often be explained away by other evidence: *Camden v McKenzie* [2008] 1 Qd R 39, 53 [54] (Keane JA, with whom McMurdo and Douglas JJ agreed).

2341 *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 321 [31] (French CJ), 348 [130] (Gummow, Hayne, Heydon and Kiefel JJ). Cf *Gould v Vaggelas* (1984) 157 CLR 215, 236.4 (Wilson J).

(4) However, the inference described in subparagraph (1) above cannot be rebutted simply by identifying inducements other than the relevant material representation. This is because the material representation need not be the sole inducement, provided it plays at least a minor part in contributing to the representee's entry into the contract.[2342]

(5) Keeping in mind that reliance is not a substitute for the essential question of causation, it remains necessary, in drawing any inference, to attend closely to all of the evidence that is adduced that bears upon whether the inference is available.[2343]

3157 Additionally, and as a consequence of these matters, causation may be established despite a lack of direct evidence in relation to the state of mind of the relevant decision-maker.[2344]

3158 *Fourthly*, the causation requirement may be satisfied notwithstanding a degree of scepticism on the part of the representee, or some doubt or distrust, in relation to the relevant representation or representations.[2345] Amongst other reasons, this is because scepticism, doubt or distrust in relation to a representation does not amount to knowledge that that representation is misleading or deceptive, or an understanding of the relevant circumstances at a level capable of breaking the causal chain.[2346]

3159 *Fifthly,* where reliance by a company is alleged, it may be necessary to establish that the relevant "decision-maker", or a relevant agent of the company, relied on the relevant representation or representations.[2347] Where the relevant decision-maker is a

group charged with decision-making, such as a board, then it is necessary only that there be "an available conclusion that in some fashion" the relevant conduct affected the "group's decision in some way by reference to the loss or damage suffered".[2348] It is not necessary for the relevant conduct to have a consistent effect on each of the members of the decision-making group.[2349]

X.20.3 The Cargill Parties' submissions

3160 For the purposes of their submissions, the Cargill Parties grouped the Financial and Operational Performance Representations into those concerning the production of malt with strict quality control procedures and in compliance with customer specifications and laws,[2350] those concerned with sufficiency of assets,[2351] the representation concerning the procurement of barley[2352] and the representation that the Undisclosed Matters did not exist.[2353]

3161 The Cargill Parties identified a number of bases upon which they contended the evidence established that reliance was placed by Cargill Australia upon the Financial and Operational Performance Representations.

3162 *First*, they submitted that the Financial and Operational Performance Representations were calculated to induce Cargill to enter into the transaction.[2354]

3163 *Secondly*, they submitted Cargill made a careful assessment of the relevant information. While it was accepted that Cargill executives were enthusiastic about the prospect of acquiring Joe White, they submitted Cargill's internal processes left no room for casual decision-making and required those responsible for making an investment to thoroughly justify it and retain accountability for it once made.

3164 *Thirdly*, they referred to the evidence of various witnesses to the effect that they read

---

2353 See par 2826(16) above.
2354 This issue is addressed in relation to Viterra in issue 23 below.

and relied upon relevant parts of the documents in question. They contended that extensive cross-examination did not undermine the evidence of these witnesses.

3165 *Fourthly*, they submitted that Cargill's use of the information provided demonstrated that the Financial and Operational Performance Representations provided the foundation upon which Cargill valued the Joe White Business. In this regard, they submitted that Cargill's contemporaneous assessments of the value and desirability of Joe White, expressed in both Cargill's deal model and presentations made within Cargill, demonstrated Cargill's acceptance and reliance upon the Financial and Operational Performance Representations.

3166 *Fifthly*, they submitted that Cargill's assessment of the value of the Joe White Business and the desirability of purchasing Joe White could not rationally have been made had the Viterra Practices and Policies been disclosed. Again referring to contemporaneous documentation, the Cargill Parties submitted that the fact that Cargill considered it could reap the synergies it calculated and learn from Joe White's approach to customer relationships was demonstrable of its acceptance of the Financial and Operational Performance Representations.[2355] They submitted that reliance was demonstrated by Cargill's approach to both synergies and dis-synergies. Although it was accepted that nothing contained in any information provided by the Viterra Parties suggested any level of synergies, it was contended that Cargill's assessment of synergies and dis-synergies was founded on acceptance of the Financial and Operational Information and Cargill's assessment of the character of the Joe White Business as discerned from the Information Memorandum.

3167 *Sixthly*, reference was made to the confidentiality regime and the restrictions placed upon customer-related information, Joe White's manufacturing plants and Joe White's personnel.[2356] In this context, they referred to the enquiries made by Cargill concerning potential risks and problems and the answers Cargill was given. They contended the evidence showed Cargill pointedly raised and thoroughly pursued the

---

2355 See par 558 above.

2356 See pars 468, 643-644, 650-651, 746, 750, 827 above.

relevant issues and the answers received were unambiguous in conveying in substance that there was no problem and there was nothing to undermine the confidence Cargill could have in the quality of the assets.

3168 *Seventhly*, the Cargill Parties referred to the Cargill executives' evidence that Cargill Australia would not have acquired Joe White if the Viterra Practices had been disclosed. Eden, Van Lierde, Conway and Koenig were identified as the key decision-makers, each of whom gave evidence which it was submitted supported a finding that Cargill relied upon the Financial and Operational Performance Representations and the Viterra Parties' failure to disclose the true state of affairs in deciding to proceed with the purchase of Joe White.[2357]

3169 *Eighthly*, the Cargill Parties submitted that the fact that it was accepted by Cargill's witnesses at trial that the statements made did not displace the need to conduct a due diligence did not detract from Cargill's reliance upon the Financial and Operational Performance Representations.[2358]

3170 *Ninthly*, they contended that the contemporaneous evidence objectively demonstrated that the characteristics of the Joe White Business represented in the Information Memorandum were adopted by Cargill as the foundation upon which it created its valuation of the Joe White Business. They referred to Le Binh's evidence that the first iteration of Cargill's deal model was populated with the information provided in the Information Memorandum, in combination with the preliminary analysis prepared by Cargill's deal team workstreams.[2359] In particular, Cargill's deal model for financial years 2010 to 2012 and the forecast for 2013 adopted the sales revenue, malt margin, Unadjusted Earnings (both before interest and tax, and before interest, tax, depreciation and amortisation).[2360]

3171 Further, in the first iteration Cargill built its projections for the financial years from 2014 to 2023 by applying growth rates to the historical Financial and Operational

---

2357 This is discussed in more detail in issue 33 below.
2358 See, for example, pars 472, 554, 660 and fn 452 above.
2359 See pars 572-573 above.
2360 See annexure B to these reasons.

Information. In short, it was submitted that the historical Unadjusted Earnings as reported in the Information Memorandum formed the building blocks for Cargill's valuation. Furthermore, Cargill's deal model adopted a utilisation rate of 96.5 percent based on an assumption that Joe White would essentially be operating at full capacity as had been reported in the Information Memorandum.[2361] When Le Binh circulated the final version of Cargill's deal model after the Due Diligence and the day before the Acquisition Agreement was entered into,[2362] these figures remained part of the basis of Cargill's valuation of Joe White including its projections for the financial years from 2013 to 2033.

3172 Equally, in relation to capital expenditure, the Cargill management case estimate based capital expenditure at $5.1 million for the 2014 financial year increasing to $5.25 million in the first iteration of Cargill's deal model for its base case. Ultimately, the base case capital expenditure was estimated at $5.1 million on an annual basis. This figure matched the forecast given in the Information Memorandum for the 2014 financial year.[2363]

3173 *Tenthly*, the Cargill Parties referred to presentations made to the food ingredients and systems platform,[2364] the Cargill leadership team[2365] and Cargill, Inc's board.[2366] In broad summary, they submitted what was put forward in order to obtain approval for the investment demonstrated reliance upon what had been represented. They further submitted that inherent in Cargill's assessments was a belief that Joe White was using premium barley grown in the Australian region. Furthermore, they submitted the presentations demonstrated that Cargill did not discover any material risk that the Undisclosed Matters existed, including the Viterra Practices and the Viterra Policies.

2361 Ibid. In relation to capacities and volume, production capacity, production utilisation, production volumes, the sales rate based on sales volumes when compared to production volumes, and sales volumes for the financial years from 2010 to 2012 and the 2013 forecast were all adopted for the purposes of Cargill's deal model base case.

2362 See par 1010 above.

2363 See par 536 above.

2364 See pars 594-602 above.

2365 See pars 606-614 above.

2366 See pars 758-764, 838-857 above.

3174 *Eleventhly*, the Cargill Parties submitted neither the Sale Process Disclaimers nor the Acquisition Agreement Liability Terms displaced Cargill's reliance upon the Financial and Operational Performance Representations. The Cargill Parties referred to the Sale Process Disclaimers imposed either before or at the same time that the Viterra Parties provided information. They submitted that the evidence established that Cargill subsequently relied upon the information provided, notwithstanding directions or acknowledgements to the contrary. Further, they noted that no Cargill witness gave evidence that they accepted or understood in 2013 that Cargill could not or did not rely upon the Information Memorandum, the Management Presentation Memorandum, the Operations Call, the Commercial Call or any other documents provided to Cargill in the Data Room Documentation. Furthermore, they referred to the evidence of those witnesses that read the Sale Process Disclaimers to the effect that they understood Cargill could not rely solely on the material provided by the Viterra Parties but was required to independently analyse the information throughout the course of its assessment.

3175 In relation to the Acquisition Agreement Liability Terms, in particular those containing acknowledgements by Cargill Australia to the effect that it did not rely upon any representations or other conduct in entering into the Acquisition Agreement except the Warranties,[2367] they submitted that the weight of the evidence established Cargill did in fact rely upon the Financial and Operational Performance Representations in deciding to enter into the Acquisition Agreement. Apparently as a fall-back position, the Cargill Parties submitted that the non-reliance clauses in the Acquisition Agreement recognised that Cargill Australia relied on the Warranties to enter into the Acquisition Agreement. It was contended that the relevant Warranties covered material in the same subject matter as the Financial and Operational Performance Representations.[2368]

3176 *Twelfthly*, the Cargill Parties submitted neither the Sale Process Disclaimers nor the

---

2367 Clause 13.4(a) and (d): see par 1029 above.

2368 The Warranties identified for the purposes of this submission were 4.2, 6.1(e), 7.3, 9.2, 12(a), (b) and (c), 13.4, 17(a): see par 1034 above.

Acquisition Agreement Liability Terms displaced Cargill's reliance upon the Financial and Operational Performance Representations.

X.20.4 The Viterra Parties' submissions

3177 The Viterra Parties identified 6 bases upon which they submitted that it was established Cargill Australia did not enter into the Acquisition Agreement in reliance on the Financial and Operational Performance Representations.

3178 *First*, it was submitted that the Pre-Execution Statements from which the Financial and Operational Performance Representations were alleged to have been made were so general that Cargill Australia could not have relied upon them as statements of fact.

3179 In this regard, the evidence of Eden was referred to. Under cross-examination Eden acknowledged that the Information Memorandum did not displace the Due Diligence and that "generalised statements about [a] proven effective business model" were what he would have expected to see before the process entered Phase 2. Eden also accepted that the Due Diligence was when Cargill would have the opportunity to test whether particular statements were true or not. While the Viterra Parties conceded Eden did not accept the proposition put to him that the statements in the Information Memorandum concerning Joe White's "proven effective business model" were highly generalised,[2369] reference was made to his evidence that there was no intrinsic measure that supported the statements contained in the Information Memorandum. Reference was also made to Eden's evidence that during Phase 1 Cargill did not expect to get a lot of information beyond what was contained in the Information Memorandum and that was why those involved in assessing the information at that stage had a commercial background rather than an operations background.

3180 The Viterra Parties also referred to De Samblanx's evidence concerning the Management Presentation.[2370] Based on that evidence, they submitted that

---

2369 On the contrary, Eden's evidence was that the statements concerning Joe White's proven effective business model were very specific: see pars 504-506 above. This evidence was not challenged. Further, Eden accepted some other parts of the Information Memorandum contained generalised statements: see pars 506, 518-521 above.

2370 See pars 724, 737, 2170 above.

De Samblanx understood the underlying statements were no more than starting points or points of attention for the subsequent Due Diligence and further investigations.

3181 Based on these matters, it was submitted that Cargill did not expect the Information Memorandum or the Management Presentation to be a source of information that Cargill could rely on in respect of the operations side of the Joe White Business.

3182 *Secondly*, the Viterra Parties submitted the evidence demonstrated that Cargill conducted the Due Diligence in accordance with the Sale Process Disclaimers because Cargill proactively and independently investigated the facts on which Cargill proposed to base its decision to enter into the Acquisition Agreement. The Viterra Parties referred to the detailed assessments made by Cargill,[2371] but also noted, correctly, that Cargill did not verify all significant facts relevant to the Financial and Operational Performance Representations. They referred to evidence of Eden, Engle and Viers to the effect that they left reviewing of operational matters to others at Cargill. As to the operations investigations, the Viterra Parties submitted the Operations Spreadsheet did not verify facts relevant to the Financial and Operational Performance Representations. Further, they submitted a number of observations made in the Operations Spreadsheet were incompatible with reliance upon the Financial and Operational Performance Representations. These were submitted to include:

(1) Joe White had "no respect of processing conditions [of] customers?".

(2) References to additives being used which were not normally allowed by most international brewers.

2371 For example, in relation to Phase 1 alone, by reference to the evidence, the Viterra Parties acknowledged that Cargill: (1) undertook a detailed investigation of the estimated Accumulation and Position Margin in relation to the profit which might be made in respect of the procurement of barley for Joe White; (2) assessed the details of the administration costs that the Cargill group would incur if it were operating Joe White; (3) undertook its own assessment of estimated malt margins in Australia; (4) "carefully examined" the forecast information provided in the Information Memorandum; (5) "very carefully" looked at what capital expenditure might be needed; and (6) "carefully" looked at the safety, health and environment information in the Information Memorandum.

(3) The fact that some customers like Heineken required 5 days germination and site visits proved that most plants had 4 days germination which might have meant a process non-conformance which could be addressed either by waiver or by reducing plant capacity.

(4) References to limited storage capacity, non-independent laboratories and the possibility that Joe White might have required additional storage costs to follow Cargill's Certificate of Analysis rules.[2372]

3183 Further, it was submitted that to the extent that Cargill was interested in verifying or having a better understanding of the extent to which the Financial and Operational Performance Representations were true, that interest was exhausted upon Cargill's discovery that there was a risk they were not true, because that meant there was a risk that Joe White did not follow Certificate of Analysis rules in the way that Cargill did.

3184 Furthermore, the Viterra Parties contended Cargill failed to conduct an adequate due diligence and in particular submitted that De Samblanx did not provide documents: (1) reporting on Due Diligence findings as requested by Engle, but only provided the Operations Spreadsheet; (2) reporting on the Operations Call; (3) summarising his findings to the Project Hawk team "at the feasibility stage"; or (4) setting out many of the Due Diligence procedures that had been allocated to him.

3185 Moreover, it was submitted that other Project Hawk participants read the Operations Spreadsheet but took no steps to ensure that the risks identified had been further investigated.

3186 In summary, in light of these matters referred to, it was submitted that Cargill's failure to take steps to investigate and verify certain facts relating to the Financial and Operational Performance Representations was as a result of Cargill's decision not to take those representations into account, rather than any decision to rely upon them.

3187 *Thirdly*, the Viterra Parties relied upon each of the Sale Process Disclaimers and the

---

2372 In this regard, reference was made to De Samblanx's evidence that what he stated in the Operations Sheet was what he thought at the time.

Acquisition Agreement Liability Terms. In particular, they relied upon representations of non-reliance contained in clause 8.3(c) of the Confidentiality Deed, and clauses 13.4(a) and 13.4(d) of the Acquisition Agreement, which they submitted were statements made in documents formally executed by Cargill which Cargill clearly understood. Further, it was submitted that the language used in these statements was most likely to record Cargill Australia's contemporaneous state of mind because these statements were made in legal language in a contract. It was submitted that these statements ought to be accepted over oral evidence given at trial on the basis that the statements were the best evidence of Cargill Australia's state of mind at the time it was decided to enter into the Acquisition Agreement.

3188 In addition, the Viterra Parties referred to the statement in the Information Memorandum that Cargill, Inc was accepting the document for itself and its related bodies corporate on the basis that no representation or warranty was given as to the accuracy, completeness, likelihood of achievement or reasonableness of any forecasts, projections or forward-looking statements contained in the Information Memorandum. The Viterra Parties also referred to clause 15.8 of the Acquisition Agreement in relation to capping the liability of the Sellers.[2373] They submitted that when this clause was applied in conjunction with clause 13.4(a) of the Acquisition Agreement, the cap for any "non-Warranty representations" was nil. They also submitted that clause 15.8 demonstrated that Cargill knew and understood that, unlike the claims referred to in clause 15.8(a) or the types of claims referred to in clause 15.8(b), the Financial and Operational Performance Representations (being the subject of clause 13.4(e) and therefore not the subject of clause 15.8) were not safe to be relied upon.

3189 *Fourthly*, the Viterra Parties submitted that the Refusal of Certain Terms by them established that Cargill tested whether it could rely on information provided during the Due Diligence for the purposes of the Acquisition Agreement, and further whether Cargill could rely on an assumption that Joe White was not in breach of its Material

2373 See par 1030 above and issue 77 below.

Contracts. By the Viterra Parties' conduct,[2374] they submitted they made it clear to Cargill that Cargill could not rely upon such matters. Further, in negotiating clause 31.15 and Warranty 7.3 in the manner that the parties did, it was contended that Cargill was on express notice that knowledge of the Joe White executives was not attributable to the Viterra Parties and that the Viterra Parties did not agree to be deemed to have knowledge of all material disclosed to Cargill as part of the Due Diligence.

3190 Additionally, it was contended that the outcome of the contractual negotiations was that Cargill accepted an allocation of risk which entailed Cargill accepting financial responsibility for any matters falling outside the scope of the Warranties which might have adversely affected Cargill. By reference to Warranties 6.1(e) and 7.3,[2375] it was submitted the risks Cargill accepted included whether Joe White: (1) was in breach of any non-material contracts; (2) was in non-material breach of any Material Contracts; (3) had historically been in default of any Material Contracts where that default no longer subsisted at the time the Warranty was given; (4) was in material breach of Material Contracts where such breach was unknown to Viterra Malt; and (5) had assets that were not sufficient for Joe White to be conducted in a way different to the way in which Joe White had been operating for the past year.

3191 It was submitted that Cargill's knowledge of these matters made it inherently unlikely that Cargill would or could reasonably have relied on any of the matters identified. Accordingly, it was contended it should be held that Cargill did not rely upon the Financial and Operational Performance Representations.

3192 *Fifthly*, it was submitted that Cargill would have acquired Joe White regardless of the Financial and Operational Performance Representations, as Cargill considered Joe White pivotal to its business and the missing pearl in Cargill Malt's string of pearls. The Viterra Parties contended Cargill had no intention of allowing the opportunity to pass it by regardless of any representations made. They referred to statements made

---

2374 See pars 979, 989, 992 above.

2375 See par 1034 above.

by Eden and De Samblanx on 27 June 2013 that they considered there was limited, if any, ability to expand without capital investment, and that they were questioning how Joe White could carry out steeping and germination in the times suggested.[2376] They also referred to other evidence which they submitted demonstrated Cargill identified risks that Joe White might not be complying with customer specifications and that Joe White's processing conditions were not consistent with the specifications of Cargill Malt's global customers (which were also Joe White's customers).

3193 Based on these matters, the Viterra Parties submitted that, despite Cargill having this knowledge and knowing that the onus was on it to investigate each and every fact that was relevant to its decision whether or not to acquire Joe White, Cargill did not take steps to investigate the risks identified. Accordingly, it was submitted that the only credible inference that was open to be drawn was that the existence of the Undisclosed Matters was not a fact that Cargill considered to be relevant to its decision to enter into the Acquisition Agreement.

3194 *Sixthly*, it was submitted that Cargill was aware of the Alleged Industry Practices and that if it had intended to rely upon the Financial and Operational Performance Representations when deciding whether or not to enter into the Acquisition Agreement, it would have investigated whether Joe White engaged in any practices of the kind or similar to the Alleged Industry Practices. In particular, they alleged that Cargill's knowledge of the Alleged Industry Practices meant that Cargill was alerted to the fact that there was a real risk that Joe White was engaging in such practices.

3195 Further, they submitted that none of the Pre-Execution Statements alleged to give rise to the Financial and Operational Performance Representations was a statement to the effect that Joe White did not employ any of the Alleged Industry Practices. In observing that Cargill Australia's case was that because of the Pre-Execution Statements Cargill Australia assumed the Financial and Operational Performance Representations were true, the Viterra Parties submitted because of Cargill's knowledge as an industry participant it was effectively incumbent upon Cargill to use

2376 See par 755 above.

the Due Diligence to confirm for itself whether or not Joe White used any practices similar to those of which it now complains. Finally, it was submitted that by Cargill failing to use the Due Diligence to investigate its suspicions held by reason of its knowledge of the malting industry it was demonstrated that Cargill did not rely upon any of the Financial and Operational Performance Representations.

X.20.5 Analysis

3196 There is no dispute between the parties that the authorities require the question of whether or not a party relied upon representations made in entering into an agreement to be determined as a matter of fact on the evidence and in light of all the relevant surrounding circumstances. In my opinion, the answer to this factual question was clear. In numerous ways, it was demonstrated that Cargill Australia entered into the Acquisition Agreement in reliance on the Financial and Operational Performance Representations.

3197 In addressing this issue in more detail, it is appropriate to start with Conway. Conway was at the relevant times a member of the board and the Cargill leadership team who was "tagged" to Cargill Malt globally.[2377] From the time the shares in Joe White were put up for sale in May 2013, Conway was kept informed about the possible purchase.[2378] He was also 1 of the board members who had been involved in assessing the desirability of acquiring Joe White in November 2012 as pivotal, and downgrading that status to desirable in late June 2013 before any commitment had been made.[2379] Further, from the time the process of assessing the possible purchase was commenced right up until the time of Completion, Conway was told of the progress and the key issues that arose.[2380]

3198 Because of Conway's senior position, he was not fully across procedures and practices relating to how Cargill conducted Cargill Malt. For example, Conway was not aware

---

2377 See par 300 above.

2378 See par 455 above.

2379 See pars 706-707 above.

2380 In relation to circumstances before the Acquisition Agreement was entered into, see pars 628, 707, 828, 842, 857, 963, 966 above and pars 3781, 3783-3790, 3798-3800 below; and from that time up until Completion, see pars 1072, 1157, 1160, 1177, 1199-1202, 1205-1206, 1409-1412 above.

of the expression "theoretical blend analysis" and it never occurred to him that Cargill might have policies affecting the preparation of Certificates of Analysis that were different to other maltsters. However, Conway knew that Cargill had policies for Certificates of Analysis that required them to be true and accurate in relation to all products that left Cargill's plants. Also because of his senior position, in 2013 Conway did not read some of the critical documents in this case. He gave evidence that he did not read the Confidentiality Deed, the Information Memorandum, or the Acquisition Agreement or any draft of it. Although it was not addressed in his evidence, it was also highly unlikely he read the Management Presentation Memorandum. The means by which Conway was kept informed was by reports made to the Cargill, Inc leadership team and the board.[2381] Those reports were prepared by persons who were directly responsible for reading the relevant documentation and for being involved in the Due Diligence.

3199 Like a number of other Cargill executives,[2382] Conway had the authority in 2013 to decide unilaterally not to proceed with the Acquisition if he had been so minded. Conway's unequivocal evidence was that if he had known in substance of the Viterra Practices before 4 August 2013 then Cargill would never have signed the Acquisition Agreement. There is always a need for caution when assessing evidence given in hindsight concerning hypothetical situations.[2383] However, Conway's evidence was not only plausible but compelling. He explained that the Viterra Practices would have had the potential to have a significant impact on the value of the Joe White Business. In addition, Conway would have been concerned about the culture of Joe White as Cargill had sent a full team down to Australia to do a due diligence and such matters had not come out during that process.[2384] Further, after the Viterra Parties had

---

2381 See pars 705, 758-765, 838-857, 958-967, 975 above.

2382 See par 299 above.

2383 See, for example, *ABN Amro Bank NV v Bathurst Regional Council* (2014) 224 FCR 1, 331 [1733] (Jacobson, Gilmour and Gordon JJ); *Bathurst Regional Council v Local Government Financial Services Pty Ltd (No 5)* [2012] FCA 1200, [1975]-[1977] (Jagot J); *Fabcot Pty Ltd v Port Macquarie-Hastings Council* [2011] NSWCA 167, [186]-[187] (Sackville AJA, with whom Beazley and Campbell JJA agreed).

2384 See further pars 3394, 3396-3400 below where this evidence is discussed in more detail in the context of events before Completion.

repeatedly emphasised during the earlier stages of the trial the significance of the evidence of Conway before he was called,[2385] his evidence on this point was not the subject of any challenge.

3200 Although Conway gave no evidence directly concerning the making or otherwise of the Financial and Operational Performance Representations (which was unsurprising in circumstances where he did not read the key documents the subject of the sale process), Conway's evidence alone was sufficient to establish Cargill's reliance upon them. In essence, what was reported to Conway and other members of both the board and the Cargill leadership team was the product of what had been represented in the Pre-Execution Statements and as the result of the Due Diligence. In Conway giving evidence that knowledge of the Viterra Practices alone would have resulted in Cargill not proceeding, effectively Conway's evidence was that knowledge of a subset of the Undisclosed Matters would have been enough to undermine the transaction and Cargill's interest in it.

3201 The matter did not rest there. In the hierarchy of authority concerning Cargill Malt, Van Lierde sat immediately below Conway as executive vice president of Cargill's food business division and the platform leader "tagged" to Conway. As a person who also had authority to singularly decide that the Acquisition should not proceed, Van Lierde gave evidence in the same vein as Conway.[2386] Equally, the next person in the chain of authority who also had authority to stop the transaction, Eden, gave like evidence.[2387] Further, Koenig, a person not directly in this chain of authority but who was a very senior executive involved in the transaction from its inception,[2388] gave evidence to like effect. If the evidence of any 1 of these individuals were accepted, then this would establish reliance for the same reasons as discussed above in relation to Conway. In my view, the evidence of each of them ought to be accepted.[2389]

2385 See issue 33.4 below.
2386 See further pars 3394, 3404-3407 below.
2387 See pars 3408-3411 below.
2388 See pars 343-347, 374 above and pars 3401-3403 below.
2389 See further pars 3394, 3412-3413 below.

3202 Another means by which reliance was demonstrated was the manner in which Cargill approached its assessment of the Joe White Business. As it was directed to do,[2390] Cargill based its initial valuation upon the information contained in the Information Memorandum. Then, having been invited to participate in Phase 2, Cargill made a series of enquiries and analyses in order to determine for itself to the extent that it was able whether it could rely upon the Financial and Operational Information supplied to it. Cargill had existing structures and processes in order for this assessment to take place. The contemporaneous documentation demonstrated that Cargill did in fact rely upon the information supplied by the Viterra Parties in making its assessment.[2391]

3203 By way of illustration only, based on the information provided and Cargill's assessment of the benefits to be gained from Joe White becoming part of Cargill Malt, synergies were valued at $107 million.[2392] It was implausible that Cargill would have made an assessment remotely reflecting this if the view had not been formed (after duly conducting the Due Diligence and not unearthing contrary information) that Cargill could rely on the Financial and Operational Information it had been provided. It was even more implausible that synergies would have been valued at such a level if Cargill had been made aware of *any* of the Undisclosed Matters and in particular the Viterra Practices (if any value at all could be attributed to synergies in those circumstances).

3204 In short, Cargill ultimately valued Joe White at $427 million as its base case as it had formed the view that the Joe White Business was sound and was capable of reliably producing financial and operational results in accordance with what had been represented, including in relation to quality control, compliance with customer contracts, the ability to procure the required barley, the sufficiency of assets and the absence of inappropriate practices on a routine or significant basis. In so doing, Cargill appreciated in early August 2013, at the completion of the Due Diligence, that it was

---

2390 See pars 464, 466 above.

2391 See, for example, par 1010 above in relation to the latest deal model before Cargill Australia entered into the Acquisition Agreement. See also issue 80 below and annexure B to these reasons.

2392 See pars 3981, 4179 below.

paying a purchase price at the upper end of its assessment of Joe White's value, but believed it could deliver the returns as forecast in the deal model.[2393] This view would not have been formed if Cargill had not made an assessment consistent with the Financial and Operational Performance Representations.

3205 Further, on a more general level, the internal reports prepared by Cargill for the Cargill leadership team and the board spoke of the Joe White Business in positive terms that were entirely consistent with reliance upon the Financial and Operational Performance Representations.[2394] No doubt, these positive terms partly reflected the enthusiasm that Eden and others had in relation to the prospect of ownership of Joe White and the potential for benefits to Cargill Malt more broadly. However, they also reflected the manner in which the Joe White Business was presented to Cargill, and did so on a considered basis at various times based on the information that was available at the relevant time. There can be little doubt, and I so find, that if Cargill had been informed of the existence of the Undisclosed Matters or even just the Viterra Practices (being a component of the Undisclosed Matters), then the internal reports to the senior executives would have been in very different terms.[2395] It follows that the submission that Cargill was so keen to acquire Joe White that it would have entered into the Acquisition Agreement regardless of whether or not the Financial and Operational Performance Representations were made must be rejected.[2396]

3206 Neither the Sale Process Disclaimers nor the Acquisition Agreement Liability Terms alter the fact that Cargill relied upon the Financial and Operational Performance Representations. This was notwithstanding the fact that I accept the submission of the Viterra Parties that the Acquisition Agreement Liability Terms, together with the negotiations leading up to their inclusion in the Acquisition Agreement,[2397] provided probative evidence of a state of mind of Cargill Australia that was inconsistent with

---

2393 See pars 1006 above.

2394 See, for example, pars 705, 758-765, 838-857, 958-967, 976 above.

2395 Assuming the transaction would not have been abandoned upon learning of the true position, before any detailed report was prepared: see issue 33 below.

2396 See further par 3411 below.

2397 See, for example, pars 979-980, 989, 992 above.

reliance upon the Financial and Operational Performance Representations *to the extent they did not fall within or overlap with the Warranty Representations*. Plainly, some aspects of what was agreed to was inconsistent with such reliance.[2398] Despite this, both the contemporaneous evidence and the evidence given at trial demonstrated overwhelmingly that Cargill did in fact rely upon the Financial and Operational Performance Representations. Taking into account all the evidence that was before the court, there was a myriad of reasons why Cargill would not have proceeded with the transaction if, as a bare minimum, it had known of the Viterra Practices.

3207 The existence of any inconsistency between clause 8.3(c) of the Confidentiality Deed and reliance upon the Financial and Operational Performance Representations was less apparent. If there was an inconsistency, the reasons in the preceding paragraph were equally applicable and the finding of reliance was not precluded by the existence of this clause. However, in my view there was no inconsistency. For the reasons discussed below,[2399] it has been found that Cargill did not breach clause 8.3(c).

3208 Further, the fact that Cargill proactively and independently conducted its own investigations and analyses during the Due Diligence did not detract from the reliance placed on the information provided by the Viterra Parties. Of course, if Cargill had discovered matters that were inconsistent with the Financial and Operational Performance Representations, then such a scenario would have severed any reliance up to that time. However, despite some initial doubts about what had been stated in the Information Memorandum and the Management Presentation,[2400] ultimately Cargill relevantly accepted and relied upon what had been conveyed.

3209 Naturally, as the Viterra Parties have failed to establish that the Alleged Industry Practices existed, their submissions premised on Cargill's knowledge of them must necessarily fail. Further, if a finding be necessary, the fact that no express statement was made to the effect that Joe White did not employ any of the Alleged Industry

---

2398 See issue 98 below.
2399 See issues 87, 105 below.
2400 See, for example, pars 755, 820-821 above.

Practices did not give rise to a circumstance where Cargill ought to have assumed or suspected that Joe White engaged in practices of the nature or similar to the Viterra Practices, or for that matter the Operational Practices.[2401]

3210 In light of the findings made above, it is not strictly necessary to respond to the Cargill Parties' submission concerning whether the Financial and Operational Performance Representations were made with the intention of inducing Cargill to enter into the Acquisition Agreement. This issue is discussed in more detail in relation to Viterra below.[2402] It suffices to say that the evidence showed the conduct of distributing the information which gave rise to the Financial and Operational Performance Representations was calculated to induce Cargill to purchase the shares in Joe White by having Cargill Australia enter into the Acquisition Agreement. Nothing contained in the Sale Process Disclaimers or the Acquisition Agreement Liability Terms altered the fact that Glencore (and Viterra) intended to and did engage in the conduct of promoting the sale of Joe White in a positive manner, calculated to create massive and maximum tension between prospective purchasers, in order to induce a prospective purchaser such as Cargill to purchase Joe White and do so at a price in the order of US $400 million.[2403]

3211 Finally, reliance by Cargill on the Financial and Operational Performance Representations was reasonable in the circumstances. Given the strictures imposed by Glencore in relation to confidentiality and access to information, Cargill had little alternative other than to test the information provided to it by the Viterra Parties and, subject to appropriate investigations and analyses, rely upon the information presented in the event that those investigations and analyses did not disclose that what Cargill was being told was anything other than materially correct. Further, this was precisely what Glencore anticipated prospective purchasers, including Cargill, would do.[2404] Again, the Sale Process Disclaimers and the Acquisition Agreement

---

2401 Compare par 495 above.

2402 See issue 23 below.

2403 See pars 110, 382, 402, 474, 493, 697-700, 709, 766, 816 and fn 364 above.

2404 See, for example, pars 381-382, 403-406, 427, 436, 474, 493-497, 619, 659, 766, 797-810, 943, 1019, 1454 above.

Liability Terms did not alter the fact that the Viterra Parties were the primary source of information in relation to matters relevant to whether or not to purchase Joe White and that Cargill had limited ability to obtain information about Joe White itself other than through the process as provided on the strict conditions imposed by Glencore (and Viterra).

X.21 Prior to entering into the Acquisition Agreement, did Cargill Australia and Cargill, Inc have the knowledge or state of mind pleaded in paragraph 31A of the Defence?

3212 By paragraph 31A, the Viterra Parties alleged Cargill had a certain state of mind on about 4 August 2013 and before entry into the Acquisition Agreement. This alleged state of mind related to Certificates of Analysis, barley varieties and grades of barley, gibberellic acid and the Malt Cost Reduction Transformation Project.

X.21.1 Certificates of Analysis

3213 The Viterra Parties alleged Cargill considered that: (1) analysis undertaken on malt was only correct within "the standard deviation" of the analytical equipment; (2) if Joe White did not follow the same rules in relation to Certificates of Analysis as Cargill, additional storage costs would be expected if Cargill acquired Joe White; and (3) it was necessary to ensure that Joe White's Certificates of Analysis were "reflecting reality".

3214 With respect to the first of these matters, there was no dispute that results were only as good as the equipment used to test the malt, and that there were numerous sources of analytical variance in testing malt. The Viterra Parties also correctly identified that, in August 2012, Eden was positing an alternative to seeking derogations, namely that a derogation only be sought when an actual analysis was outside the standard deviation of the analytical equipment,[2405] and that Eden was aware of maltsters having plus or minus 2 standard deviation policies or something like that.[2406] In short, Cargill

2405 See pars 329-330 above.
2406 See fn 683 above.

understood that whenever a parameter was tested, the result was always dependent on the level of accuracy that the equipment could achieve and that there must have always been a range (however small or big) within which a result (or measured value) might deviate from the "true value".[2407]

3215 In relation to the other 2 matters raised, they reflected De Samblanx's notes of questions raised in early July 2013.[2408] However, to the extent that these notes reflected doubts, they were allayed.[2409]

3216 As part of their submissions on this point, the Viterra Parties contended that it should be found Cargill considered that it was necessary to ensure the Joe White's Certificates of Analysis were reflecting reality because of the various matters raised. Although concerns were raised about the accuracy of Certificates of Analysis issued by Joe White in early July 2013, there was no basis for a finding that any real concerns in that regard continued up to the time of the execution of the Acquisition Agreement. Further, an appreciation about inherent uncertainty in measurements did not equate to, or even touch upon, some form of notice that the measured results or values were not being faithfully recorded in Certificates of Analysis.

X.21.2 Barley varieties and grades of barley

3217 The Viterra Parties alleged Cargill knew or suspected that: (1) Joe White used Hindmarsh barley; (2) Joe White purchased off-grade barley; (3) Joe White employed blending in its malting procedures; and (4) Joe White utilised or could utilise up to 30 percent of non-malt-1 varieties.

3218 In relation to the first 2 of these allegations, there was no doubt that Cargill was informed that Joe White used Hindmarsh barley[2410] and off-grade barley.[2411] In relation to Joe White blending during its malting procedures, Cargill was informed on

---

2407 See, for example, pars 2209-2212 above. See also par 331 and fnns 554, 683, 708 above.
2408 See pars 772, 776 above. See also par 858 above.
2409 See, for example, pars 889, 1059-1061 above.
2410 See par 954 above, but also see pars 2715-2717 above.
2411 See pars 926, 929, 2064, 2578 above, but also see par 930 above.

numerous occasions that Joe White employed blending.[2412] That fact in and of itself was unremarkable. Finally, there was no issue that Cargill was told of the possible utilisation of up to 30 percent of off-grade barley.[2413]

X.21.3 Gibberellic Acid

3219 The Viterra Parties alleged Cargill: (1) considered there were benefits from using gibberellic acid in the production of malt; (2) suspected that some of its competitors might use gibberellic acid to improve their malt quality; (3) knew or suspected that the use of gibberellic acid was not normally allowed by most international brewers; (4) knew or suspected that customers might test malt supplied to them, but considered that testing for gibberellic acid in malt was supposedly difficult to do; (5) knew or suspected that Joe White was generally on 5 days steeping/germination time, whereas Cargill was generally on 6 to 7 days steeping/germination time; (6) knew or suspected that many Joe White plants were on 4 days steeping/germination time, which might mean a process non-conformance that could be addressed either by waiver or reducing plant capacity; (7) knew or suspected that Joe White used gibberellic acid in the production of malt for at least some of its customers; and (8) considered that there was some risk that Joe White's use of gibberellic acid would mean that the guiding principles of the Cargill Code might be compromised if Cargill Australia acquired Joe White.

3220 The matters referred to in (1), (2), (3), (4),[2414] (5) and (7) above were either not contested at all or not seriously put in issue.

3221 In relation to the sixth matter, there was no issue that Cargill knew that some of Joe White's plants only took 4 days for steeping and germination. As a result of this, Cargill was initially concerned about possible non-compliance with respect to some of Joe White's customers' requirements that, at the time this concern existed, might

---

2412 See, for example, pars 730, 884, 926 above.

2413 See par 926 above.

2414 There was evidence that gibberellic acid could be detected by some: see par 2799 above.

have needed to be addressed by waiver or reducing plant capacity.[2415]

3222 In relation to the eighth matter, again at a point in time during the Due Diligence, Cargill did consider there was some risk that the Cargill Code might be compromised because of the use of gibberellic acid.[2416]

X.21.4 The Malt Cost Reduction Transformation Project

3223 The Viterra Parties alleged that Cargill knew or suspected that: (1) a transformation project was in place at Joe White to drive efficiency gains; and (2) cost reduction was a part of the Joe White Business model.

3224 There was no dispute that these matters were stated as part of the Management Presentation,[2417] but the level of detail provided was very limited.

3225 A discussion of this issue would not be complete without referring to Mattiske's evidence that, by the time Glencore acquired Viterra, all transformation projects were completed or dormant.[2418] Although this evidence has been rejected, it is of some significance that Mattiske had no appreciation of the existence of the Malt Cost Reduction Transformation project. Further, his lack of knowledge, despite being directly involved in settling the Information Memorandum and the Management Presentation Memorandum, strongly supported a finding that Cargill was not provided with any meaningful information about the details of any transformation project so as to put in doubt any of the Financial and Operational Performance Representations. I so find.

X.21.5 Conclusion

3226 The Viterra Parties have established that Cargill had the knowledge or state of mind of a substantial number of the matters pleaded in paragraph 31A of the Defence as set out above. As this issue is referred to with respect to other matters below, it should

---

2415 See par 819 above.
2416 Ibid.
2417 See par 731 above.
2418 See par 147 above.

be pointed out that knowledge or suspicion of these matters neither individually nor collectively gave Cargill notice of any of the Undisclosed Matters.

X.22 Did Viterra know that the Financial and Operational Performance Representations or any of them were or was false and/or did Viterra not genuinely believe the representations were true and/or was Viterra reckless as to whether they were true or false?

X.22.1 Legal Principles

3227 The elements of deceit that a plaintiff must prove are well established.[2419]

3228 *First*, the defendant made a false representation.[2420] Ordinarily, this will be determined by how the representation would have been understood by a reasonable person.[2421] A false representation may be made by words or conduct, or by active concealment or non-disclosure of a fact which renders a fact disclosed false or misleading.[2422] However, merely proving a representation was false is not enough. The differing meanings or senses in which words or conduct were understood by both the representor and the representee must be borne in mind when considering the elements of deceit.[2423]

3229 *Secondly*, the defendant made the representation with the knowledge that the representation was false, or was "recklessly, careless" as to whether the representation was false or not.[2424] Recklessness is a state of mind established by showing an

2422 *Wood v Balfour* [2011] NSWCA 382, [7] (Giles JA, with whom Meagher JA agreed), [49]-[50] (MacFarlan JA); *Krakowski v Eurolynx Properties Ltd* (1995) 183 CLR 563, 575.2 (Brennan, Deane, Gaudron and McHugh JJ), quoting *Curwen v Yan Yean Land Co Ltd* (1891) 17 VLR 745, 751.

2423 *Krakowski v Eurolynx Properties Ltd* (1995) 183 CLR 563, 576.7.

2424 *Magill v Magill* (2006) 226 CLR 551, 567 [37], 587-588 [114]; *Banditt v The Queen* (2005) 224 CLR 262, 265 [2] (Gummow, Hayne and Heydon JJ); *Derry v Peek* (1889) 14 App Cas 337, 374.3 (Lord Herschell). Note that Gummow, Kirby and Crennan JJ expressed the second element as "recklessness *or* carelessness" (emphasis added), while Lord Herschell used the words "recklessly, careless whether it be true or

"indifference to [the] truth or falsity" of the representation.[2425] It has alternatively been expressed as the absence of genuine or honest belief in the truth of the statement as it was intended to be understood.[2426] Recklessness requires the defendant to have been aware of a risk that the statement was untrue or false and to have consciously disregarded that risk.[2427] The second element may also be established where a defendant wilfully shuts her or his eyes to what would result from further enquiry as to the truth or falsity of the statement.[2428]

3230 Motive is irrelevant if fraud is proved;[2429] it does not matter that there was no intention to cheat or injure the person to whom the representation was made; and prior planning is not required.[2430]

3231 Mere carelessness, in the sense of failing to take adequate care, is not sufficient.[2431] The absence of reasonable grounds for believing the statement is true is also not enough to satisfy this element.[2432] Although this may serve as evidence of recklessness or a lack of honest belief, this evidence can be displaced by showing the representor's genuine belief in the truth of the representation.[2433] However, the grounds of belief

---

false". However, there is no difference in substance. It is clear that Gummow, Kirby and Crennan JJ used "carelessness" in the sense of "not caring whether the representation was false or not", which aligns with Lord Herschell's formulation, rather than carelessness in the sense of merely not taking reasonable care, which is insufficient. As Beech J stated in *Lois Nominees Pty Ltd v Hill (No 2)* [2016] WASC 104: "Not caring is not to be equated with failing to take appropriate care; it is important not to equate negligence with fraud": at [28]. See further cases in fn 2431 below.

may be relevant to assessing the credibility of later assertions of belief; if the belief is destitute of all reasonable grounds it may be difficult to persuade the court it was genuinely held.[2434]

3232 In respect of a corporate defendant, the plaintiff must identify a natural person with the requisite state of mind and be able to attribute the state of mind of that person to the company.[2435] A division of function among company officers responsible for different aspects of a transaction does not relieve the company from responsibility by reference to the knowledge possessed by each of them.[2436] This may be established by relying on the principles of actual and apparent authority set out above.[2437] Accordingly, it is not necessary for a plaintiff to establish that the person with the requisite state of mind made the representation. A corporation may be liable where a representation is made with authority by a person who did not know it was fraudulent and another person whose knowledge may be attributed to the corporation knew of the making of the representation and knew it was false.[2438]

3233 *Thirdly*, the defendant made the representation with the intention that it be relied upon by the plaintiff, or a class of persons to which the plaintiff belongs.[2439] However, it need not be made directly to the plaintiff.[2440]

3234 *Fourthly*, the plaintiff acted in reliance on the false representation.[2441] The representation need not be the sole cause of the plaintiff's actions;[2442] it is sufficient

that the representation played some part, even if only a minor part.[2443] This is the case even if another reason for the plaintiff's actions was the plaintiff's own mistake or carelessness.[2444] Further, if the representation is made to induce the other party to enter into a contract, and the other party does enter into the contract, an inference arises (which may be rebutted) that the other party was induced to do so by the representation.[2445]

3235 *Fifthly*, the plaintiff suffered damage, which was caused by reliance on the false representation.[2446] Generally speaking, a causal connection is established if the plaintiff would not have sustained the loss if not for the defendant's wrongful conduct.[2447] However, satisfaction of the "but for" test is not always necessary, or sufficient, to show causation. The "but for" test results must be tempered by value judgments and policy considerations,[2448] and ultimately determined with a common sense approach.[2449]

3236 It goes without saying that, as a claim based on deceit involves allegations of fraud, a

finding that the claim has been made out is not lightly made.[2450]

X.22.2 The Cargill Parties' submissions

3237 The Cargill Parties submitted the Financial and Operational Performance Representations were necessarily all false by reason of the existence of the Viterra Practices. By reference to the Pre-Execution Statements, Cargill identified why it was that each individual statement, and each Financial and Operational Performance Representation arising from such statements, was false. Further, they contended that each of the Financial Operational Performance Representations was based on the 44 pleaded statements all "made by Hughes" (as well as others in conjunction with Hughes with respect to some of them).[2451]

3238 In relation to knowledge of the falsity of those statements, reliance was placed upon the knowledge of Hughes, Argent, Youil and Fitzgerald. Specifically addressing Hughes, they referred to his position as an employee of Viterra Ltd and his position as executive manager of Viterra Malt,[2452] as well as his position up to December 2012 as a director of each of the Viterra entities together with Joe White.[2453] They submitted Hughes had no relationship with Joe White other than that which included his role as an executive for Viterra Malt.

3239 The Cargill Parties contended that the evidence established Hughes knew of the *existence* of the Viterra Practices. They referred to a number of matters in order to demonstrate this, including his knowledge and involvement in the Malt Cost Reduction Transformation Project, the Malt Blend Parameters Procedure, pencilling, the introduction of the Viterra Code, the genesis and ongoing implementation of the Viterra Certificate of Analysis Procedure, as well as what he stated in relation to the

---

2450 *Krakowski v Eurolynx Properties Ltd* (1995) 183 CLR 563, 579.4. See also fn 2456 below.

2451 Consisting of 24 Information Memorandum Statements, 12 Management Presentation Statements, 4 Operations Call Statements and 4 Commercial Call Statements. Obviously not all of them were actually made by Hughes himself. However, the relevant point was that he either made them or knew they were being made and took no exception to any of them.

2452 The Cargill Parties' submissions referred to Hughes as being a general manager of Viterra Malt, but the evidence was that he was executive manager. Nothing turned on this.

2453 See par 47 above.

Viterra Practices after the Cargill 22 October Letter.[2454]

3240 Based on this knowledge, it was submitted that Hughes could not have honestly believed the truth of the statements made to the effect that Joe White met customers' exact specifications and specific customer requirements as stated in the Information Memorandum and the Management Presentation Memorandum.[2455] Further, they contended that Hughes' statements that Joe White had long-term relationships with customers and a strong record of contract renewal, while technically correct, failed to disclose that those relationships were predicated on systemic non-compliance with customer contracts and the concealment of that fact in accordance with the Viterra Practices. They submitted it followed that Hughes suppressing this fact rendered false these technically correct statements. Furthermore, they submitted Hughes was not being honest when he said that Joe White's procurement function was focused on meeting customers' contractual requirements as to barley varieties, nor when it was stated that Joe White had sufficient production facilities and production capacity together with low future capital expenses in the short to medium term.

3241 Moreover, the Cargill Parties submitted Hughes' statements during the Operations and Commercial Calls were particularly egregious because they were answers to specific questions that, if answered truthfully, should have included disclosure of the Viterra Practices.

X.22.3 The Viterra Parties' submissions

3242 The Viterra Parties contended that if, contrary to their submissions, the Financial and Operational Performance Representations were conveyed and any of them were false, Viterra did not know of this because: (1) knowledge that could properly be attributed to Viterra did not amount to knowledge of any falsity; and (2) knowledge of those persons who had knowledge which could be said to amount to knowledge of false representations being made could not be attributed to Viterra.

2454 This included the evidence referred to in pars 73, 90, 124-126, 135-136, 145-147, 156-167, 199-204, 206, 229-249, 271, 287-292, 1279-1284 above. See also par 2676 above.

2455 See pars 438, 491, 504-505, 514, 522, 716, 718, 727 above.

3243 In addition to their submissions concerning attribution, which have been addressed in issue 11 above, the Viterra Parties submitted that a finding that a party to civil litigation is guilty of fraudulent or criminal conduct on the balance of probabilities should not be lightly made.[2456] In applying the hybrid approach,[2457] they submitted that it was necessary for the court to find that a single individual had the requisite knowledge and intent which was able to be attributed to Viterra. Thus, it was submitted it was necessary for Cargill Australia to establish that a natural person knew the Financial and Operational Performance Representations had been made, and that that person knew, or was reckless as to whether, those representations were false.

3244 The Viterra Parties submitted that based on the agreed list of issues, only the knowledge of Fitzgerald, Hughes, Argent and Youil needed to be considered. Further, by reference to the pleadings, it was submitted there was no issue which arose in relation to Argent and Youil.

3245 Regarding Fitzgerald's knowledge, it was accepted that it could be attributed to Viterra but it was submitted there was no evidence to support a finding that he knew of the Undisclosed Matters. As for Hughes, they submitted both that it had not been established Hughes knew of the Undisclosed Matters and in any event that his knowledge should not be attributed to Viterra.

3246 On the question of Hughes' knowledge, the Viterra Parties submitted the evidence did not support a finding that Hughes had knowledge of the alleged extent and effects of the Viterra Practices, namely: (1) the Operational Practices were engaged in routinely or without informing customers, or both; (2) the Financial and Operational Information was substantially underpinned by the Viterra Practices and the Viterra Policies; and (3) without the implementation of the Viterra Practices, Joe White could not have produced and sold malt - (a) in the volumes and to the specifications required

---

2456 See par 2285 above. See also *Magill v Magill* (2006) 226 CLR 551, 587-588 [114] (Gummow, Kirby and Crennan JJ); *Neat Holdings Pty Ltd v Karajan Holdings Pty Ltd* (1992) 110 ALR 449, 450 (Mason CJ, Brennan, Deane and Gaudron JJ).

2457 See par 2642 above.

by customers, or (b) in the volumes and for the return as reflected in the Financial and Operational Information.

3247 Further, they submitted that, by reason of the Refusal of Certain Terms, Cargill knew Viterra's position was that the knowledge of the Joe White executives was not attributable to Viterra for the purposes of the sale of Joe White. It was submitted it followed from this that Cargill did not expect Hughes' knowledge would be attributed to Viterra. They contended that if Cargill wanted Hughes' knowledge to be attributed to Viterra, it should and would have made that request for the purposes of clause 31.15 of the Acquisition Agreement. Given the absence of such a request, it was submitted that to permit Hughes' knowledge to be attributable to Viterra would undermine the bargain that the parties had struck. Further, it was submitted that this context was relevant to, and should significantly inform, the court's consideration of whether Hughes' knowledge could be attributed to Viterra for the purposes of Cargill Australia's deceit claims.

3248 Furthermore, they submitted that by the time the sale of Joe White commenced Hughes' knowledge was no longer attributable to Viterra by reason of his position as a director as he no longer held the position. Moreover, they submitted that there was no evidence that during his time as a director of the Viterra entities he shared his knowledge with any person whose knowledge was attributable to any of the Viterra Parties during the relevant later period. Finally, in addition to the matters referred to concerning Hughes' role in the sale process,[2458] they contended that although Hughes was an employee of Viterra Ltd he had "no other function within the Viterra Group" other than his duties specifically limited to Joe White.[2459]

3249 As a further alternative to the submission that Hughes' knowledge should not be attributed to Viterra,[2460] it was submitted that even if Joe White engaged in the Viterra Practices, Cargill had not established Hughes' knowledge as to the extent of the Operational Practices, nor whether Joe White's customers were informed of them. In

2458 See par 2644 above.
2459 See pars 2640, 2658 above.
2460 See par 2645 above.

relation to any findings on these issues, it was submitted that as a result of the Hughes/Cargill Agreement and the Cargill Covenant, even if the Viterra Parties' strikeout application was unsuccessful,[2461] a series of inferences should be drawn as part of a finding that Cargill Australia had not established Hughes had the requisite knowledge. In substance, it was contended that irrespective of whether or not Hughes knew how Joe White was actually operating, this did not mean that Hughes had knowledge of the extent and the effects of the Viterra Practices. Further, the Viterra Parties submitted that because of the Hughes/Cargill Agreement, Cargill Australia interfered with Hughes' capacity to be a truthful witness of fact and the court should find Hughes would not have given evidence to support Cargill Australia's assertion that he had knowledge of the Undisclosed Matters.

3250 In this regard, the Viterra Parties referred to: (1) Hughes verifying each of the Information Memorandum Statements being true and correct;[2462] (2) Hughes engaging in the verification process in relation to the Warranties;[2463] (3) the position Hughes adopted in his initial discussions with Mattiske after the Cargill 22 October Letter had been received, in particular Hughes stating that he was convinced Joe White could deliver on the statements made in the Due Diligence, that there were new barley varieties coming which meant the use of gibberellic acid would not be needed as much in the future, that the barley varieties issue could be solved and that he did not see any risk or issues with that in the business going forward;[2464] (4) Hughes stating on 23 October 2013 that using incorrect barley varieties was a short-term issue and that after March 2014 the position would be better;[2465] (5) Hughes stating on around 23 October 2013 that the barley varieties issue was a one-off, that it should be resolved in the near future and that customers were happy;[2466] (6) Hughes stating on around 29 October 2013 that the Reporting Practice was standard industry practice and it was fine, that Cargill used different processes which might have meant that Joe White's current

2461 See pars 1862-1876 above.
2462 See pars 446-452 above.
2463 See issue 125.6 below.
2464 See pars 1250-1259 above.
2465 See par 1281 above.
2466 See par 1390 above.

processes would not be required and that Joe White engaged in far more extensive testing by comparison to Cargill, whose process involved a far narrower form of testing which might have resolved the issue;[2467] and (7) Hughes approving the final versions of the Reply Letters.[2468]

X.22.4 Analysis

3251 It has been found that: (1) Hughes was an agent of Viterra when acting by assisting in the sale process of Joe White;[2469] (2) the Financial and Operational Performance Representations were made not only by Glencore but also by Viterra;[2470] and (3) the Financial and Operational Performance Representations were false.[2471]

3252 Thus, the question for consideration is whether the Financial and Operational Performance Representations made by Viterra (including by means other than Hughes) were fraudulent because of the knowledge of Hughes as agent for Viterra such that Viterra may be liable for a claim of deceit.

3253 As has been explained above,[2472] in order to succeed in a claim of deceit against a corporation it is not necessary to establish that the person who engaged in the imputed conduct with authority was the same person who knew that the representations made or other conduct engaged in alleged to comprise the false representations. In other words, the person with authority to engage in the imputed conduct may have been entirely ignorant of any falsehood or wrongdoing, but the corporation may still be liable for deceit if another person knew false representations were being made on behalf of the corporation, as that other person's knowledge may be attributed to the corporation.[2473]

2467 See par 1393 above.
2468 See pars 1401-1404, 1513 above.
2469 See par 2660 above. For completeness, it has also been found that Hughes was acting on behalf of Viterra for the purposes of s 139B(2) of the *Competition and Consumer Act*.
2470 See issue 15 above, and in particular pars 457, 475-483, 711, 2174, 2176, 2184, 2922, 3001, 3031 above.
2471 See issue 16 above.
2472 See par 3232 above.
2473 Naturally, all elements of the cause of action of deceit must still be considered.

3254 In this proceeding, the Financial and Operational Performance Representations were predominantly made by the provision of the Information Memorandum and the Management Presentation Memorandum to Cargill, coupled with some oral representations made by Hughes and, to a much lesser extent, Argent.[2474] To the extent that they were made solely by the provision of documents, the Financial and Operational Performance Representations were not made by Hughes himself. Equally, there were some statements made by Argent that were not also expressly made by Hughes.[2475] However, by reason of his direct involvement in the drafting and finalising of both the Information Memorandum and the Management Presentation Memorandum, as well as his active participation in the Management Presentation, the Operations Call and the Commercial Call, to the extent that they were not made by Hughes, he was fully aware of all of the statements made concerning Joe White which gave rise to the Financial and Operational Performance Representations.

3255 Accordingly, the only remaining matters for determination are the extent of Hughes' knowledge of the falsehood of the Financial and Operational Performance Representations and whether that knowledge ought to be attributed to Viterra.

3256 As discussed in issue 11 above, Hughes knew of the existence of the Operational Practices.[2476] The further question is whether he was aware that they were being implemented routinely (without customers being informed) such that it ought to be concluded that he knew of the Viterra Practices. In addressing this issue, initially each of the Operational Practices will be considered individually.

3257 There were numerous matters which indicated that Hughes was fully aware of the existence and implementation of the Reporting Practice. In broad summary, over many years he advocated and required its use, including by overseeing the creation,

---

2474 See issue 15.2 above.
2475 See pars 728-733 above.
2476 See par 2676 above.

development and institutionalisation of the Reporting Practice for all Certificates of Analysis issued to Joe White's customers.[2477]

3258 The position in relation to Hughes' knowledge of the Varieties Practice was straightforward. On 23 October 2013, Hughes directly acknowledged the Varieties Practice in stating that Joe White used barley varieties inconsistent with customer contracts.[2478] He referred back to events in 2010 as part of addressing this issue.[2479] He also readily attested that Joe White did not always have the barley varieties available as needed and that substantial sums could be involved in addressing this problem between October 2013 and the end of March 2014.[2480] Around the same time, Hughes approved the contents of the Key Recommendations Memorandum and the Customer Review Spreadsheet which demonstrated his full awareness of this issue. There was nothing to suggest the Varieties Practice was a recent occurrence in October 2013 or that Hughes had only just become aware of it. On the contrary, what Hughes stated, including that the issue of not having the correct barley varieties was not pointed out to Glencore in 2012, indicated that Hughes was aware that the Varieties Practice had been in place for some significant period of time.[2481]

3259 As for the Gibberellic Acid Practice, the position was equally clear. It is unnecessary to go further than what Hughes stated on 23 October 2013, namely that the use of prohibited gibberellic acid was difficult to detect and that Joe White engaged in such conduct routinely at all of its plants when it should not have.[2482] This clear and unequivocal evidence was consistent with a large body of other evidence that indicated that Hughes was aware of the Gibberellic Acid Practice.[2483]

2477 See, for example, pars 73, 90, 167, 174, 201, 206, 226, 229, 245, 248, 270, 271, 287, 1280 (and in particular the reference to Joe White using the Reporting Practice at all its plants for all its customers) above.

2478 See par 1281 above.

2479 Ibid, and see in particular fn 782 above.

2480 Ibid.

2481 See issue 10.7 above in relation to evidence indicating non-approved barley varieties being used from 2010 to 2013; and issues 10.8 and 10.9 above as to the data available concerning the Varieties Practice.

2482 See par 1282 above.

2483 See pars 1129-1130, 1215, 1218, 1224-1225, 1251-1255, 1265, 2556 above.

3260 In addition to these matters, some observations may be made about the evidence of Hughes' knowledge which was relevant to his collective awareness of the Viterra Practices. As the Viterra Parties themselves submitted,[2484] if there was information in the Information Memorandum (and I interpolate the Management Presentation Memorandum) that was misleading, then Hughes must have known of that fact by virtue of his position. Further, it was material that on numerous occasions when the issue arose concerning Joe White engaging in the Operational Practices, Hughes never responded by suggesting that he was not aware of them or that he did not know the manner in which they were being implemented. On the first occasion the issue was raised by Mattiske,[2485] Hughes spoke to each of the matters without needing to defer to any of the other Joe White executives in order to explain what was occurring. Similarly, when specifically addressing each of the Operational Practices on the following day,[2486] Hughes did not profess to have a lack of knowledge of any of the matters raised. Yet again, in mid-October 2013 when the Joe White executives involved in operations decided it was time to disclose the Operational Practices to Cargill, Hughes made no suggestion at the 15 October Meeting that anything that was disclosed was news to him. In short, there was no hint in the evidence that Hughes, as the hands-on executive, was unaware of any material matter concerning the Viterra Practices. Quite the contrary, on 29 October 2013 Hughes considered himself able to unreservedly convey that Joe White would be able to supply malt to its customers only if it was not required to supply exactly as specified.[2487]

3261 That is not to say that Hughes would have known of every occasion upon which the Operational Practices were implemented or every nuance of the manner in which they were applied.[2488] Undoubtedly, given the numerous occasions over an extended number of years in which they were implemented as part of Joe White's operations without his direct involvement on each occasion, he would not have been across every instance upon which a Sign-Out Report was pencilled, a Certificate of Analysis

---

2484 See par 2645 above.
2485 See pars 1250-1258 above.
2486 See pars 1279-1288 above.
2487 See par 1462 above.
2488 See par 1314 above.

reported results inaccurately, a barley variety was used contrary to customer specifications and (on the occasions when it occurred) was falsely reported, or gibberellic acid was used when it was prohibited. However, this lack of knowledge of every time that the Operational Practices were implemented did not equate to a lack of knowledge of the Viterra Practices. The evidence demonstrated that Hughes was fully aware of the general approach of implementing the Viterra Practices in order to allow Joe White to give the impression on an ongoing basis of a much higher level of compliance with customer requirements and specifications than that which was actually occurring.

3262 In relation to the tenth of the Financial and Operational Performance Representations, to the effect that the Undisclosed Matters did not exist, for substantially the same reasons that it has been found that that representation was made,[2489] Hughes must have been aware that it was made and that it was false. Plainly, Hughes was aware of the Viterra Policies.[2490] As discussed immediately above, he was also aware of the Viterra Practices and that they had been implemented as part of the Joe White Business in 2013 and the years preceding then. Further, it was axiomatic that the routine implementation of the Operational Practices without informing customers would have resulted in Joe White's financial and operational performance being substantially underpinned by such conduct. Hughes must have fully appreciated that, if Joe White had disclosed to its customers throughout the period from 2010 to October 2013 that Joe White was routinely incapable of producing malt that complied with customers' requirements and specifications,[2491] this would have caused considerable disruption to the Joe White Business and adversely affected its financial and operational performance. Exactly what level of disruption might have been caused is not necessary to determine. It is sufficient to conclude that it would have been substantial, and that Hughes must have appreciated this at the time. There were numerous pieces of evidence that indicated that this was so.[2492] His attempt to justify his position after

2489 See par 2916 above.
2490 See pars 90, 229, 287 above.
2491 See, for example, par 1226 above.
2492 See pars 73 (about the necessity to engage in pencilling and that Hughes stated in around 2000 that it

the Cargill 22 October Letter (to the extent that Mattiske's evidence suggested that he did),[2493] did not detract from the reality of the situation in 2013, and Hughes' appreciation of that reality.[2494]

3263 Further, the submissions made by Hughes to the effect that he could not have known whether the Viterra Policies had been disclosed by the Viterra Parties as part of the Due Diligence, such that he would not have appreciated that Cargill would have understood the Financial and Operational Performance Representations without some understanding of the Viterra Policies, must be rejected. While it was correct that Hughes was not given responsibility for what was to be included in the Data Room and was not told by the Viterra Parties as to precisely what had been included, it did not follow from this that he would not have appreciated that the Viterra Policies had not been disclosed. In short, no reference was made at all to the Viterra Policies in the Information Memorandum or the Management Presentation Memorandum, or during the Management Presentation, the Operations Call or the Commercial Call. Further, the nature of the dialogue during the Management Presentation, the Operations Call and the Commercial Call must have indicated to Hughes that Cargill was not aware of the Viterra Policies. Without being exhaustive, questions about how Joe White reprocessed product not within specification and internal tolerances around specifications,[2495] without any reference to standard deviations or the Viterra Policies, must have demonstrated to Hughes that Cargill was uninformed about them. In addition, he was fully aware that the Viterra Policies had been filed in a manner to conceal their true status.[2496]

3264 Furthermore, Hughes' subsequent conduct of considering it necessary to draw the Operational Practices to Cargill's attention in mid-October 2013 spoke volumes about

---

was common practice to despatch out-of-specification malt), 1131, 1281 (in particular the reference to the possibility of big dollars being involved if Joe White was required to supply the correct barley varieties and the estimate of a significant increase in the cost base), 1282 (in particular the references to increased germination time if gibberellic acid was not added and that Joe White engaged in the Gibberellic Acid Practice to drive capacity), 1284 (in particular the reference to Hughes believing the use of the Operational Practices was a process to manage risk) above.

2493 See pars 1250-1258 above.

2494 See, for example, par 1218 above.

2495 See par 884 above.

2496 See pars 90, 287 above.

him being conscious of the fact that Cargill had not been informed about such matters prior to this time. There was nothing in the evidence to suggest that after 4 August 2013 Hughes' belief as to what Cargill had been told during the Due Diligence concerning disclosure of the Viterra Policies had been mistaken, or that he learnt after 4 August 2013 for the first time that Cargill had been kept in ignorance of the Operational Practices, including the existence of the Viterra Policies.[2497]

3265 In relation to attribution, it has already been found that Hughes was Viterra's agent for the purposes of the sale process.[2498] The authority given to Hughes was to assist as directed by Glencore and Viterra. This included assisting in the collating of information, in the drafting and finalising of the Information Memorandum (including verifying much of its contents) and the Management Presentation Memorandum, in making oral presentations, and in responding to questions about the Joe White Business as a result of the contents of the documents provided to Cargill as part of the sale process. Further, Hughes was the person on behalf of Viterra that was directed to assist because of his knowledge of Joe White, and was given the overarching responsibility to ensure that the relevant information was disclosed and that the material representations in relation to the Joe White Business were true and correct.[2499] Furthermore, at all times Hughes was under an express contractual obligation to act ethically and honestly,[2500] as well as to comply with the Viterra Code which mandated (amongst other things) that Hughes maintain superior standards of honesty, fairness and integrity in business relationships.[2501] The Viterra Code also required Hughes to disclose to Viterra any violations or possible violations of the Viterra Code in his dealings with or on behalf of Viterra.[2502] Hughes' duty of disclosure to Viterra was unaffected by any agreement that Glencore and Viterra may

---

2497 In arriving at this conclusion, little weight is placed upon the contents of Hughes' self-serving (and untested) note of the 15 October Meeting and his subsequent (untested) statement on 23 October 2013: see pars 1148, 1280 above.

2498 See, for example, par 2660 above.

2499 See, for example, pars 366-367, 393, 433, 443, 445-451, 1876 above. Obviously, Argent was also retained for much the same purpose, but his knowledge was that of a financial controller concerned largely with financial matters, whereas Hughes was the only person who was a Viterra executive with the responsibility for both operational and financial matters.

2500 See issue 136 below.

2501 See par 59 above.

2502 See par 63 above.

have had in place with Cargill concerning their obligations to make disclosure to Cargill.

3266 As explained above, given the level of his involvement, Hughes was aware of all of the Pre-Execution Statements that were made during the sale process. Plainly, the Viterra Code required Hughes to disclose to his superiors at Viterra that many of the Pre-Execution Statements were patently wrong.[2503] In these circumstances, where he assisted in the manner that he did with the actual authority of Viterra, as a Viterra Ltd employee and a Viterra executive with responsibility for the operations of Joe White, Hughes' knowledge was attributable to Viterra.[2504]

X.22.5 Conclusion

3267 Hughes was fully aware as to the making of the Pre-Execution Statements that gave rise to the Financial and Operational Performance Representations.[2505] Accordingly, in addition to Viterra making the Financial and Operational Performance Representations, by reason of Hughes' knowledge being attributable to Viterra and his role in the sale process as explained above, Viterra knew they were false. Alternatively, in the circumstances referred to above, Hughes could not have genuinely believed any of the Pre-Execution Statements (and thus the Financial and Operational Performance Representations) were true. Even if that is incorrect, alternatively and at the very least, Hughes was reckless as to whether or not the Pre-Execution Statements (and thus the Financial and Operational Performance Representations) were true or false.

X.23 Did Viterra make the Financial and Operational Performance Representations with the intent that Cargill Australia would rely on them

2503 See further par 3277 below.

2504 See pars 2618, 2621 above.

2505 In stating this, it is acknowledged that Hughes was not fully aware of precisely what financial and operational information had been disclosed by the Viterra Parties during the Due Diligence. However, that did not diminish his knowledge of the financial and operational performance of Joe White between the 2010 and 2013 financial years (to the extent that the 2013 financial year had been completed) being substantially underpinned by Joe White's practice of supplying malt to customers pursuant to the Viterra Practices and the Viterra Policies that did not comply with customer contracts.

by entering into the Acquisition Agreement?

X.23.1 The Cargill Parties' submissions

3268 After noting that disclaimers were ineffective to exclude or defeat liability for deceit[2506] and that to establish liability it was not necessary for a person who makes a fraudulent misrepresentation to make it directly to the misled person where the communication to that person was intended by the fraudster,[2507] the Cargill Parties submitted Viterra, at the request of Glencore, provided vital information for inclusion in the Information Memorandum and the Management Presentation Memorandum about the financial and operational performance of the Joe White Business. They contended Viterra knew that both these documents would be provided to potential purchasers, including Cargill, and would be acted upon by prospective purchasers in making an assessment of whether to make an offer for the Joe White Business, and if so for how much. It was submitted that knowledge of the purpose of these documents could be inferred from the fact they were prepared for a proposed sale, coupled with the close involvement of Hughes and Argent in the sale process.

X.23.2 The Viterra Parties' submissions

3269 In the alternative to their submissions that the Financial and Operational Performance Representations were not made, the Viterra Parties submitted it should be found that because of the Sale Process Disclaimers, the Refusal of Certain Terms and the risks Cargill agreed to accept, Viterra did not make the Financial and Operational Performance Representations with the intent that Cargill Australia should rely upon them. They submitted the existence of these factors was wholly inconsistent with any such intention. Referring to authority,[2508] they submitted that, although the disclaimers could not avert the operation of provisions such as section 18 of the Australian Consumer Law, the Sale Process Disclaimers were a circumstance to be

---

2506 *Commercial Banking Co of Sydney Ltd v RH Brown & Co* (1972) 126 CLR 337, 344.8 (Menzies J, with whom Barwick CJ, McTiernan and Gibbs JJ agreed), 350.2 (Gibbs J, with whom McTiernan J agreed).

2507 Ibid, 344.9-345.2 (Menzies J, with whom Barwick CJ, McTiernan and Gibbs JJ agreed), 346.8 (Gibbs J, with whom McTiernan J agreed).

2508 *Citigroup Pty Ltd v CrediProtect Pty Ltd* [2010] NSWSC 1054, [107]-[108] (McDougall J).

taken into account in assessing whether or not there was reliance upon representations made. They contended it followed that a disclaimer also evidenced the plain intention of the person disclaiming liability that any representation to which the disclaimer applied should not be relied upon by the person to whom the representation was made and to whom any liability was disclaimed.

X.23.3 Analysis

3270 As was stated by Gibbs J in *Commercial Banking Co of Sydney v RH Brown & Co*,[2509] what was intended by the representor is a question of fact which is not simply determined by consideration of disclaimers alone.

3271 It was beyond controversy that the Information Memorandum and the Management Presentation Memorandum comprised marketing material created by "Glencore and its subsidiaries", namely Viterra, in order to try to obtain a very good outcome for the Sellers and Glencore.[2510] Further, those with responsibility for its contents, including the Financial and Operational Information, fully appreciated that what was stated in these documents would affect not only whether or not a prospective purchaser would be interested, but also how the Joe White Business would be valued and the price a prospective purchaser would be likely to be willing to pay.[2511] They were drafted by Merrill Lynch, an organisation very experienced in such matters, and then fastidiously reviewed in order to carefully produce documents that would be likely to achieve the desired outcome.[2512] To the same end, both Glencore and Viterra made sure that the management who they incentivised to assist with the sale process were properly rehearsed on the key messages to be delivered.[2513]

3272 Further, the contemporaneous documentary evidence demonstrated that Hughes was completely on board with the notion of presenting the Joe White Business in a positive way.[2514] This was additionally demonstrated not only by the contents of the

---

2509 (1972) 126 CLR 337, 350.4.
2510 See, for example, pars 110, 766, and fn 364 above.
2511 See, for example, pars 398-399, 402-406, 429, 436, 438, 525-528, 530, 536, 623, 678, 766, 797-810 above.
2512 See, for example, pars 110, 696-697 above and fn 4078 below.
2513 See, for example, pars 366-368, 396, 402, 698-700, 872 above.
2514 See, for example, pars 797-810, 872 above.

Information Memorandum and the Management Presentation Memorandum themselves and the substantial extent to which he approved the contents of those documents, but also by what Hughes refrained from stating about the Joe White Business up until around mid-October 2013, including the failure even to make any mention of the Operational Practices.

3273 If Hughes had intended to represent the Joe White Business fairly and accurately then, at the very least, he would have included a reference to the Viterra Practices, the Viterra Policies, the inability of Joe White to obtain all the barley varieties as required by its customers, the inability to meet customer specifications on a regular basis (including with respect to customers who prohibited the use of exogenous gibberellic acid) and the fact that Joe White had insufficient storage at most of its plants. Naturally, if he had done so (if not in the Information Memorandum or the Management Presentation Memorandum, the finalisation of which was not ultimately his responsibility, then in the Operations Call and the Commercial Call), it would have been less likely that a prospective purchaser would have been induced by what had been stated about the Joe White Business. Indeed, such disclosure would have exposed a significant number of material statements in the Information Memorandum and the Management Presentation Memorandum to have been patently and materially incorrect, which would have had the inevitable consequence of a prospective purchaser re-evaluating its assessment of the Joe White Business.[2515] The fact that he did not state such matters was further indication that Hughes intended to induce a prospective purchaser to be interested in acquiring Joe White on the basis represented.

3274 It follows from what is stated above that the evidence demonstrated that throughout the relevant corporate structure (that is, from the upper echelons of Glencore's executives down to Mattiske, in his role as a Glencore executive and a director of Viterra, and those employed by Viterra Ltd, including Hughes and Argent after being "well instructed"), there was a united intention to present Joe White in a positive

2515 See, for example, pars 905-906 above and par 3396 below.

manner. It was hoped that this positive presentation would result in a prospective purchaser, including Cargill,[2516] being induced to pay a very significant sum for the shares in Joe White and the Joe White Business more generally. This united intention was reflected in all aspects of how Joe White was presented, including in the making of the Financial and Operational Performance Representations to Cargill.

3275 The intention to induce prospective purchasers, including Cargill, was not displaced by the Sale Process Disclaimers. The context in which the Sale Process Disclaimers were imposed, and the regime created with respect to the extent to which the information disclosed could be verified and assessed, was entirely consistent with the intention to induce Cargill to rely upon the Financial and Operational Performance Representations. As discussed elsewhere,[2517] Cargill and other prospective purchasers had limited and very controlled means by which they could conduct their own investigations and analyses in assessing the Joe White Business.

3276 In conclusion, the answer to the question posed is yes.

X.23.4 Further observations

3277 Before leaving the issues concerned with this claim for deceit, I note that the findings concerning Hughes knowingly making false statements have not been made lightly.[2518] Nor have they been made without due consideration of the fact that it was Glencore and Viterra, not Hughes, that had the ultimate say on what was included in the Information Memorandum and the Management Presentation Memorandum, together with nearly all of what was disclosed during the Due Diligence, including in the Data Room.

3278 Hughes was not called as a witness despite being a party to the proceeding. In circumstances where the court has not had the opportunity to hear from Hughes himself about why he did what he did, it is not without some hesitation that these findings have been made. However, Hughes was represented by very experienced

---

2516 See par 398 above.
2517 See pars 468-469, 643, 651, 656-658 above.
2518 See *Evidence Act*, s 140(2). See also par 2285 above.

and capable counsel and it can only be presumed that the decision not to call Hughes was made advisedly. Further, despite his detailed knowledge of how the Joe White Business was conducted, during the sale process in 2013 Hughes approved and did not correct statements such as: "[Joe White] delivers high quality products adhering to specific customer requirements"; "Joe White's business model is focused on ensuring customers receive the highest quality malt to meet their exact specifications and requirements"; "Technical analysis and strict quality control procedures ensure customer specifications are consistently met"; "Once a customer's specific product needs have been identified, the procurement function ensures the appropriate quantity of malting barley is acquired to meet these specifications"; and "Joe White's high-quality manufacturing assets had an outstanding reputation for product uniformity, consistency and an ability to produce to a customer's exact specifications". Furthermore, not only did he approve and fail to correct these statements, but to compound matters he gave answers to Cargill's questions which were entirely consistent and congruent with, and reaffirming of, them despite the questions put to him towards the end of the Due Diligence during the Operations Call[2519] and the Commercial Call.[2520] In these circumstances, the inescapable conclusion was that Hughes must have known that what was being stated about some critical aspects of the Joe White Business was both patently and materially inaccurate, and incontrovertibly misleading.[2521] Further, unlike any of the other Third Party Individuals, he knew of all of the relevant statements that had been made (that gave rise to the Financial and Operational Performance Representations) and of the

---

2519 These included questions concerning the regularity of Joe White's experience of quality problems, how Joe White dealt with product that was not within specifications, issues concerning challenges with storage, and managing malt quality and grades of barley: see par 884 above.

2520 These included questions concerning the attainability of forecasts, the attainability of volumes, the ability to achieve higher margins, the key factors that allowed Joe White to command a premium, margin opportunities and risks within the domestic market, the ability to push margins on domestic and export customers, and the prospects of Joe White in the Japanese market: some of these matters are referred to in pars 910-915 above.

2521 See, for example, pars 1098, 1210-1232, 1462 above in relation to the position in October 2013. See also Hughes' submission to the effect that, if the Viterra Parties had taken reasonable care, then they would have acted differently because they either knew or should have known that, amongst other things, the Financial and Operational Performance Representations were false: see par 5188 below (although Hughes' case was that he was not doing anything other than what he believed to be in good faith, honest and in the best interest of Viterra: see pars 5236-5237 below).

implementation of the Viterra Practices.

3279 Moreover, although the court did not have the benefit of Hughes' evidence, in reaching this conclusion the question of why he engaged in such unsatisfactory behavior should be considered in light of the surrounding circumstances. It seems implausible that his conduct would have been motivated purely by a desire to secure his incentive bonus or from being driven to obtain the highest price for Glencore and Viterra no matter what the means (especially as he would no longer be a Viterra Ltd employee when the deal was completed, but instead would be employed by the new owner). It would be surprising if either of these factors, or both in combination, would have caused Hughes to commit such serious wrongs in such a substantial transaction.

3280 However, it was entirely plausible that in early 2013 Hughes found himself in a position where it was easier for him to continue the deception in relation to how the Joe White Business operated rather than being candid about the unsatisfactory practices being engaged in. After all, Hughes had been employed as the senior executive at Joe White for many years and during that time Joe White had been the subject of a number of takeovers. These included the most recent takeover of Viterra by Glencore, and the Viterra Practices were successfully concealed from Glencore on that occasion.[2522] Further, the 2 most recent owners of Joe White, being ABB Grain and Viterra, both had codes of conduct requiring ethical business practices and yet the Viterra Practices had been able to continue without any real interruption.[2523] Hughes had purported to comply and oversee compliance with these codes. Further, under the Viterra Code he had been required to report each year that both he and the Joe White Business had been conducted in a proper manner.[2524] In short, not only had Hughes been successful over many years in carrying out the subterfuge which necessarily went with overseeing the implementation of the Viterra Practices, but he had effectively locked himself in to the position of representing on an ongoing basis that everything concerning the operations and financial reporting of Joe White was

---

2522 See pars 352-360, 1281 above.
2523 See pars 58-64 and fn 144 above.
2524 See pars 62-63 above.

above board. In these circumstances, it seems highly likely Hughes would have formed the view that the best path for him to follow was to continue to play to the same tune, to do what he had done for many years and then to try to make sure yet again that he could finesse the situation with the new owner after a sale had taken place. He must have realised sometime in September or early October 2013, after learning about the manner in which Cargill strictly conducted business in accordance with the Cargill Code, that the music was about to jolt to a sudden stop. Hence, he oversaw the 15 October Meeting at which the Operational Practices (though not the full extent of the Viterra Practices) were finally disclosed to Cargill.

3281 But to focus on Hughes alone would be to consider the situation too narrowly. Hughes had never been a sole director of Joe White and was not a director at any time in 2013. At no point did he have unfettered control over how the Joe White Business was conducted. Both at the time Glencore was in control, and for the 3 or so years before that when Viterra was in control, he had fellow directors from these large organisations. The case of the Viterra Parties was that none of them knew of the Viterra Practices. Leaving aside the knowledge of Viterra Ltd employees engaged in conducting the Joe White Business on a day-to-day basis, the evidence has not established that any of them did. Be that as it may, the directors of Joe White, and Joe White's wholly-owning shareholders, for many years allowed Hughes to perform his role while the Viterra Practices were being engaged in. Further, Hughes and others involved in the Joe White Business operations were informed from around 2000 that profit, not quality, was *the* key performance indicator, which was only emphasised further when Viterra took control.[2525] While this approach in no way sanctioned unlawful behavior, it was a direction that would have made it more difficult for Hughes to unwind what had been occurring and to adopt business practices that would have complied with customer contracts (to the extent Joe White could), and necessarily would have resulted in smaller margins and diminished profits for the Joe White Business. In summary, by 2013 the Viterra Practices (including the deception

[2525] See pars 131-146 and fn 520 above (referring to cost reduction becoming more important from 2000 onwards).

they necessarily involved) had become an entrenched part of Joe White in conducting its operations in the pursuit of greater profits. At all times up to when the Cargill 22 October Letter was sent, Hughes had been willing to continue to operate in that manner until someone told him otherwise.

X.24 Did Glencore and/or Viterra provide the October 2013 Responses as alleged in paragraph 25 of the Statement of Claim?

X.24.1 The allegations

3282 Cargill Australia pleaded that Glencore or Viterra, or both, advised Cargill Australia of the following between 25 and 30 October 2013:

(1) There had been some "instances" where barley other than that specified pursuant to a particular contract had been used due to seasonal issues.

(2) Joe White's plants (which had been audited and approved by customers as required) were adequate and sufficient to meet the specifications applicable under customer contracts.

(3) Joe White had "occasionally" supplied malt to customers that included gibberellic acid in breach of customer contracts, but was able to produce malt to the specifications required to meet customer demands without adding gibberellic acid.

(4) The Joe White Business was capable of producing the quality and quantity of malt contractually sold to customers and no customer had ever rejected malt due to the issues raised by Cargill Australia.

(5) Notwithstanding the matters disclosed in subparagraphs (1) to (4) above, there was no fundamental issue with Joe White or the Joe White Business.

3283 Cargill Australia further pleaded that between 25 and 30 October 2013, there was a failure to disclose to Cargill Australia:

(1) The nature and extent of the Viterra Practices.

(2) The Viterra Certificate of Analysis Procedure or the Malt Blend Parameters Procedure (being the Viterra Policies).

(The allegations in this and the preceding paragraph, collectively, "the October 2013 Responses".)

3284 Communications to Cargill Australia during the period from 25 to 30 October 2013 consisted of the 25 October Reply Letter,[2526] 2 phone calls between Purser and Mattiske on or around 29 October 2013,[2527] a third call on 30 October 2013,[2528] and the 30 October Reply Letter.[2529] In addition, in the particulars to paragraph 25 of the Statement of Claim reference was made to discussions held immediately before this period, on 23 and 24 October 2013.[2530]

X.24.2 The Viterra Parties' general submissions

3285 The Viterra Parties made a number of submissions in relation to the October 2013 Responses generally. They contended that whatever responses they made were limited by the time available for the investigations and were also limited to information received from Joe White management. As to the first of these matters, the amount of time elapsed, being approximately 3 days, is an objective fact, but this did not alter the position as to whether or not the October 2013 Responses were made. In relation to the second matter, the 25 October Reply Letter expressly referred to the fact that Glencore had "made enquiries" of Joe White management. However, it was then stated that Glencore was in a position to advise in certain matters. Again, the objective fact is that enquiries were made of Joe White management, but this fact also was not directly responsive to the allegation that the October 2013 Responses were made. Further, they acknowledged that, to the extent that any of the October 2013 Responses

---

2526 See par 1405 above for an extract of the 25 October Reply Letter.
2527 See pars 1442-1444, 1447-1450, 1503-1509 above.
2528 See par 1514-1523 above.
2529 See par 1512 for an extract of the 30 October Reply Letter; the final version of the letter was identical to this draft.
2530 See pars 1319-1322, 1344, 1368-1371 above.

were made as alleged, they were attributable to each of the Viterra Parties directly.

X.24.3 Analysis

3286 In relation to the gravamen of the first statement, a materially identical statement was included in the 25 October Reply Letter: "there have been instances where barley other than that specified in a particular contract has been used". But the explanation that this was "due to seasonal issues" was not communicated in writing or orally in those precise words. Although Mattiske did tell Purser on 24 October 2013 that Joe White had on occasions been unable to source the barley variety required by a customer because it was unavailable in the market,[2531] that was a broader explanation (which might or might not have encompassed seasonal issues).[2532] Accordingly, this part of the allegation has not been made out. That said, the Viterra Parties accepted that the effect of the communications made was that Cargill Australia was told that incorrect varieties had been used.[2533]

3287 Words to the effect of the second statement were also included in the 25 October Reply Letter, which stated that: "…you are concerned that the plant is not sufficient to meet the specifications set out in customer contracts. This concern is unfounded. We have confirmed that the plants are adequate to deliver malt that meets customer specifications and have been audited and approved by customers as required." This account of the plants' adequacy in the conduct of a stated concern about sufficiency suggested the plants were both adequate and sufficient. This position was buttressed by oral communications between Purser and Mattiske.[2534]

3288 In relation to the third statement, Cargill Australia was advised in the 25 October Reply Letter that there had "been non-compliance with customer requirements around [gibberellic acid]". In downplaying the significance of this, it was also stated

---

2531 See par 1378(7) above.

2532 A similar response was made in the 30 October Reply Letter, which suggested it was common knowledge within the industry that there was a short-term shortage of certain barley varieties: see par 1512 above.

2533 They further submitted that Cargill was informed that it would be an ongoing issue until the new crop was available, but this submission went beyond the matters raised in issue 24.

2534 See pars 1368, 1378(1) above.

that there were no complaints or claims known to be in existence and that such non-compliance was not necessary to meet customer specifications. In short, there was no hint of any real or ongoing problem. Thus the latter part of the statement, that Joe White was "able to produce the specifications of malt required to meet customer demands without adding [gibberellic acid]", was included in the 25 October Reply Letter, with the additional note that "modified production conditions may be required". Further, Cargill was informed orally shortly before this that, in addition to everything concerning quality issues being fully and properly documented, Joe White had only occasionally used gibberellic acid when it had been requested that it not be used. Importantly, Mattiske also said words which indicated the relevant customers were aware of the conduct.[2535] Furthermore, Cargill was told in late October 2013 that the unauthorised use of gibberellic acid related to a single contract.[2536] While the reference to "non-compliance" in the 25 October Reply Letter gave no indication of the frequency of non-compliance, in the context of the words that immediately followed which indicated there was no real problem, and of the other statements concerning this issue, it appeared to suggest that Joe White had, at most, "occasionally" used gibberellic acid when not permitted. Furthermore, the "non-compliance with customer requirements" in relation to gibberellic acid amounted to a statement that there had been a "breach of customer contracts" (albeit with the relevant customers' knowledge).[2537]

3289 The Viterra Parties submitted that the cumulative effect of the communications on this issue was that Cargill was told that Joe White had used gibberellic acid when it was prohibited, but did not seek to address the allegation concerning how often it was said this was done. The Viterra Parties also accepted that Cargill was told it appeared that the prohibited use of gibberellic acid affected a particular 70,000 tonne contract and that the cessation of the Gibberellic Acid Practice would increase germination time from 4 days to 5 days. This aspect of the submission did not directly address the allegation so far as it concerned the ability to produce malt to the specifications

2535 See par 1378(6) above.
2536 See pars 1505, 1507-1509 above.
2537 See par 1378(6) above.

required without adding gibberellic acid, however it was implicit that the extended germination period would solve the issue. In short, these submissions do not affect the basis of the finding made.

3290 In relation to the fourth statement, the 25 October Reply Letter stated: "the plants are adequate to deliver malt that meets customer specifications" and that Joe White was "able to produce the specifications of malt required to meet customer demands without adding [gibberellic acid] although modified production conditions may be required". These statements conveyed that the Joe White Business was capable of producing the quality and quantity of malt as contractually sold to customers. Although the letter refers to the "plants", rather than "the Joe White Business", the effect was the same because all malt produced by the Joe White Business was produced by Joe White's plants. Further, the reference in the letter to "customer specifications", rather than "malt contractually sold to customers", was a distinction without a material difference. Generally, customer contracts contained the customer specifications unless they were changed by a direction from the customer (which would ordinarily amount to a variation of the contract in question). The latter part of the statement, that "no customer had ever rejected malt due to the issues raised" by Cargill Australia, was also included in the 25 October Reply Letter.[2538]

3291 In relation to the fifth statement pleaded, Purser made a contemporaneous note which recorded that she had been told by Mattiske of his belief, in substance, that there was no fundamental issue with the Joe White Business.[2539] Effectively, this statement coupled with the terms of the 25 October Reply Letter amounted to an assurance that there were no fundamental issues notwithstanding the statements that, relevantly, had been made.

3292 In relation to the first failure to disclose, there was plainly a failure to disclose the nature and extent of the Viterra Practices to Cargill Australia between 25 October and 30 October 2013. Nothing said to Cargill at this time either individually or in

---

2538 See also pars 1368, 1378(5) above.

2539 See par 1378 above.

combination consisted of a communication that Joe White "routinely and without informing customers" engaged in the Operational Practices, or even suggested that the Operational Practices had been or were being engaged in at a level that had or would have any significant impact on the financial and operational performance of the Joe White Business.

X.24.4 The Viterra Parties' further submissions

3293 The Viterra Parties made submissions which tried to have a bit each way. They submitted that it was unreasonable to suggest that they could have disclosed the Viterra Practices within 9 days after first hearing of the potential existence of such issues. However, they also submitted that, by reason of the matters raised in response to issue 12 above, the information relevant to the existence and extent of the Viterra Practices was disclosed to Cargill in the course of the Due Diligence. As to the latter, these submissions have already been rejected.[2540] In relation to the former submission, this effectively amounts to an admission that the Viterra Practices were not disclosed, as was the fact. Any submission about the reasonableness of the October 2013 Responses was not responsive to the allegations. There were also other submissions made about Cargill's knowledge or conduct which were not responsive to this issue, so it is unnecessary to address them here.

3294 In relation to the Viterra Policies, they were not disclosed to Cargill Australia between 25 and 30 October 2013. The Viterra Parties conceded as much. In fact, despite knowing of the existence of written policies in the form of the Viterra Certificate of Analysis Procedure and the Malt Blend Parameters Procedure in October 2013,[2541] the fact of their existence was not even admitted by the Viterra Parties on the pleadings until 13 December 2018.[2542]

3295 Notwithstanding this, the Viterra Parties also submitted that the content of the Viterra Policies had been explained to Cargill by the Joe White executives at some length

---

2540 See issue 12 above.

2541 See pars 1324, 1332 above. The Malt Blend Parameters Procedure was expressly referred to in the Viterra Certificate of Analysis Procedure: see par 203 above.

2542 See par 1854 above.

during the 15 October Meeting. They contended, as a result, no inference as to "second tier representations" could be drawn from the fact that Cargill was not provided with the relevant documents. This submission was without merit.

3296 The presentation made during the 15 October Meeting made express reference to the Malt Proficiency Scheme,[2543] but made no reference to the Viterra Policies being in writing. The Malt Proficiency Scheme had been included in the Data Room.[2544] The 25 October Reply Letter referred to a documented procedure, being the "ISO accredited quality system" (and no other relevant documents). Further, the day before the 25 October Reply Letter was sent, Mattiske told Purser that the relevant policy had been disclosed in the Data Room; and to compound this misleading statement, Mattiske said the policy was disclosed in the Malt Proficiency Scheme.[2545] The 30 October Reply Letter referred to Joe White's accreditation with the International Organisation for Standardisation and its documented procedures. In other words, neither what was told to Cargill at the 15 October Meeting nor what was contained in the Reply Letters identified the existence of the Viterra Policies, but inadequately referred to other documentation. This circumstance was made even more stark by the fact that, leaving aside Hughes' knowledge being attributable to Viterra or Glencore, all the Viterra Parties knew full well of the existence of the Viterra Certificate of Analysis Procedure, which in its terms referred to the Malt Blend Parameters Procedure, and the significance of both documents to the issues at hand by 23 October 2013 at the very latest.[2546] And yet, on 24 October 2013, Mattiske directed Purser to the wrong document by referring to the existence of the Malt Proficiency Scheme in the Data Room. Further, none of the communications to Cargill on any of these occasions gave any indication of the true extent of the Viterra Practices.

3297 Again, the Viterra Parties made submissions with respect to other matters not responsive to the allegations the subject of this issue. Accordingly, they will not be

---

2543 See par 1116 above.
2544 See par 1015 above.
2545 See par 1378(2) above.
2546 See par 1324 above. Linder and Fitzgerald were both acting for Glencore and Viterra at this time.

addressed here.

X.24.5 Conclusion

3298 In summary, the allegation that each of the Viterra Parties engaged in the provision of the October 2013 Responses has been made out in substance. The minor exception to this was not material,[2547] as the explanation given in relation to the first statement gave no indication that the Varieties Practice was being engaged in routinely and without Joe White informing its customers.

X.25 Did (a) Glencore and/or (b) Viterra convey any and if so which of the Pre-Completion Representations as pleaded in paragraph 33 of the Statement of Claim, including in light of the Sale Process Disclaimers, the Acquisition Agreement Liability Terms and the Alleged Industry Practices?

X.25.1 The allegations

3299 The Cargill Parties alleged that by providing the October 2013 Responses,[2548] Glencore or Viterra, or both, conveyed the following representations:

(1) The Operational Practices had occurred only to an insignificant extent.[2549]

(2) The Operational Practices had no impact on the production, sales and earnings figures and operational performance stated in the Financial and Operational Information.

(3) The production and sales figures stated in the Financial and Operational Information were based upon compliance with customer contracts including customer specifications, and as a result, had been properly and lawfully achieved.

2547 See par 3286 above.

2548 See issue 24 above.

2549 The Statement of Claim referred to the "Viterra Practices" only occurring to a limited extent, but it is convenient to use the term "Operational Practices" as this term has been defined in these reasons, which definition does not include the extent to which the relevant practices were engaged in: see par 43 above.

(4) The assets of the Joe White Business were sufficient for Joe White to sell malt in the volumes and for the returns stated in the Financial and Operational Information.

(5) By reason of the matters alleged in subparagraphs (1) to (4) above, Joe White had low future capital expenditure needs in the short to medium term.

(Together, "the Pre-Completion Representations".)

3300 Paragraph 33 of the Statement of Claim contained no particulars. The Pre-Completion Representations were alleged to have arisen simply by reason that the October 2013 Responses were given. Necessarily, the October 2013 Responses were to be understood in the context in which they were communicated. That context was identified by the particulars to paragraph 25.[2550] The particulars in support of the allegation included that on 23 October 2013 Mattiske had stated that if the issues raised in the Cargill 22 October Letter were true they were serious and unacceptable and that Purser had told Mattiske that Cargill needed to know if ceasing the alleged practices immediately would impact the Joe White Business in any way, including its profitability and the ability to meet customers' contract specifications. On the evidence, those matters have been established.[2551] The particulars also referred to the Reply Letters.[2552]

X.25.2 The Cargill Parties' submissions

3301 The Cargill Parties noted that the relevant events arose in the final days before Completion. They submitted that the information about the Viterra Practices received on 15 October 2013 was fragmented and uncertain, in part due to positive statements received during the Due Diligence that Joe White could make malt to meet customers' "exact specifications" and because Cargill was completely reliant on Glencore and

2550 See par 3284 above.
2551 See pars 1319-1321 above.
2552 See pars 1405, 1512, 1524 above.

Viterra to shed light on the issues disclosed in the 15 October Meeting.

3302 In relation to the first representation, the Cargill Parties submitted that the language of the October 2013 Responses played down the occasions on which certain Viterra Practices took place. They referred to the statements that the wrong barley variety was only used in some "instances",[2553] and that gibberellic acid was used occasionally when it was not permitted.[2554] Further, it was submitted that these admissions could be taken as nothing more than isolated incidents given Mattiske's statements to the effect that the plants were sufficient to make the quality and quantity of malt as contractually sold to customers[2555] and that there was "no fundamental issue" with the Joe White Business,[2556] and because of the failure to disclose the Viterra Policies and the extent of the Viterra Practices.[2557]

3303 In relation to the second, third and fourth representations, the Cargill Parties submitted that these were conveyed by the express statements that the plants were adequate and sufficient to meet contractual specifications,[2558] and that they had been audited and approved by customers as required.[2559] Further, they again referred to Mattiske's statements and the non-disclosure of the Viterra Policies, and submitted these statements in context conveyed these representations.

3304 The Cargill Parties also referred to the Viterra Parties' silence. It was submitted that if the Viterra Policies had been provided to Cargill in October 2013, Cargill would have been informed that the Viterra Practices were institutionalised within Joe White. It was submitted such information was relevant to the issue of the extent of the Viterra Practices and went to the heart of each of these representations. The Cargill Parties submitted that no satisfactory explanation was provided for the failure to disclose the Viterra Policies; Mattiske and Fitzgerald could have disclosed them and there would have been no rational impediment to disclosure if the Viterra Parties genuinely

2553 See par 3286 above.
2554 See par 3288 above.
2555 See par 3287 above.
2556 See par 3291 above.
2557 See pars 3292-3296 above.
2558 See pars 3287, 3290 above.
2559 See par 3287 above.

viewed them as benign.

3305 In relation to the fifth representation, the Cargill Parties contended that that representation was implied from the other representations to the effect that the Joe White Business was functional and operative and not underpinned by the Viterra Practices. Further, it was contended that the representation was a continuation of the express representations made during the sale process that Joe White had low future capital needs in the short to medium term.[2560]

3306 In response to the Viterra Parties' submissions (referred to immediately below), the Cargill Parties submitted that the Viterra Parties denied the Pre-Completion Representations were made but did not contend that the October 2013 Responses had some alternative meaning. They then referred to various matters raised in the Defence and gave their responses. They submitted the Sale Process Disclaimers relied upon by the Viterra Parties[2561] did not apply to post-sale events, the sale process having concluded on 4 August 2013. Further, they submitted that the Acquisition Agreement Liability Terms were irrelevant,[2562] and that the Alleged Industry Practices did not exist. Furthermore, in response to the Viterra Parties' defence to allegations in paragraph 19 of the Statement of Claim, to allegations of Cargill's knowledge (including the existence of Alleged Industry Practices) and to the defence to the allegation that the October 2013 Responses were not conveyed because of the Alleged Industry Practices and related matters, the Cargill Parties relied on their submissions above as well as their other submissions concerning the Viterra Practices and Cargill's reliance on the Financial and Operational Performance Representations and the Pre-Completion Representations "as applicable" (without specificity).[2563]

X.25.3 The Viterra Parties' submissions

2560 See pars 2146(11), 2889-2894 above.

2561 These included various disclaimers made in the Phase 1 Process Letter, the Information Memorandum, the Confidentiality Deed, the Phase 2 Process Letter, the Data Room Protocol and the Management Presentation: see par 2828 above.

2562 It was submitted that the terms did not have the contended effect, as they were either definitional, relevant to the construction of the Warranties or went to reliance by Cargill on representations to enter into the Acquisition Agreement and then to proceed to Completion.

2563 The reference to the Pre-Completion Representations in this context appeared entirely circular.

3307 The Viterra Parties submitted that the Pre-Completion Representations were not conveyed for 3 reasons.

3308 *First,* it was submitted that Cargill Australia agreed pursuant to the Acquisition Agreement that Viterra and its Representatives (which included Glencore) made no representation or warranty as to the accuracy or completeness of disclosures relating to Joe White other than the Warranties. Accordingly, it was submitted that they would not be liable in the absence of fraud if any information disclosed was inaccurate, incomplete or misleading.[2564]

3309 Further, they submitted that Cargill Australia had agreed that Viterra was under no obligation to provide Cargill Australia with information on future financial performance or prospects, and would not be liable under any claim relating to opinions, estimates or forecasts. Therefore it was submitted that Cargill Australia expressly agreed that information disclosed by Glencore and Viterra could not amount to any binding representation unless it was contained in the Warranties.

3310 They also relied on the Refusal of Certain Terms in the lead up to the execution of the Acquisition Agreement. It was submitted that if the Pre-Completion Representations were made it was made clear to Cargill that it could not rely upon them as Glencore and Viterra refused to accept terms proposed by Cargill to the effect that it could rely on information provided in the Due Diligence. It was contended therefore that by negotiating and agreeing to the terms in the final form of the Acquisition Agreement, Cargill accepted a degree of risk.

3311 *Secondly,* it was submitted that Cargill Australia was aware that the October 2013 Responses were not statements of fact, but rather amounted to no more than information received from Joe White management that was passed on to Cargill.

2564 Issue 25 was defined by reference to the Acquisition Agreement Liability Terms. However, the Viterra Parties confined their submissions to the terms contained in clauses 13.4(a), (b), (d) to (f) and 13.5 of the Acquisition Agreement to submit that Cargill Australia agreed that Viterra (and its Representatives) had not made any representation as to the accuracy or completeness of disclosures relating to Joe White other than the Warranties and were not liable to Cargill Australia if the information was inaccurate, incomplete or misleading.

Further, it was submitted Cargill knew that the Viterra Parties were unable to provide substantive responses, including because there was not enough time to conduct a proper investigation and because of Glencore's lack of expertise in malting.[2565]

3312 *Thirdly,* even if the October 2013 Responses were statements of fact, it was submitted they were not capable of conveying the Pre-Completion Representations. In support of this, it was submitted that the following factors must be taken into account:

(1) The substantial size of the transaction.

(2) The nature of the parties, being large multinationals.

(3) The fact that Cargill was advised by its internal financial advice group (referred to in the Cargill Parties' opening as its own internal merchant bank) and at least 4 internal lawyers, as well as the external advisers Goldman Sachs, Allens and Deloitte.

(4) Cargill's knowledge of the Alleged Industry Practices.

(5) Cargill's knowledge of the Operational Practices.

(6) The information provided to Cargill in October 2013 by Joe White management as to the way in which Joe White was operating.[2566]

3313 The Viterra Parties submitted that in these circumstances, even if the October 2013 Reponses were made because of the statements made or by reason of the non-disclosure alleged (as the case may be), such conduct should not be held to amount to the making of any of the Pre-Competition Representations. Further, the Viterra Parties referred to what Cargill was actually told and submitted the October 2013 Responses did not: (1) state the regularity of the Viterra Practices (with a minor

---

2565 See par 3285 above.

2566 The communications to Cargill were said to include that investigations were limited and only passing on what Joe White management had said, that Joe White had and would continue to use incorrect varieties, and that ceasing the Gibberellic Acid Practice, which had affected a 70,000 tonne contract, would increase germination time.

exception);[2567] (2) include any reference to the reliability of the information in the Due Diligence; or (3) provide any definitive guarantee as to the adequacy of Joe White's facilities.

3314 Furthermore, it was submitted that a sophisticated commercial entity the size of Cargill, with its level of expert advice, and knowledge of the Alleged Industry Practices and the way Joe White was operating, would not have inferred the Pre-Completion Representations from the October 2013 Responses.

3315 More specifically, in relation to the first representation, the Viterra Parties submitted that it was not conveyed because:

(1) Cargill was aware of the existence of the Alleged Industry Practices and that Joe White engaged in them.

(2) Based on the 15 October Meeting, Cargill knew of a number of matters. *First,* for many customers there was a need to "send out of specification according to our own laboratory" so that it would be within specification when tested by customers. *Secondly,* Joe White's policy allowed for results to be amended by up to 2 standard deviations. *Thirdly,* Joe White wanted a transition period after Completion to cease its practice of supplying customers with similar varieties where the desired variety was not available. *Fourthly,* the Gibberellic Acid Practice existed and its cessation might require some malt production timelines to increase from 4 to 5 days.

(3) In the second half of October 2013, the Viterra Parties told Cargill that Joe White issued Certificates of Analysis in compliance with a documented procedure which had been discussed at the 15 October Meeting, that Joe White had used incorrect barley varieties which would be an ongoing issue until new crop barley was available and that the

[2567] This was a reference to the 70,000 tonne contract (see par 1447 above), on the basis that it was Mattiske's understanding of the situation rather than a substantiated position.

Gibberellic Acid Practice existed in Joe White which appeared to affect a 70,000 tonne contract.

(4) In the second half of October 2013, the Viterra Parties did not seek to quantify the extent of the Alleged Industry Practices in which Joe White engaged, and there was no reasonable basis upon which Cargill could have assumed that the extent of the Operational Practices was only insignificant.

(5) The Viterra Parties repeatedly told Cargill that the information provided was no more than what Joe White had told them and did not provide any definitive guarantees.

3316 In relation to the second representation, the Viterra Parties submitted it was not conveyed for reasons not materially dissimilar to submissions at paragraph 3315(1), 3315(4) and 3315(5) above, and because Cargill knew that ceasing "such practices" could significantly weaken a malting business "to the point of closure" and as such Cargill knew that such practices could significantly affect such matters.[2568]

3317 In relation to the third representation, the Viterra Parties submitted that it was not conveyed because:

(1) None of the October 2013 Responses mentioned the basis upon which the production and sales figures stated in the Financial and Operational Information were prepared.

(2) Cargill had been informed during the Due Diligence that the Financial and Operational Information had been sourced primarily from data based on Joe White's actual operations.[2569]

(3) Based on the contentions immediately above and the submissions in

---

2568 This submission obviously touched upon the matters raised in issue 10 concerning the Viterra Practices underpinning the Joe White Business, and did not seem to sit comfortably with the submissions made by the Viterra Parties in relation to that issue.

2569 See par 2738 above.

relation to issues 12, 13 and 21 above, Cargill was aware of the practices engaged in by Joe White, and knew that the production and sales figures stated in the Financial and Operational Information had been prepared on the basis of Joe White's actual operations to date and therefore it knew that the production and sales figures were based upon Joe White's use of the Alleged Industry Practices. Therefore, to the extent that Cargill considered that the Alleged Industry Practices involved non-compliance with customer contracts, Cargill knew that the information provided was based upon practices which involved such non-compliance.

3318 In relation to the fourth representation, the Viterra Parties submitted that this was not conveyed for the same reasons as the third representation was not made and in addition the reason at paragraph 3315(5) above.

3319 In relation to the fifth representation, the Viterra Parties submitted that this was not conveyed for the same reasons as the fourth representation was not made. Further, they submitted it was not made because of matters relating to Cargill's theoretical blend approach, including that De Samblanx was concerned that additional storage would be needed if Joe White did not follow the Certificate of Analysis rules as Cargill did, which would increase Joe White's future capital expenditure.[2570]

X.25.4 Analysis

X.25.4.1 General observations

3320 Determining whether or not the representations were conveyed requires a consideration of both the context in which they were made and of the language used in the express statements themselves. As to the context, the October 2013 Responses were made very close to the date of Completion, against a backdrop of numerous positive statements made by the Viterra Parties, including about Joe White's ability to meet customer specifications.[2571] The reliability of such statements had withstood the

2570 See pars 772, 858 above.

2571 See, for example, par 2913 above regarding the representation made by the Viterra Parties that Joe White was able to meet customers' exact specifications.

Due Diligence in the sense that Cargill was satisfied with its own investigations based on the information available to it, but then this had been subjected to doubt by reason of what was stated to Cargill in the lead up to and at the 15 October Meeting. However, what Cargill had been told at the 15 October Meeting did not disclose the extent to which the Operational Practices were engaged in or the extent to which their implementation was disclosed to customers. Importantly, what was stated did not inform Cargill whether, and if so the extent to which, Joe White had been acting outside the terms of its customers' contracts.[2572]

3321 In addition, Cargill did not have "unfettered access to all"[2573] the relevant information and was therefore reliant on Glencore or Viterra to illuminate and clarify the issues disclosed at the 15 October Meeting. The Viterra Parties were aware of this as, after the Cargill 22 October Letter was sent, it had been mutually agreed that the issues raised were serious.[2574] Not only did Purser demand that Cargill needed to know if an immediate cessation of the Operational Practices would impact the Joe White Business in any way, but in response Mattiske specifically told Purser that he would keep Cargill informed. Consistent with this approach, both the Cargill 22 October Letter and the Cargill 29 October Letter enquired about and sought specific answers as to the frequency and the impact of the Operational Practices.

3322 Further, to the extent the Viterra Parties' submissions relied upon Cargill's asserted knowledge of the Alleged Industry Practices they must be rejected, as the Viterra Parties failed to establish the existence of the Alleged Industry Practices or Cargill's knowledge of any such practices.[2575] As already observed,[2576] notice that some small number of individuals or organisations in the industry acted, or had acted, dishonestly or unethically was a far cry from knowledge of something alleged to be endemic in the malting industry, much less an awareness that that was how the Joe White Business operated, particularly in light of the positive way in which it had been

---

2572 See pars 1102-1141 above.

2573 To adopt the language in the 30 October Reply Letter: see par 1512 above.

2574 See par 1319 above. The contents of the Cargill 22 October Letter also made it clear this was Cargill's position at the time the letter was sent: see par 1236 above.

2575 See issue 13 above.

2576 See pars 2805-2806, 3051 above.

presented to Cargill by the Viterra Parties.

3323 Furthermore, in relation to the time available to investigate the matters raised, the Viterra Parties had more than enough time to speak with the relevant operational executives to ascertain the true position. Although there may have been insufficient time to do a detailed analysis of the exact extent to which the Operational Practices had been implemented historically or the precise extent to which they were being implemented in late October 2013, there was ample opportunity for the Viterra Parties to obtain a substantive account from the relevant employees as to the existence and implementation of each of the Viterra Practices generally in October 2013, and the extent to which any cessation would have been likely to have impacted upon the Joe White Business. So much was clear from what actually occurred; albeit that the investigations were not nearly as comprehensive as they reasonably could have been and that much of what Fitzgerald was told by Hughes, Youil, Wicks and Stewart was not conveyed to Cargill.[2577] In addition, although there may have been insufficient time to check all the matters that Hughes conveyed on 29 October 2013,[2578] there was no apparent reason why that information could not have been obtained from Hughes on or shortly after 23 October 2013 if the Viterra Parties had been serious about conducting a proper investigation into the Operational Practices. If it had been so obtained, in the days that followed after receipt of the Cargill 22 October Letter there would have been more than enough time to check the substance of the relevant details before the agreed date for Completion.

3324 Moreover, the substantial size of the transaction, the size and experience of Cargill and the resources available to Cargill did not alter the fact that the Viterra Parties had access to, or the ability to access, material information concerning the Viterra Practices (and their likely effect on the Joe White Business) which Cargill did not. In that regard, the Cargill 22 October Letter made it clear that Cargill was seeking a response from the Sellers, being the entities who had actually agreed to sell the shares in Joe White and the related assets. Any suggestion that Viterra, who by October 2013 had been in

2577 See par 1373 above and annexure C to these reasons.
2578 See par 1462 above.

control of the Joe White Business for 4 years, was incapable of giving a meaningful response to queries raised concerning the frequency and likely impact of the Viterra Practices was without substance. In the circumstances, including that "[Joe White] management" were all long term employees of Viterra Ltd engaged for the past 4 years in conducting the malt business of Viterra Malt, the attempt to characterise Viterra as a mere conduit of information provided by Joe White was not tenable. Although Mattiske informed Purser that Glencore could not respond to the questions in the detail that had been asked,[2579] any inability of Glencore to provide specific details was no bar to Viterra providing meaningful responses to the issues raised in a timely manner.

X.25.4.2 The 5 representations comprising the Pre-Completion Representations

3325 The first representation, that *the Viterra Practices had occurred only to an insignificant extent*, was conveyed. The October 2013 Responses comprised statements that there had been some *instances* where non-specified barley was used (but the technical needs of the customer were always met),[2580] and that the Gibberellic Acid Practice occurred *occasionally*.[2581] These statements conveyed that the occurrences were infrequent and not a regular or substantive practice of Joe White; that is, in substance that they were insignificant. Both of these responses were provided in the context of the 25 October Reply Letter stating Cargill's concerns about Joe White's plants being insufficient to meet contractual specifications being unfounded and both Reply Letters also stating that Certificates of Analysis were issued by Joe White in compliance with a documented procedure, being its "[International Organisation for Standardisation] accredited quality system".

3326 Further, the representation to the effect that the Viterra Practices only occurred to an insignificant extent was reinforced by the October 2013 Response that there was *no*

2579 See par 1504 above.

2580 See par 3286 above. The statement as to customers' technical needs always being met was qualified with the words "as far as we are aware", it having been acknowledged that enquiries had been made of "[Joe White] management": see par 1405 above.

2581 See par 3288 above.

fundamental issue with Joe White or the Joe White Business.[2582]

3327 Furthermore, the October 2013 Responses were given in the context of a number of relevant statements made by Cargill in the Cargill 22 October Letter.[2583] Cargill told the Viterra Parties that it did not know if the practices were "sporadic or widespread, which customers [were] affected and whether the practices [were] ongoing". Cargill also stated that it was concerned that the potential ramifications might have been "significant" should the Operational Practices have occurred. Similarly, Cargill asked Viterra directly about the frequency of the Operational Practices and the extent of their impact. The fact that these more probing questions were not addressed beyond what was reassuringly said fortified and affirmed the representation that the Viterra Practices only occurred to an insignificant and inconsequential extent.

3328 The second representation, that *the Viterra Practices had no impact on the production, sales and earnings figures and operational performance stated in the Financial and Operational Information*, was conveyed for much the same reasons as the first representation. Although the October 2013 Responses informed Cargill that there had been some "instances" where barley other than that specified pursuant to a particular contract had been used and that Joe White had "occasionally" supplied malt to customers that included gibberellic acid in breach of customer contracts,[2584] there was no suggestion that these practices had resulted or would result in an impact on the production and earnings figures and operational performance stated in the Financial and Operational Information.

3329 In relation to barley varieties, not only was there no indication that there had been any impact on the production, sales and earnings figures or Joe White's operational performance, but the statement that as far as management was aware the customers' technical needs had always been met suggested there had been no impact.

3330 Equally, the fact that the second representation was made was unaffected by the

---

2582 See par 3291 above.
2583 See par 1236 above.
2584 See pars 3286, 3288 above.

disclosures concerning the use of gibberellic acid. Included with the reference to occasional conduct of using gibberellic acid when it had been requested that it not be used was the suggestion that such conduct occurred with the knowledge of the relevant customers.[2585] The reference to non-compliance with customer requirements must be seen in this context, together with the statements about the capability of Joe White to produce malt in accordance with customer contracts and the absence of any suggestion that the performance of Joe White had been impacted in the past or would be impacted by the cessation of the Operational Practices. Again, the terms of the 25 October Reply Letter were emphatic in informing Cargill that any concern it had about Joe White's ability to meet specifications in customer contracts was unfounded.

3331 The third representation, that *the production and sales figures stated in the Financial and Operational Information were based upon compliance with customer contracts including customer specifications, and as a result, had been properly and lawfully achieved*, was conveyed for similar reasons as those stated above. There was an obvious minor exception to this with regard to the Gibberellic Acid Practice, being the third of the October 2013 Responses to the effect that malt was supplied to customers that included gibberellic acid *in breach* of customer contracts.[2586] However, the communications concerning this issue included Mattiske telling Purser in substance that the customers were aware of the use.[2587] More significantly, by pointing to what was being suggested to be a trivial and transparent exception, the position could only be understood as Cargill being told that Joe White was otherwise complying with its customers' contracts. In short, when this piece of information was viewed in the context of all the other assurances given by the Viterra Parties at the time, in substance it did not suggest anything other than the Financial and Operational Information was based on compliance with customer contracts and specifications.

3332 The fourth representation, that *the assets of Joe White were sufficient for Joe White to sell malt in the volumes and for the returns stated in the Financial and Operational Information*,

---

2585 See par 1378(6) above.
2586 See par 3282 above.
2587 See par 1378(6) above.

was conveyed. This representation was largely reflected in the October 2013 Response to the effect that Joe White's plants (which were said to have been audited and approved by customers as required) were adequate and sufficient to meet the specifications applicable under customer contracts. This response, together with the other assurances given and the statements as to the very limited circumstances in which issues concerning the use of incorrect barley varieties (but meeting technical needs) and the unauthorised use of gibberellic acid (but disclosed to customers) were said to have occurred, indicated that Joe White's assets were more than sufficient for selling malt in the manner that had been represented.

3333 The fifth representation, that *by reason of the matters alleged in the first 4 Pre-Completion Representations, Joe White had low future capital expenditure needs in the short to medium term*, was also conveyed. In circumstances where the first 4 representations were made and assurances had been previously given about minimal need for future capital expenditure in the short to medium term,[2588] this position was effectively confirmed by the October 2013 Responses in the context in which they were given.

3334 Before completing the discussion on whether the Pre-Completion Representations were made, reference should be made to the Viterra Parties' submissions that the October 2013 Responses did not: (1) state the regularity of the Viterra Practices (with a minor exception); (2) include any reference to the reliability of the information in the Due Diligence; and (3) provide any definitive guarantee as to the adequacy of Joe White's facilities.[2589] These general observations about what was not specifically stated did not alter the effect of what was represented. Indeed, it must be observed that the failure of the Viterra Parties to properly address any of these 3 matters in October 2013 was entirely consistent with the Pre-Completion Representations having been made.

X.25.5 The disclaimers and related terms

2588 See pars 2146(11), 2889-2894 above.

2589 See par 3313 above.

3335 Consistent with what is stated above in relation to issue 15 above,[2590] none of the Sale Process Disclaimers, the Refusal of Certain Terms or the Acquisition Agreement Liability Terms resulted in the Pre-Completion Representations not being made. The simple fact was that the Viterra Parties chose to respond to Cargill's queries by giving the October 2013 Responses. In so doing, the Viterra Parties did not state or imply that they relied upon any of the Sale Process Disclaimers or the Acquisition Agreement Liability Terms in giving their responses.

3336 Further, not only did the Viterra Parties not refuse to respond or assert any legal right not to respond, or state that their responses were qualified beyond what was specifically outlined in the Reply Letters (by reason of the Sale Process Disclaimers, the Refusal of Certain Terms or the Acquisition Agreement Liability Terms), Mattiske gave positive assurances concerning the basis upon which the Viterra Parties would address the issues that had been raised, including that they would be dealt with in "good faith",[2591] and provided "reassurance" about Joe White's ability to meet customer specifications.[2592] No doubt, he did so as he perceived it was in the interests of the Viterra Parties to address Cargill's concerns so as to seek to ensure that Cargill Australia did not decide not to proceed to Completion in accordance with the terms of the Acquisition Agreement.

3337 Furthermore, this was done in circumstances where Cargill made it clear that it intended to rely upon the responses given. The position of Cargill was reiterated by the Cargill 29 October Letter which made plain that Cargill would not be fobbed off by the plainly inadequate responses that had been given in the 25 October Reply Letter.

X.25.6 Conclusion

3338 For these reasons, Glencore and Viterra conveyed each of the Pre-Completion Representations.

2590 See pars 2931-3028 above.
2591 See pars 1234, 1319-1321, 1368-1372, 1376-1378, 1380, 1442-1450, 1503-1509, 1514-1522 above.
2592 See, for example, par 1368 above.

X.26 Were the Pre-Completion Representations false for the reasons pleaded in paragraphs 19 and 30 of the Statement of Claim, including in light of the Sale Process Disclaimers, the Acquisition Agreement Liability Terms and the Alleged Industry Practices, and did Glencore and/or Viterra thereby engage in misleading or deceptive conduct within the meaning of the Australian Consumer Law?

3339 Both paragraphs 19 and 30 of the Statement of Claim referred to the non-disclosure of the Undisclosed Matters,[2593] which have been found to have existed at all material times before Completion.[2594]

3340 In making the Pre-Completion Representations, the Viterra Parties did not disclose any of the Undisclosed Matters. Indeed, each of the Pre-Completion Representations was fundamentally inconsistent with the state of affairs that existed at Joe White concerning the existence and implementation of the Viterra Practices.

3341 More specifically, the Viterra Practices had occurred to a significant extent for a significant period of time, and throughout the period from 2010 to 2013. Further, the Viterra Practices underpinned Joe White's financial and operational performance for each of the financial years 2010 to 2013,[2595] and thus had a material impact on the production, sales and earnings figures and operational performance stated in the Financial and Operational Information. Furthermore, by reason of the implementation of the Viterra Practices, the production sales figures stated in the Financial and Operational Information were not based upon compliance with customer contracts, including customer specifications, and therefore had not been properly and lawfully achieved. Moreover, the assets of the Joe White Business were not sufficient for Joe White to sell malt in the volumes and for the returns stated in the Financial and Operational Information (regardless of whether or not the theoretical blend approach was adopted).[2596] Accordingly, contrary to the Pre-Completion

---

2593 See par 1851 above.
2594 See issue 10 above.
2595 See issue 10.12 above.
2596 See, for example, par 1216 above.

Representations, Joe White did not have low future capital expenditure needs in the short to medium term and needed to engage in immediate material capital expenditure if it was to have the capacity in the future to sell malt in the volumes and for the returns that had been represented.

3342 In the circumstances, the Pre-Completion Representations were false. In making the Pre-Completion Representations, the Viterra Parties and each of them engaged in conduct that was misleading or deceptive within the meaning of the Australian Consumer Law.[2597]

3343 In addition, for the reasons discussed in issue 25 above,[2598] nothing contained in the Sale Process Disclaimers or the Acquisition Agreement Liability Terms[2599] had the effect of altering the substance of what was represented. Equally, allegations concerning the Alleged Industry Practices took the matter no further.[2600]

3344 Finally, to the extent that the Viterra Parties maintained that what was stated in the October 2013 Responses accurately reflected what they had been told by the Joe White executives, that submission cannot be accepted.[2601]

3345 In rejecting this submission, the position of Hughes has not been overlooked. Despite Hughes being a party to the proceeding, no party chose to call him. Accordingly, the court is none the wiser as to how it might have been said by Hughes that he could have conscientiously approved the contents of each of the Reply Letters.[2602] In the absence of evidence on the point from Hughes, the most favourable manner in which the relevant circumstances could be considered from Hughes' perspective was that Hughes had been open and candid with Fitzgerald and Lindner in their meeting on 23 October 2013, and the draft letters had been prepared by the Viterra Parties' lawyers

---

2597 In making this finding, it is unnecessary to refer separately to s 4 of the Australian Consumer Law, which was also relied upon by Cargill Australia.

2598 See pars 3335-3337 above.

2599 Including the Refusal of Certain Terms.

2600 See par 3322 above.

2601 See, for example, pars 1373, 1380, 1462-1465 above and annexure C to these reasons.

2602 See pars 1395-1404 above in relation to the 25 October Reply Letter and par 1513 above in relation to the 30 October Reply Letter.

with the knowledge of what Hughes and the other Joe White executives had said to Fitzgerald and Lindner in response to Cargill's queries. In those circumstances, it appeared that Hughes was willing to go along with what others might have considered could be said about the current position without "stretching" the responses.[2603] This included not providing a proper account of what had been occurring historically, and Hughes acceding to the "elision" of referring to customers' needs to avoid the Viterra Parties having to disclose openly and unambiguously that routinely customers' specifications had not been and were not being met for numerous reasons.[2604]

3346 Interestingly (but understandably), when addressing the issue of his suggested changes to the draft in his closing submissions, Hughes did not submit that the contents of the Reply Letters were accurate or a fair account of the Operational Practices.[2605] Rather, those submissions highlighted the fact that he had given far more detail at the meeting held on 23 October 2013, as was the fact.[2606]

3347 In any event, the fact that Hughes gave his imprimatur to the extent that he did in no way altered the glaring inaccuracies and inadequacies of the responses contained in the Reply Letters.[2607] Nor did it alter what Hughes, Youil, Wicks and Stewart stated to the Viterra Parties on or about 23 October 2013 as to the ongoing existence and implementation of the Viterra Practices and the material impact on the Joe White Business that would be likely to result if the Viterra Practices were ceased immediately upon Completion.

X.27 Were the Pre-Completion Representations made in trade or commerce in Australia?

2603 See par 1395 above.

2604 The reference to the "elision" related to Stewart's evidence about the change he recommended to the talking points from "customer specifications" to "customer needs": see par 1353 above. However, that elision was carried through by Hughes to the contents of the 25 October Reply Letter: see par 1399 above. As to concealing the fact that customers' specifications were not being met, see also par 1398 above.

2605 See fn 844 above.

2606 See pars 1279-1288 above.

2607 By way of further example, see pars 1210-1233 above.

3348 There was no issue that if the Pre-Completion Representations were made, they were made in trade or commerce in Australia.

X.28 If the Pre-Completion Representations, or any of them, were made by Mattiske and/or Viterra, is that conduct deemed to be Glencore's conduct under section 139B(2) of the *Competition and Consumer Act*?

3349 In closing submissions, the Viterra Parties accepted that if the Pre-Completion Representations were made by Mattiske or Viterra, or both, that conduct was deemed to be Glencore's conduct.

X.29 If the Pre-Completion Representations, or any of them, were made by Mattiske and/or Glencore, was the conduct deemed to be Viterra's conduct under section 139B(2) of the *Competition and Consumer Act*?

3350 Similar to issue 28, the Viterra Parties accepted that if Mattiske or Glencore engaged in the conduct of making the Pre-Completion Representations, that conduct was deemed to be Viterra's conduct.

X.30 Did Cargill Australia rely upon the Pre-Completion Representations in completing the Acquisition Agreement, including in light of the Sale Process Disclaimers, Acquisition Agreement Liability Terms and the Alleged Industry Practices?

3351 This issue may be dealt with very briefly as the Cargill Parties made no substantive submission to the effect that the Pre-Completion Representations were relied upon by any representative of Cargill. Although the Statement of Claim specifically pleaded that Cargill Australia completed the Acquisition Agreement in reliance upon the Pre-Completion Representations, no particulars of that allegation were given and no witness called by the Cargill Parties gave evidence to that effect. On the contrary, it was made clear to the Viterra Parties, as was the fact, that Cargill was sceptical of and unsatisfied with the responses that had been provided.[2608] This was not surprising

[2608] See par 1521 above.

given the lack of directness in responding to, or the complete avoidance of, the questions raised. More significantly, contrary to the position that might have existed if the Operational Practices had been disclosed before the Acquisition Agreement was entered into, in the absence of a proper understanding of the position, Cargill reasonably considered it had little choice other than to proceed with the Acquisition and assess the situation once it was in control.

3352 Therefore the answer to the question posed is no. However, so there can be no misunderstanding, some of the Viterra Parties' submissions on this issue will be addressed.[2609]

3353 After referring to a large body of evidence, the Viterra Parties submitted that the evidence demonstrated Cargill Australia consciously believed that it could not rely on information provided by the Viterra Parties in October 2013 and therefore did not rely on that information. Contrary to this submission, Cargill made enquiries in October 2013 as a result of disclosures in around mid October 2013 that had not previously been made, on the basis that they would be answered accurately and in good faith. The contents of both the Cargill 25 October Letter and the Cargill 29 October Letter demonstrated that Cargill was requesting important information in a serious manner and expected meaningful and reliable responses. There could be no doubt that this was fully appreciated at the time by the Viterra Parties.[2610]

3354 Again, to the extent the Viterra Parties relied upon submissions concerning Cargill's knowledge of Joe White's operations and the Alleged Industry Practices, such submissions did not assist.

3355 Finally, reference was made by the Viterra Parties to evidence that Cargill was told the information provided was not verified. To the extent that Cargill was told this, it did not follow that Cargill knew information being provided was no more than what the Viterra Parties had been told by Joe White management or that the Viterra Parties were unable to independently verify the relevant information. Whatever might have

2609 See also par 3370 below.
2610 See pars 1234, 1319 above.

been the position with respect to Glencore's lack of knowledge (including that of Mattiske, despite the fact he had been a director of Joe White and Viterra for many months), that did not equate to lack of knowledge on the part of Viterra. Further, Glencore itself had the ability to take the necessary steps to access all relevant employees (who were all employees of Viterra Ltd) to obtain the relevant information; steps which it in fact took (albeit with material deficiencies).

X.31 Was Cargill Australia deprived of the opportunity to obtain properly informed legal advice about whether it was entitled to terminate the Acquisition Agreement prior to Completion, as a result of Glencore or Viterra, or both, making the Pre-Completion Representations?

3356 For the reasons that follow, Cargill Australia was deprived of the opportunity to obtain properly informed legal advice as to whether it was entitled to terminate the Acquisition Agreement in the period leading up to Completion. Further, it was so deprived because of the making of the Pre-Completion Representations in the context in which they were made, as explained below.

3357 *First*, before the Acquisition Agreement was executed, the contents of the Data Room (including information contained in the black box) did not disclose or give notice of the occurrence, let alone the extent, of the Operational Practices. Although none of the Cargill representatives specifically requested any Joe White policy relevant to the analysis and reporting of test results for malt produced and delivered during the Due Diligence, this did not negate the fact that Cargill Australia was not provided access to critical information.

3358 It was entirely reasonable for Cargill to expect that any such policies material to Joe White's operations would have been disclosed in the Data Room.[2611] Further, if the

[2611] See pars 616-619, 1018-1019 above and pars 3382-3383 below. This expectation was not affected by the terms of the Data Room Protocol (see par 650-658 above); the fact that the parties agreed that the Viterra Parties were under no *obligation* to disclose any particular information did not alter the circumstances giving rise to the *expectation*; namely, that it had been agreed that a due diligence would be conducted by Cargill, including in relation to the information provided as part of the sale process, in order for Cargill to conduct its own investigations and analyses to seek to assess the nature and value of the Joe White Business.

questions asked during the Due Diligence had been properly answered,[2612] then the non-disclosure of the Undisclosed Matters would not have occurred. In light of this material non-disclosure, in the context in which it occurred, at the time Cargill Australia agreed to enter into the Acquisition Agreement it was not on notice that Joe White engaged in the Operational Practices; and thus was not on notice of the Viterra Practices.

3359 *Secondly*, prior to receiving regulatory approval from the Foreign Investment Review Board and in the earlier stages of the integration period, Cargill Australia's access to Joe White's information and management team was considerably restricted. To avoid breaching Australian competition laws, Cargill and Joe White were required to operate independently.[2613] A somewhat cautious approach was therefore adopted by Cargill concerning seeking any disclosure of Joe White's sensitive information. Although in early October some Cargill representatives were put on notice of the Operational Practices, the extent to which these pervaded the Joe White Business was not revealed.[2614] Further, Viers' evidence that Cargill was constrained as to what could be discussed with Joe White pre-Completion and before foreign investment approval emphasised the barrier Cargill faced until shortly before Completion in seeking comprehensive information.[2615]

3360 That said, around 15 October 2013, informal notification of the Foreign Investment Review Board's approval was given for the Acquisition to go ahead. Accordingly, such information could have been made more readily available to Cargill; and there was an opportunity for greater disclosure at or shortly after the 15 October Meeting.[2616] As already observed,[2617] on the basis of what was presented, the true extent of the Operational Practices was not revealed, and the opportunity to press

---

2612 See, for example, pars 884, 911, 912, 914-916, 926, 929-930 above.
2613 See pars 1050-1051, 1068 above.
2614 See par 1084 above.
2615 See par 1090 above.
2616 See pars 1102-1119 above.
2617 See par 3359 above. See also pars 1140-1142 above.

further questions was, at least in Viers' mind, curbed due to anti-trust concerns.[2618]

3361 *Thirdly*, following the 15 October Meeting, the internal correspondence within Cargill revealed 2 things: (1) based on an acceptance of what Cargill had been told,[2619] there was an understanding that the Operational Practices had been engaged in at some level; and (2) equally, Cargill was not equipped with enough information to make an informed assessment as to the extent or potential impact of the Operational Practices.[2620] These internal communications prompted Cargill to seek legal advice from Allens. The advice produced promptly on 17 October 2013 was caveated by a declaration that it was "high-level" and "given at a time when [Allens] have only limited information that does not form a sufficient basis for [Allens] to form conclusive views" on the potential issues arising out of the Operational Practices.[2621] Evidently, Allens did not have enough information to take a position on Cargill Australia's right to terminate the Acquisition Agreement. Further, Cargill was in no position to provide the information required given the limited disclosure that had been made to it.[2622] Contrary to the Viterra Parties' submission, the inadequacy of the information available to Allens was not because Cargill chose to withhold from Allens some of the material information of which it was aware.[2623]

3362 *Fourthly*, on 21 October 2013 the Customer Review Spreadsheet was circulated and reviewed by a number of Joe White executives, which recorded that Joe White was not meeting its customers' requirements.[2624] This spreadsheet and the Key Recommendations Memorandum were never disclosed to Cargill before Completion.[2625] If they had been, these documents would have revealed a substantial amount of further material information regarding the Operational Practices and

2623 As to any inferences that might have been drawn because Savona was not called as a witness, see pars 2101-2108 above.
2624 See pars 1211-1232 above.
2625 See par 1232 above.

shown that the Pre-Completion Representations were materially misleading.

3363 *Fifthly*, at the point when Cargill did relay its concerns in respect of the Operational Practices, the responses set out in the 25 October Reply Letter[2626] and the 30 October Reply Letter,[2627] which gave rise to the Pre-Completion Representations, were not satisfactory. The Reply Letters not only provided no further material information to Cargill than what had previously been disclosed, but they omitted very significant details of the full nature and extent of the Operational Practices. Thus, after receipt of the Reply Letters, Allens was in no better position to confirm either way as to whether Cargill Australia had a right to terminate the Acquisition Agreement. Ultimately, consistent with this position, Allens was of the view throughout the period leading up to Completion that more information was required as to the extent of the Operational Practices before any advice could be given in respect of termination.[2628]

3364 Further, at the time Cargill received the 25 October Reply Letter, Cargill representatives were generally uneasy as to the adequacy and completeness of the disclosures.[2629] Furthermore, it was noted that Joe White management was still not available to Cargill for the purposes of obtaining more information, and Viers, in particular, pressed for a second letter to be sent in a bid to gain access to some meaningful details on the Operational Practices.[2630]

3365 As to the 30 October Reply Letter, in addition to the lack of detail, Mattiske concluded by stating that Cargill had been provided with "an appropriate level of access" to Joe White records and current employees and that "from [Completion] Cargill [would] have full and unfettered access to all records and employees of [Joe White]".[2631] This reflected the fact that Cargill did not have full access to the relevant information to that time and that there was an acceptance that disclosure before Completion on the matters Cargill was raising would not be as comprehensive as it would be after

2626 See pars 1405-1406 above.
2627 See pars 1512, 1524-1525 above.
2628 See pars 1275, 1413-1415, 1418-1425, 1529-1530 above.
2629 See pars 1406-1407 above.
2630 See par 1408 above.
2631 See par 1512 above.

Completion. Further, Cargill's representatives, including Eden, Viers and Van Lierde, expressed concern as to the pervasiveness of the Operational Practices and whether what was known provided enough material to terminate.[2632] Clark's evidence in respect of the 30 October Reply Letter confirmed, from his legal perspective, that more information was required in respect of the impact of the Operational Practices on the Joe White Business before Cargill Australia's rights could be determined.[2633] Clark's advice was undoubtedly correct.

3366 Finally, consistent with the conclusions in issue 12 above, Cargill was not sufficiently informed of the Operational Practices so as to have the ability to understand the extent to which these were implemented or adopted, or the extent to which they: (1) resulted in Joe White misstating results in Certificates of Analysis; (2) resulted in Joe White supplying malt contrary to customer requirements and specifications (including secretly using incorrect barley varieties and prohibited gibberellic acid); and (3) impacted upon Joe White's financial and operational performance.

3367 In conclusion, there were insufficient facts disclosed pertaining to the Operational Practices and the extent to which these impacted the Joe White Business with which to instruct Allens comprehensively or at least at a level that would allow Allens to give properly informed legal advice. The limited information led to the result that Allens could not provide any meaningful advice regarding Cargill Australia's right to terminate the Acquisition Agreement.

3368 Notwithstanding Cargill's patent apprehensiveness and uncertainty, Cargill maintained its desire to complete the Acquisition and resolve any issues commercially. However, this desire to complete did not reflect any implacable or overriding intention; rather it was maintained in circumstances where Cargill was not fully informed as to the full nature, extent or materiality of the Operational Practices.[2634] Further, to have decided not to complete, in light of the advice that had

---

2632 See pars 1526-1528 above.

2633 See pars 1529-1530 above.

2634 This observation also relates to views expressed before the Reply Letters were received, as those views were expressed in ignorance of the magnitude of the problems involved.

been given about the lack of relevant information and the exposure to a possible large damages claim, would have been a step highly unlikely to have been taken by a company acting in a commercially sensible way.[2635]

3369 Thus, contrary to the Viterra Parties' submission, it ought not be inferred that Cargill did not properly instruct Allens because Cargill was determined to reach Completion regardless of what they had been told. Both the contemporaneous documentation and the evidence given at trial made it clear that advice was being sought so that the option of termination might be properly considered.[2636] Further, termination would not only have been seriously considered if Cargill was reliably informed about the full nature and extent of the Operational Practices, but would have been directed.[2637]

3370 Before leaving this issue, it should be recorded that whether or not the Pre-Completion Representations were actually made in the terms alleged seems to be of little moment. The real issue on the events leading up to Completion was the substantial failure by the Viterra Parties to properly address the issues that had been raised by Cargill. If the Viterra Parties had responded properly to the issues concerning the Operational Practices (which they would have been able to do if they had chosen to properly investigate and report on the issues then at hand), then Cargill would have been in a position to properly assess, and obtain properly informed legal advice about, whether or not it should have proceeded with the Acquisition in circumstances where the financial and operational performance of the Joe White Business was materially different than had previously been represented.

X.32 If Cargill Australia had obtained properly informed legal advice, would that advice have been to the effect that it was lawfully entitled to terminate the Acquisition Agreement prior to Completion?

X.32.1 Introduction

3371 For the reasons that follow, on the basis of what would have been known in the period

---

2635 See further fn 2638 below.
2636 See pars 1179-1183, 1275, 1417 above.
2637 See par 1183 above. This issue is discussed further at issue 33 below.

before Completion if the Viterra Parties had responded more responsively and comprehensively, it is more likely than not that Allens would have concluded that Cargill Australia was entitled to terminate the Acquisition Agreement because of contraventions of the Australian Consumer Law.[2638]

3372 In answering this issue, the court is considering a counterfactual, where certain information would have been disclosed after the parties had entered into the Acquisition Agreement but before Completion. Based on the facts as found, if proper disclosure had been given, the instructions to Allens would have included that the Operational Practices existed, and further, that they were engaged in routinely without disclosure to Joe White's customers, so as to comprise the Viterra Practices.[2639] The court is required to determine whether Allens, sufficiently informed of the material information relating to the Viterra Practices before Completion, would have concluded there was a right to terminate.

X.32.2 The allegations

3373 Before dealing with the substantive matters that arise, to identify precisely how the issue arose it is necessary to spend a moment on the pleadings. In the Statement of Claim the following was alleged:

> (a) As a result of Glencore and/or Viterra making the Pre-Completion Representations, Cargill Australia was deprived of the opportunity to obtain properly informed legal advice regarding whether it was entitled to terminate the Acquisition Agreement prior to Completion;
>
> (b) If Cargill Australia had received properly informed legal advice to the effect it was lawfully entitled to terminate the Acquisition Agreement, it would have exercised its right to do so.

2638 To be clear, it is also likely that any such advice would have included a warning that, if Cargill Australia was to terminate, such action would be coupled with the attendant risk that Viterra would not accept the termination and would sue for damages for an alleged wrongful termination. However, it would also be likely that such a warning would have been coupled with advice that Cargill Australia would have been able to defend any such claim successfully in light of the seriously misleading conduct that had been engaged in. As to the consequences of wrongfully seeking to terminate a contract, see *Mann v Paterson Constructions Pty Ltd* (2019) 267 CLR 560, 575-577 [9]-[12] (Kiefel CJ, Bell and Keane JJ, dissenting); *Foran v Wight* (1989) 168 CLR 385, 396.2 (Mason CJ), 430.2-432.4 (Brennan J), 438.8 (Deane J), 441.7-442.3 (Dawson J); *Ogle v Comboyuro Investments Pty Ltd* (1976) 136 CLR 444, 453.8 (Barwick CJ); *Carr v JA Berriman Pty Ltd* (1953) 89 CLR 327, 343.7 (Fullagar J, with whom Dixon CJ, Williams, Webb and Kitto JJ agreed).

2639 See issue 10 above.

As may be seen, there was no express allegation that Cargill Australia would have received advice that it was entitled to terminate. Undoubtedly, so much was implicit and hence this issue was identified in the terms that it was.

3374 The particulars to these allegations bear this out. They included that Cargill Australia was deprived of the opportunity to instruct its lawyers as to the existence and extent of the Undisclosed Matters and the reasons why the Financial and Operational Performance Representations were false. It was stated that as a result it was not able "to obtain legal advice regarding whether it could terminate the Acquisition Agreement without exposing itself to an unknown risk of significant liability in circumstances in which those matters existed". Further, the implicit allegation was addressed in the particulars to subparagraph (b). After referring to the Undisclosed Matters and the alleged falsehood of the Financial and Operational Performance Representations, it was stated that it was therefore likely that Clark would have advised that Cargill Australia could terminate the Acquisition Agreement without exposing itself to any unknown risk of significant liability.

3375 Notably, neither the allegations nor the particulars supporting them sought to identify the legal basis upon which it was alleged Allens would have advised Cargill Australia of its right to terminate. In the Defence, the Viterra Parties simply denied the entirety of the allegations without further elaboration.

3376 The state of the pleadings might explain why, in the respective closing submissions, the matters raised were somewhat mismatched. The Cargill Parties made submissions concerning rights of rescission at general law and in equity based on misrepresentations having been made, and then separately addressed the rights Cargill Australia had arising from the Australian Consumer Law. In contrast, the Viterra Parties referred to common law principles regarding termination rights and also referred to specific clauses in the Acquisition Agreement (which were not the subject of submissions by the Cargill Parties).

3377 Plainly, both on the pleadings and on the issue as articulated, it was left open as to the

precise basis upon which it was alleged Allens might have given advice to Cargill Australia in October 2013 if it had been properly instructed as to the relevant facts. Naturally, it was only necessary for Cargill Australia to establish a single basis upon which Allens might have based its advice as to the right to terminate. In light of the view that I have formed, the most efficient manner to deal with this issue is to address the issues that arise under the Australian Consumer Law first.

X.32.3 Analysis

3378 In a situation where the material relevant to the Operational Practices was substantially disclosed after the Acquisition Agreement was entered into but before Completion, it would have been clear that the manner in which the Joe White Business was being conducted was fundamentally inconsistent with what had been represented, including with respect to the material inaccuracy of the the Financial and Operational Performance Representations,[2640] the Warranty Representations[2641] and the Pre-Completion Representations.[2642] In short, the true situation was far removed from critical representations made (both expressly and impliedly) in relation to the Joe White Business, including in the Information Memorandum,[2643] the Management Presentation Memorandum,[2644] the Acquisition Agreement,[2645] and the Reply Letters.[2646] This position alone would have resulted in Allens observing that there was something completely amiss between what had been represented before Completion and the actual financial and operational features of the Joe White Business. Therefore, it was highly likely that in these circumstances Allens would have advised of the probability that section 18 of the Australian Consumer Law had been contravened; consequentially enlivening a host of available remedies, including termination.[2647]

2640 See issue 15 above.
2641 See issues 48-53 below.
2642 See issue 25 above.
2643 See par 470 above.
2644 See par 711 above.
2645 See issues 48-53 below.
2646 See pars 1405, 1512, 1524 above.
2647 Section 237 provides a court may impose any order the court thinks appropriate on the application of an injured person (being a person who has suffered, or is likely to suffer, loss or damage) because of

3379 In my view, nothing in the advice Allens in fact gave in October 2013, on the limited information available,[2648] suggested that such advice would not have been given. This was particularly so in light of the material misrepresentations that had been made and the very significant consequences Cargill would have anticipated for the Joe White Business if Cargill Australia was to acquire the Joe White Business and customer contracts were to be adhered to.[2649]

3380 Further, if the existence of the Viterra Practices had been disclosed to Allens in a manner which accounted for their true nature and extent, there would have been sufficient information available for Allens to give properly informed advice on termination. In submitting to the contrary,[2650] the Viterra Parties referred to the evidence of Clark about what he required before he could form a view on whether or not Cargill Australia had a right to terminate. These included the purpose for which Certificates of Analysis were used, which customers were affected, how long the Viterra Practices had been engaged in, the quantities involved, the exact level of tolerance accepted in respect of Certificates of Analysis and the physical capacity of Joe White's malting facilities to produce malt to meet customer specifications.[2651] Clark also gave evidence that no particular issue was determinative and that it was difficult to provide a single set of fact patterns that he would have needed in order to advise. Clark gave further evidence that if there were such a substantial impact on production that the Joe White Business could not fulfil customer contracts, that would have been highly determinant.

---

conduct in contravention of Chapter 2, 3 or 4 of the Australian Consumer Law. The order must be for the purpose of compensating for loss, or preventing or reducing the loss or likely loss. Chapter 2 includes the prohibition on misleading or deceptive conduct: see further par 3385 below.

2648 See, for example, pars 1171-1176, 1178-1181, 1184 above.

2649 See, for example, par 3316 above.

2650 The Viterra Parties also made submissions based upon clauses referred to in the Allens Letter of Advice, and contended that none of them could have been considered an essential term the breach of which would have given rise to a right to terminate. It is unnecessary to address these matters.

2651 See also pars 1189-1191 above. Further, based on Clark's evidence as referred to in these paragraphs, the Viterra Parties submitted Clark had a broad understanding of the reality of the practices at Joe White and did not consider any contractual term would justify termination. It suffices to say that the extent of Clark's understanding of the Viterra Practices in October 2013 was materially limited and did not allow him to form any meaningful opinion on Cargill Australia's right to terminate (as he expressly stated at the time).

3381 Based on this and other like evidence, the Viterra Parties submitted that Clark would have needed to know a great deal more than it would have been possible to learn before Completion. They further submitted that in the limited time of the "7 days" available after receipt of the Cargill 22 October Letter, it would not have been possible for the Viterra Parties to identify and disclose everything that Clark required. Even putting aside the evidence of Mattiske that he might have paid a lot more attention to the issues that confronted him at the time,[2652] the evidence overwhelmingly indicated that within 48 hours of receipt of the Cargill 22 October Letter, the Viterra Parties had at their disposal information from the Joe White executives which would have enabled substantial disclosure to Cargill of the existence and extent of the Viterra Practices, including the existence of the Viterra Policies. If the Viterra Parties had been minded to provide a full and frank response to the issues that had been raised, such matters could have been disclosed readily and comprehensively.[2653] To the extent that the 30 October Reply Letter suggested there was limited time to explore the matters raised,[2654] the limitations were not such that the Viterra Parties were precluded or materially impeded from providing, in substance, the details of the Viterra Practices, at least sufficiently to have enabled Cargill to have properly instructed Allens so as to have enabled Allens to give legal advice on Cargill Australia's right to terminate the Acquisition Agreement. For completeness, it must be observed that there were between 8 to 10 days between 22 October 2013 and the date for Completion on 31 October 2013 (depending on whether 22 October 2013 or 31 October 2013 or both were or were not included in the total days), not 7 days as submitted by the Viterra Parties.

3382 Further, it is likely Allens would have advised that the Viterra Parties' ongoing non-

---

2652 See par 1485 above.

2653 See, for example, pars 1211, 1276-1311, 1324, 1373 above.

2654 See pars 1512, 1524 above. See also par 1504 above. Ultimately, it appeared that very little turned on the amount of time available. Based on certain assumptions that did not reflect the facts (see fn 4551 below), Mattiske's evidence in re-examination was to the effect that if he had been alerted of matters immediately after the Acquisition Agreement had been signed rather than on 22 October 2013 he would have provided the same responses as those set out in the Reply Letters in any event. In other words, according to Mattiske, any absence of time pressure that the Viterra Parties might have been experiencing in late October 2013 would not have made any substantive difference because Mattiske's position was that if he had had the extra time he would not have responded any differently.

disclosure of the Viterra Practices was contrary to a reasonable expectation of Cargill that, in the circumstances, certain disclosures would have been made.[2655] Such disclosures ought to have included information material to the operations of the Joe White Business.[2656]

3383 This expectation arose for 2 key reasons.[2657] *First*, because the Operational Practices were so inextricably intertwined with the Joe White Business that they vitally affected and underpinned its financial and operational performance.[2658] *Secondly*, in the context of a complex commercial transaction of significant value, the Viterra Parties held a considerably advantageous position when compared to Cargill with respect to the knowledge of the Operational Practices.[2659] In such circumstances, with an obvious disparity between the position of the parties, in light of the representations that had been made it was entirely reasonable to expect that matters which greatly affected the Joe White Business, such as the Operational Practices, would be disclosed prior to its sale.[2660]

3384 Furthermore, for reasons discussed elsewhere,[2661] the existence of exclusion or limitation clauses would not have thwarted Cargill Australia's right to terminate. Allens expressly advised that these clauses would not preclude Cargill Australia from exercising its rights if the Australian Consumer Law had been contravened.[2662]

3385 In all the circumstances, it is likely Cargill Australia would also have been advised it could terminate by its own action and further or alternatively seek to obtain a remedy

under section 237 of the Australian Consumer Law.[2663] In order to be able to obtain a remedy under this section, including with respect to termination, loss or likely loss, a person is required to establish the loss or damage suffered, or the likely loss or damage, was because of the misleading conduct the subject of the claim.[2664] Had Allens been provided with all of the relevant information pertaining to the Operational Practices, there would have been no need for a laborious analysis. On a preliminary view, patently,[2665] without the continued implementation of the Viterra Practices, it would have been plain that Joe White faced substantial erosion to its business productivity and, consequently, its value. In this proceeding, it has been established that Joe White was confronted with many disadvantages and adverse consequences in relation to its plant operations, production capacity and relations with its customers following the cessation of the Viterra Practices.[2666] In short, it was highly probable that Allens would have advised (if such advice were even necessary in light of the view Cargill itself would have formed) that loss was likely to be suffered if the Acquisition Agreement were to proceed to Completion.

X.32.4 Conclusion

3386 In summary, if Allens had been properly informed of the material facts, it would have advised Cargill Australia that it could lawfully terminate the Acquisition Agreement because of contraventions of the Australian Consumer Law. Given this conclusion, it is unnecessary to consider separately what advice Allens would have given concerning the right to terminate at common law more generally.[2667]

X.33 If, prior to Completion, Cargill Australia had received advice to the effect that it was lawfully entitled to terminate the Acquisition Agreement, would

2663 Remedies available include an order declaring a contract void, void from a point in time or void *ab initio*: s 243(a).

2664 *Marks v GIO Australia Holdings Ltd* (1998) 196 CLR 494, 515 [54] (McHugh, Hayne and Callinan JJ).

2665 See, for example, pars 1144, 1146 above.

2666 In relation to the plant and operation changes see, for example, pars 1460, 1465, 1784-1787, 1824-1829 above. See also issues 10.3, 10.4 above.

2667 The Acquisition Agreement did not contain any relevant express right to terminate, however a right to terminate may still exist in these circumstances: see, for example, *Koompahtoo Local Aboriginal Land Council v Sanpine Pty Ltd* (2007) 233 CLR 115, 136-139 [47]-[49] (Gleeson CJ, Gummow, Heydon and Crennan JJ).

it have exercised its right to do so?

X.33.1 The allegation

3387 On the premise that Cargill Australia had received advice that it was able to lawfully terminate the Acquisition Agreement (which premise carries with it that Allens had been properly instructed and therefore Cargill Australia was also aware of the relevant circumstances), the evidence demonstrated that Cargill Australia would have terminated before Completion.

X.33.2 The Viterra Parties' overarching submissions and general responses to them

3388 In opposing such a finding being made, the Viterra Parties made a number of related submissions in contending the counterfactual evidence of the Cargill witnesses ought not be accepted, particularly in light of its hypothetical nature.[2668]

3389 *First*, it was submitted that Cargill Australia was not interested in termination because of Cargill's intense keenness to acquire Joe White. This submission was also made on the basis that Cargill proceeded to Completion despite, so it was contended, having knowledge of the Alleged Industry Practices and the degree to which Joe White engaged in these or similar practices. It suffices to say that this submission concerning Cargill's knowledge was contrary to the facts as found.[2669] Further, the suggestion that Cargill Australia intended to complete the Acquisition Agreement come what may has also been rejected.[2670] The various examples given by the Viterra Parties of evidence indicating Cargill intended to complete in no way demonstrated that, if Cargill had known the extent of the issues relating to the Viterra Practices, it would have effectively ignored them and proceeded with Completion.

3390 *Secondly*, as an extension of the first submission, the Viterra Parties submitted Cargill

2669 See issue 13 above.

2670 See pars 3368-3369 above.

was not concerned with operational matters. They contended the Acquisition was strategic and "had nothing to do with operational aspects" of the Joe White Business. For similar reasons in response to the first submission, this cannot be accepted. Although the investment was undoubtedly strategic, the evidence demonstrated that the strategy was not being pursued to the exclusion of operational matters.[2671] Further, Cargill required that those involved in Project Hawk complete an independent evaluation so that the Joe White Business could be valued before any funds were committed. This could not have been performed without a proper consideration of operational matters.

3391 *Thirdly*, as an extension to the first and second submissions, the Viterra Parties submitted that Cargill believed a failure to secure an acquisition of the Joe White Business would have materially harmed its global malt business. This submission accurately encapsulated Cargill's position if the Joe White Business was in fact, or at least something akin to, what it had been represented to be. The purchase of the Joe White Business had been anticipated as the last step in Cargill, Inc establishing a successful global malt business.[2672] There was no question that this was a priority in 2013 leading up to the Acquisition Agreement, albeit not as high a priority as it had previously been considered to be.[2673] However, for the same reasons stated in response to the first of the preceding submissions on this issue, such a position did not amount to Cargill having an intention to purchase the Joe White Business regardless of its manner of operation, its value or the ability of Cargill to conduct a business consistently with the guiding principles outlined in the Cargill Code.

3392 *Fourthly*, the Viterra Parties submitted that if Cargill intended to acquire a business that did not engage in the Operational Practices it would have expressly provided for that outcome in the Acquisition Agreement. This was put on the basis that Cargill was aware of the prevalence of the Alleged Industry Practices. It was contended that because Cargill made no attempt to negotiate any such protection this reflected the

---

2671 See, for example, pars 622, 705-707, 823-824, 839-857, 976, 3200, 3204 above and pars 3750, 3942 below.
2672 See pars 1, 301 above.
2673 See par 707 above.

fact that Cargill's interest in the Joe White Business "had nothing to do with the [Joe White Business'] use or non-use of any particular operating practices". This submission was premised on the Viterra Parties establishing the existence of the Alleged Industry Practices, which they have failed to do.[2674] Further, as stated in response to the previous submission, to contend that Cargill's interest in Joe White, and its position in deciding whether to make a bid and at what amount, had nothing to do with operational matters ignored a substantial body of evidence to the contrary. Furthermore, the submission appeared to assume that the Warranties were not breached despite the existence of the Viterra Practices, which is contrary to what has been found.[2675] Moreover, as discussed below,[2676] if Cargill had believed or had reasonable grounds to suspect that the Operational Practices existed to any significant degree before the Acquisition Agreement was entered into, it would not have been interested in negotiating any form of warranty to cover the situation as it would not have agreed to enter into an acquisition agreement.

3393 *Fifthly*, the Viterra Parties submitted that what occurred between 9 and 22 October 2013 demonstrated the position Cargill would have adopted. It was contended that Cargill engaged in open and forthright discussions with the Joe White executives as to how Joe White was operating and "even with all this knowledge" Cargill did not seek to terminate the Acquisition Agreement. As discussed elsewhere,[2677] at no time before Completion did Cargill have a proper understanding of the Viterra Practices such that it could have known (or obtained advice to the effect) that it was legally entitled to terminate the Acquisition Agreement.

X.33.3 Cargill's corporate structure and the counterfactual evidence

3394 As explained above,[2678] the structure of Cargill, Inc was such that if any of the Cargill leadership team, a platform leader or a business unit leader decided that a transaction should not proceed notwithstanding it had been approved by the board of Cargill, Inc,

---

2674 See issue 13 above.
2675 See issues 39-47 below.
2676 See pars 3396-3412, 3748-3759 below.
2677 See issues 12, 21, 24, 25, 30-32 above. See also pars 1195-1198, 1206, 1414-1415 above.
2678 See par 299 above.

then that decision to desist would be implemented. Each of Conway and Koenig (both members of the Cargill leadership team), Van Lierde (a platform leader) and Eden (the business unit leader) gave evidence in substance that they would have terminated or recommended termination of the Acquisition Agreement if relevant facts about the Viterra Practices were known and advice had been received from Allens that Cargill Australia could lawfully terminate. Further, Hawthorne, Engle and Viers gave evidence that they would have recommended to the decision-makers to terminate. De Samblanx also gave relevant evidence of what he would have done during the Due Diligence if certain matters had been discovered.[2679]

3395 The counterfactual evidence was adduced by the Cargill Parties during the evidence in chief of a number of witnesses. As the propositions put to each of the key witnesses on this issue were slightly different (and the Viterra Parties' submission in response also differed), it is necessary to refer to the key witnesses' evidence on this topic individually.

3396 Conway's evidence was that if he knew before Completion, in substance, that the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice were being engaged in then Cargill would not have proceeded. (The 4 propositions put to Conway were that he was to assume he had been informed:[2680] (1) the Reporting Practice was engaged in so as to alter actual results to report to customers that malt complied with specifications when in fact it did not; (2) the Varieties Practice was customary and widespread; (3) the Gibberellic Acid Practice was engaged in "notwithstanding the customer's express specification" that gibberellic acid not be used; and (4) the customers had not been informed of the practices.) Conway explained if Cargill had known the true position before 4 August 2013, Cargill Australia would never have signed the Acquisition Agreement, because of these practices and their potential to have significant impact on the value of the Joe White Business from the perspective of known unknowns and unknown unknowns,

2679 See pars 905-906 above.

2680 The terms "Reporting Practice", "Varieties Practice" and Gibberellic Acid Practice" were not used when putting these propositions to the relevant witnesses, but it is convenient to use these terms in summarising the evidence for present purposes.

including the reaction of Joe White's customers. Further, Conway gave evidence that Cargill had sent a full team down to do a due diligence and these things had not come out beforehand, which would have raised queries about the culture of Joe White and that it would have been a major red flag. Conway stated his position would have been the same both before the Acquisition Agreement was signed, and after the Acquisition Agreement had been signed but before Completion.

3397 The Viterra Parties noted the differences between how the 3 Operational Practices were presented to Conway. They contended that he was asked to assume: (1) in relation to the Varieties Practice, that it was customary and widespread; (2) for the Gibberellic Acid Practice, that it was customary;[2681] and (3) with respect to the Reporting Practice, that it existed without any assumption as to its extent. In these circumstances, it was submitted that the evidence left open the possibility that Conway gave his evidence on the basis that the Reporting Practice was neither customary nor widespread and that the Gibberellic Acid Practice was customary but not widespread. Thus, it was contended that the evidence of Conway was more ambiguous than the evidence given by other witnesses (referred to below) and accordingly was of even less assistance to the court.[2682]

3398 Contrary to these submissions, the fact that Conway gave evidence in these terms meant it was clear that if his evidence were accepted then there was no way Cargill would have proceeded to Completion if it had been properly informed of the Viterra Practices. In short, his evidence was that if he had been told of circumstances that were less obnoxious than the Viterra Practices themselves, then he would have

---

2681 This submission in relation to gibberellic acid was put without a reference to the transcript being provided. The relevant passage in the transcript is summarised in the preceding paragraph above and there was no reference to the "practice of adding gibberellic acid during the malting process, notwithstanding the customer's express specification that gibberellic acid should not be used" being "customary".

2682 To elaborate, the Viterra Parties submitted that the absence of any reference to "customary" or "widespread" (in contrast to the Varieties Practice) gave rise to the "potential inference" that the assumption put to Conway was that the Reporting Practice was neither customary nor widespread. No such inference could reasonably have been drawn, and there was nothing in Conway's evidence to suggest he understood the proposition in such a manner. The proposition clearly put was that the Reporting Practice applied to all Certificates of Analysis (as was the fact).

decided not to proceed. It obviously must follow that if the true position had been disclosed his position would have been the same, though presumably more emphatic.

3399 Further, as a purported example of the fifth submission referred to above,[2683] the Viterra Parties referred to Conway's conduct in October 2013 and submitted that the evidence of his actual reaction at this time should be preferred by the court to the evidence he gave at trial. The difficulty with this submission was that in October 2013 Conway (and all others at Cargill) did not have a proper understanding of what was occurring. Then, having made enquiries in the context of a binding agreement being in place, Cargill was told that its concerns were without foundation. Conway's reaction in such circumstances was of little probative value in determining what Conway would have done if he had been told the Operational Practices definitely existed in the manner put to him in the witness box, much less what his reaction would have been if he was actually told about the full extent of the Viterra Practices.

3400 Furthermore, insofar as the propositions put to Conway (and other witnesses) included a reference to a practice being "customary", they submitted that that term was vague and ambiguous in relation to the extent to which it suggested the relevant practice occurred. They also submitted that "widespread" failed to address the questions of materiality or the extent to which the witness was to assume that each affected customer was in fact affected. While neither of these terms were capable of conveying specificity in relation to the precise prevalence of the Operational Practices or the exact impact on customers, such matters were of little moment. Both terms are of common parlance and readily understood. There was no suggestion of any ambiguity in this regard when the questions were put to the witnesses.[2684] As the Cargill Parties submitted, customary in this context meant it was the custom of the Joe White Business to engage in the conduct and was an appropriate synonym. In addition, Cargill Australia's case did not require the implementation of the

---

2683 See par 3393 above.

2684 Also authorities indicate that customary is a well-understood term in the commercial sphere: see, for example, *Byrne v Australian Airlines Ltd* (1995) 185 CLR 410, 423.4-424.2 (Brennan CJ, Dawson and Toohey JJ); *Con-Stan Industries of Australia Pty Ltd v Norwich Winterhur Insurance (Australia) Ltd* (1986) 160 CLR 226, 236.2-237.4 (Gibbs CJ, Mason, Wilson, Brennan and Dawson JJ).

Operational Practices to be established at any precise level. And although the case prosecuted was based on establishing the Operational Practices were routine (presumably because that was the language used by some of the Joe White executives in 2013), they could also be aptly described as customary or widespread; indeed in relation to the implementation of the Reporting Practice, the procedure in place was universal.

3401 Koenig's evidence was that if he knew before Completion that, in substance, the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice were being engaged in customarily then Cargill would have brought the contract to a screeching halt. (The 4 propositions put to Koenig were that he was to assume he had been informed: (1) the Reporting Practice was a customary practice; (2) the Varieties Practice was a customary practice; (3) the Gibberellic Acid Practice was engaged in even where the customer prohibited its use; and (4) the customers were not told of the practices.) Koenig explained that Cargill would not have been interested in the Joe White Business if it could not be operated successfully in line with the guiding principles of the Cargill Code, and further that there would have been no way to provide an accurate and reasonable valuation of the Joe White Business, including it would have been very difficult to put a valuation on what forward projections could look like.

3402 The Viterra Parties acknowledged that Koenig was a member of the Cargill leadership team, but submitted he otherwise did not have any particular responsibility for Cargill Malt. In a similar vein, they submitted the involvement he had in this transaction was at the request of others and that he was not a relevant decision-maker. They submitted Koenig's evidence concerning the inability to operate in accordance with the Cargill Code should be rejected on the basis that there was nothing to suggest Joe White could not be operated in accordance with Cargill's guiding principles. They also referred to his evidence that he could not recall Conway raising issues with him in October 2013 and that there was no evidence that he took any steps to stop the transaction despite what occurred in October 2013. In these circumstances, it was submitted his evidence

should not be accepted.

3403 Dealing with the last point first, similar to the position with Conway, the position Koenig adopted in October 2013 was of little probative value when the true facts had been concealed from Cargill. In relation to the submission concerning the Cargill Code, Koenig's evidence was unchallenged. No doubt, in theory the Joe White Business could have been conducted in accordance with the Cargill Code, but implicit in Koenig's evidence was that it could not be run successfully or at least at an acceptable level. As the matter was not explored during his cross-examination, this evidence will not be rejected on a supposition as to what was theoretically possible. As to the other matters raised, none of them detracted from the fact that Koenig was a very senior officer of Cargill who was taking an interest in the possible purchase of Joe White and who had the authority to direct that Cargill withdraw from the transaction. Further, none of Koenig's evidence on this issue was the subject of any cross-examination.

3404 Van Lierde's evidence was that if he knew before Completion, in substance, the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice were engaged in customarily and on a widespread basis then Cargill "for sure" would have terminated the process and would not have continued with the Acquisition. (The 4 propositions put to Van Lierde were that he was to assume he had been informed: (1) the Reporting Practice was a customary and widespread practice; (2) the Varieties Practice was a customary and widespread practice; (3) the Gibberellic Acid Practice was engaged in where the customer prohibited its use and the practice was widespread; and (4) the customers were not told of the practices.) Further, his evidence was that if any of these practices were known before the Acquisition Agreement was entered into, then Cargill would have terminated the process of acquiring Joe White. Van Lierde's evidence was that if the Reporting Practice was disclosed before 4 August 2013, the Joe White Business would not have been acquired for multiple reasons, but first and foremost because it would have been very evident that the conduct was completely in breach of Cargill's guiding principles under the

Cargill Code, which Cargill strongly adhered to. He also said it would have been impossible for Cargill to have an idea of the ramifications in terms of the impact on Cargill's existing malt business. When asked a broader question about the Operational Practices more generally, Van Lierde's evidence was that the moment Cargill was faced with issues that were in breach of Cargill's guiding principles the conclusion would have been reached that Joe White would not be a good fit to be operated by Cargill no matter how important the target might have been. In addition, Van Lierde's evidence was that if Eden had expressed a view to him that the transaction should be stopped, he would have supported Eden's position and informed Conway of the situation.

3405 The Viterra Parties submitted this evidence of Van Lierde should be given no weight because it amounted to a categorical rejection of proceeding to Completion, which was contended to be uncommercial. They submitted that, like Conway, Van Lierde's evidence was inherently unlikely as he suggested he would never have contemplated any "normal commercial action", such as seeking further information or a reduction in the purchase price. It was submitted his evidence was strongly coloured by the benefit of hindsight. Further, in light of Van Lierde's involvement in October 2013 it was contended he must have known there was at least a material risk of the existence of practices akin to those described to him during his evidence. As there was a complete lack of evidence of Van Lierde's reaction in October 2013 resembling his hypothetical evidence, it was contended his evidence should be rejected.

3406 With respect to Van Lierde's evidence about the impact on Cargill's existing malt business and the Cargill Code, the Viterra Parties invited the court to consider how Cargill actually conducted the Due Diligence. They submitted if these 2 factors were really so important, such that they could have led to the transaction being immediately terminated, then that would have been reflected in the manner in which the Due Diligence was carried out. Instead, so it was contended, the Due Diligence was not thorough, careful or diligent and was inconsistent with Van Lierde's "contrived counterfactual answers".

3407 Little need be said concerning Van Lierde's evidence beyond what has already been said in relation to Conway and Koenig. Further, with respect to the submission about the manner in which Cargill conducted the Due Diligence, it has been found that it was carried out diligently and with reasonable care.[2685]

3408 Eden's evidence was that if he knew before Completion any of, in substance, the Reporting Practice, the Varieties Practice or the Gibberellic Acid Practice was being engaged in customarily and on a widespread basis, he would have recommended to his direct superior, Van Lierde, that the Acquisition Agreement be terminated. Eden gave evidence that if he had been informed of the Operational Practices before he had made a recommendation to the food ingredients and systems platform, he would have recommended Cargill stop the process. (The 4 propositions put to Eden were that he was asked to assume he had been informed: (1) the Reporting Practice was a customary and widespread practice; (2) the Varieties Practice was a customary and widespread practice; (3) the Gibberellic Acid Practice was engaged in where the customer prohibited its use and the practice was widespread amongst those that prohibited its use; and (4) the customers were not told of the practices.) Eden also gave extensive evidence as to why each of these matters would have been of significance to him. These included the serious breach of trust with customers, that such conduct would have been dealt with very seriously under the guiding principles in the Cargill Code,[2686] together with the costs of remedying the situation and the implications to the value of the Joe White Business.

3409 The Viterra Parties submitted the hypothetical scenario put to Eden was very complex and contrived, and that Eden was dogmatic in responding. They emphasised Eden's keenness in 2013 to have Cargill buy the Joe White Business and contended that Eden had probably made a mistake about his assessment of the Joe White Business. They submitted his evidence on what he would have done was motivated by him not wanting to accept the blame for what occurred.

2685 See issue 80 below. See also fn 2371 above.

2686 See also par 1094 above.

3410 They also sought to attack Eden's evidence concerning customers taking the requirement to use specific barley varieties very seriously, suggesting it was concerned with the position of maltsters and that the underlying premise of this evidence had not been established. Reference was made to some of Eden's notes in 2013, including referring to the investment being very strategic and the absence of a focus on reputation. They suggested these matters undermined the credibility of Eden's evidence on this topic.

3411 In addition to the matters already stated above concerning the other key witnesses on this issue, the particular matters raised by the Viterra Parties concerning Eden did not take the matter any further. Eden's evidence concerning the importance of barley varieties to brewers who specified particular varieties were required to be used was supported by a large body of other evidence.[2687] His evidence during his cross-examination about his reaction to Joe White secretly substituting varieties was compelling and not challenged.[2688] Further, Eden's obvious enthusiasm in 2013 did not mean that he would have acted without any business acumen and would have simply ignored the seriousness of the occasion if the Operational Practices had been disclosed to him in a manner that indicated that Joe White's customers were being deceived on an ongoing basis to a significant degree. Furthermore, as Eden explained in his evidence, part of the reason why Cargill's investment in Joe White was strategic was because of the supreme reputation of Australian malt.[2689] He said that if it became known that that reputation was not soundly based then the strategic element of the recommendation would not have existed anymore.[2690] Moreover, Eden's conduct in

---

2687 See pars 18, 1676, 1679, 1711, 1744, 1814, 1816, 1834-1835, 2455, 2499 above and 3724 below.

2688 See par 1146 above. In the Viterra Parties' closing submissions, it was suggested that Eden "laced his evidence" with language like "shocking" and "cheating". On the occasions where such language was used it did not strike me as being inappropriate given the subject matter he was addressing. Significantly, "cheating" was the way Eden referred to penciling in discussing the issue in 2013: see par 1091 above.

2689 See par 301 above.

2690 The Viterra Parties submitted this evidence should be rejected because no mention of Australia's reputation was referred to in his contemporaneous notes, which were focused on demand, margin and geographical location. Any absence of a contemporaneous note (compare Eden's notes of 9 July 2013 referring to "Aussie dream" and Australia being the "2nd sweet spot": par 845 above) was no basis to find that Eden's evidence on this point was completely fabricated, even more so as the evidence of such a view appeared entirely rational.

2013 was not consistent with the Viterra Parties' submission that the Due Diligence was unimportant because of the strategic benefits. Eden was keen to ensure Cargill had sufficient time to conduct a proper Due Diligence.[2691]

3412 By reason of Cargill, Inc's corporate structure, if the evidence of any of Conway, Koenig, Van Lierde or Eden were accepted, then the Cargill Parties would have established that the Acquisition Agreement would have been terminated if the relevant advice had been received. In fact, I accept the evidence of each of these witnesses. Not only was each of them a credible witness more generally, but their evidence to the effect that they would not have proceeded in the circumstances, and the reasons they gave, made perfect commercial sense. Without being exhaustive, if the disclosure of the Operational Practices in the manner put to these witnesses in the various propositions summarised above had occurred in 2013 (either before the Acquisition Agreement was entered into or shortly before Completion was due to occur),[2692] this would have indicated to each of them: (1) the Joe White Business had been materially misrepresented; (2) there could be no way of knowing how Joe White's customers would react if the true position were disclosed; (3) any attempt to value the Joe White Business would be based on information which could not be relied upon, including in relation to matters relevant to synergies;[2693] (4) Cargill would have been associating itself with a business engaging in improper practices if it allowed the transaction to proceed; (5) Cargill intended to continue to employ those managing the

---

2691 See fn 602 above. Further, the records concerning the Data Room showed that Eden accessed it on 10 separate occasions (though Eden could not recall doing so).

2692 To be clear, to the extent not touched upon already, the evidence of Conway, Koenig, Van Lierde and Eden (concerning whether or not Cargill Australia would have entered into the Acquisition Agreement if they had learned about, speaking broadly in summarising their evidence, the Operational Practices or practices of that nature being conducted at a significant level before 4 August 2013) was the same in substance. Universally, their evidence was that the transaction would not have gone ahead. The Viterra Parties submitted this evidence was not relevant to causation because it was Page who made a decision on 2 August 2013 to proceed with the Acquisition Agreement. The contention that it was Page alone who made this decision has been rejected: see pars 3799, 3867 below. In any event, even if this finding is incorrect, any such decision by Page would not have resulted in the Acquisition Agreement being entered into for $420 million if Cargill had known of the Viterra Practices on or before 4 August 2013 as each of Conway, Koenig, Van Lierde and Eden would have advised that the transaction should not proceed, and, because of the corporate structure and decision-making process of Cargill, that advice from any 1 of them would have been acted upon.

2693 Synergies were a large component of the value of Joe White as assessed by Cargill.

Joe White Business who had engaged in these practices; (6) there could have been real problems implementing the Cargill Code; (7) the approval given by the board on 9 July 2013 would have been based on materially misleading information; and (8) there could be no real means of ascertaining how Joe White would perform if it were to operate in a proper manner without the use of the Operational Practices.[2694]

3413 As a result of the findings made above, it is unnecessary to specifically address the Viterra Parties' submissions made in relation to Hawthorne, Engle, Viers and De Samblanx on this issue. Suffice to say that, for similar reasons to those expressed above, the submissions of the Viterra Parties were also unpersuasive in relation to these 4 witnesses.

X.33.4 The background to Conway being called and his unchallenged evidence

3414 Before leaving this topic, the significance of Conway's evidence should be alluded to. No witness statement was filed on behalf of Conway by the Cargill Parties before the trial commenced. In their opening, the Viterra Parties emphasised this fact. They submitted that Conway had made pivotal decisions concerning the Acquisition and suggested that Cargill was so sensitive about this that Conway's name (together with Page's) was not mentioned in the Cargill Parties' opening. Further, during Eden's cross-examination it was put to him by the Viterra Parties' senior counsel that Conway was the primary decision-maker as to what course Cargill should have adopted in late October 2013.[2695] Conway was also referred to repeatedly by the Viterra Parties during the cross-examination of Hawthorne and Koenig. On the 22nd day of trial, the Cargill Parties announced that they might call Conway as a witness as the Viterra Parties "had been pressing for him", however his availability was then unknown. On the 27th day of trial, when it was made clear that Conway would definitely be called as a witness, the Viterra Parties opposed him being called on the basis they would be prejudiced,

---

2694 It must be noted that, in submitting the October 2013 Responses did not give rise to Pre-Completion Representations (see par 3316 above), the Viterra Parties submitted that Cargill's experience before October 2013 meant it "knew" ceasing the Operational Practices "could significantly weaken the [Joe White Business] (to the point of closure), and as such Cargill knew (better than the [Viterra Parties]) that such practices could significantly affect [production, sales and earnings figures and operational performance]".

2695 Eden did not accept this proposition.

while also maintaining an adverse inference ought to be drawn if he failed to give evidence or the court ruled he should not be permitted to do so. In addressing this position, it was pointed out to the Viterra Parties that repeated and incessant observations by them about the absence of Conway from the Cargill Parties' witness list had caused the Cargill Parties to change their approach. The Viterra Parties' opposition to Conway being called by the Cargill Parties was unsuccessful.

3415 When Conway was finally called on the 37th day of trial, he gave clear and unequivocal evidence about what he would have done if he had known, in substance, about the Operational Practices in 2013.[2696] Significantly, during his cross-examination by the Viterra Parties (no other party cross-examined him), Conway was not challenged about any of this evidence.[2697]

X.34 Prior to Completion, did Cargill Australia and Cargill, Inc have the knowledge or state of mind pleaded in paragraph 40A of the Defence?

X.34.1 The allegations and the evidence relied upon

3416 By paragraph 40A of the Defence, the Viterra Parties alleged, further or alternatively, that if any of the matters pleaded in paragraph 19 of the Statement of Claim were the fact[2698] (which was not admitted) then, before 31 October 2013 Cargill knew or suspected the existence of those matters or some of them. The Viterra Parties set out 16 paragraphs of particulars, from which it was said that Cargill's knowledge was to be inferred. The 16 paragraphs may be loosely grouped into 2 categories, being matters before and matters after the Acquisition Agreement was entered into.

3417 As to the first of these, the particulars referred to the matters pleaded in paragraph

---

2696 See pars 3396-3400 above.

2697 Naturally, the mere fact that Conway's evidence was not the subject of cross-examination did not mean the court was required to accept it: *Ellis v Wallsend District Hospital* (1989) 17 NSWLR 553, 586C-588B (Samuels JA, with whom Meagher JA agreed and Kirby P relevantly agreed). Further, in fairness, I am not suggesting that cross-examination on this issue did not occur because it had been overlooked. It appeared abundantly clear from Conway's evidence that what he was stating on the issue (and his evidence more generally) was entirely credible.

2698 See issue 10 above.

31A of the Defence. These matters have already been addressed in reaching the conclusion that no matters raised in this paragraph of the Defence put Cargill on notice of the Undisclosed Matters.[2699]

3418 In relation to the latter category, certain documents[2700] preceding and arising out of the 15 October Meeting and leading up to the Cargill 22 October Letter, the Cargill 29 October Letter and the Reply Letters (including these letters themselves) were relied upon.[2701]

3419 In addition to these documents, the Viterra Parties referred to the evidence of De Samblanx concerning what he was told on 10 October 2013 regarding corrections that could be made to Certificates of Analysis for results within 2 standard deviations,[2702] together with his view that the presentation given during the 15 October Meeting was detailed, frank, uninhibited and forthcoming, and he could have asked whatever questions he wanted during it.[2703] Further, they relied upon what was stated in the 15 October Meeting, including:

(1) Joe White's overarching philosophy involved sending malt that was within specification according to the customer for those customers that analysed malt.[2704]

(2) There were many examples where customers expected that they would read within specification, which meant that Joe White needed to send

---

2699 See issue 21 above. See also issue 12 above.

2700 Including at pars 1089, 1100, 1103, 1106, 1120, 1143-1144, 1159, 1162, 1170, 1187, 1195, 1199, 1204-1205, 1207, 1236, 1305, 1405, 1409-1412, 1419, 1451, 1524 above. With respect to Eden's email referred to at par 1159, the Cargill Parties submitted the contents of the email should not be taken as representing Eden's state of mind because that was not put to him during cross-examination. Although there might be an issue as to what Eden meant by the email (as to which see par 1159 above), its contents indicated that it plainly was intended to reflect his views. When this matter was raised during oral submissions, the Cargill Parties' senior counsel appear to resile from the submission. In any event, it is rejected.

2701 Some further documents were referred to by the Viterra Parties that were not tendered at trial, and accordingly are not referred to here. In closing submissions, the Viterra Parties also sought to rely upon the Alleged Industry Practices, and Cargill's alleged knowledge of them, which need not be addressed further: see issue 13 above.

2702 See par 1088 above.

2703 See par 1140 above.

2704 See par 1108 above.

out-of-specification malt according to its laboratories.[2705]

(3) In order to address inherent unreliability, Joe White's policy permitted results to be amended by up to 2 standard deviations to allow for normal variation.[2706]

(4) Stewart's evidence that he stated during the course of the presentation that a procedure had been developed through utilising the standard deviations of the Malt Proficiency Scheme, which stated that 2 standard deviations were recognised as normal variation for a particular analysis parameter.[2707]

(5) Joe White's procedures permitted malt to be shipped if results were more than 2 standard deviations out of specification, so long as 2 general managers signed off on the shipment.[2708]

(6) If a barley variety a customer desired was not available, Joe White would supply a variety with a similar character instead.[2709]

(7) It was unlikely that Joe White had sufficient stocks of barley remaining to meet customers' requirements of certain varieties.[2710]

(8) Gibberellic acid was used for the majority of Joe White's customers, but there were some who prohibited its use; of those who prohibited it, Joe White continued to use gibberellic acid for some but not all.[2711]

3420 Interestingly, when making submissions on this issue as to what it was alleged Cargill knew or suspected, the Viterra Parties made no reference to any information contained in the Reply Letters, nor how what was stated in the Reply Letters impacted upon

---

2705 See par 1115 above.
2706 See par 1116 above.
2707 Ibid.
2708 See par 1112 and fn 701 above.
2709 See par 1117 above.
2710 This was based on what was contained in Hughes' notes (see par 1128 above), which suggested something more specific was stated on this topic than was recorded in the presentation: see par 1117 above.
2711 See par 1129 above.

Cargill's knowledge or any suspicions it may have had.

3421 In any event, having referred to the matters set out above, the Viterra Parties submitted that the combined effect of Cargill's knowledge of the Alleged Industry Practices, the information provided during the Due Diligence and the further communications with Joe White in October 2013 was that "Cargill was well aware that Joe White was engaging in the [Alleged] Industry Practices". Further, the Viterra Parties submitted that Cargill not only knew that Joe White engaged in the "[Alleged] Industry Practices, but also knew or suspected that the extent of those practices was significant".[2712]

X.34.2 Conclusion

3422 There was no controversy that, prior to Completion, Cargill had been told of the existence of each of the Operational Practices. However, at the time of Completion Cargill did not know the extent to which any of the Operational Practices were implemented, much less the extent to which they might have impacted upon the operational and financial performance of the Joe White Business. Indeed, Cargill had not even been provided with the Viterra Policies.

3423 Further, whatever knowledge or suspicion Cargill may have had must be seen in light of the October 2013 Responses.[2713] In particular, the final word from the Viterra Parties was that Certificates of Analysis had been issued in accordance with the accredited quality system of the International Organisation for Standardisation, that the issue with barley varieties was only short term, and that steps had been taken so it would be unnecessary to use gibberellic acid where customers prohibited it.[2714] More generally, Cargill was also told any concern about Joe White's plants' ability to meet customers' specifications was unfounded. Each of these assertions bore no resemblance to operations that incorporated the Viterra Practices.

2712 The Viterra Parties also made a submission concerning the inferences that could be drawn from the fact that none of Hermus, Hughes or Savona was called by the Cargill Parties to give evidence. This has been dealt with elsewhere: see pars 2043-2073, 2126, 2105-2108 above respectively.

2713 See issue 24 above.

2714 See par 1512 above.

3424 In short, there was no real basis to suggest that Cargill knew (or had effective notice to form a basis to suspect in any substantive or material way) that Joe White was or had been engaged in the Viterra Practices in the manner in which it was when it proceeded to Completion.

X.34.3 A further remark

3425 It cannot pass without comment that the Viterra Parties' submissions on this issue appeared to conflict with their underlying case. Notwithstanding that the Viterra Parties maintained that the Cargill Parties had not proven that the Operational Practices were implemented routinely and without informing customers (so as to comprise the Viterra Practices), their submissions on this issue invited the court to find positively that Cargill knew, or at least suspected, that the extent of the use of the Operational Practices was significant such that they knew or suspected some or all of the Undisclosed Matters.[2715] Naturally, no such finding of actual knowledge could be made about Cargill's state of mind unless the underlying facts were in existence or had occurred. Even though the allegations in paragraph 40A of the Defence were made "further or alternatively", the tension between these submissions and the overall position adopted by the Viterra Parties was manifest.

X.35 Did Viterra know that the Pre-Completion Representations or any of them were or was false and/or did Viterra not genuinely believe the representations were true and/or was Viterra reckless as to whether they were true or false?

X.35.1 Introduction

3426 The principles relevant to the tort of deceit are set out above.[2716]

3427 It has already been established that the Pre-Completion Representations were made.[2717] However, a moment needs to be spent discussing the manner in which issue

2715 See also par 908 above.
2716 See issue 22.1 above.
2717 See issue 25 above.

35 was formulated. As may be seen, the question as framed invited the court to consider the Pre-Completion Representations both collectively and individually. This reflected the manner in which the allegations were pleaded in the Statement of Claim; which referred collectively to "the Representations", which in turn was defined to be a reference to the Financial and Operational Performance Representations, the Warranty Representations and the Pre-Completion Representations "individually, collectively or any combination". However, the last of the Pre-Completion Representations was alleged to have been made by reason of the making of the first 4 Pre-Completion Representations.[2718] It followed from this that, if any of the first 4 Pre-Completion Representations were not made in the manner alleged, then it could not be established that the fifth Pre-Completion Representation was made as alleged. Further, and more importantly, each of the Pre-Completion Representations was alleged to have been made by reason of the provision of the October 2013 Responses. Accordingly, making an assessment as to whether Viterra had the state of mind alleged by reason of the knowledge of any particular person or persons necessarily involved considering the knowledge of the person in question in the making of all of the October 2013 Responses.

X.35.2 The Cargill Parties' submissions

3428 In their submissions, the Cargill Parties relied on the knowledge of Fitzgerald, Mattiske, Hughes, and Mallesons.[2719]

3429 The Cargill Parties submitted that the Pre-Completion Representations were conveyed by the October 2013 Responses, all of which were false by reason of the Viterra Practices and by matters revealed to Mattiske, Fitzgerald and Mallesons during the investigation carried out in response to the Cargill 22 October Letter. It

---

2718 See par 3299 above.

2719 In the Statement of Claim, the Cargill Parties alleged the knowledge of various persons was attributable to Viterra including Mattiske, Fitzgerald, Hughes, Stewart, Mallesons, Rees, Gordon and McMeekin. The final version of the agreed list of issues (see par 1861 above) identified that for the purposes of issue 35 the Cargill Parties relied upon the knowledge of Mattiske, Fitzgerald, Hughes, Stewart, Mallesons and Rees. The Cargill Parties did not make submissions in relation to the knowledge of Rees at all, and only referred to Stewart to make submissions concerning the knowledge of Fitzgerald, Hughes and Mallesons.

was submitted that Mattiske's actions conveyed the Pre-Completion Representations. It was noted the content of the Reply Letters and the talking points (on which the oral statements in the October 2013 Responses were based) were written by Mattiske, Fitzgerald and Lindner. The fact that Hughes contributed to the 25 October Reply Letter was also referred to.

3430 The Cargill Parties submitted that the Pre-Completion Representations were made by Mattiske, on behalf of Glencore and Viterra,[2720] and that the evidence clearly established that Mattiske either knew that the Pre-Completion Representations were false or that he was reckless as to their truth. The Cargill Parties pointed to the fact that Mattiske was a director of all 3 Viterra companies, the managing director of Glencore Grain and an employee of Glencore.[2721] In conjunction with these matters, they relied upon the fact that Mattiske was responsible for the investigation of matters raised by Cargill, and that he signed both the Reply Letters.

3431 Further, the Cargill Parties submitted that the knowledge of Hughes was the knowledge of Viterra for the reasons they provided in their submissions for issues 11, 22 and 23 above**.**

3432 Furthermore, it was submitted that the knowledge of Mattiske, Fitzgerald and Mallesons was the knowledge of Glencore and Viterra in making the Pre-Completion Representations for the following reasons:

(1) Fitzgerald was the company secretary and general counsel for the 3 Viterra companies and obtained his knowledge of the Viterra Practices within the course of his authority as general counsel and secretary. Further, his role in the investigation, at the behest of Mattiske, gave rise to a duty to inform Mattiske of the matters he learned during the investigation and the opportunity to do so.[2722]

2720 In their submissions, the Cargill Parties dealt with issues 35 and 37 together, relying on the same set of submissions to establish both Glencore's and Viterra's knowledge.

2721 See par 97 above.

2722 The Cargill Parties relied on *Commonwealth Bank of Australia v Kojic* (2016) 249 FCR 421, 438 [66]

(2) Mattiske's evidence was that Fitzgerald reported the contents of each interview carried out with the Joe White executives during the investigation.[2723] As the Viterra Parties decided not to call Fitzgerald, it was submitted that the court should find that Mattiske was told, and therefore knew, everything that Fitzgerald was told during the investigation.

(3) Mallesons was retained by Glencore and Viterra, it was submitted for the purpose of investigating and advising them about the matters raised,[2724] and therefore any knowledge obtained was in Mallesons' capacity as an agent, which was therefore attributable to Glencore and Viterra.

3433 The Cargill Parties submitted that each of Mattiske, Fitzgerald, Mallesons and Hughes knew that the specific matters referred to below were false when the October 2013 Responses were made, and therefore Glencore and Viterra could not honestly have believed that the statements were true.

3434 *First,* it was submitted that the statements concerning the extent of the Viterra Practices were not honestly made. It was submitted that the October 2013 Responses concerned the extent of the Viterra Practices as follows:

(1) There had been some "instances" where barley other than that specified pursuant to a particular contract had been used due to seasonal issues.[2725]

(Allsop CJ) concerning aggregation of information between officers or agents of a company if there is a duty and opportunity to communicate it: see par 2647 above.

2723 See par 1276 above, although his evidence was that he was not aware of Lindner's involvement: see par 1277 above.

2724 It was admitted by the Viterra Parties that Glencore and Viterra retained Mallesons on or about 22 October 2013 to advise them in relation to the substance of the matters raised and how to respond. It was also admitted that Fitzgerald led the investigation in response to Cargill's queries. Otherwise, they denied the allegation that Glencore or Viterra or both retained Mallesons to investigate and advise on the substance of matters raised in the Cargill 22 and 29 October Letters.

2725 See par 3282(1) above.

(2) Joe White had "occasionally" supplied malt to customers that included gibberellic acid in breach of customer contracts.[2726]

(3) The Joe White Business was capable of producing the quality and quantity of malt contractually sold to customers.[2727]

(4) That, notwithstanding these matters, there was no fundamental issue with Joe White or the Joe White Business.[2728]

(5) The silence as to the extent of the Viterra Practices.

3435 It was submitted that it was obvious from the matters disclosed to Fitzgerald, Lindner and Mattiske that the Viterra Practices were systemic and permeated each aspect of the Joe White Business. It was also submitted there could be no controversy that Hughes knew about the existence and the extent of the Viterra Practices. Further, it was submitted that as a result of what had been raised in August 2010[2729] and in October 2013[2730] each of them knew the following:

(1) The Reporting Practice was routine and Joe White routinely did not supply malt that met customers' contractual specifications.

(2) Joe White altered Certificates of Analysis to a significant extent.

(3) Joe White had persistent difficulties in obtaining good quality barley that was capable of meeting customer requirements.

(4) The Gibberellic Acid Practice existed.

(5) The written procedure recorded as the Viterra Certificate of Analysis Procedure had not been disclosed during the Due Diligence.

(6) Customers were not told about the Operational Practices, and were

---

2726 See par 3282(3) above.
2727 See par 3282(4) above.
2728 See par 3282(5) above.
2729 See pars 162-163 above.
2730 See pars 1276-1373 above.

unaware that contracts were routinely breached.

(7) The impact of ceasing the Operational Practices would be profound.

(8) There was not enough barley in Australia to fill the shortfall of barley faced by the Joe White Business, and it was unable to supply malt exactly as specified, and thus was at risk of breaching malt contracts.

3436 Further, it was submitted that Stewart informed Fitzgerald of the existence of the Customer Review Spreadsheet,[2731] which revealed that the Joe White Business utilised the Operational Practices for every customer and was incapable of meeting its contractual obligations for every single customer.[2732] The Cargill Parties submitted that the court should conclude that Fitzgerald, having been made aware of the contents of the Customer Review Spreadsheet and informed of the extent of the Operational Practices during the interviews, either read the spreadsheet or deliberately shut his eyes to making enquiries that would have revealed the existence of the spreadsheet.

3437 *Secondly,* the Cargill Parties submitted that it could not have been honestly said that Joe White's plants were adequate and sufficient to meet contractual specifications. It was submitted that the Key Recommendations Memorandum prepared by Stewart, which contained key recommendations in response to the Customer Review Spreadsheet,[2733] identified that Joe White plants did not have adequate barley or malt storage to meet customer specifications. The Cargill Parties submitted that Hughes and Mattiske were aware of this document,[2734] that Stewart provided this information to Fitzgerald and Lindner,[2735] and that Mattiske was informed by Fitzgerald of all relevant and important information learned during the investigation. Further, they referred to the Customer Review Spreadsheet, which they contended identified that

---

2731 See par 1270 above.

2732 The Cargill Parties referred to their submissions under issue 10 in their support of this submission.

2733 See par 1212 above.

2734 See pars 1265-1270 above. The Cargill Parties' submission was based upon the further submission that Fitzgerald passed on all relevant information to Mattiske.

2735 See par 1270 above.

increased silo capacity was the *only* long-term solution to the inability of Joe White to produce malt within specification without applying a standard deviation buffer.[2736]

3438 *Thirdly,* the Cargill Parties submitted that it could not have been honestly said that Joe White was able to produce malt to the specifications required to meet customer demands without adding gibberellic acid. It was submitted that Mattiske, Fitzgerald, Lindner and Hughes had knowledge of the Key Recommendations Memorandum, which recorded that it would take the business 3 to 4 months to be able to produce additive free malt,[2737] and that it would require an extra day of germination to meet requirements for Asia Pacific Breweries and Sapporo, resulting in a loss of 14,000 metric tonnes of production per year.[2738] It was submitted that this information about the size of the production loss was also contained in a memorandum sent by Stewart to Fitzgerald on 24 October 2013.[2739]

3439 *Fourthly,* the Cargill Parties submitted that the statement that no customer had ever rejected malt due to the issues raised by Cargill was materially incomplete and thereby false because customers did not know they were receiving malt that did not comply with their contracts and therefore were in no position to reject malt for that reason. It was submitted that Hughes knew that the contracts were routinely breached. Further, they submitted Mattiske, Fitzgerald and Lindner were informed of the breaches and must have been aware that the statement was false as they removed a drafted talking point for Mattiske that encapsulated this paradox.[2740]

3440 *Fifthly,* the Cargill Parties submitted that the failure to disclose the Viterra Policies was inexplicable and dishonest. It was submitted that Fitzgerald and Lindner obtained a

---

2736 See pars 1228-1229 above.

2737 The reference to 3 to 4 months was taken from the first draft of the Key Recommendations Memorandum. In the later draft, which was the subject of Stewart's email to the other executives with which Hughes and Wicks agreed and Youil implicitly agreed, referred to a period of 6 months before additive-free malt could be produced: see pars 1210, 1212, 1218 above.

2738 See par 1215 above.

2739 See pars 1388-1389 above.

2740 The talking point that was omitted had said "it appears that from time to time [gibberellic acid] has been included when it should not have been. But we understand that it is very hard to detect and as far as we are aware no customer complaints have been received": see pars 1345-1346, 1356, 1358, 1366-1367 above.

copy of the Viterra Certificate of Analysis Procedure and, upon a review of the Data Room index, would have ascertained that it had not been provided to Cargill in the Data Room.[2741] It was submitted there was no explanation for their failure to provide such a clearly relevant document.

3441 Further, despite this knowledge, it was submitted that Fitzgerald, Lindner and Mattiske drafted talking points and the Reply Letters which expressly referred to the alteration of Certificates of Analysis in accordance with Joe White's documented procedures, which were said to be accredited in accordance with the International Organisation for Standardisation.[2742] The Cargill Parties submitted that either these were knowingly false statements or Mattiske, Fitzgerald or Lindner, knowing that the Viterra Certificate of Analysis Procedure had not been disclosed, made a deliberate decision not to interrogate further any references to International Organisation for Standardisation accreditation in reference to the Viterra Certificate of Analysis Procedure. It was submitted that their conduct in failing to disclose the procedures while simultaneously making positive statements was designed to give the impression that their pencilling practice had a proper basis, which was reckless conduct.

X.35.3 The Viterra Parties' submissions

3442 The Viterra Parties maintained that the Pre-Completion Representations were not conveyed (see issue 25 above), and alternatively, if they were made, they were not false: see issue 26 above. In the alternative, the Viterra Parties submitted that Viterra did not know that such representations were false and Viterra was not reckless as to whether they were false and genuinely believed the Pre-Completion Representations were true, for the following reasons:

(1) The knowledge that could be attributable to Viterra, even if aggregated,

---

2741 See pars 661, 1324 above.

2742 It was not contested that the Viterra Certificate of Analysis Procedure was not an International Organisation for Standardisation accredited procedure. Further it was submitted by the Cargill Parties that no satisfactory explanation was provided about the meaning of the International Organisation for Standardisation accredited system in the Reply Letters.

did not amount to knowledge that the Pre-Completion Representations were false.

(2) In effect, in the alternative to subparagraph (1) above, the knowledge of persons who had knowledge that could be said to amount to knowledge that the Pre-Completion Representations were false should not be attributable to Viterra.

(3) There was positive evidence that persons whose knowledge could be attributed to Viterra believed that the Pre-Completion Representations were true.

3443 With regard to the knowledge of particular individuals, the Viterra Parties submitted that:

(1) Each of Mattiske's, Fitzgerald's and Mallesons' knowledge could be attributed to Viterra for this purpose, but there was no evidence to support a finding that each of them knew of the Undisclosed Matters.[2743]

(2) Hughes and Stewart's knowledge should not be attributed to Viterra.

3444 In relation to the Customer Review Spreadsheet and the Key Recommendations Memorandum,[2744] the Viterra Parties submitted that these were drafted by Joe White and were withheld from the Viterra Parties, who therefore did not have knowledge. Further, they contended it should not be inferred that Hughes provided these matters to or discussed them with Fitzgerald. Furthermore, even if the Viterra Parties had knowledge of the Customer Review Spreadsheet, it was submitted that such knowledge did not amount to knowledge of the Viterra Practices or the Undisclosed Matters as the spreadsheet did not reveal the extent of the Operational Practices and the reliability of the information contained in the spreadsheet was questionable.

2743 The Viterra Parties also considered Rees' knowledge, submitting that it should not be attributable to Viterra, and that alternatively there was no evidence to support a finding that he knew of the Undisclosed Matters. As the Cargill Parties made no positive submissions in relation to Rees, it is unnecessary to address him separately.

2744 See pars 1210-1211 above.

3445 The Viterra Parties addressed each individual said to have attributable knowledge and made the submissions outlined below.

3446 *First,* the Viterra Parties relied on their submissions under issue 22 above to submit that it was not established that Fitzgerald had knowledge of the Undisclosed Matters prior to 4 August 2013. Further, the Viterra Parties disputed the factual bases raised by the Cargill Parties regarding Fitzgerald's alleged knowledge between 4 August 2013 and 31 October 2013 for the following reasons:[2745]

(1) Fitzgerald received the Cargill 22 October Letter; however, the information provided by Cargill Australia to Fitzgerald did not form a proper basis to determine that Fitzgerald had knowledge of the matters which made the Pre-Completion Representations false. It was submitted it could not reasonably be said that the Viterra Parties had an obligation to inform Cargill Australia of the matters of which Cargill Australia had informed the Viterra Parties in the Cargill 22 October Letter.

(2) On 22 October 2013, Hughes sent an email, copied to Fitzgerald, with the subject line "Cargill [Customer] Review & Cargill Customer Review Key Recommendations Document";[2746] however, the Customer Review Spreadsheet and the Key Recommendations Memorandum were not attached and there was no evidence to suggest that Fitzgerald received those documents.

(3) Fitzgerald had discussions with Hughes in relation to matters raised in the Cargill 22 October Letter and held meetings with Hughes, Youil, Stewart and Wicks on 23 October 2013, of which Lindner took notes;[2747] however, the Viterra Parties disagreed with Cargill Australia's

---

2745 The Viterra Parties identified 13 bases upon which the Cargill Parties asserted Fitzgerald had knowledge between 4 August 2013 and 31 August 2013. These 13 points are identified at the start of each subparagraph.

2746 See par 1265 above.

2747 See pars 1276-1311 above.

characterisation of what was said and submitted that it was necessary to view these discussions within the context in which they occurred.

(4) On 23 October 2013, Fitzgerald was provided with the Viterra Certificate of Analysis Procedure;[2748] however, Fitzgerald was not aware of its existence before 23 October 2013 and believed that it had likely been disclosed to Cargill in the Data Room.[2749]

(5) Fitzgerald was involved in drafting talking points for a call between Purser and Mattiske on 24 October 2013;[2750] however, this involvement demonstrated nothing more than a drafting process and did not demonstrate additional knowledge on Fitzgerald's part.

(6) On 24 October 2013, in response to a request from Fitzgerald, Stewart sent Fitzgerald an email containing the information requested for barley variety use and additive free malting;[2751] however, this email did not constitute evidence that Fitzgerald had knowledge that Joe White was engaging in the Undisclosed Matters. It was submitted that the fact that Fitzgerald requested this information showed that he was making reasonable enquiries. Further, the email did not mention the Customer Review Spreadsheet or the Key Recommendations Memorandum and no offer was made to provide Fitzgerald with further details or explanation of the contents of the email. Despite Fitzgerald apparently having requested information which led to him being provided with the email on 24 October, he was not given the opportunity to consider the further work that Joe White was undertaking.[2752] After receiving the email, Fitzgerald sent draft talking points to Stewart for feedback, demonstrating that Fitzgerald was seeking to ensure that the

2748 See par 1313 above.
2749 See par 1324 above.
2750 See pars 1344-1368 above.
2751 See par 1387 above.
2752 The Viterra Parties' senior counsel explained that this submission meant that Fitzgerald did not know about the "[Customer Review Spreadsheet] and so on".

communications with Cargill were consistent with Stewart's understanding of the facts.

(7) The drafting process for the 25 October Reply Letter[2753] did no more than demonstrate a drafting process and did not demonstrate additional knowledge of Fitzgerald.

(8) The phone call between Lindner and Fitzgerald on 24 October 2013[2754] did not evidence any knowledge by Fitzgerald of the Undisclosed Matters, but rather demonstrated an effort to avoid any misleading conduct.

(9) The alleged communications between Fitzgerald, Rees and Mattiske from 22 October 2013 to 31 October 2013 regarding the Viterra Practices and Viterra Policies, for the purposes of providing responses to the Cargill 22 October Letter and the Cargill 29 October Letter, did not provide any further particulars or any evidence of knowledge passed between those people.

(10) Fitzgerald received the Cargill 29 October Letter;[2755] however, it was submitted it could not be reasonably said that he had an obligation to inform Cargill Australia of the information Cargill Australia had just provided to the Viterra Parties.

(11) The Viterra Parties disagreed with Cargill Australia's characterisation of what was said in the meeting on 29 October 2013,[2756] which Fitzgerald, Norman, Rees, Lindner, Hughes and Wicks attended in person and Mattiske attended by telephone, and further submitted that it was necessary to view the discussions as a whole and in the context within which they occurred. It was submitted that the information was

---

2753 See pars 1381-1405 above.
2754 See pars 1383-1384 above.
2755 See pars 1454-1457 above.
2756 See pars 1457-1466 above.

adequately conveyed to Cargill Australia and was, in any event, already known to it.

(12) The conversation on 29 October 2013 between Fitzgerald and Stewart or Wicks, or both, that Cargill asserted occurred,[2757] did not support a finding that Fitzgerald had any knowledge of the Undisclosed Matters as a result of that conversation. Further, the fact that Stewart sent a version of the Customer Review Spreadsheet to McIntyre on 28 October 2013 did not constitute evidence of Fitzgerald's knowledge of matters in the spreadsheet and it was not established that the spreadsheet recorded the nature and extent of the Viterra Practices.[2758]

(13) The process of drafting the 30 October Reply Letter demonstrated that what the Viterra Parties confirmed with Joe White was not inaccurate,[2759] and did not demonstrate additional knowledge of Fitzgerald.[2760]

3447 *Secondly,* the Viterra Parties submitted that Mattiske had no knowledge of the Undisclosed Matters prior to October 2013, nor after 22 October 2013, other than the information provided to Cargill. They submitted that the factual bases upon which the Cargill Parties asserted that Mattiske had knowledge were insufficient for the following reasons:[2761]

(1) Mattiske did receive the Cargill 22 October Letter and the Cargill 29 October Letter; however the same reasons set out in relation to Fitzgerald[2762] applied to Mattiske's receipt of the letters. It was obvious that any representations conveyed were subject to what Cargill

---

2757 See pars 1510-1511 above.
2758 See par 1429 above.
2759 The submission put was not precisely in these terms and was somewhat cryptic, however what is set out above is my understanding of what was being submitted.
2760 See pars 1512-1513, 1525 above.
2761 The Viterra Parties identified 8 bases upon which the Cargill Parties asserted Mattiske had knowledge after 22 October 2013.
2762 See par 3446(1), (10) above.

Australia had been told by Joe White in October 2013.

(2) The alleged communications between Fitzgerald, Rees and Mattiske, from 22 October 2013 to 31 October 2013 regarding the Viterra Practices and Viterra Policies, for the purposes of providing responses to the Cargill 22 October Letter and the Cargill 29 October Letter, did not provide any further particulars or any evidence that knowledge passed between those people.

(3) With regard to the preparation of the talking points and the 25 October Reply Letter, the Viterra Parties relied upon the same matters they submitted in respect of Fitzgerald's knowledge.[2763]

(4) Mattiske sent the 25 October Reply Letter to Cargill Australia;[2764] however, this did not demonstrate that Mattiske knew that what Cargill was told was false.

(5) With regard to the call on 29 October and the preparation of the 30 October Reply Letter, the Viterra Parties relied upon the same matters they submitted in respect of Fitzgerald's knowledge.[2765]

(6) To the extent that communications on 29 and 30 October 2013 demonstrated knowledge by Mattiske,[2766] such knowledge was sufficiently disclosed to Cargill by way of the Reply Letters and Mattiske's discussions with Purser in October 2013.

(7) Mattiske sent the draft 30 October Reply Letter to Walt on 29 October 2013;[2767] however, this did not add anything to Cargill Australia's allegation as to Mattiske's knowledge.

2763 See par 3446(5),3446(7)above.
2764 See fn 850 above.
2765 See par 3446(11), 3446(13) above.
2766 See pars 1454, 1456, 1467, 1490-1491 above.
2767 See par 1513 above.

(8) Mattiske sent the 30 October Reply Letter;[2768] however, this showed the information that Mattiske provided to Cargill, and did not demonstrate that Mattiske knew that what Cargill was told was false.

3448 *Thirdly,* the Viterra Parties boldly submitted that Mallesons had no knowledge of the Undisclosed Matters after 22 October 2013 *other than the information already provided to Cargill*. Further, they submitted the Cargill Parties relied on no additional material unique to Mallesons and that nothing was contended beyond the matters relied upon by the Cargill Parties to establish Fitzgerald's knowledge. Accordingly, it was submitted there was no need to consider separately Mallesons' knowledge. Further, they referred to Lindner's evidence that she believed that, to the extent they were made, the Pre-Completion Representations were true.[2769]

3449 *Fourthly,* with regard to Hughes' knowledge, the Viterra Parties relied on their submissions for issue 22 above, to submit that Hughes' knowledge was not attributable to Viterra and the evidence did not support a finding that Hughes had knowledge of the extent and effects of the Viterra Practices.

3450 *Fifthly,* the Viterra Parties submitted that Stewart's knowledge was not attributable to Viterra and that the Cargill Parties had not established that Stewart had knowledge of the extent and effects of the Viterra Practices. The Viterra Parties submitted that Cargill did not seek to add Stewart as a knowledge individual for the purposes of clause 31.15 of the Acquisition Agreement, and merely relied on the fact that he was an employee of Viterra Ltd, which was an insufficient basis for attribution.

3451 *Finally*, the Viterra Parties submitted that for the reasons submitted at issue 22 above, the Viterra Parties did not have knowledge that the Pre-Completion Representations were false, nor that Viterra was reckless as to whether they were false.

X.35.4 Analysis

2768 See par 1524 above.
2769 See pars 1384-1385, 1525 above.

3452 There were 5 Pre-Completion Representations conveyed.[2770] Based upon the majority judgment in *Krakowski v Eurolynx Properties Ltd*,[2771] it is necessary to consider the knowledge of the individuals identified by the Cargill Parties to determine whether a person whose knowledge was attributable to Viterra had the state of mind required for the second element of the cause of action in deceit to be made out against Viterra.[2772] As there has not been universality in the reasoning of decisions following *Krakowski v Eurolynx Properties*,[2773] findings relevant to the state of knowledge will be made with respect to each person in question regardless of whether the person knew that the Pre-Completion Representations as pleaded had been made.

X.35.4.1 Hughes

3453 It has been found elsewhere that Hughes' knowledge of the Joe White Business was knowledge that was attributable to Viterra during the sale process.[2774]

3454 The evidence established that Hughes did have knowledge of the matters pleaded in paragraph 30(bb), (bc), (bd) and (be) of the Defence.[2775] Further, it was established that Hughes had knowledge of the existence and extent of the implementation of the Viterra Practices.[2776]

3455 To elaborate, by virtue of his knowledge of the Viterra Practices, Hughes knew that it was not true that:[2777]

(1) The Operational Practices had occurred only to an insignificant extent.

(2) The Operational Practices had no impact on the production, sales and earnings figures and operational performance stated in the Financial and Operational Information.

2770 See issue 25 above.
2771 (1995) 183 CLR 563 (Brennan, Deane, Gaudron and McHugh JJ).
2772 See par 3232 above.
2773 See, for example, the cases referred to in *Commonwealth Bank of Australia v Kojic* (2016) 249 FCR 421, 456-457 [146]-[149] (Edelman J, with whom Allsop CJ and Besanko J relevantly agreed).
2774 See issues 11, 22 above.
2775 See issue 11 above. See also par 3619 below.
2776 See issue 22 above. See also par 4902 below.
2777 Ibid; see also pars 1279-1288, 1462-1465 above.

(3) The production and sales figures stated in the Financial and Operational Information were based upon compliance with customer contracts, including customer specifications, and as a result had been properly and lawfully achieved.

This necessarily followed from Hughes' knowledge that the Viterra Practices were routinely implemented without customers' knowledge and as a result customer specifications were not being complied with.

3456 Further Hughes, as the hands-on executive had knowledge that Joe White's plants were not adequate and sufficient to meet the specifications applicable under customer contracts. Although this could be established in numerous ways, it is unnecessary to do more than refer to his discussions with Stewart in relation to the Key Recommendations Memorandum. In the Key Recommendations Memorandum, Stewart acknowledged that there was inadequate storage for both barley and malt which had the consequence that there was no ability to reliably meet customer specifications, with the exception of customers being supplied by malt from Tamworth.[2778] Stewart spoke to Hughes about the Key Recommendations Memorandum and Hughes said he agreed with its contents.[2779] By this conduct, Hughes confirmed his knowledge at the time the Pre-Completion Representations were made that the assets of the Joe White Business were not sufficient for Joe White to sell malt in the volumes and for the returns stated in the Financial and Operational Information. Hughes also knew this was the view of all the senior operational executives of Joe White.

3457 Furthermore, based on his knowledge of these 4 matters,[2780] Hughes must have been in a position to know that it was not the case that Joe White had low future capital expenditure needs in the short to medium term.[2781] Presumably, this was reflected in part by what occurred some months earlier, namely the proposed inclusion of the

2778 See par 1216 above.
2779 See par 1218 above.
2780 See par 3299(1)-(4) above.
2781 See, for example, par 1216 above.

stated need of $30 million of net working capital in an early draft of the Information Memorandum (which was removed in its entirety).[2782]

3458 Having made these findings, it is also necessary to consider if, and if so the extent to which, Hughes knew of the making of the Pre-Completion Representations.[2783] In contrast to the allegations concerning the Financial and Operational Performance Representations, there was no allegation that Hughes himself made any of the Pre-Completion Representations for or on behalf of Viterra. Indeed, in what can only be described as a lacuna in this claim of deceit based on Hughes' knowledge, there was no pleaded allegation nor any submission directed to how it was said that Hughes knew that the Pre-Completion Representations were made at any time before Completion by Viterra.[2784] Despite this apparent deficiency, it is appropriate to refer to the relevant evidence, being evidence relating to the basis upon which the Pre-Completion Representations were alleged to have been made, coupled with Hughes' knowledge of such matters.

3459 The evidence disclosed that Hughes was aware of and approved the contents of each of the Reply Letters.[2785] The Viterra Parties did not dispute this.[2786] Accordingly, to the extent that the Pre-Completion Representations were alleged to be based upon the October 2013 Responses made in the Reply Letters, it has been established that Hughes was aware of that relevant information.[2787] However, Hughes was not privy to, and there was no evidence to suggest he was told about, what Mattiske said to Purser

---

2782 See par 436 above. As for other information being removed, see par 4406 below.

2783 See par 3232 above.

2784 The Cargill Parties' submissions expressly identified what they relied upon in alleging that Hughes knew certain matters were false when the October 2013 Responses were made. The only submissions made by the Cargill Parties concerning Hughes' knowledge in this regard were that he contributed to the 25 October Reply Letter, he knew of the Viterra Practices, he knew of the Key Recommendations Memorandum and the Customer Review Spreadsheet, and he knew customers were unaware that their contracts were being breached.

2785 See pars 1395-1400, 1513 above.

2786 Indeed, they submitted that an inference ought to be drawn that Hughes believed the contents of the Reply Letters were correct. (The Viterra Parties' submissions referred to letters dated 22 and 30 October 2013, but the context made clear that it was intended to refer to the Reply Letters, that is the letters dated 25 and 30 October 2013.)

2787 As explained in pars 3286-3290 above, the first 4 of the October 2013 Responses were derived in part (but not entirely) from the contents of the 25 October Reply Letter.

during their discussions on 23 and 24 October 2013. Thus, there was no basis to find that Hughes' knowledge could be attributed to Viterra with respect to all the October 2013 Responses (and therefore each of the Pre-Completion Representations), as each of the first, third, fourth and fifth responses comprising the October 2013 Responses were alleged to have been given in part by reason of what Mattiske stated to Purser on 23 and 24 October 2013.[2788]

3460 Lest it be considered relevant despite the conclusion in the previous paragraph, some further observations should be made about Hughes' position at this time. It must follow from what is stated above that Hughes did not have the requisite knowledge of the facts in question so that it could be found that he knew the Pre-Completion Representations had been made. Accordingly, in respect of these allegations the falsehood of the Pre-Completion Representations could not be attributed to Viterra by reason of Hughes' knowledge of the Undisclosed Matters. However, Hughes must have fully appreciated that the contents of the Reply Letters were not directly responsive to Cargill's enquiries, that what was stated in relation to each of the Operational Practices was materially inaccurate and that the Viterra Parties had failed to make any proper disclosure of the Viterra Practices notwithstanding they were directly relevant to the enquiries.

3461 It must also be observed that the seriousness of the falsehoods stated by way of the contents of the Reply Letters was in some respects more acute than what had transpired concerning earlier false representations. By Hughes knowing of the contents of the Cargill 22 and 29 October Letters, as he did, he must have been fully aware that Cargill had made specific enquiries in relation to each of the Operational Practices, including as a result of what had been stated at the 15 October Meeting. In these circumstances, not only must it have been clear to Hughes that Cargill considered the issues that it had raised to be important, but also it must have been obvious that the materially inaccurate and inadequate responses in the Reply Letters

---

2788 See pars 3282-3291 above. See also par 3427 above.

gave a false account of what was occurring in relation to the manner in which the operations of Joe White were being conducted.

X.35.4.2 The lawyers

3462 Naturally, the position of Fitzgerald and Mallesons must be considered separately. However, it is convenient to initially refer to them together as there was considerable overlap with some of the matters about which they were informed after the Cargill 22 October Letter.

3463 Self-evidently, both Fitzgerald and Mallesons (through Lindner) were aware of what had been said by Hughes, Youil, Stewart and Wicks on 23 October 2013.[2789] From these meetings, it was made clear to them both that the Operational Practices identified in the Cargill 22 October Letter existed, and were engaged in at least to a not insignificant extent.[2790]

3464 More specifically, in the meeting with the most senior Viterra executive involved in running the Joe White Business, Hughes, it was made known to Fitzgerald and Mallesons that, amongst other things:

(1) The Certificate of Analysis Procedure was adopted for every customer.[2791]

(2) The correct barley variety was not always available for supply to customers.[2792]

(3) The financial ramifications of Joe White's past conduct and inability to supply correct barley varieties up to March 2014 could be significant.[2793]

(4) The Gibberellic Acid Practice was carried out routinely at all plants

---

2789 See pars 1276-1311 above.
2790 See, for example, pars 1285-1287 above.
2791 See pars 1280, 1285 above. See also par 1316 above in relation to further information provided to Fitzgerald.
2792 See pars 1281, 1286 above.
2793 Ibid.

when it should not have been.[2794]

(5) Ceasing the Gibberellic Acid Practice would have an adverse effect on production schedules, in the order of 20 percent with respect to the relevant customers, which would obviously have flow on effects for other production schedules.[2795]

(6) The financial impact of the conduct identified on the Joe White Business had not been ascertained with any precision.[2796]

3465 The meetings with Youil, Stewart and Wicks provided more information to Fitzgerald and Mallesons on the extent of the Operational Practices, including further details on the loss of capacity.[2797]

3466 As a general observation (which addresses a number of the Viterra Parties' submissions), even by the end of 23 October 2013 (still 2 days before any response was sent), the matters that Fitzgerald and Lindner had been informed of went well beyond what had been disclosed to Cargill at the 15 October Meeting, or at any other time before the Cargill 22 October Letter was sent.[2798] Critically, the Joe White executives had provided information on which Glencore and Viterra would have been able to form a level of understanding of the general prevalence of the Operational Practices. Even if, contrary to this conclusion, the information was insufficient to form any view with reasonable certainty, it must have been abundantly clear that there were very serious issues that needed to be addressed and that it would have been possible to obtain more detailed information if further enquiries were made.

3467 As a result of the information provided in the interviews, Fitzgerald and Lindner were informed of matters relevant to the Pre-Completion Representations. Those matters were disclosed by Viterra Ltd employees with knowledge of the facts, which facts

---

2794 See pars 1282, 1287 above.
2795 Ibid.
2796 See pars 1283, 1288 above.
2797 See pars 1289-1310 above.
2798 See, for example, annexure C to these reasons.

indicated that:

(1) The Operational Practices were occurring to a significant extent.

(2) Once disclosed, the Operational Practices had the potential, if not the likelihood, to have a material adverse financial impact on the Joe White Business and its reputation.

(3) The production and sales figures stated in the Financial and Operational Information were not based upon compliance with customer contracts including customer specifications, and had not been properly and lawfully achieved.

However, the position in relation to the adequacy of Joe White's plant capacity was less clear. Certainly, nothing in Lindner's notes indicated that any of Hughes, Youil, Stewart or Wicks disclosed their joint view as recorded in the Key Recommendations Memorandum.[2799] In any event, as at the close of business on 23 October 2013, it seems likely that Fitzgerald and Mallesons were in a position to realise that there must have been a real question as to whether Joe White had low future capital expenditure needs in the short to medium term.

X.35.4.2.1 Mallesons

3468 Notwithstanding the position at the close of 23 October 2013, because of matters that occurred subsequently, I cannot be satisfied that Mallesons knew or even ought to have known of any of the matters identified in the preceding paragraph by the time the 25 October Reply Letter was sent. There are principally 2 reasons for this.

3469 The first arises out of the email that Lindner sent to herself on the evening of 24 October 2013.[2800] That email recorded a discussion with Fitzgerald that afternoon concerning whether or not the draft responses in relation to barley varieties and the use of gibberellic acid were misleading. In giving her evidence, Lindner had no

2799 See par 1216 above.
2800 See par 1383 above.

recollection of the discussion beyond being able to state that she was satisfied with the outcome. She was conscious that neither she nor anyone else from Mallesons had verified what was being said to Cargill.[2801] It was Fitzgerald who had been given the task of determining what steps ought to be taken in response to Mattiske's direction that an investigation needed to be carried out. Although Fitzgerald involved Lindner in the conversations with some of the Joe White executives on 23 October 2013 (by way of telephone), at no time was Mallesons instructed to give advice concerning what steps needed to be taken in response to the Cargill 22 October Letter. Further, there were numerous discussions and exchanges of information within Viterra and Glencore to which Mallesons was not privy.

3470 In these circumstances, particularly given that Lindner had specifically turned her mind as to whether or not what was intended to be stated would be misleading, and was given assurances that what was going to be stated was not, I cannot be satisfied that Mallesons knew that any of the October 2013 Responses was false or that Lindner (or anyone else from Mallesons) was reckless in that regard. On the contrary, on the limited evidence available as to what occurred, there could be no basis for such a finding.

3471 The second principal reason was the different position in which Mallesons stood. Self-evidently, it may be distinguished from that of Hughes who was aware of the material facts concerning the Viterra Practices. Further, Mallesons' position was markedly different from Fitzgerald in a number of material respects.

3472 *First*, as already touched upon, it was Fitzgerald who was determining what steps ought or ought not to have been taken in order to obtain sufficient information to be able to respond to the issues that had been raised. Thus, it was Fitzgerald who had the duty to report back faithfully and accurately (consistent with exercising reasonable care in the circumstances) to Mattiske. Although Mallesons assisted with drafting and gave advice on some matters, it was not asked to assume, and never assumed,

---

2801 See par 1384 above.

responsibility for the conduct or outcome of the investigation.[2802]

3473 *Secondly,* as reflected in the exchange on 24 October 2013 between Fitzgerald and Lindner, it was Fitzgerald who was responsible for forming the view as to whether or not the responses were misleading. In accepting Fitzgerald's view that the proposed responses (subject to some changes) were not misleading, Lindner would have undoubtedly believed, reasonably, that Fitzgerald was in a better position to make this assessment. In contrast to Lindner's position, Fitzgerald was the long-standing general counsel at Viterra. Further, Fitzgerald had had significant opportunity to make further enquiries after the conclusion of the interviews with the Joe White executives, in circumstances where it was expressly contemplated during those interviews that further information would be provided to Fitzgerald.

3474 *Thirdly,* Fitzgerald had access or the ability to gain access to all, or substantially all, of the relevant information on the basis that it was Viterra's information, including the Customer Review Spreadsheet[2803] and the Key Recommendations Memorandum. He also had the ability to directly raise any issues with any executive he chose to speak to and to ascertain the state of affairs (for example, as illustrated by the email sent to Fitzgerald by Stewart on 24 October 2013).[2804] In contrast, although Mallesons was emailed various drafts of the Reply Letters, assisted in the drafting of these letters, and was informed along the way as to Hughes' reservations with respect to some matters,[2805] as well as assisting with drafting the talking points,[2806] Mallesons was not in a position to verify the underlying facts for itself or, on an informed basis, to form a view contrary to the instructions it had received about the information being conveyed not being misleading.

3475 *Fourthly*, Fitzgerald was in a position to ascertain categorically whether or not the Viterra Certificate of Analysis Procedure had been included in the Data Room

---

2802 In substance, this was the position reflected in the Defence: see fn 2724 above. See also par 1312 above.
2803 See, for example, par 1270 above.
2804 See par 1387 above.
2805 See, for example, pars 1395-1401 above.
2806 See par 1344 above.

Documentation. In contrast, there was no evidence to indicate that Mallesons was ever instructed as to the result of enquiries in this regard.[2807] In such circumstances, there was nothing to indicate that Mallesons would have appreciated that the Viterra Certificate of Analysis Procedure was not included in the numerous documents that had been listed or that the belief Fitzgerald expressed on the evening of 23 October 2013 was incorrect.[2808] For reasons explained elsewhere,[2809] it has been found that Fitzgerald must have appreciated the omission of the Viterra Certificate of Analysis Procedure from the Data Room Documentation. It must have been apparent to him that such an omission was material.

3476 *Fifthly*, unlike Mallesons, Fitzgerald had the ability to check the veracity of assertions concerning the Reporting Practice and whether there was any accreditation that meant it complied with the International Organisation for Standardisation requirements. There was nothing in the Viterra Certificate of Analysis Procedure to suggest that any such requirements were being met or that any accreditation had been obtained.[2810]

3477 Further, it is instructive that, after listening to what had been said by the Joe White executives on 23 October 2013, Lindner was alive to the risk that the responses in relation to the use of incorrect barley varieties and the use of gibberellic acid when prohibited could be considered misleading "because they understated the frequency of the practices referred to".[2811] There was nothing in the evidence to suggest that Fitzgerald was told by any executive that the frequency of the Varieties Practice or the Gibberellic Acid Practice was otherwise than as disclosed on 23 October 2013. On the contrary, the further information he either received or was made aware of only fortified the position that the Operational Practices were implemented on a more than insignificant basis.[2812]

3478 The materially different position of Mallesons remained after the Cargill 29 October

---

2807 See pars 1324, 1326 above.
2808 Ibid.
2809 See pars 1332, 1365, 1470 above.
2810 See also pars 1280, 1316 above and the references to "ISO audits" and pars 1355, 1398, 1533 above.
2811 See par 1383 above.
2812 See, for example, pars 1387-1388 above.

Letter was sent. Although Lindner was provided with further information[2813] and forwarded her initial draft of the 30 October Reply Letter,[2814] neither she nor anyone else from Mallesons was fully briefed on all that had been provided to Fitzgerald including as a result of the further letter from Cargill. Further, the 30 October Reply Letter was conspicuous for its non-responsiveness and its generality. Very little of substance was said beyond what had previously been said. Furthermore, the letter was drafted subject to Fitzgerald's comments and, to Lindner's knowledge, was also reviewed by Hughes.[2815]

3479 Moreover and in any event, unlike the involvement Mallesons had in settling the talking points for the earlier discussion with Purser, there was nothing to suggest that Mallesons fully understood what Mattiske actually told (or did not tell) Purser in his discussions with her.[2816]

X.35.4.2.2 Fitzgerald

3480 Including for the reasons set out immediately above, Fitzgerald's position was materially different from that of Mallesons. That said, it is difficult to state precisely what level of knowledge Fitzgerald had in circumstances where neither he nor Hughes gave evidence. Obviously, he was informed about numerous matters that were not conveyed to Cargill before Completion, and he was put on notice that the operations of the Joe White Business had been improper in a number of material respects.[2817] But also it must be acknowledged that it would be expected that Fitzgerald must have derived some level of comfort from the position adopted by Hughes (and to the lesser extent that he was involved, Stewart)[2818] in agreeing to the contents of the Reply Letters and the talking points.[2819] The manner in which Stewart

---

2813 See par 1462 above.
2814 See par 1512 above.
2815 See par 1513 above.
2816 See further par 3482 below.
2817 See, for example, pars 1290, 1298, 1300, 1302, 1304, 1313-1318, 1323-1324, 1326-1332, 1352, 1365, 1373, 1387-1389, 1401, 1462 above.
2818 See, for example, pars 1323, 1334, 1352-1353, 1395 above.
2819 Noting that in relation to the 30 October Reply Letter, Hughes was directed not to make any changes and confined his response to the 3 numbered paragraphs of the letter by stating that none of what was contained in those paragraphs was inaccurate: see par 1513 above.

gave evidence at trial[2820] suggested that both he and Hughes were very defensive in relation to some aspects of what had been occurring. Beyond Mattiske's and Stewart's evidence on this issue (such as it was), the exact level and basis upon which Hughes sought to justify the position to Fitzgerald was not clear in the absence of evidence from either him or Fitzgerald. However, any alleviation of Fitzgerald's position could only go so far in light of the fact that it could not seriously be contested that improper conduct was disclosed to Fitzgerald. That said, to the extent it might have been said Fitzgerald was aware of the Pre-Completion Representations, this knowledge did not establish that he knew they were false, or did not genuinely believe them to be true, or was reckless in that regard.

3481 It is important to be clear about the allegations made. They are not that Viterra, by reason of Fitzgerald's knowledge, knew that some aspects of the talking points or the Reply Letters were false or did not genuinely believe them to be true, or there was recklessness in that regard. Rather this state of mind was alleged to exist, by reason of Fitzgerald's knowledge, in relation to the precise matters said to comprise the Pre-Completion Representations. Although the facts demonstrate that: (1) both Fitzgerald and Mattiske could and should have caused far more thorough and detailed investigations to have been undertaken in response to Cargill's queries,[2821] and that more detailed and meaningful responses could have been given; (2) Fitzgerald must have been aware that the Viterra Certificate of Analysis Procedure had not been disclosed in the Data Room or referred to in the talking points or the Reply Letters;[2822] (3) Fitzgerald must have appreciated that the Viterra Certificate of Analysis Procedure was a material document in relation to the queries made by Cargill concerning Certificates of Analysis;[2823] and (4) Fitzgerald was told by the Joe White executives that Joe White was supplying malt in breach of its customers' contracts,[2824] such matters did not establish the requisite state of mind to substantiate an allegation of

2820 See, for example, pars 168-177 above.
2821 By way of example, see fn 4545 below.
2822 See pars 1327, 1329-1331 above.
2823 Ibid.
2824 See par 1328 above.

fraud in relation to the Pre-Completion Representations based on Fitzgerald's position and knowledge.

3482 Further, and in any event, Cargill Australia's claim for deceit based upon the Pre-Completion Representations suffered from the same defect in relation to Fitzgerald's knowledge as it did in relation to Hughes's and Mallesons' knowledge. Although Fitzgerald (unlike Hughes) knew of the final form of the talking points and probably knew or believed that Mattiske spoke to those talking points in his discussion with Purser on 24 October 2013,[2825] such knowledge or belief did not establish that Fitzgerald knew the substance of the 4 responses forming part of the October 2013 Responses that were said to be stated orally by Mattiske.[2826] A comparison between the contents of the talking points and the Pre-Completion Representations shows that the talking points did not contain words to the effect that: (1) there had been some instances where barley other than that specified pursuant to a particular contract had been used;[2827] (2) Joe White had occasionally supplied malt to customers that included gibberellic acid in breach of customer contracts; (3) the Joe White Business was capable of producing the quality and quantity of malt contractually sold to customers;[2828] or (4) there was no fundamental issue with Joe White or the Joe White Business.[2829] Accordingly, there was no basis to infer that Fitzgerald knew any such responses had been given in those terms and therefore knew that the Pre-Completion Representations had been made.

X.35.4.3 Mattiske

3483 The position of Mattiske was markedly different from Hughes, Mallesons and Fitzgerald as he was directly responsible for the making of each of the October 2013 Responses. Thus, he had knowledge of each of the circumstances alleged to have

---

2825 See par 1368 above.

2826 See par 3282(1), (3), (4), (5) above.

2827 Though it must be acknowledged the wording in the talking points on this issue was very similar: see par 1368 above.

2828 This topic was touched upon in the talking points, but not in the precise manner alleged as part of the Pre-Completion Representations.

2829 Although this might have been implicit from what was contained in the talking points and the Reply Letters, that was not the manner in which the case of fraud was pleaded by Cargill Australia.

given rise to the Pre-Completion Representations. However, his knowledge of the underlying matters was also markedly different and needs to be considered separately.

3484 At the outset, it must be observed that Mattiske was not told everything that he might have been told as a director of Joe White and Viterra.[2830] *First,* Hughes noted in his meeting with Fitzgerald and Mallesons on 23 October 2013 that before 22 October 2013 Mattiske was not aware of the Varieties Practice and related issues.[2831] *Secondly,* Youil noted in his meeting with Fitzgerald and Mallesons that before 22 October 2013 Mattiske was not aware of the 3 practices discussed.[2832] *Thirdly,* the Viterra Certificate of Analysis Procedure was not shared with Mattiske and he was not made aware that that procedure allowed for the alteration of results even when they were outside the band of 2 standard deviations.[2833] *Fourthly,* Mattiske had not seen the Customer Review Spreadsheet before being shown it in the witness box,[2834] and there was no evidence to suggest the Key Recommendations Memorandum was brought to his attention in 2013. *Fifthly*, contrary to the Cargill Parties' submissions, it would be incorrect to infer Mattiske was told everything Fitzgerald had been told by the Joe White executives. The evidence showed he was not, and also left real doubt about the extent to which Fitzgerald disclosed all relevant matters to Mattiske.[2835]

3485 In addition to Mattiske's general lack of knowledge of the operations of the Joe White Business and of the matters referred to in the preceding paragraph, Mattiske was largely relying upon others to inform him of the relevant information. In considering whether his state of mind in late October 2013 was capable of amounting to deceitful conduct on the part of Viterra, due weight must be given to the fact that Hughes, and Fitzgerald and Mallesons (who had spoken directly to Hughes, Youil, Wicks and Stewart about Cargill's queries), all approved of the contents of the Reply Letters. Further, unlike someone in Hughes' position who would have appreciated the

2830 But see also par 1375 above.
2831 See par 1281 above.
2832 See par 1295 above.
2833 See par 1313 above.
2834 See par 1429 above.
2835 It is not being suggested that Fitzgerald deliberately withheld information from Mattiske.

subtleties of Stewart's amending language in the talking points and his own changes to a draft of the 25 October Reply Letter, it was highly unlikely that Mattiske would have realised the significance of these amendments given his lack of knowledge,[2836] together with a level of distraction due to other matters he was handling at the time.[2837]

3486 There could be no real issue that some things that were conveyed by Mattiske were materially incorrect.[2838] Further, Mattiske must have fully appreciated that both the contents of the Reply Letters and what he stated to Purser did not properly respond to the direct questions being asked by Cargill,[2839] and that there was a real risk that Cargill could make claims arising out of the Acquisition after Completion.[2840] However, the evidence did not establish that Mattiske knew or was reckless as to whether what was in fact stated by way of the October 2013 Responses was incorrect. In circumstances where Mattiske's own knowledge was seriously deficient and where he ensured that those with a far better understanding of the relevant facts were directly involved in formulating the responses given to Cargill,[2841] there was no basis to find that, when he gave the October 2013 Responses and thereby made the Pre-Completion Representations, he knew they were false or did not genuinely believe they were true, or was reckless as to whether they were true or false.

X.35.5 Conclusion

3487 For the reason stated, Cargill Australia has failed to identify any person whose knowledge might have been attributed to Viterra who knew that the Pre-Completion Representations were made *and* also knew that they were false, or did not genuinely believe they were true, or was reckless as to whether they were true or false. In such circumstances, it cannot be found that Viterra had the state of mind alleged.

2836 See pars 1352-1353, 1399 above.
2837 See par 1485 above.
2838 See, for example, pars 1368, 1380, 1405, 1447, 1505, 1512, 1524 above.
2839 This conclusion effectively reflected Mattiske's evidence, albeit that he sought to justify the limited response on the lack of time available to carry out the investigations: see par 1320 above.
2840 See par 1467 above.
2841 That is the Reply Letters and the talking points.

3488 In summary, the Cargill Parties' submissions to the effect that certain statements were not honestly made and that there was an inexplicable and dishonest failure to disclose the Viterra Policies (including that they were wrongly stated to be the subject of International Organisation for Standardisation accreditation) did not specifically address the relevant matters. In relation to the persons identified by the Cargill Parties, it must be observed that their submissions comprised a series of matters that they contended 1 or more of Fitzgerald, Mattiske, Hughes and Mallesons knew, speaking broadly, was untrue. However, there was no attempt by the Cargill Parties to link these matters to 1 or more of the October 2013 Responses or the Pre-Completion Representations so as to identify the basis upon which it was alleged that Viterra had the requisite intent. Furthermore, the Cargill Parties submitted that Mattiske conveyed the Pre-Completion Representations, but made no submissions about how it was said that any of Fitzgerald, Mallesons or Hughes was aware each of them had been made. Although not expressly stated in their submissions, it would appear the Cargill Parties approached this issue on the basis that the knowledge of Fitzgerald, Mattiske, Hughes and Mallesons could be aggregated in order to establish the requisite intent of Viterra. If this was the correct understanding of their approach then, on the state of the authorities, this was bound to fail.

X.36 Did Viterra make the Pre-Completion Representations with the intent that Cargill Australia should rely on them by completing the Acquisition Agreement?

X.36.1 The Cargill Parties' submissions

3489 The Cargill Parties submitted that the Viterra Parties made the Pre-Completion Representations with the intent that Cargill Australia should rely on them by completing the Acquisition Agreement.[2842] It was submitted that there could be no other reason for the Viterra Parties to have responded in the way that they did.

3490 Further, it was submitted that Mattiske knew that Cargill would in fact rely on

---

2842 The Cargill Parties pointed to Mattiske's evidence that he "believed that Cargill would consider carefully [his] response to the questions or concerns that it had raised".

Glencore's responses to the Cargill 22 and 29 October Letters. The Cargill Parties submitted that Mattiske's principal concern in October 2013 was to ensure Cargill would complete. They contended he did not wish to defer Completion,[2843] as it would have had the undesired consequence of leaving the Viterra Parties in control of Joe White and he did not wish to continue running the Joe White Business.[2844] It was submitted that Mattiske behaved accordingly in drafting and sending talking points to Fitzgerald and Lindner stating that "we will still close on the 31st October. And will proceed to this effect".[2845] They also noted that, after his conversation with Purser on 24 October 2013 but before the 25 October Reply Letter was drafted, Mattiske wrote an email to Fitzgerald, Lindner and Pappas which said that he "mentioned [C]ompletion about 3 times regarding 31 October is very close, [Purser] made no gestures or remarks in regards to deferral of the date".[2846].

3491 Furthermore, they referred to the evidence that following a conversation with Mattiske, Walt told King that Mattiske had conveyed his view to work towards closing and "to close and deal with a potential warranty claim thereafter".[2847]

X.36.2 The Viterra Parties' submissions

3492 The Viterra Parties submitted that Cargill Australia did not discharge its burden of proving that it was induced to act upon the Pre-Completion Representations.[2848]

3493 It was submitted that the October 2013 Responses occurred within a tight timeframe and "concentrated" on the Reply Letters. Further, they contended that Cargill anticipated that it would not receive any useful information in response to the Cargill 22 October Letter, and in particular:

(1) A file note from a teleconference on 18 October 2013 recorded that even

---

2843 See fn 4545 below.
2844 See par 1181 above.
2845 See par 1351 above.
2846 See par 1377 above.
2847 See par 1454 above.
2848 The Viterra Parties relied on *Gould v Vaggelas* (1984) 157 CLR 215, 237.5-239.3 (Wilson J). See also par 3153 above.

though a letter would be sent to Glencore, Cargill would not be able to obtain any further information in relation to the effect of the Operational Practices and the cost to remedy them.[2849]

(2) After the Cargill 22 October Letter was sent, Viers discussed with Eden or Van Lierde that if Cargill did not inform the Viterra Parties of the specific financial effect caused by the Operational Practices, then Cargill would not receive an appropriate response.[2850]

(3) A proposed board paper for the Cargill board, prepared by Eden on 24 October 2013, noted that Joe White engaged in practices inconsistent with Cargill's guiding principles and stated that Cargill had "put Glencore on notice as per the [Acquisition Agreement] conditions. Our discovery of the details and costs to remedy will happen post close."[2851]

3494 Furthermore, the Viterra Parties submitted that the responses were provided in the context of Sale Process Disclaimers and the acknowledgements in clause 13.4 of the Acquisition Agreement,[2852] which demonstrated that the Viterra Parties did not intend for their statements to be relied upon. The Viterra Parties submitted that clause 13.4(a) operated to indicate reliance was absent by reason of the words "in proceeding to Completion".

3495 Moreover, it was submitted that the terms of the responses by the Viterra Parties did not support any suggestion that the Viterra Parties intended for Cargill Australia to rely upon them. It was contended the responses could not be relied upon, for the following reasons:

(1) The Viterra Parties repeatedly referred to the tight timeframes which limited their ability to investigate the matters raised in the Cargill 22

2849 See pars 1187-1188 above.
2850 See par 1271 above.
2851 See par 1411 above. See also pars 1409-1410, 1412 above.
2852 The Viterra Parties relied upon cl 13.4(a), (b), (d), (f)(i) and (ii), and 13.5: see par 1029 above.

October Letter.[2853]

(2) The Viterra Parties consistently made it clear that they were doing no more than passing on what they had been told by the Joe White executives.[2854]

(3) The responses did not seek to provide any firm information as to the extent of the Operational Practices,[2855] which would have been included if any communication was designed to encourage reliance. Therefore, in the absence of firm information as to the extent of the Operational Practices, no reliance was possible.

X.36.3 Analysis

3496 The question for determination was the intent of Viterra. Although the terms of the Acquisition Agreement were clearly relevant in considering this question, what was stated in the Acquisition Agreement (or, for that matter, the Confidentiality Deed) was not determinative.

3497 Upon receiving the Cargill 22 October Letter, the Viterra Parties had a number of options. One of those options was to refer to the Acquisition Agreement or the Confidentiality Deed (or both) and to indicate to Cargill that it was the Viterra Parties' position that whatever was said in response could not be relied upon. Despite the Viterra Parties conferring with expert lawyers in this field on how they should respond, they chose to give no such indication. Rather than take a legalistic approach, Mattiske assured Purser the Viterra Parties would act in good faith. This must have been, at least in part, because the Viterra Parties fully appreciated that Cargill took the matters that had been raised very seriously,[2856] such that if satisfactory responses were

---

2853 See, for example, pars 1320, 1370 above.

2854 See, for example, par 1370 above.

2855 See par 1405 above.

2856 This was indicated to the Viterra Parties in a number of ways, including the contents of the Cargill 22 October Letter (see par 1236, including the reference to investigations and the necessity of remedying the situation before Cargill took control), the subject matter (being the possibility of conduct in breach of customers' contracts) and what Purser stated to Mattiske: see pars 1319-1322 above.

not communicated then there was a real risk that Cargill Australia would seek to defer Completion until satisfactory answers had been given.[2857] In this context, Mattiske fully understood that any response given would be viewed carefully by Cargill.[2858]

3498 Further, the Viterra Parties perceived it was strongly in their interests to ensure that Completion occurred as scheduled.

3499 In these circumstances, the obvious and only reasonable inference open was that by the Viterra Parties responding in the manner in which they did in the Reply Letters, coupled with Mattiske's discussions with Purser, it was intended that Cargill would rely upon the responses given, at least to the extent that it would cause Cargill to proceed with Completion. None of the matters put forward by the Viterra Parties provided any compelling reason to find that such an inference ought not be drawn.

3500 *First,* any suggested expectation by Cargill of whether or not Cargill would receive any useful information in response to the Cargill 22 October Letter did not directly address the issue of Viterra's intention. The extent to which, if at all, Viterra could have expected that Cargill would have anticipated that Cargill would not receive any useful information this would only be 1 factor relevant to the issue of whether or not Viterra intended for Cargill Australia to rely on the positive representations made. In any event, for reasons explained above,[2859] the evidence relied upon by the Viterra Parties did not establish that Cargill anticipated that it would not receive any useful information in response to the Cargill 22 October Letter. The position of Cargill as expressly stated by Purser was that Cargill expected the matters raised to be treated as serious.[2860] Unsurprisingly, what was stated by Purser properly reflected Cargill's position when it was on the cusp of paying $420 million.

2857 This appreciation was evidenced by Mattiske asking Purser on numerous occasions whether or not Cargill was going to proceed to Completion as agreed: see pars 1377, 1449, 1506 above. If Mattiske's evidence was intended to suggest he had no concern in this regard (in fairness, it was a little unclear from the questions put and answers given), then this contemporaneous evidence was more probative than any evidence Mattiske gave of his belief some 5 years after the relevant events: see par 1377 above.

2858 See fn 2842 above. See also pars 1489, 1508, 1521 above.

2859 See par 1412 above.

2860 See pars 1319-1321, 1372 above.

3501 *Secondly,* the short time between the requests for information and the time for Completion highlighted the weight Cargill placed upon the responses to its queries. With Completion as imminent as it was, and with the prospect of Cargill being able to access all information for itself only 8 to 10 days away,[2861] the fact that Cargill sought to raise the matters formally in writing and demanded a response before Completion was a clear indication to the Viterra Parties that those matters were of considerable significance.

3502 Further, this tight timeframe did not detract from the fact that Cargill was aware that the Viterra Parties had more than enough time to speak with the relevant operational executives to obtain a substantive account as to the existence and implementation of the Operational Practices and the likely extent to which any cessation would have impacted upon the Joe White Business.[2862]

3503 The suggestion by Mattiske that the timeframes were tight did not amount to an indication that the positive statements contained in the Reply Letters and the representations made by way of the October 2013 Responses were not accurate or could not be relied upon. On the contrary, Mattiske conveyed to Purser that the timeframe meant that the issues raised could not be fully investigated. However, he did not suggest in any way that the unequivocal statement that Cargill's concern about the ability of Joe White's plants to meet customers' specifications was unfounded might need to be qualified in some way, or that the stated position might change if further time had been available to investigate the issues.

3504 *Thirdly*, the Pre-Completion Representations were in part made in part orally and in part in writing by Mattiske, whose intention was to close the deal. Mattiske had a conversation with Purser on 24 October 2013, before the 25 October Reply Letter was drafted, where he mentioned Completion numerous times. Mattiske accepted that he did not raise with Purser the option of deferring the Acquisition to enable a proper

---

2861 Depending on whether you include 22 October 2013 or 31 October 2013, or both.
2862 See par 3323 above.

investigation.[2863] After the Cargill 22 October Letter had been sent, and before the 25 October Reply Letter, Mattiske added to the talking points for an upcoming call with Cargill that the Viterra Parties still intended to close,[2864] evidencing the Viterra Parties' clear intention. Further, after receiving the Cargill 29 October Letter, Mattiske's view was to complete and deal with a potential warranty claim thereafter, which was conveyed to King and Walt.[2865]

3505 *Fourthly*, the fact that the Viterra Parties made it clear that they were passing on what they had been told by the Joe White executives said little, if anything, about the intention of the Viterra Parties. The Joe White executives were expected to be the source of much of the information about the operations of Joe White. Cargill had no reason to suspect that the executives under the direction of Glencore and Viterra would provide anything but reliable information.

3506 *Fifthly*, the Pre-Completion Representations provided relevant information as to the extent of the Operational Practices.[2866] In relation to each of the Operational Practices, the 3 responses given in both Reply Letters conveyed that they had occurred only to an insignificant extent.[2867] In circumstances where these very general responses were given to the specific questions raised, and were coupled with the assurance that any resulting loss or damage would not be significant, the only available inference sensibly open was that the Pre-Completion Representations were made to encourage Cargill to complete as scheduled without the need for Cargill to receive any definitive information.

3507 With regard to the Sale Process Disclaimers and clause 13.4 of the Acquisition Agreement, the Viterra Parties' submissions did not identify how these provisions prevented Viterra or Glencore from intending for Cargill Australia to rely on the Pre-Completion Representations. Put simply, they did not alter the objective fact that the

---

2863 See fn 4545(8) below. For completeness, Mattiske gave evidence that if he believed he was dealing with a serious issue then he *may* have considered deferring Completion.

2864 See par 1351 above.

2865 See par 1454 above.

2866 See par 1405 above.

2867 See issue 25 above.

Viterra Parties chose to respond in terms that conveyed that the issues raised were not of any significance, and did so with the intention of ensuring Completion would proceed as scheduled.[2868]

X.37 Did Glencore know that the Pre-Completion Representations, or any of them, were or was false and/or did Glencore not genuinely believe the representations were true and/or was Glencore reckless as to whether they were true or false?

3508 For the same reasons issue 35 was answered in the negative, the answer to each of the questions raised in this issue is no.

X.38 Did Glencore make the Pre-Completion Representations with the intent that Cargill Australia should rely on them by completing the Acquisition Agreement?

3509 The Viterra Parties indicated that where their submissions for issue 36 above applied to Viterra, they applied equally to Glencore. They made no further submissions. For the same reasons that issue 36 was answered in the affirmative, the answer to the question raised in this issue is yes.

X.39 Is Viterra, by the operation of clause 31.15 of the Acquisition Agreement, deemed to have known of the facts, matters and circumstances pleaded in paragraphs 19 and 30 of the Statement of Claim, for the purposes of the Warranties?

3510 Clause 31.15 provided that where a Warranty was given to a Seller's awareness or knowledge, the Seller would be deemed to know of a particular fact, matter or circumstance *only* if 1 or more of Rees, Fitzgerald, Mann or Mattiske were actually

---

2868 In light of this finding, it is not necessary to make any determination about whether the operation of clause 13.4(a) was confined to statements, representations, warranties, conditions, promises, forecasts or other conduct up until the execution of the Acquisition Agreement, or whether it also related to such conduct after execution and before Completion. However, the wording of the clause strongly suggested that it only related to conduct up until the time of execution as it was concerned with statements, etc which "may have been made" and made no reference to statements, etc which might be made after the Acquisition Agreement had been entered into: see par 1029 above.

aware of it on the date the Warranty was given *or would have been aware had he made reasonable enquiries* on the date the Warranty was given.[2869]

3511 In the Statement of Claim, Cargill Australia alleged that each of Rees, Fitzgerald and Mattiske knew of the facts, matters and circumstances concerning the Undisclosed Matters, or would have been aware of those facts, matters and circumstances had they made reasonable enquiries. This knowledge was alleged to have existed from at least early 2013, and further or alternatively at all material times from around mid-October 2013. It was further alleged that, by reason of these matters, Viterra was deemed to know of the Undisclosed Matters and that the Financial and Operational Performance Representations were false.

X.39.1 The Cargill Parties' submissions

3512 The Cargill Parties described the effect of clause 31.15, identified the individuals whose knowledge was relevant for the purposes of clause 31.15, and listed the Warranties provided to the Seller's awareness or knowledge, being Warranties 4.2(b), 7.3, 9.2 and 12(b) and (c). Further, they relied on their submissions with respect to each of these Warranties in submitting that Viterra ought to be deemed to know the relevant facts, matters and circumstances.[2870]

3513 However, in stark contrast to what was pleaded in the Statement of Claim, there was no attempt to make any submission as to how, by operation of clause 31.15, Viterra was deemed to have known of the facts, matters and circumstances pleaded in paragraphs 19 or 30 of the Statement of Claim.[2871] Accordingly, this issue will be addressed on the more limited basis in which the Cargill Parties chose to agitate it.[2872]

2869 For the complete wording of the clause, see par 1033 above.

2870 See issues 42, 43, 44 below. Despite what was stated in this part of their submissions, the Cargill Parties did not press any claim based on Warranty 4.2(b).

2871 Whether inadvertently or otherwise, the Cargill Parties' submissions identified this issue not by setting out the question as agreed, but rather recorded the question for issue 39 as to whether Viterra was deemed to have known *any* of the facts, matters or circumstances pleaded in paragraphs 19 and 30 of the Statement of Claim.

2872 In light of the Viterra Parties' submissions, it would appear this was the manner in which they approached it as well: see par 3517 below.

X.39.2 The Viterra Parties' submissions

3514 The Viterra Parties again submitted that the existence of the Undisclosed Matters had not been established, that the Financial and Operational Performance Representations were not conveyed, or if conveyed, were not false. Further or alternatively, they submitted that Cargill Australia had not established that Mattiske, Fitzgerald or Rees knew of the Undisclosed Matters,[2873] or that they would have been aware of them had they made "reasonable enquiries", or that the Financial and Operational Performance Representations were false. All these matters have already been addressed.[2874]

3515 The Viterra Parties correctly noted the Warranties were given on 2 occasions and that Viterra's knowledge was required to be considered as at both 4 August 2013 and at 31 October 2013.

3516 In relation to the language in clause 31.15, the Viterra Parties submitted it was concerned with attributing knowledge to the Sellers. They submitted that "deemed" in this context was a synonym for "attributed to" or "treated as having" or "considered for the purposes of the Warranties as having". They also submitted that "deemed" might not have been the happiest synonym.

3517 They further submitted that the focus of the court's considerations should be on knowledge of the circumstances alleged to constitute breach of any Warranty, namely:

(1) what were the facts, matters or circumstances alleged to constitute the breach; and

(2) in respect of each of Rees, Fitzgerald or Mattiske, was he either actually aware of those facts, matters or circumstances, or would he have been aware if he had made reasonable enquiries on the date the Warranty was given.

3518 In relation to reasonable enquiries, the Viterra Parties made the following

---

2873 The Cargill Parties did not seek to establish the knowledge of Mann for the purposes of this or any other issue.

2874 See issues 10, 11, 15, 16, 22 above.

submissions:

(1) "Reasonable" for the purposes of "reasonable enquiries" depended on all the circumstances on the date the Warranty was given, including what enquiries could have been made on that date.

(2) Cargill Australia did not plead or particularise the reasonable enquiries that they contended that Rees, Fitzgerald and Mattiske ought to have made, and simply sought to draw an inference from the facts relied upon for allegations of actual knowledge.

(3) Rees, Fitzgerald and Mattiske were informed of the Warranty verification process and participated in the investigations following receipt of the Cargill 22 October Letter. Each of them should be held to have satisfied any obligation, to the extent it existed, to make reasonable enquiries.

3519 In relation to the Viterra Policies being available on Pulse, the Viterra Parties made the following submissions.

3520 *First*, in their written submissions, the Viterra Parties submitted that the evidence did not establish that any of Rees, Fitzgerald or Mattiske would have had access to the Viterra Policies on Pulse if they had searched for them. When it was put to the Viterra Parties' senior counsel that it would be an extraordinary inference for the court to draw that, in the absence of any evidence, neither the chief executive officer nor the general counsel of a company could have access to documents on the company's intranet, it was submitted that possibly they could have had access but they were not running the Joe White Business. The Viterra Parties contrasted the position of these 3 individuals with Argent. It was further submitted that while Mattiske was conducting some level of oversight, he was "2 levels up the chain". Further, it was submitted the evidence demonstrated that Mattiske did not look at any policies on Pulse that were specific to Joe White's operations and had not seen the Viterra Policies prior to giving

evidence. Furthermore, it was contended that there was no evidence that Rees had knowledge of the Viterra Policies.

3521 *Secondly*, it was submitted there was no reason for Fitzgerald, Mattiske or Rees to make enquiries into Joe White's operational practices or procedures, by looking at Pulse or otherwise, prior to entry into the Acquisition Agreement.[2875]

3522 *Thirdly*, it was contended by the Viterra Parties that the evidence did not support Cargill Australia's assertion that, if any of these individuals had made reasonable enquiries, they would have learned about the Viterra Practices or Policies. They submitted it could be inferred that if these individuals had asked the Joe White executives they would have been told that the Information Memorandum Statements and the Warranties were correct. The Viterra Parties relied on Hughes and Argent's verification of the Information Memorandum Statements, and Hughes, Argent, Youil, Wicks and Stewart's verification of the Warranties to contend that Rees, Fitzgerald and Mattiske would not have been informed of the extent to which any of the Information Memorandum Statements or the Warranties were inconsistent with the Undisclosed Matters.

X.39.3 Analysis

3523 The specific Warranties in question, namely 7.3, 9.2, and 12(b) and (c), are addressed in issues 43, 44 and 42 below respectively, including the arguments addressing clause 31.15 of the Acquisition Agreement in relation to those Warranties. However, it is convenient to consider here the more general submissions made, to the extent that they remain in light of the approach taken by the Cargill Parties.

3524 There was no real issue raised between the parties about the meaning of "deemed" in clause 31.15. Any of the suggested meanings put forward by the Viterra Parties was suitable. In essence, "deemed" in this context meant Viterra's knowledge being

---

2875 This submission did not address the evidence that Fitzgerald was responsible for following up disclosure of "Company Policies" in the Data Room: see par 3608 below.

treated as the fact if a named person[2876] had actual knowledge or if reasonable enquiries on the specific dates would have disclosed the relevant information to 1 or more of those named persons.[2877]

3525 As to what "reasonable enquiries" entailed, the Viterra Parties were correct in submitting that what was reasonable depended on the circumstances, including the ability to make relevant enquiries. There was no suggestion that there were any availability issues in relation to any of the Joe White executives. On the contrary, the evidence indicated that they were effectively on-call (at least during office hours). Accordingly, for the purpose of considering reasonable enquiries that could have been made on 4 August 2013 or 31 October 2013, it must be presumed that any of Rees, Fitzgerald or Mattiske could have readily had access to the Joe White executives.

3526 With respect to the Warranty verification process, it was relevant to the question of what enquiries were reasonable on 4 August 2013 that each of Rees, Fitzgerald and Mattiske knew that Wilson-Smith had carried out some form of verification process. However, each of them being informed of the fact that it had purportedly been carried out did not equate to reasonable enquiries having been properly made on their part.[2878] Before it could be said that on 4 August 2013 any reasonable enquiries of Rees, Fitzgerald or Mattiske were limited or curtailed for the purposes of clause 31.15 based on the surrounding circumstances, the reasonable enquiries so diminished would have still included making such enquiries as were necessary to be reasonably satisfied that the verification process had been conducted in a manner that was likely to mean that the Warranties had been properly verified. In fact, no one from Viterra or Mallesons properly oversaw the steps Wilson-Smith took. Thus, to the extent it might have been argued that "reasonable enquiries" for the purposes of clause 31.15 might have included enquiries made of Wilson-Smith or someone else involved, for

---

2876 Relevantly, Rees, Fitzgerald or Mattiske.

2877 In relation to the approach to construing, and the meanings of, "deemed" in different statutory contexts, see: *Macquarie Bank Ltd v Fociri Pty Ltd* (1992) 27 NSWLR 203, 207E (Gleeson CJ, with whom Cripps JA agreed); *Federal Commissioner of Taxation v Comber* (1986) 10 FCR 88, 96.4 (Fisher J); *Hunter Douglas Australia Pty Ltd v Perma Blinds* (1970) 122 CLR 49, 65.5-65.8 (Windeyer J); *Muller v Dalgety & Co Ltd* (1909) 9 CLR 693, 696.5 (Griffith CJ). As for an example of a contractual context, see: *Regal Consulting Services Pty Ltd v All Seasons Air Pty Ltd* [2017] NSWSC 613, [35]–[36] (McDougall J).

2878 See par 996 above.

the reasons explained in issue 125.6 below, on no view could it have been said that the process engaged in would have satisfied the criteria. Further, on the basis of what occurred with respect to the Warranty verification process, it could not be presumed that the reasonable enquiries would have been satisfied by simply asking any employee involved if the Warranties had been properly verified, as any such enquiry (other than the most superficial in nature) would have been highly likely to have resulted in a negative response.[2879]

3527 In circumstances where Viterra had an established intranet system, upon which all material policies and procedures were required to be available,[2880] reasonable enquiries would necessarily have included taking steps to check whether material policies on Pulse concerning Joe White's operations had been included in the Data Room.[2881] It was instructive that, when Wilson-Smith had been given the task of compiling documents including company policies for the Data Room, 1 of the steps he took was to conduct a search on Pulse in an attempt to obtain relevant policies.[2882]

3528 In relation to the submission that there was no reason for Rees, Fitzgerald or Mattiske to make enquiries into Joe White's operational practices or procedures prior to the Acquisition Agreement being entered into, this cannot be accepted in its entirety. Despite the terms of the Data Room Protocol to the effect that there was no obligation to disclose anything, Viterra engaged in the exercise of determining what documents ought to be included in the Data Room, no doubt in part in anticipation of some form of warranties which were intended to be given in due course.[2883] In this regard, Fitzgerald had a primary responsibility to ensure material company policies were included.[2884] Such a responsibility gave reason for Fitzgerald, either himself or by someone else under his supervision, to look at Pulse and to make other enquiries to ensure material operational policies were located. In any event, even if there was no reason for any of Rees, Fitzgerald or Mattiske to consider operational practices,

2879 See further issue 42 below.
2880 See pars 191-192 above.
2881 See Warranties 12(b) and 12(c).
2882 See par 669 above.
2883 See also par 619 above.
2884 See par 618 above.

policies or procedures *before* 4 August 2013, that situation in itself did not determine the question of what comprised reasonable enquiries as at 4 August 2013 for the purposes of clause 31.15. (Of course, there was no obligation for the reasonable enquiries to have actually been made. The question was of what any reasonable enquiries would have made each of them aware.)

3529 To the submission by the Viterra Parties that if reasonable enquiries had been made, none of Rees, Fitzgerald or Mattiske would have learned about the Viterra Practices or the Viterra Policies, the evidence strongly suggested to the contrary. Again, insofar as this submission relied upon a Warranty verification process having taken place before 4 August 2013, that did not establish that each of the Third Party Individuals had actually verified the truth of the Warranties in question. In fact, they did not.[2885] Further, to the extent this submission relied upon what occurred in relation to the preparation and finalisation of the Information Memorandum, the evidence concerning this aspect of the sale process was of limited probative value in any determination of what would have occurred if reasonable enquiries had been made of Hughes concerning the accuracy of the Warranties.[2886] Assisting in the preparation of a marketing document at the direction of Glencore and in accordance with its agenda to portray Joe White in a very positive manner was a fundamentally different exercise to responding to any enquiries about whether particular Warranties were true and correct. Although it has been found that Hughes falsely verified that the contents of the Information Memorandum were true and correct,[2887] it did not follow from this that he would have been likely to also falsely verify the Warranties if a proper enquiry had been made in that regard. The events in October 2013 demonstrated the response Hughes would have been likely to have made if any of Rees, Fitzgerald or Mattiske

---

2885 See issue 125.6 below.

2886 There is no need to consider the position of Argent as there was no evidence that he was aware of the Viterra Practices or the Viterra Policies at any time before 31 October 2013. It suffices to say, that it would be unlikely that reasonable enquires would have resulted in queries being raised with Argent as he was not directly involved in operations. That this was so was reflected by what occurred in October 2013 when Mattiske, Fitzgerald, Rees and Norman only made enquiries of the Joe White executives involved in operations.

2887 See issue 22 above.

made reasonable enquiries of him about the accuracy or otherwise of the Warranties. Speaking broadly, at the very minimum Hughes would have been highly likely to have disclosed the existence of the Viterra Policies if the relevant circumstances had been explained to him as part of reasonable enquiries having been made.[2888]

3530 These observations in relation to reasonable enquiries were equally applicable to 4 August 2013 and 31 October 2013. Further, after the Cargill 22 October Letter the level of enquiries that were required to be made in order to be reasonable were far more extensive, in light of the queries raised by Cargill and the manner in which they were raised.[2889]

3531 In summary, for the reasons given below in addressing issues 42, 43 and 44, Viterra was deemed to have known of facts, matters or circumstances that meant that Warranties 12(b) and (c), 7.3 and 9.2 respectively were untrue and incorrect. Otherwise, as the Cargill Parties made no submissions on the point, no finding is made as to whether or not, by operation of clause 31.15, Viterra was deemed to have known more generally of the facts, matters or circumstances pleaded in paragraphs 19 and 30 of the Statement of Claim.

X.40 Are any of the Warranties to be read down or qualified pursuant to clause 13.3(a) of the Acquisition Agreement by any information that was fairly disclosed to Cargill Australia or otherwise within its knowledge which is inconsistent with the relevant Warranty?

3532 Speaking broadly, clause 13.3 qualified the Warranties set out in the Acquisition Agreement by requiring them to be read down to exclude from their operation information fairly disclosed to Cargill Australia during the sale process, and also information within Cargill Australia's knowledge before the Acquisition Agreement was signed.[2890] Although clause 13.1 concerned the time at which the Acquisition Agreement was entered into and the time of Completion, clause 13.3 did not

---

2888 This is explained in more detail below when dealing with the particular Warranties in question: see esp issue 42 below.

2889 See pars 1234, 1319-1322, 3321, 3323-3324, 3497 above.

2890 See par 1029 above for cl 13.3 set out in full.

incorporate matters disclosed to Cargill in the period between when the Acquisition Agreement was entered into and the time of Completion.

3533 The Viterra Parties alleged, in effect, that Cargill Australia had knowledge of: (1) the Alleged Industry Practices; (2) the Undisclosed Matters; and (3) the Operational Practices.[2891] In accordance with this knowledge, it was submitted that the court should read down and qualify each Warranty in the Acquisition Agreement.

3534 This submission cannot be accepted for 3 reasons.

3535 *First*, the Viterra Parties did not discharge their burden of establishing that the Alleged Industry Practices were standard practices in the malting industry.[2892] Consequently, it could not be inferred that Cargill Australia had knowledge of these practices being standard within the industry.[2893] For the avoidance of doubt, the evidence disclosed that Cargill was aware of some nefarious practices in the malting industry, such as pencilling,[2894] but there was no evidence that anyone from Cargill believed anything similar to the Operational Practices were standard practices in the industry; quite the contrary.

3536 *Secondly*, what was said to have been disclosed in the Information Memorandum and during the Due Diligence in relation to the Undisclosed Matters fell short of establishing that Cargill Australia had knowledge of any of the Undisclosed Matters.[2895]

3537 *Thirdly*, the alleged disclosures to Cargill Australia in relation to Certificates of

---

2891 In the case of the Undisclosed Matters, it was submitted that certain disclosures were made during the sale process by the Viterra Parties such that Cargill was informed of the Undisclosed Matters or some of them. Cargill's knowledge in this regard has been dealt with in issue 12 above. In the case of the Operational Practices, it was submitted that Cargill had certain knowledge pertaining to Certificates of Analysis, barley varieties, the use of gibberellic acid and grades of barley. Cargill's knowledge in respect of these matters has been dealt with in issue 21 above.

2892 The Viterra Parties bore the onus of establishing that the Alleged Industry Practices existed for the purpose of the Defence. See further issue 13 above.

2893 For completeness, any such inference would be directly contrary with Purser's evidence (which I accept) that Cargill's position in October 2013 was that none of the Operational Practices was standard industry practice: see par 1372 above.

2894 See issues 12, 13.3 above.

2895 See issue 12 above.

Analysis, barley grades and varieties, and the use of gibberellic acid, did not disclose anything that, objectively, gave any notification of the Undisclosed Matters or the Operational Practices.[2896] Therefore, any matters that were disclosed to Cargill Australia did not advance the Viterra Parties' defence on this issue.

3538 It follows that without having established: (1) the existence of the Alleged Industry Practices; (2) knowledge of any of the Undisclosed Matters; or (3) knowledge of the Operational Practices, there were no grounds for qualifying the Warranties with respect to what was alleged to have been disclosed to or known by Cargill Australia.

X.41 Did Viterra breach Warranties 4.2(a), (b) and (c) regarding its Records on the date of the Acquisition Agreement (4 August 2013) or at Completion (31 October 2013)?

3539 The Warranties and definitions are set out above.[2897] Warranty 4.2 was as follows:

> **4.2 Records**
>
> The Records:
>
> (a) have been compiled and maintained in good faith;
>
> (b) to the best of the Share Seller's knowledge and awareness, do not contravene any Law; and
>
> (c) are complete and up-to-date in all material respects.

X.41.1 The Cargill Parties' submissions

3540 In relation to Warranty 4.2(a), the Cargill Parties submitted that, in the context of a contractual obligation requiring a particular act to be performed, the words "in good faith" meant to do the act: (1) honestly; (2) observing reasonable commercial standards of fair dealing in a particular line of business; and (3) absent an intention to defraud. The Cargill Parties submitted that the first and third were subjective elements, and the second element was objective.

3541 The Cargill Parties submitted that the "Records" were misleading, with reference to

---

2896 See issue 21 above.
2897 See pars 1022, 1034 above.

their submissions to issue 16 above. Specifically, the Cargill Parties submitted that the Financial and Operational Information, conveyed in part by the Information Memorandum, the Management Presentation and the Commercial and Operations Calls, was misleading because it did not make reference to the existence, nature or extent of the Viterra Practices.

3542 With reference to their submissions in relation to issue 22 above, the Cargill Parties submitted that the misleading nature of the Financial and Operational Information was known to Hughes and his knowledge could be attributed to his employer, Viterra Ltd, and to the business in which he worked, being the business of Viterra Malt.

3543 As a result, the Cargill Parties submitted the "Records" had not been compiled in good faith because they could not have been compiled in a way they would have been if ordinary reasonable commercial standards had been observed.

3544 The Cargill Parties did not press their claim for breach of Warranty 4.2(b).

3545 In relation to Warranty 4.2(c), the Cargill Parties submitted that "complete" should mean "entire, thorough" and "without defect".[2898] Further, the Cargill Parties submitted that "material" should be understood as referring to something of importance to Cargill in its capacity as purchaser of Joe White.

3546 The Cargill Parties submitted that neither the Information Memorandum nor the Financial and Operational Information made any reference to the Viterra Practices or the Viterra Policies. Further, the Cargill Parties submitted that there was no explanation of the financial and operational effect of the Viterra Practices and the Viterra Policies on the Joe White Business.

3547 The Cargill Parties submitted that if their submissions on non-disclosure and the misleading nature of the Information Memorandum and the Financial and Operational Information were accepted,[2899] the only conclusion available was that the "Records" were incomplete due to the omission of any reference to the Viterra

---

2898 Relying on the Oxford English Dictionary (2nd ed).

2899 See issues 16, 22, 26 above.

Practices and Policies. On the basis of the significant effect of the Viterra Practices on the value of the Joe White Business, the Cargill Parties submitted this was a "material" omission for the purposes of Warranty 4.2(c) such that that Warranty was breached.

3548 The Cargill Parties accepted that between entry into the Acquisition Agreement and Completion some information was provided to Cargill concerning the Viterra Practices. In this context, clause 13.8 of the Acquisition Agreement was addressed.[2900] The Cargill Parties submitted that this new information resulted in Cargill having knowledge that the Operational Practices might have existed, but that did not include any knowledge of their nature or extent, or impact on the performance of the Joe White Business.[2901] Therefore, the Cargill Parties submitted, the information disclosed in October 2013 could not support a conclusion that Warranties 4.2(a) and (c) were corrected or no longer misleading, as full and truthful disclosure was required to engage clause 13.8.

3549 Finally, the Cargill Parties submitted that the Defence was flawed on this issue.[2902] They submitted, to the extent it referred to information allegedly disclosed, the omitted information concerning the Viterra Practices was not included in the Defence and, to the extent it relied on obligations of confidence imposed or disclaimers made prior to entry into the Acquisition Agreement, these were not relevant as they must give way to express terms in the subsequent Acquisition Agreement.

X.41.2 The Viterra Parties' submissions

3550 *First*, the Viterra Parties submitted that the Information Memorandum and the Financial and Operational Information did not constitute "Records" for the purpose of Warranty 4.2.

3551 The Viterra Parties submitted that the Information Memorandum did not form part of the "Records" because this would be inconsistent with other clauses of the Acquisition

2900 See par 1029 above.

2901 Reference was made to their submissions in issue 24 above.

2902 In the Defence, in response to the allegation that each subclause of Warranty 4.2 had been breached, the Viterra Parties referred to pars 12, 15-21, 25, 26, 26A, 26B, 30-33, 37, 44-48, 54-62 of the Defence (the detail of which is unnecessary to refer to) without further elaboration.

Agreement. The Viterra Parties contended Records did not have the wide meaning suggested because "Records" were required to be:

(1) The subject of "reasonable access" by representatives of Cargill Australia prior to Completion, pursuant to clause 9.4.

(2) Handed over at Completion, pursuant to clause 5.4(d).

(3) Subject to retention obligations, pursuant to clause 23.

The Viterra Parties submitted that it was nonsensical to speak of these clauses operating in relation to the Information Memorandum. Therefore, it was submitted, it was not sensible to treat the Information Memorandum as part of the defined term, "notwithstanding the breadth of the definition".

3552 In relation to the Financial and Operational Information, the Viterra Parties noted that the definition of this term in the Statement of Claim referred to information "disclos[ed]" in the Information Memorandum and during the Due Diligence, which was alleged to have "conveyed" the Financial and Operational Performance Representations. On this basis, the Viterra Parties submitted that the Financial and Operational Information must only refer to information concerning Joe White's actual performance conveyed in the Information Memorandum or otherwise provided during the Due Diligence and not some broader concept of Joe White's records, as information not provided during the sale process could not have been "disclos[ed]", nor "conveyed" anything, to the Buyer.

3553 The Viterra Parties submitted that Cargill Australia had not sought to be precise in the Statement of Claim and that Cargill Australia's claim that this other unspecified financial and operational information should be considered to be "Records" should be rejected for lack of particularity. Further, the Viterra Parties submitted that if this submission was not accepted then, for the purposes of Warranty 4.2, the Financial and Operational Information must be the "Summary Historical Financials" section of the

Information Memorandum,[2903] subject to their submission that the Information Memorandum was not a "Record". Furthermore, the Viterra Parties submitted that if any underlying records were to be included, these must be the Data Books.

3554 *Secondly*, the Viterra Parties submitted that an inference should be drawn that Hughes believed that the Warranties, including Warranty 4.2, were true and correct and therefore no breach of Warranty 4.2 could be established.

3555 *Thirdly*, the Viterra Parties submitted that Warranty 4.2(a) had not been breached. In relation to the Financial and Operational Information, the Viterra Parties submitted that the figures in the summary historical financials section reflected the actual results obtained by Joe White and there was no evidence that the figures were falsified. Further, there was no reason to conclude that the summary historical financials were not compiled and maintained in good faith. Furthermore, the Viterra Parties noted that the Information Memorandum was prepared by King, who they submitted acted with care, noting that he gave evidence that he paid close attention to the section of the Information Memorandum dealing with financials. Finally, the Viterra Parties submitted that the Cargill Parties' loss expert[2904] accepted that he did not conclude that any financial statements of Joe White were incorrect or unreliable.

3556 *Fourthly*, in relation to Warranty 4.2(c), the Viterra Parties submitted that the only breach Cargill Australia relevantly relied upon was non-disclosure of the alleged Undisclosed Matters (in particular the Viterra Practices and the Viterra Policies) and there was no allegation that the Records were not up to date. Further, the Viterra Parties submitted that the summary historical financials conveyed high-level figures, and that there was no evidence that they were incomplete or out of date.

X.41.3 Analysis

X.41.3.1 The allegations

3557 The breaches of clause 4.2 were alleged in a number of ways. Relevantly, it was alleged Warranty 4.2(a) was breached because the Records included the Information

---

2903 Appearing on page 42 of the Information Memorandum: see annexure B to these reasons.

2904 This was a reference to Klein: see par 3946 below.

Memorandum and the Financial and Operational Information, and each of them conveyed the Financial and Operational Performance Representations and was incomplete as the Undisclosed Matters (in particular the Viterra Practices and the Viterra Policies) were not disclosed, and Viterra knew of these matters or was deemed to have known them. As to the alleged breach of Warranty 4.2(c), it was alleged the Records were not complete and up-to-date in all material respects simply because the Undisclosed Matters were not disclosed in the Information Memorandum and the Financial and Operational Information.

X.41.3.2 What fell within the meaning of "Records"

3558 The definition of "Records" was broad. It provided for a number of examples which incorporated or extended the definition of, relevantly, "reports", "data" and "documents and other material of [Joe White] or exclusively or predominantly relating to [Joe White] or the [Joe White] Business", to include "sales literature, market research reports, brochures and other promotional material" and "all trading and financial records".[2905] The Information Memorandum clearly fell within the definition of a "Record" as it was "sales literature" or "promotional material" that "exclusively or predominantly" related to Joe White.

3559 Further, the Viterra Parties' submission that a number of clauses of the Acquisition Agreement made it nonsensical to apply "Records" to the Information Memorandum must be rejected. Where the definition of "Record" was so broad, it was unsurprising that not every description of "Records" in the Acquisition Agreement would apply neatly to each individual "Record". Thus, while some obligations related to "Records" (such as enabling reasonable access or handing them over at Completion) may have been unnecessary in relation to a relatively small number of "Records" already in the Buyer's possession, this situation did not justify excluding such materials from the definition of "Records". This is particularly so when such a document fell squarely within the definition as "sales literature" or "promotional material". Further, the definition of "Records" suggested by the Viterra Parties was inconsistent with the clear words of the definition appearing in the Acquisition Agreement. If there were a

2905 See par 1022 above.

real conflict between the clear definition and the clauses referred to, then a sensible construction of these clauses would simply limit their operation to the extent that the conflict existed, but not otherwise.[2906]

3560 However, as the Cargill Parties correctly submitted, there was no inconsistency as alleged. Clause 1.1 of the Acquisition Agreement specified that the words defined in that clause had the meanings stated unless the contrary intention appeared. To the extent that "Records" as defined might be said to be contrary to the intention of a particular clause, then the meaning of Records for that clause would be construed as being refined accordingly. For example, Records in clause 5.4(d) would simply be read as referring to records within the definition of Records that had not been delivered already. Similarly, clause 9.4 would be confined to records to which access had not been given already. Finally, it was not explained why a document like the Information Memorandum would need to be excluded from the retention obligations under clause 23, but assuming that were the case, then the meaning of Records for the purposes of that clause would be limited accordingly.[2907]

3561 Further, to the extent that the Viterra Parties' submissions referred to "'Records' of Joe White" in responding to this issue, if such language was intended to be exhaustive of documents that fell within the definition, then it was misplaced. As reflected by the reference to "its" in the framing of issue 41 (that is, "its Records" signifying Viterra's Records), "Records" was not confined to Joe White's records. The documents of the Sellers that came within the definition of "Records" were caught by the definition.[2908] For the reasons already discussed, the Information Memorandum came within that

---

2906 Naturally, in construing a contract, consistency in the meaning of a term is ordinarily what would be expected to have been the common intention of the parties, but each contract must be construed according to its terms to discern objectively the intention of the parties.

2907 In response to this position, the Viterra Parties submitted it was not a question of looking for a contrary intention, but rather a question of finding "the" meaning having regard to the whole of the context. This submission ran contrary to the structure of the intended operation of the definitions which expressly contemplated that the meanings could be different depending on context.

2908 As may be seen from the definition, "Records" was not only concerned with documents "of the Company" but also encapsulated documents (and the other materials referred to in the definition) "exclusively or predominantly relating to [Joe White] or the [Joe White Business]": see par 1022 above. To the extent that the documents of the latter category fell within the definition of Assets (see par 1022 above), the Sellers were required to procure their transfer to Cargill Australia upon Completion pursuant to cl 17.1 of the Acquisition Agreement: see par 1031 above.

definition, and had been prepared by Viterra (in conjunction with, and under the control of, Glencore) for Viterra's sale of the shares in Joe White and the assets exclusively used in connection with the Joe White Business.

3562 In relation to the Viterra Parties' submission concerning the manner in which Financial and Operational Information was defined in the Statement of Claim, they were correct in contending that it was confined to the financial and operational performance as reported in the Financial and Operational Information disclosed in the Information Memorandum and during the Due Diligence. However, this observation concerning the manner in which Financial and Operational Information was defined did not appear to take the matter much further. As a general observation, "Undisclosed Matters" was not so confined and concerned the entirety of Joe White's financial and operational performance for the period from financial year 2010 to part of financial year 2013. Further, the way in which these allegations were made in the Statement of Claim referred to the Records as *including* the Information Memorandum and the Financial and Operational Information. In any event, as the allegations concerning alleged breaches of Warranty 4.2 were limited to being based upon the Information Memorandum and the Financial and Operational Information being incomplete, it is unnecessary to address the submission further.

3563 Equally, little need be said about the Viterra Parties' complaint concerning lack of particularity. There was no application to strike out the pleading on this basis, and the case must be determined on the pleadings as they stand.[2909]

3564 For the purposes of considering Warranty 4.2(a), the Financial and Operational Information included the financial and operational information disclosed in the Information Memorandum, the Management Presentation (including the Management Presentation Memorandum), and the summaries of the Operations Call and the Commercial Call. All these documents fell within the description of Records and the definition of Financial and Operational Information.

2909 Naturally, subject to any allegation that was not pressed by way of closing submission.

3565 For the purposes of considering Warranty 4.2(c), it is sufficient to consider the Financial and Operational Information conveyed within the Information Memorandum.

X.41.3.3 Warranty 4.2(a)

3566 The Financial and Operational Performance Representations have been found to have been made and have been found to have been misleading.[2910] The Financial and Operational Performance Representations were conveyed by the Financial and Operational Information, including in the Information Memorandum Statements.[2911]

3567 It has been determined elsewhere that the misleading nature of the Financial and Operational Information was known to Hughes and that this knowledge was attributable to Viterra.[2912]

3568 In the context of an implied contractual term, "good faith" has been described as being associated with "fair and reasonable".[2913] As a result of the materially misleading nature of the Financial and Operational Information, including as conveyed in the Information Memorandum, and to the knowledge of Viterra, the relevant "Records" were not compiled in good faith.

3569 The Viterra Parties' submissions that the Information Memorandum was prepared carefully by King, together with references to the Cargill Parties' loss expert's conclusion regarding the financial statements of Joe White, were not to the point. The fact that King exercised care in the process did not alter the fact that the Information Memorandum was materially misleading to the knowledge of Viterra. Further, the Viterra Parties' submission as to the position of Cargill's expert did not properly

---

2910 See issues 15 and 16 above.

2911 Note, although the Information Memorandum, the Management Presentation, the Operations Call and the Commercial Call were relied on in the Statement of Claim in addition to the Financial and Operational Information to establish the Financial and Operational Performance Representations, to the extent these documents and calls conveyed the representations by definition they formed part of the Financial and Operational Information.

2912 See issue 22 above.

2913 *Burger King Corporation v Hungry Jack's Pty Ltd* (2001) 69 NSWLR 558, 570 [169]-[173] (Sheller, Beazley and Stein JJA). See also *Esso Australia Resources Pty Ltd v Southern Pacific Petroleum NL* [2005] VSCA 228, [28] (Buchanan JA, with whom Warren CJ and Osborn AJA agreed).

reflect the entirety of his evidence on the point.[2914]

3570 The above analysis applies equally in relation to the date of entry into the Acquisition Agreement and on Completion. Although some information was provided (and therefore Records containing more information were created) in the lead up to Completion, being the October 2013 Responses, these failed to disclose the Viterra Policies or the true nature and extent of the Viterra Practices.[2915] As a result, this information did not correct the misleading nature of the Information Memorandum or the Financial and Operational Information, or rectify the unsatisfactory manner in which, relevantly, the Records were compiled and maintained.

X.41.3.4 Warranty 4.2(c)

3571 It has been found that the Undisclosed Matters were not disclosed in the Information Memorandum, during the Due Diligence, or otherwise in the Financial and Operational Information.[2916] Further, it has been found that the financial and operational performance of Joe White in the period of financial years 2010 to 2013 (in part) was substantially underpinned by Joe White's implementation of the Viterra Practices, including the Viterra Policies.[2917]

3572 The submissions of the Cargill Parties on the meaning of "complete" and "material" were not seriously contested and should be accepted.[2918] In circumstances where the Viterra Practices underpinned the Joe White Business, the non-disclosure of the Viterra Practices in the Information Memorandum was clearly material and as a result the Records, relevantly, were not complete in all material respects, in breach of Warranty 4.2(c). The fact that the Viterra Policies were documents that formed part of the Records could not be said to have completed the Records. They were marked and filed in a manner that meant the Records remained incomplete.[2919] Further, there were no documents forming part of the Records which dealt with the Varieties Practice or

---

2914 See the findings concerning the reliability of the historical financial statements of Joe White and the expert evidence in that regard at pars 4002-4003, 4218-4222, 4234, 4245 below.

2915 See issue 24 above.

2916 See issues 10 and 12 above.

2917 See issue 10.12 above.

2918 See par 3545 above.

2919 See further par 3574 below.

the Gibberellic Acid Practice.

3573 The above analysis applies equally in relation to the date of entry into the Acquisition Agreement and on Completion. Similar to the position with Warranty 4.2(a), the information disclosed in the lead up to Completion did not rectify the incompleteness of the the "Records",[2920] so that on the basis as pleaded the "Records" were not complete in all material respects at Completion.

3574 For completeness, the extraordinary manner in which the Viterra Policies were documented and archived must be noted. The marking of the Viterra Policies as "obsolete" and filing them on that basis in the Records System so as to mislead customers' auditors and auditors more generally meant that the Records had not been compiled or maintained in good faith, and were not complete or up-to-date.[2921] However, as this was not the manner in which the relevant allegations were pleaded, this fact *of itself* does not form the basis of the findings in relation to this issue.[2922]

X.42 Did Viterra breach Warranties 12(a), 12(b) and 12(c) regarding the Data Room Documentation on the date of the Acquisition Agreement (4 August 2013) or at Completion (31 October 2013)?[2923]

3575 The Warranties and related definitions are set out above.[2924] The matters the subject of Warranty 12 read as follows:

> **12 Data Room Documentation**
>
> (a) The Data Room Documentation has been collated and disclosed in good faith and with reasonable care.

2920 See issue 24 above.

2921 See pars 287-292, 1533, 2113 above and 4900 below.

2922 But was still relevant to the question of whether the Records more broadly were materially complete in light of the Information Memorandum also forming part of the Records (as discussed in par 3572 above).

2923 The different definitions of "Data Room Documentation" in the Statement of Claim and the Defence both did not faithfully replicate the definition of that term in the Acquisition Agreement: see fn 1337 above. As this issue concerned breach of Warranties in the Acquisition Agreement, obviously the term as defined in the Acquisition Agreement must be adopted as the relevant definition.

2924 See pars 1022, 1029, 1034 above.

(b) To the Share Seller's knowledge and awareness, no material information has been omitted from the Data Room Documentation.

(c) To the Share Seller's knowledge and awareness, the Data Room Documentation is true and accurate in all material respects.

X.42.1 The Cargill Parties' allegations and submissions

3576 The Cargill Parties referred to all the documents comprising the Data Room Documentation. They submitted the Data Room Documentation contained the Financial and Operational Information, and the list of the Data Room Documentation included reference to the Information Memorandum, Management Presentation Memorandum and summaries of the Operations Call and Commercial Call.[2925] The Cargill Parties subsequently withdrew this submission insofar as it related to the Information Memorandum.[2926]

3577 Cargill Australia pleaded certain matters that were alleged to give rise to these Warranties being breached. The first premise alleged to give rise to a breach was the Data Room Documentation was claimed to have included the statements to the effect set out in paragraph 2146(1) and (2) above (defined in the Statement of Claim as "the Data Room Statements"), the Operations Call Statements and the Commercial Call Statements. As to the Data Room Statements, these were alleged to have arisen on a different basis to the corresponding Information Memorandum Statements, namely from the Data Books, management reports for the period November 2010 to April 2013, an unadjusted trial balance of Joe White as at 31 October 2012 and a detailed breakdown of customers' sales volumes. It was further alleged that these statements conveyed the Financial and Operational Performance Representations, which were false. The second premise alleged was that the Data Room Documentation did not disclose the Undisclosed Matters, which comprised or contained material

---

2925 In fact, the Management Presentation Memorandum and summaries of the Operations Call and Commercial Call were included in the Data Room, however the Information Memorandum was not.

2926 Ultimately, after seeking to advance a number of alternate bases to maintain the submission that the reference to Information Memorandum was appropriate, the Cargill Parties accepted the reference to it in their submissions should be removed.

information.[2927]

3578 It was further alleged that the Share Seller, Viterra Malt, knew or was deemed to have known of the matters set out in the preceding paragraph, and as a result, each of the subclauses of Warranty 12 was breached.

3579 In their submissions as to how it was contended Warranty 12 was breached, the Cargill Parties first addressed interpretation. In relation to Warranty 12(a), the Cargill Parties referred to their submissions above regarding the meaning of "good faith".[2928] The Cargill Parties submitted that in tort the standard of reasonable care is determined by consideration of the care a reasonable person would take, which is to be ascertained objectively. While acknowledging that to breach a contractually imposed duty to take care, such as that imposed by Warranty 12(a), does not strictly concern negligent conduct, they submitted that often the same facts would amount to both the tort and a breach of contract. With regard to reasonable care in the context of Warranty 12(a), the Cargill Parties submitted that the obligation would be breached if the Data Room Documentation did not include information that was reasonably accessible to the Sellers and likely to be considered necessary by a potential purchaser of the Joe White Business.

3580 The Cargill Parties submitted that each subclause of Warranty 12 was breached because the Data Room Documentation omitted the Viterra Practices and Policies. Further, they submitted the consequence of this omission was the Data Room Documentation was misleading regarding the production volumes, sales volumes and financial returns set out in the Financial and Operational Information. This contention was put on the basis that those volumes and returns were dependent upon the existence of the Viterra Practices, the implementation of which was in breach of sales contracts.

2927 Noting that the definition of Undisclosed Matters was a reference to each and all of the components of that definition: see par 1851 above. The Cargill Parties erroneously submitted that the expression "material information" had been discussed earlier in their submissions "and should likewise be given the same meaning". They later clarified the position by acknowledging the phase had not been previously referred to.

2928 See issue 41 above.

3581 The Cargill Parties further submitted that the omitted and misleading information was not corrected prior to Completion (when the Warranties were given again as at 31 October 2013).

3582 The Cargill Parties identified the key issue for Warranties 12(b) and 12(c) as whether the breach was within Viterra Malt's knowledge. In relation to entry into the Acquisition Agreement, the Cargill Parties relied on the deemed knowledge of Fitzgerald and Mattiske "by way of" Hughes' actual knowledge; presumably referring to what they would have become aware of had they made reasonable enquiries on the dates each Warranty was given. In this regard, the Cargill Parties relied on their submission in issue 11 above in relation to Hughes' knowledge of the existence and extent of the Viterra Practices, and on their submissions in issue 22 above in relation to Hughes' knowledge that the Financial and Operational Performance Representations were false.

3583 In relation to Mattiske's and Fitzgerald's knowledge, the Cargill Parties submitted that Mattiske and Fitzgerald would have known about the allegedly incomplete and misleading nature of the Data Room Documentation if they had made reasonable enquiries of Hughes or Stewart, or both, for the following reasons:

(1) Hughes and Stewart were asked to verify the Warranties, but the process of Warranty verification was inadequate and bordering on incompetent. It was submitted that, had Viterra properly conducted the Warranty verification process, it was likely that Hughes and Stewart would have disclosed, at least, that the Viterra Policies were not in the Data Room. Further, it was submitted that the Viterra Policies would have been readily disclosed, which was apparent from what occurred in October 2013.

(2) Fitzgerald was aware of the Viterra Code's introduction in 2010 and related circumstances; his knowledge said to be apparent from the email

sent on 11 August 2010,[2929] and Fitzgerald being asked to assist to co-ordinate a response to employees refusing to sign the Viterra Code.

(3) Fitzgerald was responsible for collating the policies for disclosure in the Data Room, including by supervising others. The Cargill Parties contended he failed to take steps, or ensure others took steps, to locate any policies relating to the Joe White Business other than policies relating to safety, health and the environment.[2930] It was submitted Fitzgerald should have made enquiries of Hughes or Stewart as to what policies were material. Had he done so he would have become aware of the Viterra Policies.

(4) As general counsel, Fitzgerald should have made enquiries as to the continued application of the Viterra Certificate of Analysis Procedure.

3584 In relation to Viterra's knowledge at Completion, the Cargill Parties submitted that Viterra had knowledge that the Data Room Documentation was incomplete because Fitzgerald knew that the Viterra Certificate of Analysis Procedure had not been disclosed in the Data Room.[2931] Further, based on what had been stated by the Joe White executives, it was submitted that each of Mattiske, Fitzgerald and Rees knew in October 2013 that the Viterra Practices had a material impact on the financial and operational performance of the Joe White Business.

3585 Finally, the Cargill Parties submitted that Mattiske, Fitzgerald and Rees failed to conduct a reasonable investigation into the matters raised by Cargill in October 2013, in particular the impact of those matters on the financial and operational performance of the Joe White Business. On this basis, it was submitted that each of them was deemed to know that the Data Room Documentation was incomplete.

X.42.2 The Viterra Parties' submissions

2929 See pars 156-157 above.
2930 See pars 618, 669-670 above.
2931 See pars 1323-1333 above.

3586 The Viterra Parties submitted that the documents disclosed in the Data Room were only alleged to have conveyed representations because they included the summaries of the Operations Call and the Commercial Call. This was contended on the basis that in paragraph 27 of the Statement of Claim the Data Room Statements were not alleged to form part of the Financial and Operational Performance Representations. The Viterra Parties submitted that allegations concerning the Operations Call Statements and the Commercial Call Statements in paragraph 27 of the Statement of Claim were limited to having contributed to the following of the Financial and Operational Performance Representations:

(1) Joe White had not withheld or concealed material information from customers.

(2) The assets of the Joe White Business were sufficient for Joe White to sell malt in the volumes and for the returns stated in the Financial and Operational Information.

(3) When procuring barley, Joe White gave priority to obtaining barley that best met its customers' specifications and requirements.

3587 Further, the Viterra Parties noted that each of the representations referred to immediately above were also alleged to have been made or contributed to by statements in the Information Memorandum and Management Presentation Memorandum (which were not the subject of the relevant allegations in this section of the Statement of Claim).

3588 The Viterra Parties noted that the remainder of Cargill Australia's pleaded allegations were the non-disclosure of the Undisclosed Matters, which were alleged to comprise or contain material information.

3589 On the basis that Hughes was not called and their contention that he verified the Warranties, the Viterra Parties submitted that an inference should be drawn that Hughes believed each of the Warranties, including Warranties 12(a), (b) and (c), were

true and correct.

3590 In relation to Warranty 12(a), the Viterra Parties submitted that unless Viterra's knowledge of the Viterra Practices was established, a lack of good faith should not be found. Further, it was submitted "reasonable care" should be understood in the context of the sale process, being a sale to a sophisticated and well-advised corporate group with experience in malting and express disclaimers and acknowledgements. Furthermore, the Viterra Parties submitted that the process of setting up the Data Room was entirely regular for a transaction of this nature; and referred to Bickmore working with Argent to collate documents, to the Warranty verification process and to evidence to the effect that confirmation was sought that all documents had been provided in the Data Room.[2932] Moreover, the Viterra Parties submitted that the fact that the Viterra Policies were not included in the Data Room did not mean it was set up without reasonable care, particularly where they contended the Viterra Policies were not known to Viterra.

3591 In relation to Warranty 12(b), the Viterra Parties submitted that Cargill Australia must establish both the omission of material information and Viterra Malt's knowledge as confined by clause 31.15 of the Acquisition Agreement. The Viterra Parties submitted that the emails demonstrated that Fitzgerald first became aware of the Viterra Certificate of Analysis Procedure on 23 October 2013 and at that time believed it had been disclosed in the Data Room. They referred to Mattiske's evidence that he had not seen the Viterra Certificate of Analysis Procedure until the trial. Further, the Viterra Parties submitted that there was no evidence that Rees was aware of this document, and no evidence that Mattiske, Fitzgerald or Rees were aware of the Malt Blend Parameters Procedure.

3592 The Viterra Parties referred to the communications between the Viterra Parties and Cargill in October 2013 and the fact that Cargill was informed that Joe White issued

---

2932 This evidence was given by Lindner, but was very vague. Lindner gave evidence that "we went through a process to confirm that all relevant documentation had been provided in the Data Room", but could only say she suspected she participated in the process and that she had an "understanding" that Wilson-Smith was coordinating the process.

Certificates of Analysis in compliance with a documented procedure. They relied upon the fact that Cargill did not ask to see the procedure despite this information. Further, the Viterra Parties referred to the circumstance that Cargill Australia spoke to the Joe White executives in the 15 October Meeting.

3593 The Viterra Parties submitted that Cargill Australia could not now rely on the non-disclosure of the Viterra Policies in the Data Room because Cargill knew prior to 4 August 2013 that:

(1) Joe White used the Malt Proficiency Scheme, and Eden acknowledged this would alert someone to an analytical approach relating to 2 standard deviations.

(2) Joe White must have had policies concerning the production of Certificates of Analysis but did not ask to see them, despite being aware of the Alleged Industry Practices, aspects of the Undisclosed Matters (as submitted in issue 12 above) and matters relating to Certificates of Analysis (as submitted in issue 21 above).

3594 As a result, the Viterra Parties submitted that Warranty 12(b) should be read down pursuant to clause 13.3(a).[2933]

3595 In relation to Warranty 12(c), the Viterra Parties submitted that non-disclosure should not be regarded as a circumstance capable of giving rise to a breach of this Warranty, because this was covered by Warranty 12(b) which related to omissions. In addition, the Viterra Parties submitted that Cargill Australia was required to show that any lack of truth or accuracy was material and to Viterra Malt's knowledge. Further, the Viterra Parties submitted that Viterra was not aware of the Viterra Practices or Policies until after the Data Room closed. Furthermore, they contended the verification of the subclauses in Warranty 12 by the Joe White executives meant that any breach was not to Viterra Malt's awareness. The Viterra Parties repeated their submissions in relation to Warranty 12(a) in relation to the setting up of the Data Room. Finally, the Viterra

2933 See issue 40 above.

Parties referred to their submissions that the Financial and Operational Performance Representations were not made or, in the alternative were not false. Thus, it was submitted there was no breach of this Warranty.

X.42.3 Analysis

X.42.3.1 Related findings and the pleaded issue

3596 Findings already made relevant to this issue include that the Viterra Parties have not established the existence of the Alleged Industry Practices.[2934] Further, it has not been found that Cargill knew of the matters or had the state of mind as alleged in paragraph 31A of the Defence.[2935] Furthermore, it has been found that Viterra Malt knew of the Viterra Practices and Policies on 4 August 2013.[2936] Moreover, for reasons discussed below,[2937] to the extent that the Viterra Parties' submissions relied upon a duly performed Warranty verification process, those submissions cannot be accepted.

3597 It is convenient to address the Viterra Parties' submission concerning what was alleged in the Statement of Claim. It was correct to point out that paragraph 27 of the Statement of Claim made no reference to the Data Room Statements. However, it did not follow from that that the allegations concerning this issue were confined to the Operations Call Statements and the Commercial Call Statements. There were 3 reasons why this was so.

3598 *First*, it was alleged that the Data Room Statements were to the general effect alleged in the first 2 of the Information Memorandum Statements. Accordingly, the allegations in paragraph 27 of the Statement of Claim (which referred expressly to all the Information Memorandum Statements) included the substance of what was alleged to be the Data Room Statements.

3599 *Secondly*, the Data Room Statements necessarily fell within the definition of Financial and Operational Information in paragraph 19 of the Statement of Claim, those statements being Financial and Operational Information disclosed during the Due

2934 See issue 13 above.
2935 See issue 21 above.
2936 See issue 22 above.
2937 See issue 125.6 below.

Diligence. The Financial and Operational Information was also expressly referred to in paragraph 27 of the Statement of Claim, thereby incorporating the Data Room Statements (amongst other things).

3600 *Thirdly*, regardless of what was contained in paragraph 27, paragraph 44(a) of the Statement of Claim expressly alleged that the Data Room Statements, in conjunction with the Operations Call Statements and the Commercial Call Statements, conveyed the Financial and Operational Performance Representations. Therefore, whatever might have been said about what was or was not pleaded in paragraph 27 about the Data Room Statements conveying the Financial and Operational Performance Representations, the specific allegation was made in the relevant part of the pleading for the purposes of this issue.

3601 That said, in relation to the manner in which this issue was actually pleaded, the first premise from which Cargill Australia pleaded that Warranty 12 was breached must be rejected. It has not been established that the Data Room Statements, the Operations Call Statements and the Commercial Call Statements, or any combination of them, conveyed the Financial and Operational Performance Representations independent of the other statements relied upon to establish the Financial and Operational Performance Representations. Indeed, the Statement of Claim identified precisely how it was alleged the 10 representations comprising the Financial and Operational Performance Representations were made, and none of them were defined by reference only to statements to the effect of the Data Room Statements,[2938] the Operations Call Statements and the Commercial Call Statements. Tellingly, the Cargill Parties made no submission to this effect and in their closing submissions did not address this aspect of their pleading. In summary, although the Financial and Operational Performance Representations have been found to have been made,[2939] the alleged basis for these representations being conveyed by these 3 sets of statements was materially different to the manner in which it was principally pleaded that the

---

2938 That is, the first 2 Information Memorandum Statements.

2939 See issue 15 above.

Financial and Operational Performance Representations were made.

3602 Accordingly, only the second premise on which Cargill Australia pleaded that the clause 12 Warranties were breached (namely, that the Data Room Documentation did not disclose the Undisclosed Matters, so material information was omitted and the Data Room Documentation was misleading regarding production volumes, sales volumes and financial returns) will be considered further. It has been determined elsewhere that the Undisclosed Matters were not disclosed during the Due Diligence, which finding necessarily included that they were omitted from the Data Room Documentation,[2940] as was the fact.

X.42.3.2 Knowledge or deemed knowledge

3603 To reiterate, Warranty 12(a) was not confined to matters of "the Share Seller's knowledge and awareness". Accordingly, in considering the knowledge of the existence and extent of the Viterra Practices in relation to both the questions of good faith and reasonable care, the exercise was not confined to matters the subject of clause 31.15 of the Acquisition Agreement. Warranties 12(b) and 12(c) were subject to Viterra Malt's knowledge and awareness, which was required to be established in accordance with clause 31.15.[2941] Pursuant to clause 31.15, Viterra Malt was deemed to have had knowledge of a fact, matter or circumstance only if any named individuals, including Mattiske and Fitzgerald, were aware of the relevant matter on the 2 dates the Warranty was given or would have been aware had they made reasonable enquiries on those dates.[2942]

3604 Turning to the relevant circumstances, had Fitzgerald made reasonable enquiries he would have been aware of at least the Viterra Policies, and that they had not been included in the Data Room, both on the date of entry into the Acquisition Agreement and at Completion. This is established by the following evidence.

3605 *First*, as discussed above,[2943] it has been found that Hughes had knowledge of the

---

2940 See par 2746 above.
2941 See par 1033 above.
2942 See issue 39 above.
2943 See issue 22 above. See also par 2668 above.

Undisclosed Matters prior to entry into the Acquisition Agreement. Any basic enquiry of him would have revealed much if not all of this, which was substantially what occurred in late October 2013. Further, it was beyond dispute that Hughes knew of the Viterra Policies.[2944]

3606 *Secondly*, the most senior person at Viterra given the responsibility to ensure the verification process was properly carried out was Fitzgerald, who was also aware it was being conducted by Wilson-Smith.[2945] If Fitzgerald had conducted, or caused to be conducted, an adequate verification process of the Warranties, it is likely Hughes and others would have revealed the existence of significant aspects of the Undisclosed Matters, including at least the existence of the Viterra Policies. This position is supported by the fact that on a number of occasions Hughes had raised aspects of the Viterra Practices with others. In addition to this occurring within Viterra in 2010 (although the details were limited given the absence of a trial witness able to give direct evidence on the matter),[2946] and with Cargill at the 15 October Meeting (again, not in as much detail as might have been the case), most significantly Hughes described the Viterra Practices in detail, and explained that the Reporting Practice was documented, to Fitzgerald and others at and soon after the meeting on 23 October 2013.[2947]

3607 Without being exhaustive, a verification process, properly carried out so that each executive fully understood the relevant circumstances (including the meaning of the relevant clause, what documents had been included in the Data Room, and the seriousness of the occasion), that involved any of Warranties 4.2, 6.1(e), 7.3, 12, 13.4 or 17(a) would have been highly likely to have resulted in disclosure that material information had been omitted from the Data Room Documentation and that the Data Room Documentation was not true and accurate in all material respects. I so find.

3608 *Thirdly*, Fitzgerald was responsible (with his subordinate, Wilson-Smith) for following

---

2944 See pars 90, 287 above.
2945 See pars 668 above and 4956, 4958 below.
2946 See par 162 above.
2947 See pars 1103-1132, 1279-1288, 1314-1316 above.

up disclosure of "Company Policies" in the Data Room.[2948] Regardless of how any Warranty verification process was conducted, had Fitzgerald made, or caused to be made, reasonable enquiries on 4 August 2013 about material company policies relevant to operations, including simply by asking Hughes or Stewart, he would have been highly likely to have discovered the existence of the Viterra Policies. The fact that the Refusal of Certain Terms included Viterra rejecting specific reference to the Joe White executives in clause 31.15,[2949] which was acceded to by Cargill, did not mean that reasonable enquiries did not include enquiries of the Joe White executives.

3609 To elaborate, the removal of any reference to the Joe White executives by Mallesons was part of an attempt to confine the operation of clause 31.15 to actual knowledge of 2 individuals, which attempt was unsuccessful. Not only was the list of individuals expanded to include Mann and Mattiske, but the ambit of the clause was further expanded to provide that Viterra's deemed knowledge would include the knowledge the named individuals would have had had they made reasonable enquiries.[2950] The reinstatement of this aspect of the deemed knowledge without express reference to the Joe White executives did not mean the Joe White executives were to be excluded from what any reasonable enquiries might have entailed. Rather, it simply meant that they were not necessarily included. Given the subject matter of the possible enquiry concerning Warranty 12(b) or 12(c), Hughes was the obvious person to approach concerning the material completeness, truth or accuracy of the Data Room. So much was demonstrated by the events in October 2013, when Hughes was immediately approached when Cargill raised queries about the Operational Practices in the Cargill 22 October Letter. In particular with respect to Hughes, it would be an absurd construction of the clause to suggest that reasonable enquiries excluded enquiries of the person most suitable to respond to such enquiries. In any event, even if it had been considered that someone other than Hughes ought to have been approached about reasonable enquiries, an enquiry of any senior employee involved in the operations of Joe White would have been highly likely to have resulted in that person

2948 See par 618, 669-670 above.
2949 See par 989 above.
2950 See par 992 above.

referring to the omission of the Viterra Policies given the integral part they played in the way Joe White operated. I so find.

3610 Further, the Viterra Policies were also available on Pulse, for anyone internally at Viterra to access.[2951] The Malt Blend Parameters Procedure had been on Pulse since 2012. Stewart gave evidence that the Viterra Certificate of Analysis Procedure was also on Pulse as well as Viterra's Records System. Had Fitzgerald searched for "certificate of analysis" the system would have brought up the Viterra Certificate of Analysis Procedure.[2952] Although the Viterra Policies had been marked "obsolete", reasonable enquires would have established their status. So much is clear from the position adopted by Fitzgerald on 23 October 2013, which demonstrated he was under no illusion about whether the Viterra Policies were current.[2953]

3611 *Fourthly*, upon discovering 1 or both of the Viterra Policies, reasonable enquiries both on 4 August 2013 and at Completion would have encompassed confirming whether they had been included in the Data Room. This must follow from the fact that the Viterra Policies were material to the operations of the Joe White Business.

3612 In short, whatever factual scenario might have been expected to have arisen if reasonable enquiries had been made, if any of Mattiske, Fitzgerald or Rees (all of whom on the evidence had no meaningful knowledge of how the Joe White Business operated) were to have made reasonable enquiries concerning Warranty 12(b) or 12(c) at the very least it would have involved 2 steps. The first of these would have been to ascertain what had been actually been included in the Data Room. Then, it would have been necessary to enquire of someone with knowledge about what material documentation needed to be included in order for there to have been no material omission and for the Data Room Documentation to be true and accurate in all material respects. There could be no real doubt that if such steps had been taken they would

---

2951 See pars 192, 278 above. Stewart's unchallenged evidence on this issue has been accepted (see par 278 above); but even if there could be said to be some doubt about his evidence, there could be no real doubt that someone as senior as Fitzgerald would have been able to access policies on Pulse: see par 3476 above. In October 2013, there was no evidence to suggest any impediment existed: see par 1324 above. The Viterra Policies were also on the Records System.

2952 See par 192 above.

2953 See par 1324 above.

have resulted in policies which materially affected the manner in which every single customer order was met, namely the Viterra Policies, being disclosed as having been omitted and the enquirer being informed that their absence meant the Data Room Documentation was not being true and accurate in all material respects.

3613 As a result, by operation of clause 31.15, Fitzgerald was deemed to have knowledge of the relevant circumstances; being the existence of the Viterra Policies and their omission from the Data Room both as at the date of entry into the Acquisition Agreement and the date of Completion. It follows that Warranties 12(b) and 12(c) were breached on both of these occasions.

3614 Additional evidence relevant to the date of Completion supported this conclusion concerning the later point in time. It was incontrovertible that by this date Fitzgerald was aware of the Viterra Certificate of Analysis Procedure.[2954] On 23 October 2013, Fitzgerald stated that he believed it had been disclosed in the Data Room and that this was being checked. Reasonable enquiries included confirming whether the document was in the Data Room; a simple check would have revealed it was not there. Accordingly, in the unlikely scenario that he did not know of the document's omission as a matter of fact shortly after he sent his email on 23 October 2013,[2955] Fitzgerald was deemed to have been aware it was not in the Data Room at this time.

3615 The Cargill Parties also relied on Fitzgerald being aware of the email sent by Hughes to Gordon in August 2010, however it has been found that it is not possible to objectively form any view as to what Fitzgerald understood to be the true position at that time.[2956]

3616 Insofar as the Viterra Parties' submissions related to Fitzgerald's actual knowledge, these submissions only addressed part of the issue. For the reasons explained, deemed knowledge was sufficient for the purposes of clause 31.15 of the Acquisition Agreement and therefore Warranty 12(b) and (c).

2954 See par 1324 above.

2955 This point was effectively conceded by the Viterra Parties in closing submissions: see par 1327 above.

2956 See par 166 above.

3617 Given the conclusion in relation to Fitzgerald, it is unnecessary to consider Mattiske's knowledge or deemed knowledge.

3618 The Viterra Parties' argument that Cargill Australia could not rely on disclosure of the Viterra Policies because of what was actually disclosed prior to 4 August 2013 must be rejected. Neither the Viterra Policies themselves, nor the fact that they or some similar document existed which entrenched the conduct recorded in the Viterra Policies, were disclosed during this period.[2957]

X.42.3.3 Matters specific to Warranty 12(a)

3619 The meaning of the term "good faith" has been discussed previously.[2958] The Viterra Policies were significant to Joe White; it has been found that Joe White's financial and operational performance was substantially underpinned by Joe White supplying malt pursuant to the Viterra Practices, of which the Viterra Policies were a material part.[2959] It would be reasonably expected that such significant policies would be disclosed in the Data Room.[2960] Through Hughes, Viterra had knowledge of the Undisclosed Matters, including the existence of the Viterra Policies, and their effect on the Financial and Operational Information.

3620 The Cargill Parties have not shown that Viterra deliberately chose not to include the Viterra Policies in the Data Room.[2961] The evidence indicated that Hughes' involvement in the compilation of the Data Room was peripheral. Also, although Argent participated at a far greater level in collating documents, there was no evidence that he knew of, or was asked to make enquiries about, the Viterra Policies or company policies concerning operations of a similar nature. Further, there was evidence that Fitzgerald mistakenly believed that the Viterra Policies had been disclosed.[2962] This left open the real possibility that the Viterra Policies simply may have been inadvertently omitted from the Data Room, despite Viterra's knowledge of their existence. Given the seriousness of the allegations involving a deliberate

2957 See par 2744 above and issue 12 more generally.
2958 See par 3568 above.
2959 See par 2609 above.
2960 See pars 495-497, 619 above.
2961 See pars 662, 1324 above.
2962 See par 1324 above.

decision to exclude the Viterra Policies, the Cargill Parties have not established on the balance of probabilities that the Data Room Documentation was not collated and disclosed in good faith at the time the Acquisition Agreement was executed. This position was not altered by the further matters that were exposed in late October 2013. On the terms of the Acquisition Agreement, there was no obligation or occasion to add to the Data Room after the Acquisition Agreement had been entered into.

3621 In contrast, the facts demonstrated that the Data Room Documentation was not collated and disclosed with reasonable care. The division of the responsibility at different times between Bickmore and Wilson-Smith without proper supervision of the overall process was unsatisfactory.[2963] Further, Hughes or another senior executive engaged in the operations of the Joe White Business (such as Youil, Wicks or Stewart) ought to have been spoken to directly about the existence or otherwise of documents material to how the operations of the Joe White Business were conducted. Given their significance to Joe White, had Viterra acted with reasonable care and made the appropriate enquires it would have discovered that the Viterra Policies had not been disclosed in the Data Room and taken the reasonable step of including them. Furthermore, the evidence of Lindner on the topic of checking the Data Room Documentation was imprecise and speculative.[2964] It amounted to little more than her understanding of what had occurred. In short, there was no probative evidence that anyone did a meaningful check that all material documents, including any material policies concerning operations, had been included in the Data Room. On the evidence, it must be inferred that no such check was ever carried out. If it had been, it would have resulted in the disclosure of the Viterra Policies. As a result, Warranty 12(a) was breached upon entry into the Acquisition Agreement and upon Completion.

3622 The Viterra Parties' submission concerning the absence of any request by Cargill for the documented procedures cannot result in a different finding. *First*, whether or not Cargill made the request did not answer the question of whether or not reasonable

---

2963 See pars 661-670 above.
2964 See fn 633 above.

care had been exercised by the Sellers absent such a request.[2965] *Secondly*, in circumstances where the Joe White Business was represented in the positive manner that it had been, including in relation to responses given during the Due Diligence, and ultimately Viterra Malt represented and warranted that no material information had been omitted, it was perfectly understandable that Cargill proceeded on the basis that there were no further material documents to be provided.[2966] *Thirdly*, although only relevant to the position before Completion, Mattiske positively represented to Cargill that the relevant documentation had been included in the Data Room,[2967] contrary to the fact.

X.42.3.4 Matters specific to Warranty 12(b)

3623 The omission of the Viterra Policies, which were clearly material to the Joe White Business operations, meant that material information was omitted from the Data Room Documentation. For the reasons explained above,[2968] Fitzgerald, and therefore Viterra Malt, was deemed pursuant to clause 31.15 of the Acquisition Agreement to be aware of the existence of the Viterra Policies and their omission from the Data Room Documentation. As a result, the omission was to Viterra Malt's knowledge and Warranty 12(b) was breached both upon entry into the Acquisition Agreement and upon Completion.

3624 The submission that Warranty 12(b) ought to be read down is rejected. For reasons already explained,[2969] disclosure of the Malt Proficiency Scheme did not amount to disclosure of the Reporting Practice or anything of that nature. Further, Eden's evidence did not suggest otherwise.

X.42.3.5 Matters specific to Warranty 12(c)

3625 The Viterra Parties' submission that omission *alone* was not sufficient to give rise to a breach of Warranty 12(c) may be correct. However, on no sensible reading of subclauses (b) and (c) together could it be considered that subclause (c) would not be

---

2965 Naturally, if any such request had been made it may have increased the level of care required to have been duly considered as exercising reasonable care.

2966 A proposed warranty to this effect was included in the draft forwarded by Cargill on 29 July 2013.

2967 See par 1378(2) above.

2968 See pars 3540-3613 above.

2969 See par 223 above.

engaged despite the Data Room Documentation not being true and accurate because the reason for that state of affairs was some material information had been omitted. In other words, there was no apparent reason why both subclauses should not be construed according to the language used despite the fact that that might mean there was some overlap so that both subclauses might breached because of particular conduct. Further, to read subclause (c) down as a result of the language and operation of subclause (b) would be contrary to the express direction to construe each Warranty independently, as provided in clause 13.2 of the Acquisition Agreement.[2970]

3626 Turning to the facts, the omission of the Viterra Policies rendered the Data Room Documentation not true and accurate in material respects. *First*, the Viterra Policies were material to the operations of the Joe White Business but were not included in the Data Room or otherwise disclosed in the Due Diligence at any time.[2971] *Secondly*, the Data Room Documentation included Financial and Operational Information.[2972] *Thirdly*, the Financial and Operational Information as reported was substantially underpinned by Joe White's practice of supplying malt pursuant to the Viterra Practices and Policies. Therefore, as a result of the non-disclosure of the Viterra Policies, the Financial and Operational Information was rendered misleading, including the information included in the Data Room Documentation when viewed as a whole. Thus, to the extent it included misleading Financial and Operational Information, the Data Room Documentation was not "true and accurate in all material respects".

3627 In addition, to the extent that the Data Room Documentation did not include a material document relating to the operations of Joe White, it was also in breach of this Warranty because the material omission also meant that the Data Room Documentation was not true and accurate in all material respects.

3628 It was obvious that the Data Room Documentation included the Financial and Operational Information, and this must have been known to Fitzgerald. It has been

2970 See par 1029 above.
2971 See par 2744 above.
2972 See par 4825 below.

found above that Fitzgerald, and therefore Viterra Malt, was deemed to be aware of the existence of the Viterra Policies and their omission from the Data Room Documentation. The significance of the Viterra Policies to the Financial and Operational Information would either have been clear to Fitzgerald from the nature and content of the Viterra Policies themselves, or revealed by reasonable enquiries by Fitzgerald regarding the significance of the policies upon becoming aware of them. As a result, Fitzgerald is deemed to have known that the Data Room Documentation that contained Financial and Operational Information was not "true and accurate in all material respects". As a result, Warranty 12(c) was breached upon entry into the Acquisition Agreement and at Completion.

3629 The Viterra Parties' submission that Viterra did not become aware of the Viterra Practices or Policies until after the Data Room was closed was incomplete to the extent that it did not address Fitzgerald's deemed knowledge. Further, the fact the Data Room had closed was not a complete answer to whether these Warranties were breached, particularly in relation to the date of Completion when so much more information had been brought to Fitzgerald's attention concerning the Viterra Practices and Policies.

3630 With respect to the submission concerning Hughes' absence from the witness box, the fact that he was not called did not provide a basis for an inference that he would have given evidence that he believed the Warranties were true and correct. Leaving aside the unsatisfactory manner in which the Warranty verification process was conducted, in circumstances where the Viterra Policies were omitted from the Data Room, on no sensible view could it have been said that the Data Room Documentation had been collated and disclosed with reasonable care, or that no material information had been omitted from the Data Room, or that the Data Room Documentation was true and accurate in all material respects. Thus, it could not be inferred Hughes would have given any evidence to this effect.

3631 What is stated in the preceding paragraph also addresses the Viterra Parties' submission that the mere omission of the Viterra Policies did not demonstrate an

absence of reasonable care. It did not matter how sophisticated or well-advised the parties were, documents critical to how the operations of Joe White were conducted ought to have been included in the Data Room, and with the most elementary level of enquiries, it is highly likely that they would have been. Indeed, the sophistication and level of advice available to Glencore and Viterra made the oversight with respect to the Viterra Policies even more glaring than it might otherwise have been.

X.42.4 Conclusion

3632 Accordingly, Viterra breached Warranties 12(a), 12(b) and 12(c) on the date of the Acquisition Agreement and again at Completion.

X.43 Did Viterra breach Warranty 7.3 regarding defaults under Material Contracts on the date of the Acquisition Agreement (4 August 2013) or at Completion (31 October 2013)?

3633 Warranty 7.3 was as follows:

> **7.3 No default by the Company**
>
> To the Share Seller's knowledge and awareness, the Company is not in material default of any Material Contract, nor has anything occurred or been omitted which would be a material default but for the requirement of notice or the lapse of time or both.

3634 In relation to contracts for the sale of malt, Material Contract was defined in the Acquisition Agreement to include:

> [A]ny contract entered into by [Joe White] pursuant to which at least 20,000 tonnes of malt is supplied by [Joe White] over the term of that contract.

X.43.1 The Cargill Parties' submissions

3635 The Cargill Parties submitted that Joe White entered into Material Contracts with the following customers:

(1) San Miguel.

(2) Beer Thai.

(3) Beer Thip Brewery 1991 Co Ltd ("Beer Thip").

(4) Thai Beverages.

(5) Asia Pacific Breweries.

(6) SABECO.

(7) SAB Miller.

(8) Sapporo.

(9) HABECO.

3636 The Cargill Parties submitted that Joe White breached the Material Contracts for the sale of malt as a result of the supply of malt to customers pursuant to each of the Operational Practices. In relation to the Reporting Practice, they submitted Material Contracts were breached because of the incorrect reporting of customer specifications and as a result of supplying malt with a falsified Certificate of Analysis where the accurate reporting of malt test results was required under the terms of the contract.

3637 In relation to the meaning of "material default", the Cargill Parties referred to their general submissions in relation to contractual interpretation in respect of Warranty 4.2.[2973] Further, the Cargill Parties submitted that, in the context of "material breach", "material" should be found to mean "important" and to connote "significance".[2974] Furthermore, the Cargill Parties submitted that the focus was on the materiality of the breach, rather than the materiality of the obligation, and involved an evaluation of whether the particular breach had had a serious effect on the benefit the other party would have enjoyed if not for the breach.[2975]

3638 The Cargill Parties submitted that the breaches of the Material Contracts for the sale of malt were material because they had a serious effect on the benefit the customers would otherwise have been intended to gain. Further, the Cargill Parties submitted the breaches went to the characteristics of the product supplied to customers by Joe White and thus went to the core of trust and reliability between a supplier and its customers.

2973 See issue 41 above.

2974 *Androvitsaneas v Members First Broker Network* [2013] VSCA 212, [89] (Redlich and Priest JJA and Macaulay AJA).

2975 Ibid, [90]-[92].

3639 The Cargill Parties submitted that each of the Material Contracts in relation to the sale of malt included an implied term that Certificates of Analysis reporting the properties of malt delivered would not misrepresent the properties of that malt or whether compliance with contractual specifications had occurred.[2976]

3640 The Cargill Parties made submissions with respect to each of the 9 customers identified above separately. Only the submissions in relation to Asia Pacific Breweries are dealt with below. The other customers need not be considered in light of the conclusions reached in relation to Asia Pacific Breweries to the effect that Joe White was in material default of this Material Contract.

3641 In relation to Asia Pacific Breweries, the Cargill Parties first addressed the contractual requirements. The Cargill Parties submitted that the contract between Joe White and Asia Pacific Breweries required Joe White to supply malt according to Heineken's specifications for quality and other requirements and that the Heineken specifications expressly prohibited the use of additives including gibberellic acid. Further, the Cargill Parties submitted that the initially approved barley varieties were Gairdner, Stirling, Sloop and Schooner and from November 2011 the approved varieties were Gairdner, Stirling, Sloop, Baudin, Vlamingh and Flagship.

3642 In relation to the Gibberellic Acid Practice, the Cargill Parties submitted there was specific evidence that established that gibberellic acid was used for shipments of malt produced for Asia Pacific Breweries. The evidence relied on included the following:

(1) On 22 October 2013, Stewart requested Joe White production managers cease using gibberellic acid for "additive free" customers in preparation for Completion, specifically noting Asia Pacific Breweries.

(2) At around that time, Stewart prepared the Key Recommendations Memorandum for Hughes,[2977] in which Stewart confirmed it would take 6 months for Joe White to meet additive free requirements for Asia

---

2976 This submission need not be considered in light of the conclusions reached below.

2977 See pars 1210-1217 above.

Pacific Breweries.

(3) The Customer Review Spreadsheet, as prepared by Stewart on 28 October 2013, recorded that Asia Pacific Breweries had a requirement to be additive free but that it was not currently additive free.

3643 With respect to the Varieties Practice, the Cargill Parties relied on the Barley Analysis.[2978] The Cargill Parties submitted that the Barley Analysis demonstrated that, for 75.32 percent of malt shipments to Asia Pacific Breweries, the malt was produced using non-contractual barley varieties. Further, the Cargill Parties submitted that the Customer Review Spreadsheet recorded that Joe White was unable to supply Asia Pacific Breweries with malt produced using the correct barley varieties for the remainder of financial year 2012-2013 or for financial year 2013-2014. Furthermore, the Cargill Parties submitted that the high proportion of orders that contained non-conforming barley varieties demonstrated the disregard with which Joe White treated the barley variety requirement for Asia Pacific Breweries.[2979]

3644 In relation to the Reporting Practice, the Cargill Parties submitted that the Barley Analysis demonstrated that 89.87 percent of malt shipments to Asia Pacific Breweries contained malt that failed to meet 1 or more customer specifications but it was reported in the Certificate of Analysis that that specification had been met.

3645 The Cargill Parties referred to their submissions at issue 11 above and the factual narrative for issues 25 to 29 above in relation to the Share Seller's knowledge and made further submissions, outlined below.

3646 *First,* in relation to knowledge prior to entry into the Acquisition Agreement, the Cargill Parties made submissions regarding Fitzgerald's knowledge. The Cargill Parties referred to the email sent to Fitzgerald on 11 August 2010 regarding staff members' refusal to sign the Viterra Code and concerns expressed by Hughes to Gordon, and submitted that these matters were, or could have been, conveyed to

2978 See pars 2311-2317, 2426-2543 above.
2979 See also pars 1335-1336 above.

Fitzgerald.[2980] Further, the Cargill Parties submitted that Fitzgerald was aware of the malt cost review aspect of the Malt Cost Reduction Transformation Project, and he had been provided information referring to the use of "off specification grades" and a proposal to use 75 percent off-grade barley.[2981] It was submitted that the relationship between the use of off-grade barley and the "false certification concerns" raised by Joe White staff should have been clear to Fitzgerald; and that once Fitzgerald was aware that inaccurate Certificates of Analysis were being provided, reasonable enquiries would have included ascertaining whether Joe White was complying with contracts. The Cargill Parties submitted that information about customer contracts was readily available within the Joe White Business, and reasonable enquiries would have resulted in Fitzgerald becoming aware that Joe White was in material default of customer contracts, including the contract with Asia Pacific Breweries dated 24 November 2008. Further, the Cargill Parties submitted that as the Viterra Parties did not call Fitzgerald, a *Jones v Dunkel*[2982] inference should be drawn regarding enquiries made by Fitzgerald in 2010 when he was notified of staff members' refusal to sign the Viterra Code.

3647 *Secondly,* in relation to knowledge prior to Completion, the Cargill Parties made submissions in relation to Fitzgerald, Mattiske and Rees. The Cargill Parties referred to the Cargill 22 October Letter, received by Mattiske and Fitzgerald.

3648 In considering Fitzgerald's knowledge, the Cargill Parties relied on specific evidence including the following:

(1) On 22 October 2013, Fitzgerald was copied to an email from Hughes referring to the Customer Review Spreadsheet.[2983]

(2) On 23 October 2013, Fitzgerald conducted interviews with Hughes, Youil, Stewart and Wicks.[2984] During these interviews, Hughes informed Fitzgerald that Joe White had some contracts where it was

2980 See pars 156-157 above.
2981 See par 131 above.
2982 (1959) 101 CLR 298.
2983 See pars 1265-1266 above.
2984 See pars 1276-1311 above. The submissions erroneously submitted Rees also attended these meetings.

using non-approved barley and that Joe White was routinely using gibberellic acid when not permitted. Stewart informed Fitzgerald that Joe White was changing the results in Certificates of Analysis and customers were not being informed that the incorrect barley variety was being used.

(3) On 24 October 2013, Fitzgerald was informed by Stewart that Joe White had complied with contractual requirements regarding barley variety on only 74 percent of shipments packed in the week of 9 to 15 September.[2985]

3649 In relation to Fitzgerald, Mattiske and Rees, the Cargill Parties relied on a meeting on 29 October 2013, after receipt of the Cargill 29 October Letter.[2986] The Cargill Parties submitted that after this meeting Mattiske reported to others that gibberellic acid was used to produce approximately 70,000 tonnes of malt for Asia Pacific Breweries when not permitted and that Joe White had insufficient quantities of required barley varieties to supply malt to Asia Pacific Breweries.[2987]

3650 The Cargill Parties further submitted in relation to Fitzgerald and Rees that a *Jones v Dunkel*[2988] inference should be drawn that their evidence would not have assisted the Viterra Parties to establish that Fitzgerald or Rees had made reasonable enquiries in October 2013 concerning Joe White's material default of Material Contracts.

3651 Finally, the Cargill Parties submitted that no facts or circumstances inconsistent with Warranty 7.3 were fairly disclosed to Cargill prior to entry into the Acquisition Agreement so that clause 13.3 of the Acquisition Agreement did not operate to modify Warranty 7.3.

X.43.2 The Viterra Parties' submissions

3652 The Viterra Parties submitted that Warranty 7.3 referred to Joe White not being "in" material default and so only related to contracts, or defaults, that were currently

2985 See pars 1387-1389 above.
2986 See pars 1457-1466 above.
2987 See par 1467 above.
2988 (1959) 101 CLR 298.

subsisting at the relevant date and did not relate to concluded contracts or historical defaults. The Viterra Parties made a number of submissions in relation to the contracts relied upon by the Cargill Parties (including some contracts that were concluded by the date of the Warranties), express contractual terms and the clarity of specifications.[2989] For the purpose of this issue, these submissions will be dealt with only to the extent they related to Asia Pacific Breweries.

3653 The Viterra Parties submitted that many specification documents were tendered in relation to Asia Pacific Breweries so it was difficult to determine which specification applied in respect of a particular shipment. Further, the Viterra Parties noted that various agreements were expressly governed by foreign law, or contained dispute resolution clauses, making the question of breach complicated as a matter of fact and law. A number of examples were given which did not include Asia Pacific Breweries.

3654 In relation to the implied term relied on by the Cargill Parties, the Viterra Parties submitted that Certificates of Analysis did not misrepresent the properties of the malt delivered.[2990]

3655 The Viterra Parties submitted that Cargill Australia provided little specific evidence going to breach of any particular contract in any particular respect. The Viterra Parties described Cargill Australia's claim as follows:

(1) Impermissible use of gibberellic acid, sought to be proved by way of reliance on the matters raised in issue 10 above.

(2) Use of unauthorised barley varieties in reliance on the Barley Analysis and the particulars in schedule E to the Statement of Claim.

(3) Misstatements in Certificates Analysis in reliance on the Parameters Analysis, contended to be based on data from the Laboratory Information System and not by reference to any contractual document.

2989 For matters relevant to some of these submissions, see pars 2299-2301 above.

2990 Again, these submissions need not be considered in light of the conclusions reached below.

3656 The Viterra Parties submitted that these matters were directed to establishing that Joe White conducted its business "routinely" in accordance with the Viterra Practices and Policies and contended that the Cargill Parties had failed to establish this. Further, the Viterra Parties submitted that the court should not accept this global approach and that the Cargill Parties had failed to establish that a particular term of a particular Material Contract was breached by particular conduct to amount to a material default. It was contended, therefore, that the Cargill Parties had failed to prove breach of Warranty 7.3 on the relevant dates.

3657 On the basis that Hughes was not called and the Viterra Parties' contention that he verified the Warranties before the Acquisition Agreement was entered into, the Viterra Parties submitted that an inference should be drawn that Hughes believed each of the Warranties, including Warranty 7.3, was true and correct.

3658 In relation to materiality, the Viterra Parties submitted that, in all the circumstances, none of the matters relied on were material, including any breach as at the date of entry into the Acquisition Agreement or at Completion. This was put on the basis that it was unlikely that any breach would have been material as Material Contracts were in respect of at least 20,000 tonnes of malt over the life of the contract and therefore any shipments the subject of presently subsisting breaches were likely to have been of relatively small amounts when considered against the context of the whole agreement.[2991]

3659 In relation to knowledge, the Viterra Parties submitted that, to the extent Joe White was in any material default of Material Contracts, Viterra Malt was not aware of that fact. The Viterra Parties submitted that, for example, Fitzgerald's knowledge following the Cargill 22 October Letter was entirely dependent on what he was told by the Joe White executives and was consistent with what was conveyed to Cargill Australia in the Reply Letters.[2992] It was contended that what Fitzgerald knew from

---

2991 Again, the Viterra Parties submitted Cargill Australia had not established the Undisclosed Matters existed and that the Alleged Industry Practices were engaged in by other commercial malthouses. These submissions are contrary to the findings in issues 10 and 13 above.

2992 This submission has been rejected elsewhere: see, for example, pars 1373-1375 above.

the events in October 2013 could not amount to knowledge of a material default.

X.43.3 Analysis

3660 Subject to the issue of knowledge or deemed knowledge, Warranty 7.3 would have been breached if Joe White was in "material default" in relation to *any* Material Contract. As a result, it is sufficient to consider the contract for supply of malt to Asia Pacific Breweries.

3661 The contract with Asia Pacific Breweries was a "Material Contract" pursuant to the Acquisition Agreement. The contract was for Joe White to supply a guaranteed volume of 80,000 tonnes of malt per year. It was on foot at both relevant dates as it ran for the period from 1 April 2010 to 31 March 2014. For the reasons discussed below, Joe White was in material default in relation to this contract both upon entry into the Acquisition Agreement and on Completion.

3662 The Cargill Parties' submissions that the term "material default" should be attributed the meaning "important" and connoted "significance" should be accepted.[2993] This interpretation was not resisted by the Viterra Parties.

3663 The Gibberellic Acid Practice and the Varieties Practice each amounted to a material default in relation to the relevant contract. The undisclosed deliberate use of gibberellic acid when expressly prohibited by Asia Pacific Breweries was reprehensible conduct and unquestionably was a material default. Equally, the undisclosed deliberate use of a barley variety or barley varieties other than that permitted by the contract was a material default. There could be no doubt that Heineken would have treated it as such,[2994] and objectively it would have been entirely justified in doing so.[2995]

2993 *Androvitsaneas v Members First Broker Network* [2013] VSCA 212, [89] (Redlich and Priest JJA and Macaulay AJA).

2994 See, for example, pars 1709, 1817-1819, 1822, 1835 above.

2995 The Reporting Practice need not be considered for the purpose of this issue given the conclusions reached in relation to the Gibberellic Acid Practice and Varieties Practice. This is not to say the implementation of the Reporting Practice for the Asia Pacific Breweries contract did not also amount to a material default. Lest there be any doubt, it almost goes without saying that the deliberate covert

3664 To elaborate, in relation to the Gibberellic Acid Practice, it has been found that Asia Pacific Breweries prohibited gibberellic acid and that gibberellic acid was used routinely when it should not have been at all relevant times up until Completion.[2996] Further, the Customer Review Spreadsheet provided specific evidence that gibberellic acid was used in malt for Asia Pacific Breweries. Although this document was created in October 2013, there was nothing to suggest such conduct was only a recent occurrence; quite the contrary. The contract in question was an ongoing supply contract that resulted in malt being supplied continuously pursuant to 129 orders between July and October 2013 and the Gibberellic Acid Practice was implemented routinely. As such, Joe White must have been in material default at the time the Acquisition Agreement was entered into and at Completion.[2997]

3665 In relation to the Varieties Practice, it should first be noted that there may have been some inconsistency between the Customer Review Spreadsheet, which listed 3 approved varieties for Asia Pacific Breweries (Gairdner, Stirling and Sloop, and the Cargill Parties' submissions that from November 2011 the approved varieties were Gairdner, Stirling, Sloop, Baudin, Vlamingh and Flagship.[2998] This reflected what was pleaded in the Statement of Claim (which was alleged to be the contractual position). This possible inconsistency was immaterial for the purposes of resolving this issue.[2999] On the more expansive list of approved varieties, non-approved varieties were used for 272 orders in the period of 1 January 2010 to 31 October 2013.[3000] Further, although these orders spanned a number of years, the evidence also showed non-approved barley varieties were supplied to Asia Pacific Breweries on numerous occasions every

---

misstating of results of analyses conducted of malt delivered to customers was also a material default.

2996 See pars 2544, 2553 above.

2997 It is unnecessary for the purpose of this finding to make any determination about whether malt was delivered precisely on 4 August 2013 and 31 October 2013. The concept of breach of contract, including anticipatory breach, does not mean that a contract is breached only for a moment in time.

2998 It has been found elsewhere that the evidence suggested the Customer Review Spreadsheet was accurate or substantially accurate: see pars 1434-1436 above. Further, the Customer Review Spreadsheet stated the position as at October 2013, and these particular details may have changed from the position in November 2011.

2999 The more likely explanation for the difference was not that there was an inconsistency, but that the approved varieties changed after November 2011; as it was confirmed on 29 October 2013 that the only approved varieties for Asia Pacific Breweries were Gairdner, Stirling and Sloop: see par 1462 above.

3000 See pars 2428, 2484 above. Further, if the tighter list of approved varieties was used, non-approved varieties were used for 561 orders.

month from July to October 2013. In addition, the Customer Review Spreadsheet made clear there was an ongoing issue as there was an inability to supply all barley varieties as required.

3666 The Viterra Parties' submissions are rejected for the following reasons.

3667 *First*, the specifications in relation to Asia Pacific Breweries were sufficiently clear to determine that there was a material default in relation to the contract for supply of malt to Asia Pacific Breweries. At a bare minimum, it was sufficient that it has been established that the contract prohibited the use of gibberellic acid. To that end, the Cargill Parties have established that a particular material term of a particular Material Contract was being breached at the relevant times, namely the additive free requirement in the contract for supply of malt to Asia Pacific Breweries.

3668 *Secondly*, it was incorrect to suggest that "any shipment(s) the subject of presently subsisting breach(es) were likely to have been of relatively small amounts when considered against the context of the whole of the agreement" *and therefore* any breach was not likely to be material. As at the date of entry into the Acquisition Agreement, Joe White was, and continued to be, in material default in respect of their contract with Asia Pacific Breweries due to the numerous instances of the supply of malt with prohibited gibberellic acid and with non-approved barley varieties during the period of the contract to that time. Breaches in the period from the contracts' commencement remained unremedied at the date of Acquisition Agreement and at Completion. As a result, the Viterra Parties' submission that only some subset of those breaches were relevant, which were "presently subsisting" at date of the Acquisition Agreement or at Completion, cannot be accepted. Even if it were accepted, the evidence demonstrated subsisting breaches.[3001] Moreover, given the serious deception involved in such a flagrant breach of contractual requirements, even relatively small quantities that were delivered because of the errant conduct must be considered to have been a material default.

3001 See pars 3664-3665 above.

3669 Warranty 7.3 was subject to Viterra Malt's knowledge and awareness, which must be established in accordance with clause 31.15 of the Acquisition Agreement.[3002]

3670 With respect to knowledge prior to entry into the Acquisition Agreement, the Cargill Parties relied on Fitzgerald's knowledge. In relation to Fitzgerald's actual knowledge, it has been found that he must have had some knowledge of some practices or strategies of Joe White, however the evidence did not establish he had full knowledge of the extent of such practices or strategies, nor specific knowledge of the Reporting Practice, the Varieties Practice or the Gibberellic Acid Practice.[3003] The specific matters relied on by the Cargill Parties, including the emails sent in 2010 and the Malt Cost Reduction Transformation Project, were therefore insufficient to establish his knowledge of material defaults of Material Contracts.[3004] As a result, actual knowledge has not been established. However, for the same reasons as discussed in relation to issue 42 above, had Fitzgerald made reasonable enquires he would have become aware of material breaches of the contract for supply of malt to Asia Pacific Breweries (and other major customers). Fitzgerald was the most senior person with responsibility for the verification process and had that process been conducted adequately it is likely Hughes and others would have revealed significant aspects of the Undisclosed Matters, including non-compliance with customer contracts. Had Fitzgerald then conducted reasonable enquiries he would have discovered the material defaults in relation to contracts for the supply of malt to customers, including Asia Pacific Breweries.[3005] Further, independent of any verification process, the most basic of enquiries about any policies concerning operations of Joe White would have revealed the existence of the Operational Practices, and thus the ongoing material defaults of Material Contracts.[3006]

3671 In relation to knowledge prior to Completion, at the meetings held on 23 October 2013

3002 See par 1033 above.
3003 See pars 2684-2687 above.
3004 It has been found elsewhere that it is not possible to objectively form any view as to what Fitzgerald understood to be the true position as a result of the August 2010 emails: see pars 166, 3615 above.
3005 See pars 3606-3607 above.
3006 See par 3608 above.

Fitzgerald was informed that Joe White was in default of contracts for the supply of malt as a result of using non-approved barley varieties and non-approved gibberellic acid.[3007] As a result, Fitzgerald had actual knowledge that Joe White was in default in relation to contracts for the supply of malt, including to Asia Pacific Breweries.[3008] If it was not already clear that this default was material (which seemed highly unlikely), reasonable enquiries would have confirmed this to have been the case. Mattiske's knowledge was also evidenced by what was said at the meeting held after receipt of the Cargill 29 October Letter.[3009] After this meeting, Mattiske reported to others the supply to Asia Pacific Breweries of at least 70,000 tonnes of malt produced using gibberellic acid and that sufficient quantities of the barley varieties Asia Pacific Breweries expected to receive were not available in Australia.[3010]

3672 As a result, the material default of Material Contracts was within the knowledge of the Share Seller pursuant to clause 31.15 of the Acquisition Agreement for the purposes of Warranty 7.3 both on 4 August 2013 and on 31 October 2013.

X.43.4 Conclusion

3673 In the interests of not making these lengthy reasons unnecessarily lengthier, the analysis of this issue has been confined to the position of Asia Pacific Breweries. For the reasons stated above, Warranty 7.3 was breached in relation to Asia Pacific Breweries both on the date of the Acquisition Agreement and the date of Completion. Such a finding makes it unnecessary to consider other Joe White customers identified by the Cargill Parties.

3674 However, for the sake of completeness it should be added that, having reviewed the submissions and evidence in relation to each of these other customers identified by the Cargill Parties, subject to some possible exceptions, Warranty 7.3 was also breached in relation to the Varieties Practice on at least 1 or both of the 2 dates in question by reason of material defaults with respect to the Material Contracts on foot.

3007 See pars 1281-1282 above.
3008 See, for example, par 1462 above.
3009 See also pars 1460-1461 above.
3010 See pars 1447-1467 above.

Those exceptions were for: (1) Beer Thai, Beer Thip and Cosmos Brewery Thailand Co Ltd where it appeared the supply contracts may have expired before 4 August 2013; and (2) SAB Miller where there was no evidence of incorrect barley varieties being used for any of the months from July to October 2013.

X.44 Did Viterra breach Warranty 9.2 regarding facts capable of giving rise to a Claim on the date of the Acquisition Agreement (4 August 2013) or at Completion (31 October 2013)?

3675 Warranty 9.2 was as follows:

> **9.2 No claims or disputes**
>
> At the date of this agreement, there are no Claims or disputes relating to the Business and, to the best of the Share Seller's knowledge and awareness, there are no facts or circumstances which may give rise to a Claim or to any legal, administrative or government proceedings.

X.44.1 The Cargill Parties' submissions

3676 The Cargill Parties referred to their submissions in respect of issue 43 above in relation to material default of the Material Contracts related to the sale of malt and the knowledge of Fitzgerald, Mattiske and Rees.

3677 The Cargill Parties relied on the existence of the Operational Practices, and the fact that they were not disclosed to customers, as facts or circumstances which may have given rise to a Claim against Joe White. The Cargill Parties submitted that Joe White engaged in this conduct and misled its customers in contravention of section 18 of the Australian Consumer Law. Further, the Cargill Parties submitted that Joe White breached the terms of the Material Contracts related to the sale of malt by failing to supply malt in accordance with contractual specifications by engaging in the Operational Practices. The Cargill Parties submitted this was so regardless of the fact that there was no evidence that any Claims had been made at the date of the Acquisition Agreement or the date of Completion, or had arisen after Completion.

3678 Furthermore, the Cargill Parties submitted, relying on their submissions in relation to issue 21 above, that no facts or circumstances inconsistent with Warranty 9.2 were

fairly disclosed to Cargill in the Disclosure Material or Transaction Documents or otherwise were within Cargill's knowledge, nor were they disclosed in writing during the Due Diligence. Thus, it was contended that clause 13.3 of the Acquisition Agreement did not operate to modify Warranty 9.2.

X.44.2 The Viterra Parties' submissions

3679 The Viterra Parties referred to the allegations made in the Statement of Claim and noted there was no allegation of any existing Claim at the date of the Acquisition Agreement or the date of Completion; rather, the relevant allegations were confined to prospective Claims against Joe White, or existing facts or circumstances that could give rise to Claims because of the failure of Joe White to comply with customer contracts, including customer specifications. Accordingly, it was submitted that it was necessary for Cargill Australia to establish that Viterra Malt was aware of the facts or circumstances relied on for the purposes of clause 31.15 of the Acquisition Agreement.

3680 Further, the Viterra Parties relied on their submissions at issue 10 above in relation to the existence of the Undisclosed Matters and at issue 43 above, in submitting that Cargill Australia's allegations lacked specific evidence of any breach. They also repeated their submission that an inference should be drawn that Hughes believed each of the Warranties, including Warranty 9.2, was true and correct.

3681 The Viterra Parties further relied on their submissions at issue 39 above, including the Warranty verification process, to submit that, to the extent there were prospective Claims, Viterra Malt was not aware of them.

3682 Finally, the Viterra Parties submitted that breach could only result in nominal damages in the absence of any prospective Claims eventuating.

X.44.3 Consideration

3683 The Operational Practices have been found to have existed, to have not been disclosed to customers, and to have constituted material defaults of customer contracts,

including Material Contracts.[3011] The Operational Practices, together with their non-disclosure to customers, clearly amounted to facts or circumstances "which may [have] give[n] rise" to a Claim by any affected customers. This was so regardless of whether or not Claims ultimately arose as a result of the facts or circumstances. Thus, any lack of specificity in relation to the allegations made could be of no moment.[3012] In proving that the Viterra Practices were implemented throughout the relevant years, the Cargill Parties have established that customer contracts were being breached systemically by reason of each of the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice. Hughes was fully aware of this (as were others) and could not have been expected to give evidence that the Warranties were true and correct, including not being able to state that there were no facts and circumstances as at 4 August 2013 or 31 October 2013 which might have given rise to a Claim.

3684 The conclusion has been reached in respect of issue 43 above that the Operational Practices were within Viterra Malt's knowledge and awareness for the purposes of the Share Seller's Warranties, upon entry into the Acquisition Agreement and at Completion, at the very least because they would have been uncovered by reasonable enquiries by 1 or more of the relevant persons. It was axiomatic that knowledge or deemed knowledge of the Operational Practices necessarily meant knowledge or deemed knowledge of facts or circumstances which might have given rise to a Claim against Joe White by its customers. As a result, Warranty 9.2 was breached both upon entry into the Acquisition Agreement and at Completion. The position as at Completion was even more certain. In light of what Fitzgerald was told by Hughes, Youil, Wicks and Stewart after the Cargill 22 October Letter,[3013] there could be no doubt that he had actual knowledge of facts and circumstances which might have

---

3011 See issues 10 and 43 above.

3012 In fact, the Cargill Parties' closing submissions provided details of alleged breaches of customer contracts between 2010 and 2013 because of the Varieties Practice which ran for 83 pages, with as many as 25 orders per page (most of which were alleged to be orders in which the barley variety supplied was in breach of contract). It is unnecessary to discuss these individually in light of the finding made immediately above and also because of the findings made concerning the Barley Analysis: see issue 10 above.

3013 See par 1311 above.

given rise to a Claim.[3014]

3685 In light of the findings concerning the operation of clause 15.4(b) of the Acquisition Agreement,[3015] it is unnecessary to discuss any issue in relation to damages.

X.45 Did Viterra breach Warranties 13.4 and 17(a) regarding the conduct of the Joe White Business on the date of the Acquisition Agreement (4 August 2013) or at Completion (31 October 2013)?

3686 Warranties 13.4 and 17(a) were as follows:

> **13.4 Business carried on**
>
> Since the Last Balance Sheet Date, the [Joe White] Business has been conducted in the ordinary course in a proper and efficient manner, without any interruption or alteration in its nature, scope or manner.
>
> …
>
> **17 Compliance with Laws**
>
> (a) The [Joe White] Business has been conducted in accordance with applicable Laws and ISO Standards in all material respects.

X.45.1 The Cargill Parties' submissions

3687 In their written submissions, the Cargill Parties submitted that Warranty 13.4 had 2 limbs. The *first*, "in the ordinary course", was a warranty that the business was being managed in the routine way in which a malt business is conducted. The *second*, "proper and efficient manner", was submitted to mean what it said without any elaboration. Somewhat paradoxically, in oral closing submissions on this issue, the Cargill Parties referred to a case in which it was contemplated that "proper" in the phrase "proper and efficient manner" could have a variety of meanings.

3688 That case, *Montedeen Pty Ltd v Bamco Villa Pty Ltd,*[3016] concerned a franchise agreement, in which a franchisor's obligation was to conduct a system in a "proper and efficient

---

3014 Although not relied upon by the Cargill Parties in their submissions, it should be pointed out that the evidence demonstrated that Viterra was on express notice of quality claims being on foot as at 2 August 2013 and there was no evidence to suggest they were resolved by 4 August 2013 or 31 October 2013: see par 5033 below.

3015 See pars 5294-5325 above.

3016 [1999] VSCA 59 (Brooking, Charles and Chernov JJA).

manner". The Court of Appeal adopted a definition of proper from the Oxford English Dictionary that referred to "genuine, true or real".[3017] In so doing, they held the franchisor was required to conduct the system with due regard for the interests of its franchisees.[3018] However, the Cargill Parties' senior counsel baulked at any suggestion that the meaning adopted in that case could be adapted to the context in which the phrase appeared in Warranty 13.4. Ultimately, the Cargill Parties did not put forward precisely the meaning they adopted, but submitted that in this context "proper"[3019] was inconsistent with running a business that falsified Certificates of Analysis, represented that malt was something that it was not and systematically cheated its customers.

3689 The Cargill Parties submitted that Warranty 17(a) required the Joe White Business to be conducted in accordance with "applicable Laws". "Law" was defined in the Acquisition Agreement to include the common law, principles of equity and any Australian statute. Further, the Cargill Parties submitted "applicable Laws" and "ISO Standards" should be read separately so there could be a breach of a Law without any infringement of ISO Standards. The Cargill Parties submitted that a principal feature of the manner in which the Joe White Business was conducted, by reference to the Viterra Practices, was the systematic cheating of customers. The Cargill Parties submitted that this was not an ordinary, proper or efficient manner to conduct any lawful business and was plainly illegal, or at least in breach of contract and tortious.

X.45.2 The Viterra Parties' submissions

3690 The Viterra Parties relied upon previous submissions: (1) in respect of issue 10 above, that Cargill Australia failed to establish that the Undisclosed Matters existed; (2) in respect of issue 43 above, in relation to the contracts relied upon by Cargill Australia and the alleged lack of specific evidence of breach; (3) in respect of issue 44 above, in relation to the absence of evidence of any Claims eventuating; and (4) an inference

---

3017 In fact, it was only part of the definition: "genuine, true, real, regular, normal".

3018 [1999] VSCA 59, [73].

3019 The Cargill Parties referred to the possible meaning being genuine, true, real, regular, normal, strict, exact or correct.

should be drawn that Hughes believed that each of the Warranties, including Warranties 13.4 and 17(a), were true and correct.

3691 In relation to Warranty 13.4, the Viterra Parties submitted that the Warranty must be read as a whole, and was directed to preserving the status quo demonstrated in the most recent balance sheet of 31 October 2012. The Viterra Parties submitted that "proper" in this context should be construed as part of the promise that nothing had changed. They contended that this Warranty was not directed towards compliance with legal requirements as other Warranties were directed towards such issues. Alternatively, they submitted that if "proper" were to be construed more broadly, it was not accepted that there had been a breach of Warranty by reason of the existence of the Operational Practices.

3692 In relation to Warranty 17(a), the Viterra Parties submitted that section 18 of the Australian Consumer Law was not an "applicable Law" for the purposes of this Warranty, nor was any common law obligation to perform contracts. Rather, the Viterra Parties submitted that this Warranty was confined to the "types of laws that regulated the conduct of a business", such as those concerning occupational health and safety, discrimination and environmental regulation. The Viterra Parties submitted that this interpretation was supported by the fact that other Warranties, such as Warranties 7.3 and 9.2, were directed to customer disputes.

3693 In the event that the court were to find that section 18 of the Australian Consumer Law or a common law obligation to perform contracts were "applicable Laws", the Viterra Parties submitted that Cargill Australia relied on the same matters as it did in seeking to establish the existence of the Undisclosed Matters and provided little specific evidence that conduct was misleading or deceptive in respect of customers or that any customer contract was breached.

3694 Finally, the Viterra Parties submitted that, if it were found that the Joe White Business was not conducted in accordance with "applicable Laws", this would not be in "material respects" because they alleged that the Undisclosed Matters did not exist

and the Alleged Industry Practices were engaged in by other commercial malthouses.

X.45.3 Analysis

3695 Before turning to each of these Warranties separately, an aspect of the Viterra Parties' approach to construing these provisions needs to be addressed. With respect to both Warranties, the Viterra Parties submitted their construction ought to be affected by what was contained in other Warranties such that certain words should not be construed as contended for by the Cargill Parties because the subject matter said to be captured by the Warranty was dealt with in other Warranties.[3020]

3696 To the extent the Viterra Parties relied on the subject matter and scope of other Warranties to read down Warranty 13.4 or 17(a), their submissions must be rejected. Clause 13.2 of the Acquisition Agreement expressly provided that each Warranty was to be construed independently and was not limited by reference to any other Warranty.

X.45.3.1 Warranty 13.4

3697 The Viterra Parties' submission that, read as a whole, Warranty 13.4 was only directed towards preserving the status quo cannot be accepted. The effect of this construction would be that no matter how improperly or inefficiently the Joe White Business was being conducted, it would not be a breach of the Warranty provided that the Joe White Business was conducted in an equally unsatisfactory manner before the Last Balance Sheet Date. This would make little commercial sense. While the words "in the ordinary course" did suggest a level continuity between the manner in which the business was conducted prior to the Last Balance Sheet Date, the words "in a proper and efficient manner" plainly added more. The remaining words of the Warranty did not detract from this approach, although they implied that the Joe White Business was being operated in a proper and efficient manner as at the Last Balance Sheet Date. Further, if Warranty 13.4 was intended to do no more than require that the Sellers warranted that the Joe White Business had been being conducted without interruption or alteration in the same manner as it had been conducted since the Last Balance Sheet

3020 See pars 3691-3692 above.

Date, it could have said so by limiting the language of the Warranty to these words. In short, to accept the Viterra Parties' submission would be to give no substantial meaning or operation to the words "in a proper and efficient manner".

3698 As to the meaning of "proper and efficient manner", it is a term that is not infrequently used in commercial documents to describe how a business or a part of a business is or ought to be conducted.[3021] Naturally, the phrase must be understood by reference to the context in which it appears. Plainly enough, for a business to be conducted in a proper and efficient manner, it must be conducted both properly and efficiently. It is convenient to initially focus on the meaning of proper in this context.

3699 Given the manner in which the Joe White Business was being conducted from 31 October 2012 until 4 August 2013, and further until 31 October 2013, it is unnecessary to decide definitively what the precise meaning of "proper" was in this Warranty. Whether the descriptions the Cargill Parties adopted (namely genuine, true, real, regular, normal, strict, exact or correct), or whether another potential meaning, or a combination of other potential meanings was attributed to this word in this context,[3022] on no view could a business that engaged in conduct which involved the Viterra Practices, or the routine implementation of any of them, be considered to be a business conducted in a proper manner. Without going into extensive detail, it suffices to say that, in circumstances where the Viterra Practices involved deliberate deception and a consciously implemented system to conceal the deliberate breaches of customer contracts on an ongoing basis, the Joe White Business was not being conducted in a way that remotely resembled a proper manner. It necessarily followed that no level of efficiency in operating the Joe White Business in this manner could amount to it being conducted in "a proper and efficient manner".

3021 Of the many examples that could be given, see *Re 700 Form Holdings Pty Ltd* [2014] VSC 385, [11] (Robson J); *Ubertini v Saeco International Group SpA (No 4)* [2014] VSC 47, [24] (Elliott J); *Arhanghelschi v Ussher* [2013] VSC 253, [28], [34] (Ferguson J); *Bearingpoint Australia Pty Ltd v Hillard* [2008] VSC 115, [5] (Habersberger J); *Montedeen Pty Ltd v Bamco Villa Pty Ltd* [1999] VSCA 59, [20], [73] (Brooking, Charles and Chernov JJA). See also *Corporations Act*, ss 283BB(a), 283CB(a).

3022 In *Montedeen Pty Ltd v Bamco Villa Pty Ltd* [1999] VSCA 59, [73], other meanings referred to included "strictly belonging or applicable; that is in conformity with the rule; strict, accurate, exact, correct, literal not metaphorical" and "such as a thing of the kind should be; excellent, admirable, commendable, capital, fine, goodly, of high quality … of good character or standing; honest, respectable, worthy".

3700 Accordingly, although the Cargill Parties have not shown that there was any interruption or alteration in the way that the Joe White Business was conducted before and after the Last Balance Sheet Date, or that the Joe White Business was not conducted "in the ordinary course" when compared to how it was being conducted on the Last Balance Sheet Day, nevertheless they have established Warranty 13.4 was breached because the Joe White Business was not being conducted in a proper and efficient manner.

X.45.3.2 Warranty 17(a)

3701 In relation to Warranty 17(a), the Cargill Parties' submission that it should be read as imposing 2 separate requirements should be accepted. The natural meaning of the clause was that both requirements had to have been satisfied on the relevant dates. Thus, if the Joe White Business was not conducted in accordance with applicable Laws in all material respects the Warranty was breached, irrespective of the position in relation to ISO Standards. The same would hold if the Joe White Business were not conducted in accordance with the ISO Standards, however it is unnecessary to consider this alternative as the ISO Standards were never tendered at trial.

3702 In relation to the first requirement, given the very broad definition of "Law", there was no basis in the text, context or purpose of the Warranty to read this as confined to only specified types of laws. Further, the Viterra Parties failed to provide any cogent support for why the laws they submitted fell within the definition should be included to the exclusion of other laws. In particular, "types of laws that regulate the conduct of a business" was not a clearly defined set of laws. Furthermore, even if "applicable Laws" were interpreted to mean "types of laws that regulate the conduct of a business", it is difficult to conceive why the *Competition and Consumer Act* would not be such a type of law; section 18 being a statutory norm under which persons engaging in conduct in trade or commerce in Australia are required to operate.

3703 In short, nothing more need be said than, for the purpose of construing Warranty 17(a), "Laws" had a meaning that accorded with "Law" as defined in the Acquisition Agreement. The Australian Consumer Law was clearly within the defined meaning

of "Law" and therefore, to the extent its provisions applied to the operation of the Joe White Business, they were "applicable Laws".

3704 Equally, contractual law fell within the definition of "Law". Leaving aside the question of any technical breaches, material defaults of contract such as must have existed by reason of the Viterra Practices meant that Warranty 17(a) was also breached for this reason.

3705 To elaborate, the Reporting Practice and the Varieties Practice involved false statements to customers in Certificates of Analysis,[3023] which falsity was not disclosed to the customers. Self-evidently, this conduct amounted to a contravention of section 18 of the Australian Consumer Law. Further, although the Gibberellic Acid Practice did not involve positive statements at around the time of delivery as to whether or not exogenous gibberellic acid had been included when it was prohibited by the customer, providing malt knowingly including a customer-prohibited additive without disclosing the fact was equally self-evidently conduct that was misleading in contravention of section 18. Further, it has been found that such conduct also amounted to breaches of customer contracts.[3024] Furthermore, the Operational Practices continued right up until Completion.[3025]

3706 The Viterra Parties' submissions in reliance on the non-existence of the Undisclosed Matters as alleged and on the Alleged Industry Practices must be rejected on the basis of conclusions reached elsewhere that the Undisclosed Matters did exist and it has not been established that the Alleged Industry Practices existed.[3026]

3707 Having concluded the Joe White Business was not conducted in accordance with all "applicable Laws", the final question is whether this amounted to a failure to comply "in all material respects". The breaches of contract have been found to have been material.[3027] As a result of those breaches of contract, the Joe White Business had not

---

3023 Noting that not all instances of the Varieties Practice involved express misstatements in Certificates of Analysis.
3024 See issue 43 above.
3025 See pars 1555-1556 above.
3026 See issues 10, 13 above.
3027 See issue 43 above.

been conducted, and was not being conducted at the specific dates, in accordance with "applicable Laws … in all material respects". Further, it need not be determined whether any particular contravention of section 18 of the Australian Consumer Law was material. The Reporting Practice and the Varieties Practice have been found to have been engaged in routinely. The systemic engagement in misleading or deceptive conduct clearly fell well short of the Joe White Business being conducted in accordance with "applicable Laws … in all material respects".

3708 As already noted, the Cargill Parties failed to tender the ISO Standards.[3028] Further, no submissions were made articulating how the ISO Standards were breached. As breach of the other requirement in Warranty 17(a) has been established, the failure to put evidence of the ISO Standards did not affect the overall result as to whether there had been a breach.

X.45.4 Conclusion

3709 In conclusion, each of Warranty 13.4 and Warranty 17(a) was breached upon entry into the Acquisition Agreement and on Completion.

X.46 Did Viterra breach Warranty 6.1(e) on the date of the Acquisition Agreement (4 August 2013) or at Completion (31 October 2013)?

3710 In closing submissions, the Cargill Parties stated that they did not press this issue.

X.47 Did Viterra breach clauses 13.1 and 13.8 of the Acquisition Agreement?

X.47.1 Clause 13.1

3711 To view it in its context, clause 13.1 is set out above.[3029] It provided:

> The Sellers represent and warrant to the Buyer that each Warranty is correct and not misleading on the date of this agreement and will be correct and not misleading on the Completion Date as if made on and as at each of those dates except where otherwise provided in the Warranty.

3028 For completeness, it might have also been expected that the Viterra Parties would have tendered the ISO Standards in light of the contents of the Reply Letters: see pars 1405, 1512, 1524 above.

3029 See par 1029 above. See also par 1022 above for relevant definitions.

X.47.1.1 The Cargill Parties' submissions

3712 The Cargill Parties submitted that clause 13.1 was not independent of the Warranties and incorporated each of those Warranties and promises to the effect that each was correct and not misleading It followed, the Cargill Parties submitted, that if any Warranty had been breached there was an automatic breach of clause 13.1.

X.47.1.2 The Viterra Parties' submissions

3713 The Viterra Parties submitted that clause 13.1 was the operative clause in respect of the Warranties, and the conclusions in relation to issues 41 to 46 above flowed through to issue 47 above.

X.47.1.3 Analysis

3714 For the reasons outlined above,[3030] Viterra has been found to have breached (in the order of the issues as determined) Warranties 4.2(a), 4.2(c), 12(a), 12(b), 12(c), 7.3, 9.2, 13.4 and 17(a) at the dates of entry into the Acquisition Agreement and of Completion. As a result, it was not the case that "each Warranty [was] correct and not misleading" at each of those dates. Quite the opposite. Accordingly, clause 13.1 was breached both at the date of entry into the Acquisition Agreement and of Completion.

X.47.2 Clause 13.8

3715 Clause 13.8 is also set out above.[3031] It provided:

> (a) In the period from the date of this agreement until Completion, the Sellers must as soon as reasonably practicable disclose to the Buyer in writing any fact, matter or circumstance of which it becomes aware and which in its reasonable opinion would result or would be likely to result in any Warranty not being correct or being misleading in any material respect and for the purpose only of this clause 13.8 any reference in a Warranty to the term "as at the date of this agreement" shall be disregarded.[3032]
>
> (b) Subject to clause 13.8(c), the Seller must use all reasonable endeavours to remedy (if capable of remedy) the relevant fact, matter or circumstance before Completion.

3030 See issues 41, 42, 43, 44 and 45 above.

3031 See par 1029 above. See also par 1022 above for relevant definitions.

3032 The term "as at the date of this agreement" was relevant to Warranties 6.1(e), 9.2: see par 1034 above. In the Viterra Parties' closing submissions, it was contended these words added little to the obligation under cl 13.8 and that it would make more sense if the words were instead replaced with "as at the Completion Date". This matter was not raised on the pleadings. When it was raised with the Viterra Parties' senior counsel, he simply stated that, "You can't replace the words".

(c) Nothing in clause 13.8(b) will require the Sellers or a Related Body Corporate of a Seller to pay any money or provide other valuable consideration to or for the benefit of any person or otherwise take any action which, in that Seller's reasonable opinion, would or may impact adversely on or otherwise be contrary to its interests or the interests of a Related Body Corporate of the party.

X.47.2.1 The Cargill Parties' submissions

3716 The Cargill Parties submitted that clause 13.8(a) required disclosure of information that came to light that would have indicated that a Warranty was not correct or was misleading and clause 13.8(b) required the breach to be remedied before Completion. Further, it was submitted that the unstated assumption behind clause 13.8(a) was that the relevant information came to light between entry into the Acquisition Agreement and Completion.

3717 The Cargill Parties submitted that, even if (contrary to its primary submission) Viterra was not aware of the Viterra Practices and Policies prior to entry into the Acquisition Agreement, there was no doubt it had become aware of them by Completion. The Cargill Parties relied on their submissions in relation to the Pre-Completion Representations concerning the knowledge of the Viterra Parties.[3033] Further, the Cargill Parties submitted that the nature and extent of the Viterra Practices was not disclosed to the Cargill Parties prior to Completion.

X.47.2.2 The Viterra Parties' submissions

3718 The Viterra Parties submitted that clause 13.8 required Viterra to disclose in writing, in the period between execution and Completion, matters of which they were aware, and that, in Viterra's reasonable opinion, would likely result in a material breach of Warranty. The Viterra Parties characterised the Cargill Parties' submissions as essentially claiming that: (1) Viterra knew more than it disclosed in the October 2013 Responses; (2) to Viterra's knowledge, the pleaded Warranties were likely to be breached in a material respect; and (3) Viterra did not disclose this to Cargill Australia. They submitted that this had not been established.

3719 The Viterra Parties referred to their submissions in relation to the facts relevant to this issue and to issue 35 above concerning Viterra's knowledge of the of the veracity of

3033 See issue 25 above.

the Pre-Completion Representations, and submitted that *Viterra* was informed by Cargill Australia of the alleged practices and conducted an investigation by which they adequately informed Cargill Australia of the results. The Viterra Parties submitted that in the context of the dialogue between Cargill Australia and Viterra in response to the Cargill 22 October Letter, it could not be said that Viterra "failed to disclose" any matters of which it was "aware" and that in Viterra's "reasonable opinion" would likely result in a "material" breach of Warranty.

3720 The Viterra Parties' submissions did not specifically address clause 13.8(b).

X.47.2.3 Analysis

3721 The requirements of clause 13.8(a) were not in dispute.[3034] Leaving aside the finding already made that the knowledge of Hughes was the knowledge of Viterra,[3035] it has been established based on what Hughes, Youil, Wicks and Stewart told Mallesons, Fitzgerald and Norman in October 2013 that Viterra knew significantly more than it disclosed to Cargill before Completion.[3036] Viterra was aware of numerous facts, matters or circumstances which would have resulted, or would have been likely to have resulted, in multiple Warranties being incorrect or being misleading in a material respect. Given the substantial body of information about the existence and prevalence of the Viterra Practices and serious breaches of supply contracts (including Material Contracts),[3037] no reasonable opinion could have been held to the contrary.

3722 The matters disclosed to Mallesons, Fitzgerald and Norman[3038] have been addressed

---

3034 On a strict reading of cl 13.8(a), if Viterra already knew of a breach and failed to disclose it at the time of entry into the Acquisition Agreement then it could not have become aware of the matter in the period from the date of the Acquisition Agreement to Completion and therefore the clause could not be enlivened. No such submission was put by any party. The better construction of the clause was that there was an ongoing obligation to disclose if the matter was known to Viterra and had not been disclosed. In any event, if such a construction were correct and operated to exclude any obligation under cl 13.8, then it would follow that Viterra would have been in breach of the relevant Warranty or Warranties at the time the Acquisition Agreement was entered into in any event.

3035 See issue 11 above.

3036 See pars 1285-1288, 1311, 1373-1375, 1405, 1512, 1524 above and par 5164 below, and annexure C to these reasons.

3037 Ibid. See also issue 42 above in relation to Warranties 12(b) and 12(c), issue 43 above in relation to Warranty 7.3, issue 44 above in relation to Warranty 9.2.

3038 The disclosure is described this way in light of the findings that Viterra already knew of such matters because of the knowledge of Hughes.

extensively.[3039] In light of the fact that it was necessary for there to be merely a single Warranty that was incorrect or misleading, or even likely to have been incorrect or misleading, for this provision to be enlivened, some straightforward illustrations will suffice in order to demonstrate why Viterra could not have reasonably had any other opinion.

3723 Mallesons, Fitzgerald and Norman were told on 23 October 2013 that gibberellic acid was used routinely in breach of contract,[3040] including with Heineken and Sapporo whose audits did not detect its use.[3041] Also in the context of gibberellic acid, they were told that the specifications of the malt as supplied were often outside of contractual specifications. For reasons already explained,[3042] the existence of this conduct amounted to a breach of Warranty 7.3. Even though some of what was communicated did not specifically state which contracts had been breached (it would appear from Lindner's notes that no one asked), learning that Joe White acted in such a way routinely or often and at all of Joe White's plants when it should not have was, at the very least, knowledge that it was likely that Warranty 7.3 (amongst others, including 9.2, 13.4 and 17(a)) was not correct or was misleading. In any event, Wicks' express referral to Heineken and Sapporo could have left no doubt that there were material defaults in relation to Material Contracts.

3724 Mallesons, Fitzgerald and Norman were also told that incorrect barley varieties could not be used and that as a result there was a legal exposure for Joe White from 1 November 2013.[3043] They were further told that Joe White had been required by Viterra to source cheaper barley in the past and that there would be issues with obtaining required barley varieties until March 2014, which could be significant financially.[3044] Also on 29 October 2013, Viterra was expressly informed that issues concerning the inability to supply the correct barley varieties included Asia Pacific

---

3039 See pars 1285-1288, 1311, 1373-1375, 1405, 1512, 1524 above and par 5164 below, and annexure C to these reasons.
3040 See par 1282 above.
3041 See par 1308 above.
3042 See pars 3663-3664 above.
3043 See par 1299 above.
3044 See par 1281 above.

Breweries and that Heineken were dogmatic.[3045] Knowledge of such matters meant Viterra knew before 31 October 2013 that it was irrefutable that Joe White was operating in breach of its supply contract with Asia Pacific Breweries, which meant that there were matters of which it was aware which would result in a Warranty not being correct or being misleading, including Warranty 7.3.

3725 Further, it was conveyed that specifications were often outside of contract and that if Joe White was required to supply in accordance with its contractual obligations from 1 November 2013 it would be commercial suicide and the brand would be decimated.[3046] This information also raised issues under Warranty 7.3 (amongst others, including 9.2, 13.4 and 17(a)).

3726 These matters were never conveyed in writing to Cargill before Completion.[3047] As a result, Viterra breached clause 13.8(a).

3727 Clause 13.8(b) required Viterra to use all reasonable endeavours to remedy (if capable of remedy) the relevant fact, matter or circumstance before Completion. Reasonable endeavours would have required, at least, attempts to completely cease the Operational Practices prior to Completion. The evidence shows that, to the extent they were capable of remedy, Viterra took some limited steps to remedy the Operational Practices in the lead up to Completion.[3048] However, this fell far short of using all reasonable endeavours. The Viterra Parties did not make submissions to the contrary. The Viterra Practices continued right up until Completion.[3049] As a result, Viterra breached clause 13.8(b).[3050]

3045 See pars 1462, 1467, 1478-1479, 1482, 1487-1490 above.

3046 See par 1307 above.

3047 For the purpose of determining whether a breach of cl 13.8(a) had occurred, it is unnecessary to consider what Mattiske may or may not have said orally to Purser in response to Cargill's queries. To comply with cl 13.8(a), any notification was required to be in writing.

3048 For example, Mattiske gave a direction that the Gibberellic Acid Practice should stop immediately: see par 1254 above (however, the contemporaneous direction given by Stewart to cease using gibberellic acid for additive free customers was to commence from Completion: see pars 1263-1264 above). See more generally par 2544 above.

3049 See pars 1555-1556 above.

3050 Clause 13.8(c) did not arise for consideration.

3728 Accordingly, the answer to both questions raised in this issue is yes.

X.48 Did Viterra convey representations in the same terms as the Warranties by providing the Warranties in the Acquisition Agreement?[3051]

3729 The Warranties pleaded in paragraph 22 of the Statement of Claim were contained in schedule 4 of the Acquisition Agreement, being each of the Warranties referred to in issues 41 to 46 above. These Warranties set out statements of existing facts and matters relevant to Joe White and the operation of the Joe White Business. As discussed in issue 47 above, the Warranties were given contractual force by clause 13.1 of the Acquisition Agreement.[3052] The simple issue to be determined is whether representations were made in the same terms as the Warranties.

3730 Whether a representation was conveyed must be determined by reference to all the circumstances, including the terms of the contract.[3053] By clause 13.1, Viterra represented and warranted to Cargill Australia that each Warranty was correct and not misleading on the date of the Acquisition Agreement and on the Completion Date.[3054] On its face, it was unambiguous; clause 13.1 conveyed a warranty *and* separately a representation that the Warranties were correct.

3731 The interpretation the Viterra Parties contended for, namely that clause 13.1 did not convey a representation, would give no effect to the words "represent and". Rarely would a construction of a clause that gives no meaning or operation to express wording be adopted as the correct approach.[3055]

3732 The Viterra Parties submitted that "a warranty, of its nature, is a promise about a fact, not a statement that something is a fact" and therefore is "a promise, not a

---

3051 See pars 1022, 1029, 1034 above.

3052 See par 1029 above.

3053 See, for example, *RCR Energy Pty Ltd v WTE Co-Generation Pty Ltd* [2017] VSCA 50, [64] (Weinberg, Whelan and Santamaria JJA); *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 322 [35] (French CJ).

3054 This clause is set out in full at par 1029 above.

3055 *Australian Broadcasting Commission v Australasian Performing Right Association* (1973) 129 CLR 99, 109.4-110.1 (Gibbs J, dissenting).

representation".[3056] As a matter of authority, it is doubtful whether this submission, that a warranty could never amount to a representation, was correct. Any warranty in a particular case would need to be considered on its terms and in context in order to determine whether misleading or deceptive conduct had been engaged in.[3057] In any event, for the purposes of this issue, it is unnecessary to determine this point given the words "represent and" contained in clause 13.1. Such language made it clear that a representation was conveyed in addition to the respective warranty being given. This position was reinforced by the definition of "Warranties" itself, which meant "the warranties *and representations* set out in Schedule 4 …" (emphasis added).[3058]

3733 The Viterra Parties also made submissions based upon other parts of the Acquisition Agreement. They contended that the court should not find representations were made in the same terms as the Warranties because the terms of the Acquisition Agreement as a whole precluded such a finding. In particular, it was put that the fact that the Sellers had only undertaken an obligation to pay damages in the event of the breach of a Warranty, coupled with the express contractual statements that no representations or warranties were made other than the Warranties, made it plain no representation was being made. As to the *first* part of this submission, the remedy or remedies available was a separate question as to whether or not representation was made. *Secondly*, the express contractual statements referred to did not preclude a representation being made in circumstances where Warranties was defined in the

---

3056 The Viterra Parties relied on a quote from *Accounting Systems 2000 (Developments) Pty Ltd v CCH Australia Ltd* (1993) 42 FCR 470, 505.8 (Lockhart and Gummow JJ) and suggested that their Honours' comments that "a statement [that] is embodied as a provision of a contract" may amount to misleading or deceptive conduct did not concern warranties. However, their Honours' comment was contained in a paragraph that concerned warranties and the Viterra Parties' submission appeared to be inconsistent with Lockhart and Gummow JJ's conclusion that the trial judge was correct in finding that the contractual warranty was capable of constituting misleading or deceptive conduct: at 506.9.

3057 *RCR Energy Pty Ltd v WTE Co-Generation Pty Ltd* [2017] VSCA 50, [64] (Weinberg, Whelan and Santamaria JJA); *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 322, [35]-[36] (French CJ); *MWH Australia Pty Ltd v Wynton Stone Australia Pty Ltd (in liq)* (2010) 31 VR 575, 597-598 [90]-[91] (Buchanan and Nettle JJA); *Accounting Systems 2000 (Developments) Pty Ltd v CCH Australia Ltd* (1993) 42 FCR 470, 505.8-506.4 (Lockhart and Gummow JJ). For completeness, the Viterra Parties submitted French CJ conflated warranties with statements of fact in the passages referred to in *Campbell v Backoffice Investments Pty Ltd*, 322 [35]-[36]. In light of the conclusion reached on the correct construction of cl 13.1 of the Acquisition Agreement it is unnecessary to consider this beyond stating that such a submission ran counter to a number of authorities, including those referred to in this footnote.

3058 See par 1022 above.

manner referred to in the preceding paragraph.

3734 The Viterra Parties further submitted that any representation conveyed by clause 13.1 was limited by the effect of clauses 13.3 and 13.4, and subject to the limitations set out in clause 15 of the Acquisition Agreement. It was put that these terms precluded any finding that representations were conveyed in the same terms as the Warranties.

3735 Clause 13.3 provided that each Warranty was to be read down and qualified by information fairly disclosed to Cargill Australia in specified ways. The inclusion of clause 13.3 in the Acquisition Agreement did not preclude a representation being conveyed by clause 13.1. Naturally, information disclosed in accordance with clause 13.3 would affect the scope of the relevant representation conveyed by 13.1. However, this would go to the content and extent of the representation made, as opposed to whether a representation was conveyed or not.[3059]

3736 The Viterra Parties also relied on clause 13.4,[3060] in which Cargill Australia acknowledged and agreed that it did not rely on any statement, representation, warranty, condition, promise, forecast, or other conduct which may have been made on behalf of Viterra, except the Warranties. Clause 13.4 was not relevant to whether or not representations were made, but rather it spoke to Cargill Australia's reliance, or non-reliance, on any representations made. In fact, far from precluding a representation having been conveyed, clause 13.4 expressly recognised the possibility that representations may have been made by Viterra by reason of the Warranties.[3061]

3737 Clauses 15.8, 15.9 and 15.11 limited Viterra's liability, by imposing a maximum liability in the absence of fraud, a bar on recovery for indirect loss and an obligation to mitigate, respectively. Contrary to the Viterra Parties' submissions, these clauses did not prevent clause 13.1 conveying a representation and did not require it to be construed in the manner suggested. Rather, these further clauses would become

---

3059 Relevant disclosures could possibly have the effect that no representations were conveyed if the disclosures were inconsistent with all aspects of the Warranties given. However, this was clearly not what occurred.

3060 See par 1029 above.

3061 The effect of clause 13.4 in relation to the question of reliance by Cargill is addressed at par 3726 below.

relevant when assessing loss for the claims to which they may have applied.

3738 Further, the surrounding circumstances leading up to the Acquisition were consistent with the Cargill Parties' position. Clause 10.4 of the Confidentiality Deed expressly contemplated that a subsequent separate agreement could contain both representations and obligations.[3062]

3739 Accordingly, in the terms set out in schedule 4, in the manner set out in clause 13.1 and subject to the other provisions of the Acquisition Agreement (such as clauses 13.2 and 13.3), representations were made in addition to warranties given in the terms of the Warranties. To repeat, this interpretation was consistent with the definition of "Warranties" in clause 1.1 of the Acquisition Agreement. The definition of "the warranties and representations set out in Schedule 4" indicated that the statements of existing fact contained in schedule 4 were themselves representations. Accordingly, the Sellers made representations in the same terms as Warranties 4.2, 6.1(e), 7.3, 9.2, 12, 13.4 and 17(a) ("the Warranty Representations").

X.49 Did Cargill Australia rely on the Warranty Representations in entering into the Acquisition Agreement?

X.49.1 The Cargill Parties' submissions

3740 The Cargill Parties submitted that the fact that Cargill Australia relied on the Warranty Representations was established in 2 ways. *First*, the Acquisition Agreement contained an express acknowledgement in clause 13.7(a) by Viterra that Cargill Australia had entered into the agreement and would complete in reliance on the Warranties as they were given on the terms of the agreement.[3063]

3741 *Secondly*, the Cargill Parties submitted that the subject matter of the Warranty Representations was materially the same as that of the Financial and Operational Performance Representations, and reliance was shown by the same factors which the Cargill Parties identified for the purpose of issue 20 above. They contended the

3062 See par 590 above.
3063 See par 1029 above.

relevant factors in relation to the subject matter were:

(1) The representations were of a kind calculated to induce Cargill to enter into the transaction, by unambiguously conveying that Joe White was a producer of high quality malt made from high quality barley, whose business model was trained closely on meeting customers' requirements exactly.

(2) Cargill made a careful assessment of the information it received from the Viterra Parties, making decisions within a rigorously structured process which required justification and accountability, rather than the mere enthusiasm of Cargill executives.

(3) The characteristics of Joe White conveyed by the representations were the foundation upon which Cargill created its valuation of the Joe White Business.

(4) Cargill's assessments of the value and desirability of Joe White could not have rationally been made had the Viterra Practices been disclosed.

(5) Cargill carefully and thoroughly assessed the risks of the transaction within the limits of the Due Diligence, and raised and pursued potential risks with the Sellers, receiving unambiguous reassurances in answer to its questions.

(6) Cargill's senior executives gave evidence that they would not have approved the Acquisition, or would have withdrawn approval for the Acquisition before making any legal commitment, had the Viterra Practices been disclosed.[3064]

X.49.2 The Viterra Parties' submissions

3742 The Viterra Parties submitted the court should not find that the Warranty

[3064] See issue 33 above.

Representations were made, but that if they were made then it should not be found that Cargill Australia relied on the Warranty Representations. They set out 4 factors which they contended weighed against such a finding.

3743 *First*, they contended that express contractual statements made in the Acquisition Agreement were inconsistent with Cargill Australia's claimed reliance. Referring to clause 13.4, they submitted that the Acquisition Agreement expressly provided that Cargill Australia did not rely on any representation or warranty other than the Warranties, and that this provision represented a solemn and binding statement of fact.

3744 *Secondly*, it was submitted that the attitude of Cargill to the Acquisition was such that Cargill Australia would have acquired Joe White regardless of the Warranty Representations. In support of this submission, the Viterra Parties referred to the November 2012 process by which Cargill had identified "must have acquisitions",[3065] and noted that during this process Cargill's malt business unit had nominated the Acquisition as "pivotal" to its business and identified Joe White as the missing "pearl" in the business unit's "string of pearls".

3745 *Thirdly*, they submitted Cargill had knowledge of the Alleged Industry Practices, and learned during the Due Diligence that Joe White was, or that there was a real possibility that it was, engaging in the Alleged Industry Practices. Accordingly, it was submitted that Cargill could not succeed in establishing that it had relied on any of the Warranty Representations which were inconsistent with what it already knew.

3746 *Finally*, the Viterra Parties submitted that Cargill decided to enter into the Acquisition Agreement prior to the making of any Warranty Representations. The Warranties were provided by Viterra executing the Acquisition Agreement, and it followed that any Warranty Representations could not have been made any earlier than the time of entry into the Acquisition Agreement. As a result, it was contended that Cargill Australia could not have entered into the agreement in reliance on any such

---

3065 See pars 706-707 above.

representations.

3747 Further to this final point, the Viterra Parties submitted that the evidence showed that the decision to enter into the Acquisition Agreement was made at the moment the Cargill leadership team decided to approve the final bid, which was prior to the Warranties being finalised. They contended that the evidence of Cargill Australia's reliance was limited to the reference to the negotiations on 2 August 2013 in respect of the increase in the final bid price,[3066] and that the only reference to the Warranties in this evidence was that re-statement of the Warranties at Completion as 1 of the conditions imposed by Cargill for its increased bid.

X.49.3 Analysis

3748 Put succinctly, the terms of the Acquisition Agreement referred to below are determinative of the outcome of this issue. Additionally, as noted in issue 20 above,[3067] where a representation is made which is calculated to induce a person to enter into a contract, and the person in fact enters into the contract, there arises a fair inference of fact that they were induced to do so by the representation.[3068] A material representation which is objectively likely to induce a party to enter into a contract may be treated as calculated to do so.[3069] The Warranty Representations were material, and were by their content objectively offered and made to induce Cargill Australia to enter into the Acquisition Agreement. In light of the expressly agreed position as set out in the Acquisition Agreement, it is probably unnecessary to make a finding; but, if it be necessary, the fair inference to be drawn from the terms of the Warranty Representations was that Cargill Australia did rely on the Warranty Representations in entering into the Acquisition Agreement. I so find. This finding is buttressed by the fact that on 2 August 2013 Cargill required the Warranties to be given both at the

---

3066 See issues 54-60 below.

3067 The legal principles relevant to determining issues of reliance are set out in issue 20.2 above.

3068 See par 3156 above. Of course, whether an inference ought to be drawn involves a consideration of all the relevant circumstances.

3069 *Australian Competition and Consumer Commission v TPG Internet Pty Ltd* (2013) 250 CLR 640, 657 [55] (French CJ, Crennan, Bell and Keane JJ).

date of the Acquisition Agreement and at the date of Completion.[3070]

3749 The factors listed by Viterra did not rebut the inference that Cargill Australia relied on the Warranty Representations when entering into the Acquisition Agreement. In relying on clause 13.4(a) of the Acquisition Agreement,[3071] the Viterra Parties failed to grapple with the fact that the definition of "Warranties" in the Acquisition Agreement included "the warranties *and representations* set out in Schedule 4 …" (emphasis added).[3072] Read in light of this definition, reliance by Cargill Australia on the Warranty Representations was entirely consistent with the acknowledgement in clause 13.4(a).

3750 The second factor raised by the Viterra Parties placed too much emphasis on the superseded view held that the possible acquisition was "pivotal" to Cargill Malt. As the Viterra Parties properly acknowledged, before any decision to acquire Joe White was made this classification had been downgraded from "pivotal" to "desirable" from the perspective of the Cargill leadership team.[3073] It has been found that, although the Acquisition was a high priority for Cargill, this did not amount to Cargill having an intention to purchase Joe White regardless of its manner of operation, its value or the ability of Cargill to conduct a business consistently with the guiding principles outlined in the Cargill Code.[3074] Had Viterra declined to agree to the Warranties (being the making of the Warranty Representations and the giving of warranties as set out in the Warranties) when requested, it would probably have been considered as most uncharacteristic for a transaction such as this, and in any event would have put Cargill on notice about potential issues with Joe White. Further, it would at the very least have prompted Cargill to ask further questions and to seek an explanation as to why anticipated warranties would not be given, Cargill's enthusiasm notwithstanding. The submission that Cargill Australia would have proceeded with

---

3070 See also par 3758 below.

3071 The clause provided that in entering into the Transaction Documents and in proceeding to Completion, the Buyer did not rely on any statement, representation, warranty, condition, promise, forecast or other conduct which may have been made by or on behalf of a Seller, except the Warranties.

3072 See par 3732 above.

3073 See para 707 above.

3074 See paras 3390-3394 above.

the Acquisition regardless of whether the Warranty Representations were made was contrary to a significant body of evidence which has been found to fairly reflect Cargill's position.

3751 The third factor relied on was the existence of the Alleged Industry Practices. As the Viterra Parties have failed to establish that the Alleged Industry Practices existed, this need not be considered further.[3075]

3752 The final factor relied on by the Viterra Parties was that Cargill Australia could not have relied on the Warranty Representations in entering into the Acquisition Agreement because the Warranty Representations were not made until the Acquisition Agreement was already entered into. As noted above,[3076] it is necessary for recovery under the Australian Consumer Law that causation is satisfied, and questions of reliance are a "tool of analysis" in determining whether as a matter of fact the causation requirement is met.[3077] On the Viterra Parties' submission, the causation requirement could not be satisfied because they contended the reliance was alleged to have occurred *before* the conduct relied upon, so the alleged cause occurred *after* the alleged effect. Consideration of this submission requires specific identification of both the moment at which the Warranty Representations were made and the moment at which reliance occurred.

3753 As outlined above,[3078] the Warranty Representations were conveyed by operation of clause 13.1 of the Acquisition Agreement, which relevantly said "The Sellers represent and warrant to [Cargill Australia] that each Warranty is correct and not misleading on the date of this agreement and … on the Completion Date …". The use of "represent and warrant", with both verbs in the same simple present tense, carried an implication that the act of representing occurred simultaneously with the act of warranting.

3075 See issue 13 above.

3076 See par 3148-3149 above.

3077 *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 351 [143] (Gummow, Hayne, Heydon and Kiefel JJ); *I & L Securities Pty Ltd v HTW Valuers (Brisbane) Pty Ltd* (2002) 210 CLR 109, 128 [56]-[57] (Gaudron, Gummow and Hayne JJ); *Henville v Walker* (2001) 206 CLR 459, 469 [14] (Gleeson CJ), 494 [109] (McHugh J, with whom Gummow J agreed), 509 [163] (Hayne J, with whom Gummow J agreed). See also *Sellars v Adelaide Petroleum NL* (1994) 179 CLR 332, 356.8-357.2 (Brennan J) and generally issue 20.2 above.

3078 See pars 1029, 3731-3732 above.

Plainly, the act of warranting occurred, and the Warranties were given, at the time of contract formation. Equally, the simultaneous conduct of representing occurred upon the contract being entered into.

3754 The conclusion that the Warranty Representations were not made until the point of contract formation was affirmed by consideration of a counterfactual where, immediately prior to contract formation, Cargill Australia had changed its mind and declined to enter into the contract. In this counterfactual, Cargill Australia would not be able to rely upon or seek remedies based on the Warranties, including not being entitled to rely on the Warranty Representations. If Cargill Australia, in this counterfactual, sought in some other proceeding to allege reliance on the Warranty Representations as an element of a claim, Viterra could rightly have said that since the contract was not entered into, the Warranties were never given and accordingly the Warranty Representations were never made.

3755 All of that said, in any event the answer to this submission by the Viterra Parties is found in clause 13.7(a), which stated that the Sellers acknowledged that:[3079]

> [Cargill Australia] has entered into this agreement and will Complete in reliance on the Warranties as they are given on the terms of this agreement.

The express acknowledgement in clause 13.7(a) of entry by Cargill Australia in reliance on the Warranties (which included the Warranty Representations) militated against a construction of the Acquisition Agreement which would have the Warranty Representations made after the point of entry into the contract by Cargill Australia.

3756 The language of each of clauses 13.1, 13.4(a) and 13.7(a) made plain that both the making of the Warranty Representations and reliance upon them could not have occurred either before or after Cargill entered into the contract; these events having occurred on the entry of Cargill Australia into the Acquisition Agreement. Thus, the moment of reliance coincided with the time of the making of the Warranty Representations.

3079 See par 1029 above.

3757 The Viterra Parties attempted to identify an earlier moment at which the decision to invest occurred (and therefore, they contended, the moment of any reliance), being the moment at which the Cargill leadership team decided to approve the making of the final bid at the meeting on 24 July 2013.[3080] In essence, it was submitted the decision to invest occurred before the Warranty Representations were made, and therefore no reliance could have been placed subsequently on the Warranty Representations.

3758 As well as being inconsistent with the express language of clause 13.7(a), this submission mischaracterised the decision of the Cargill leadership team, which was to make an offer to acquire Joe White *on particular terms*. The final bid which Cargill, Inc communicated to Merrill Lynch on 29 July 2013 was expressed to be "[s]ubject to the Acquisition Agreement",[3081] and was sent with a draft acquisition agreement tracked with Cargill's proposed amendments.[3082] As acknowledged in the Viterra Parties' submissions, the materials connected with the Cargill leadership team meeting on 24 July 2013 show that the Cargill leadership team turned their minds to the proposed warranties, and expressed a desire to modify the agreement so that the then proposed warranties were to be re-stated at Completion.

3759 If, in the period between the Cargill leadership team meeting on 24 July 2013 and contract formation on 4 August 2013, the Viterra Parties had sought to materially change the expression or content of the Warranty Representations, it would have been completely open for Cargill to have taken some action in response. Depending on the extent of the changes,[3083] Cargill might have delayed signing an agreement, sought further input from the Cargill leadership team or other senior decision-makers, or walked away from the transaction. The fact that Viterra was perfectly entitled to (and in fact did) amend the Warranties as proposed and that, if it had materially done so, Cargill could have taken these steps at this interval illustrated that the moment of

3083 See pars 979, 984, 989-992, 1002, 1007-1008, 1012-1014 above and 3800-3801 below in relation to the negotiations that occurred.

reliance did not occur on 24 July 2013 or any time before the Acquisition Agreement was entered into.

3760 It follows for the reasons stated that the answer to issue 49 is yes.

X.50 Were the Warranty Representations false because the Warranties the subject of the Warranty Representations were breached and did Viterra thereby engage in misleading or deceptive conduct within the meaning of section 18 of the Australian Consumer Law?

X.50.1 Submissions

3761 The Cargill Parties submitted that the Warranty Representations were false at the date of the Acquisition Agreement for the same reasons that each Warranty, and clause 13.1, was breached on the date of the Acquisition Agreement, as set out in their submissions on issues 39 to 45 and 47 above. The Cargill Parties relied on the observation of French CJ in *Campbell v Backoffice Investments Pty Ltd*[3084] that the "[t]he giving of a warranty embodying a false statement of present fact may be characterised as misleading or deceptive conduct simply because it involves the making of that false statement".[3085]

3762 The Viterra Parties submitted that if, as they contended, the Warranty Representations were not made, there could be no question as to their falsity, and that if the Warranty Representations were made, they must have been made at the time of entry into the Acquisition Agreement. The Viterra Parties relied on their submissions on issues 41 to 47 above to contend that the Warranty Representations were not false at that time.

3763 The Viterra Parties submitted that whether conduct was misleading or deceptive was to be determined in all the circumstances, which include, for a representation made in a contract, the circumstances in which the contract was made. The Viterra Parties referred to 3 circumstances which they submitted were relevant to characterising the

3084 (2009) 238 CLR 304.
3085 Ibid, 322 [36].

Warranty Representations.

3764 *First*, the Viterra Parties referred to Sale Process Disclaimers. It was submitted that the Acquisition Agreement must be considered in the context of the regime that had preceded it.

3765 *Secondly*, the Viterra Parties referred to Cargill Australia's acknowledgements in clauses 13.4 and 13.5 of the Acquisition Agreement that it had not relied on any representation, warranty, forecast or other conduct made by Viterra except the Warranties.[3086]

3766 *Thirdly,* the Viterra Parties referred to the fact that during the negotiations, the Viterra Parties had rejected certain amendments to clauses 13 and 31.15 of the Acquisition Agreement proposed by the Cargill Parties that concerned the scope of certain proposed warranties and the basis upon which deemed knowledge would have been attributed to Viterra.[3087] They submitted that the Refusal of Certain Terms put Cargill on express notice that the Viterra Parties would not and did not:

(1) Agree that the knowledge of the executives of Joe White was attributable to the Viterra Parties.

(2) Agree to be deemed to have knowledge of all material disclosed to Cargill in the Due Diligence.

(3) Provide any warranty in respect of whether Joe White was then, or had previously been, in default of any contracts, save for a Warranty that Joe White was not (on the date the Warranty was given) in *material default* of Material Contracts.

3767 On the basis of the circumstances listed, the Viterra Parties stated that where the Viterra Parties made it very clear that they were making no representations other than the Warranties, it could not be said that the breach of any Warranty meant that the

Warranty Representation in the same terms as the Warranty was misleading or deceptive.

X.50.2 Analysis

3768 In determining this issue, a question arises as to whether the making of the Warranty Representations was conduct for the purposes of the Australian Consumer Law, and therefore capable of constituting misleading or deceptive conduct within the meaning of section 18.

3769 The Australian Consumer Law provides that a reference to "engaging in conduct" is a reference to doing or refusing to do any act, including "the making of, or the giving effect to a provision of, a contract or arrangement".[3088] There are numerous instances where courts have recognised that representations in the form of contractual terms,[3089] or warranties specifically,[3090] may constitute conduct for the purposes of the Australian Consumer Law (or its predecessor).

3770 The Victorian Court of Appeal noted, in *RCR Energy Pty Ltd v WTE Co-Generation Pty Ltd*,[3091] that the question of whether contractual promises can form representations for the purposes of the Australian Consumer Law remains "a matter of controversy".[3092] In that case, the Court of Appeal held that it was at least arguable that the contractual warranties in question were conduct for the purpose of the Australian Consumer Law,[3093] but that it was also possible for a provision of a contract, properly construed, to be nothing more than the undertaking of an obligation.[3094] As outlined above,[3095]

3088 Australian Consumer Law, s 2(2).

3095 See issue 48 above.

the phrasing "represents and warrants" in clause 13.1 of the Acquisition Agreement unambiguously conveyed both the giving of warranties in the form of the Warranties and the making of the Warranty Representations in the same terms, and so it was clear that the Viterra Parties did more than merely undertake an obligation.

3771 It has been found that clauses 13.1 and 13.8 were breached,[3096] including because of breaches of Warranties 4.2(a) and 4.2(c),[3097] 12(a), 12(b) and 12(c),[3098] 7.3,[3099] 9.2,[3100] 13.4[3101] and 17(a).[3102]

3772 The finding that each of these Warranties was breached was based upon the conclusion that the statement the subject of the Warranty was incorrect at the relevant time. It followed from the terms of the Warranties in question that a contemporaneous representation in the same terms was also incorrect. Broadly speaking, in the circumstances of this case, including by reason of the existence and non-disclosure of the Viterra Practices, these incorrect representations were misleading or deceptive.[3103] More particularly, for the reasons discussed above, independent of whether or not the relevant Warranty was breached, the conduct of making the Warranty Representations in the terms stated in the Acquisition Agreement was misleading or deceptive or likely to mislead or deceive as each of them was false because in relation to:[3104]

(1) Warranty 4.2(a), the Records had not been compiled and maintained in good faith.

(2) Warranty 4.2(c), the Records were not complete and up-to-date in all material respects.

(3) Warranty 12(a), the Data Room Documentation had not been collated

3102 Ibid.
3103 Compare *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 322 [36] (French CJ).
3104 In the order the Warranties were addressed in the issues above.

and disclosed with reasonable care.

(4) Warranty 12(b), to the Share Seller's knowledge and awareness, material information had been omitted from the Data Room Documentation.

(5) Warranty 12(c), to the Share Seller's knowledge and awareness, the Data Room Documentation was not true and accurate in all material respects.

(6) Warranty 7.3, to the Share Seller's knowledge and awareness, Joe White was in material default of Material Contracts.

(7) Warranty 9.2, there were facts and circumstances to the Share Seller's knowledge or awareness which might have given rise to a Claim.

(8) Warranty 13.4, the Joe White Business had not been conducted in a proper and efficient manner since the Last Balance Sheet Date.

(9) Warranty 17(a), the Joe White Business had not been conducted in accordance with applicable Laws in all material respects.

3773 That said, nothing in the circumstances identified by the Viterra Parties provided a basis for concluding that the Warranties identified above were breached but that the Warranty Representations in the same terms were not misleading and deceptive. The Viterra Parties' submissions did not, for example, identify how the meaning of any Warranty Representation was sufficiently modified such that as a consequence it was not misleading or deceptive, either by reason of the existence of the Sale Process Disclaimers[3105] or by the Refusal of Certain Terms. In addition, the reliance placed by the Viterra Parties on clause 13.4 failed to take into account that the Warranty Representations were captured within the definition of "Warranties" in the Acquisition Agreement, and thus fell within an express exception to the acknowledgement of no reliance in clause 13.4(a).[3106] For the same reason, it was of no assistance for the Viterra Parties to state that they made it clear that they were

3105 Considered in issue 15.3 above.
3106 See issue 49 above.

giving no representations other than the "Warranties". Further, insofar as the Viterra Parties sought to rely on the Sale Process Disclaimer or the Refusal of Certain Terms, those submissions failed to address the fact that such matters existed in the context of the Confidentiality Deed, which expressly provided that Cargill was entitled to rely upon representations set forth in (what became) the Acquisition Agreement.[3107]

3774 In conclusion, by making the Warranty Representations in the same terms as Warranties 4.2(a), 4.2(c), 7.3, 9.2, 12(a), 12(b), 12(c), 13.4 and 17(a) of Schedule 4 of the Acquisition Agreement,[3108] Viterra engaged in misleading or deceptive conduct for the purposes of section 18 of the Australian Consumer Law.

X.51 Were the Warranty Representations made in trade or commerce in Australia?

3775 There was no issue that if the Warranty Representations were made, they were made in trade or commerce in Australia.

X.52 Did Viterra know that the Warranty Representations or any of them were false and/or did they not genuinely believe the representations were true and/or were they reckless as to whether they were true or false?

X.53 Did Viterra make the Warranty Representations with the intent that Cargill Australia should rely on them by entering into the Acquisition Agreement?

3776 In closing submissions, the Cargill Parties did not press the allegations that were the subject of issues 52 and 53.

X.54 Did Glencore and/or Viterra convey the Other Bidders Representations?

3777 Cargill Australia alleges that on 2 August 2013, Glencore or Viterra, or both, represented that:

3107 Clause 10.4: see par 590 above.
3108 See par 3771 above.

(1) Glencore or Viterra, or both, had received other Phase 2 bids which were equal to or higher than the First Final Bid ("the Equal to or Better Bids Representation").

(2) Further or alternatively, that there were other bids that were close to the First Final Bid ("the Competitiveness Representation").

(3) Further or alternatively, that Cargill needed to pay an additional $15 million to secure the acquisition of Joe White ("the Necessity Representation").

(Collectively, "the Other Bidders Representations".)

X.54.1 The conduct alleged to convey the Other Bidders Representations

3778 It is first necessary to precisely identify the conduct said to convey the Other Bidders Representations.[3109] The Other Bidders Representations were alleged to have been made by a series of statements made by Mahoney in either or both of the 2 telephone calls between Mahoney and Koenig on 2 August 2013 ("the Further Bid Calls").

3779 Only Koenig gave direct evidence as to what was said during the Further Bid Calls,[3110] which occurred sometime at or around 9:15am Minneapolis time. Koenig was in his office and was not expecting a call from Mahoney. In the First Further Bid Call, Koenig's evidence was that Mahoney stated that he wanted to complete the transaction with Cargill acquiring Joe White. Mahoney said he could do it on the phone call, but he wanted Cargill to increase its First Final Bid to purchase Joe White by $15 million, to $420 million. Mahoney told Koenig that if Cargill did so a deal could be reached by verbal agreement between them.

3780 Additionally, in response to a question from Koenig as to why Cargill needed to

---

3109 See, for example, *Google Inc v Australian Competition and Consumer Commission* (2013) 249 CLR 435, 464-465 [89] (Hayne J): see par 5046 below. See also *Miller and Associates Insurance Broking Pty Ltd v BMW Australia Finance Ltd* (2010) 241 CLR 357, 364 [5] (French CJ and Kiefel J).

3110 The Viterra Parties foreshadowed calling, but ultimately did not call, Mahoney.

increase its bid by $15 million to secure the purchase of Joe White,[3111] Mahoney relevantly stated that he had other bidders "there", "at that number" or "at that level".[3112] Mahoney told Koenig he had 2 hours to respond. Koenig said he would discuss it internally and get back to Mahoney within the 2 hours.

3781 At 9:31am Minneapolis time, just minutes after the First Further Bid Call, Koenig sent an email, entitled "RE: Joe White Malting – heads up", to Page, Conway, MacLennan, Hawthorne and others, copied to Van Lierde, Eden, Engle and others. Koenig's evidence was that this email provided a summary of the contents of the First Further Bid Call. In that email, Koenig stated that:

> Chris Mahoney from Glencore just called. Same message in that we are very close on details but he wants to cut a verbal agreement and get [t]his done but *needs* A$15 [million] more above our A$405 [million].
>
> He was vague on his rationale on why the A$15 [million] more *other than allegedly he's got other bidders there.* I asked him if that included the *same surety and speed of closure* and he said *we think so*.
>
> [He] was driving on his way to France. *Said he was making the rounds to the other contestants* (not sure he would be telling them) but would like a call back within 2 hours to *confirm that the deal is done* at A$420 [million] and *will have* the rest of the details sorted out.
>
> He claims he/I started this discussion[3113] and would like [to] conclude it with a verbal agreement and *it will then be a done deal*.
>
> Hard ball or comply?
>
> (Emphasis added.)

3782 There are a number of observations to make about this email. *First*, Mahoney's position concerning the necessity of a further bid was recorded. *Secondly*, it noted Mahoney had conveyed the existence of more than 1 other bidder. *Thirdly*, the

---

3111 In his evidence in chief, Koenig did not refer to this aspect of the conversation, but he recalled it when cross-examined on the same topic.

3112 The variations in phrasing were not significant and, in the context, were consistent in meaning. The evidence of Mahoney referring to "at that number" or "at that level" was given by Koenig in stating what was said in the Second Further Bid Call, but Koenig also gave evidence that Mahoney was repeating the similar response that he had already given in the First Further Bid Call. The fact that Mahoney made such a statement or such statements in the First Further Bid Call was borne out by the email Koenig sent shortly after: see par 3781 below.

3113 Presumably a reference to earlier discussions: see pars 343-347 above.

reference to Mahoney stating "we think so" was plainly not Mahoney conveying any doubt about the terms of the alleged bids of others, but rather was indicating that, in Glencore's opinion, the competitors' terms reflected the same surety and speed of closure. Mahoney must have been presumed to know the relevant terms based on what he said to Koenig. Further, there could be no real doubt that he knew the details given his position and the existence of the Merrill Lynch report on the final bids.[3114] *Fourthly*, Mahoney conveyed he was still dealing with other bidders. *Fifthly*, Mahoney said he had authority to do the deal. *Sixthly*, there was only a limited window of opportunity given to Cargill to secure the Acquisition as proposed by Mahoney.

3783 Subsequently, following several telephone conferences variably involving Arndt, Conway, Eden, Engle, Hawthorne, Koenig, Page, Van Lierde and Viers,[3115] it was decided that Cargill would raise its bid for Joe White to $420 million.

3784 Not surprisingly, the Cargill executives who gave evidence of these telephone conferences had various levels of recollection.

3785 Conway could not recall them at all, though he clearly took part.

3786 Koenig recalled 1 quick telephone conversation in which Mahoney's proposal was discussed, followed by "email conversations". He had a vague recollection of others involved in the telephone conversation, and believed they included Page, Conway, Hawthorne, Van Lierde and Eden. Koenig could only recall the discussion in very general terms. He recollected that there was discussion about what Cargill should do, whether the proposal was a bluff, whether Cargill should have complied or countered, and how Cargill wanted to conduct itself. He said various opinions were expressed and the conversation concluded on the basis that further work needed to be done (including by Van Lierde and the food ingredients and systems platform team) and it was agreed to reconvene within 2 hours.

3787 Van Lierde recalled being involved, but was not sure whether it was in more than a

---

3114 See par 983 above. See also par 766 above, recording Mahoney's reporting to Glasenberg and Walt about the indicative bids in Phase 1.

3115 Not all these persons participated in every call.

single conversation. Van Lierde initially stated that he did not see a reason to increase Cargill's bid all the way to $420 million, but said he was willing to increase the bid by $5 million. He recalled others responding that the bid should not be increased at all, but Koenig stating that the bid should be increased to $420 million given the discussion he had had with Mahoney. Van Lierde said he could not recall who made the final decision to increase the bid to $420 million but that, ultimately, it was a group decision.

3788 Eden was able to give an account of a telephone discussion in which he recalled Page, Conway, Koenig, Van Lierde and others being on the call. Whilst he was not able to recall everyone, Eden said the participants included 3 or 4 members of the Cargill leadership team.

3789 Eden said Koenig basically went through the matters he had set out in his email.[3116] Although he could not be specific, Eden recollected queries about whether or not what had been said by Mahoney was a true story and Conway questioning whether the position was legitimate. Eden said that Conway's query was made in a context where an auction process was being run by Merrill Lynch in a very formal way, and Mahoney's approach had deviated from the established practice. Although Eden could not remember who said it, he did recall many questions about whether there was a legitimate counterparty at $420 million.

3790 During the conversation, Eden stated he was disappointed, as he thought the parties were following a process and, at the eleventh hour, Mahoney had taken a different approach.[3117] Eden gave evidence that he stated he did not believe it was true that there was another bidder at $420 million. Having said this, Eden also stated he did not think it was in Cargill's best interest not to comply with the request and Cargill would have to take Mahoney at his word. Eden said Conway agreed with this recommendation. Eden could not recall what Page said, but agreed with the proposition put under cross-examination that the court could infer that Page agreed

---

3116 See par 3781 above.

3117 Although disappointed, Eden could not have been totally surprised: see pars 950, 964 above.

that the price be increased to $420 million. Further, Eden agreed under cross-examination that it would be fair to say that ultimately, as the chief executive officer, Page "would be the decision-maker", with Conway very influential.

3791 Hawthorne gave evidence that Koenig told him, in a conversation with others, that Mahoney had asked for an additional $15 million to increase the purchase price from $405 million to $420 million, in order to conclude the transaction. Koenig also told him that Mahoney had said there were other bidders, the bidding process remained competitive, and that $15 million was required to win the deal.

3792 Hawthorne said there were various questions of Koenig about whether Mahoney was being truthful or bluffing. Hawthorne recalled there being a discussion about the fact that Mahoney was a former trader at Cargill and that, in the trading industry, Mahoney could be known to place a bluff. Hawthorne asked a number of questions about the "bona fides" of the request and what options Cargill had. He said there was also discussion about competing bidders and whether Cargill was comfortable raising its bid.

3793 After some debate, it was concluded that Cargill did not have a basis for doubting Mahoney, given what he had said to Koenig. Hawthorne also said a view was expressed that there might have been 1 or more competitors who were willing to pay the price. Further, he said Eden and Van Lierde referred to the willingness of Cargill to purchase Joe White for up to US$400 million with a 10 percent internal rate of return, and that an amount of $420 million would be within that range.

3794 Viers had a distinct recollection of a telephone discussion in which he participated while in his garage at home. The others who participated in this conversation were Van Lierde, Eden, Engle and Hawthorne.[3118] Viers said that Koenig was not on this call.

3795 According to Viers, Engle explained that Koenig had received a call from Mahoney in which Mahoney stated that if Cargill wanted to do a deal, it would need to come up

---

3118 It was possible a representative of Goldman Sachs was also on the line.

with another $15 million. Engle also referred to it being an auction and that Cargill should not assume that it was the only bidder. During the course of the conversation, the question was raised as to whether it was a bluff or whether there was really another bidder. This resulted in some debate. Although Viers could not be precise as to what was said, in substance the view expressed was that the stakes were high and, therefore, what Mahoney had said should be taken at face value. The conversation ended with Van Lierde stating that Cargill should pay the additional $15 million.

3796 Engle gave an account of the telephone conversation. He said Page, Koenig, Hawthorne, Eden, Arndt and Matt Gibson from Goldman Sachs participated. Engle gave evidence that Hawthorne laid out 3 different options, staying at $405 million; increasing to $420 million; or meeting somewhere in the middle. He said Page led the discussion about those options. Page also enquired about the remaining "document items" that needed to be completed and about the results of the Due Diligence. Engle recalled a dispute about how long the warranty period would last and other matters relating to documentation. Engle also recalled an issue being raised as to whether increasing the bid to $420 million would be beyond the bounds or the guidance given by the Cargill, Inc board concerning the required internal rate of return. Engle did not give evidence about how the conversation concluded as he said he had no further recollection of what was said.

3797 As an aside, Engle worked with Le Binh to ensure such an increase in price was consistent with the board approval. That exercise showed that with a bid at $420 million, an internal rate of return of 10.1 percent could be achieved.

3798 Engle gave evidence of a further conversation, with Page, Conway, Hawthorne and others, in which he discussed the product of the work he had done with Le Binh (as referred to in the previous paragraph). Engle said it was during this conversation that it was agreed to increase the bid, conditional on transaction documents being agreed quickly and the outstanding contractual matters regarding indemnities, warranties and particular business liabilities being resolved in Cargill's favour.

3799 From these discussions, and the context in which they arose, it was apparent that ultimately each of the Cargill executives was willing to act upon what Mahoney had said. None of them was willing to call his bluff. Further, a number of senior executives were involved in reaching the decision that was ultimately made. There was no direct evidence of anything Page said to demonstrate that he chose to make a decision alone. On the contrary, the executives ultimately collaboratively considered and decided the approach to adopt. Furthermore, the decision to increase the bid by $15 million was activated by, and made directly in response to, at least principally if not entirely, what Mahoney had stated to Koenig in the First Further Bid Call.

3800 At 11:09am on 2 August 2013, Hawthorne sent an email entitled "Proj Hawk: response to Chris Mahoney" to Koenig, copied to Page, Conway, Van Lierde, Eden, Viers, Engle and Arndt. This email contained Cargill's agreed response. It authorised Koenig to make an offer of $420 million to Mahoney, on certain conditions. The email relevantly stated:

> [Thanks] for handling communication [with Mahoney]. Our agreed response:
>
> 1. While we believe A$405 [million] is a fair price and we are also delivering certainty, speed, and commercially balanced terms, *we are willing to meet your ask of A$420 [million].* Cargill's willingness to raise the price to A$420 [million] is conditioned upon:
>
> a. Immediate exclusivity
>
> b. All parties work to sign the transaction documents as expeditiously as possible (e.g. next 6-8 hours)
>
> c. Glencore's agreement to a balanced approach to resolve the remaining contract issues:
>
> i. Warranties are restated at Completion
>
> ii. Non tax claims indemnity period runs 18 months from Completion
>
> iii. Warranty recoveries from Cargill's related parties do not apply to the indemnity limit
>
> iv. Business liabilities to be restricted to only the operations of the Joe White [B]usiness with caps and time periods.
>
> …
>
> (Emphasis added.)

3801 In fact, paragraph 1(c) of the email contained a total of 6 conditions. Ten minutes later a further email was sent removing the sixth condition.[3119] Koenig's evidence was that he made Cargill's offer of $420 million to Mahoney in the Second Further Bid Call, which occurred within 2 hours of the First Further Bid Call. His evidence was he did not have any authority to negotiate further with Mahoney. He said he did not read from a script and could not be certain which email he utilised in the Second Further Bid Call when identifying Cargill's conditions.[3120]

3802 In the Second Further Bid Call, according to his evidence in chief, Koenig again asked Mahoney why Cargill needed to increase its bid by $15 million to purchase Joe White. Mahoney's responses included statements broadly consistent with the statements made in the First Further Bid Call, namely that the bidding process was "an auction" and that there were "competing parties at that level".

3803 At 11:33 am, shortly after the Second Further Bid Call, Koenig sent an email entitled "RE: Proj Hawk: response to Chris Mahoney" to Hawthorne and others. In it, Koenig stated that an agreement had been reached by which Cargill would acquire Joe White for $420 million. That email stated:

> We're done $A420 [million]. I walked [Mahoney] through the terms. He was not in a position to write them down but there was no [heart]burn or hesitation. *We discussed the price and he kept on insisting it was an auction and it was going to the highest bidder.*
>
> He will advise his people that it's done …
>
> (Emphasis added.)

3804 Under cross-examination, Koenig said he recalled commencing the Second Further Bid Call with, "Chris, please tell me 1 more time why Cargill needs to do this?". Under further cross-examination, Koenig agreed with the proposition that all that Mahoney said in the Second Further Bid Call was contained in the email referred to in the previous paragraph, and that Mahoney said nothing else. According to this further evidence, in the Second Further Bid Call Mahoney did not expressly mention any need

---

3119 The fifth condition is irrelevant for present purposes.

3120 Nothing turns on it, but it is likely the later email was utilised: see par 3805 below.

for an additional $15 million.

3805 Shortly after, Mahoney spoke with King "and other members of the negotiating team" and informed them that Cargill had agreed to increase its bid. Mahoney said the quid pro quo was that Glencore conceded 5 points that were still being negotiated.[3121]

3806 The facts set out above demonstrated that Mahoney's statements said to convey the Other Bidders Representations were made.[3122] But before turning to this, some initial observations should be made.

3807 *First,* Koenig was a credible witness, notwithstanding that his recollection was, at times, imperfect. Imperfections in Koenig's recollection of the contents of each of the Further Bid Calls may be attributed to the significant period of elapsed time since those calls occurred and the time he gave evidence. That Koenig appeared to, at times, conflate aspects of the Further Bid Calls may be attributed to the short period of time that separated the Further Bid Calls and the significant overlapping of the subject matter of the conversations, in addition to the significant lapse of time. Ultimately, there was nothing to suggest that, in giving evidence, Koenig was doing anything other than giving his best recollection in the circumstances.

3808 *Secondly,* imperfections in Koenig's recollection present a less significant evidentiary obstacle than they otherwise might have because of the contemporaneous emails[3123] prepared and sent by Koenig describing the Further Bid Calls in which he participated.[3124] Those emails serve as a "reliable contemporaneous record",[3125] unaffected by the ordinary fallibility of human memory in the context of later

---

3121 As to the conditions Cargill put forward: (1) Warranties being restated at Completion was reflected in cl 13.1 of the Acquisition Agreement; (2) the non-tax claims indemnity running for 18 months was reflected in cl 15.6(a)(ii); (3) in relation to Warranty recoveries from Cargill's related parties, see cl 15.8; (4) business liabilities to be restricted was reflected in cll 10.1 and 10.7; and (5) a further condition (not set out above) was reflected in cl 9.6: see par 3800 above.

3122 That is, the statements in pars 3779-3780, 3802, 3804 above.

3123 See pars 3781, 3803 above.

3124 In relation to the difficulties of proof associated with later evidence of oral conduct see: *Watson v Foxman* (1995) 49 NSWLR 315, 319.1 (McClelland CJ in Eq). See also *Woolcorp Pty Ltd v Rodger Constructions Pty Ltd* [2017] VSCA 21, [99] (Santamaria and Kyrou JJA and Elliott AJA); *Protec Pacific Pty Ltd v Steuler Services GmbH & Co KG* [2014] VSCA 338, [687] (Tate, Santamaria and Kyrou JJA).

3125 *Watson v Foxman* (1995) 49 NSWLR 315, 319.4.

litigation.[3126] In particular, those emails substantially and satisfactorily corroborate Koenig's evidence as it related to the Other Bidders Representations.[3127]

3809 *Thirdly,* Mahoney was ultimately not called as a witness. As a result, Koenig's evidence in relation to the Further Bid Calls was not contradicted, and so may be more readily accepted.[3128]

X.54.2 Were the Other Bidders Representations conveyed?

X.54.2.1 Legal principles

3810 In determining whether Mahoney's statements conveyed the Other Bidders Representations, it is necessary to consider those statements in the circumstances in which they were made.[3129] It is trite that any meaning conveyed by particular words and phrases depends not only on their literal meaning, but also the context in which those words or phrases are used, including to whom they are conveyed.[3130] The meaning or meanings conveyed by words in a particular context and to a particular person may therefore differ, even differ substantially, from the literal meaning of those words.[3131] Further, the literal truth of a statement is no barrier to finding that the meaning conveyed by that statement was misleading or deceptive.[3132]

3811 Accordingly, Mahoney's statements must be considered:

(1) In combination with each other.

(2) As part of a dialogue, and in relation to statements and queries to which

they responded.

(3) Against the backdrop of the competitive sale process.

(4) In light of the relative knowledge of the participants, including that Cargill was unaware of the details of the competitive bids.

(5) As informed by the subject matter and apparent purpose of the communications.

X.54.2.2 Submissions

3812 The Cargill Parties submitted that the constituent statements necessarily conveyed the Other Bidders Representations. The Viterra Parties submitted that the constituent statements were incapable of conveying the Other Bidders Representations, largely because the Other Bidders Representations were never stated or represented.

X.54.2.3 Analysis

3813 As to the First Further Bid Call, either the Equal to or Better Bids Representation, or the Competitiveness Representation was conveyed by the statement that Mahoney had other bidders "there" or "at that number" or "that level". Each statement if made individually, or if more than 1 was made, either individually or in combination:

(1) Was made in the context of a competitive and continuing "blind auction" for the Joe White Business in which there was a deliberate and stark asymmetry of knowledge between the bidders and the Viterra Parties. Cargill, an active bidder, was not aware of the number or details, including the amount, of any other Phase 2 bids, and Cargill's lack of knowledge was a fact known to Mahoney.

(2) Was made at a time when it was expected the competitive bidding process would soon be coming to a close, and Glencore and Viterra would be choosing the preferred bidder.

(3) Was made in the course of an unsolicited call from Mahoney, the apparent purpose of which was to convey to Cargill relevant

information that it did not have and could not independently obtain or verify, and that would, if acted upon, allow Cargill to conclude a deal to secure the Acquisition.

(4) Accompanied another statement made by Mahoney in the same call that Mahoney wanted Cargill to increase its Phase 2 bid by a specific increment, $15 million, to a specific level, $420 million.

(5) Responded to Koenig's query as to why Cargill needed to increase its Phase 2 bid by that specific increment, to that specific level.

(6) Accompanied the further statement that Mahoney was in contact, or would shortly be in contact, with other bidders.

3814 In those circumstances, Mahoney's statement that he had other bidders "there" or "at that number" or "at that level", or in any combination, objectively conveyed a representation in substance that:

(1) There were other Phase 2 bids at the desired bid amount of $420 million or in the range between the First Final Bid of $405 million and the desired bid amount of $420 million (that is, the Equal to or Better Bids Representation).

(2) Alternatively, there were other Phase 2 bids equal to or close to the First Final Bid of $405 million and so there was a risk the First Final Bid would not ultimately be the bid that would be accepted (that is, the Competitiveness Representation).

3815 Not only were these representations encompassed in the words used but, unless 1 of these meanings was conveyed, Mahoney's statements: would not have meaningfully explained or rationalised his stated desire that Cargill increase its bid in order to secure the deal; would not have sensibly responded to Koenig's query as to why Cargill needed to increase its bid from the First Final Bid amount to the desired bid amount; and nor would it have offered Cargill, as an active participant in an otherwise

"blind" bidding process, any rational commercial incentive to increase its bid.

3816 In my opinion, it is the Equal to or Better Bids Representation, rather than the Competitiveness Representation, that was made. All other things being equal,[3133] unless the other bids were at least at the same level as Cargill's, then Cargill would have had little incentive to increase its bid. Cargill's offer was already fully compliant, with "surety and speed of closure". Further, the subsequent discussions between the Cargill executives demonstrated that Koenig had understood Mahoney's statements in this way. If this conclusion is not correct, then, at the very least, the Competitiveness Representation was made. The statements made by Mahoney could not be sensibly understood as meaning anything other than there were other active and meaningfully competitive bidders with whom Glencore was still actively engaged. In any event, it was not necessary for Cargill Australia's claim to establish both these representations were made. Either representation was demonstrably false.[3134]

3817 For completeness, other possible alternative meanings of Mahoney's statements would be nonsensical in the circumstances, namely that: (1) Glencore or Viterra had other bids greater than $420 million (with "the same surety and speed of closure"); or (2) Glencore had other bids substantially less than and nowhere close to $405 million. Neither of these meanings, in the context, would be consistent with either a need or some sensible commercial rationale for Cargill to increase its bid to $420 million.[3135]

3818 Further, the Necessity Representation, that Cargill needed to pay an additional $15 million to secure the Acquisition, was made by several of Mahoney's statements in the First Further Bid Call both individually and in combination.[3136] Specifically, it

---

3133 See the second paragraph of Koenig's email at par 3781 above.

3134 See pars 3836-3837, 3847 below.

3135 Interestingly, when the Viterra Parties' senior counsel was cross-examining 1 of Cargill's loss experts, he sought to explain what occurred in Cargill Australia increasing its bid from $405 million to $420 million in terms of "Glencore came back to [Cargill] and said, '405 isn't enough, we want 15 million more'". Of course, in the circumstances $405 million was more than enough to win the bidding process. Later, the position was paraphrased as, "Glencore … said, 'You'll *have to* pay another 15 [million] if you want it'" (emphasis added).

3136 The representations made by Mahoney in the Second Further Bid Call and their context are addressed below: see pars 3882-3890.

was conveyed by:

(1) Mahoney's statements to the effect that by increasing its First Final Bid by $15 million, Cargill would or, at the very least, would be highly likely to, secure the acquisition of the Joe White Business.[3137] Within the blind auction process, Mahoney stating in substance that he wanted to complete the transaction and that, by increasing its First Final Bid by a significant and specific increment, Cargill would secure the acquisition of the Joe White Business (subject to having certain details sorted out), conveyed to Cargill that increasing its First Final Bid by that increment was *necessary* for it to secure the acquisition. (On their face, these statements alone might be said to merely convey that Cargill increasing its First Final Bid by $15 million would be a means of securing the Joe White Business;[3138] in context, however,[3139] they conveyed that Cargill increasing its First Final Bid by $15 million was also *necessary*.)[3140]

(2) Mahoney's statement that he was actively engaged with the other bidders in the context of a blind auction coming to an end.

(3) Mahoney's response to Koenig's querying why Cargill needed to increase its bid by $15 million,[3141] which response accepted and reinforced the premise of the question that it was *necessary* for Cargill to increase its bid to secure the acquisition of Joe White.

3819 Suffice to say for present purposes, these latter 2 statements reinforced and confirmed that the Equal to or Better Bids Representation or the Competitiveness Representation, had also been made in the First Further Bid Call. Further, the first paragraph of Koenig's email sent immediately after the First Further Bid Call demonstrated that he had understood from what had been said that Mahoney's position was that the further

3137 See, for example, pars 3780-3781 above.
3138 Statements to that effect may not be false or misleading even when directed at the highest bidder.
3139 Including the context by reason of the matters referred to in subparagraphs (2) and (3) below.
3140 See also fn 3135 above.
3141 See par 3780 above.

$15 million was necessary.[3142] For completeness, the statements made by Mahoney in the Second Further Bid Call were entirely consistent with the relevant statements made in the First Further Bid Call,[3143] and were made in substantially the same context of seeking to close out a blind auction. To the extent the context of the Second Further Bid Call differed, it only reinforced this conclusion as to what was represented in the First Further Bid Call; the key relevant contextual difference being that the Second Further Bid Call followed very shortly after the First Further Bid Call, and so occurred in a context in which the Other Bidders Representations had already been conveyed previously.

X.54.3 Was the relevant conduct attributable to Glencore or Viterra, or both?

3820 It was common ground between the Cargill Parties and the Viterra Parties that Mahoney's conduct was attributable to Glencore. At the time of the Further Bid Calls, Mahoney was director of the agricultural products division of Glencore, and as King attested was the "ultimate decision-maker short of the [chief executive officer] in relation to any issue that might arise regarding" the sale of the Joe White Business. Further, in closing submissions, Viterra Parties' senior counsel stated that Mahoney was the individual who ultimately held the decision-making role.[3144] However, whether Mahoney's conduct was also relevantly attributable to Viterra was disputed.

X.54.3.1 The Cargill Parties' submissions

3821 The Cargill Parties submitted that Mahoney's conduct was attributable to Viterra in any or all of the following 3 ways.

3822 *First,* Mahoney was said to have actual authority to bind and to speak for the Viterra entities as the most senior officer within Glencore's agricultural business.

3823 *Secondly,* Mahoney was said to have apparent authority to negotiate price on behalf of Viterra. Mahoney's authority was said to have been apparent to Cargill in the Further Bid Calls as, amongst other reasons: (1) Cargill was aware that Viterra had been

---

3142 See par 3781 above.

3143 This was regardless of whether Koenig's account in his evidence in chief or his account under cross-examination was accepted: see pars 3802 and 3804 above.

3144 See further par 3830 below.

acquired by Glencore's agricultural business under Mahoney's leadership; (2) Mahoney and Koenig had previously communicated on several occasions, in 2012 and 2013, in relation to Glencore's plans to sell Joe White; (3) it was Mahoney who invited Cargill to bid for the Joe White Business;[3145] and (4) in the First Further Bid Call, Mahoney referred to the First Final Bid for the Joe White Business, and asserted an ability to verbally conclude the deal.

3824 *Thirdly*, and in any event, it was contended Mahoney's conduct may be attributed to Viterra by operation of section 139B(2)(b)(ii) of the *Competition and Consumer Act* because Mahoney was acting with authority and relevantly had the consent or agreement of a director of the Viterra entities; namely, Mattiske. The Cargill Parties submitted that consent and agreement could be inferred by, for example, Mattiske's conduct in finalising the sale to Cargill at the price negotiated by Mahoney.

X.54.3.2 The Viterra Parties' submissions

3825 The Viterra Parties submitted that Mahoney's conduct was not attributable to Viterra, essentially for 2 reasons. *First,* it was contended that Mahoney lacked actual or implied authority because there was no evidence that Mahoney, at the relevant time, held any position of authority in respect of any of the Viterra entities. *Secondly,* it was submitted that Mahoney lacked apparent authority because the First Further Bid Call was unexpected, and not preceded or accompanied by a communication from another person known to have authority to act for Viterra. Accordingly, it was submitted that there was no basis for Cargill to infer that "Mahoney had any authority to act for Viterra".

X.54.3.3 Analysis

3826 In my view, Mahoney's conduct was plainly attributable to Viterra.[3146] At a minimum, it was attributable to Viterra because Mahoney had apparent authority to negotiate on behalf of Viterra. This was demonstrated in 3 ways.

3827 *First,* there was every reason for Cargill to presume that he had the authority he

---

3145 See pars 431, 456 above.

3146 For a discussion on the general principles concerning attribution of conduct and agency, see issues 11, 18, 19 above.

represented he had. Mahoney was not unknown to Koenig, or to Cargill more generally. Cargill knew of Mahoney's senior position in the Glencore agricultural business, and his role in Glencore's acquisition of the Viterra entities. This was not Mahoney's first conversation with Koenig in relation to the sale of Joe White.[3147] In those circumstances, it was of no moment that the First Further Bid Call was unexpected,[3148] nor that it was not preceded or accompanied by a separate communication with someone known to have authority to act on behalf of Viterra. In the circumstances, Mahoney did not need to be introduced, or expressly authorised by someone else known to have authority to act for Viterra, for it to have been apparent to both Glencore and Viterra that it would appear to Cargill that Mahoney had such authority to engage in negotiations on behalf of Viterra as part of the sale process.

3828 *Secondly*, it may be noted that Mahoney having apparent authority to negotiate on behalf of the Viterra entities by virtue of his senior position in Glencore was consistent with the language of the Information Memorandum and the Management Presentation Memorandum, including the references to "Glencore".[3149] In short, from May 2013 onwards, although Glencore was exercising control over the situation, each of the separate legal entities comprising Viterra had expressly consented and agreed for Glencore to conduct the sale process and present relevant information on behalf of the Sellers.

3829 *Thirdly*, in the context of the first 2 matters referred to above, Mahoney explicitly represented that he had authority to negotiate price and conclude a deal on behalf of the Sellers in the Further Bid Calls. Mahoney's representation of his own authority alone could never be sufficient to establish Mahoney had apparent authority.[3150]

3147 See pars 343-347, 431 above.

3148 To the extent that it may have been: see pars 950, 964 above.

3149 See pars 475-483, 711 above. See also the definition of "Discloser" in the disclaimer in the Information Memorandum and the Management Presentation Memorandum.

3150 *Pacific Carriers Ltd v BNP Paribas* (2004) 218 CLR 451, 466 [36] (Gleeson CJ, Gummow, Hayne, Callinan and Heydon JJ), citing *Freeman & Lockyer v Buckhurst Park Properties (Mangal) Ltd* [1964] 2 QB 480, 503 (Diplock LJ); *Northside Developments Pty Ltd v Registrar-General* (1990) 170 CLR 146, 187.2 (Brennan J); *Crabtree-Vickers Pty Ltd v Australian Direct Mail Advertising & Addressing Company Pty Ltd* (1975) 133 CLR

However, the statements Mahoney made in the Further Bid Calls were entirely consistent with the impression otherwise created that Mahoney had authority to negotiate on behalf of Viterra (and Glencore).[3151] Amongst other things, he referred to the First Final Bid, represented that he was authorised to conclude a deal verbally by which Cargill could have acquired Joe White, and made representations as to the status of the bidding process and the bid amount necessary for Cargill to secure the Acquisition from the Sellers. This was done in the context where the Further Bid Calls were preceded by the exchanges that took place in 2012 and early 2013.[3152]

3830 For completeness, there can be little doubt that Mahoney had actual authority in any event. From a Glencore perspective, it was Mahoney who was the executive in charge of the sale process in relation to the Joe White Business.[3153] As King stated in his evidence, Mahoney was "head of agri", ultimately the person in charge of the relevant business division, and the ultimate decision-maker short of the chief executive officer with respect to any issue that might have arisen in relation to the sale of Joe White.[3154] Given that role and responsibility and Glencore's position in selling the Joe White Business with the knowledge, involvement and consent of senior executives of Viterra, including Mattiske, Fitzgerald and Rees, it must follow that Mahoney had actual authority to act on behalf of the Sellers.[3155] The possibility that Mahoney may not have had actual authority from Viterra to make precisely each of the specific statements he did was not to the point.[3156]

72, 78.5 (Gibbs, Mason and Jacobs JJ).

3151 See, for example, *Crabtree-Vickers Pty Ltd v Australian Direct Mail Advertising & Addressing Company Pty Ltd* (1975) 133 CLR 72, 78.6 (Gibbs, Mason and Jacobs JJ). See also *Pacific Carriers v BNP Paribas* (2004) 218 CLR 451, 466-467 [36] (Gleeson CJ, Gummow, Hayne, Callinan and Heydon JJ).

3152 See pars 342-347, 431 above.

3153 See also par 1007 above; Walt being a key supervisor in the sale process.

3154 To adopt the language of the Viterra Parties' senior counsel in closing submissions: "You will recall that the instructions were all coming from Glencore, from Baar in Switzerland, Mr Mahoney [was] the 1 who ultimately held the decision-making".

3155 See also pars 3820, 3828 above. It must also be noted that Mostert was a director of each of the Sellers as well as chief financial officer of Glencore Agricultural, and was fully aware of Glencore's involvement in the sale process: see, for example, par 366 above.

3156 See *Colonial Mutual Life Assurance Society Ltd v The Producers and Citizens Co-Operative Assurance Company of Australia Ltd* (1931) 46 CLR 41, 46.6 (Gavan Duffy CJ and Starke J), 50.5 (Dixon J, with whom Rich J agreed). See also *Scheuer v Bell* [2004] VSC 71, [131] (Kaye J) and the cases there cited; *Pacific Carriers Ltd v BNP Paribas* (2004) 218 CLR 451, 467 [38], 469 [44] (Gleeson CJ, Gummow, Hayne, Callinan and

3831 Furthermore, Mahoney's conduct can also be attributed to Viterra by operation of section 139B(2) of the *Competition and Consumer Act*.[3157]

3832 There could be no issue that Mahoney's conduct was done on behalf of Viterra. Mahoney's conduct was engaged in so Viterra could receive payment of an additional $15 million for the purchase price. Further, Mattiske was a director of each of the companies comprising the Sellers with authority to act in relation to the sale of the Joe White Business on behalf of those companies.[3158] The effect of Mattiske's evidence was that he had consented or agreed to, at least implicitly, the sale process being conducted by "the Glencore team" based in Switzerland.[3159] Furthermore, Mattiske, as a director of each of the companies, finalised the transaction and executed the Acquisition Agreement, which evidenced Viterra consenting and agreeing to the purchase price achieved by Mahoney of $420 million (including taking the benefit of the additional $15 million).[3160] Accordingly, Mahoney's conduct was attributable to Viterra.

X.55 Were the Other Bidders Representations false, and did Glencore and/or Viterra thereby engage in misleading or deceptive conduct within the meaning of section 18 of the Australian Consumer Law?

X.55.1 Legal principles

3833 Whether a representation or representations constitute misleading or deceptive conduct is an objective question of fact. It is to be determined by reference to the conduct giving rise to the representation or representations, in light of all the surrounding facts and circumstances, including the representor's course of conduct

---

Heydon JJ); *Mullens v Miller* (1882) 22 Ch D 194, 199.5-200.1 (Bacon VC); *Barwick v English Joint Stock Bank* (1867) LR 2 Ex 259, 265.8-266.5 (Willes J, delivering the judgment of the court).

3157 For a discussion of the relevant principles concerning s 139B(2), see issue 18 above.

3158 For evidence of such authority in the sale process, see, for example, pars 366-367, 370, 392 above.

3159 See par 392 above. See also par 4525 below as to Glencore's role from the time the Confidentiality Deed was executed by Cargill, Inc and delivered to Glencore.

3160 See fn 644 above.

viewed as a whole.[3161]

3834 Further, as a general rule, where a representation consists of a demonstrably false statement of fact, such a representation will amount to misleading or deceptive conduct.[3162]

X.55.2 Analysis

3835 For the reasons that follow, the Other Bidders Representations were demonstrably false,[3163] and as a result Glencore and Viterra engaged in misleading or deceptive conduct within the meaning of section 18 of the Australian Consumer Law.

3836 Either the Equal to or Better Bids Representation or the Competitiveness Representation was false because, as the Viterra Parties accepted, only 2 other Phase 2 bids had been submitted, which were for amounts significantly less than the First Final Bid. The closest bid to the First Final Bid was the Phase 2 bid of Co-Operative Bulk in the amount of $335 million, obviously $70 million less. The only other Phase 2 bid was $85 million below the First Final Bid, being Malteurop's bid of $320 million.[3164]

3837 The Necessity Representation, that Cargill needed to pay an additional $15 million to secure the Acquisition, was also demonstrably false. As stated above, the First Final Bid was the highest Phase 2 bid by a very significant margin both in dollar and percentage terms. The conditions attached to the First Final Bid were not obviously more onerous, and were less numerous than those attaching to the other Phase 2 bids submitted.[3165] Glencore did not have an amount below which it was not willing to let

---

3161 *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592, 605 [39]-[40] (Gleeson CJ, Hayne and Heydon JJ), 625 [109] (McHugh J). For a more extensive discussion of this case, see pars 2937-2950 above.

3162 See, for example, *Australian Competition and Consumer Commission v Valve Corporation (No 3)* (2016) 337 ALR 647, 690 [217] (Edelman J); *Conagra Inc v McCain Foods (Aust) Pty Ltd* (1992) 33 FCR 302, 380.8 (French J).

3163 That is either the Equal to or Better Bids Representation and the Necessity Representation, or the Competitiveness Representation and the Necessity Representation: see par 3816 above.

3164 See par 983 above.

3165 Ibid.

the sale proceed.[3166] Accordingly, it could not have been necessary, in those circumstances, for Cargill to further increase the amount of the First Final Bid (and so further increase the already substantial margin by which the First Final Bid exceeded the other Phase 2 bids) in order to secure the Acquisition.

X.55.3 Rejection of the Viterra Parties' submissions

3838 Nonetheless, the Viterra Parties contended that the Necessity Representation was not false because it was not incorrect to say that if Cargill increased its bid by $15 million, Cargill *would* secure the Acquisition that day and so would avoid the risk of further competitive negotiations against other bidders.

3839 This submission cannot be accepted. It appeared to be directed at disputing the falsity or otherwise of certain of Mahoney's statements, rather than the falsity of the Necessity Representation. There were 2 indicators that this is so.

3840 The *first* was the use, in this submission, of a temporal qualification; namely, that by increasing its bid by $15 million, Cargill would secure the Acquisition "that day". This was consistent with some of Mahoney's statements, but did not specifically address the Necessity Representation, which was not merely temporally bound.

3841 The *second* indicator was the use of the word "would", namely, that by Cargill increasing its bid by $15 million, Cargill "would secure the transaction". That is consistent with the use, in Mahoney's statements, of securing the outcome, but again did not address the Necessity Representation.

3842 This was an important distinction. It was obviously true that, by the highest bidder further increasing the superiority of its bid, it would result in the highest bidder being the successful bidder; but it is not true that doing so was *necessary*. Thus, whilst it was not false to represent that Cargill increasing its bid by $15 million would definitely secure to it the Acquisition, it was entirely misleading and false to represent that it

---

[3166] Of course, if all bids were well below a price Glencore was willing to approve for the sale, then there was no obligation for Glencore or Viterra to proceed. It may be assumed that if all bids were very low, Glencore might have reconsidered its position. However, in respect of the First Final Bid of $405 million, no such consideration arose: see, for example, par 766 above.

was necessary that it do so.

3843 This illustrated and reinforced the fundamental point that constituent statements and conveyed representations are, and may mean, different things. The Viterra Parties' submission directed at contesting the falsity or otherwise of specific statements made by Mahoney did not fully engage with the allegation. It is the falsity of the Necessity Representation which was at issue.

3844 In addition, the Viterra Parties put forward a rationale for Cargill increasing its bid by $15 million to secure the Acquisition, namely that Cargill could avert the risk of further competitive negotiations involving other bidders. Notably, this rationale was said not to depend on there being Phase 2 bids that were close, equal or superior to the First Final Bid. "[C]ompetitive negotiations", it was submitted, posed a risk for Cargill not because, as at 2 August 2013, there were presently competitive Phase 2 bids, but because there was the prospect that presently uncompetitive bids may later become competitive. This was said to be because "it was open for Glencore to engage in dialogues with the [other Phase 2 bidders] to seek to encourage them to increase their bids if a deal was not reached … that day".

3845 This submission did not withstand scrutiny.

3846 *First,* as a matter of logic, that the representee had, or may have believed it might have, perceived commercial reasons to do what the representor represents was necessary was not determinative of the issue.

3847 *Secondly,* and in any event, the posited rationale was not at all compelling. If there was evidence that could possibly support the rationale, none was identified.[3167] What evidence there was did not suggest any risk, real or even remote, that the bidding process would continue such that there would have been any real prospect of a

[3167] In oral closing submissions, the Viterra Parties submitted that if Cargill had not agreed to pay an extra $15 million the deal might have been done with someone else. While anything may have been possible, the evidence at trial, coupled with the complete absence of any evidence being led by the Viterra Parties as to the prospect of such an event occurring, suggested any such possibility was extremely remote so as to be bordering on the fanciful. Further, it may be safely presumed that, given the pressure exerted from those in charge in Switzerland (see par 766 above), if there had been any chance of another bidder matching or exceeding the First Final Bid that possibility would have been explored.

competitive bid that would have come close to matching or exceeding the First Final Bid of $405 million. To repeat, as at 2 August 2013, the First Final Bid was $70 million higher than the Phase 2 bid of Cargill's nearest competitor, Co-Operative Bulk, and $85 million higher than the Phase 2 bid of its only other remaining competitor, Malteurop. To be competitive against Cargill, Co-Operative Bulk would have had to increase its bid by over 20 percent just to match the First Final Bid, in circumstances where there was no evidence to suggest Co-Operative Bulk was interested in increasing its Phase 2 bid at all.

3848 In those circumstances, it is difficult to comprehend: (1) why a technically possible, but not realistic, risk of further bidding from uncompetitive other bidders should compel Cargill to immediately secure the deal; and (2) why, even if immediately securing the deal was considered desirable by Cargill, Cargill should need to materially increase the already significant amount by which its First Final Bid exceeded the Phase 2 bids of its competitors to do so.

3849 In conclusion, the Necessity Representation was patently false.

X.56 Were the Other Bidders Representations made in trade or commerce within Australia, or between Australia and places outside Australia, such that section 18 of the Australian Consumer Law applies?

3850 Section 18 of the Australian Consumer Law applies to conduct in trade or commerce "within Australia" or "between Australia and places outside of Australia".[3168] Further, section 5(1) of the *Competition and Consumer Act* gives section 18 of the Australian Consumer Law extraterritorial operation. That subsection relevantly provides that section 18 of the Australian Consumer Law applies to conduct engaged in outside of Australia by "bodies corporate incorporated or *carrying on business* within Australia" (emphasis added).[3169]

3851 As the exchanges between Mahoney and Koenig took place entirely overseas,[3170] a

---

3168 Australian Consumer Law, definition of "trade or commerce": s 2(1).
3169 *Competition and Consumer Act*, s 5(1).
3170 Koenig was in the United States of America and Mahoney was in Europe.

question arose as to whether the Other Bidders Representations were made in trade or commerce such that section 18 of the Australian Consumer Law applied. In light of the relevant facts, this must be resolved by determining whether the Other Bidders Representations were made by a body "incorporated or carrying on business within Australia".[3171]

3852 Perhaps because of the way the issue was formulated, it appeared the Viterra Parties adopted the position that, because the Other Bidders Representations were not made within Australia or between Australia and places outside Australia, this disposed of the issue entirely. That was the only submission they made on this issue. If that was their position, it cannot be accepted. Section 5(1) of the *Competition and Consumer Act* must be considered.

3853 As set out above, Mahoney's conduct in making the Other Bidders Representations was attributable to *both* Glencore and Viterra.[3172] However, in answering this particular question, it is convenient to address Glencore and Viterra separately.

3854 Turning *first* to Viterra, if I am correct that Mahoney's conduct in making the Other Bidders Representations was attributable to Viterra, then this question must be answered in the affirmative. This is because each of the Viterra entities was incorporated within Australia. For completeness, each of them was also carrying on business within Australia.

3855 Turning *secondly* to Glencore, the answer to the question is the same. This is because Glencore was relevantly "carrying on business within Australia".[3173]

3856 The term "carrying on business" is to be construed according to its ordinary or usual meaning.[3174] Whether or not a company satisfies the definition of "carrying on

---

3171 See, for example, *Australian Competition and Consumer Commission v Valve Corporation (No 3)* (2016) 337 ALR 647, 681-682 [164]-[166], 685 [182], 686 [189], 687-688 [198]-[205] (Edelman J).

3172 See issue 54.3 above.

3173 Glencore is not incorporated within Australia.

3174 *Bray v F Hoffman-La Roche Ltd* (2002) 118 FCR 1, 17-18 [59]-[60] (Merkel J). For completeness, Merkel J referred to a submission of the applicant and the Australian Competition and Consumer Commission (the latter not being a party: 8 [14]) that "carrying on business in Australia" should be interpreted

business" is a question of fact and degree.[3175] Ordinarily, although not always, "carrying on business" will involve:[3176]

> … a series or repetition of acts. Those acts will commonly involve "activities undertaken as a commercial enterprise in the nature of a going concern, that is, activities engaged in for the purpose of profit on a continuous and repetitive basis".
>
> (Citations omitted.)

3857 Relevantly, a company incorporated overseas may be "carrying on business" in Australia even where the bulk of its activities are conducted elsewhere.[3177] Further, a company incorporated elsewhere may be found to be "carrying on business" in Australia where, as here, its Australian activities are conducted in connection with, or by reason of its control over, an Australian company.[3178] Furthermore, involvement in the acquisition and sale of an Australian company or companies may, in appropriate cases, constitute "carrying on business" in Australia.[3179]

3858 In my view, Glencore was relevantly "carrying on business within Australia" for at least the following reasons:[3180]

---

broadly so as to give effect to the object of the *Trade Practices Act*: 17-18 [59]. However, his Honour did not rule on the point in finding he was not satisfied the foreign respondents carried on business in Australia: 23 [81]. In *Australian Competition and Consumer Commission v Valve Corporation (No 3)* (2016) 337 ALR 647, Edelman J suggested Merkel J had referred to "the parties' acceptance" that the expression should be broadly interpreted: 687 [196]. In fact, only the applicant and a non-party had contended for that position. To compound matters, in *Vautin v BY Winddown, Inc* (*No 4*) (2018) 362 ALR 702, 753-754 [235] Derrington J referred to Edelman J as describing Merkel J's position to the effect that "carrying on business" should be broadly interpreted. In fact, Merkel J did not express this view.

3175 *Luckins v Highway Motel (Carnarvon) Pty Ltd* (1975) 133 CLR 164, 186.9 (Stephen J).

3179 *Norcast S.ár.L v Bradken Ltd (No 2)* (2013) 219 FCR 14, 77 [256].

3180 It is not suggested that these reasons individually would all lead to the conclusion that Glencore was carrying on business with Australia. Further, it was unlikely all of them were necessary to be established to demonstrate Glencore carried on business in Australia at the relevant times.

(1) Glencore was the ultimate holding company for Joe White, an Australian company, which it owned through Joe White's holding companies, Viterra Ltd and its subsidiaries.[3181]

(2) Glencore acquired Joe White, through its acquisition of Viterra in late 2012, and shortly afterwards, Glencore commenced preparations to on-sell Joe White.

(3) From the time Glencore acquired Viterra, Glencore was involved in decisions concerning how Joe White conducted some aspects of the Joe White Business.[3182]

(4) Throughout 2013, Glencore was actively involved in, and primarily responsible for, the sale of Joe White and the "running of the transaction".[3183] Day-to-day project management of that process fell to a Glencore employee, King, with the decision-making responsibility resting with, and the actual sale process driven by, "the Glencore team".[3184] Glencore's advisers were continually involved in that process in key respects.[3185]

(5) Glencore's purpose in selling Joe White was the generation of profit, or at least the realisation of the maximum value possible for what was, for Glencore, a "non-core" asset.

(6) The sale process was long, multi-tiered and involved, on Glencore's part, continuous and repetitive activity of a conventionally commercial kind, including attendance in Australia by Glencore executives and representatives, the making of presentations, and facilitating and overseeing site visits occurring in Australia as part of that process.[3186]

3181 See par 9 above.
3182 See par 357 above.
3183 This reflects the Viterra Parties' own submissions.
3184 See par 392 above.
3185 See, for example, pars 363, 369, 376, 386, 404, 440 above.
3186 See, for example, pars 362, 699 above.

(7) The sale process required the involvement of Australia-based executives and employees of Viterra, working in Australia in this capacity over a number of months, whose conduct was overseen by Glencore and Viterra.

(8) Glencore (and Viterra) retained Australian lawyers, Mallesons, to advise and assist with the sale process.[3187]

(9) The sale process also involved the ongoing participation of Mattiske, who had some responsibility to ensure it ran smoothly and who was based in Melbourne at all material times.

3859 As a result, section 18 of the Australian Consumer Law applies.

X.57 Did Cargill, Inc rely on the Other Bidders Representations in raising its bid by $15 million to $420 million?

X.58 Did Cargill Australia rely on the Other Bidders Representations in entering into the Acquisition Agreement?

X.58.1 Preliminary matters

3860 It is convenient to deal with issues 57 and 58 together. Necessarily, they largely overlap. However, separate issues in relation to causation arise with respect to each of the Further Bid Calls. Therefore, it is necessary to deal with each call separately.

3861 There is no controversy that Cargill raised its bid to $420 million and as a result acquired the Joe White Business at that amount.

3862 The relevant legal principles are set out in issue 20.2 above. As explained above, the issue of whether or not Cargill Australia relied on the Other Bidders Representations as alleged is to be determined as a matter of fact.

X.58.2 The First Further Bid Call

3187 See par 367 above.

X.58.2.1 The Cargill Parties' submissions

3863 The Cargill Parties submitted that there were 3 main indicators that Cargill relied on the Other Bidders Representations conveyed in the First Further Bid Call in raising its bid to $420 million and entering into the Acquisition Agreement:

(1) Cargill immediately treated the Other Bidders Representations as warranting serious consideration and an urgent response. Significantly, very shortly after the First Further Bid Call, a telephone call involving a large number of senior Cargill executives (including executives with the power to decide whether or not to increase the First Final Bid) was convened to consider how to respond.[3188]

(2) The evidence of senior Cargill executives who participated in that telephone call was that, notwithstanding some reservations, Mahoney was ultimately taken "at his word" and the Other Bidders Representations were taken at face value.[3189]

(3) Despite canvassing alternative options (including maintaining the First Final Bid, or raising the First Final Bid by $5 million or $10 million), Cargill decided shortly after to increase its bid by $15 million as a result of the Other Bidders Representations. In short, Cargill agreed to do precisely what Mahoney had represented was necessary to secure the Acquisition.

X.58.2.2 The Viterra Parties' submissions

3864 The Viterra Parties submitted that if, contrary to their primary submission that the Other Bidders Representations were not made, the court held they were made then there were key indicators that Cargill had not relied on the Other Bidders Representations. They referred to the evidence indicating that senior Cargill executives, at the time at which they were considering the Other Bidders Representations, openly and repeatedly doubted whether they could rely on the Other Bidders Representations. Further, they submitted there was a lack of direct evidence

---

3188 See pars 3783-3789 above.

3189 See pars 3793, 3795, 3799 above.

as to what matters, if any, were actually relied upon by the person they contended was the ultimate decision-maker, Page. Page was not called to give evidence, and it was submitted he was likely to have been influenced by views expressed by Conway, and Conway did not recall being involved in the relevant calls. Furthermore, they submitted that notwithstanding the absence of any direct evidence in relation to Page's decision-making, there was "strong circumstantial evidence" that Page did not rely on the Other Bidders Representations. They contended that Page instead saw the making of the Other Bidders Representations as offering leverage to resolve the outstanding key matters in Cargill, Inc's favour in return for an increase in the purchase price. In this regard, 2 key pieces of circumstantial evidence were identified: (1) Page, during a telephone call following the First Further Bid Call, asked other Cargill executives about the present state of negotiations with Glencore and the matters in negotiation that had not yet been resolved; and (2) Page ultimately decided that Cargill would increase its bid on condition that a number of remaining items be resolved in Cargill's favour.

X.58.2.3 Analysis

3865 For the reasons below, it has been established that Cargill did rely on the Other Bidders Representations[3190] in raising its bid to $420 million and entering into the Acquisition Agreement at that price.

3866 To explain why this is so, it is convenient to first address several matters raised by the Viterra Parties.

3867 There was no direct evidence that Page singularly made the decision to raise the First Final Bid by $15 million. On the contrary, the evidence shows the decision was made collectively by a number of senior Cargill executives,[3191] of whom Page was the most senior. The mere fact that Page was the senior officer did not mean that it was only his state of mind that was relevant in determining whether the causation requirement

---

3190 In making this observation, it is necessarily contingent on which of the 3 representations comprising the Other Bidders Representations were made. Essentially, therefore, this represents a finding of reliance on either the Equal to or Better Bids Representation, or the Competitive Bids Representation, and, in addition, the Necessity Representation.

3191 In addition, Koenig gave evidence that he sent his email concerning the first of the Further Bid Calls (see par 3781) "to the people who were making the decision".

had been satisfied. This was particularly so in such a large organisation as Cargill, where a number of other senior executives had worked far more closely on the proposed transaction. Further, because of Cargill's decision-making structure and process,[3192] these other senior executives were also capable of making the decision as to whether or not Cargill should proceed with the purchase.

3868 In short, the collective consideration of Mahoney's statements, including the open exchange of opinions and assessments, the views expressed and the manner in which the ultimate decision was made, demonstrated the Other Bidders Representations were relied upon by Cargill.[3193]

3869 Alternatively, even accepting for the sake of argument that Page was the relevant decision-maker in relation to whether to increase the First Final Bid to $420 million,[3194] the absence of direct evidence in relation to Page's state of mind was not an obstacle to a finding of reliance on the facts of this case. Reliance may be established by inference.[3195]

3870 In the circumstances, contrary to what has been found, even if Page was the sole decision-maker, an inference of reliance would readily be drawn.[3196] Page participated in, and went along with, the views of others to the effect that Mahoney's statements could not be dismissed and ought to be acted upon.[3197] Even putting this fact aside, the mere fact that Page and the other executives acted with the urgency that they did and agreed to increase the First Final Bid in such a short and stipulated timeframe by precisely the specified amount of $15 million was highly probative evidence of reliance on the statements made.

3871 Further, there was not "strong circumstantial evidence" that Page viewed the Other Bidders Representations merely opportunistically; that is, only as leverage for Cargill

---

3192 See pars 298-299 above.
3193 See pars 3783-3801 above.
3194 Noting that the Cargill Board had pre-approved making a bid for Joe White of up to US$400 million (approximately $440 million) on 9 July 2013, on condition of a minimum 10 percent internal rate of return.
3195 See pars 3154-3157, 3159 above.
3196 See further pars 3878-3879 below.
3197 See pars 3786, 3789-3790, 3792-3793, 3795 above.

to extract additional contractual protections from Glencore.

3872 The circumstantial evidence relied upon by the Viterra Parties comprised 2 entirely unremarkable matters: (1) Page enquired as to the state of negotiations and the status of all unresolved matters when considering whether Cargill should agree to the purchase price specified; and (2) Cargill responded to that request for a significant increase in its bid with a condition that certain unresolved matters that had not been discussed by Mahoney and Koenig be resolved in Cargill's favour. Put simply, that Cargill's response to the Other Bidders Representations had regard to the overall state of negotiations and sought to finalise them in its favour did not indicate that the Other Bidders Representations were not viewed seriously, nor that they were not relied upon.

3873 Furthermore, even if Cargill's decision to increase its bid and enter into the Acquisition Agreement was motivated in part, even in large part, by its interest in securing the additional contractual protections it extracted, that would still be entirely consistent with Cargill having relied on the Other Bidders Representations in deciding to offer to (and contracting to) acquire the Joe White Business for $420 million. It was not necessary that Cargill relied only on the Other Bidders Representations in deciding to increase its bid and enter into the Acquisition Agreement; it was only necessary that the Other Bidders Representations materially contributed to those decisions.[3198] It was readily apparent that they did.

3874 Two further observations may be made about the doubts openly expressed by senior Cargill executives in relation to the Other Bidders Representations.

3875 *First*, whether it was, as found, a group decision or if Page alone made the decision and he had shared, endorsed or had been influenced by the doubts expressed by the other executives, it would still be no bar to establishing reliance. Scepticism, doubt or distrust as to the truth of a representation is not knowledge of its falsity, and so is not necessarily inconsistent with reliance.[3199] There was no evidence to suggest that Page

---

3198 See pars 3153-3154 above.

3199 See par 3158 above.

or any other Cargill executive knew, or held a definite belief, that Mahoney was merely bluffing and that there was no real substance to what he had told Koenig. On the contrary, the possibility was squarely raised (such consideration included Mahoney's previous conduct while a Cargill employee),[3200] considered and then resolved on the basis that Cargill ought not to proceed other than by taking what Mahoney had said at face value. In other words, it was decided to rely and act upon the Other Bidders Representations despite a level of doubt as to their veracity.

3876 To the extent the Viterra Parties submitted that an adverse inference ought to be drawn because of the Cargill Parties' failure to call Page, or at least that no inference ought to be drawn in Cargill Australia's favour because of this failure,[3201] it was correct that Page's absence was not explained. It was also correct that, assuming he remembered the circumstances, he would have been able to give direct evidence of the relevant discussions, as well as any thoughts or decision-making process he may have engaged in at the time.

3877 However, the fact that Page was not called as a witness did not, and should not, prevent the court from finding reliance given the circumstances of the case. There were a number of other witnesses who were able to give evidence about what occurred.[3202] Further, the case of reliance was a very strong case, supported by contemporaneous documents and facts not in issue. Furthermore, it should not be necessarily assumed that Page would have remembered the relevant events. It was quite plausible that he like Conway, in a very senior executive role, would have no or little substantive recollection.[3203]

3878 *Secondly*, and in any event, the absence of direct evidence of Page's reliance was not evidence of an absence of reliance. In short, the lack of evidence from Page did not

---

3200 See par 3792 above.

3201 It was not entirely clear whether such a submission was made. Comment was made in the factual part of their submissions about Page not being called. However, in the Viterra Parties' submissions dealing with *Jones v Dunkel* inferences, Page was not referred to.

3202 See pars 3785-3798 above.

3203 Whilst acknowledging the facts in this case were very different, compare the observations in *Australian Securities and Investments Commission v Hellicar* (2012) 247 CLR 345, 413-414 [168]-[170] (French CJ, Gummow, Hayne, Crennan, Kiefel and Bell JJ).

rebut or undermine the large body of evidence which demonstrated Cargill did, in fact, rely on the Other Bidders Representations.

3879 Having disposed of these main matters raised by the Viterra Parties, it may be seen more readily that a fair inference was available that Cargill relied on the Other Bidders Representations in deciding to increase its First Final Bid for Joe White to $420 million and enter into the Acquisition Agreement. Indeed, in my view, it was the only sensible inference to draw. The following matters were significant:

(1) The Other Bidders Representations were calculated to induce Cargill to adopt a very specific course of action in order to benefit Glencore and Viterra. The Necessity Representation, reinforced by the Equal to or Better Bids Representation or the Competitiveness Representation, was an acute and direct means of inducement.

(2) The Other Bidders Representations were accompanied by other statements that aligned with the atmosphere of exaggerated urgency and competitiveness created by the Other Bidders Representations, in particular a 2 hour window of opportunity, and references to active correspondence with competitor bidders.[3204]

(3) The Other Bidders Representations were made in the context of a high-stakes and competitive bidding process, involving a stark asymmetry of information between representor and representee, coupled with the inability for the representee to lawfully test or verify the relevant representations.[3205] In those circumstances, a level of doubt on the part of Cargill was almost unavoidable, but acting (or more accurately failing to act by not increasing the First Final Bid) on the basis of mere doubt was considered untenable given the stakes.

3204 See pars 3779-3780 above.

3205 Cargill was contractually bound not to communicate with any of the other bidders: see par 643 above.

(4) The evidence demonstrated that Cargill took the Other Bidders Representations seriously. Cargill convened high-level meetings to consider them on short-notice; and formulated a response quickly and in compliance with the demands accompanying the Other Bidders Representations.[3206]

(5) In a very short timeframe, Cargill ultimately decided to do precisely what was represented to be necessary to acquire the Joe White Business, by increasing its First Final Bid by $15 million.

3880 In those circumstances, there can be little doubt that the Other Bidders Representations "materially contributed" to Cargill's decision to increase the First Final Bid for Joe White to $420 million and enter into the Acquisition Agreement for that amount. Indeed, given the terms of the bidding process,[3207] and that there was no competitive bid even remotely close to the First Final Bid,[3208] in the absence of the Other Bidders Representations in the First Further Bid Call, there would have been no rational basis for Cargill to increase its bid as it did.

3881 To reiterate, although relevant to determining whether the required causal link existed, the mere fact that Cargill was able to secure some additional conditions in its favour in return for offering the additional $15 million did not break the chain of causation.

X.58.3 The Second Further Bid Call

3882 There was no suggestion that what occurred in the Second Further Bid Call altered the effect of what had occurred in the First Further Bid Call. Accordingly, it was not strictly necessary for Cargill to make out its case based on the Second Further Bid Call. However, given I have formed the view that Cargill did not rely on any representations conveyed in the Second Further Bid Call in raising its bid to

---

3206 Even after the discussions about increasing the First Final Bid were completed, there was evidence demonstrating reliance. In an email on 3 August 2013, Eden made reference to buying the Joe White Business in circumstances where there was "intense competition": see par 1009 above.

3207 See pars 639-643 above.

3208 See pars 3836-3837 above.

$420 million and entering into the Acquisition Agreement at that price, it is important to set out the basis of that conclusion. Essentially, Cargill's decision to raise its First Final Bid had already been made by the time of the Second Further Bid Call. Further, Koenig considered he was duty-bound to respond in accordance with that decision, and demand the specified conditions,[3209] whether or not Mahoney confirmed what he had previously stated.

3883 To elaborate, Cargill's decision to raise the First Final Bid for Joe White was communicated to Koenig in the email sent by Hawthorne before the Second Further Bid Call. By that email, Koenig was authorised and directed to convey to Mahoney an offer of $420 million. He did so in the Second Further Bid Call. As Koenig accepted, he was not relevantly a decision-maker and had no authority to further negotiate the price. Though Koenig, in the Second Further Bid Call, again asked Mahoney why it was necessary that Cargill increase its bid, that query did not indicate the absence of a concluded decision by Cargill to so increase its bid; the question was put despite that decision having already been made.

3884 The Cargill Parties submitted that the Other Bidders Representations were conveyed in the Second Further Bid Call and were relevantly relied upon by Cargill despite the fact that, as the Cargill Parties accepted, Cargill had decided to agree to pay $420 million before the Second Further Bid Call. The Cargill Parties advanced this submission in 2 ways.

3885 *First,* the Cargill Parties characterised the later representations as an extension of the earlier representations. Cargill's reliance on the Other Bidders Representations conveyed in the Second Further Bid Call was said to be a continuation of reliance on the Other Bidders Representations conveyed in the First Further Bid Call (which preceded the decision to raise the bid). As the Cargill Parties put it, "Cargill's reliance on [the Necessity Representation] continued in the second call after [Koenig] tested the representation again by asking why Cargill had to pay $15 million more and

---

3209 Whichever email it was: see pars 3800-3801 above.

Mahoney confirmed and repeated the earlier representation".

3886 *Secondly,* the Cargill Parties appeared to posit a second component of the decision to offer the increased bid, which followed the later representations. Specifically, it was submitted that Koenig had, in the Second Further Bid Call, a degree of decision-making capacity. This was contended to be in relation to the bid amount, or at least the capacity to decide to not offer the increased bid, in the event that his initial questioning of Mahoney cast further doubt on, or revealed the falsity of, the Necessity Representation. As the Cargill Parties put it, "[h]aving tested the [Necessity Representation], after questions were raised internally as to whether [Mahoney] was bluffing, *[Koenig] then agreed* to pay $420 million on behalf of Cargill" (emphasis added).

3887 If supported by some evidence, or even in the absence of any contrary evidence, both of these submissions might have had some attraction. In those circumstances, it might have been assumed that, if Mahoney had said something to indicate that what he had said in the First Further Bid Call was incorrect, then Koenig would have at least sought further direction from the other Cargill executives before concluding a verbal agreement to pay $420 million for the Joe White Business.[3210] However, the Cargill Parties' submissions were directly contrary to the evidence.

3888 Significantly, there was no evidence that Koenig had any authority to do anything other than put the offer which he had been directed to convey. Equally, the evidence did not suggest Koenig had any authority to withhold the offer, or to further negotiate the price. Further, it was incorrect to submit that Koenig agreed to pay $420 million, or that he so agreed because he was satisfied with Mahoney's responses to his queries. To so submit implied a decision-making capacity where there was none. It was the Cargill executives who had earlier decided that Cargill would pay that amount; Koenig was authorised and directed to convey, and in substance merely conveyed, that decision.

[3210] For the avoidance of doubt, it was clear from the context that such an agreement was not intended to be legally enforceable unless and until the terms of the Acquisition Agreement had been agreed upon.

3889 Moreover, and more significantly, Koenig's evidence on this issue was clear and unequivocal. Under cross-examination, Koenig said that, before telling Mahoney that Cargill was willing to pay $420 million, he asked Mahoney to say a further time why Cargill needed to pay that amount "knowing full well ultimately we were going to pay it". He agreed that it did not matter what Mahoney said (other than if he had said that the deal was no longer available), because Koenig did not have authority to say Cargill was not going ahead and he had no intention of arguing with Mahoney.

3890 It followed that come what may, Koenig was intent to act as directed; namely, to tell Mahoney that Cargill was willing to offer $420 million, and would have done so regardless of what Mahoney might have said. In these circumstances, neither Koenig, much less the decision-makers who instructed him, could have relied on anything Mahoney said in the Second Further Bid Call.

X.58.4 Conclusion

3891 The evidence demonstrated that Cargill did in fact rely on the Other Bidders Representations in raising its bid to $420 million and then entering into the Acquisition Agreement for that purchase price.

X.59 Did Glencore and/or Viterra know that the Other Bidders Representations were false and/or did they not genuinely believe the Other Bidders Representations were true and/or were they reckless as to whether the Other Bidders Representations were true or false?

X.59.1 Legal principles

3892 The elements of deceit are set out above.[3211] To make out their claim for deceit, the Cargill Parties needed to establish that Glencore or Viterra, or both, knew that the Other Bidders Representations were false, or did not genuinely believe that they were true or were reckless as to whether they were true or false.

3211 See issue 22.1 above.

X.59.2 Submissions

3893 The Cargill Parties submitted that it could be inferred from the relevant facts that Mahoney, and therefore Glencore and Viterra,[3212] knew the Other Bidders Representations were false, or did not genuinely believe that they were true or were reckless as to whether they were true or false. The Cargill Parties referred to the fact that Mahoney was the head of Glencore Agriculture and in charge of the sale of Joe White, while reporting to the chief executive officer of the Glencore group. Further, they referred to Merrill Lynch's summary of the Phase 2 bids.[3213] In the Defence, Glencore admitted knowledge of the amounts of the Phase 2 bids. In any event, the Cargill Parties submitted in his conversation with Koenig, Mahoney made it clear he was aware of other final bids that had been made.[3214]

3894 The Viterra Parties relied on their submissions that the Other Bidders Representations were not made, or alternatively, that even if they were made, it was not established that the representations were false. Both of these submissions have been rejected.[3215]

X.59.3 Analysis

3895 Glencore and Viterra both knew that the Other Bidders Representations were false, or did not genuinely believe that they were true or were reckless as to whether they were true or false. As already explained above,[3216] Mahoney's conduct and his knowledge that the Other Bidders Representations were false, were plainly attributable to Glencore and Viterra as a matter of law (in addition to attribution resulting from the operation of section 139B(2) of the *Competition and Consumer Act*).

3212 Initially, the Cargill Parties only made submissions on this issue in relation to Glencore's position. After this fact was raised with them, on 19 November 2019 the Cargill Parties filed supplementary submissions contending that Viterra also knew the falsity of the Other Bidders Representations because Mahoney was acting as Viterra's agent or on Viterra's behalf within the meaning of s 139B(2)(b)(ii). At the hearing on 22 November 2019, the Viterra Parties' senior counsel informed the court that he did not wish to say anything in response.

3213 See par 983 above.

3214 See, for example, par 3780 above. The fact that Mahoney misrepresented the level of the other bids made could not, in the circumstances, suggest he was labouring under any misunderstanding as to the amounts involved. No submission to this effect was made by the Viterra Parties.

3215 See issues 54, 55 above.

3216 See pars 3820, 3826-3832 above.

3896 Further to Glencore's admission that it knew of the amounts bid in Phase 2, there could be no real issue that Mahoney was a person at Glencore who had this knowledge on 2 August 2013. Therefore, Mahoney, acting for Glencore and Viterra during the sale process, was clearly in a position to have known that the Other Bidders Representations were false, and materially so. Naturally, if I had not formed this view, I would have concluded that Mahoney did not genuinely believe the Other Bidders Representations to be true or, at the very least, was reckless as to whether they were true or false. These alternate findings would necessarily have flowed from Mahoney's knowledge of the sale process and the position he held.

X.60 Did Glencore and/or Viterra make the Other Bidders Representations with the intent that Cargill, Inc should rely on them by raising its bid by $15 million, and that Cargill Australia should rely on them by entering into the Acquisition Agreement? If so, and Cargill relied upon the Other Bidders Representations (see issues 57 and 58 above), did Cargill Australia suffer any loss?[3217]

3897 To make out its claim for deceit, Cargill Australia needed to establish that Glencore or Viterra, or both, made the Other Bidders Representations with the intention that they be relied upon by Cargill.[3218]

X.60.1 The submissions

3898 The Cargill Parties submitted it should be inferred that Glencore made the Other Bidders Representations with the intent that Cargill rely on them to raise its bid by $15 million and rely on them by entering into the Acquisition Agreement. The Cargill Parties claimed that the Other Bidders Representations were made in the context of the sale process and the only purpose for which they could have been made was to persuade Cargill to increase the First Final Bid.

3899 The Viterra Parties submitted that, if the Other Bidders Representations were

---

3217 The parties addressed the question of loss arising from the Other Bidders Representations in issue 73, but it is convenient to deal with it here.

3218 See par 3233 above.

conveyed (which they denied), as a result of the context there was no intention for Cargill Australia to rely on them because such an intention would be wholly inconsistent with the Sale Process Disclaimers.

X.60.2 Conclusion

3900 The Other Bidders Representations were undoubtedly made with the intention for Cargill to rely on them in the way that it did by increasing its bid by $15 million.

3901 In circumstances where the First Final Bid was $405 million and Mahoney called Koenig and made representations to Koenig that other bidders were "there", "at that number" or "at that level",[3219] and that there was a necessity for Cargill to pay an additional $15 million to secure the acquisition of Joe White,[3220] objectively there was no other realistic intention that Mahoney could have had in making the Other Bidders Representations.

3902 Further, the existence of any disclaimers that formed part of the sale process did not have the effect of preventing Mahoney from intending for Cargill to rely on the Other Bidders Representations, nor could they have had the effect of altering the factual matter of his actual intention apparent from what he said when he made the Other Bidders Representations. Mahoney made no reference to any disclaimers in the Further Bid Calls. Furthermore, Mahoney's intention was a matter of fact, and in the surrounding context, the Sale Process Disclaimers did not prevent, detract, diminish or obscure Mahoney's particular and obvious intention. Given the content of the Other Bidders Representations, it would be entirely artificial to find that Mahoney's intentions, at the closing stages of the sale process when all final bids were in, were somehow altered or materially affected by previous disclaimers. This was particularly so in circumstances where the Further Bid Calls were not foreshadowed to be part of the sale process and were clearly outside what the parties had agreed would have been the means of the Viterra Parties procuring a sale.[3221]

3219 See par 3780 above.
3220 See pars 3781-3782, 3818 above.
3221 See, for example, par 3790 above.

3903 In summary, Glencore and Viterra both engaged in deceit by making the Other Bidders Representations. In the circumstances, Mahoney knew that the Other Bidders Representations were false because he knew there was no other bid that was even remotely comparable to the First Final Bid. In short, Mahoney was successful in creating a completely false impression that Cargill needed to increase the First Final Bid to $420 million to secure the purchase of Joe White, when in fact the existing offer was already more than enough to achieve that outcome. In doing so, Mahoney evidenced his intention that, in the limited time he allowed, Cargill would rely on the Other Bidders Representations, which it did. Except for the reference to the Sale Process Disclaimers in their closing submissions, no alternate intention was suggested by the Viterra Parties and none was apparent.

X.60.3 Loss

3904 Regardless of the outcome of the other claims in this proceeding, Cargill Australia is entitled to recover by way of damages the additional $15 million it agreed to pay in reliance upon the Other Bidders Representations.

3905 The Viterra Parties submitted that even if the court was satisfied that Cargill, Inc and Cargill Australia relied upon the Other Bidders Representations in offering an additional $15 million, it could not be satisfied that that amount was the equivalent of the loss suffered. This was put on the basis that there was no counterfactual evidence of what would have occurred had Cargill not offered a further $15 million. They contended that the evidence from Cargill's own witnesses gave rise to an inference that the parties almost certainly would not have entered into the Acquisition Agreement on the same terms as they did on 4 August 2013 because: (1) at the time of the Other Bidders Representations, the parties were still apart on some key contractual terms; (2) Cargill had decided that the increased purchase price could be used as leverage to resolve the outstanding key matters in Cargill's favour; (3) Cargill's offer of an additional $15 million was in fact expressly conditional upon Glencore agreeing to certain key terms; and (4) Glencore agreed to most of those terms, which were duly

incorporated into the Acquisition Agreement.[3222]

3906 Despite the negotiations concerning the terms of the Acquisition Agreement being long and hard,[3223] and that it cannot be determined with any certainty what the precise final terms would have been if Cargill had not offered to pay an additional $15 million, these circumstances did not alter the amount of (additional) loss suffered by Cargill when it agreed to pay $420 million because of the Other Bidders Representations. Put simply, if Mahoney had not made the approach to Koenig by way of the First Further Bid Call, in all probability Cargill would have been the successful bidder at $405 million and would not have paid any further sum as part of the process of arriving at agreed terms (noting that most terms already had been agreed upon by 2 August 2013). There was no evidence to suggest that any of the negotiations outside the Further Bid Calls raised any issue concerning Cargill Australia paying a higher price to complete the deal. Further, the Viterra Parties did not put to any witness that, absent the Other Bidders Representations, such a scenario was a real possibility.

X.61 Did Glencore and/or Viterra convey the representations pleaded in paragraph 67 of the Statement of Claim ("the Co-Operative Bulk Representations")?

X.62 Were the Co-Operative Bulk Representations false by reason of the matters pleaded in paragraphs 63 and 64 of the Statement of Claim, including in light of the Sale Process Disclaimers, the Acquisition Agreement Liability Terms and the terms of the Co-Operative Bulk Agreement as pleaded in paragraph 91 of the Defence ("the Co-Operative Bulk Agreement Terms"), and in consideration of Co-Operative Bulk's termination claim, and did Glencore and/or Viterra thereby engage in misleading or deceptive conduct within the meaning of section 18 of the Australian Consumer Law?

X.63 Did Cargill Australia enter into the Acquisition Agreement for $420 million

---

3222 See par 3805 above.

3223 This was how the Viterra Parties fairly summarised the evidence of Eden. Eden gave evidence that the negotiations were very complex, that there were a lot of trade-offs in coming to the final terms and conditions and that the negotiations were long and difficult.

in reliance on the Co-Operative Bulk Representations?

X.64 Were the Co-Operative Bulk Representations made in trade or commerce in Australia or between Australia and places outside of Australia?

X.65 Did Glencore and/or Viterra owe Cargill Australia a duty to take reasonable care in making the Financial and Operational Performance Representations and/or the Warranty Representations and/or the Pre-Completion Representations ("the Due Diligence Information Duty")?

X.66 Did Glencore and/or Viterra breach the Due Diligence Information Duty by reason of:

(1) any falsity of the Financial and Operational Performance Representations, the Warranty Representations and/or the Pre-Completion Representations; and
(2) any knowledge by Viterra of the Undisclosed Matters (individually or in combination) from around early 2010, or from around mid-October 2013?

X.67 Did Glencore and/or Viterra owe Cargill Australia a duty to take reasonable care in providing the Financial and Operational Information ("the Co-Operative Bulk Information Duty")?

X.68 Did Glencore and/or Viterra know or ought to have known of the termination notice pleaded in paragraph 63 of the Statement of Claim, and did they breach the Co-Operative Bulk Information Duty by disclosing the Co-Operative Bulk Agreement in the Data Room documents, but not disclosing the termination notice or the fact that Co-Operative Bulk had terminated or purported to terminate the Co-Operative Bulk Agreement, including in light of the Sale Process Disclaimers, the Acquisition Agreement Liability Terms and the Co-Operative Bulk Agreement Terms, and in consideration of Co-Operative Bulk's termination claim?

3907 None of the matters raised in issues 61 to 68 were ultimately pressed by the Cargill

Parties.[3224]

X.69 Was the Independent Expert appointed to determine certain disputed issues pursuant to clauses 7.2(f)(iii) and 8 of the Acquisition Agreement competent to determine the Disputed Issues?

X.70 By instituting this proceeding, has Cargill Australia waived any right and/or made an election which precludes it from having an Independent Expert determine the Disputed Issues?

X.71 Are the Viterra Parties therefore bound by the outcome of the Independent Expert's determination to the extent it purported to determine any of the Disputed Issues and are they liable to pay the amount as claimed by Cargill Australia (see issue 75 below)?

X.72 If the Viterra Parties are bound by the outcome of the Independent Expert's determination, are the claims brought by Cargill Australia in this proceeding in relation to the Disputed Issues claims brought in breach of clause 7.2(f)(iii) of the Acquisition Agreement, which ought to be dismissed?

3908 Due to the interrelated nature of issues 69 to 72, these issues will be dealt with together. In brief, the issues as defined in paragraph 102(a) of the Amended Defence ("the Disputed Issues")[3225] arose out of the draft completion accounts prepared by Joe White. The Disputed Issues were referred to an independent expert, McGrath Nicol ("the Independent Expert"), pursuant to a dispute process set out in clause 8 of the Acquisition Agreement. The Independent Expert determined 1 of the Disputed Issues relating to Joe White's malt inventory in Cargill's favour ("the Independent Expert's Determination"). Subsequently to the Independent Expert's Determination, Viterra

3224 These issues were the subject of written closing submissions, but were withdrawn during the course of oral closing submissions.

3225 The Disputed Issues were defined in par 102(a) as a termination claim with respect to Co-Operative Bulk (which was not pressed by the Cargill Parties), and certain barley and malt inventory of Joe White which Cargill Australia alleged could not be used for supply to customers because it comprised Hindmarsh barley, malt made from Hindmarsh barley and malt made from off-specification barley.

Malt paid the sum of $9,445,882.36 to Cargill for the adjustment amount and accrued interest.[3226] Viterra claimed that this was the whole amount owing, whilst Cargill claimed that a further $774,887 was owing.

3909 It was common ground that Cargill Australia's loss in relation to the Independent Expert's Determination was subsumed by the loss claimed in this proceeding. This was made clear not only by Cargill's concession on this point, but also the calculation of Cargill's loss in Cargill's key expert report on loss in relation to the problems with Joe White's malt inventory.

3910 Therefore, as the loss claimed in relation to the Independent Expert's Determination falls within the loss for which Cargill is entitled to recover in this proceeding, there is no need to consider and resolve issues 69 to 72. Furthermore, the amount alleged to be owing by Viterra in relation to the Independent Expert's Determination will be satisfied by payment of the award of damages in this proceeding. Accordingly, there is no need to consider these 4 issues any further.

X.73 Has Cargill Australia suffered loss by reason of:[3227]

(1) Any contravention by Glencore and/or Viterra of section 18 of the Australian Consumer Law?
(2) Any deceit by Glencore and/or Viterra?
(3) Any breach by Viterra of the Warranties and clause 13.1 and/or clause 13.8 of the Acquisition Agreement?
(4) Any breach by Glencore and/or Viterra of the Due Diligence Information Duty?
(5) Any breach by Glencore and/or Viterra of the Co-Operative Bulk Information Duty?

X.73.1 The relevant legal principles for the assessment of loss suffered for misleading or deceptive conduct

X.73.1.1 Section 236 of the Australian Consumer Law

3911 Cargill Australia sought compensation for misleading or deceptive conduct in

---

3226 The Independent Expert determined that a negative adjustment to the draft completion accounts was required in the order of $814,881. Cargill ultimately claimed from Viterra an adjustment amount of $9,692,197 with interest in the amount of $528,572 pursuant to clause 3.2(b) of the Acquisition Agreement.

3227 It is unnecessary to consider questions (3), (4) or (5): see par 4324 below.

contravention of section 18 of the Australian Consumer Law. The relevant section to determine compensation for such conduct is section 236,[3228] which relevantly states:

> (1) If:
>
> (a) a person (the ***claimant***) suffers loss or damage because of the conduct of another person; and
>
> (b) the conduct contravened a provision of Chapter 2 or 3;[3229]
>
> the claimant may recover the amount of the loss or damage by action against that other person, or against any person involved in the contravention.

3912 The starting point is consideration of the words of section 236 itself.[3230] The question is simply has the plaintiff established it has suffered loss or damage because of the contravening conduct?[3231] In assessing the loss, the court's approach must be flexible and best adapted to give the plaintiff an amount that will most fairly compensate for the wrong suffered.[3232]

3913 The court is not constrained to principles of common law relevant to assessing damages in contract or tort.[3233] However, in many cases the measure for damages in

---

3228 Section 236 of the Australian Consumer Law is the successor to s 82 of the *Trade Practices Act*. Case law regarding the construction of the previous section remains relevant: see, for example, *Robinson v 470 St Kilda Road Pty Ltd* [2018] FCAFC 84, [102]-[103] (Rangiah J). See also *Marks v GIO Australia Holdings Ltd* (1998) 196 CLR 494, 526-527 [95] (Gummow J) for an articulation of the relevant elements under s 82 of the *Trade Practices Act*; as to the fourth element articulated, read "because of" instead of "by" for the purposes of s 236.

3229 Section 18 is located in Chapter 2.

3230 *Murphy v Overton Investments Pty Ltd* (2004) 216 CLR 388, 407 [44] (Gleeson CJ, McHugh, Gummow, Kirby, Hayne, Callinan and Heydon JJ); *Wardley Australia Ltd v Western Australia* (1992) 175 CLR 514, 526.4 (Mason CJ, Dawson, Gaudron and McHugh JJ).

3231 *Henville v Walker* (2001) 206 CLR 459, 501-502 [130]-[132] (McHugh J, with whom Gummow J agreed); *Marks v GIO Australia Holdings Ltd* (1998) 196 CLR 494, 512-513 [42] (McHugh, Hayne and Callinan JJ). See also par 3916 below.

3232 *ABN AMRO Bank NV v Bathurst Regional Council* (2014) 224 FCR 1, 186 [963] (Jacobson, Gilmour and Gordon JJ), citing *Ingot Capital Investments Pty Ltd v Macquarie Equity Capital Markets Ltd* (2008) 73 NSWLR 653, 684 [171] (Ipp JA), *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd* (2004) 217 CLR 640, 667 [65] (Gleeson CJ, McHugh, Gummow, Kirby and Heydon JJ) and *Henville v Walker* (2001) 206 CLR 459, 502 [131] (McHugh J).

3233 *Murphy v Overton Investments Pty Ltd* (2004) 216 CLR 388, 403 [31] (Gleeson CJ, McHugh, Gummow, Kirby, Hayne, Callinan and Heydon JJ); *Marks v GIO Australia Holdings Ltd* (1998) 196 CLR 494, 503-504 [17] (Gaudron J), 510 [38], 512 [40]-[41] (McHugh, Hayne and Callinan JJ), 529 [102]-[103] (Gummow J); *Wardley Australia Ltd v Western Australia* (1992) 175 CLR 514, 526.2 (Mason CJ, Dawson, Gaudron and McHugh JJ); *Gates v City Mutual Life Assurance Society Ltd* (1986) 160 CLR 1, 14.8 (Mason, Wilson and Dawson JJ).

tort has been considered appropriate.[3234] In tort, damages are awarded with the object of placing the plaintiff in the position they would have been had the tort not been committed.[3235] In particular, where appropriate and helpful, the court can look to actions for deceit as analogous to claims for compensation pursuant section 236,[3236] but only as a guide.

3914 In the current proceeding, the measure of damages for the tort of deceit provides helpful guidance for the court to ascertain the measure of damages under section 236 that will most fairly compensate Cargill Australia for its loss. Such an approach would essentially put Cargill Australia in the position it would have been in if not for the relevant conduct; namely not paying the purchase price of $420 million and not acquiring Joe White (but accounting for the benefit received by actually taking ownership of Joe White represented by ascertaining its real value).[3237]

X.73.1.2 The common approach

3915 In *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd,* the High Court recognised that, when the acquisition of an asset is induced by misleading or deceptive conduct, the common approach to the measure of damages is the difference between the real value of the asset at the date of acquisition and the price paid for it.[3238] In effect, a plaintiff is entitled to recover the loss or expenditure incurred because of the conduct in question, but must account for any corresponding advantage gained. This approach has been described as "the rule in *Potts v Miller*".[3239] The High Court

3237 For convenience, unless indicated to the contrary, no distinction is made between Joe White and the Joe White Business in this part of the reasons.

3238 (2004) 217 CLR 640, 656-657 [35] (Gleeson CJ, McHugh, Gummow, Kirby and Heydon JJ), referring to *Potts v Miller* (1940) 64 CLR 282. See also *Morellini v Adams* [2011] WASCA 84, [42] (McLure P, with whom Pullin and Newnes JJA agreed); *Kizbeau Pty Ltd v W G & B Pty Ltd* (1995) 184 CLR 281, 291.2 (Brennan, Deane, Dawson, Gaudron and McHugh JJ); *Toteff v Antonas* (1952) 87 CLR 647, 650.5 (Dixon J), 654.1 (Williams J).

3239 *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd* (2004) 217 CLR 640, 656-657 [35] (Gleeson CJ,

explained that true or real value is distinct from market value:[3240]

> [T]he test [of the rule] depends not on the difference between price and "market value", but price and "real value" or "fair value" or "fair or real value" or "intrinsic" value or "true value" or "actual value" or what the asset was "truly worth" or "really worth" or "what would have been a fair price to be paid . . . in the circumstances . . . at the time of the purchase".
>
> (Citations omitted.)

3916 However, "the 'rule' is not universal or inflexible or rigid", and is only a "rule of practice".[3241] It is not the default position. The fundamental questions are: "what are the facts, do those facts establish a compensable loss and if so, what was its true measure?"[3242]

X.73.1.2.1 Determining true or real value

3917 The distinction between true, or real, value and market value is "sometimes difficult to draw, but it is old and fundamental".[3243] The market value of the asset is the price which would be struck between "willing but not anxious buyers" and "willing but not anxious sellers".[3244] The assessment must be undertaken "at the relevant time" and "in the position of the bargaining parties as on the critical date".[3245] In relation to market value, reference was made in the Cargill Parties' submissions to what was described as the "*Falconer* principle", that "evidence of future events is admissible not to prove a hindsight but to confirm a foresight".[3246] The Viterra Parties pointed to the criticism that this formulation was an oversimplification of the principle and argued that its relevance to the current case was limited.[3247] While it has been recognised that

3246 See *Challenger Property Asset Management Pty Ltd v Stonnington City Council* (2011) 34 VR 445, 461-463 [35]-[38] (Croft J), quoting *Housing Commission of New South Wales v Falconer* [1981] 1 NSWLR 547, 558B-559C (Hope JA), 563F (Glass JA), 576B (Mahoney JA).

3247 *Challenger Property Asset Management Pty Ltd v Stonnington City Council* (2011) 34 VR 445, 464 [40], citing *Minister Administering the Crown Lands Act v Illawarra Local Aboriginal Land Council* (2009) 168 LGERA

there is a risk in adopting this single phrase independent of context, the principles from *Housing Commission of New South Wales v Falconer* are relevant to the possibility of using subsequent events in determining market value.[3248] While these principles relate to an assessment of market value, rather than true value, market value is a "starting point" to determine real value.[3249]

3918 Market value will differ from true value if the market value is "delusive or fictitious". Such a market value may be the result of market manipulation or some other improper practice on the part of the vendor,[3250] or where the market operates under some material mistake.[3251]

3919 Whatever the precise position with respect to market value, true or real value can be determined with reference to subsequent events insofar as they shed light on the true value of the asset at the relevant date.[3252] In *Kizbeau Pty Ltd v W G & B Pty Ltd*, the High Court stated that "although the value is assessed as at the date of the acquisition, subsequent events may be looked at insofar as they illuminate the value of the thing as at that date".[3253]

3920 Importantly, a distinction is drawn between subsequent events where the cause of loss is intrinsic and those where the cause of loss is extrinsic. The court must distinguish between causes of decline in value that are "intrinsic", or "inherent", in the thing itself, which should be taken into account, and causes that are "independent" or "extrinsic", which should not be taken into account to determine the true value.[3254]

3921 In *Kizbeau Pty Ltd v W G & B Pty Ltd*,[3255] the nature of this distinction was traversed. The High Court stated that subsequent events arising from the nature or use of the thing itself should be taken into account. For example, the takings of a business subsequent to purchase were generally relevant not only to prove a representation made before the acquisition, but also to prove the true value of the business as at the date of purchase.[3256] This is true even when some difference exists between the conditions under which the business was conducted before and after purchase, subject to allowance being made for differences in conditions.[3257] However, supervening events, such as a decline in takings caused by ineptitude or unexpected competition post-acquisition, should not be taken into account.[3258]

X.73.1.2.2 Effect of resale

3922 If, subsequent to acquisition, the plaintiff resells the asset, this will not, in itself,[3259] prevent the plaintiff recovering.[3260] If the *Potts v Miller* approach is adopted, the date at which loss is ascertained is the date of the original acquisition. Therefore, the comparison is made between the true value at the date of acquisition and the purchase price, and not the value at the time of subsequent sale. However, a resale, like a later valuation, may be relevant to the extent it illuminates the true value at the time of the original acquisition.[3261] In some instances, where resale occurs shortly after the original purchase, and is not affected by extrinsic factors, the amount of the resale may closely reflect the true value at the time of purchase.

3923 The Queensland Court of Appeal held, in *Manwelland Pty Ltd v Dames & Moore Pty*

3261 *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd* (2004) 217 CLR 640, 658-659 [38]-[40] (Gleeson CJ, McHugh, Gummow, Kirby and Heydon JJ).

Ltd,[3262] that a resale could be taken into account to determine the plaintiff's loss, as damages were to be determined by ascertaining the net loss sustained.[3263] In that case, the plaintiff was a developer who purchased property in reliance on representations made by the defendant. The defendant had been employed by the plaintiff to provide expert advice on the costs associated with decontaminating the relevant property.[3264] The advice provided was found to be misleading or deceptive because it materially underestimated the costs of remediating the land.[3265] The plaintiff went on to develop and sell the land for significantly more than the original purchase price. After project costs were taken into account a small net loss resulted.[3266]

3924 The plaintiff sued the defendant for the difference between the price paid, $810,000, and the true value of the property at the date of acquisition in March or April 1995,[3267] being $300,000.[3268] However, both at first instance and on appeal it was held that the proceeds of resale of part of the property in July 1996 (after a subdivision) were required to be taken into account in assessing the plaintiff's loss. Accordingly, the expenses incurred by the plaintiff, including the original purchase price, were deducted from the resale price to establish the "overall loss sustained", and the plaintiff was only entitled to approximately $10,000.[3269] In the leading judgment, McPherson JA emphasised that it had been found by the trial judge that the plaintiff always intended to develop and sell the property it acquired and that was precisely what it did, albeit with respect to only a third of the property purchased because of the contamination. On this basis, it was found that the plaintiff achieved the original purpose of its purchase, but on a scale reduced by two-thirds. Accordingly, the

3266 Ibid, 43,461 [9].

3267 There are slightly different dates referred to. The option was exercised on 31 March 1995, but the valuation was conducted on the basis that it occurred on 20 April 1995, which valuation was accepted by the trial judge.

3268 *Manwelland Pty Ltd v Dames & Moore Pty Ltd* (2001) ATPR ¶41-845, 43,460, [7], 43,462 [12] (McPherson JA, with whom Thomas JA and Douglas J agreed).

3269 Ibid, 43,461, [9], 43,463 [15].

plaintiff was only entitled to the amount it was out-of-pocket in relation to "the project it carried out" and no more.[3270]

3925 On the approach in *Manwelland Pty Ltd v Dames & Moore Pty Ltd*, if the asset in question is subsequently sold for more than the original purchase price, the loss that the plaintiff may be entitled to recover is the total of any expenses incurred, including the original purchase price, less any gross profit obtained from holding or reselling the asset. On this approach, if the gross profit exceeded the total expenses incurred, then the plaintiff would have no loss to recover. Further, the approach does not involve considering the true value at the time of the acquisition, at least not directly.[3271] Special leave to appeal from the Court of Appeal's decision was refused on the basis it was an "application of established general principles to the particular facts and circumstances".[3272]

3926 There has been some criticism of the approach adopted in *Manwelland Pty Ltd v Dames & Moore Pty Ltd*. This was made on the basis that it was considered that if the plaintiff was not locked into the property but chose to keep it and had incurred further losses as a result of the development they would not be recoverable; therefore, it was difficult to see why any profits from a successful development ought to be brought to account.[3273]

3927 In circumstances where the approach in *Potts v Miller* is appropriate, resale is relevant only to the extent it sheds light on the true value at the time of the original purchase. This was acknowledged in *Manwelland Pty Ltd v Dames & Moore Pty Ltd*, where it was stated that if *Potts v Miller* were to be applied, the development and resale of the asset

The Viterra Parties noted that in *Brown v Dream Homes SA Pty Ltd* the amount received on resale of the property was to be taken into account in assessing damages. This is of no relevance to the question at hand; *Brown v Dream Homes SA Pty Ltd*, 143 related to a claim for transaction costs in buying and selling the property. Damages, applying the approach in *Potts v Miller*, were not sought and there was no claim based on the difference between the purchase price and true value of the asset at the date of acquisition.

would be relevant to demonstrate its true value at the time damages fall to be determined.[3274]

X.73.1.3 Instances when Potts v Miller *is not appropriate*

3928 It is fundamental that a plaintiff be compensated for loss suffered. The approach in *Potts v Miller* is not universal and is only 1 means of giving effect to this.[3275] Alternative approaches may be appropriate in a range of circumstances.[3276]

3929 In determining which approach to adopt, the court must consider the facts of the case and what the true measure of compensable loss is.[3277] An alternative approach to assessing loss will be appropriate if required to properly compensate the plaintiff for their loss.[3278] When considering tort cases, courts have stated that in certain circumstances an alternative approach will be appropriate if the plaintiff "incurs losses which are not represented by the difference between the price and value of the business",[3279] or if required "in order to give adequate compensation for the wrong done to the plaintiff after the transaction is complete",[3280] or "when the overriding compensatory rule requires it".[3281]

3930 Circumstances when an alternative approach may be appropriate include:

(1) Where the loss is a contingent loss, the appropriate date for ascertaining loss may be the date upon which the contingency materialised.[3282]

3282 *Murphy v Overton Investments Pty Ltd* (2004) 216 CLR 388, 410 [55] (Gleeson CJ, McHugh, Gummow,

(2) Where the misrepresentation continues to operate after the date of acquisition of the asset so as to induce the plaintiff to retain the asset.[3283]

(3) Where the misrepresentation continues to operate and subsequent losses are directly attributable to the impugned conduct itself and not extraneous factors.[3284]

(4) Where the circumstances of the case are such that the plaintiff is, by reason of the impugned conduct, locked into the property.[3285]

3931 It is uncontroversial that determining the appropriate approach requires "consideration of factual questions going to the circumstances of the acquisition" and the relevant principles identified by the High Court in *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd*.[3286]

X.73.1.4 The "left in hands" approach

3932 An alternative approach, in which the benefits of any subsequent resale may be taken into account is, for example, the "left in hands" approach. In an appropriate case, this may be utilised as the preferred approach to calculate the actual amount of loss or damage, or may be a means by which the soundness of another approach utilised to calculate the amount might be checked.

3933 Under the "left in hands" approach, damages are calculated as whatever is left in the

purchaser's hands at the time of the trial.[3287] The plaintiff is entitled to all their loss, subject to giving credit for any benefit that has been received, including proceeds from a subsequent sale of the asset.[3288]

3934 A primary reason for adopting the *Potts v Miller* approach is the desirability of separating out losses resulting from extraneous factors subsequent to the purchase.[3289] However, it may be less appropriate to look primarily at the point in time of the acquisition if there are no losses resulting from extraneous factors to separate out, and thus the "left in hands" approach may be more readily adopted.[3290]

X.73.1.5 The key parties' positions

3935 The Cargill Parties submitted that the approach in *Potts v Miller* should be adopted, so that the amount of compensation for the loss suffered be calculated as the difference between the purchase price of $420 million and the true value of Joe White on the date of purchase. The Cargill Parties submitted that the "left in hands" approach was inapposite and that the factors that might have made it appropriate were not present in this case. It was submitted that there was no ongoing operation of the misrepresentations on Cargill Australia as it became aware of the misleading or deceptive conduct soon after Completion. Further, Cargill Australia was not locked in and had the option of selling Joe White immediately, but opted to retain the asset for around 5 years, which necessarily resulted in the undesirability of having to identify and quantify extraneous factors. Furthermore, it was submitted that a current valuation of Joe White (in essence there was no such valuation before the court)[3291] would not reveal anything about Cargill Australia's loss in 2013. Moreover, the Cargill Parties submitted that the sale price of the entirety of Cargill Malt did not demonstrate the standalone value of Joe White at that time of resale and was therefore irrelevant.

3287 *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd* (2004) 217 CLR 640, 666-667 [63]-[64] (Gleeson CJ, McHugh, Gummow, Kirby and Heydon JJ).

3288 *Smith New Court Securities Ltd v Scrimgeour Vickers (Asset Management) Ltd* [1997] AC 254, 266G-267C (Lord Browne-Wilkinson, with whom Lord Keith of Kinkel and Lord Slynn of Hadley agreed).

3289 *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd* (2004) 217 CLR 640, 667-668 [65] (Gleeson CJ, McHugh, Gummow, Kirby and Heydon JJ).

3290 Ibid.

3291 See issue 73.15 below.

3936 Broadly, the Viterra Parties submitted that the court had 3 options to assessing any loss Cargill Australia may have suffered: (1) the *Potts v Miller* approach with synergies included in assessing true value; (2) the *Potts v Miller* approach without including synergies; and (3) the "left in hands" approach. The Viterra Parties submitted that the "left in hands" approach should be preferred as it was the best measure to ensure that Cargill Australia was not over compensated. It was submitted that Cargill Australia was required to prove loss and had ignored the significance of resale of Joe White in the context of the sale of its global business, Cargill Malt.

3937 Further, the Viterra Parties referred to a number of authorities in contending that the value of Joe White at the time of trial was the appropriate basis upon which to assess any loss.

3938 Furthermore, the Viterra Parties correctly observed that Cargill Australia had chosen to adopt only 1 measure of damages, based on a single body of expert evidence. They submitted that if the approach Cargill Australia adopted was not the appropriate means of calculating the amount of loss, then it necessarily followed that, whatever causes of action were relied upon, Cargill Australia's claims for compensation must fail.[3292]

X.73.1.6 Application of principles in this case

3939 In the circumstances of this case, *Potts v Miller* is the appropriate approach to provide fair compensation for the loss suffered at the date of the Acquisition of Joe White. There are a number of reasons for this.

3940 *First*, a justification for not adopting the common approach is to ensure the plaintiff is fully compensated.[3293] In circumstances where Cargill Australia has not claimed any

---

3292 *Winky Pop Pty Ltd v Mobil Refining Australia Pty Ltd* [2016] VSCA 187, [294] (Warren CJ, Ashley and Osborn JJA), affirming the approach at first instance: [2015] VSC 348, [752] (Digby J). See also *Radferry Pty Ltd v Starborne Holdings Pty Ltd* [1998] FCA 1689, 15 (Cooper, Marshall and Dowsett JJ), in which it was observed that if a party seeks to prove loss by only a single basis of calculation and that basis fails, there is no fall-back position. It was further noted that it is not for the court to seek to find another basis to establish loss and it is the fault of the party for failing to adduce the relevant evidence that is the cause of the failure to succeed.

3293 *Smith New Court Securities Ltd v Scrimgeour Vickers (Asset Management) Ltd* [1997] AC 254, 284C (Lord Steyn, with whom Lords Keith and Slynn agreed).

losses incurred subsequent to the Acquisition, an alternative approach is not required to give adequate compensation for the loss suffered as a result of the contravening conduct.

3941 *Secondly*, a reason for adopting the *Potts v Miller* approach is the desirability of separating out losses resulting from extraneous factors in the later history of the asset.[3294] In circumstances where Cargill Australia has operated the Joe White Business for a number years following the Acquisition, and during this period the value of the asset has been influenced by both intrinsic and extraneous factors, which in themselves may have varied in significance over the extended period of time, a later date is inappropriate for the assessment of loss.

3942 *Thirdly*, the features of this transaction do not align with any of the examples of instances when an alternative approach has been found to be appropriate. Cargill was a strategic bidder that did not acquire Joe White with the intention of improving and selling it in the short or intermediate term;[3295] it bought it for the purpose of conducting the Joe White Business on an ongoing basis. Further, Cargill Australia's position (which has been accepted) was that if it had known of the Undisclosed Matters, it would not have proceeded with the transaction.[3296] Thus, any loss suffered by Cargill Australia was incurred upon Acquisition and was not contingent on some later event. Furthermore, the misrepresentation did not continue to operate beyond the date of Acquisition;[3297] and (leaving aside any considerations confined to contractual remedies)[3298] Cargill Australia was not "locked into" retaining Joe White.[3299]

3943 Consequently, events subsequent to the Acquisition are not properly attributable to

---

3294 *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd* (2004) 217 CLR 640, 667-668 [65] (Gleeson CJ, McHugh, Gummow, Kirby and Heydon JJ).

3295 Cf *Manwelland Pty Ltd v Dames & Moore Pty Ltd* (2001) ATPR ¶41-845, 43,465 [21] (McPherson JA, with whom Thomas JA and Douglas J agreed).

3296 See issue 33 above.

3297 See pars 1557-1558 above.

3298 See pars 5294-5325 above.

3299 See par 3930(4) above.

the contravening conduct.[3300] In these circumstances, the fact that Cargill has resold Joe White as part of a larger sale of Cargill Malt did not alter this position, regardless of whether or not it has made a profit, or a loss less than that suffered at the date of Acquisition. In circumstances where such a significant period of time elapsed between the Acquisition and the subsequent sale, and there were significant changes in management and other factors which influenced the performance and value of Joe White, there could be little if any connection between the amount received on the resale and the loss suffered back in 2013 upon Completion. To be clear, and contrary to the Viterra Parties' submission, the approach in *Potts v Miller* does not involve the court "ignoring" the resale. But in my view, in the circumstances of this case, the resale is not material to an assessment of the amount of the loss suffered.

3944 Having concluded that it is appropriate to adopt the approach in *Potts v Miller*, it is then necessary to consider the evidence relevant to ascertaining the true value of Joe White at Completion.

X.73.2 The 3 experts called in relation to calculating loss

3945 There was no suggestion that the experts called were not suitably qualified to give expert evidence on the issue of the true value of Joe White. Accordingly, details of their respective qualifications and experience may be briefly summarised.

3946 Cargill Australia called 2 experts, Gordon Klein ("Klein")[3301] and Greg Meredith ("Meredith").[3302] The Viterra Parties called Michael Potter ("Potter").[3303]

3300 Noting that subsequent events may still be relevant to the extent they shed light on the true value at the time of the acquisition: *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd* (2004) 217 CLR 640, 657-659 [37]-[39].

3301 Klein is a faculty member of Anderson's School of Management at the University of California, Los Angeles, where he lectures in courses as part of undergraduate and masters of business administration programs. He was admitted to the Californian bar in 1979 and is a certified public accountant registered in Illinois. He has substantial experience as a professional consultant in relation to business and financial matters.

3302 Meredith is a partner of Ferrier Hodgson, and gives expert evidence in commercial cases as part of his professional activities. He has a bachelor of economics degree from the University of Sydney and is a fellow of Chartered Accountants Australia and New Zealand. He is also an accredited business valuation specialist.

3303 Potter is a chartered accountant and a principal of Axiom Forensics Pty Ltd. He holds a business

3947 Klein prepared 2 reports.[3304] Using a discounted cash flow method, Klein ultimately concluded that the true value of Joe White at the date of Completion was $158.2 million (thus resulting in a loss to Cargill Australia of $261.8 million), or on a less preferred assumption that the true value was between $178.2 million and $250.6 million.

3948 Meredith also prepared 2 reports. In his first report, based on 3 separate scenarios, Meredith estimated the true value of Joe White at the date of Completion was between $36.3 million and $90.5 million. In the later report, Meredith concluded the true value of Joe White was between $102.6 million and $120.1 million. Little more need be said about Meredith's evidence in relation to his valuations.[3305] In closing submissions, the Cargill Parties ultimately chose not to rely on it. This was done so advisedly. Although not in any way seeking to challenge Meredith's considerable expertise or his general veracity as an independent witness, there were a number of difficulties with his evidence.

3949 Without being exhaustive, he made the assumption that something was attributable to the Viterra Practices and was not extrinsic for the purposes of assessing value unless it was demonstrated otherwise. Although such an approach possibly might have been appropriate for any claim for equitable compensation (I express no view), in circumstances where the onus was entirely on Cargill Australia to prove its loss without any presumptions in its favour, this basis of assessment was self-evidently problematic. What made this approach even more troubling was that Meredith failed to disclose his reasoning in determining whether a factor was extrinsic or otherwise. Further, although purporting to adopt the approach in *Potts v Miller* as explained in subsequent authorities, Meredith's valuation relied on hindsight in a manner that was impermissible and, in my view, went beyond what was contemplated by these

---

valuation specialist designation from Chartered Accountants Australia and New Zealand. He has a bachelor of commerce degree from the University of Western Australia.

3304 He did so with the assistance of an economic consultant, Cornerstone Research. This consultant performed research and provided other assistance.

3305 That said, his evidence with respect to various components of the valuations of the other experts remained relevant.

authorities.

3950 In circumstances where his evidence was not relied upon, it is unnecessary to elaborate further. Put simply, if Cargill Australia had decided to rely on Meredith's evidence, it would not have advanced its claim for loss.

3951 Potter prepared 3 reports.[3306] In his first report, which is the report Potter stated the court should prefer in ascertaining Joe White's true value,[3307] Potter made a range of assumptions based on each possible scenario concerning the existence or otherwise of the Viterra Practices. Based on the average of the results of using the discounted cash flow method and the capitalised maintainable earnings method, Potter concluded the true value of Joe White was between $384.8 million and $447.2 million.[3308] Potter described his second report as an illustrative valuation. He used a forecast which had been prepared by Cargill approximately 12 months after the Acquisition.[3309] Based on this, he concluded the true value was between $372.8 million and $396 million.[3310] This second report was not put forth by the Viterra Parties as providing a basis for establishing the true value. The third report was prepared as a result of the sale of Joe White.[3311] It contained the same figure as the first report for the upper end of the range, but increased the lower end from $384.8 million (or $360.3 million)[3312] to $398.9 million.

3952 In addition to the individual reports, the experts prepared 2 joint reports. The first of

---

3306 He did so with the assistance of Axiom Forensic employees and officers, being a fellow principal, a manager, a senior analyst and an analyst. During cross-examination, Potter explained that the fellow principal drafted the first draft of the third report.

3307 The Viterra Parties submitted that Potter gave no such indication, and suggested his evidence was confined to comparing his approach in his first report with the approach he took in the second report. The issue was raised twice during his evidence and on the second occasion, it was clear the question was not confined to Potter's first 2 reports. In any event, not much turns on this as it is ultimately a matter for the court.

3308 In so concluding, Potter adopted Klein's conclusions in relation to sales prices and volumes without deciding whether or not those assumptions were correct. Further, in a subsequent joint report Potter amended the lower end of this range to $360.3 million.

3309 See pars 1784-1785 above.

3310 In the second report Potter assumed $30 million of capital expenditure.

3311 See par 1846 above.

3312 This alternate figure was arrived at by Potter in a later joint report using Klein's assumptions regarding projection of loss of sales.

these was prepared shortly after the trial commenced, and the second was prepared over 5 months later.

X.73.3 What methodology or methodologies did each of the experts adopt; and what are the relative strengths and weaknesses of each methodology?

3953 Relevantly,[3313] the methodologies adopted by each expert were selected respectively by them in order to determine the true value of Joe White. The experts agreed that true value was a legal rather than accounting term and that market value could be used as a starting point to assess true value. The experts agreed that market value can be defined as:[3314]

> …the estimated amount for which an asset or liability should exchange on the valuation date between a willing buyer and a willing seller in an arm's length transaction, after proper marketing and where the parties had each acted knowledgeably, prudently and without compulsion.

3954 The experts agreed that the true value of Joe White at the date of Completion was the market value of Joe White adjusted to take into consideration the effect of the Viterra Practices. In this case the only circumstance that would allegedly cause the participants in the market to be mistaken in any material manner concerning true value was the existence of the Viterra Practices and not being given notice of their ongoing implementation.

3955 The 2 possible dates for assessing true value were 4 August 2013, being the date of the Acquisition Agreement, and 31 October 2013 being the date of Completion. The experts to varying degrees made reference to both dates in some of their analysis, but ultimately settled on 31 October 2013.

3956 There are obvious reasons why 4 August 2013 might be considered an appropriate date, as it was the date upon which Cargill Australia legally bound itself to purchase

---

3313 Not including Potter's "illustrative" second report.

3314 Citing the International Valuation Standards Council's International Valuation Standards (2013 (being the year of the Acquisition)), [29]. The definitions cited and agreed upon by all the independent experts were contained in the *International Valuation Standards* issued by the International Valuation Standards Council (per the 2013 Frameworks and Requirements). See also pars 3917-3918 above.

Joe White. However, no rigidity is applicable in this regard.[3315] The date at which Completion occurred, and Cargill Australia paid the moneys it claimed represented its loss (less any benefit received) may also be viewed as an appropriate date. The experts have proceeded on the basis that the date of Completion was the valuation date to use. In circumstances where new information came to light in October 2013 and Cargill considered withdrawing from the transaction in late October 2013 but then decided to proceed only shortly before Completion, after further misleading conduct of the Viterra Parties, 31 October 2013 represented an appropriate date at which to assess true value.

X.73.3.1 Klein's approach

3957 Klein used a discounted cash flow method. It is useful to provide an overview of this method here, as these concepts will be referred to throughout this analysis of the experts' valuations. Broadly, the discounted cash flow method uses 2 inputs to determine value: the estimated future cash flow on a forward-looking basis and a discount rate. The estimated future cash flows are an estimate of the cash flows the business will generate over the forecast period, and are reflected in the numerator. The discount rate relates to the level of risk and is used to determine the net present value of the cash flows, and is reflected in the denominator. Generally, there is an inverse relationship between the discount rate and the assessed value; if the discount rate is reduced the value goes up, and vice versa.

3958 Klein conducted his valuation assuming that the Viterra Practices were disclosed and that Cargill would not have acquired Joe White. Klein drew a distinction between hypothetical purchasers who were financial bidders and those who were strategic bidders. In his preferred scenario, Klein assumed that only risk-tolerant financial bidders would choose to participate in the market once the Viterra Practices became known.[3316] In his alternative scenario, Klein assumed that strategic bidders would also participate in the market.[3317] In both scenarios, Klein made adjustments to the

3316 See pars 4036-4037 below.

3317 See par 4038 below.

discount rate to reflect the increased debt and equity costs of capital that would result upon lenders and equity investors becoming aware of the Viterra Practices.

3959 Klein stated that he valued Joe White on a forward-looking basis, having regard to information existing at the time of the Acquisition. Klein's position was that he used information arising post-Acquisition generally not by means of hindsight, but as a cross-check on the reasonableness of his assumptions as at the valuation date. Accordingly, he readily acknowledged he did not use hindsight to exclude factors that might be considered extrinsic. He also conceded that in circumstances where he had limited data as at the valuation date, he did the best he could and sometimes used subsequent facts as a means of adjusting his foresight estimates, but only to be more conservative.

X.73.3.1.1 The Cargill Parties' submissions

3960 The Cargill Parties submitted that Klein's general approach was forward-looking and used information that existed at the time of Acquisition. It was submitted that to the extent subsequent events were used, generally it was to confirm a foresight. The Cargill Parties acknowledged that Klein used post-Acquisition data when no other data was available, but submitted that this approach was orthodox and appropriate.

3961 The Cargill Parties also pointed out that Potter accepted that there were significant areas of agreement between Potter and Klein. In his evidence, Potter identified only 4 primary areas of disagreement,[3318] if he were to accept Klein's assessment of sales.[3319]

X.73.3.1.2 The Viterra Parties' submissions

3962 The Viterra Parties criticised Klein's approach of assessing the impact of the Viterra Practices in aggregate, rather than in various scenarios as Potter did. The Viterra Parties also argued that Klein's valuation required the court to find that all aspects of those practices would have contributed to the hypothetical purchaser paying less for

---

3318 Being the attributes and identity of the hypothetical purchaser (see pars 4034-4064 below), the treatment of synergies (see pars 4163-4202 below), the discount rate (see pars 4203-4251 below), and transaction costs: see pars 4252-4265 below.

3319 In Potter's first report, and then the first joint report and his second report, Potter had not accepted Klein's assessment of the impact of the Viterra Practices on sales. However, they were largely adopted by Potter in Potter's calculations in the second joint report.

Joe White. A further criticism was that Klein relied on a mix of assumptions made by Goldman Sachs, Deloitte and Cargill in determining the inputs into his valuation model without analysing their baselines to determine their reliability, which he then adjusted to reflect assumptions the hypothetical purchasers would have made if aware of the Viterra Practices and Policies.

3963 The Viterra Parties criticised Klein's methodology on the basis that his references to post-Acquisition information were selective, ignoring consideration of post-Acquisition information that would been more directly relevant to his forecasts than other valuation modelling.

X.73.3.1.3 Other experts' response to Klein

3964 Potter characterised Klein's methodology as calculating the expected future cash flows arising from an assessment of the effect of the Viterra Practices and then applying an uplift factor to the discount rate applied in assessing the present value of the forecast cash flows. Potter contended that the approach Klein should have adopted was to start with the market price of Joe White with no effect on the value from the Viterra Practices and reduce this by the amount the potential purchasers would require to remedy the Viterra Practices, to the extent the Viterra Practices were inappropriate or not sustainable. Further, Potter contended that Klein should not have adjusted both projected cash flows and the discount rate on the basis that he believed this double-counted the allowance for risk, or at least gave rise to a material overstatement, which resulted in a material understatement of the true value of Joe White. Potter argued that as the Viterra Practices was a series of specific alleged matters that was better accommodated by making specific adjustments to the forecast cash flow. Accordingly, he contended there should be no uplift in the discount rate.[3320]

3965 Meredith criticised Klein's cash flow forecasts on the basis that Klein did not consider hindsight in estimating the effect of the Viterra Practices, which in Meredith's view was inconsistent with the legal principles. Further, Meredith disagreed with Klein's

[3320] Potter's position was that the figure for the denominator for the appropriate level of risk should consist of 3 components only: a base; a market risk and specific risk. Potter stated that the specific risk did not need to be adjusted for the Viterra Practices if an appropriate adjustment had been made to the cash flows.

reliance on the Goldman Sachs forecasts as a starting point to estimate cash flows and Klein's assumption that sales volumes would reach similar levels to those set out in the Information Memorandum. These criticisms were directed towards stating why Klein had *overstated* Joe White's true value.

3966 In response to Potter's observations, Klein argued that the value determined through the discounted cash flow method reflected an assessment of both future cash flows and an assessment of the risk-adjusted discount rate applied to these cash flows. Klein contended that if new material information had become available, such as an awareness of the Viterra Practices, the hypothetical purchaser would have performed a new discounted cash flow analysis and estimated anew the expected future cash flow and risk-adjusted discount rate of the asset taking into account the new information. He submitted that it was entirely appropriate to change all valuation inputs when material new information rendered a previous analysis outdated.

X.73.3.1.4 Analysis of Klein's approach

3967 Ultimately, there could be no issue with Klein's approach of assessing the effect of the Viterra Practices in aggregate in circumstances where the court has determined that all the Viterra Practices occurred as alleged and were not disclosed.[3321]

3968 Further, Potter's position that "[i]n this case" it was impermissible to adjust both cash flows and discount rate, as it would necessarily be double counting or give rise to an overstatement of results, should not be accepted. Notably, when giving evidence Potter accepted that adjusting both the numerator (being the estimated cash flows) and the denominator (being the discount rate for risk) could be done without double counting.

3969 As explained by Klein, the valuation was a fresh assessment of value, taking into account the new information, being the Viterra Practices. It was proper for the valuer to assess the appropriate future cash flows *and* the appropriate discount rate in light of the relevant information. Whether or not the adjustments have the effect of double counting, or materially overstating the effects of the Viterra Practices, depends on the

3321 See issue 10 above.

appropriateness of the inputs used to determine the future cash flow and the discount rate selected.[3322] Furthermore, it is highly likely, if not axiomatic, that the risk attaching to a business that sold only 1 type of product (that is, malt), and that was historically involved in the routine misreporting of test results in relation to that product in purported satisfaction of customers' requirements, would be greater than that applicable for a business that conducted its operations in an appropriate and contractually compliant manner. Such risk should also have been addressed in choosing the appropriate discount rate.

3970 The assumptions made by Goldman Sachs, Deloitte and Cargill prior to the Acquisition were not a problem at the methodological level, as these assumptions were made prior on the basis of information that would be available to the hypothetical purchaser absent the Viterra Practices. The reasonableness of the assumptions used by Klein, both drawn from the Goldman Sachs, Deloitte and Cargill models and his adjustments, are discussed below. Further, it was not impermissible (and in fact it was required), if beginning with assumptions made without knowledge of the Viterra Practices, to make any adjustments necessary to reflect the assumptions that would have been made by a hypothetical purchaser who had been aware of the Viterra Practices and Policies.

X.73.3.2 Potter's approach

3971 In his primary valuation, contained in his first report, Potter's methodology was to first value Joe White absent the Viterra Practices then estimate the cost of rectifying the effect of the Viterra Practices and deduct this amount to arrive at an estimate of the true value. In the first stage of his analysis, Potter estimated the market value absent the Viterra Practices by undertaking both a discounted cash flow method of valuation and a capitalisation of maintainable earnings method of valuation and averaging them both to reach an estimate of $447.2 million.[3323] Critically, in doing so

---

3322 See pars 3989-4033 below in relation to assumptions and pars 4203-4251 below in relation to discount rate.

3323 The capitalisation of maintainable earnings valuation was $414.7 million and the discounted cash flow valuation was $479.7 million.

Potter relied on the forecasts contained in Cargill's deal model "as a proxy for the assumptions that would have been made by a hypothetical market participant".[3324] He did so on the basis that he considered it to have been professionally prepared after a period of "extensive due diligence", that it represented an informed assessment of the prospects of Joe White and that it was reasonable to assume that a hypothetical acquirer of Joe White would have undertaken a similar analysis. Accordingly, he considered the Cargill deal model an appropriate starting point in assessing market value.

3972 Thus, in the discounted cash flow method Potter adopted Cargill's deal model as a proxy for the cash flow. Potter commented that the strength of the discounted cash flow method was its transparency, incorporating market estimates of risk and return and enabling alternative views of key input to be readily identified. In contrast, Potter described the capitalisation of future maintainable earnings method as a relatively simple, shorthand version of the discounted cash flow method. Potter explained that this method involved assessing the future expected Unadjusted Earnings,[3325] and then multiplying that figure by a multiple derived from comparable "stockmarket listed companies" (to ascertain a trading multiple) and transactions for the sale of comparable companies (to ascertain a transaction multiple). The experts agreed that the capitalisation of maintainable earnings approach was a method commonly used where there was a profitable operating history and sufficient consistency in earnings to form a view as to sustainable earnings. They also agreed this method was commonly used for small to medium enterprise valuations where prospective financial information, that would support a discounted cash flow valuation, was not available.

3973 Essentially, Potter also adopted Cargill's base case discount rate.[3326] He stated that

---

3324 Based on the Cargill deal model, Potter calculated a cash flow forecast for a period of 20 years, followed by the calculation of a terminal value. Potter's terminal multiple was calculated by reference to his discount rate. But as the Cargill deal model did not include a terminal growth rate, Potter chose to adopt a terminal growth rate of zero percent.

3325 That is, earnings before interest, tax, depreciation and amortisation.

3326 The Cargill base case discount rate was 10 percent. The Cargill deal model was expressed in United States dollars. Potter explained that 10.97 percent was an implied rate to arrive at the United States

Cargill Australia's claim was based on what it paid and therefore he considered it was necessary to have regard to any assumptions in Cargill's deal model that were more optimistic than those in the Information Memorandum or Goldman Sachs' valuation. Notwithstanding reservations he expressed about Cargill's discount rate being excessive,[3327] he concluded that it was reasonable to assume that a hypothetical purchaser would have used the same discount rate as Cargill's base case, and would have made a similar allowance for risk as Cargill did.[3328] Potter explained that he arrived at a higher valuation than Cargill's deal model because he adopted a mid-year discount period assumption, rather than year-end, and adjusted for Australian corporate tax rates and excluded transaction costs, which were included in Cargill's deal model.[3329] For the capitalisation of maintainable earnings method Potter assessed the future expected Unadjusted Earnings,[3330] then applied a multiple of 11.3. The Unadjusted Earnings were calculated by reference to the average earnings for the 2010 to 2012 financial years and the expected earnings for the 2014 financial year.[3331] Potter decided to take the average of the 2010 to 2012 financial years, being $36.7 million, as his figure for future maintainable earnings.

3974 In the second stage of his analysis, Potter assessed the effect of the Viterra Practices on the value of Joe White in 8 scenarios.[3332] In order to calculate the net present value of

---

dollar valuation that Cargill applied, but he chose to use 10 percent to the Australian dollar cash flows in any event. The issue was a little confusing as Potter stated in his report that he used the discount rate of 10.97 percent, which was the percentage figure referred to in each of the appendices that made up appendix 5 to his report. However, both in his evidence in chief and under cross-examination he gave evidence that the rate of 10 percent had been used for the Australian dollar cash flows. He stated that his reference to 10.97 percent in his first report was inaccurate.

3327 Potter expressed the view that each of the discount rates of 8, 10 and 12 percent in the Cargill deal model for best case, base case and downside case respectively appeared to be excessive. Potter calculated a weighted average cost of capital (which he described as a "[m]arket based discount rate based on United States integers") as at 31 October 2013 at 6.31 percent, prior to an allowance for specific risk.

3328 This conclusion was expressed despite the fact that the precise amount Cargill had allowed for specific risk was not apparent.

3329 Potter stated that the mid-year assumption was standard valuation practice, on the assumption that cash flows were received on average evenly across the year and "to reflect this the discount period [was] assumed to be 0.5 less than the forecast period"; with the consequence that the discount period for the first year was 0.5, and 1.5 for the second year, 2.5 for the third year, and so on.

3330 Being earnings before interest, tax, depreciation and amortisation.

3331 No use was made of the 2013 financial year for which Unadjusted Earnings were expected to decline to $25.1 million for earnings before interest, tax, depreciation and amortisation.

3332 See pars 4006-4008 below.

the effect of the Viterra Practices on Joe White, Potter undertook the following calculation:

(1) Determined the value of Joe White without making any allowance for the Viterra Practices by applying a market based discount rate (said by Potter to be 8.75 percent) to the expected cash flows based on Cargill's deal model.[3333]

(2) Determined the value of Joe White by making adjustments for the effect of the Viterra Practices to the expected cash flows and applying a market based discount rate to the expected cash flows.[3334]

(3) Calculated the effect of the Viterra Practice(s) as the difference between the 2 amounts.[3335]

3975 Potter used a discount rate of 8.75 percent in both the first and second step of this calculation. He repeated the calculation in relation to each of the scenarios, as the adjustments to the cash flows for the effect of the Viterra Practices differed in each.

3976 To arrive at his final estimate of the true value, Potter deducted the effect of the Viterra Practices from his estimate of the market value. This "market value" was calculated by using the average of the discounted cash flow and the capitalisation of

---

3333 The result was an unadjusted value of $621.9 million, though this figure was not referred to anywhere in the body of Potter's first report and obviously bore no resemblance to the figure at which Joe White was sold after a market sale. When the Viterra Parties' senior counsel was asked for a term to describe this figure other than unadjusted value, he described it as a notional value using a different discount rate. In short, there was no attempt to describe it as representing market value or true value, nor could there have been.

3334 The results were different in each scenario and varied from a value of $621.9 million to a value of initially $559.5 million, the latter figure subsequently being adjusted down to $534.7 million.

3335 The results were different in each scenario and varied from an amount of nil to an amount of initially $62.4 million which was later adjusted up to $87.2 million as at 4 August 2013 and $86.9 as at 31 October 2013. This was explained by Potter by reference to the difference between Klein's position and his position with respect to assumptions about the effect of the Viterra Practices on sales volumes and prices. Potter's evidence was that he became aware of some additional evidence which might have meant that he underestimated the level of risk or uncertainty that a hypothetical purchaser would place on sales. In order that the effect of the differences in these assumptions was apparent, he did recalculations using Klein's assumptions regarding the effect on sales volumes and prices. (Potter's evidence by way of his opening statement to the court seemed to suggest an increase from $62.4 million to $87.2 million, but his calculations attached to the final joint report indicated that the figure for 31 October 2013 was $86.9 million.)

maintainable earnings valuations as described above.[3336] In his final scenario, assuming the existence of all the Viterra Practices, Potter ultimately estimated the true value as $360 million.[3337]

X.73.3.2.1 The Viterra Parties' submissions on Potter's approach in his first report

3977 In relation to Potter's first valuation, the Viterra Parties submitted that Cargill's deal model was the best available proxy for the cash flow that a hypothetical purchaser could be expected to develop and so was appropriate for Potter's discounted cash flow valuation.

3978 Further, in relation to the capitalisation of maintainable earnings estimate, the Viterra Parties submitted that to determine the multiple Potter undertook a global study of the grain industry transactions for comparable companies where synergies were reported to be a significant driver of value and the process for publicly traded shares of comparable companies. Furthermore, the Viterra Parties submitted that the multiple was reliable because it was subsequently confirmed by the multiple achieved when Cargill resold its global malt business, as was cited in the buyer's letter of offer.[3338]

3979 The Viterra Parties submitted that it was appropriate to apply a different discount rate to the calculation of the value absent the Viterra Practices and for the effect of the Viterra Practices to avoid a mismatch of cash flows and the discount rate applied to those cash flows.[3339]

3980 The Viterra Parties submitted that Potter's methodology should be preferred because he was the only expert who properly engaged with the question of whether and when it was appropriate to use hindsight and the only expert to conduct proper analysis of

---

3336 See par 3971 above.

3337 This was lower than the estimate in his first report due to his adjustment of the amount of the effect of the Viterra Practices: see fn 3335 above.

3338 The multiple used in the resale was 11.1. In my view, the sale of a global business using such a multiple in 2019 was of little relevance to determining the appropriate multiple for Joe White in 2013 impacted by the Viterra Practices and the necessary uncertainty that attached to the maintainability of the earnings.

3339 See pars 4226-4228 below.

customer data post-Acquisition. The Viterra Parties further submitted that Potter's valuation was corroborated by subsequent evidence including Cargill's commitment review from 2014,[3340] and the subsequent sale of Cargill's global malt business.[3341]

X.73.3.2.2 The Cargill Parties' submissions on Potter's approach

3981 In relation to Potter's discounted cash flow valuation, the Cargill Parties submitted that it was improper to use Cargill as a proxy for the hypothetical purchaser because Cargill's bid price reflected Cargill's unique synergies and the next highest bidder, with far fewer synergies, bid significantly less. Further, the Cargill Parties submitted that Potter accepted that he did not have an understanding of the other bidders' businesses, did not assess their synergies and that if other market participants did not have grain and oilseeds businesses then that synergy would need to be excluded.[3342] The Cargill Parties submitted that it was untenable for Potter to decline to reduce his valuation to reflect Cargill's unique synergies, which the Cargill Parties contended were worth $107 million. Finally, the Cargill Parties submitted that it was inappropriate that Potter adjusted Cargill's deal model to arrive at a higher valuation than that reached by Cargill at the time; $479 million compared to $427 million.

3982 In relation to the capitalisation of maintainable earnings valuation, the Cargill Parties submitted that Potter used an inflated multiple and thus arrived at an inflated value.

3983 The Cargill Parties were critical of the fact that Potter did not provide any information about the adjustments he made to the value of Joe White to account for knowledge of the Viterra Practices, submitting that it was unsatisfactory that this could not be understood from his report on its face. The Cargill Parties rejected Potter's method for assessing the effect of the Viterra Practices by determining a sum for rectification on a number of bases. *First*, his valuation was not a valuation of Joe White and did not consider the wider impact of the Viterra Practices on business value, including on reputation and relationships with customers. *Secondly*, the Financial and Operational Information that formed the basis of Cargill's valuation was underpinned by the

3340 See pars 4268-4277 below in relation to this assessment in Potter's second report.
3341 See pars 1845-1846 above in relation to the sale of Cargill's global malting business.
3342 See par 4186(6) below.

Viterra Practices and a buyer could not utilise the commercial advantage and efficiencies provided by the Viterra Practices or change the fact that historically the Viterra Practices occurred. Thus the Cargill Parties submitted that rectification costs was an inappropriate methodology to value the impact of the Viterra Practices. *Thirdly*, the Cargill Parties argued that Potter's application of this methodology was flawed because he failed to reflect risks that he accepted were created by cessation of the Viterra Practices.

X.73.3.2.3 Other experts' responses to Potter's approach

3984 Klein considered Potter's methodology to be improper for 4 principal reasons:

(1) Inclusion of buyer-specific synergies.

(2) Reliance on Cargill's deal model resulting in an assumption that other market participants would have had identical expectations to Cargill.

(3) Use of cash flows relied on by Cargill in setting its bid prior to having awareness of the Viterra Practices.

(4) Use of the discount rate relied on by Cargill, not a market participant.[3343]

3985 Meredith criticised Potter's methodology on the basis that it in effect relied on 3 valuations of Joe White and that this was an unconventional and uncommon method of assessing the true value of a business. Meredith's view was that 1 valuation should have been performed using the expected cash flows a hypothetical purchaser would attribute and with a discount rate calculated from first principles rather than being "back-solved". Potter responded to this criticism; he agreed that the discount rate was "back-solved" but asserted that it was in effect the rate Cargill applied and represented the level of risk a market participant, being Cargill, applied to the cash flow assumptions. Meredith also criticised Potter's use of the cash flow projections in Cargill's deal model because they were prepared on the basis that the Viterra Practices continued and represented cash flows available to Cargill. Meredith's view was that valuation principles did not support assessing market value incorporating practices

[3343] These criticisms are addressed at pars 4226-4230, 4247-4249 below.

breaching customer contracts.

X.73.3.2.4 Analysis of Potter's approach

3986 Potter's first report used both the discounted cash flow and capitalised maintainable earnings approaches, both of which are conventional means by which to value a business. In principle, it was appropriate to use a combination of these methods in seeking to ascertain the true value of Joe White. However, on the facts of this case, the capitalised maintainable earnings approach was inapposite and not a proper basis upon which to value Joe White. In addition to serious reservations about the multiple chosen by Potter,[3344] in circumstances where the financial performance of the 2010 to 2013 financial years was substantially underpinned by the Viterra Practices, it was totally inappropriate to use the financial results for those years as a means of assessing the true value of Joe White as at 31 October 2013. Further, Joe White did not have consistency of earnings upon which to form a proper view as to Joe White's sustainable earnings.[3345] Furthermore, serious questions must be raised about the ability to ascertain an appropriate multiple (whether based on a trading multiple or a transaction multiple) when any comparable company would presumably involve a company involved in practices that could be compared to the Viterra Practices. There was no evidence to suggest any such comparable existed.

3987 The second report did not, in truth, purport to be a valuation of the true value of Joe White. It impermissibly used hindsight as its basis. No criticism of Potter is made in this regard as he was simply acting in accordance with his instructions. However, as he himself acknowledged, the "valuation" in the second report was flawed in its approach.

3988 As to his third report, in light of the view that I have formed about its lack of relevance or probative value,[3346] it is unnecessary to go through each of the components of this analysis.

X.73.4 Have the assumptions that were provided to, made by or otherwise relied upon

3344 See fn 3580 below.
3345 See par 3972 above.
3346 See pars 4306-4313 below.

by the experts been proven?

X.73.4.1 The determination of "true value"

3989 Klein was instructed to determine the "true or market value" of Joe White, assuming the Viterra Practices and Policies were fully disclosed and that Cargill would not have acquired Joe White. The Viterra Parties noted that Klein was not instructed to assess loss suffered by Cargill or the value of benefits received by Cargill as the owner of Joe White.

3990 The instruction to assess the value assuming the Viterra Practices and Policies were disclosed accorded with the legal principles. The reference to "true or market value" was appropriate because it was clear Klein understood these instructions to be directing him to ascertain the true value.[3347] Further, the assumption that Cargill would not have bid for Joe White (or having bid, would not have acquired Joe White) has been proven.[3348] Furthermore, there was no need for expert opinion regarding loss suffered by Cargill as the owner of Joe White because, applying the principles referred to above, in appropriate circumstances (which is a matter for the court) the loss may be calculated by the purchase price minus the true value.

3991 Similarly, Potter was instructed that 1 approach to assessing damages was to subtract the "true value" or "real value" of the business acquired from the price paid. This instruction itself was appropriate, as it required Potter to determine the "true value".

X.73.4.2 The extent and impact of the Viterra Practices and Policies

X.73.4.2.1 Klein's instructions

3992 The Viterra Parties submitted that Klein was not given instructions as to the malting industry, nor precisely what the Viterra Practices and Policies entailed. It was submitted this lack of instructions included not being provided with specifics of the Reporting Practice, the Varieties Practice or the Gibberellic Acid Practice, other than information regarding the alleged extent and impact of the Viterra Practices. Further, the Viterra Parties submitted that Klein's instructions and analyses were inadequate, not based on actual evidence and supplemented by Klein's own assumptions and

3347 See pars 3953-3954 above.

3348 See par 3394 above.

conclusions which were inconsistent with evidence given at trial.

3993 The Viterra Parties submitted that Klein was not given instructions in relation to similar practices alleged to have been engaged in commonly by other participants in the industry (being the Alleged Industry Practices).[3349] Further, the Viterra Parties noted Klein's language when referring to the Viterra Practices:

(1) "longstanding, intentional practice of committing large-scale deception upon its customers and a longstanding practice of failing to perform its contractual obligations".

(2) "company that [authorises] the unethical and widespread practice of falsely 'passing off' goods as conforming to customer specifications".

(3) "in conjunction with a company systematically concealing that products intended for human consumption did not meet specifications".

3994 The Viterra Parties' submissions in relation to Klein's instructions and analysis are dealt with in relation to each of the assumptions below. In relation to the submissions regarding the language used by Klein, although such language does not mirror precisely the actual findings in this case, the evidence in relation to the Viterra Practices was entirely consistent with these characterisations. As the matters set out above (including in issue 10) demonstrate, the Viterra Practices were longstanding, intentional, unethical, involved deception of Joe White's customers and breaches of contract, and were committed to such a significant level as to underpin the operational and financial performance of the Joe White Business.

X.73.4.2.2 Klein's instructions regarding the Reporting Practice and the Varieties Practice

3995 Klein was given the following information with respect to the Reporting Practice and the Varieties Practice in relation to malt produced by Joe White during the period from January 2010 to 31 October 2013:

3349 But see issue 13 above.

(1) Approximately 90 percent of all Certificates of Analysis that Joe White provided to its customers had at least 1 parameter for that malt shipment that was recorded as out of specification in testing results but reported in the Certificate of Analysis sent to the customer as within specifications.

(2) Approximately 90 percent of the total tonnes of malt orders shipped to customers had at least 1 parameter for that malt shipment recorded as out of specification in testing results but reported in the Certificate of Analysis sent to the customer as within specifications.

(3) More than 70 percent of the orders from customers that required specific barley varieties to be used in their malt in contracts or written communications and for which a Certificate of Analysis was issued to the customer were not correct in that the variety actually used in the blend was not that specified by the customer and was not that reported in the Certificate of Analysis issued to the customer.

3996 To inform his analysis, Klein relied on the assumptions above. Klein explained that he expected, on or around the date of Completion, that hypothetical purchasers would have performed similar analyses to those performed by Cargill, consequently revising their perceptions about the reliability of Joe White's historical financial statements.[3350]

3997 The Cargill Parties submitted that the figures Klein used were not materially different to, and were more conservative than, the figures arrived at by Ryan.

3998 The Viterra Parties noted that the particulars on which Klein's instructions were based were subsequently withdrawn.[3351] Further, the Viterra Parties submitted that even if the particulars were proven, the analyses undertaken by Klein identified non-conformance in situations where, on the evidence, there was conformance.

3350 Klein explained under cross-examination that nowhere did he state the historical financial statements were incorrect, but rather was indicating in this part of his report that there was a basis for a hypothetical market participant to conclude that they were unreliable.

3351 This was as a result of Ryan being instructed to use data from a different source: see par 2316 above.

Furthermore, the Viterra Parties submitted that evidence at trial did not establish that other bidders would have had the ability to perform such analyses, nor did it establish that they would have had concerns arising from those types of analyses. The Viterra Parties submitted that whilst Klein considered that hypothetical purchasers would revise their perceptions about the reliability of Joe White's historical financial statements, under cross-examination he could not identify any part of a financial statement that was wrong and he failed to point to any inaccuracies.

3999 To determine whether the assumptions relied upon by Klein were established, it is necessary to consider the evidence given by Ryan.[3352] Ryan's Parameters Analysis established that 98.88 percent of all Certificates of Analysis[3353] that Joe White provided to its customers had at least 1 parameter for that malt shipment that was recorded as out of specification in testing results but reported in the Certificate of Analysis sent to the customer as within specifications, which amounted to 99.16 percent of tonnes of malt sold.[3354] Ryan's conclusions demonstrated higher levels of non-compliance than Klein's assumptions of 90 percent of both Certificates of Analysis and tonnes of malt sold. Therefore, Klein relied on conservative estimates.

4000 Further, Ryan's Barley Analysis established that 77.58 percent of orders,[3355] with at least 1 barley variety used in the blend and at least 1 customer-required variety, were orders where not all the varieties used in the blend were the customer required varieties.[3356] Therefore Klein's assumption that more than 70 percent of orders from customers contained non-conforming malt was justified, albeit conservative, compared to the 77.58 percent established.

4001 It was immaterial that the particulars upon which Klein relied were withdrawn, as Ryan's analyses as ultimately put before the court provided a sound basis for the

---

3352 See annexure D to these reasons.

3353 That is, of the 4,359 Certificates of Analysis the subject of the Parameters Analysis.

3354 See annexure D, facts 1-2. Also see par 2411 above regarding the Parameters Analysis. Further, it was appropriate for Klein to not rely on the Deviation Analysis: see pars 2410-2412 above.

3355 That is, the unique orders.

3356 See annexure D to these reasons, fact 11. Also see par 2537 above regarding the Barley Analysis.

assumptions that Klein relied upon.

4002 Further, on the basis that a hypothetical purchaser would not have known of the Viterra Practices prior to any disclosure as part of the sale process,[3357] it was reasonable to assume that, upon learning of the Viterra Practices and before deciding whether to acquire Joe White, a hypothetical purchaser would have reconsidered the reliability of the financial statements and used information available at the time to assess the extent to which non-conformance had occurred, together with the consequential effect that might have had upon the assumptions previously made in valuing Joe White. Furthermore, it was reasonable to assume that, if information had not been available, a hypothetical purchaser would have requested information about the extent of the Viterra Practices as part of its due diligence in order to conduct similar analyses to the analyses undertaken, including because of the additional uncertainty regarding the reliability of the financial statements and any forecasts based upon them. Moreover, it was reasonable to assume that based on the data that would have been made available,[3358] a hypothetical purchaser would have arrived at the same or even less conservative conclusions than Klein given such high levels of non-conformance.[3359] Therefore, Klein's analyses of the particulars were underpinned by assumptions that were established.

4003 As to the remainder of the Viterra Parties' submissions on this point, it was not clear why a hypothetical potential bidder would have had any inability to perform the relevant analyses or some form of analyses or enquiries to understand the nature and extent of the issues. This was a "Wall Street" sale, which could be expected to attract sophisticated prospective purchasers. Further, it was highly likely, and I so find, that such a person would have had concerns arising from those types of analyses or enquiries. Furthermore, it was unnecessary for there to be evidence from Klein identifying parts of the historical financial statements that were wrong. It was sufficient to justify Klein's position that Klein considered, as would be expected, that

---

3357 See par 2792 above.

3358 The data was available from Joe White's and Viterra's existing systems.

3359 See Annexure D to these reasons.

hypothetical purchasers would revise their perceptions about the reliability of Joe White's historical financial statements as a means of ascertaining a reliable valuation of Joe White. In any event, the effect of the findings in issue 10 above is that it has been established that the historical financial statements were only accurate to the extent that they were the result of operations being conducted in accordance with the Viterra Practices and not otherwise.

X.73.4.2.3 Klein's instructions regarding the Gibberellic Acid Practice

4004 Klein was given the following instructions (each of which has been established, or relevantly established, for the reasons set out immediately under each assumption) with respect to gibberellic acid and its use by Joe White prior to the Acquisition:

(1) Some of Joe White's customers had terms of their contracts which related to the use of gibberellic acid in the production of malt, which included:

(i) Sapporo (Marubeni Corporation) whose contracts, from time to time, provided that barley used for commodity was to meet Japanese regulations of agricultural chemical residues of barley.

(ii) Sumitomo (on behalf of Asahi) whose contracts, from time to time, requested that either gibberellic acid not be used in the malting process and/or that agrochemicals should be below Japanese maximum residue level.

(iii) SAB Miller whose contracts, from time to time, did not permit the use of gibberellic acid.

(iv) Asia Pacific Breweries and its subsidiaries whose contracts, from time to time, did not permit the use of gibberellic acid.

It has been established that up to 31 October 2013 Sapporo,[3360] Asahi, SAB Miller and Asia Pacific Breweries prohibited the use of gibberellic

[3360] See pars 1224, 1564, 2552 above.

acid.[3361]

(2) Gibberellic acid for malting was not allowed in Japan as it is a food additive.

This broad proposition has not been established,[3362] but relevantly the evidence was that each of Joe White's customers based in Japan prohibited the use of exogenous gibberellic acid.[3363]

(3) Joe White used gibberellic acid to produce malt from time to time including in respect of some customers whose contract did not permit it.

This assumption has been established.[3364]

(4) Joe White did not record all occasions where gibberellic acid was used in the production of malt.

This assumption has been established.[3365]

(5) With the use of gibberellic acid, Joe White was able to produce malt taking only 4 days of germination, compared to 5 days of germination if gibberellic acid was not used, which increased production by about 16,350 tonnes per year.

This has been established.[3366]

(6) Joe White supplied approximately 70 kilotonnes of malt each year that

---

3361 See pars 41, 1224, 1564, 2546 above.

3362 The Cargill Parties referred to the translation of Articles 10 and 11 of the Food Sanitation Act (Japan) Act No 233 of 1947. However, these articles did not refer to gibberellic acid specifically and referred to exclusions (which included certain additives) and exceptions, as well as criteria or standards that might be established and used in producing food. Beyond referring to this statutory position, there was no evidence to establish the status of gibberellic acid (which is a naturally occurring substance). In the absence of any evidence on the point, it was not possible to make any finding about Japanese law and its regulatory impact on the use of exogenous gibberellic acid in malt.

3363 See pars 41, 1224, 2546, 2552 above.

3364 See par 2544 above.

3365 See par 2556 above.

3366 See par 1703 above. There was a slight variance in figures given for this issue, but it was insignificant.

was produced using gibberellic acid when it was prohibited.

This has been established.[3367]

(7) Joe White estimated that moving from 4 day to 5 day malting would increase costs by $1.5 per tonne, whereas Cargill estimated it to be $5 per tonne.

This has been established.[3368]

X.73.4.2.4 Potter's instructions

4005 In contrast to the approach taken by the Cargill Parties in relation to Klein's reports,[3369] not a great deal of focus was put on whether Potter's instructions in relation to the Viterra Practices were established. Although not all the assumptions made by Potter were readily apparent, largely they reflected the allegations made by Cargill Australia in the Statement of Claim.

4006 Potter was instructed to assess the effect of the Viterra Practices in 8 scenarios, adopting a different combination of assumptions in each scenario. The assumptions were:

(1) No adjustments were required to be made to any pre-Acquisition forecasts of Joe White's post-Acquisition financial performance and results as a consequence of any of the Viterra Practices.

(2) Cargill Australia's changes to the Viterra Practices relating to the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice were an independent, extrinsic or supervening cause of any decline in the value of Joe White post-Acquisition and were not to be taken into account in assessing the true value at the assessment date.

4007 In the first scenario Potter was instructed to adopt the above assumptions in relation

---

3367 See, for example, par 1467 above, which evidence related only to Asia Pacific Breweries (and accordingly the tonnage was likely to have been considerably more).

3368 See pars 1281, 1419, 1421 above.

3369 The Cargill Parties prepared a table of the relevant assumptions, and referred to the evidence they relied upon in seeking to demonstrate that the assumption had been established.

to all aspects of the Viterra Practices, which Potter stated resulted in an estimated reduction in market value of nil. In the following scenarios he was instructed to adopt the assumptions in relation to combinations of 1 or more aspects of the Viterra Practices so the adjustments incrementally increased as the greater impact was allowed for.[3370] In the final scenario he adopted none of the above assumptions, thereby assuming that the Viterra Practices and each of them had an adverse effect on the market value which was not extrinsic when calculating the true value of Joe White.

4008 Joe White's financial and operational performance for the financial year 2010 to part of the financial year 2013 was substantially underpinned by the Viterra Practices.[3371] Accordingly, a valuation that proceeded on the assumption that no adjustment to any pre-Acquisition forecasts of Joe White's post-Acquisition financial performance and results was required as a result of the Viterra Practices would be inapt to the facts as found. Further, although the logic of Potter being instructed to make assumptions in each of the scenarios he assessed was perfectly sound in the absence of findings by the court, in light of the findings actually made it is only necessary for the final scenario be considered. In relation to the final scenario, he estimated a reduction of market value of either $86.9 million or $87.2 million.[3372]

X.73.4.3 Email from Viers dated 28 October 2013

4009 Klein relied upon estimates contained in an email from Viers to Eden and Jewison dated 28 October 2013,[3373] as a basis for various assumptions.[3374]

4010 The Viterra Parties submitted that, regardless of the issues relating to the general reliability of the estimates contained in the email, Viers' estimates were made, according to Cargill, without knowledge of the full extent of the Viterra Practices. It was submitted that if those estimates were to be considered relevant, then the court should accept that Cargill had all the information required to estimate the impact of

---

3370 See par 3974 above.

3371 See issue 10 above.

3372 This assumed capital expenditure of $30 million and was an adjustment to his first report as he subsequently became aware of additional evidence of lost sales resulting in him amending his valuation of the effect of the Viterra Practices, in the final scenario, from $62.4 million to $87.2 million: see fn 3335 above.

3373 See pars 1418-1435 above.

3374 See pars 4071, 4100, 4120, 4141 below.

the Viterra Practices and Policies prior to Acquisition to make an informed decision about whether to complete the transaction.

4011 It was accepted in October 2013 by the relevant Cargill employees that the estimates contained in the 28 October 2013 email were made without knowledge of the full extent of the Viterra Practices. It was for that very reason they were not referred to in communications with the Viterra Parties.[3375] Accordingly, regardless of Klein's instructions or any assumptions he may have made based on this email, there was no proper basis to conclude that Cargill had all the information it required in October 2013 to make any properly informed assessment of the impact of the Viterra Practices.

4012 Therefore it must follow that Viers' calculations at that time were not a reliable proxy for the assumptions that a hypothetical purchaser would have made with full knowledge of the Viterra Practices. Rather, they were relevant information about the views of a purchaser with the information that was available to Cargill at that time. Thus, references to estimates within the email would only be appropriate with the qualification that such estimates were made in the absence of full knowledge of the extent of the Viterra Practices. The significance of this is discussed below.

X.73.4.4 Information available to a hypothetical purchaser

4013 Klein acknowledged that a hypothetical purchaser would have knowledge of the Viterra Policies but not information about the numerical impact of such policies, and that quantification of the impact would require difficult projections.

4014 The Viterra Parties submitted that Klein made numerous assumptions about what hypothetical bidders would have known and how they would have dealt with the situation (and what they could and would have forecasted), despite not having any experience in the malting industry and apparently not seeking any opinions from the industry.

4015 Notwithstanding the fact that Klein was not a malt expert, as an expert in valuing businesses he was tasked with assessing the true value of Joe White in light of the

---

3375 See par 1425 above.

existence of the Viterra Practices. The task before Klein and the other experts involved using information available, much of which was provided by highly qualified and experienced people in the malting industry, to come to a valuation. The extent to which any of Klein's assumptions were inconsistent with the "reality" of a hypothetical scenario, or might otherwise have been unreasonable, will be considered in the sub-issues below where relevant.

X.73.4.5 Disclosure of the Viterra Practices and Policies to customers

4016 Klein was instructed to assume full disclosure of the Viterra Practices and Policies to customers and noted that he had made this assumption. Klein stated that a reasonable hypothetical purchaser who became aware of the Viterra Practices and Policies would have told their customers upon acquiring the Joe White Business.

4017 The Viterra Parties submitted that Klein's assumption that a hypothetical purchaser would have disclosed the Viterra Practices and Policies to customers had not been proven and further Cargill had not disclosed them to customers and therefore this was contrary to the actual facts.

4018 There was no doubt that, for a time after Completion and the immediate cessation of the Viterra Practices, Cargill decided at that point in time not to disclose to Joe White's customers what had happened in the past regarding the existence and implementation of the Viterra Practices. However, commencing shortly after Completion and then over time, derogations were sought, together with permissions to use different barley varieties or gibberellic acid where previously prohibited. Accordingly, although there was no specific communication to customers providing all the details of the Viterra Practices, the major overseas customers generally became aware that Cargill was not conducting the Joe White Business in material respects as it had been previously conducted.[3376] However, this fact alone was of little moment. More significantly, the cessation of the Viterra Practices coupled with having to communicate with customers about the need for derogations or, with respect to some customers changes in production methods concerning the use of required barley varieties or the non-use or

3376 See, for example, pars 1666, 1673-1693, 1706-1713, 1718-1720, 1725-1726, 1728-1744 above.

ongoing use (as the case may be) of prohibited gibberellic acid, gave rise to significant disruption in Joe White's operations and performance. For completeness and in any event, the evidence indicated that over time some customers became aware of what had occurred previously.[3377]

X.73.4.6 Cessation of the Viterra Practices and Policies

4019 The Viterra Parties submitted that Klein assumed that upon Acquisition, a hypothetical purchaser would not continue with any aspect of the Viterra Practices and Policies, nor attribute any value to Joe White to the extent that such value was referrable to the Viterra Practices and Policies. It was submitted that Klein had not received instructions to do so and evidence at trial indicated that it was unlikely to be the case, as most commercial maltsters engaged in similar practices.

4020 In circumstances where the Alleged Industry Practices have not been established,[3378] there can be no basis for the submission that most commercial maltsters would have continued to operate the Joe White Business adopting practices similar to the Viterra Practices. Both Klein and Potter agreed, by reference to established valuation principles, that only legally permissible uses were to be taken into account. In light of the fact that each of the Viterra Practices involved conduct concerned with deliberately misleading Joe White's customers, it must follow that the hypothetical purchaser acting in accordance with established valuation principles would have made the assumption that it would have immediately desisted with the Viterra Practices upon taking ownership of Joe White.

X.73.4.7 Risk and reputation

4021 Klein assumed that the Acquisition of Joe White posed an unquantifiable risk of harm to a strategic purchaser's reputation for integrity and reliability. Further, consistent with Cargill's evidence on what various witnesses said they would have done if they had been properly informed of the Viterra Practices before Completion,[3379] Klein concluded that such risks would have resulted in strategic purchasers withdrawing

3377 See pars 1666, 1708-1711 above.
3378 See issue 13 above.
3379 See issue 33 above.

from the bidding process altogether.[3380]

4022 The Viterra Parties submitted that Klein's assessment of an unquantifiable reputational risk was inconsistent with evidence of what practices industry participants engaged in and the lack of any evidence of actual reputational damage to Cargill after the Acquisition. It was submitted that the fact that Cargill had continued to operate under the name Joe White suggested that Cargill had not perceived reputational damage from an association with Joe White. Further, the Viterra Parties submitted that Klein did not even take into account all of the information that was known to Cargill in October 2013, and he did not ask for instructions as to whether Cargill had decided before 31 October 2013 to cease using the name.

4023 The Cargill Parties submitted that Klein was correct not to rely on evidence of actual reputational damage to Cargill after the Acquisition, as his task was to value the business using foresight and it was a matter for him, as a valuer, to decide whether he cross-checked the reasonableness or not on actuality. Nor, it was submitted, was it put to Klein that he did not take into account all of the information known to Cargill. Further, it was submitted that the Viterra Parties failed to put to Klein evidence of what practices industry participants engaged in.

4024 The reasonableness of Klein's assumptions regarding risk and the strategic bidder's involvement in the bidding process is considered below.[3381]

4025 Further, whether or not a hypothetical purchaser would have perceived some sort of reputational damage from association with Joe White was not contingent on whether or not Cargill did or would have changed Joe White's name. Cargill would not have bid on Joe White if it had been aware of the Viterra Practices, and as such, it was immaterial that Klein did not ask for instructions as to whether Cargill would have changed Joe White's name. Under cross-examination, Klein gave evidence a prospective purchaser would have to factor in evidence that reputational harm could arise from being aligned with a firm that had previously deceived customers, with the

3380 See par 4036 below.
3381 See pars 4054-4062 below.

risk that the affected customers might be lost in the future. Furthermore, as could be expected given the ongoing inability to produce malt in compliance with specifications, it was clear that Cargill did suffer reputational damage after the Acquisition.[3382] If this subsequent fact had been taken into account, it would have confirmed the appropriateness of the assumption that a hypothetical purchaser, with knowledge of the Viterra Practices, would have considered additional risks concerning reputational damage.

4026 In short, it was entirely reasonable to assume that, upon learning of the extent of the Viterra Practices, it was likely that a hypothetical purchaser would have perceived additional risks and the possibility of reputational damage.

X.73.4.8 Misstatements in financial statements

4027 The Viterra Parties submitted that Klein proceeded on an incorrect assumption that the financial statements of Joe White contained misstatements. Klein's assumptions regarding misstatements in Joe White's financial statements are considered below.[3383]

X.73.4.9 Additional factual assumptions

4028 In addition to disclosure of the Viterra Practices and Policies, Klein was instructed to make the following factual assumptions:

(1) The term "Total Barley Costs," as recorded in Cargill's financial accounts, included freight and logistics costs, in addition to the direct materials cost of acquiring barley.

Klein was taken to this specific assumption during cross-examination and was not challenged about it. Further, in Potter's first report, he specifically referred to this assumption (made by both Klein and Meredith) and took no exception to it. Finally, the Viterra Parties made specific challenges to both Klein and Meredith's approach to barley costs in their closing written submissions,[3384] but made no criticism of this

3382 See, for example, pars 1708-1713 above.
3383 See pars 4205, 4234, 4242 below.
3384 See pars 4099-4101 below.

particular factual assumption. As no issue was taken on this point, it is inferred that there was no controversy about this assumption. In any event, it would be expected that the total of the costs associated with barley would include freight and logistics.

(2) To produce 1 tonne of malt output, Joe White must utilize 1.2 tonnes of barley.

This was the effect of Jones' evidence, which was not challenged.

(3) When preparing its valuation dated 18 December 2014, Deloitte was not instructed to consider the impact of the Viterra Practices and Policies.

This was established.[3385]

(4) Instructions were provided in relation to the Joe White and Co-Operative Bulk dispute before Completion.

As there was ultimately no substantive issue between the parties on this matter,[3386] it suffices to say that the documents tendered at trial bear out the assumptions Klein was instructed to make about the history of the dispute up to Completion, as well as the subsequent payment by Cargill to settle the dispute.[3387]

(5) Following the Acquisition by Cargill, Joe White's barley costs increased from the prices paid before Acquisition due to, among others, 1 or more of the following factors:

(a) There were insufficient quantities of contractual varieties available in the market and so premiums had to be paid when purchasing the required varieties of barley.

(b) Costs of preserving the barley through the supply chain increased

3385 See fn 674 above.
3386 See issues 61-64 above.
3387 See further pars 4266-4267 below.

(that is, hiring and building additional separate storage to keep different varieties segregated).

(c) Additional transport and logistics costs associated with transporting barley around the country to the plants at which it was required were incurred.

The above factors were established.[3388]

4029 With respect to storage for the Joe White Business following the Acquisition, Klein was instructed:

(1) In order for Joe White to operate at capacity production levels and produce malt in accordance with Cargill's Blending and Certificate of Analysis procedure rather than the Viterra Practices and Policies, as at February 2014 it was calculated that an additional 15,500 to 18,500 tonnes of storage was required. To acquire such additional storage would cost approximately $30 million.

For the reasons discussed below, in substance this was established.[3389]

(2) As at the date of Klein's first report, being 21 February 2018, the Joe White Business had constructed 6,580 tonnes of additional storage at the following plants:

(a) Sydney an additional 3,880 tonnes of storage;

(b) Port Adelaide in stage 1 an additional 1,800 tonnes of storage; and

(c) Port Adelaide in stage 2 an additional 900 tonnes of storage.

(3) As at the date of Klein's instructions for his first report, the costs

---

3388 See, for example, pars 1574, 1785 above, regarding the unavailability of contractual barley varieties and the consequential purchasing premiums; par 1670-1671 and fn 1031 above, regarding the increased supply chain costs due to barley requirements; and pars 1574, 1725, 1784-1785 above regarding additional barley transport costs.

3389 See pars 4140-4162 below.

expended to construct the additional 6,580 tonnes storage was $11.4 million, incurred as follows:

(a) Sydney additional storage costs, approximately $5.1 million;

(b) Port Adelaide stage 1 additional storage costs, approximately $2.5 million; and

(c) Port Adelaide stage 2 additional storage costs, approximately $3.8 million.

In relation to (2) and (3), it has been established that additional storage was installed at a cost of the amounts alleged (even if all the storage was not related to malt storage, as opposed to barley storage).[3390] Although the additional tonnage of storage capacity available was not established, little could turn on this in circumstances where the production of Joe White never approached capacity after Completion and plainly the expenditure which occurred would have significantly increased storage capacity.[3391]

(4) Further to the additional storage constructed as set out above, during 2014 to the first half of 2016 Joe White incurred additional costs of $452,000 in renting additional storage capacity from Co-Operative Bulk at the Perth plant. From around mid-2016 Joe White entered into a new agreement with Co-Operative Bulk which provided for various grain and malt handling, cleaning and transport services and also provided for storage, including for Joe White to access additional storage at the Perth plant.

This was established.[3392]

3390 Contrary to the Viterra Parties' submission, it was of no moment that the document proving the overall cost in relation to stage 2 at Port Adelaide did not provide a breakdown of the costs. The business record tendered demonstrated on its face that the entirety of the costs related to additional storage.

3391 See pars 1826, 1844 above.

3392 See fn 1024, 1039 above.

(5) As the Joe White Business was not, at the date of Klein's instructions, operating at full production capacity, it had not yet been necessary to construct all of the additional storage identified as set out in subparagraph (2) above.

This has been established.[3393]

4030 There were also further assumptions relating to events after Completion.[3394] These assumptions appeared in a table provided to the court, which set out the relevant assumptions and the evidence relied upon to demonstrate each assumption was based on evidence adduced at trial.[3395] Given these matters related to events subsequent to Completion (being the date upon which true value was calculated), it suffices to say that I have been through each of those assumptions and find that each of them has been established on the evidence referred to (much of which appears in the findings of fact set out above).

X.73.4.10 Documents not in evidence

4031 The Viterra Parties correctly submitted that Klein's report relied on documents that were not in evidence. The Viterra Parties listed the following 3 particular documents that Klein relied on:

(1) A financial summary of Joe White.

(2) Fitzgerald's handwritten notes dated 29 October 2013.

(3) Rees' handwritten notes, which appear to have been prepared in late October 2013.

4032 Although strictly correct, part of this submission was without substance. The financial summary referred to in paragraph 4031(1) was at court book page 38090 (which the

---

3393 See pars 1826, 1844 above.

3394 These were the subject of instructions in a letter dated 4 October 2018 to Meredith from the Cargill Parties' solicitors.

3395 The table of assumptions consisted of 19 pages; the further assumptions and the corresponding evidence relied upon being from pages 8 to 19.

Viterra Parties highlighted was not tendered). It contained information that was in another document at court book 38099 entitled updated financial summary which was tendered and contained the same or substantially the same information for all of the financial years from November 2013 to October 2017.[3396] Further, the Cargill Parties submitted that whilst the documents in paragraphs 4031(2) and 4031(3) were not tendered, other evidence spoke to the same topics. When the issue was raised in closing submissions as to what documents precisely were being referred to (as only examples had been given), the Viterra Parties did not identify any particular document as being of significance in demonstrating an inability to prove an assumption of materiality. In short, the issue may be left on the basis that the real question for the court was whether the underlying facts have been established rather than whether any particular document was or was not tendered.

4033 For completeness it should be noted that, naturally, documents that were not tendered cannot be considered. Some instances where Klein did rely on documents that were not tendered and were material to his consideration are dealt with below.[3397]

X.73.5 What conclusions should be drawn in respect of the nature of the hypothetical purchaser?

4034 The experts agreed that the assessment of true value required a hypothetical transaction and a hypothetical purchaser. Further, they agreed that market value is determined based on hypothetical market participants, not the actual entities that in fact may have bid to acquire Joe White prior to learning of the Viterra Practices. The experts accepted the definition of market participants as: [3398]

> … the whole body of individuals, companies or other entities that are involved in actual transactions or who are contemplating entering into a transaction for a particular type of asset. The willingness to trade and any views attributed to market participants are typical of those of buyers and sellers, or prospective buyers and sellers active in a market on the valuation date, not to those of any

---

3396 See pars 1826, 1844 above.

3397 See pars 4067, 4120, 4134 below.

3398 The definitions cited and agreed upon by all the independent experts were contained in the *International Valuation Standards* issued by the International Valuation Standards Council (2013), Frameworks and Requirements, [18]: see fn 3314 above.

particular individual or entity.

4035 There were 2 types of bidders identified as potential market participants for Joe White; financial bidders and strategic bidders. Financial bidders are bidders that generally buy and sell companies and whose portfolios do not necessarily hold assets in the same industry. Further, financial bidders usually dispose of their investments in the intermediate term. Strategic bidders are bidders that hold assets in the same industry as the target company and focus on companies in that industry. Klein referred to relevant potential strategic bidders as agribusiness firms.

X.73.5.1 Klein's approach

4036 Klein concluded that upon learning of the Viterra Practices, the characteristics of hypothetical market participants would differ from the characteristics of the actual bidders in 2 respects:

(1) Strategic bidders, who had reputations to protect and conservative risk profiles, would withdraw from the bidding process altogether. Klein explained that this would be due to the potential risks stemming from an association with a company such as Joe White that engaged in deceptive practices, and had questionable internal controls and unethical management. Such risks could include potential litigation, time-consuming distractions and potential adverse publicity and reputational harm.

(2) Consistent with this position, Klein was instructed that Cargill would not have remained a bidder if it had known the true position. Similarly, Klein was of the view that closely situated strategic bidders would have shared Cargill's perspective and withdrawn from the bidding process.[3399]

4037 Klein therefore expected that the hypothetical market participants would consist of financial bidders, who were more risk-tolerant and had business models that focused

[3399] Klein was given instructions as to Cargill's position, but gave evidence he would have formed that view with respect to strategic bidders independently of his instructions.

on rehabilitating distressed companies. The financial bidders would operate Joe White on a standalone basis and accordingly not be subject to reputational harm in the agribusiness industry due to association with Joe White.

4038 Determining the correct hypothetical market participant had a material effect on Klein's calculation of the true value of Joe White. Klein considered that the true value was what financial bidders would pay, being $158.2 million. Alternatively, Klein considered that strategic bidders would pay between $178.2 million and $250.6 million, and concluded that the lowest value in that range was the proper assessment.[3400]

4039 Meredith did not utilise Klein's approach of distinguishing between strategic and financial bidders. On the contrary, in his approach to synergies, he implicitly accepted that strategic bidders would remain in the bidding process. That said, he did not consider Klein's approach was necessarily incorrect. While stating that he was unable to express a concluded view as to how a hypothetical purchaser would react to knowledge of the Viterra Practices,[3401] he said he did not consider the conclusion that other strategic bidders would have reacted the same way as Cargill and opted out of the bidding process to be unreasonable. However, Meredith also stated that it was highly likely that any hypothetical strategic purchaser would have been identified by Goldman Sachs, and that the hypothetical purchaser "may" have included some additional financial purchasers.

4040 Potter disagreed with Klein's distinction between financial bidders and strategic bidders.[3402]

X.73.5.1.1 The Cargill Parties' submissions

4041 The Cargill Parties submitted that the court should accept Klein's opinion that the appropriate hypothetical bidders were financial bidders, who would invest in Joe

---

3400 The lower value is based on a higher discount rate, representing an expectation of greater risk: see pars 4203-4251 below.

3401 He specifically said he could not form a view as to whether Co-Operative Bulk or Malteurop would have remained in the bidding process.

3402 See further pars 4049-4050 below.

White on a discrete basis rather than joining it with existing assets.

4042 In support of this, the Cargill Parties noted the following:

(1) Klein considered that the substantial reputational and financial risks posed by the Viterra Practices meant that the hypothetical market participants would consist solely of financial bidders.[3403]

(2) Throughout cross-examination, Klein consistently maintained his reasoning for his position that no strategic purchasers would bid on Joe White after learning of the Viterra Practices, based upon many years of experience and study, as well as consulting with strategic bidders.

(3) When it was put to Klein that the strategic bidders would be in a better position to extract value from Joe White and so bid more, Klein considered that both strategic bidders and financial bidders were likely to have stood in the same position on the core issue of whether customers would disappear, and both bidders would hire skilled consultants to run the business. Further, given the Joe White Business depended on 10 customers for around 90 percent of its sales (of which 3 of those represented nearly half of the sales), Klein's position was that a strategic bidder would not know any better than a financial bidder whether 1, 2 or 3, or even 10, of those customers might "disappear".

X.73.5.1.2 The Viterra Parties' submissions

4043 The Viterra Parties submitted that the court should find that the market participants included strategic bidders. It was submitted that strategic bidders who were already in the industry were more likely to want to have something that they could tack onto their existing businesses.

4044 The Viterra Parties submitted that in excluding strategic bidders, Klein assumed that no-one already in the malting business was bidding. The Viterra Parties submitted that Klein's conclusions were not credible given the number of businesses involved in

3403 See par 4021 above.

malting who had been interested in Joe White and Klein's lack of specialised knowledge of the malting industry.[3404]

4045 Further, the Viterra Parties submitted that Klein's language was speculative, for example, his reports contained the following phrasing:

(1) "[P]resumably, others similar to Cargill similarly would have withdrawn".

(2) "[I]t is reasonable to believe that Cargill, and other strategic buyers similarly situated to Cargill, would have withdrawn from the bidding process".

(3) "[L]arge companies with substantial business reputations to protect and conservative risk profiles likely would have withdrawn from the bidding process altogether".

4046 Furthermore, it was submitted that Klein's reasons for excluding strategic bidders were based upon the possible consequences for the acquirer's reputation, and it was submitted that there was no evidence of damage to Cargill's reputation post-Acquisition.[3405] Therefore, it was submitted that there was no basis to conclude that hypothetical strategic purchasers would have withdrawn from the bidding process out of concern for reputation.

4047 Moreover, the Viterra Parties submitted that in cross-examination Klein refused to accept the "flaw" in his approach. It was submitted that Klein's reasoning appeared to extend to assumptions that Joe White representatives had deceived bidders and upon discovering flaws, "most buyers" would withdraw from the bidding process. The Viterra Parties submitted that Klein's use of the words "most buyers" did not support his position that not a single strategic buyer would continue to participate in the bidding process.

3404 Although there were 9 bidders at the conclusion of Phase 1, there were only 3 bidders (all strategic) at the end of Phase 2: see pars 626, 945, 983 above.

3405 See par 4022 above.

4048 Finally, the Viterra Parties submitted that Klein accepted that someone in the malting business would be in a better position to form a judgment about the effect of the Viterra Practices than someone who was not. It was submitted that Klein also agreed that a strategic purchaser would be in a better position than a financial purchaser to ameliorate and perhaps eliminate the impact of the Viterra Practices. The Viterra Parties contended that such acknowledgements contradicted Klein's approach.

X.73.5.2 Potter's approach

4049 Potter relied on the assumptions set out in Cargill's deal model, as a proxy for the assumptions that would have been made by a hypothetical purchaser. He then considered the net present value of adjustments to those cash flows to adjust for the effect of the Viterra Practices after "rectifying capital expenditure". Potter noted that he considered these assumptions reasonable given the time that Cargill spent examining Joe White and preparing forecasts. Further, Potter considered that the Goldman Sachs valuation contained forecasts that combined its own analysis and the analysis of an industry participant (in this case, Cargill), stating that it was not clear that there would have been any difference in valuation outcome had Goldman Sachs prepared a valuation for any other hypothetical acquirer.[3406]

4050 As for Klein's views concerning strategic and financial bidders, Potter disagreed with the delineation. Potter suggested the exercise involved was not concerned with "idiosyncrasies" of particular purchasers, but rather the market value as assessed by all potential acquirers.

X.73.5.2.1 The Viterra Parties' submissions

4051 The Viterra Parties submitted that the court should find that Potter's adoption of the assumptions in Cargill's deal model was a reasonable approach in circumstances where Cargill had conducted an "extensive due diligence" and there was no evidence available of the valuation models of other bidders.

4052 Further the Viterra Parties submitted that the forecast cash flows that Potter used from

---

3406 Importantly, Potter noted the exception to this proposition was that there could be a difference to the extent that synergies available to Cargill were higher than those available to a hypothetical acquirer. This is addressed further below: see pars 4179-4180 below.

Cargill's deal model closely approximated those in the Goldman Sachs' valuation and, as Potter explained, it was not clear that there would have been any difference in valuation outcome had Goldman Sachs prepared a valuation for a different hypothetical acquirer, rather than for Cargill.

X.73.5.2.2 The Cargill Parties' submissions

4053 In addition to their submissions about the inappropriateness of using a particular participant, the Cargill Parties rejected Potter's approach of using Cargill as a proxy for the hypothetical bidder, in circumstances when it was submitted that Cargill would not have bid had it known about the Viterra Practices.

X.73.5.3 Analysis

X.73.5.3.1 Klein's approach

4054 On balance, Klein's conclusion that the hypothetical purchaser was confined to a set of financial bidders cannot be accepted. Based on both the evidence at trial of what actually occurred in 2013 and the expert evidence, I am not satisfied that the potential bidders would not include any strategic bidders. On the contrary, it appeared more likely that at least some of the potential strategic buyers would have remained part of the bidding process. There are a number of reasons for this.

4055 *First*, although Cargill's position on the point was unequivocal and clear, it did not follow that other strategic bidders would necessarily drop out of the bidding process, especially if the circumstances were that the bidder considered the Viterra Practices could be addressed and the business might be acquired at a reasonable price. The assets of the Joe White Business were undoubtedly valuable, and Joe White occupied a unique position in the market of a global industry.

4056 *Secondly*, the views expressed by Klein were equivocal. This observation is not made by way of criticism. Indeed, if Klein had completely ruled out any possibility of any strategic bidders remaining in the process, such a position would be difficult to accept. However, his evidence read as a whole clearly did leave open the real possibility that a strategic bidder would have remained.

4057 *Thirdly*, other than Cargill's position, there was no other evidence to support this

conclusion. Whilst Klein is undoubtedly suitably qualified to have formed the views that he did, he did not have any special knowledge of the malting industry and his reasoning was necessarily speculative.

4058 *Fourthly*, and further to the third point, neither of the other experts positively agreed with Klein. While it did not follow from this that Klein was wrong, on an uncertain issue such as this it is telling that Meredith, with the full benefit of Klein's opinions and reasoning, was not willing to unreservedly agree with him. While Meredith was able to state that Klein's opinions were reasonable, in substance his approach to identifying the hypothetical purchaser amounted to a rejection of Klein's position.

4059 *Fifthly*, while the reputation of a strategic bidder would be highly likely to be a factor when considering a strategic purchase, it appeared unlikely that all strategic bidders would consider that this aspect of the Viterra Practices could not be managed after any acquisition.

4060 In short, if the Viterra Practices were openly disclosed during the bidding process, it was unlikely that all strategic bidders would conclude the issue could not be dealt with satisfactorily by an adjustment to the amount of any bid and appropriate communications with customers upon acquisition, albeit acknowledging that the risks involved in the proposed transaction would necessarily be heightened.

4061 Accordingly, the better view is that the correct approach was to include hypothetical purchasers who were strategic bidders as it was more likely than not that some strategic bidders would have remained part of the bidding process.

4062 As such, Klein's alternative valuation of strategic bidders will be considered for the purposes of determining the true value of Joe White.

X.73.5.3.2 Potter's approach

4063 On the basis that strategic bidders would still be involved in the bidding process, it was appropriate for Potter to rely on Cargill's deal model as a proxy for assumptions developed by a hypothetical purchaser *as a starting point* for his valuation. Although there was merit in Klein's view that it was inappropriate to conclude that if Cargill

had withdrawn as a bidder, a company identical to Cargill would have emerged as a bidder (as Cargill would have withdrawn from the bidding process had they known of the Viterra Practices),[3407] it was reasonable for Potter to assume that a strategic hypothetical purchaser would have conducted its own due diligence and come to not dissimilar conclusions as those that were arrived at in Cargill's deal model, again *as a starting point* for its analysis. However, this starting point would not include valuation of all potential synergies and would necessarily be prior to consideration of the effects of the Viterra Practices and Policies on the overall approach to any valuation.[3408]

4064 To be clear, having determined that the hypothetical purchaser included strategic bidders, there was no real controversy about the appropriate *starting point*. The Viterra Parties submitted, consistent with Potter's evidence, that there was no material difference in the forecasts in the Goldman Sachs' valuation (that was adopted by Klein), and the Cargill deal model (that was adopted by Potter). Similarly, leaving aside the issue of financial bidders, the Cargill Parties submitted there were only 2 primary areas of difference between Klein and Potter.[3409]

X.73.6 Volumes of malt sold

4065 One input used to estimate future cash flow was the volume of malt sold.[3410]

X.73.6.1 Klein's approach

4066 Klein estimated a decrease in sales volumes on the basis that there would be a reduction in demand by customers. Klein considered that not only would customers increasingly reject non-conforming malt, there would also be a loss of customers, which would have a significant adverse effect on customer demand given that a small

---

3407 See issue 33 above.

3408 See sub-issue 10 below.

3409 These being synergies and the discount rate for the discounted cash flow approach. Initially there was another area of dispute, namely the treatment of transaction costs, but Klein accepted Potter's position on this issue and increased his assessment of the true value accordingly. This position reflected Potter's evidence that there were only 4 primary areas of disagreement between himself and Klein, which were the same 4 issues, being the type of hypothetical purchaser, synergies, the discount rate, and transaction and integration costs, see par 3961 above.

3410 The volume of malt sold was measured in metric tonnes and also was referred to in the evidence as kilotonnes. The volume sold could be constrained by limits in production capacity or customer demand.

number of customers accounted for a large proportion of sales.

4067 In assessing the impact of the Viterra Practices on volume, Klein assessed the volume of non-conforming historical sales,[3411] and considered how the hypothetical purchaser would assess the impact of the Viterra Practices on sales volume.[3412] This led Klein to conclude that the hypothetical purchaser would assume that Joe White had not been delivering malt of the high quality represented to customers and, due to issues of non-conformance with and unavailability of barley varieties, Joe White's sales volumes would decline approximately 40 kilotonnes per year for 3 years and then recover at the same rate over the following 3 years.[3413] Further, Klein estimated an ongoing annual reduction of 16.35 kilotonnes due to a 20 percent decrease in production capacity with respect to the relevant malt affected, caused by the cessation of use of gibberellic acid when not permitted. Klein relied upon a spreadsheet setting out the capacity of each Joe White plant, and calculated 16.35 kilotonnes based on 1 day of extra production for the orders of Asia Pacific Breweries, Asahi, Sapporo and SAB Miller.[3414] However, as the effect of this would only be fully suffered if capacity was constrained, the amount of 16.35 was only included in Klein's calculations from when the anticipated loss of sales ceased, namely the 2019 financial year.

3411 Using an analysis of 4 years of historical data which was filed as particulars of Cargill Australia's claim and then withdrawn, but for these purposes the details were not materially different to the agreed facts set out in annexure D to these reasons: see pars 3999-4000 above. Klein estimated that on average, per year since 2010, Joe White had sold approximately 312 kilotonnes of malt which were reported in Certificates of Analysis as complying with customer specifications but that in fact were out of specification and just under 239 kilotonnes of malt which did not conform to barley variety specifications. Further Klein considered, based on 3 documents, 2 of which were not tendered in evidence and 1 which was tendered, that at least 70 kilotonnes of malt was produced using gibberellic acid for customers who required it not to be used: see par 4031-4033 above. Notes from a meeting with Joe White executives on 23 October 2013, tendered in evidence and relied on by Klein, estimated 120 kilotonnes of malt was produced using gibberellic acid for customers: see par 1301 above.

3412 In assessing the impact of the Viterra Practices on volume of malt sold, Klein had regard to Cargill's estimates contained in an email from Viers to Eden and Jewison on 28 October 2013: see par 1419 above. Klein also had regard to his own assessment of the frequency at which Joe White supplied malt that did not conform to barley varieties specified, the impact on customers and expected time lags in the responses by customers.

3413 Klein assumed that reduction of volumes of malt sold due to customer rejections attributable to the use of out-of-specification barley would increase from 39.8 kilotonnes in financial year 2014 to 79.7 kilotonnes in financial year 2015 to 119.5 kilotonnes in financial year 2016 and then diminish in annual quantities of 39.8 kilotonnes for 3 years, and thereafter return to equilibrium.

3414 Compare par 1689 above.

4068 In addition to the adjustment in cash flows, Klein considered that hypothetical purchasers would identify additional risk regarding whether Joe White would achieve that estimated cash flow and therefore increased the discount rate to reflect the additional uncertainty.[3415]

X.73.6.1.1 The Cargill Parties' submissions

4069 The Cargill Parties submitted that Klein's approach in assessing the impact on sales and risk were closely related and should readily be accepted.

X.73.6.1.2 The Viterra Parties' submissions

4070 The Viterra Parties submitted that numerous assumptions Klein relied upon had not been established, including the assumptions (in same order as listed by the Viterra Parties) that:

(1) Hypothetical purchasers would have been able to determine that an average of 239 kilotonnes of malt sold per year had historically not conformed with barley variety specifications.

(2) The 3 year pattern of decline in actual sales was a reflection of customer and contract characteristics inherent in the Joe White Business at Acquisition.

(3) 50 percent of goods produced with non-conforming barley varieties would be rejected upon informing customers that non-conforming barley had been used.

(4) Sales volume losses due to rejections attributable to malt that did not comply with barley specification would increase over 3 years by 40 kilotonnes per year and then decrease at the same rate.

(5) An average of 312 kilotonnes of total malt shipped between financial year 2010 and 2013 did not conform with customer specifications, although reported test results stated that it was within specification.

3415 See par 4205 below.

(6) The transition to not using gibberellic acid in malt when not permitted would require more time and cause a loss of capacity of 16.35 kilotonnes from financial year 2019 onwards.

4071 Further, the Viterra Parties noted that Klein's assumption (4) above, was based on an estimate by Cargill, Inc in Viers' email to Eden and Jewison on 28 October 2013,[3416] and Klein acknowledged that he was not able to test the reliability of that estimate.

4072 Accordingly, the Viterra Parties submitted that Klein's approach to volumes of malt sold should be rejected.

X.73.6.2 Potter's approach

4073 Potter made no adjustments to sales volumes as a result of issues relating to the Reporting Practice or the Varieties Practice. With regard to barley variety issues, Potter considered that he had already accounted for additional expenditure to acquire the correct barley varieties and concluded that once the varieties were rectified there would not be any loss of sales.[3417] Further, in contrast to Klein, Potter considered it unreasonable to assume that where corrective costs were included, the effect on sales volumes would continue in perpetuity.[3418]

4074 Potter adopted Klein's calculations of the yearly impact of the Gibberellic Acid Practice on sales volumes. However, Potter considered that cessation of the Gibberellic Acid Practice would affect the sales volume in financial years 2014 and 2015 only, consisting of a reduction of 12.5 kilotonnes and 16.4 kilotonnes, respectively, due to storage capacity constraints. Potter actually factored these production capacity issues into his initial model for 2014 and 2015 because of his assumption that sales would not decline. Therefore, Potter assumed the extra day of germination required by refraining from the use gibberellic acid when prohibited

---

3416 As previously explained, these estimates were made absent knowledge of the full extent of the Viterra Practices. After these figures had been internally circulated, Viers considered that he was unable to specifically quantify an amount based on the limited information available and therefore the figures were not communicated with Viterra: see pars 1419-1424 above.

3417 In his first report, Potter adopted Klein's assumptions in part for increased expenditure to acquire conforming barley varieties: see par 4146 below.

3418 Noting that this was relevant to issues relating to the Gibberellic Acid Practice and production, as Klein had the effect on sales at nil from the end of the 2018 financial year.

would have had an impact on overall production capacity. Potter considered that after 2 years, storage capacity would be made available and sales volumes would return to normal.

4075 Subsequently, Potter was provided with evidence that there had been actual loss of sales volumes by Joe White,[3419] and presented an alternative analysis which adopted Klein's sales volume assumptions for non-compliance with barley varieties and other required specifications recorded in Certificates of Analysis, but made no further adjustments to his gibberellic acid assumptions.[3420] In utilising the alternate position on sales figures, Potter queried whether Cargill's approach to Certificates of Analysis and to dealing with Joe White's customers would be applied by a hypothetical purchaser, but accepted this consideration would only be relevant if a hindsight analysis were adopted.

4076 Under cross-examination, Potter stated that after he reviewed the further instructions of the other experts concerning sales, he accepted that there might have been some risk of losing sales, although he did not think there was a significant risk of losing customers. Further, as all risk in Potter's model was in the cash flows inserted into the numerator (and none was taken into account in the discount rate, used for the denominator), any risk needed to be addressed in the forecast cash flows if the risk was significant and measurable. However, Potter did not accept if a risk were not measurable, and therefore could not be incorporated into any adjustments to the forecast cash flows, that there then ought to be an adjustment to the denominator reflecting the appropriate discount rate. Problematically, this resulted in the relevant risk not being attended to at all in Potter's modelling.

4077 Also during his cross-examination he accepted that by making no adjustment to forecast sales, that approach made no adjustment for the risks associated with the

---

3419 Potter received new evidence regarding a decrease in volumes of malt sold. He noted that he could not comment on whether the sales losses were directly caused by the Viterra Practices. After noting in the second joint report he had not had the opportunity to read the relevant documents, he referred to the difficulties of relying on post-Acquisition events.

3420 See par 4067 above.

Viterra Practices which Potter himself identified. In relation to revenue items these included: losing customers, contracts or specific sales; a general decline in sales; not being able to maintain premium prices; and the flow-on consequences for the value of the inventory.[3421] As for risks associated with operational costs, Potter gave evidence that these were: increased cost of barley; increased cost of production for malt that was previously produced using gibberellic acid when prohibited; the cost of rectifying plant; potential staffing costs; and claims in relation to previous sales. Save for rectifying capital expenditure (which was expressly provided for in Potter's calculations), Potter was unable to state whether the adjustments he made to forecast sales to accord with Klein's position wholly incorporated all of the risks he had identified.

X.73.6.2.1 The Viterra Parties' submissions

4078 The Viterra Parties submitted that the court should accept Potter's initial approach, save that the anticipated reduction in capacity, as a result of not using gibberellic acid, should only continue up until August 2014, 1 year less than Potter estimated.[3422]

4079 The Viterra Parties submitted that Potter's assumption that volumes of malt sold would not be impacted as a result of barley variety non-compliance was reasonable given that the Cargill Parties had not adduced evidence of material loss of sales post-Acquisition due to non-conforming barley varieties. Further, it was submitted that any actual difficulties that Joe White did face in sourcing particular barley varieties were likely to have been caused by Cargill taking over the supply of barley.[3423]

3421 On this particular risk, Potter's evidence was that in preparing his first report he considered a hypothetical purchaser, upon learning of the Viterra Practices, would consider not being able to maintain premium prices as a risk, but would value that risk at zero.

3422 The Viterra Parties relied on Asia Pacific Breweries' approval of the use of gibberellic acid in August 2014, which was earlier than the end of financial year 2015, the date at which Potter predicted reduced capacity issues would be restored: see par 1786 above. The Cargill Parties submitted that it was an erroneous methodology to contend that there was an error in what Klein did because, in pointing to facts post-Acquisition, the position was in fact different: see par 4086(6) below.

3423 The Viterra Parties submitted that there were multiple explanations for the difficulties faced by Joe White in obtaining barley varieties post-Acquisition that were unrelated to the manner in which Joe White operated prior to the Acquisition, including changes to sourcing arrangements: see, for example, pars 1791, 1816 above. It was submitted that it could be inferred that until Scaife joined Joe White in November 2014, Cargill's grain and oilseeds supply chain had been focused on activities that generated profits for that business rather than procuring the correct barley for Joe White. In support of this, the

4080 With regard to Potter's assumption about reduced volumes of malt sold as a result of cessation of the Gibberellic Acid Practice, the Viterra Parties submitted that they were reasonable. However, the Viterra Parties argued that based on some of the relevant evidence, Potter's adjustments were likely to be too high. They contended that post-Acquisition "from August 2014 (once Heineken … had approved the use of gibberellic acid)" only a very small volume of malt was potentially affected by the Gibberellic Acid Practice.[3424]

4081 Lastly, the Viterra Parties submitted that Potter's assumption that volumes of malt sold would not be impacted due to Certificate of Analysis issues should be accepted. In relation to Potter's alternative assessment of volumes of malt sold, which adopted Klein's assumptions, it was submitted that this was incorrect as Klein's assumptions were flawed. This was put on the basis that, *first,* the post-Acquisition evidence did not demonstrate that there was a material loss of sales as a result of ceasing the Viterra Practices.[3425] *Secondly,* it was submitted that any loss in sales was likely to be a short-term result of switching to the theoretical blend reporting approach without sufficient capabilities to do so.

X.73.6.2.2 The Cargill Parties' submissions

4082 The Cargill Parties noted that Potter focused on analysing Klein's adjustments, rather than undertaking his own analysis. Further, they noted that during the trial Potter relied on his alternative calculations (incorporating Klein's assumptions with respect to loss of volume) as his primary opinion.

4083 In relation to the use of gibberellic acid from August 2014, the Cargill Parties submitted that it was not put to Klein that based on the evidence at trial his adjustment

---

Viterra Parties relied upon the synergies relevantly achieved in the first year after the Acquisition. These submissions must be rejected as they were contrary to the substantive evidence on the point: see, for example, pars 1747,-1754, 1775-1776, 1785, 1837 above.

3424 The Viterra Parties pointed to some of the evidence concerning the position from August 2014 (see par 1786 above and fn 3441 below) and submitted that Heineken had approved the use of gibberellic acid and further, by reference to their submissions as to the meaning of the Customer Review Spreadsheet, that the Sapporo Group was the only customer that was affected by the use of gibberellic acid, which totalled between 4,700 to 6,800 tonnes of malt affected each year.

3425 The Viterra Parties submitted that the impact of ceasing the Viterra Practices was limited, short term and numerous other factors contributed to declines that were unrelated to Joe White operations prior to the Acquisition.

related to the Gibberellic Acid Practice was likely to be too high. They further submitted that Klein's task was to value Joe White using foresight and it was a matter for him as a valuer whether or not he cross-checked reasonableness on actuality.

4084 The Cargill Parties submitted that Potter's first analysis should be rejected for 2 principal reasons:

(1) Potter provided his assessment of lost profits associated with reduced volume of malt sold, instead of the lost value of Joe White, which therefore was not a new valuation of Joe White.

(2) Potter failed to account for how a hypothetical purchaser's assessment of the future prospects and risk of Joe White would change, including having regard to the impact on customers.

X.73.6.3 Analysis

X.73.6.3.1 Klein's approach

4085 At a general level, it was not realistic for Potter to assume that a hypothetical purchaser preparing a valuation on a discounted cash flow method would proceed on the basis that the cessation of the Viterra Practices would result in no loss of sales. On the contrary, upon the assumption that customers would necessarily learn their specifications could not be met, there was every reason to anticipate that sales may be adversely affected. Further, the justification given by Klein for his approach in anticipating significant disruption to the Joe White Business was perfectly reasonable in the circumstances. Generally, the assumptions he made were appropriate.

4086 In response to the issues raised (again, in the same order as listed by the Viterra Parties):[3426]

(1) If hypothetical purchasers were to proceed with bidding many millions of dollars for Joe White they would have insisted on taking the time to perform an analysis of the volume of malt sales that contained non-

[3426] See par 4070 above.

conforming barley to gain a proper appreciation of how projections for future performance would be affected.[3427] Of course, based on the information available at trial of pale malt export sales, they would have been able to determine that at least 239 kilotonnes per year did not conform with barley variety specifications.[3428] Even if such a level of information were not available, a proper due diligence with a vendor responding fully and frankly to enquiries about the nature and extent of the Viterra Practices (which could readily have been done as the Sellers had complete and unfettered access to the Viterra Ltd employees engaged in Joe White's management and the relevant data) would have enabled hypothetical purchasers to analyse the likely prevalence and effect on the Joe White Business.

(2) Based on the nature of the Joe White Business, including the unavailability of some particular required barley varieties in the short to medium term and the long term nature of the malt supply contracts,[3429] it was reasonable to assume that hypothetical purchasers would have expected a 3 year pattern of decline in actual sales before recovering over the following 3 years.

(3) Hypothetical purchasers would have conducted the same or a similar analyses to the analysis undertaken by Klein,[3430] to predict the rate of rejection for non-conforming malt. Given the proportion of orders affected by the Viterra Practices, it was reasonable to assume that hypothetical purchasers would have predicted that 50 percent of malt

---

3427 This conclusion is consistent with Klein's evidence.

3428 See fn 3411 above. Also see pars 3998-4001 above.

3429 Noting that this latter consideration only affected some of Joe White's customers for a limited period of time as a number of contracts expired in the first year after the Acquisition and that this was to occur would have been information available to a hypothetical purchaser. That said, Potter obviously thought the long term contracts were significant in expressing the view that any decline in sales would have occurred over a 3 year period because of Joe White's practice of entering into long term supply contracts (though he subsequently questioned the relevance of the term of customer contracts).

3430 See fn 3412 above. Also see pars 3998-4001 above.

that did not conform with barley variety specifications would be rejected such that it would have to be sold at a discount.[3431]

(4) It was reasonable to assume that a hypothetical purchaser would estimate a decrease in volume of malt sold by around an additional 40 kilotonnes every year for 3 years, and then an increase at the same rate over the following 3 years.[3432] Again, Klein relied on estimates contained in Viers' email dated 28 October 2013 and acknowledged that he could not verify the estimates made.[3433] However, Klein adopted a more conservative estimate of 39.8 kilotonnes instead of 50 kilotonnes per year.[3434] Further, it was reasonable to assume that hypothetical purchasers would have requested information to conduct some sort of analysis to estimate the amount of malt that would be rejected due to the Varieties Practice and its cessation. An estimate of 40 kilotonnes per year fell within the range of what could be expected to have been estimated by a hypothetical purchaser, based on the information that would have been available at the valuation date. Even if Klein was mistaken as to the exact meaning of Viers' email on this point, using hindsight to test

---

3431 Naturally, this assumption carried with it that 50 percent of non-compliant malt would not have to be sold at a discount. Further, in making this assumption, Klein referred to Viers' email sent on 28 October 2013: see par 1419 above. In part, the contents of the email were ambiguous and Potter challenged Klein's reliance on it, stating this assumption lacked analysis. No attempt was made to clarify precisely what Viers meant in referring to malt "directly not usable" and the related matters when Viers was taken to this email in cross-examination. Klein's first report stated his understanding that the email indicated Cargill's position was that half the non-conforming malt would be accepted and the other half would be rejected and then sold discounted by $50 per tonne. Klein referred to subsequent facts in observing that substantially higher discounts were actually incurred with respect to non-conforming barley, including malt being sold for feed. Klein assumed that potential purchasers would have obtained the same results as Cargill, with similar estimates of 156,000 tonnes per year at an estimated discount of $50 per tonne. During cross-examination, Klein accepted that the adoption of these figures was not ideal but that he was doing the best he could with the limited data available. He further noted that the figures used in his model were biased in favour of being more conservative and cautious. The evidence available did suggest malt sold as feed was sold at a substantial discount well in excess of $50 per tonne. When cross-examined about these matters, Klein was not challenged as to his understanding of the contents of Viers' email and acknowledged that he had not sought to exclude extrinsic matters when considering the subsequent facts that he did. During Meredith's cross-examination, he was asked about the contents of the email, but was simply asked to confirm his assumption of a $50 per tonne discount was derived from Viers' email.

3432 See pars 4009-4011, 4067, 4086(2) above.

3433 See pars 1419, 4009-4011, 4071 above.

3434 This was in both Viers' original estimate and his revised estimate: see par 1421 above.

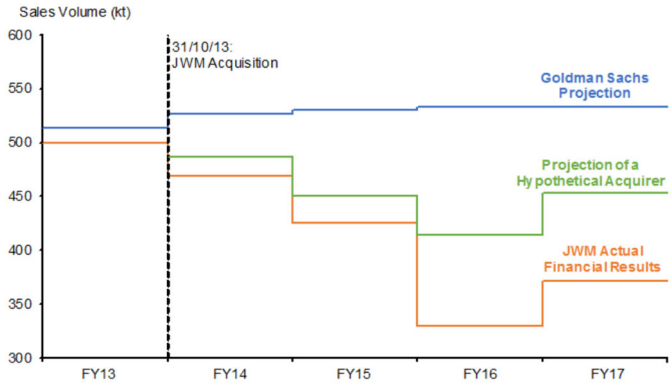
the reasonableness of this assumption, it was confirmed by the fact that the actual reduction of malt sold post-Acquisition was a cumulative total of approximately 171 kilotonnes over 3 years.[3435] Furthermore, Potter himself gave evidence that he reviewed Klein's assumptions concerning volume risk and considered, notwithstanding he had some issues with Klein's calculations, given the information that was available (including using hindsight as a check), Klein held a reasonably rational view concerning a decline in sales and then a recovery. On the same issue, Potter stated that Klein's analysis did not look too unreasonable.[3436]

(5) For the reasons stated in subparagraph (1) above, it was reasonable to assume that a hypothetical purchaser would arrive at the conclusion that an average of 312 kilotonnes of total malt shipped between financial year 2010 to 2013 contained issues relating to the Reporting Practice or some similar approximation.

(6) The assumption that ceasing use of gibberellic acid would increase germination from 4 days to 5 days has been established.[3437] Further, the information that would have been available to a hypothetical purchaser provided a proper basis for the assumption that ceasing to use gibberellic acid would reduce production capacity by 16.35 kilotonnes

---

3435 This amount was well in excess of Klein's adjustments, which also allowed a considerable buffer for the effect of any extrinsic factors. The comparison between the original projections by Goldman Sachs, Klein's adjusted projections and the actual results was illustrated by Klein diagrammatically as follows (JWM being a reference to Joe White):



3436 See also fn 3589 below.

3437 See par 4004(5) above.

per year. The customers Klein relied upon were all known to be customers that prohibited gibberellic acid being used as an additive. The fact, also known before Completion, that Joe White supplied at least 70 kilotonnes of malt each year that was produced using gibberellic acid when it was prohibited, was consistent with the assumption made.[3438] Moreover, the Viterra Parties' submissions on the point were misplaced. The contention that only 1 customer was affected by the issue from August 2014, made by relying on the Customer Review Spreadsheet and an agreement in August 2014,[3439] was based on a conclusion with respect to gibberellic acid that was not put to any of the lay witnesses and does not reflect the facts as found.[3440] Further, this contention appeared to ignore the fact that in late February 2014 there were still 4 customers who insisted on exogenous gibberellic acid not being used.[3441] Furthermore, no reference was made to evidence of Scaife about the limited nature of the agreement with Heineken in August 2014.[3442] In short, neither the facts available to a hypothetical purchaser before the valuation date, nor the subsequent facts, provided a basis for the suggestion that production capacity would only be affected for a short period of time because of this issue. On the contrary, as Klein's model assumed a complete return to sales levels at the pre-Completion level by the end of 2018, the introduction of this assumption with respect to production capacity from 2019 onwards made perfect sense.

4087 Before leaving this important aspect of the valuation evidence put forward by Cargill Australia, some further more general observations should be made.

4088 It is a basic principle that the mere circumstance that facts subsequent to the

---

3438 See pars 1447, 1462 above.

3439 See par 4080 above.

3440 See pars 1224-1225 above.

3441 See par 1689 above. The document evidencing this fact was referred to in the Viterra Parties' written submissions, but was not referred to when the other subsequent matters were relied upon in seeking to establish that only Sapporo remained an issue.

3442 See par 1786 above.

Acquisition turned out to be different to what a hypothetical purchaser would have assumed in valuing Joe White as part of the bidding process does not demonstrate that the assumptions made in estimating the true value of Joe White were incorrect (but rather such subsequent facts *may* have been used by a valuer as a means of illuminating the true value).[3443] Leaving this principle aside, many of the matters referred to by the Viterra Parties as being the relevant subsequent events were not put to Klein to obtain his expert opinion on whether, and if so how, they would have affected his approach to the assumptions he made and the exercise he undertook.

4089 In any event, much of the underlying basis upon which the Viterra Parties sought to attack Klein's assumptions were contrary to the findings in these reasons, and in some instances plainly contrary to the evidence. Thus, in substance, the attempt by the Viterra Parties to attribute Cargill Australia's loss to Joe White's performance after Completion and various extrinsic or independent factors, rather than it being as a result of the Viterra Practices, was unsuccessful. That is not to say that there were no extrinsic or independent factors at play, but the primary reason for the difficulties experienced in the initial years after Completion was the fallout of having to deal with the Viterra Practices. A key rationale of the adoption of the *Potts v Miller* approach is that it is largely unnecessary to become too immersed in the exact possible cause of every factor of a business' performance after acquisition; that is, provided that it has been established that the forecasting assumptions used to establish the true value were appropriate and soundly based and are not shown to be otherwise, including because of subsequent events. In this case, subject to the specific matters referred to below, I am so satisfied.

X.73.6.3.2 Potter's approach

4090 It follows that Potter's initial approach to volumes of malt must be rejected. Even if the cost of the capital expenses for which both Klein and Potter made provision were to be incurred to rectify issues related to the Reporting Practice and the Varieties Practice, it was unreasonable for Potter to assume that hypothetical purchasers would have anticipated zero losses in volume of malt sold. Self-evidently the measures that

[3443] See par 3919 above.

needed to be taken by way of rectifying capital expenditure (whatever the appropriate level of expenditure might have been) could not be undertaken instantaneously upon Completion. The proposed capital works were to provide for additional storage and would take time.[3444] But further such expenditure could not properly be viewed as some sort of panacea. This was for various reasons. For example, any hypothetical purchaser would have to make provision for the fact that some of the required barley varieties simply were not available and that that fact had been concealed from Joe White's customers. Another matter required to be accounted for was that Joe White would have to produce malt with existing capacities for a period of time and, because of an inability to produce malt that complied with customer specifications, would be required to seek derogations, which would be highly likely to give rise to customer dissatisfaction and disruption. Further, desisting with the prohibited use of gibberellic acid would have had a direct impact on production cycles and capacity.

4091 Again speaking generally, by routinely implementing the Viterra Practices, Joe White had deceived customers into accepting non-conforming goods and in so doing Joe White had maintained customer retention, price, lower costs and margin. Therefore, had a hypothetical purchaser been made aware of the Viterra Practices, it would have assumed either that there was a real and substantial risk that Joe White would lose a number of customers, or that it would be at a risk of losing or not retaining the same level of business with existing customers, or at the very least, that Joe White would have not been able to attract new customers to replace any customers lost (new customers being unusual in the Joe White Business) or attract new business from existing customers at the same rate and for the same returns as it previously would have expected to be able to. As such, it would be unreasonable, and incorrect, to assume that capital expenditure to rectify non-conformance alone would have prevented any significant risk of reduction in volumes of malt sold, as well as the price paid for malt (this issue is dealt with immediately below) and related issues. It would also be incorrect not to adjust for such matters, or the significant risk of such matters

---

3444 Potter allowed for 2 years, with $15 million in each year; Klein allowed for a longer period of 5 years on the basis that all capital expenditure would not need to be incurred any sooner because of an anticipated decline in volumes of malt sold.

eventuating, at least either at a cash flow level or in the discount rate, if not both.

4092 Further, Potter's assumption that a hypothetical purchaser would have assumed that storage capacity constraints would be rectified after 2 years and consequently prevent ongoing losses in sales volumes due to issues with gibberellic acid cannot be accepted. Where volume losses were attributable to capacity constraints (as opposed to demand), and where corrective costs were to be incurred to remedy those storage issues, it could reasonably be assumed that the losses would continue into perpetuity in the absence of further capital expenditure with respect to manufacturing capacity.[3445] Further, in adopting Klein's capital expenditure assumptions, Potter did not include an assumption for corrective costs for manufacturing capacity, he only included corrective costs for storage capacity which enabled the storage of more varieties of barley in inventory. The additional storage capacity would not enable increased production of malt not using gibberellic acid and therefore it was unreasonable to assume that losses would be mitigated after 2 years.

4093 Overall, Klein's assumptions were all established and reasonable. Therefore to the extent these experts disagreed on the impact of the Viterra Practices on volume of malt sold, the court accepts Klein's approach in favour of Potter's approach.

X.73.7 Price of malt

4094 An input used to estimate future cash flow was the price of malt sold.

X.73.7.1 Klein's approach

4095 Klein proceeded on the basis that the Viterra Practices undermined the representations made as to how Joe White was able to achieve its historical premium malt price. Klein concluded that, in contrast to the representations made, Joe White's malt was not high quality malt, did not satisfy customer needs, was subject to supply risk, and only achieved fast turnaround through supply of non-conforming barley.

[3445] For completeness, even if the manufacturing capacity was increased by the necessary capital expenditure, it would be the position in perpetuity that malt that previously took 4 days to produce with the use of prohibited gibberellic acid would necessarily take 5 days, with concomitant increases in production and related costs.

4096 Therefore, Klein considered that a hypothetical purchaser would make the following adjustments to price in their forecast:

(1) Discount prices by $50 per tonne in respect of Klein's assessment that half of the 312 kilotonnes of out-of-specification malt previously subject to adjusted Certificates of Analysis would be rejected by customers, which would continue for 2 years post-Acquisition.[3446]

(2) Loss of half of the historical price premium of $25 per tonne, being $12.5 per tonne, for 2 years and then gradually improving until financial year 2019, when it would be restored in full.

4097 Further, Klein recognised, but did not quantify the possibility of, reduced cash receipts due to unpaid deliveries of out-of-specification malt.

X.73.7.1.1 The Cargill Parties' submissions

4098 The Cargill Parties submitted that the court should readily accept Klein's assessment of the forecast price of malt, noting that Klein recognised the possibility of reduced cash receipts due to unpaid deliveries of out-of-specification malt but did not reduce the price because of this possible impact.

X.73.7.1.2 The Viterra Parties' submissions

4099 The Viterra Parties objected to Klein's approach, submitting that numerous assumptions he relied upon in determining how a hypothetical purchaser would forecast sale prices had not been established. These were submitted to include that:

(1) Hypothetical purchasers would have obtained the same results from conducting similar tests to the tests done by Cargill in preparation for trial,[3447] and that they would have estimated a discount of $50 per tonne.

(2) The discount of $50 per tonne would have been sustained for 2 years.

3446 See fn 3411 above. Klein used an analysis performed by Cargill in preparation for trial, which considered 4 years of historical data, forming part of the Cargill Parties' particulars that were withdrawn: see pars 3998-4004 above.

3447 See issue 10 above.

(3) Hypothetical purchasers would have forecasted $12.5 per tonne loss of pricing premium.

4100 The Viterra Parties submitted that the assumptions in subparagraphs (1) and (2) were inconsistent with evidence of what actually happened post-Acquisition.[3448] The Viterra Parties again submitted that Klein relied on Cargill's estimated impact prior to Acquisition,[3449] which he did not test for reliability. Further, it was submitted that Klein used post-Acquisition information to conclude that the actual discount was larger than Cargill had anticipated;[3450] however, he did not analyse such information to exclude extrinsic factors. Accordingly, it was submitted that Klein relied on Cargill's estimate as the best data available, though it did not accord with post-Acquisition evidence.

4101 With regard to the assumption in subparagraph (3), the Viterra Parties submitted that Klein based this on a comment in the due diligence material that indicated that Joe White's margins were generally $25 per tonne higher than its competitors. It was submitted that Klein did not test the reliability of the figure relied upon, including whether a hypothetical purchaser would expect to achieve the same margin. Further, it was submitted that the same document contained references to opportunities to increase the margin, including procurement opportunities, which Joe White previously did not achieve because of the Viterra procurement policy.[3451] Furthermore, the Viterra Parties submitted that Klein assumed that the $25 premium would be lost for 2 years and then bolstered back to equilibrium, based on speculative reasoning as he did not rely on post-Acquisition information and apparently did not seek instructions in that regard. Moreover, it was submitted that the post-Acquisition information demonstrated that there was no loss of margin caused by ceasing the Viterra Practices.

3448 Again, the Cargill Parties submitted that it was an erroneous methodology to contend that there was an error in what Klein did merely because, in pointing to matters post-Acquisition, the position was in fact different.

3449 See pars 4009-4011 above.

3450 In his report, Klein commented that actual discounts were much higher than $50 per tonne.

3451 The Cargill Parties correctly submitted that these matters were not put to Klein.

X.73.7.2 Potter's approach

4102 Potter did not make any adjustments for price on the basis that he had already accounted for additional expenditure to acquire the correct barley varieties and for increased storage capacity; therefore he was of the view that it was unlikely that there would be any losses due to discounts or adjustments to any price premium.[3452]

4103 However, Potter provided an alternative analysis, which adopted Klein's price assumptions relating to issues concerning the Reporting Practice and the Varieties Practice.

X.73.7.2.1 The Viterra Parties' submissions

4104 The Viterra Parties submitted the Potter's initial approach was logical and supported by post-Acquisition evidence. It was submitted that the post-Acquisition evidence supported the assumption that no losses would be incurred because it was contended no material discounts were provided to customers as a result of ceasing the Viterra Practices. Further, it was submitted any discounts provided were likely to be short-term as a result of Cargill having switched to a theoretical blend approach.

4105 Furthermore, the Viterra Parties considered that Potter's alternative assessment of the price of malt, which adopted Klein's assumptions, was incorrect as Klein's assumptions were flawed for the reasons stated above.

X.73.7.2.2 The Cargill Parties' submissions

4106 The Cargill Parties correctly noted that Potter did not, during his evidence, identify the price of malt as an area of substantial disagreement with Klein.

4107 The Cargill Parties submitted that Potter's initial analysis should be rejected because Potter:

(1) Ignored evidence that prior to Acquisition some of Joe White's executives expected sales and customers to be impacted.[3453]

3452 Potter adopted a $50 per tonne discount for out-of-specification malt in scenarios that did not factor in increased costs to purchase the right barley varieties.

3453 The Cargill Parties noted Stewart's assessment, adopted by the other operational Joe White executives, that Joe White was unable to produce malt within specification for customers: see pars 1212-1213, 1216,

(2) Ignored evidence post-Acquisition regarding the impact on sales and customers due to Joe White's inability to produce malt within specification.[3454]

(3) Did not analyse matters Klein considered a hypothetical purchaser would identify that Klein did not quantify.

4108 The Cargill Parties also noted that where Potter did include discounts on pricing in his scenarios, he adopted Klein's assumption of a discount of $50 per tonne.

4109 Lastly, Potter did not adjust his analysis for price premium risk; however, under cross-examination he acknowledged that for the purpose of the joint expert report he agreed with Klein that it was in the range of $11 million to $13 million.

X.73.7.3 Analysis

X.73.7.3.1 Klein's approach

4110 The court is satisfied that the assumptions relied on by Klein were reasonable.

4111 The Viterra Parties' submissions relating to Klein's failure to have regard to post-Acquisition events are rejected to the extent that they suggest that Klein should have relied on hindsight. To reiterate, while post-Acquisition information can be relied upon to the extent it might shed light on the true value at the valuation date, the absence of consideration of post-Acquisition events did not mean that Klein's assumptions were flawed.

4112 For reasons already stated,[3455] it was reasonable to assume both the level of rejection assumed and that the price of rejected malt would be discounted by $50 per tonne. Further, a hypothetical purchaser would have assumed the need for future storage

---

1218 above.

3454 Such evidence included: Commitment Review Reports from financial year 2014 to 2016 (see pars 1784, 1823, 1837 above), which demonstrated volume falls after cessation of the Viterra Practices; Joe White's supply rates of out-of-specification malt under derogation (see fn 1034 above); emails of complaints from customers (see par 2358 above); reports of falling demands from customers as a consequence of quality issues (see par 1839 above); evidence from Sagaert regarding customers looking for alternative suppliers as a result of Joe White not producing malt within specification (see par 1840 above); and evidence from Scaife that the impact on Joe White's performance of changing malt varieties after Completion was related to the Viterra Practices: see pars 1799-1800 above.

3455 See fn 3431 above.

and would have gone about assessing the storage requirements in a not dissimilar way as was done by Viers on 28 October 2013. However, unlike Viers, the hypothetical purchaser would have had knowledge of the full extent of the Viterra Practices. Therefore, it was only appropriate to refer to Viers' email and rely on it with the qualification that the estimates contained within it were made in the absence of full knowledge of the extent of the Viterra Practices. Furthermore, it was reasonable to assume that hypothetical purchasers would have requested information and used available information with knowledge of the extent of the Viterra Practices to assess the expected discount price for rejected malt. Based on the available information, a hypothetical purchaser reasonably could have arrived at a conclusion that the discounted malt would sell at a price discounted by $50 per tonne.[3456] The reasonableness of this assumption was confirmed by the fact that in reality Joe White suffered substantially higher discounts.[3457]

4113 Moreover, it was reasonable to assume that hypothetical purchasers would estimate that Joe White's pricing premium of $25 would halve in light of customers learning of the Viterra Practices. It was represented to Cargill during the Due Diligence that Joe White had margins that were generally $25 per tonne higher than its competitors'.[3458] It was explained that this price premium was achievable due to Joe White's features;

3456 In seeking to test this assumption, Potter reviewed external data concerning the price of malting barley and feed barley. Potter noted that the average price difference was $43 per tonne in the 5 years to financial year 2014 and argued that the $50 discount Klein applied was overstated. However, looking at Potter's data, in the 5 years to financial year 2013, which was the data that would have been relevant to a hypothetical purchaser of Joe White, the average price difference was $52.70 per tonne. As a result the data supported Klein's assumption of a discount of $50 per tonne. Potter also took a 10 year average, which suffered from the same problem of using the 2014 figures. Further, a 5 year period would be more relevant to a hypothetical purchaser than an average figure using prices going back as far as 10 years.

3457 For example, Klein noted that between November 2013 through February 2014, Joe White sold malt and barley as downgraded stock as feed at an average of $162 per tonne, compared to the average selling price of malt of $582 per tonne in financial year 2014. If the average was confined to malt sales as feed the figure per tonne was slightly higher. Between November 2013 through February 2014, Joe White sold malt as downgraded stock as feed at an average of $177 per tonne, compared to the average selling price of malt of $582 per tonne in financial year 2014. It is noted that the Viterra Parties submitted that there was no material discounting of rejected malt. However, this was contrary to this evidence, which was corroborated by McIntyre's evidence (see par 1603 above) that some customers required compensation before accepting malt and other evidence of discounts being given or offered: see, for example, pars 1580-1708 above.

3458 See par 912 above.

namely, high quality malt, ability to satisfy customer needs, a supply-risk profile and fast turnaround time. It must be assumed that similar representations would be made to other hypothetical purchasers as part of explaining the historical position of the Joe White Business, which would have constituted a reliable basis for hypothetical purchasers to conclude that generally Joe White had a $25 pricing premium. It would be sensible, if not inevitable, that hypothetical purchasers would assume that if the Viterra Practices were ceased with the inevitable disruption that would follow, Joe White's ability to achieve such a high price premium would be materially undermined.[3459] Therefore, it was reasonable to assume that the hypothetical purchaser would discount the pre-existing prices or remove the price premium altogether, or at least discount prices until Joe White could deliver the features required to command the $25 pricing premium. Although there would necessarily be a level of uncertainty, in the circumstances, a 50 percent discount was a reasonable assumption. Moreover, it was realistic to assume that Joe White would not be in a position to restore the price premium or make other improvements to other possible factors relevant to its margins until sufficient blending and storage facilities became available, in approximately 2 years' time.

X.73.7.3.2 Potter's approach

4114 The court is not satisfied that Potter's initial approach to the price of malt sold was appropriate. Potter's premise necessarily assumed the required barley varieties were available at a price, which was contrary to the considered position of the relevant Joe White executives shortly before Completion.[3460]

4115 Further, even if expenses were to be incurred to acquire the correct barley varieties and increase storage capacity, it was unreasonable to assume that hypothetical purchasers would have anticipated no additional losses due to a reduction in the price

---

3459 Even on the assumption that an immediate disclosure of the Viterra Practices was not intended, a hypothetical purchaser would assume the change in approach would become readily apparent to customers because of the inability to supply malt within specification with the accompanying need to seek derogations regularly.

3460 See, for example, par 1212 above.

of malt sold.

4116 Prior to the Acquisition, Joe White executives did not expect that Joe White would be able to meet customer specifications.[3461] It was unreasonable, if not completely implausible, to expect that a hypothetical purchaser would assume that Joe White would be able to meet all customer specifications *immediately*, or if Joe White could not meet the specifications that all customers would be willing to pay the same premium price for non-compliant malt.

4117 Overall, each of Klein's assumptions related to this issue were reasonable. To the extent the independent experts disagreed on the impact of the Viterra Practices on the pricing of malt, the court accepts Klein's approach in favour of Potter's approach.

X.73.8 Operational costs (including barley and production costs)

4118 An input used to estimate future cash flow was the operational costs.

X.73.8.1 Klein's approach

4119 Klein considered that in order to purchase more expensive barley varieties to rectify the Varieties Practice, the hypothetical purchaser would estimate a permanent increase in the cost of barley of $8.10 per tonne. To arrive at this figure Klein used evidence of an actual $8.10 per tonne increase (after taking into account changes in market prices) in Joe White's barley costs post-Acquisition as a proxy. It appeared that ultimately Klein accepted the figure of $8.15 for this increased cost on the basis of Potter's assumption as to this amount.

4120 Further, Klein assumed that the cost of production would increase by $3.25 per tonne to account for the additional costs involved in the cessation of the Gibberellic Acid Practice. Klein arrived at this number by averaging pre-Acquisition estimates sourced from records of Viterra and Cargill.[3462]

3461 See pars 1212-1213, 1216, 1218, 1439 above.

3462 Klein relied on notes made by Rees at a meeting on 29 October 2013 to conclude that Viterra estimated that the elimination of the Gibberellic Acid Practice would increase cost of production by $1.50 per tonne and the email from Viers on 28 October 2013 (see pars 1419, 4009-4011 above) to conclude that

4121 Furthermore, Klein expected that the net realisable value of Joe White's inventory would have been considered to be lower than reported, which would have prompted a hypothetical purchaser to investigate the extent of such a difference. Klein used the provision calculated post-Acquisition of $1.02 million as a proxy for the amount that hypothetical purchasers would have identified.[3463] Under cross-examination he explained that he expected that if a hypothetical purchaser had been told of the Viterra Practices during the bidding process, it would have done exactly the same exercise that was done after the Acquisition to ascertain the net realisable value in the marketplace of the inventory. Accordingly, he was of the view that it was appropriate to use this information as part of the assumptions that would have been adopted by a hypothetical purchaser.

4122 Moreover, Klein considered, but did not quantify, there would be a cost of replacing customers and volumes lost, or a cost of retaining existing customers, due to the Viterra Practices. Further, he also referred to the possibility of compensatory payments for past deliveries of out-of-specification malt, which he also did not quantify. He said he took a conservative approach by not incorporating these matters into his valuation model by way of increased operational costs.

X.73.8.1.1 The Cargill Parties' submissions

4123 The Cargill Parties relied on the fact that Potter did not take issue with Klein's figures, and that all experts agreed that, generally speaking, the effect on the costs of sales and production was permanent. Accordingly, they submitted Klein's approach should be accepted.

X.73.8.1.2 The Viterra Parties' submissions

4124 The Viterra Parties submitted that Klein used hindsight to determine the increase in barley costs, however other than market fluctuations, he failed to have regard to the

---

Cargill estimated an increase of $5 per tonne. The evidence by Rees was not tendered, nor was Rees called to give evidence: see pars 4031-4033 above. However, when Klein was cross-examined by the Viterra Parties it was put to him that the document he had referred to (being Rees' notes) was a Viterra document and that the figure of $1.50 was more credible than the Cargill estimate, a proposition with which Klein did not agree.

3463 This figure was derived by totalling the provisions made for all items of "downgraded stock sold as feed" of $1,019,664.58 which Klein rounded to $1.02 million.

numerous extrinsic events. Klein's evidence was that he believed he neutralised supervening or extrinsic outcomes by looking at broader economic impacts on the cost of barley but also acknowledged that to use hindsight it was necessary to be fully aware of all the circumstances of the Joe White Business post-Acquisition. On this topic Klein gave further evidence that in order to remove all the possible extrinsic circumstances, Klein had looked at the best information available to him. The Viterra Parties submitted that Klein failed to take into account the "numerous extraneous events impacting barley procurement" after Completion by reference to factual submissions, the substance of which has been addressed elsewhere in these reasons.

4125 Further, the Viterra Parties submitted that Klein's adoption of a mid-point estimate for increased production costs was inappropriate.[3464] It was submitted that it was unreasonable that Klein did not accept the "Joe White executive" estimate, which was a more credible source than Cargill's estimate.[3465] Further, it was submitted the adjustment was inconsistent with the actual impact of ceasing the Gibberellic Acid Practice.[3466]

4126 Addressing Klein's inventory costs assumption, the Viterra Parties submitted that it should be rejected. It was submitted that Klein relied on hindsight in concluding that the hypothetical purchaser would have forecasted loss in the same manner that Cargill did post-Acquisition. Further, it was submitted that Klein's estimate was inconsistent with the determination made by the Independent Expert, who assessed the amount claimed with respect to inventory as $814,881. Furthermore, neither Potter nor Meredith made a similar adjustment.

X.73.8.2 Potter's approach

4127 Potter adopted Klein's assumption that a hypothetical purchaser would have incorporated a permanent increase in cost of barley, and fixed this at $8.15 per tonne.

4128 Further, Potter adopted Klein's assumption that eliminating the Gibberellic Acid

---

3464 See fn 3462 above.

3465 Ibid.

3466 The Cargill Parties submitted that this was not put to Klein, again making the point that it was not his task to value the business using hindsight, and submitted it was a matter for him as a valuer whether he cross-checked reasonableness against actuality or not.

Practice would increase production costs by $3.25 per tonne.

X.73.8.2.1 The Viterra Parties' submissions

4129 In closing submissions, the Viterra Parties contended that in making these assumptions Potter gave away "a bit too much". Further, to the extent that Potter relied on Klein's assumptions, the Viterra Parties submitted the assumptions were inconsistent with the evidence at trial and therefore had the effect of understating the true value of Joe White.

4130 The Viterra Parties submitted that the court should accept Potter's approach, with the following adjustments:[3467]

(1) Additional barley costs should be $3 per tonne.[3468]

(2) Increased production costs, due to ceasing the Gibberellic Acid Practice, should only apply up until August 2014.[3469]

X.73.8.2.2 The Cargill Parties' submissions

4131 The Cargill Parties submitted that, in contrast to Klein, Potter assumed that there would be no losses on inventory sold as feed on the basis that expenditure to acquire conforming barley varieties would mitigate any losses to inventory. It was submitted that in doing so, Potter ignored that buying new barley varieties would not resolve the issue of Joe White having existing stock that was out of specification that would

---

3467 Again the Cargill Parties submitted that it was an erroneous methodology to contend that there was a need to correct what Klein did because in pointing to facts post-Acquisition the position was in fact different.

3468 The Viterra Parties relied on Meredith's second scenario in his first report. Meredith calculated 3 scenarios based on the different information available to him. The cost for using the correct barley varieties was calculated as $15 per tonne in scenario 1, $3 per tonne assuming volumes of 500,000 tonnes in scenario 2 and $7 per tonne in scenario 3. The Viterra Parties submitted scenario 1 was inappropriate because it referred to "lesser grade barley," which they submitted was not contrary to customer contracts. Additionally, the Viterra Parties submitted that scenario 3 was inappropriate as it relied on post-Acquisition information without any adjustments for extraneous causes. Whereas, it was submitted that scenario 2 was the most reliable as it was based on the estimates of Joe White executives that there would be an increase in the cost base of approximately $1.5 million per year. In response to this, the Cargill Parties submitted and the Viterra Parties acknowledged that Meredith accepted the cost increase set by Klein in his second report, but did not adopt a specific adjustment, instead considering it to have been accounted for in his assessment of manufacturing costs. Further and for completeness, Meredith adopted the additional barley cost of $8.15 in his second report, on the basis that it had been agreed between Klein and Potter and noting that it was materially similar to the third scenario in his first report.

3469 See fn 3422 above.

need to be disposed of. Further, Potter did not analyse volumes lost and compensation due to the Viterra Practices or compensatory payments for past deliveries of out-of-specification malt.[3470] Furthermore, it was submitted that in oral evidence Potter did not identify Klein's inventory adjustment as a matter of disagreement.

X.73.8.3 Analysis

X.73.8.3.1 Klein's approach

4132 The court is satisfied that the assumptions relied on by Klein were reasonable. Essentially the only difference between Klein and Potter on this issue was the question of the net realisable value of the inventory.

4133 It was not a conventional means adopted by Klein to arrive at the conclusion that a hypothetical purchaser would have assumed that costs for purchasing the correct barley variety would result in an increase of $8.15 per tonne, as the basis of such reasoning was the actual post-Acquisition losses of Joe White.[3471] For Klein to have been able to have removed extrinsic factors, he would have needed to remove not only the broader macroeconomic impact, but also any other factors. That said, there was nothing to suggest that his assumption that those operating the Joe White Business both before and after Completion were acting in a rational, profit-maximising way when incurring expenditure for barley was other than correct. In short, it appeared Klein used the best available evidence and there was nothing to indicate a hypothetical purchaser would have assumed a different amount. Furthermore, that it was a reasonable assumption to make was borne out by Potter's approach.

4134 The evidence upon which the assumption that Joe White estimated that moving from 4 day to 5 day malting would increase costs by $1.5 per tonne was based was never

---

3470 Although the Cargill Parties referred to compensation for past deliveries, this was not quantified. It was possible that hypothetical purchasers would have considered the possibility of compensatory claims and factored into their analysis a low risk of such claims. However, leaving aside reputational issues a brewer might have had, it was far from apparent what compensation might be payable in circumstances where the malt had been accepted by the customers (without knowledge of the Viterra Practices) and used to make beer, presumably at prices no less than the prices that would have been achieved if malt in compliance with specifications had been supplied by Joe White.

3471 See pars 3917-3921 above.

actually adduced at trial. Further, Cargill's estimate of $5 per tonne was made at a time when all the facts were not known.[3472] There could be no issue that increased costs would have resulted because of this issue. On the very limited material available, I consider the input used by Klein of $3.25 per tonne was reasonable. This conclusion was supported by the position adopted by Potter.

4135 It was reasonable to assume that, upon learning of the Viterra Practices, a hypothetical purchaser would have performed an analysis of the inventory. Realistically, a hypothetical purchaser would assess the net realisable value of the inventory using the available financial statements. Accordingly, based on the available information, it was reasonable to conclude that they could have employed a similar method used by Cargill to estimate a loss of $1.02 million. The reasonableness of the figure was confirmed by the actual analysis that Cargill undertook soon after Acquisition with little, if any, impact of extrinsic factors,[3473] which would not have been materially different from any analysis undertaken immediately prior to Acquisition. The determination made by the Independent Expert, who assessed the amount of the claimed inventory as $814,881, was made post-Acquisition on 23 December 2014. The amount of $814,881 was not so dissimilar from $1.02 million that it made the assessment of $1.02 million unreasonable. Further, the assessment by the Independent Expert demonstrated that this was plainly a matter that ought to have been considered to be material by a hypothetical purchaser. Therefore, it was reasonable for Klein to assume that, prior to Acquisition, a hypothetical purchaser would perform the same or a similar analysis as Cargill and arrive at the same conclusion.[3474]

X.73.8.3.2 Potter's approach

4136 It was reasonable for Potter to adopt Klein's cost increases for purchasing additional

---

3472 See par 4004(7) above.

3473 See par 4121 above. Given the subject matter, it was highly unlikely that extrinsic factors could make any significant difference. The evidence was that in significant respects Joe White's barley inventory did not accord with what was required to meet customer specifications and nothing that occurred subsequently was going to change that fact without the need for some customers to change their specifications and for the disposal of non-compliant barley. The position as known in April 2014 also strongly suggested that this assumption was soundly based: see par 1717 above.

3474 For completeness, Potter stated in his first report that if he were to include the effect of the actual inventory write-down in his assessment, the present value effect would have been approximately $0.98 million.

barley varieties and cessation of the Gibberellic Acid Practice, based on the reasoning above.

4137 However, it was unreasonable to assume that rectification costs would eliminate any losses to inventory. A hypothetical purchaser would assess that even if additional costs were incurred to purchase conforming barley varieties, there would still be inventory losses as a result of the need to dispose of or relocate non-conforming barley.

X.73.8.3.3 The Viterra Parties' adjustments to Potter's approach

4138 The Viterra Parties' submission, that the hypothetical purchaser would estimate an increase in cost for purchasing additional barley varieties of $3 per tonne, in accordance with Meredith's second scenario in his first report, must be rejected as it appeared to be no more than an adoption of the scenario that best suited their case without further substantive reasoning. The difficulties with this approach include the following. *First*, Meredith's approach to his valuation was inappropriate for the reasons above.[3475] *Secondly*, Meredith noted that the information relating to the impact of using incorrect barley varieties was inconsistent and therefore he provided 3 alternative scenarios without indicating a preference for the second scenario. *Thirdly*, in Meredith's second report he adopted the cost increases set by Klein, thereby moving away from his own previous estimates. *Fourthly*, the Viterra Parties chose not to put in evidence the key document that was said to support this approach.

4139 Further, the Viterra Parties' submission that the increased production costs, due to ceasing the Gibberellic Acid Practice to produce gibberellic-acid-free malt when required should only apply up until August 2014, must be rejected for the reasons already set out above.[3476]

X.73.9 Capital costs

3475 See pars 3948-3950 above.
3476 See par 4067 above.

4140 An input used to estimate future cash flow was capital costs in relation to storage.

X.73.9.1 Klein's approach

4141 Based on his instructions,[3477] Klein assumed that the capital expenditure required to construct additional storage would be $30 million.[3478] Due to declines in demand, as a result of a forecast loss of customers, Klein concluded that a hypothetical purchaser would not expect to complete the construction until lost customers were replaced and sales progressively recovered. Therefore, Klein allocated the $30 million over the 5 years post-Acquisition.

X.73.9.1.1 The Cargill Parties' submissions

4142 The Cargill Parties submitted that the experts agreed, and the court should accept, that construction of storage was required and that the amount of capital expenditure was $30 million. In short, the only material area of disagreement was as to the allocation of that expenditure over time. It was submitted that Klein's timeline recognised demand decrease and had the effect of reducing Cargill's loss when compared to Potter's shorter period of 2 years. Further, it was submitted that Klein's use of $30 million was not based on hindsight, rather Klein correctly gave evidence that it was quantified prior to Acquisition, by reference to Viers' email of 28 October 2013.[3479] Furthermore, the Cargill Parties submitted that $30 million was conservative and should be accepted as this figure did not factor in ongoing maintenance, repairs and personnel costs.

X.73.9.1.2 The Viterra Parties' submissions

4143 The Viterra Parties took issue with the instructions provided to Klein, submitting that the amount Cargill alleged was estimated to be required for additional storage as a

---

3477 See also pars 4009-4011, 4030 above.

3478 In his report, Klein referred to 2 sources as a basis for the $30 million capital expenditure figure. (1) A memorandum prepared by Youil dated 21 February 2014, which estimated capital expenditure of $30 million: see par 1670. (2) Viers' email to Eden and Jewison on 28 October 2013, which estimated $33 million of capital expenditure: see pars 1419-1424 and 4009-4012. Klein gave oral evidence that he relied on Viers' email as an indication of anticipated expenditures pre-Acquisition.

3479 Viers' email referred to capital expenditure of $33 million "to erect malt blending capacity sufficient to eliminate the 25% nonconformance": see par 1419 above. It appeared that Klein was not instructed to take into account Viers' revised figure for capital expenditure of $21 million (see par 1421 above), but the existence of this subsequent estimate before Completion was also not raised with Klein in cross-examination.

result of ceasing the Viterra Practices had not been proven, and nor had the amount which Cargill alleged was actually spent on such storage. The Viterra Parties submitted that the Cargill Parties' instructions to Klein should not be accepted because:[3480]

(1) The estimate of $30 million relied on by Cargill contained in the February 2014 memorandum,[3481] was prepared by Youil who was not called to give evidence.

(2) Youil's estimate was for malt storage, not barley storage.

(3) Cargill did not call any witnesses to give evidence regarding the amounts that were alleged to have been spent by Cargill in relation to additional storage.

(4) The document relied upon by Cargill for expenditure at Joe White's Sydney plant indicated that the majority of costs were for barley silos, rather than silos for malt storage.

(5) It was unclear from the documents relied upon by Cargill for Port Adelaide whether the costs were for malt storage, barley storage or some other capital expenditure.

(6) It was unclear from the documents relied upon by Cargill for Perth what proportion of the silos rented from Co-Operative Bulk were for malt storage and for barley storage and what costs, if any, were incurred from 2016 onwards.

4144 Further, it was submitted that the theoretical blend method of reporting required greater malt storage capacity than reporting methods based on wet chemistry analysis. The Viterra Parties submitted that based on the evidence that most

---

3480 Again, the Cargill Parties submitted that none of these matters were put to Klein to ascertain what difference they might have made to his assessment.

3481 See pars 1670-1671 above.

commercial maltsters did not use theoretical blending as a basis for reporting,[3482] it should be assumed that the hypothetical purchaser would not use theoretical blending and therefore would not have forecast additional capital expenditure for extra storage.[3483]

4145 With regard to Klein's analysis and his reliance upon Youil's memorandum, the Viterra Parties referred to the fact that Klein conceded it contained information that would not have been known pre-Acquisition.[3484] It was submitted that the court should reject Klein's oral evidence that he relied on Viers' email of 28 October 2013 for 2 reasons. *First*, in Klein's report, the memorandum dated 21 February 2014 was the first source identified in the footnote relating to the $30 million capital expenditure figure. *Secondly*, even if Klein did rely on Viers' email, the information contained in that email was inappropriate because the estimates were made at a time when the Viterra Practices had not been fully disclosed, and therefore such estimates were irrelevant to what a hypothetical purchaser would have forecasted with full knowledge.

X.73.9.2 Potter's approach

4146 In his first report, Potter adopted the amount that Klein was instructed to assume of $30 million. However, Potter considered that the hypothetical purchaser would undertake the value-maximising course of action, which would involve incurring required capital expenditure as soon as practicable in order to minimise the effects of the Viterra Practices, as opposed to incurring it over the course of 5 years.[3485] In his third report, Potter was instructed to take a different approach and assumed capital expenditure between nil and $11.4 million at $2 million integers, the upper end of the range based on his instructions that that was the maximum amount Cargill alleged

---

3482 To be clear, the effect of French's evidence was *not* that most participants in the malting industry do not use the theoretical blending method as part of the production process (it was used by Joe White as part of its production process, as well as in operations with which French was involved), but rather his evidence was it was not used by most participants as the basis for the final reporting to the customer of the malt specifications.

3483 The Cargill Parties submitted that this was not put to Klein.

3484 See fn 3478 above.

3485 For completeness, he further assumed that the additional capital expenditure would be depreciated over a 20 year period.

had been spent in this regard.[3486]

X.73.9.2.1 The Viterra Parties' submissions

4147 The Viterra Parties submitted that Potter's approach in his third report should be accepted and that the amount of capital expenditure should be assumed to be:

(1) Nil, if the court finds that the hypothetical purchaser would not have adopted the theoretical blend method.

(2) Otherwise, no more than the amount which Cargill proved was actually spent on additional malt storage, rather than for barley storage or other expenditure.

X.73.9.2.2 The Cargill Parties' submissions

4148 The Cargill Parties submitted that Potter's assumption that capital expenditure would be incurred immediately and only over a period of 2 years was based on his flawed conclusion that sales volumes would not be affected. As to Potter's alternative capital expenditures, the Cargill Parties submitted it was all based on hindsight, and there was nothing that ought to shift the position from the $30 million assumption.

X.73.9.3 Analysis

X.73.9.3.1 Klein's approach

4149 Klein's assumptions that there would be $30 million of capital expenditure incurred for additional storage were based on instructions from Cargill.[3487]

4150 It was not determinative of this factor as to which of the 2 sources Klein actually relied upon. The question was whether there was a proper basis for the assumption that a hypothetical purchaser would have assumed that Joe White would incur $30 million in capital expenditure for additional storage and would have assumed those costs would be incurred over 5 years. Further, the assumption Klein was instructed to make related to storage generally, and was not confined to malt storage.

4151 There could be no issue that additional storage was required, whether or not the

---

3486 See par 4029(3) above.
3487 See par 4029(1) above.

theoretical blend approach was adopted. This was the unanimous view of the Joe White executives before Acquisition with respect to every plant, except Tamworth.[3488] Further, the position was that additional storage was required with respect to both malt and barley storage. The fact that the 2 sources of information Klein was referred to only related to malt storage suggested that the overall cost of additional storage would be greater than what had been forecast in the 2 documents relied upon. Therefore, the Viterra Parties' submissions highlighting the limitation of the forecast in these 2 documents did not detract from the appropriateness of a figure of $30 million.

4152 In any event, given the low storage capacity, it could be expected that a hypothetical purchaser would have assumed that, due to the capacity constraints of Joe White, upon ceasing the Viterra Practices there would be a need to spend capital to rectify storage issues. To assess the associated expenses, a hypothetical purchaser would use the information available to determine the additional storage required.

4153 It did not form part of Klein's (or any expert's) instructions whether the hypothetical purchaser would have used a theoretical blend approach to reporting or another approach. In my view, in seeking to ascertain the true value of Joe White, this was the correct approach. As the evidence was that there were a significant number of strategic purchasers who did not adopt this approach (including some operations of Cargill Malt itself),[3489] it would have been a mistake to base the valuation on the assumption that the hypothetical purchaser would use this approach.

4154 In any event, on the evidence available it was not material, for the purposes of an assessment of capital expenditure, to determine whether the hypothetical purchaser would have intended to use a theoretical blend or not. The evidence as to the difference in storage requirements of the alternative approaches was far from clear. Although French gave evidence that additional storage was required for the theoretical blend method, his evidence was that he had never personally observed the

---

3488 See pars 1216, 1218 above.

3489 The theoretical blend approach to reporting was only implemented by Cargill with customer approval: see pars 335, 340 above.

implementation of Cargill's theoretical blend policy and gave no specific evidence about the level of increased malt storage that would be required for a reporting process based on theoretical blend. In this regard, it must be noted that in making the comparison that French did, his contrast was not only to the theoretical blend approach but to a theoretical blend approach that also did not make any allowance for parameters that were "slightly out of specifications". There was no identification of what was required by way of extra storage because of making no allowance for parameters slightly out of specification, as opposed to the theoretical blend reporting approach.

4155 Further, no quantitative evidence was given by any other witness. During his cross-examination, Eden agreed that it "could be" the case that more storage capacity would be needed for the theoretical blend method, however he stated it would depend on the Certificate of Analysis policy. When Eden gave the first part of this evidence, the Viterra Parties' senior counsel commented it was a fair answer.

4156 In these circumstances, there was no proper basis to make a finding whether there was any material difference between the storage costs of the 2 methods and thus, whether there was any substantial impact on the hypothetical purchaser's evaluation.

4157 On the evidence available before Acquisition, there could be little doubt that upon learning of the Viterra Practices, the hypothetical purchaser would consider capital expenditure would be required for storage if malt was to be produced in accordance with customer specifications. Further, the evidence indicated $30 million was a reasonable, and potentially conservative figure for a number of reasons. *First,* Joe White's storage was deficient in relation to both barley and malt storage. *Secondly,* estimates both before and after Completion had the cost of additional malt storage alone at around $30 million. *Thirdly,* the Joe White executives were of the view that all plants except Tamworth required further barley and malt storage.[3490] The actual cost for Sydney and Port Adelaide was $11.4 million. *Fourthly,* the Viterra Practices

3490 See pars 1216, 1218 above.

resulted in less storage requirements than would otherwise have been required.[3491] *Fifthly*, the amount $30 million did not factor in ongoing maintenance, repairs and personnel costs.

4158 Accordingly, with reference to the information available at the time, and upon an analysis of the available data, it would have been reasonable for a hypothetical purchaser to conclude that expenses for storage would be about $30 million. Further, although far from determinative, the fact that Potter accepted that his first report was the report the court should prefer in ascertaining the true value of Joe White was of some significance, as in that report he adopted the capital expenditure of $30 million. Furthermore, to assume that either no or minimal capital expenditure was required would run entirely counter to the underlying premise of Potter's first report; namely, to remedy the effects of ceasing the Viterra Practices, a substantial amount of capital expenditure for storage would be required.[3492]

4159 As to the matter of timing, Klein's assumption that the hypothetical purchaser would expect a decrease in sales volumes over 3 years before returning to equilibrium over the subsequent 3 years has been accepted. Consistent with this, a hypothetical purchaser also would conclude that additional storage would be built over a 5 year time period that correlated with the initial reduction and then the rise in demand, in preparation for a return to full capacity in year 6. Therefore, Klein's assumption that capital expenditure would be spent pro-rata over 5 years was appropriate.

X.73.9.3.2 Potter's approach

4160 It follows that Potter's assumption that the hypothetical purchaser would incur required capital expenditure as soon as practicable was unreasonable. This was because there would be no need for all the additional storage until there was a

---

3491 Further storage would have been required if all required barley varieties were available at all plants (according to the requirements of customers receiving malt from particular plants). In addition, further storage would have been required for malt storage in relation to malt that would not be delivered, or the delivery of which was delayed, because of non-compliance issues.

3492 To be complete, Potter stated that, to ascertain the true value of Joe White, the effect of the Viterra Practices could be "corrected by assuming additional operating costs and/or additional capital expenditure costs". As to how capital expenditure of $30 million was integral to Potter's assumptions and calculations in his first report, see pars 4074, 4077, 4090, 4102 above.

sufficient demand for malt. Further, the view Potter expressed in the first joint report, that he assumed capital expenditure would be incurred as soon as practicable so that the effect of the Viterra Practices were minimised, was made before he had adopted Klein's assumptions with respect to a reduction in volume for a period of time after Completion. Notwithstanding Potter's evidence on the topic, the rationale for the assumed urgency of the expenditure was largely dissipated once Potter assumed reduction in volume and the entirety of the increased storage capacity was not needed immediately to meet the presumed reduced demand.

X.73.9.3.3 The Viterra Parties' adjustments to Potter's approach

4161 The Viterra Parties' adjustments to Potter's approach should be rejected. It was not appropriate to rely on hindsight, by adopting the amount which Cargill proved was actually spent on additional malt storage. Even if Potter did consider a range of alternative calculations in his third report, Potter did not rely on that report and hindsight reasoning in this manner was inappropriate.

4162 Overall, Klein's assumptions were reasonable. To the extent the experts disagreed on the impact of the Viterra Practices on capital expenditure, the court accepts Klein's approach in favour of Potter's approach.

X.73.10 Synergies

4163 A critical item of disagreement between the experts was the treatment of synergies. *First*, they disagreed upon whether the hypothetical purchaser would have been a financial or a strategic bidder and therefore, whether there would have been any synergistic value at all. That matter has been determined on the basis that the hypothetical purchaser would not have been confined to financial bidders.[3493] *Secondly*, if the hypothetical purchaser would have been a strategic bidder, they disagreed upon the synergistic value.

4164 The experts agreed on the definition of synergistic value:[3494]

> [A]n additional element of value created by the combination of two or more assets or

[3493] See par 4054 above.
[3494] See fn 3314 above.

interests where the combined value is more than the sum of the separate values. If the synergies are only available to one specific buyer then it is an example of special value.

4165 Further, the experts agreed that:

(1) Synergies available to all market participants ("Common Synergies") should be included in an assessment of market value.[3495]

(2) Synergies available to a specific or only some participants ("Unique Synergies"), also known as special value, should be excluded from market value.

4166 Accordingly, market value is the standalone value of the business plus any Common Synergies.[3496]

X.73.10.1 Klein's approach

4167 Klein considered that if the hypothetical purchaser would have been a strategic bidder, there would be Common Synergies of $8.6 million. Klein disregarded Unique Synergies and subtracted dis-synergies which Goldman Sachs stated were assumed to be 100 percent of Cargill's for all bidders over 2014 and 2015.[3497] To ascertain the value of Common Synergies, Klein had regard to the pre-Acquisition Goldman Sachs valuation. Klein explained that Goldman Sachs were well-known strategic advisers that he understood had advised in relation to more mergers and acquisitions in the

---

3495 Market participants in this context are not confined to strategic purchasers, but financial purchasers by definition have no synergies available to them. It was accepted that if strategic purchasers formed part of the group of market participants for the purpose of determining the hypothetical purchaser, then it would be the strategic purchasers that would set the value as they would have Common Synergies that would form part of the market value. Klein's evidence was that his "secondary model" incorporated Common Synergies for strategic buyers.

3496 The Viterra Parties observed that they were unable to locate any authorities in relation to the question of synergies in the context of considering the concept of true value. They noted that in various statutory contexts, it has been held that synergies are not to be included in fair value. See *Winpar Holdings Ltd v Austrim Nylex Ltd* (2005) 193 FLR 457, 463 [19]; 469 [35] (Charles JA, with whom Buchanan and Eames JJA agreed); *Capricorn Diamonds Investments Pty Ltd v Catto* (2002) 5 VR 61, 77 [62]; 80 [73]-[74]; 81 [76] (Warren J) for examples under the *Corporations Act*. Also see *Commissioner of State Revenue (WA) v Placer Dome Inc* (2018) 265 CLR 585, 623-625 [132]-[138] (Kiefel CJ, Bell, Nettle and Gordon JJ) for an example in a statutory valuation exercise of the *Stamp Act 1921* (WA).

3497 Klein evaluated Common Synergies as $8.6 million, applying a discount rate of 11.7 percent to give a value as at 31 October 2013. The total synergies taken into account for 2014 included $9.1 million of dis-synergies for integration costs, as a result of which Klein concluded $8.6 million were common dis-synergies for 2014. In 2015, Klein estimated dis-synergies at $0.5 million, but in his first report did not make further provision for dis-synergies for the later years. See also fn 3498 below.

United States (if not the world) than anyone else. He considered the work done by Goldman Sachs on synergies was the best available evidence, and had a high degree of credibility. The Goldman Sachs valuation analysed the ability of competing bidders to capture synergies relative to Cargill. Klein quantified the amount of Common Synergies between bidders and adjusted the Common Synergies for the impact of the Viterra Practices.[3498] Klein made the general observation, by reference to empirical data, that there was a poor track record of purchasers realising synergies that were estimated when purchasing another entity, including by reason of under-estimating dis-synergies.

X.73.10.1.1 The Cargill Parties' submissions

4168 The Cargill Parties submitted that, if the court were to find that the hypothetical purchaser would have been a strategic bidder, then the court should accept Klein's conclusion that no part of the Unique Synergies ought to be included and that Common Synergies would have been $8.6 million.

X.73.10.1.2 The Viterra Parties' submissions

4169 The Viterra Parties made the following submissions regarding Klein's treatment of synergies.

4170 *First,* Klein made assumptions about the hypothetical purchaser's ability to realise synergies which were not based on instructions or evidence, and which were contrary to the evidence at trial. It was submitted that despite Klein's attempts to justify his conclusions and reliance on instructions of post-Acquisition events, he did not enquire as to what synergies were actually realised, nor was he provided with any instructions

---

[3498] To analyse Common Synergies on the basis that the Viterra Practices and Policies were disclosed, Klein applied a number of adjustments to the value of synergies given in Cargill's deal model. First, Klein multiplied Cargill's projected synergies by the percentage identified by Goldman Sachs as common across all strategic bidders. Then, Klein assumed that "new volume" synergies were likely to have the same requirements for barley varieties and certification as existing sales volume based on his assumptions about volume, discounts and margins and adjusted them accordingly. Thus, on the basis that new volumes of exports were diminished by 9.7 percent upon the cessation of using non-compliant barley varieties, Klein assumed that 9.7 percent of new volume projected synergies would also be lost. Similarly, on the basis that 37.2 percent of export volume had Certificate of Analysis problems, Klein assumed that the same percentage of new volume would have Certificate of Analysis problems, as well as price discount issues. Further, Klein made adjustments on the basis of the assumption of loss of half of the premium price.

in that regard.[3499]

4171 *Secondly,* Klein did not independently assess the financial values of any synergies, he merely relied upon the estimates included in the Goldman Sachs valuation. However, it was submitted that there was no reasoning provided for the estimates or assumptions. In the Goldman Sachs valuation, the expected synergies of other bidders were estimated as a percentage of synergies available to Cargill and all strategic bidders were assumed to bear 100 percent of Cargill's integration costs over financial year 2014 to 2015.

4172 *Thirdly,* Klein's valuation was informed by a page in the Goldman Sachs valuation which contained a series of pie charts indicating the estimated synergies available to other bidders. It was submitted that Klein's explanation as to how he used the information was confusing and unclear. The Viterra Parties gave the example that in the Goldman Sachs valuation that 1 of the 4 strategic bidders, Soufflet, was listed as having 25 percent of the available Cargill synergies. Soufflet was estimated as having no ability to capture synergies in production or in selling, general and administrative expenses, and consequently, Klein excluded those synergies entirely on the basis they were not Common Synergies. In relation to the listed synergies that Soufflet was able to capture, the entire value of Common Synergies was limited to 25 percent, which was equivalent to the proportion that Soufflet was able to capture. The Viterra Parties submitted that Klein explained the reason that Soufflet had no synergies for selling, general and administrative expenses was because Soufflet had no relevant existing operations in the Asia-Pacific region. Given that Soufflet was the only 1 of the 4 strategic bidders identified by Cargill which did not have operations in the Asia-Pacific region, it was submitted that Soufflet had lower prospects of matching the offers of the other participants, and accordingly should not have been treated as a relevant bidder in the market for the purpose of assessing Common Synergies.

4173 *Fourthly,* it was inconsistent for Klein to simply accept Goldman Sachs' assumption

---

[3499] The Cargill Parties submitted that, for the purposes of valuing Joe White at October 2013, it was not relevant to evaluate synergies that were actually achieved post-Acquisition.

that all bidders would incur identical integration costs, given that Klein identified that Soufflet did not have any existing operations in the Asia-Pacific region. It was submitted that Klein's explanation, that all mergers and acquisitions have integration costs, was not credible given that he significantly limited the amount of positive synergies to only those that would be obtained by Soufflet. Further, it was submitted that Goldman Sachs appeared to have excluded dis-synergies from their own assessment of net synergies.[3500]

4174 *Fifthly,* Klein said that he "accepted [Goldman Sachs'] assessment of [C]ommon [S]ynergies as the best available estimate of such synergies". However, it was submitted that Goldman Sachs had a synergy category called "origination" which did not appear to translate to any of the synergies incorporated into Klein's calculations. The Viterra Parties submitted that in the absence of an explanation of origination it should be inferred that origination referred to the types of synergies that Cargill anticipated would be realised by its grain and oilseeds supply chain. However, it was submitted that Klein excluded such synergies. Further, the Viterra Parties referred to Klein having excluded freight synergies which Goldman Sachs identified, but which it was submitted were not addressed in the analysis of synergies available to other bidders.

4175 *Sixthly,* Klein discounted many of the synergies from the Goldman Sachs valuation on the basis that he assumed that volume synergies would be affected due to the Viterra Practices in the same way as he anticipated adjustments would be applied to the existing volume forecasts.[3501] It was submitted that those assumptions were not established.

4176 *Seventhly,* it was submitted Klein provided no evidentiary basis or reasoning in his report for the conclusions reached about hypothetical purchasers expecting positive synergies to be difficult to realise.[3502] It was further submitted that those conclusions

---

3500 Whether or not this was the case was not explored with any witness. The table referred to provided for total dis-synergies, and then for net synergies excluding dis-synergies.

3501 See pars 4070-4071 above.

3502 The Cargill Parties noted that this proposition was not put to Klein. Further, they submitted that for

were contrary to evidence at trial regarding the actual realisation of synergies post-Acquisition.[3503]

4177 *Eighthly,* it was contended that Klein's approach was flawed because he did not separately assess the value of the benefits that Cargill acquired that were attributed to synergies, and thus the effect of his approach would be to significantly over compensate Cargill for its claimed loss.[3504] The Viterra Parties submitted that the Cargill Parties overlooked synergies (other than Common Synergies). It was submitted that, in the absence of evidence otherwise, Cargill would have obtained a benefit, which would presumably be recorded in their internal business accounts for benefits obtained on behalf of their associated entities. Further, it was submitted that the experts were not provided with instructions concerning how to value synergies or lost synergies or assumptions by which they could attribute value to synergies. Furthermore, it was submitted that on the evidence, many synergies were gained. Therefore, it was submitted that apart from Common Synergies, the Cargill Parties did not take into account synergies in their valuation, which resulted in an amount of approximately $100 million being unaccounted for in their case.

4178 In addition, the Viterra Parties noted that Klein accepted that if the court found the additional $15 million paid by Cargill to secure the agreement was paid because Cargill saw benefit in creating a worldwide reach of its malt business, then that would have been a Unique Synergy. This was notwithstanding Klein accepted the market price was ultimately $420 million.

X.73.10.2 Potter's approach

4179 In applying the discounted cash flow method, Potter assumed that the hypothetical purchaser would expect cash flows that were projected in Cargill's deal model.

---

the purposes of evaluating the Viterra Parties' objections to Klein's figure of Common Synergies it was necessary to consider whether the details of how Klein arrived at his figure were the subject of challenge.

3503 Again, the Cargill Parties noted that this proposition was not put to Klein.

3504 The Cargill Parties submitted that the relevant true value was not the Cargill true value, it was the doctrinal true value. Further, it was submitted that it was inappropriate to use hindsight to determine further value that Cargill obtained.

Cargill's deal model included a best case, a base case and a downside case scenario for synergies, of which Potter adopted the base case of $107 million of synergies forecast to be achieved by Cargill.[3505] Potter did not attribute any value to strategic synergies that were identified but not quantified by Cargill. Potter applied a discount rate to the relevant cash flows that he considered included a level of specific risk.

4180 Further, in applying the capitalisation of future maintainable earnings method, Potter assumed that the value of synergies that a hypothetical purchaser would be willing to pay would be incorporated via the multiple applied to assumed maintainable earnings.

4181 As already explained, to arrive at an overall value, inclusive of synergies and absent the Viterra Practices, Potter averaged the results from the discounted cash flow method and the capitalisation of future maintainable earnings.

X.73.10.2.1 The Viterra Parties' submissions

4182 The Viterra Parties submitted that the court should either:

(1) Accept Potter's approach to synergies as it was the only approach which fully accounted for the benefits that Cargill Australia actually obtained (albeit partly for the benefit of other Cargill entities) and thereby avoided over compensating Cargill Australia.

(2) Or, exclude all synergies for the purpose of the valuation evidence (or at least any that were not treated as part of the value of Joe White), and for them to be treated as a separate benefit forecasted to be acquired by Cargill Australia and other entities, which the Cargill Parties did not

---

3505 Perhaps this was explained by Potter's observation in his first report that he considered the nature of preparing a valuation based on "market value" was that the purchaser to whom the highest level of synergies accrued in essence became "the market". Potter continued by stating that the purchaser to whom the highest value accrued (including all sources of value such as synergies) was assumed to offer the highest price which would be assumed to be accepted by the seller. Potter then stated that it was the value to this hypothetical purchaser that became the market value of the asset. This position did not appear to sit entirely comfortably with the position stated later in this first report (that in calculating the market value of Joe White he was only concerned with the level of synergies available to any purchaser), nor that ultimately adopted by Potter: see par 4164 above.

prove was lost nor accounted for in Cargill Australia's claim.

4183 With regard to Potter's approach of adopting the entirety of Cargill's estimated synergies of $107 million, the Viterra Parties submitted that Potter gave evidence during cross-examination that he did not have enough information about other bidders to determine the value of their synergies relative to Cargill. It was submitted that in acknowledging that he could have adopted the Goldman Sachs valuation, Potter said that he did not know how strong an opinion that would be because it was Goldman Sachs' opinion of other bidders' synergies, based on desktop research.

4184 It was submitted that Potter acknowledged that if the other bidders did not have grain and oilseeds businesses, then it was clear that such synergies should be excluded. However, the Viterra Parties contended that Potter was correct to include such synergies, as it was contended all 4 of the strategic bidders did have similar business which could obtain origination synergies similar to Cargill.[3506]

4185 Further, the Viterra Parties submitted that Potter's response at the end of his evidence that the court should adopt the $107 million of synergies in the discounted cash flow method, without qualifying his answer, should be considered in light of the assumptions and limitations upon which he had already acknowledged he based his opinions regarding synergies available to other bidders.

X.73.10.2.2 The Cargill Parties' submissions

4186 The Cargill Parties submitted that Potter's analysis of synergies should be rejected for the following reasons:

(1) Cargill would not have been a bidder for Joe White, therefore Cargill's Unique Synergies were not a useful proxy for the hypothetical purchaser.

(2) Cargill's assessment of synergies in Cargill's deal model were prepared without knowledge of the Viterra Practices, and therefore did not reflect

3506 See par 4174 above.

an assessment of the impact of Viterra Practices upon synergies.

(3) Cargill's deal model assessed Cargill's Unique Synergies, not Common Synergies.

(4) If, contrary to the Cargill Parties' primary submission, the court were to consider events after Completion to seek to ascertain the amount of synergies actually achieved, hindsight confirmed that the effect of the Viterra Practices upon Cargill's synergies was dramatic.[3507]

(5) Potter ignored direct evidence in Goldman Sachs' valuation of the synergies of other bidders at lower levels than Cargill, and Potter did not undertake any other analysis of the other bidders' synergies.

(6) Potter expressly accepted that if he assumed that other participants did not have a grain and oilseeds business, the synergy for that business would need to be taken away, but he would not accept the direct evidence of Goldman Sachs' analysis of the synergies of other bidders.

X.73.10.3 Analysis

X.73.10.3.1 Klein's approach

4187 On the premise (which has been found) that the hypothetical purchaser would include strategic bidders, the best evidence before the court as to the synergies of strategic bidders was Goldman Sachs' draft valuation. The Viterra Parties noted that this evidence was from someone that did not give evidence at trial. So much is plain, but it was a business document created in 2013 for the purpose of assisting Cargill with its bid and was admitted into evidence without limitation. Further, it was prepared by an organisation which had been retained by Cargill for its expertise in relation to such matters. In summary, there was no good reason put forward as to why this document could not be relied upon for the valuation exercise.

4188 The Goldman Sachs valuation identified 4 strategic bidders, 3 with existing operations

---

3507 The Cargill Parties referred to the third commitment review as the document containing the relevant information on this issue: see par 1837 above.

within the Asia-Pacific region, and the other, Soufflet, without existing operations within the Asia-Pacific region. In contrast with the other 3 bidders, Soufflet was identified by Goldman Sachs as unable to capture synergies for 2 of the 6 identified synergies, namely production synergies, and service, general and administrative synergies. However, all 4 bidders were similar in that they were identified as all having abilities to capture new volume, margin improvement, new revenue and origination synergies. Given the similarities as strategic bidders between the identified competitors, notwithstanding their differences, Soufflet was a relevant bidder for the purposes of assessing the value of Common Synergies.[3508] In short, it was a strategic purchaser of substance and was considered as such by Goldman Sachs in 2013.[3509]

4189 A hypothetical purchaser would have determined the true value of Joe White by adding the value of Common Synergies to the standalone value. To do so, the hypothetical purchaser would assess all strategic bidders in the market to determine to what extent competitors had the ability to capture synergies. As part of this, a hypothetical purchaser would undertake a synergy estimating exercise, likely to involve desktop or other market research (including from advisers), to quantify various competitors' abilities to capture synergies. It was reasonable to assume that the assessments undertaken by the hypothetical purchaser would not be dissimilar from the Goldman Sachs valuation, given that they would be based on publicly available information.[3510] This provided a sound basis to conclude it was reasonable

---

3508 For completeness, the International Valuation Standards defined participants as "… the whole body of individuals, companies or other entities that are involved in actual transactions or who are contemplating entering into a transaction for a particular type of asset. The willingness to trade and any views attributed to market participants are typical of those of buyers and sellers, or prospective buyers and sellers active in the market on the valuation date, not to those of any particular individual or entity."

3509 Although Soufflet was not considered amongst the leading competitive bidders, being Malteurop, Co-Operative Bulk and "Sumitomo/Emerald", Goldman Sachs prepared an analysis of an internal rate of return for Soufflet on an illustrative bidding price of $400 million.

3510 The "Fair Value Measurement" information on IFRS 13, as disseminated by KPMG as part of a questions and answers publication and as relied upon by Klein, referred to a prospective purchaser adjusting for "unobservable inputs" by using "reasonably available information" that indicated that market participants would use different data, or there being something particular to the entity including entity-specific synergies: International Financial Reporting Standards, "Fair Value Measurement, Questions and Answers, US GAAP and IFRS", KPMG December 2015, 28.

for Klein to rely on Goldman Sachs' calculation of positive synergies where he assumed such synergies would be available.

4190 Klein did not include Goldman Sachs' estimate for "origination" synergies, a category which was identified but not defined in Goldman Sachs' valuation. As noted above,[3511] the Viterra Parties contended that it should be inferred that origination synergies were synergies anticipated to be realised by grain and oilseeds supply chains. Although not explored at trial, on the face of the Goldman Sachs valuation, this submission must be correct.[3512] Klein explained under cross-examination that he determined that any available synergies for grain and oilseeds supply chain would have been included by Goldman Sachs within margin improvement synergies. Whether or not this explanation was correct, because of Klein's treatment of this item, the issue was more apparent than real.

4191 Klein included a line item in his calculations for grain and oilseeds supply chain, which he assumed to be nil. This was inconsistent with the information available from the Goldman Sachs valuation, which had all strategic purchasers having some synergies in this regard, albeit Soufflet had only 25 percent of those forecast to be realised by Cargill.[3513] That said, the synergies provided by Goldman Sachs were estimated without any knowledge of the Viterra Practices.

4192 Klein's evidence was that he believed the historical outcomes that Goldman Sachs had relied upon in forecasting anticipated sales attracting premium prices would no longer be achieved once a hypothetical purchaser ceased the Viterra Practices. Relevantly, Klein concluded that the anticipated synergy related to the increase in the margin for the grain and oilseeds supply chain would be difficult for a hypothetical purchaser to achieve if, as he assumed, the failure to comply with customer

---

3511 See par 4174 above.

3512 A comparison between page 25 (which listed the competitors and their estimated synergies) and page 10 (which provided an overview of synergies) showed a list of the same items (new volumes, margin improvement, new revenue, production, and selling, general and administrative expenses) except that instead of origination there appeared the items "Leveraging OT" and "Leveraging GOSC Australia". Further, the evidence at trial more generally indicated that origination was part of the functions of the grain and oilseeds supply chain.

3513 Klein stated in his model that all synergies identified by Cargill had been adjusted for the percentages attributed to other bidders in the Goldman Sachs valuation.

specifications in the past was caused (at least in part) by insufficient storage capacity. The connection between this reasoning and why no margin increase at all was allocated in this regard was somewhat opaque, but Klein's adjustments to Common Synergies were overall very minor and conservative. As he noted in re-examination, the difference between his estimate of Common Synergies of $8.6 million (taking into account the Viterra Practices) and Goldman Sachs' of $9.6 million (which made no allowance for the Viterra Practices) was relatively minor.

4193 An adjustment downwards on Common Synergies was an appropriate approach, as it would be likely that a hypothetical purchaser would anticipate considerable disruption upon learning of the Viterra Practices, including in relation to synergies that were previously considered achievable. To summarise, having determined the Common Synergies, the hypothetical purchaser would adjust the synergistic value to reflect any impact that the Viterra Practices would have on synergies. Based on the above reasoning, hypothetical purchasers would expect the Viterra Practices to impact cash flows, such as the volume of malt sold and the reduction or loss of premium on sales, and consequently this would have been likely to have a detrimental effect on the synergies available to strategic bidders. Therefore, the hypothetical purchaser would adjust their analysis to reflect the impact of the Viterra Practices on Common Synergies. On balance, and subject to the matter of dis-synergies which is discussed immediately below, the approach taken by Klein to Common Synergies ought to be accepted.

4194 However, I cannot be satisfied it was appropriate for Klein to adopt Goldman Sachs' assumption of dis-synergies, whereby he assumed that all bidders would incur identical integration costs in their entirety.[3514] Whilst it was reasonable for Klein to rely on Goldman Sachs' positive synergy calculations, the dis-synergies calculations, namely the integration costs of $9.6 million, assumed a single cost for all bidders, including Soufflet. Notwithstanding what was contained in the Goldman Sachs

[3514] Klein's evidence was that integration costs were managerial joinder costs and were treated as actual dis-synergies of bringing 2 firms together.

valuation,[3515] it was unreasonable to assume that Soufflet would incur the same integration costs given that it was assumed that it would not be able to capture certain synergies that the other bidders could capture. Klein noted that all mergers and acquisitions have integration costs. So much was plainly correct. Klein acknowledged that there would be some variability, but did not know whether the costs would tend to skew higher or lower than what Goldman Sachs had allowed. On this basis, he suggested that his calculation of integration costs was a "mid-point determination" based on the paucity of data.

4195 Given the limited data available from Goldman Sachs and the differences between bidders, the assumption that the integration costs would be consistent with the Goldman Sachs valuation has not been satisfactorily established. Ordinarily, with a strategic buyer there would always be a level of integration costs, but in light of the limited evidence it is not possible to arrive at a figure with any certainty. Further, it was clear that Klein's adoption of this common position on dis-synergies was based on no more than his interpretation of the ambiguous language used by Goldman Sachs, rather than any information in the Goldman Sachs valuation that would provide some justification for the assumption made.[3516] Although the evidence was far from perfect, on the material available dis-synergies representing integration costs ought to form part of the calculation referrable to Common Synergies also at a level of 25 percent[3517] of what had been allowed by Goldman Sachs.[3518]

4196 In seeking to arrive at the appropriate figure for synergies for the purpose of assessing true value, Klein was correct not to rely on post-Acquisition events.[3519] For this reason, Klein was correct to disregard any benefits Cargill may have actually acquired that

---

3515 See par 4167 above.

3516 It was stated by Goldman Sachs: "All bidders … are assumed to bear 100% of Cargill's integration/dis-synergy costs over FY14-15". In short, there was nothing beyond this which indicated that Goldman Sachs considered that was the actuality or that there was any basis to assume that such costs were likely to be common.

3517 In the Goldman Sachs valuation, it was estimated that all strategic bidders would achieve 25 percent or more of Cargill's synergies.

3518 This is likely to be a conservative figure as it would be expected that some integration costs would be proportionately less when the synergies were greater. In other words, some integration costs would be likely to be fixed or only marginally decreased if the synergies were less.

3519 See pars 3917-3921 above.

were attributable to the synergies.

X.73.10.3.2 Potter's approach

4197 Potter's approach to valuing synergies was inappropriate. Potter incorrectly adopted, as part of his discounted cash flow, Cargill's deal model not only as a starting point but also as an end point. Potter assessed Cargill's Unique Synergies as a proxy for the hypothetical purchaser without considering the synergies available to other potential purchasers. This was a flawed approach because, as Potter himself acknowledged, only Common Synergies are relevant in determining true value. If it were the fact that Potter did not have information available to him to ascertain what the Common Synergies amongst strategic bidders might have been, this did not provide a legitimate basis simply to ignore valuation principles and use the Cargill deal model as a default.

4198 In addition, fundamentally it was incorrect, without further investigation, to use any particular bidder as a proxy for the hypothetical purchaser's assessment of Common Synergies. Further, on the facts as found, the inappropriateness of using Cargill as that proxy was compounded as Cargill would not have been a market participant once the existence of the Viterra Practices had become known. Furthermore, Cargill's deal model was prepared absent knowledge of the Viterra Practices, therefore it did not reflect the impact of the Viterra Practices on synergies.

4199 Moreover, it would be unreasonable for a hypothetical purchaser to assume that the Viterra Practices would have no impact at all on synergies given the assumed impact on volume and cash flows.

4200 As for Potter's approach of capitalising future maintainable earnings, his approach to synergies was flawed for similar reasons. Potter's approach necessarily assumed the hypothetical purchaser would be willing to pay an amount for Joe White that assumed the full value of the synergies in total.[3520] This approach made no allowance for the hypothetical purchaser substantially reducing its forecasts for anticipated synergies in light of learning of the Viterra Practices, much less for the fact that Cargill itself would

[3520] For completeness, this was contrary to the evidence of Klein that such an approach would effectively involve a hypothetical purchaser agreeing to transfer all of the value in the synergies to the vendor which would wipe out any benefit those synergies would otherwise have realised for the purchaser.

not have proceeded with the Acquisition.

X.73.10.3.3 The Viterra Parties' adjustments to Potter's approach

4201 The Viterra Parties' submission that the court should exclude all synergies for the purpose of the valuation evidence, and actual synergies should be treated as a separate benefit forecasted to be acquired by Cargill and other entities, is rejected. The experts agreed the true value of Joe White was the standalone value of the business plus any Common Synergies. To seek to attribute the actual synergies achieved as the relevant input would be to engage solely in considering hindsight on this issue, rather than using it to ascertain the accuracy of assumptions made in assessing true value. To not include Common Synergies would be to undervalue the business. To adopt Viterra's alternate approach would be to seek to engage in a task of analysing many years of trading, with the almost impossible task of determining what matters were intrinsic and what were independent or extrinsic. Moreover, it would also give rise to an issue with respect to synergies that were achieved by subsidiaries of Cargill, Inc which were not Cargill Australia. No attempt was made by the Viterra Parties to engage in such an exercise in suggesting this alternate approach.[3521]

4202 Overall, Klein's approach was reasonable, save for the inclusion of all the dis-synergies from the Goldman Sachs valuation. A hypothetical purchaser would have concluded that the common dis-synergies would be the integration costs that were common to all market participants, and would not assume that such costs would be consistent amongst competitors.[3522] Therefore only $2.4 million (being 25 percent of the integration costs of $9.6 million) will be allowed,[3523] to reflect the difference between the Goldman Sachs valuation of dis-synergies and the amount that a hypothetical purchaser would have been likely to calculate as common dis-synergies.

X.73.11 Risk and discount rate

4203 In adopting the discounted cash flow method, the experts agreed that the discount

---

3521 The Viterra Parties submitted that this was a matter for Cargill to engage in and to exclude extrinsic factors in so doing. However, in circumstances where Cargill appropriately adopted the *Potts v Miller* approach this was not necessary.

3522 In exhibit 6 to Klein's first report, Klein identified integration costs as the only dis-synergy.

3523 See pars 4194-4195 above.

rate is set to reflect the riskiness of the cash flow; the higher the risk, the higher the rate of return required by a hypothetical purchaser acting commercially. As Potter put it, the discount rate reflects the required rate of return, and the appropriate rate of return is the rate that would be required by a purchaser to compensate it for the time value of money and the uncertainty or risk of the expected future returns being generated. Further, as Klein explained, the anticipated degree of dispersion or range of future outcomes define the level of risk, so that if the degree of anticipated dispersion is low, the risk of the investment (and hence the cost of capital and debt) is lower than if the anticipated dispersion had potentially much higher and lower outcomes.

4204 However, the experts used different methods for calculating their discount rates and disagreed on the company-specific risk. Otherwise, they generally agreed with the other components of the discount rates.

X.73.11.1 Klein's approach

4205 Klein determined the discount rate in 2 steps. *First,* he identified the baseline weighted average cost of capital discount rate determined by Deloitte, absent knowledge of the Viterra Practices.[3524] *Secondly,* Klein considered that, upon learning of the Viterra Practices, the hypothetical purchaser would have revised their perception of customer stability due to the risk of the potential loss of customers. Therefore, Klein adjusted the baseline required rate of return upward, reflecting his assessment of the additional risk-related returns required by a hypothetical purchaser.[3525] Klein considered accounting restatement literature, referencing an analogy between the situation concerning the Viterra Practices and accounting errors. Accordingly, he increased the cost of debt from 5 percent to 6 percent and the cost of equity from 15.7 percent to 17.7

3524 Klein relied on the assessment by Deloitte because Goldman Sachs only provided a rate for a financial bidder and did not assess the discount rate that a strategic bidder would have applied. Klein reviewed Deloitte's conclusions, including the calculations underlying them, and satisfied himself that they were accurate and reasonable. Deloitte determined the weighted average cost of capital as between 10 percent and 11 percent, based on a debt to equity ratio of 45 percent, with the cost of debt at 5.2 percent and the cost of equity at between 14.8 percent and 16.5 percent.

3525 In his evidence Klein noted that there were no studies that support the degree of risk to be adopted with the disclosure of the Viterra Practices as the circumstances were quite unique.

percent.[3526] This resulted in a discount rate between 11.7 percent and up to 17.7 percent. The top end of the range would be applicable if purely equity financing was used, on the basis that debt capital providers would not accept the increased risk.

4206 In Klein's primary report, he provided the formula he used to determine the weighted average cost of capital, adjusted by him for the effect of the Viterra Practices and Policies as follows:

		Deloitte estimate	**Adjusted for the effect of Viterra Practices and Policies**
Base rate	[a]	2.6%	2.6%
Spread over base rate	[b]	2.7%	3.8%
Cost of debt	**[c] = [a] + [b]**	**5.2%**	**6.3%**
Lower bound cost of equity		14.8%	16.7%
Upper bound cost of equity		16.5%	18.6%
Cost of equity	**[d]**	**15.7%**	**17.7%**
Weighted average cost of capital for Joe White			
Adjusted cost of debt	[c]	5.2%	6.3%
Adjusted average cost of equity	[d]	15.7%	17.7%
Assumed long-term debt-to-capital ratio	[e]	45.0%	45.0%
Corporate tax rate	[f]	30.0%	30.0%
Weighted average cost of capital	**[g] = [c] x [e] x (1-[f]) + [d] x (1-[e])**	**10.2%**	**11.7%**

4207 If the assumed long-term debt-to-capital ratio input in this formula (represented by "e") were changed, the weighted average cost of capital would change accordingly:

3526 See fn 3524 above.

Assumed long-term debt-to-capital ratio	Weighted average cost of capital (adjusted for the effect of Viterra Practices and Policies)
0%	17.7%
10%	16.4%
20%	15.0%
30%	13.7%
40%	12.4%
45%	11.7%
50%	11.1%
60%	9.7%
70%	8.4%
80%	7.1%
90%	5.7%
100%	4.4%

X.73.11.1.1 The Cargill Parties' submissions

4208 The Cargill Parties submitted that Klein's discount rate range of 11.7 percent to 17.7 percent should be adopted and that 17.7 percent was most appropriate.

4209 The Cargill Parties summarised Klein's approach as based on his assessment that a hypothetical purchaser, after receiving disclosure of the Viterra Practices, would have:

(1) Altered its perception of the risks inherent in owning Joe White and become concerned about customer stability.

(2) Viewed the risks of investing in Joe White as higher than they were prior to learning of the Viterra Practices.

(3) Identified various risk factors that were unknown to bidders at the time of the Acquisition, including concerns about the reliability of Joe White's financial information.[3527]

(4) Required a higher return to compensate for higher risk.

(5) Adjusted the discount rate upwards to reflect higher risks which could not be addressed in cash flows.

3527 The Cargill Parties noted that Klein had considered 24 specific risks, including risks regarding losing premium pricing, increasing rejection rates and reputational damage. The Viterra Parties submitted that Klein's assumption that hypothetical purchasers would review their perception of the reliability of financial statements was based upon academic studies that were not relevant as they were concerned with the correction of published financial data.

4210 The Cargill Parties submitted that Klein emphasised certain risks to forecasting the cash flows that would be identified by hypothetical purchasers, including customer loss and the flow-on impact, the lack of judgment and integrity of management, litigation risks and future discounts. Consequently, it was submitted that Klein considered that a bidder would reconsider and determine afresh all the valuation inputs in light of the new information.

4211 Further, the Cargill Parties submitted that Klein cross-checking the discount rate by looking at the analogous scenario of adjustments to discount rates caused by accounting standard errors and arriving at a range of 11.7 percent to 17.7 percent was a useful exercise, given the uniqueness of the Viterra Practices.

4212 Furthermore, the Cargill Parties submitted that given the risk associated with Joe White's cash flow, the court should assume that no lender would provide debt capital, and therefore, all financing would be equity capital, resulting in a discount rate of 17.7 percent. Regardless, it was submitted that given the riskiness of Joe White's cash flow, the discount rate would have sat at the top end of Klein's range.

X.73.11.1.2 The Viterra Parties' submissions

4213 The Viterra Parties noted that both Potter and Meredith disagreed with Klein's discount rate.

4214 With regard to Klein's usage of the Deloitte valuation report, the Viterra Parties submitted that the discount rate in the report included risk in relation to synergies which Cargill had hoped to achieve, and which Klein had mostly excluded from his valuation and therefore it was inapposite to his task of valuing Common Synergies.[3528] Further, it was submitted that Potter considered that the Deloitte discount rate was also an inappropriate starting point for "other reasons".[3529]

3528 The Cargill Parties submitted that this was not put to Klein.

3529 It was difficult to identify what was intended by this submission. Potter spoke to 5 components. For risk free rate, he adopted the same rate as Deloitte. For market risk premium, there was a difference of only 1 percent (from 7 percent to 6 percent). The geared beta applied by Deloitte was only "slightly higher" than that applied by Potter. In relation to capital structure, Deloitte assumed 45 percent debt and 55 percent equity, which Potter noted reflected a higher level of debt than he (and Meredith)

4215 Further, the Viterra Parties submitted that Klein applied a significant specific risk uplift to his discount rate, which was excessive and unjustifiable, for a number of reasons.

4216 *First*, it was submitted that Klein's approach to the discount rate was inconsistent with valuation standards. The Viterra Parties relied on Potter's explanation that Klein's valuation was not open as a matter of valuation practice. Potter noted the dramatic effect a small change in discount rate would have and that the rate assumed an effect on the value in perpetuity, whereas Potter considered many of the effects of the Viterra Practices were temporary. Potter continued by stating that there was no observable market data that allowed for the measurement of the Viterra Practices' effect on the discount rate and therefore adjusting the discount rate would be guesswork. As such, Potter claimed that the only appropriate way to address the risk was by adjusting cash flows, as he had done, and that this was the preferred method according to the accounting standards. Further, Potter considered that the concept of true value would allow the use of hindsight to some extent to assess if any unmeasurable risks at the date of valuation did have a significant value and whether they did emerge.

4217 The Viterra Parties referred to Potter's evidence on the topic and submitted that Potter's reasoning was fully supported by the accounting standards document that Klein had been provided during opening statements.[3530] In this document it was stated that an "arbitrary adjustment for risk, or one that cannot be evaluated by comparison to marketplace information, introduces an unjustified bias into the measurement". The accounting standards provide that where a reliable estimate of the market risk premium is not obtainable, "the present value of expected cash flows, discounted at a risk-free rate of interest, may be the best available estimate of fair value

---

assessed (which presumably, with a higher level of debt, would make the overall cost of funds for the transaction less not more). With respect to the specific risk premium, Potter reviewed each of the matters Deloitte raised in determining the specific risk premium and agreed with the concept that adjustments could be made reflecting each of those matters. However, rather than taking any issue with the matters, Potter noted that he would "prefer" to make adjustments to the forecast cash flows rather than the discount rate.

3530 Statement of Financial Accounting Concepts No. 7 Using Cash Flow Information and Present Value in Accounting Measurements, published by the Financial Accounting Standards Board in February 2000.

in the circumstances".

4218 *Secondly,* it was submitted that Klein incorrectly assumed that Joe White had erroneous or inaccurate financial statements. The Viterra Parties noted that the experts had agreed in writing in a joint expert report that it was immaterial whether the Viterra Practices rendered Joe White's financial statements unreliable as foundational underpinnings for the true value. However, it was submitted that Klein attempted to backtrack on this (by stating that he understood the agreed position between the experts to be in the context of the experts' extrinsic discussion about compliance with formal accounting rules as opposed to the financial statements being reliable as a prediction of future outcomes in projecting the impact of the Viterra Practices and Policies).[3531] The Viterra Parties submitted that Klein acknowledged that the reliability of the financial statements was 1 of the most important factors he advanced in relation to determining the weighted average cost of capital for a strategic bidder.[3532]

4219 It was submitted that Klein merely asserted that his primary report concluded that the financial statements summarised in the Information Memorandum were unreliable.

4220 The Viterra Parties submitted that Klein maintained his position that, by referring to "financial statements" he was referring to the information contained in the

---

3531 Klein's evidence on this point was plainly correct. A significant thrust of Klein's approach was to proceed on the basis that the historical financial statements could not form a reliable basis for estimates of future cash flows and therefore were unreliable in assessing the true value of Joe White. There was no backtracking as contended by the Viterra Parties. Klein's position was expressly referred to in his first expert report, where Klein stated that disclosure of the Viterra Practices would be likely to generate concerns among potential purchasers regarding the reliability of Joe White's financial accounts. This observation referred to an earlier part of his first report, in which Klein stated that potential purchasers commonly rely on the historical performance to gauge future profitability. Not surprisingly, Klein suggested that the existence of the Viterra Practices and Policies would cast doubt upon the professionalism of the company and the integrity of its management. He referred to the prospect of potential purchasers having substantial doubts about a company's historical financial statements and the trustworthiness of a seller's representations, with the consequence that they were likely to refrain from participating as bidders or to reduce their bid prices to incorporate lower expectations of future profitability and increased uncertainties about the achievability of such profits.

3532 This submission reflected Klein's evidence, but did not indicate that Klein thought that Joe White's historical financial statements were reliable for the purposes of forecasting or that he thought their reliability was immaterial. Klein gave evidence that the reliability of the financial statements went to the ability to assess risk and therefore the appropriate weighted average cost of capital. Indeed, as set out above, he specifically rejected the proposition when it was put to him in cross-examination that the reliability of the historical financial statements was immaterial.

Information Memorandum, even though he had been taken to passages in the first joint report where Klein: (1) opined that the Viterra Practices likely affected the reliability of Joe White's financial statements; and (2) separately, acknowledged that Deloitte had not detected misstatements in Joe White's financial statements. Klein explained that he defined financial statements in both the broad sense and the narrow sense. The Viterra Parties submitted his explanations were confusing. They contended Klein's explanation, that on the first occasion he had meant financial statements in the broader sense found in the Information Memorandum and in the second he had been referring to a narrow meaning of statutory accounts or equivalents, should be rejected.

4221 Further, it was noted that Klein acknowledged that whilst his report had statements such as "there *might* be a basis" for concluding that the financial statements were unreliable, he had not in fact concluded in his report that the Joe White financial statements were unreliable. The Viterra Parties referred to Klein's acceptance that the issue of whether he concluded that the statements were false, arose because he relied on studies that showed how a weighted average cost of capital would be influenced by an entity that had issued incorrect financial statements and subsequently corrected those financial statements.

4222 Furthermore, it was submitted that after preparing the first joint report, upon learning that Joe White's financial statements were not the subject of misstatements, Klein commented in the further joint report that he only relied on the studies regarding misstatements to the extent that they were an analogous benchmark for gauging how market participants would respond to the disclosure of the Viterra Practices and the relevance of those studies did not depend on the financial statements being erroneous. However, the Viterra Parties submitted that Klein's explanation for how he used the studies was inconsistent with what he had previously stated and that his report was therefore premised on the incorrect assumption that there were misstatements in Joe White's financial statements.[3533]

3533 But see par 4221 above.

4223 *Thirdly,* it was submitted that Klein partly relied on general business risks to justify the discount rate he arrived at, which were simply inherent in most businesses. It was further submitted that the evidence did not establish that any of the many general risks identified actually eventuated.[3534] It was submitted that the court is permitted to, and should, use hindsight to exclude the impact of such risks.

4224 *Fourthly,* the Viterra Parties submitted that Klein relied on speculative risk to justify his high discount rate, that he had already accounted for in other ways, for example:[3535]

(1) The risk that Joe White would no longer be able to charge a price premium, which was already accounted for in his cash flow adjustments.[3536]

(2) The risk of an increased customer rejection rate, which was already assumed by Klein to be much higher than the evidence suggested actually did eventuate.[3537]

(3) The risk that total costs of acquiring conforming barley varieties would be much higher, which was already accounted for in his cash flow adjustments.[3538]

(4) The risk that some of the positive synergies would no longer be obtainable, despite most positive synergies having already been excluded.[3539]

4225 Further, it was submitted that Klein's discount rate would continue to impact the forecast cash flows in perpetuity, which was inconsistent with his conclusions that the

---

3534 The Cargill Parties submitted that it made no difference whether the risks eventuated, the question was whether in October 2013 they were perceived. Further, it was submitted that if the Viterra Parties suggested that the risks were overstated, it should have been put to Klein, which it was not.

3535 The Cargill Parties submitted that none of these examples were put to Klein.

3536 See par 4096 above.

3537 See pars 4066-4067, 4096 above.

3538 See par 4119 above.

3539 See par 4167 above.

effect of the Viterra Practices would only be temporary.[3540]

X.73.11.2 Potter's approach

4226 In the first stage of his analysis, in assessing the market value of Joe White absent the Viterra Practices, Potter adopted Cargill's deal model discount rate of 10 percent.[3541] In the second stage of his analysis, when assessing the net present value of the impact of the Viterra Practices, Potter adopted a discount rate of 8.75 percent. In cross-examination, Potter explained that he considered that Cargill's deal model discount rate of 10 percent was inclusive of specific risk, and accordingly he adopted a lower discount rate to avoid double counting risk as the Viterra Practices were a specific risk to the cash flows themselves.[3542]

4227 In the joint expert report of December 2018, Potter stated that he considered the lower discount rate of 8.75 percent "should be applied because the application of a higher discount rate inclusive of specific risk, *including risk associated with the Viterra Practices* would result in a mismatch of the cash flows and the discount rate applied to those cash flows, leading to an under valuation of the effect of the Viterra Practices" (emphasis added). Under cross-examination, Potter accepted that he made no assumption that the Viterra Practices were included as part of the Cargill deal model risk and to the extent that he indicated as much in this passage, he was in error.

X.73.11.2.1 The Viterra Parties' submissions

4228 The Viterra Parties submitted that Potter's discount rates should be accepted. They pointed out that his discount rate for valuing Joe White was in line with the discount rate used in Cargill's deal model. Further, they submitted that, by adopting a discount rate of 8.75 percent to assess the net present value of the Viterra Practices, Potter created a larger assessment of their impact than would have been the case if the higher rate in the Cargill deal model had been used.

3540 The Cargill Parties submitted that this was not put to Klein.

3541 The rationale for this rate was not disclosed in the Cargill deal model, beyond it being stated that it was inserted as reflecting "the discount rate calculated as using Cargill cost of capital …".

3542 Meredith took a similar approach and arrived at a discount rate of 10.2 percent; Potter calculated that the small company premium would be lower and considered that the terminal growth rate would be higher, resulting in a lower discount rate than Meredith. All experts agreed that there was little empirical data for Australian companies on how to calculate and apply a small company premium.

X.73.11.2.2 The Cargill Parties' submissions

4229 The Cargill Parties submitted that Potter's discount rates should be rejected for the following reasons:

(1) Potter adopted Cargill's deal model discount rate which had been prepared without knowledge of the Viterra Practices and therefore did not account for risk caused by them.

(2) Potter recognised that a purchaser faced with high risk may seek to be rewarded with higher returns, but failed to adjust the discount rate.

(3) Potter recognised that risk can be taken into account using an expected cash flow approach where different cash flows are modelled and probability weighted, but did not undertake that approach.

(4) Potter's adjustments to cash flows were limited[3543] and he assumed that his cash flow adjustments would cure the effect of the cessation of the Viterra Practices, giving no consideration to any further increase in risks identified by Klein and thereby affording them no value at all in his valuation.

(5) Potter adopted some parts of Klein's analysis, wherein impact on cash flows and discount rates were inextricably linked in Klein's valuation. By including only cash flow adjustments and not discount rate adjustments, he ignored the full impact of the Viterra Practices.

4230 Further, the Cargill Parties noted that Potter did not know how Cargill's deal model discount rate was calculated, what component was specific risk, and what risks it covered, so it was submitted that reducing it by 1.25 percent was entirely arbitrary. Furthermore, during cross-examination of Potter it was demonstrated (and Potter agreed) that by changing the discount rate from Cargill's 10 percent to 8.75 percent, the value of Joe White was assessed at a value which increased by $83.2 million, with

3543 These were confined to increased barley costs, increased manufacturing costs after ceasing the use of prohibited gibberellic acid, loss of production for 2 years after ceasing the use of prohibited gibberellic acid and capital expenditure of $30 million.

the impact of the Viterra Practices as assessed by Potter going from negative $86.9 million to negative $170.1 million. In closing submissions, the Viterra Parties submitted Potter was in error in making the concessions he did in this regard (but it is unnecessary to elaborate on this in any great detail in light of the conclusion I have reached in relation to the inappropriateness of Potter's overall approach).[3544]

X.73.11.3 Analysis

X.73.11.3.1 Klein's approach

4231 Klein's approach to discount rate was an acceptable approach.

4232 As the Goldman Sachs valuation did not provide the relevant analysis, the Deloitte valuation report was an appropriate starting point. It was reasonable to assume that a hypothetical purchaser would come to a similar assessment as Deloitte regarding the discount rate for a strategic bidder, notwithstanding reductions in synergies. Klein gave specific evidence on the point and was not challenged on this evidence.[3545] That is not to say that it would be unreasonable to revise the discount rate in circumstances where synergies were reduced from an original estimation.[3546] However, it may also be reasonable for a hypothetical purchaser to assume that the reduction of certain synergies did not change the overall riskiness of the cash flow to such a degree that

---

3544 Without descending into too much detail, the exercise Potter was asked to engage in during cross-examination involved keeping the "unadjusted value" of $621.9 million, based on the discount rate of 8.75 percent, but decreasing the adjusted value purporting to incorporate the impact of the value of the Viterra Practices by using the discount rate of 10 percent. The Viterra Parties submitted to assess the impact more accurately, it would be appropriate to deduct $451.8 million from the amount representing the value without any impact of the Viterra Practices calculated using the same discount rate of 10 percent (being $533.6 million, leaving a difference of $81.8 million), rather than deducting it from the sum of $621.9 million.

3545 See fn 3524 above.

3546 While it may be possible that reducing the forecast synergies to Common Synergies might require some adjustment to the discount rate, this was not really explored with Klein. Klein clearly stated that he had assessed the Deloitte valuation with respect to the discount rate and considered it an appropriate starting point. In appendix 4 to the Deloitte valuation, Deloitte gave an extensive explanation as to why a discount rate it chose was appropriate. None of this was the subject of challenge, and although no one from Deloitte gave evidence, the document was tendered without limitation. As was stated by Deloitte, the selection of an appropriate discount rate is a matter of judgment having regard to available market pricing data and the risks and circumstances specific to the business being valued. Klein, as an expert, adopted Deloitte's approach. In circumstances where it was not put to him that the Deloitte approach was inapplicable to assessing risk in the context of Common Synergies, there was no proper basis to depart from Klein's premise. For completeness, it is noted that Meredith also had regard to the Deloitte assessment of the weighted average cost of capital being between 10 and 11 percent, as well as the Cargill deal model and a rate of 10 percent used by Grant Samuel in a cross-check valuation of GrainCorp Malt.

the discount rate needed to be adjusted. Given the enormous impact even a slight variation to the discount rate can have on the assessment of true value, it would be inappropriate for the court to make any change in light of Klein's unchallenged expert evidence.

4233 Fundamentally, a discount rate is applied to an estimated cash flow to reflect the riskiness of the cash flow. Klein was correct to consider that upon learning of the Viterra Practices, the hypothetical purchaser would revise their perception of risk, and make the assumption that the cash flows were riskier than they were prior to obtaining knowledge of the Viterra Practices.[3547] This was because of additional uncertainties that would present an additional risk for the cash flows, for example the uncertainties surrounding the stability of key customers, and therefore risk to volumes and prices. Such a risk would continue to exist even after adjustments were made to the cash flows in light of the Viterra Practices.

4234 Given the greater uncertainty, it is likely that a hypothetical purchaser would seek some sort of benchmark to assist them to quantify the additional riskiness to assign to the cash flows. On the materials put forward by the experts (and on the evidence more generally at trial) Joe White's situation was unique; as such it was reasonable to assume that a hypothetical purchaser would not have specifically comparable benchmarks and would be likely to seek, by way of analogy, some other benchmarks. Klein chose discount rate revisions for financial accounting misstatements. While obviously not perfect, this was a reasonable means of gauging an appropriate adjustment, as both hypothetical purchasers of companies with financial misstatements and hypothetical purchasers of Joe White with knowledge of the Viterra Practices would anticipate an impact on costs of capital as a result of concerns around the reliability of the historical financial statements for forecasting purposes.[3548] Ultimately, it was reasonable to assume that the disclosure of the Viterra Practices would have generated uncertainty and such uncertainty would translate into a perception of increased risk in cash flows, not dissimilar to the effect of financial

3547 See par 3968 above.

3548 Albeit, the nature of the unreliability was different: see par 4242 below.

misstatements, and consequently hypothetical purchasers would commensurately increase the discount rate.

4235 The contention of the Viterra Parties that adjusting the discount rate as Klein did was inconsistent with his assessment that the effect of the Viterra Practices on the cash flows would cease after 5 years cannot be accepted. While it was correct to submit that Klein's forecast showed that the effect of cash flows could be negated after 5 years, it did not follow that the inherent risk to the Joe White Business created by the Viterra Practices ceased at that point in time.

4236 On the contrary, in my view and with respect to Potter, it would be bordering on the fanciful to assume as at October 2013 that all risks associated with the cessation of the Viterra Practices would be gone within 5 years, much less a period of 2 years. By way of example only, there was a risk that 1 or more customers may be lost as a result of the Viterra Practices ceasing and Joe White (as least in the short to medium term) being unable to reliably supply malt within specifications. In light of the dependency of the Joe White Business on a limited number of large customers, the loss of just 1 customer could have an effect on the Joe White Business which would be felt for many years. In those circumstances, it would be likely that Klein's forecast cash flows over the first 5 years would not be achieved; and that risk needed to be reflected in the denominator reflecting the relevant risk. In other words, the historical implementation of the Viterra Practices made the stability of the future cash flows inherently more uncertain than a business without the blight of the Viterra Practices for a hypothetical purchaser who intended to conduct the Joe White Business without relying on the Viterra Practices to supply customers on the misleading basis that delivered malt was within specifications when it was not.

4237 However, the Cargill Parties have not established that the higher end of the discount rate range, being 17.7 percent, was appropriate. The Cargill Parties contended that no lender would provide debt capital given the risk and therefore there would be a greater cost required due to pure equity financing. However, it cannot be assumed, in the absence of probative evidence, that no debt capital would have been available,

particularly in circumstances where the hypothetical purchaser is assumed to be a strategic bidder. To the contrary, Klein's report stated that "in assessing the additional risk-related upward adjustment, *one possible scenario* is that a potential strategic acquirer would not be able to secure debt capital to finance this acquisition. In such a scenario, the acquisition of [Joe White] would be financed solely with equity" (emphasis added). Further, Klein observed that the attendant risks, where the loss of a single customer could have a substantially adverse effect, would make banks and other debt capital providers wary, and the cost of debt capital would indefinitely increase. This evidence did not equate to saying that debt capital would not be available.

4238 While pure equity financing was 1 of multiple possible scenarios,[3549] the court has not been provided with any probative evidence to conclude the likelihood of such a possibility, or for that matter, the likelihood of any level of decrease to the proportion of available debt capital. Further, in these circumstances, when the uncontroverted evidence was that the purchaser of Joe White would acquire land and buildings worth $63.2 million and plant and equipment worth $174.8 million,[3550] there could be no proper basis to assume that debt finance could not be raised to fund some part of the purchase.

4239 Doing my best on the evidence available, and acknowledging the increased level of risk created by the Viterra Practices, a discount rate of 13.7 percent, being in the middle of the lower end of the range provided by Klein, should be adopted as the appropriate discount rate.

4240 The Viterra Parties' other submissions objecting to Klein's approach are rejected.

4241 *First,* for reasons already discussed, Klein's approach, which used the discounted cash flow method, was open to him and was not inconsistent with valuation standards.[3551] So much was common ground.

3549 See pars 4206-0 above.
3550 See fn 674 above.
3551 See pars 3957-3970 above.

4242 *Secondly,* the benchmarks from the financial accounting misstatements studies were available to Klein. Klein acknowledged that his report did not conclude that there were in fact financial accounting misstatements in the Joe White financial statements, merely that he had concluded it was a possibility. In the absence of financial misstatements, Klein was still able to rely on the studies, by way of analogy, without presuming that there were actual misstatements within Joe White's financial statements. That is to say that the hypothetical purchaser's response in evaluating discount rate in the unique scenario of the Viterra Practices would be likely to seek out a benchmark in assessing any appropriate adjustments. Such a benchmark could be the scenario of a company publishing financial restatements. In both scenarios, the market would receive new information and would likely perceive an increase in riskiness of cash flows, and make appropriate adjustments.

4243 *Thirdly,* it was reasonable to assume that a combination of general business risks and specific risks would contribute to a higher discount rate. Regard to hindsight should only be had to the extent that it sheds light on the true value of Joe White at the time of Acquisition. The appropriate treatment of risks is not to be determined simply by using hindsight as a means of excluding risks or the perceived potential impact of relevant risks. The mere fact that, with the benefit of hindsight, a risk may be observed as not having materialised does not mean that the risk was anything other than real (and ought to be accounted for) at the time hypothetical forecasts are prepared and a discount rate is set. For many risks it is more likely than not that they will not come to pass (such as, perhaps, the loss of a particular customer). But that does not mean the risk is not real, nor that in the foreseeable future it would not eventuate into an actual loss or detriment to the business. It is because of the fact that some risks, even though not probable, are real and may materialise, that allowances for those risks (in conjunction with other risks) must be made in a forecast or a discount rate, or both, if the assessment in question is to properly reflect the true value of the business in question.[3552]

[3552] Of course, not all risks must necessarily be accounted for when seeking to ascertain the true value;

4244 *Fourthly,* Klein's adjustment to the discount rate did not result in double counting. Klein first identified additional risks to various components contributing to the cash flows as a result of the Viterra Practices and incorporated those into the forecasts. He separately acknowledged that the risk of those cash flows increased, reflecting greater uncertainty. The fact that the discount rate impacts the forecast in perpetuity was not inconsistent with the fact that the effects of the Viterra Practices might possibly have been temporary. There was plainly a risk that the effects could be long term.

4245 *Fifthly*, in relation to Klein's evidence about the historical financial statements of Joe White, I did not find his evidence confusing. There was a clear distinction between the question of reliability in reporting what had occurred and the question of reliability for the purposes of forecasting. In agreeing with the other experts not to address whether the Viterra Practices and the Viterra Policies made the financial statements unreliable on the basis that the issue was immaterial, Klein was simply agreeing not to address whether or not the financial statements reliably reported Joe White's financial performance as it had actually occurred.[3553] It was clear that, by agreeing not to address this issue, Klein was not suggesting that the manner in which the historical performance of Joe White might have been affected if it had been conducted without the Viterra Practices was immaterial. Such an agreement would have run directly counter to much of the views he expressed in his reports in adopting the approach that he did. Further, as has been found in issue 10 above, the historical financial statements from 2010 to 2013 were underpinned by the Viterra Practices and would have been likely to have been materially different if the Viterra Practices had not been engaged in for the 3 or so years in question. Accordingly, Klein was correct to factor in a risk that the results could not be repeated.

4246 Also Klein's use of the term "financial statements" was clear. Depending on the context, either he was referring to the statements made in the Information Memorandum relating to financial performance, or to the end-of-financial-year

---

whether an adjustment needs to be made is a matter of an assessment of the nature and extent of the risk.

3553 This was despite the possibility that they might be unreliable in reporting the actual performance given the conduct management had engaged in with respect to the Viterra Practices.

statements. On a fair reading of his reports, there was no inconsistency in this regard.

X.73.11.3.2 Potter's approach

4247 Potter's approach to risk resulted in numerous risks that he accepted actually existed not being accounted for in his modelling. Speaking broadly, if a risk could not be properly quantified so as to be capable of forming an adjustment to the forecast cash flows, then it was not factored into Potter's calculations at all. However, the mere fact that Potter considered the risk could not be measured or quantified did not mean the risk ceased to exist or was not material. In effectively ignoring a large number of risks on this basis and excluding the possibility that they might be accounted for in the denominator as part of his calculations,[3554] Potter's approach was flawed.

4248 Potter's adoption of a discount rate of 10 percent to assess market value was not reasonable. Although this figure or a closely proximate figure was used by various industry experts to assess the value independent of the effect of the Viterra Practices, such a discount rate made no allowance for the effect of the Viterra Practices. Equally, the discount rate calculations made in Cargill's deal model were calculated without any knowledge of the Viterra Practices. Therefore, it was misplaced to assume that a hypothetical purchaser would make calculations that were similar to the calculations in Cargill's deal model and arrive at a discount rate of 10 percent. Further, Potter's methodology of considering the impact of disclosure of the Viterra Practices was confined to treating the impact as being only relevant to his assessment of the net present effect of the Viterra Practices. This was a limited and artificial approach, as it failed to make allowance for the risk overall to the Joe White Business caused by the historical use of the Viterra Practices. Further, it had the result that, in substance, Potter did not ever produce a valuation of a hypothetical purchaser of the true value of Joe White itself which assumed a disclosure of the Viterra Practices.[3555]

4249 Similarly, Potter's discount rate when calculating the net present effect of the Viterra Practices was not reasonable when considered in combination with his cash flow

---

3554 This is not to say that Potter ignored the risks entirely, as he acknowledged the risks and said he considered them before deciding not to include them in his calculations.

3555 In making this observation, Potter's second report purported to do this, but in that report Potter used subsequent facts and did not proffer it as a proper assessment of true value: see pars 4268-4290 below.

adjustments. The ultimate issue was whether Potter reflected the risks associated with the Viterra Practices in his valuation, in either the discount rate or the cash flow. As concluded above, Potter failed to adequately take into account the impact of the Viterra Practices on the price of malt, inventory losses, and volume of malt reductions within his cash flows,[3556] thereby failing to meaningfully take into account the associated risks. Further, Potter excluded certain risks identified by Klein, which he accepted that absent hindsight reasoning he could not value. To reiterate, to assess the net present value of the Viterra Practices, Potter calculated the value of Joe White taking account of the Viterra Practices and deducted this from the value absent the Viterra Practices.[3557] As part of this exercise, Potter used the same discount rate, 8.75 percent, for both his assessment of the value of Joe White absent and taking account of the Viterra Practices.

4250 How Potter arrived at 8.75 was not properly explained.[3558] In circumstances where he was working from the Cargill deal model in valuing Joe White without the Viterra Practices and accepted the discount rate Cargill had used, and he did not know the amount of the relevant components that made up the rate in that model, there was no proper explanation as to why the different rate was applied.[3559] Further, by way of general observation, the appropriateness of a discount rate of 8.75 percent must be seriously doubted when to apply such a rate to the projected cash flows in the Cargill deal model resulted in a notional value of $621 million; a figure that bore no resemblance to reality. Further, it is noteworthy that no other expert at trial or analyst in 2013 adopted a discount rate at or near 8.75 percent.[3560] Indeed, in Potter's second report where he set out his opinion regarding the true value of Joe White using

---

3556 See pars 4090, 4114, 4137, 4160 above.

3557 See pars 3974-3975 above.

3558 Potter assumed a rate of 10.55 percent for the cost of equity and a rate of 4.55 percent for the cost of debt, with a debt to equity ratio of 30 percent.

3559 In his first report, Potter explained why he chose the rates he did for the risk free rate, the market risk premium, the beta, the small company premium, the cost of debt and the corporate tax rate, but these explanations did not grapple with why there was a need to depart from the rate used in the Cargill deal model given that he had accepted that was the appropriate discount rate for the purpose of ascertaining the true value of Joe White absent the Viterra Practices.

3560 Meredith used a discount rate of 10.2 percent or 10.3 percent (being his assessment of the weighted average cost of capital), which included a risk premium of 2.5 percent for the size and company-specific risks. For completeness, Cargill did use a rate of 8 percent for its best case model, which was not used by Cargill for the purpose of valuing Joe White.

forecasts created a year after the Acquisition as a proxy for forecasts of a hypothetical purchaser in October 2013 with knowledge of the Viterra Practices, Potter himself chose to use the discount rate from the Cargill deal model rather than 8.75 percent or some other rate.

4251 Speaking broadly, in relation to his adoption of the discounted cash flow method, Potter's general approach involved a mismatch in discount rates, the absence of an attempt to value Joe White as a whole on the basis that the Viterra Practices had been disclosed, and a failure to address risk properly in the discount rate chosen for his calculations using the discounted cash flow method. In short, in addition to further matters discussed below, Potter's approach to the discounted cash flow assessment of value did not provide a sound basis to ascertain the true value of Joe White (either on its own or in combination with the capitalised maintainable earnings approach).

X.73.12 Transaction and integration costs

4252 This issue has largely been resolved. The experts (and the parties) were in agreement that transaction costs should not form part of the valuation exercise in obtaining the true value of Joe White, and the issue of integration costs has already largely been dealt with in addressing synergies.[3561] However, the submissions will be addressed briefly, as there was a level of controversy concerning transaction costs before the ultimate position was reached.

X.73.12.1 Klein's approach

4253 In Klein's first report, he included transaction and integration costs totalling $22.7 million in 2014 and approximately $2.8 million for each year thereafter. Klein later updated his calculations to exclude transaction costs, which were approximately $20 million of the total transaction and integration costs.

X.73.12.1.1 The Cargill Parties' submissions

4254 The Cargill Parties submitted that Klein accepted that he was in error on the issue and corrected for this factor.

3561 See par 4194 above.

X.73.12.1.2 The Viterra Parties' submissions

4255 The Viterra Parties accepted that Klein was correct to acknowledge the error but submitted that Klein's explanation for retrospectively excluding transaction costs was not credible. In cross-examination, Klein stated that "once [he] noticed [transaction costs] had been embedded within certain numbers and Potter pointed that out, [he] agreed with [Potter] and [he] removed it". However, it was submitted, correctly, that Klein's initial valuation had specifically identified "transaction and integration costs" as a line item. Further, they pointed out that, in the first joint report submitted by the experts, there was a question specifically about whether to exclude transaction and integration costs. They submitted that Klein had maintained they should be included.[3562] Under cross-examination he admitted as much.

4256 Further, it was submitted that Klein's credibility was undermined as he contradicted himself by initially denying that the inclusion of transaction costs was intentional, and only later admitted that it was deliberate, albeit a mistaken application of principles. Initially, Klein denied that he had changed his position, claiming in cross-examination that he "didn't know that number was included and when [he] noticed it, [he] corrected that mistake". It was submitted that Klein continued to maintain that he had not noticed that the data included transaction costs. However, subsequently, when Klein was taken to his comments about transaction costs in the first joint report,[3563] it was submitted that Klein accepted that his initial inclusion of transaction costs had nothing to do with him not having noticed them in the data. Instead, it was submitted that he acknowledged that he had ultimately changed his position.

4257 Without going into the minutiae, these submissions fairly summarise what occurred. It was not until well after the first expert conclave was completed that Klein changed his position and, to use his words, decided to "offer it up" when the next conclave was

---

3562 In the report, Klein stated that he had assumed the transaction and integration costs in the Goldman Sachs report without making any suggestion that such an assumption needed to be qualified in any way.

3563 See par 4255 above.

held in December 2018.[3564]

4258 Furthermore, the Viterra Parties submitted that even though Klein eventually removed transaction costs, he continued to include integration costs of $2.3 million in 2014 and about $2.8 million per year thereafter. It was submitted that it was unclear why Klein incorporated integration costs for financial years 2015 to 2019 that were significantly higher than what he assessed as being the common dis-synergies in those years.

X.73.12.2 Potter's approach

4259 Potter excluded transaction and integration costs from his valuation. He said he did so in accordance with the International Valuation Standards. Potter explained the standards provided that "[m]ost bases of value represent the estimated exchange price of an asset without regard to the seller's costs of sale or the buyer's cost of purchase and without any adjustment for taxes payable by either party as a direct result of the transaction."[3565]

X.73.12.2.1 The Viterra Parties' submissions

4260 The Viterra Parties submitted that Potter's approach was in accordance with standard valuation practice and should be accepted.

X.73.12.2.2 The Cargill Parties' submissions

4261 In their closing submissions, the Cargill Parties did not address Potter's treatment of transaction and integration costs, save for their submission that Klein accepted he was in error with regard to transaction costs and corrected for this error.

X.73.12.3 Analysis

X.73.12.3.1 Klein's approach

4262 Both experts agreed that pursuant to international valuation standards the transaction

---

3564 The Viterra Parties sought to attack Klein's credit based on his initial account of what occurred in relation to transaction costs being removed from his modelling with the evidence he ultimately gave. There could be no question that Klein's explanation shifted during his cross-examination, but this occurred as further facts were pointed out to him and his memory was refreshed. In a case of this size, on such a relatively minor matter, it was far from surprising that Klein could not precisely recall what occurred in mid and late 2018 when giving his evidence in May 2019. Considering Klein's evidence as a whole, there was no real basis to conclude anything other than Klein was trying to give his evidence as an independent expert to the best of his ability, and that he was frank and honest witness.

3565 International Valuation Standards 2017, IVS 104, 28, [210.1].

costs were not to be included in the true value of Joe White. Whilst this may not have been Klein's initial position, he ultimately agreed with Potter and revised his calculations.

4263 On this issue, the evidence of Klein was somewhat confusing. He stated categorically under cross-examination that he contemplated integration costs as being a dis-synergy, but also stated he "fully excluded it from [his] calculation". He expressed a desire to show why that was so while under cross-examination, but was not given the opportunity to do so. This evidence was confusing because both in his calculations of Common Synergies and in his final calculations of value (both in his first report and as revised as part of the December 2018 joint expert report) integration costs were expressly included. Further, as the Viterra Parties noted, Klein included integration costs that were different from the integration costs estimated in Klein's synergy and dis-synergy analysis. It was unclear why Klein included additional integration costs that exceeded the integration costs already accounted for in calculating the net synergies.[3566] This issue was not addressed by the Cargill Parties in closing submissions.

4264 Without further explanation by Klein of what these assumed integration costs included, there was no proper basis to conclude that it would be likely that a hypothetical purchaser would adopt all the integration costs adopted by Klein. Further, it appears inappropriate to include integration costs as an independent line item as well as reducing the net value of synergies on this account, because without further detail this appears to give rise to the risk of double counting. Furthermore, although there may be no correlation between dis-synergies and integration costs on an ongoing basis, based on valuation principles, I cannot be satisfied $2.8 million from 2015 onwards was the appropriate figure. Therefore, based on the manner in which this issue was addressed, the court cannot be satisfied that integration costs, beyond those that might have been incorporated by way of common dis-synergies,[3567] ought

3566 See par 4167 above.
3567 See pars 4195, 4202 above.

to be included in ascertaining the true value of Joe White.

X.73.12.3.2 Potter's approach

4265 The effect of the above analysis is that Potter's approach of excluding transaction and integration costs ought to be accepted as the appropriate approach on this issue, save for any component of integration costs captured by dis-synergies.

X.73.13 The Co-Operative Bulk dispute

4266 As noted in issues 61 to 64 above, the allegations concerning Co-Operative Bulk were ultimately not pressed by the Cargill Parties in closing submissions. Neither Potter nor Meredith considered the matter. Potter was not instructed to do so, and Meredith also stated his reasons for not doing so. As a result, they made no adjustment in relation to the Co-Operative Bulk dispute.

4267 Thus, the only expert to meaningfully consider the matter was Klein. Klein took into account the amount actually paid by Cargill Australia to settle the dispute and assumed, based on his instructions at the time, that the amount paid, being $2.18 million, represented a loss to Joe White. As this has not been established on the evidence, it is unnecessary to consider this matter further.[3568]

X.73.14 What conclusions should be drawn in respect of Potter's valuation of Joe White in his second report?

4268 Potter explained that the valuation in his second report was an illustrative example of the value of Joe White using a discounted cash flow methodology and adopting the forecasts contained in Cargill's commitment report that was prepared in October or November 2014, approximately a year after the Acquisition.[3569] Although the forecasts used obviously consisted of post-Acquisition information, Potter referred to these forecasts as a proxy for what a hypothetical purchaser would have expected once it had known of the Viterra Practices. In this report, Potter evaluated the true value of

---

3568 For completeness, it should be noted that the Cargill Parties made no substantive closing submissions in support of this aspect of Klein's valuation.

3569 See par 1784 above.

Joe White as $372.8 million.[3570]

4269 The report was not intended to be a proper valuation. It was not in accordance with valuation standards, and nor did Potter consider the methodology satisfactory. Accordingly, he did not advocate that the valuations contained in his second report were the valuations the court should principally rely upon. Indeed, his position was that he considered reliance upon the 2014 commitment review unsuitable as it was potentially bringing into account extrinsic factors that occurred after Acquisition.[3571]

4270 Potter considered that his second report confirmed the range of his assessed value of the impact of the Viterra Practices.[3572] Further, Potter concluded that Meredith and Klein's assessment of true value relied on assumptions that were materially less favourable than those that Cargill itself utilised in its forecasts 12 months post-Acquisition, with knowledge of the Viterra Practices.

4271 In his second report, Potter concluded that:

(1) It was inappropriate for Meredith to have relied on Joe White's actual sales as a proxy for the sales that would have been expected by a hypothetical purchaser.

(2) It was inappropriate for Klein to have relied on Joe White's actual sales as support for the lower level of sales that a hypothetical purchaser would forecast.

4272 Potter considered that if the court were to find that post-Acquisition information was appropriate in valuing Joe White, then the forecast contained in the 2014 commitment report provided more appropriate assumptions. Further, by reference to the additional materials available in the first year after Completion,[3573] Potter suggested there were numerous reasons to explain the shortfall in sales that were independent

---

3570 This figure included rectifying capital expenditure; the amount was $396 million excluding rectifying capital expenditure.

3571 His evidence in re-examination was that this was the only reason it was unsatisfactory.

3572 Potter considered that a year post-Acquisition, Cargill, with knowledge of the Viterra Practices, would have included the anticipated impact of such practices within their forecasts.

3573 Potter did not consider the 2015 or 2016 commitment reports as part of this exercise.

of and unrelated to the Viterra Practices. These were said to include:

(1) Environmental factors that resulted in poor barley crop in 2015, which in turn affected the availability and quality of the supply of malt by Joe White.[3574]

(2) Farmers electing to grow types of barley that were unsuitable for Joe White's purposes.

(3) A surplus in global malt supply.

(4) Increased market competition from Europe and China.

(5) Cargill ignoring the cyclical nature of the barley malt industries in Australia when preparing its original forecasts in Cargill's deal model.

(6) The shutdown of the Cavan facility as a result of a silo collapse.[3575]

(7) Cargill's application of its own policies with respect to Certificates of Analysis "to the extent that Cargill's [policy] was higher than industry standards or what was represented by [Joe White]".

(8) Cargill's application of its own [Certificate of Analysis policy] "possibly causing derogations and loss of sales and customers".[3576]

X.73.14.1 The Viterra Parties' submissions

4273 The Viterra Parties submitted that the court should draw the following conclusions from Potter's valuation in his second report:[3577]

(1) The second report corroborated the valuations made in his first report.

(2) The second report represented the lowest possible true value of Joe

---

3574 This evidence was not given on the basis that it was relevant to the forecast used that was prepared in 2014, but rather in response to Meredith's reliance on post-Completion events.

3575 In fact, this did not occur until March 2015 and there was no evidence to suggest that the collapse was foreshadowed in any way: see par 1796 above.

3576 The documents relied upon by Potter in forming these views were set out in his report.

3577 The Viterra Parties accepted that certain parts of the report could be disregarded, particularly in light of the Cargill Parties' decision to rely on Klein's assessment rather than Meredith's.

White at the time of Acquisition, on the basis that removal of any extraneous causes of decline in value in the first year after the Acquisition would have had the effect of increasing the true value of Joe White.

4274 The Viterra Parties noted that Potter's value in his second report was materially higher than any of the assessments undertaken by the other experts.

4275 Further, to elaborate on the second point above, the Viterra Parties submitted that whilst the valuation in Potter's second report brought into account some extrinsic factors that occurred post-Acquisition, it was apparent that there were many extraneous causes of decline in value. It was submitted that the effect of removing those extraneous factors would be Potter arriving at a higher true value of Joe White.

4276 Furthermore, the Viterra Parties submitted that the fact that the forecasts in the 2014 commitment report later proved to be inaccurate illustrated the significant impact that extraneous factors had on Joe White in the subsequent years. It was submitted that the forecasts were not unreliable at the time they were prepared and the information contained within the report was not unreliable simply because the forecasts were subsequently proved to be inaccurate.

4277 Finally, the Viterra Parties rejected the Cargill Parties' submission that Potter relied on a line item called "other BU synergies after tax", representing synergies of other business units after tax, in the commitment report.[3578] It was submitted that the Cargill Parties had confused Potter's reliance on a different line item "BU EBITDA",[3579] representing business units' Unadjusted Earnings, and he had not included synergies of other business units after tax in his report. Further, it was submitted that had Potter included synergies of other business units after tax, his valuation would have been higher.

X.73.14.2 The Cargill Parties' submissions

4278 The Cargill Parties submitted that Potter's second report ought to be disregarded

3578 See pars 4281(3), 4284 below.

3579 EBITDA stands for earnings before interest, tax, depreciation and amortisation.

completely.

4279 The Cargill Parties submitted that, by Potter's own assessment, the valuation in his second report was:

(1) Intended to be illustrative only.

(2) Not consistent or in accordance with international valuation standards.

(3) Not a suitable or satisfactory valuation methodology. It was flawed both for using hindsight impermissibly and for taking a document prepared a year after the sale and pretending it was a suitable proxy for a hypothetical purchaser.

4280 The Cargill Parties submitted there were further reasons why Potter's second report was not useful.

4281 *First,* the assumptions underpinning the 2014 commitment report's cash flow forecasts were unknown and the forecasts were proven to be significantly inaccurate compared with the actual results, based on the following:

(1) Potter mostly agreed with Klein's assessed future cash flow, whereas Cargill's 2014 commitment report was nowhere near the expert's detailed assessments, and in any event the relevant assumptions were unexplained.

(2) It was unclear if and how the commitment reports were being adjusted year on year by Cargill.

(3) The forecasts included, and Potter relied upon, a line item for synergies of other business units after tax, notwithstanding the fact that Unique Synergies of Cargill said nothing about market value.

(4) Cargill's later forecasts in the 2015 and 2016 commitment reports discredited the 2014 commitment report's forecasts.

(5) The 2014 commitment report forecasts were a long way off the actual results. Potter agreed that the 2014 forecasts were inaccurate and accepted that he was concerned about the reliability of the forecasts.

(6) Accordingly, evaluated in a multitude of different ways the forecasts were unreliable in estimating true value.

In short, it was submitted it was likely that in late 2014 Cargill underestimated the ongoing impact of ceasing the Viterra Practices.

4282 *Secondly,* market value is limited to knowledge at valuation date and therefore use of the 2014 commitment report forecast of cash flows from a year post-Acquisition was impermissible. The information was not known or knowable at the time of the Acquisition. Further, Potter's use of post-Acquisition information conflicted with valuation standards and Potter's position regarding the use of hindsight in determining market value.

4283 *Thirdly,* even if Potter was attempting to use hindsight to determine true value, the use of the 2014 commitment report forecast cash flow was illogical and unsound, because:

(1) Cargill was unable to accurately incorporate the effect of the Viterra Practices in their cash flow forecasts in the first year post-Acquisition. In particular, the comments in later commitment reports suggested that the effect of the Viterra Practices continued beyond the first 12 months.

(2) If the assessment of true value required the adoption of hindsight, regard should be had beyond the first 12 months post-Acquisition.

(3) The post-Acquisition Unadjusted Earnings adopted by Potter did not appropriately account for the ongoing risks of the Viterra Practices.

4284 *Fourthly,* it was inappropriate to use a forecast reflecting Cargill's synergies given that Cargill would not have been a bidder.

4285 *Fifthly,* Potter's approach set out in his first report demonstrated that the forecast in his second report was inappropriate, illustrated by the following:

(1) If Potter's capitalised maintainable earnings approach from his first report was applied to future maintainable earnings based on the financial years 2012 to 2014, with Potter's or Klein's multiples of 11.3 or 8,[3580] respectively, the value would be $235 million to $171 million.

(2) If Potter's capitalised maintainable earnings approach were applied to future maintainable earnings based on financial years 2014 to 2016, with the same multiples, the value would be $75 million to $55 million.

4286 *Sixthly,* Potter's use of Cargill's discount rate of 10 percent "back-solved" to 10.97 percent was inappropriate, given that the riskiness of the cash flow eventuating in Cargill's 2014 commitment report was far greater than the riskiness Cargill assessed in its deal model, demonstrated by the variance in the forecast and actual results.

X.73.14.3 Analysis

4287 As Potter himself acknowledged, his second report was of limited relevance. This acknowledgement was made at a time during the trial when Cargill was seeking to

---

3580 In Klein's supplemental report he explained why he considered a multiple of 6 the most appropriate, but "conservatively" adopted an earnings multiple of 8 as being more appropriate than Potter's multiple of 11.3. In Potter choosing 11.3 as the appropriate multiple, he referred to transactions involving "grain companies" from March 1999 to October 2012 with sales prices ranging from $10 million to $9.835 billion, which provided an average multiple of 12.1 percent, a median multiple of 9.7 percent and an average multiple for malt transactions of 10.1 percent. However, he concluded that it was not possible to identify any particular trends and decided not to analyse the data to ascertain the relevant effects. He further observed that his analysis in arriving at 11.3 involved businesses for which synergies were identified as part of the transaction. Notably, of the 6 transactions Potter referred to in arriving at a multiple of 11.3, 5 had reported synergies in the range of 22.5 percent to 54.9 percent as a percentage of Unadjusted Earnings (being earnings before interest, tax, depreciation and amortisation). The sixth transaction with reported synergies of 289.9 percent which used a multiple of 23.8 times Unadjusted Earnings was excluded in deriving the 11.3 multiple. Based on these 5 transactions (4 of which were in Australia), a multiple of 11.3 seemed too high given there was no suggestion of any significant concerns with the respective businesses such as the existence of the Viterra Practices. In any event, Potter concluded by stating that he had had regard to the various matters he had raised and considered a high level of expected synergies for Cargill of approximately 35 percent meant that the appropriate multiple to value Joe White was higher than that which he had observed in the identified comparable transactions. Potter acknowledged a number of limitations that confronted him in seeking to ascertain an appropriate multiple. Klein also made a large number of criticisms of Potter's choice of multiple in the first joint expert report and in his supplementary report. It is unnecessary to refer to these matters.

rely on the evidence of both of the experts it called. A large aspect of the second report was to address Meredith's approach of using the details of actual sales after the Acquisition as a reliable proxy.[3581] As the Cargill Parties withdrew any support for such an approach, much of whatever relevance there may have been in Potter's second report dissipated. Further, Potter was acting on specific instructions in undertaking the exercise that he did in the second report. As he readily acknowledged, the basis of the report did not accord with the relevant principles applicable to determining the true value of a business. Accordingly, the conclusions expressed in it concerning true value cannot be given any real weight.

4288 Even if it were permissible to rely on subsequent performance and to use it as *the* basis of cash flows and risk in assessing true value, Potter's use of the commitment report prepared a year after Acquisition was inappropriate. The forecasts contained in this commitment report were merely a point in time estimate by Cargill and not indicative of the ultimate position of Joe White. They were made a year post-Acquisition, before the full impact of the Viterra Practices had been realised. Further, the actual results and subsequent commitment reports materially differed from this early forecast. Whilst this does not mean that the forecast was necessarily unreliable at the time it was prepared, it obviously demonstrated that the forecast was an inaccurate prediction of what subsequently occurred. In other words, if it were permissible to use hindsight, then properly informed hindsight would be a far more appropriate touchstone than relying on information that was opaque as to its compilation and turned out to be substantially inaccurate.

4289 The contention that the 2014 commitment report was the most accurate reflection of the value of the impact of the Viterra Practices independent of extrinsic factors, requires hindsight to be considered with extreme caution. It would be inappropriate simply to rely on an estimated forecast at an earlier point in time merely because it was less impacted by extrinsic events. In this instance, especially given the interplay

---

3581 This is to be contrasted with Klein, who referred to the actual decline in sales as a means of checking the assumptions that he considered a hypothetical purchaser would make (albeit this was also the subject of comment in Potter's second report: see par 4271(2) above).

of some extraneous factors, post-Acquisition information in the 2014 commitment report was not a means to obtain a useful proxy for assumptions that would be made by a hypothetical purchaser in establishing Joe White's value.

4290 Given the conclusion reached, it is unnecessary to go through the individual matters raised by the Cargill Parties. Suffice to say, most of the criticisms made were warranted and provided further reasons as to the lack of soundness in adopting Potter's second report as the means of ascertaining the true value of Joe White.

X.73.15 What conclusions should be drawn in respect of Potter's valuation of Joe White at the time of sale of Cargill's global malt business in his third report (insofar as it might be relevant to the true value of Joe White at the time of the Acquisition)?

4291 Cargill entered into a final sale agreement to sell its global malt business including Joe White on 23 April 2019, and Potter used the sale price of Cargill Malt as a basis for assessing a value for Joe White.[3582] In Potter's third report, dated 29 April 2019, he determined Joe White's market value on the basis of allocating a portion of the sale price of Cargill Malt.

4292 In order to do this, Potter calculated the market value of each of the 4 regions. Interestingly, Potter's valuations of each region both individually and collectively were greater than the amounts paid; so that for a sale price of US$847 million, Potter valued Cargill Malt in total at US$1,116.8 million. The value of the Asia-Pacific region was estimated as representing 34.7 percent, being the largest allocation to any region.[3583]

4293 Thus for a region allocated a price of US$293.6 million out of a total of US$847 million, Potter valued the Asia-Pacific region at US$387.1 million (nearly US$100 million more

---

3582 As may be seen from par 1846 above, the final allocation did not occur until after Potter had given his evidence.

3583 This compared with 22.2 percent that had been allocated (based on the 2018 Unadjusted Earnings figure for each region) by the parties to the sale at the time of Potter giving his evidence, which accorded with the final allocation: see par 1846 above.

than what had been agreed).

4294 In any event, using the respective percentages and valuations, Potter then allocated a sale price to each in United States dollars. After converting that amount (US$293.6 million) to Australian dollars, he calculated that the value attained by Cargill in relation to the sale of Joe White was $410.1 million (representing 99 percent of the value attributable to the Asia-Pacific region). It must be noted that Potter's valuation of Joe White was nearly $150 million more than the price allocated as part of the resale.[3584] Potter then arrived at a total assessed value of $450 million for Joe White by adding the value he stated ownership of Joe White contributed to the total sale price of Cargill Malt.[3585]

X.73.15.1 The Viterra Parties' submissions

4295 The Viterra Parties submitted that Potter's assessment of the amount received by Cargill for Joe White as part of the sale of Cargill Malt was not only relevant to the left in hands approach.[3586] They submitted this assessment was also relevant to the question of true value at the time of Acquisition in the sense that it corroborated the values assessed by Potter in his first and second reports. In particular, it was submitted that the values in Potter's third report confirmed his earlier assessment of the effect of the Viterra Practices and his assumption regarding the temporary effect of the practices.

4296 Further, the Viterra Parties submitted that if the court did not accept Potter's initial valuation, then this third report could be relied on as another piece of evidence as to the value of Joe White at the time of Acquisition. The Viterra Parties acknowledged that Potter said that in his opinion, assuming 1 of the scenarios in his first report was

---

3584 Using the same exchange rate used by Potter, the amount of $410.1 million compares with $263.13 million (being the equivalent of US$188.3 million) actually allocated for Joe White as part of the resale.

3585 Potter calculated that relative to the sale price, Joe White was valued at $410 million and that an additional $39.7 million of value was obtained by virtue of including Joe White within the sale of Cargill Malt, representing a total assessed value of $450 million: see further par 4317 below. In light of the conclusion on this point, it is unnecessary to consider whether the alleged additional amount of $39.7 million in value was a benefit Cargill Australia (as opposed to some other entity in the Cargill group) received or ought to have been taken into account in assessing Cargill Australia's loss.

3586 See pars 4314-4320 below.

correct, then the true value was the value generated in his first report rather than his second report. Therefore, the Viterra Parties submitted that Potter's first report was to be preferred above his second report, if it were determined that Joe White was to be valued at the time of Acquisition. However, Potter's third report was to be preferred if Joe White was to be valued at the time of resale.[3587]

4297 Furthermore, it was submitted that the numerous extrinsic factors affecting the Joe White Business post-Acquisition were likely to have a negative effect on the value of Joe White. Therefore, it was submitted that the relevant value left in Cargill's hands showed the third report corroborated Potter's assessment in his first report and significantly contradicted Klein's (and Meredith's) valuation(s).

X.73.15.2 The Cargill Parties' submissions

4298 The Cargill Parties submitted that the court should completely disregard Potter's valuation of Joe White at the time of the sale of Cargill Malt. It was submitted that it was not a valuation of Joe White. The sale of Cargill Malt did not contain a sale price (as opposed to an allocation) for the Australian asset. Further, it was submitted that the left in hands approach was inappropriate because in 2013 Cargill was not locked in but chose to keep Joe White. Furthermore, it was contended there was no occasion to value Joe White at a later date and the fact that it had been sold did not alter this.

4299 The Cargill Parties contended Potter's methodology was unsatisfactory for the following reasons:

(1) The value of Joe White when Cargill Malt was sold said nothing useful about the value of Joe White in October 2013. Post-Acquisition, Cargill operated the business, changing its nature for over 5 years.[3588]

(2) A suggestion that the later time value could inform the assessment on the valuation date of 31 October 2013 would be inconsistent with Potter's

---

3587 When Potter was asked which was his preferred methodology, he replied that his scenario approach in his first report was his preferred methodology to arrive at the true value: see fn 3307 above.

3588 The period of 5 years was based on the fact that an initial conditional sale of Cargill Malt was entered into in December 2018.

earlier statements eschewing hindsight in determining true value.[3589]

(3) Even if the allocation of value was relevant, Potter's allocation of value was not of Joe White "today". When Potter was asked what he was intending to ascertain, he said he was seeking to undertake a proper allocation of Cargill Malt's sale price, but he accepted that what he assessed was not the allocation of the vendor or of the purchaser under the contract.[3590]

(4) Potter's method of allocating value to Joe White lacked credence given its sensitivity to a particular inflation integer contained in the terminal multiple.[3591] As Potter accepted during cross-examination, if the projected inflation rate were reduced from 4 percent to 2.6 percent and no other alterations were made, Joe White's value would fall from $385 million to approximately $270 million.

X.73.15.3 Analysis

4300 Potter's third report did not assist the court to determine the true value of Joe White at 31 October 2013. To the extent that subsequent events are relevant to illuminating the true value of Joe White at the time of Acquisition,[3592] Potter's treatment of the sale

---

3589 Under cross-examination, Potter accepted knowing the value of Joe White 5 years after Acquisition would not assist in assessing its value in October 2013. In an earlier answer to a question on this topic, Potter accepted it was not a proxy for the position in 2013 but also stated that he considered it helpful because it suggested that the Joe White Business had recovered from its value in 2013 "if it was a damaged business", and in so deposing also stated that it was consistent with Klein's modelling of a decline in sales and then a recovery.

3590 The Cargill Parties clarified that this submission was not to suggest that the appropriate thing to do would be to deal with the allocation in the contract rather than something else.

3591 Potter converted United States dollars to Australian dollars and assessed the Asia-Pacific region at $387.1 million, of which $385.7 million was the calculation of present value of terminal period cash flows. The present value of terminal period cash flows was calculated using the present value of free cash flows ($10 million) divided by the difference between the discount rate (6.6 percent) and the projected inflation rate (4 percent, which was made up of an inflation rate of 3.5 percent and 0.5 percent for expected growth in Unadjusted Earnings). The projected cash flows for 2019 to 2023 contributed only $1.4 million to Potter's assessment of value, bringing the present value of the regional unit to $387.1 million. In response to the Cargill Parties' criticisms, the Viterra Parties submitted that the Cargill Parties had not adduced evidence from their own expert contradicting Potter's opinions or the inputs used, they had only put to him that terminal growth rate figure was sensitive. Further, they submitted that there was no basis that the projected inflation figure could be as low as 2.6 percent. The Viterra Parties submitted that using a terminal growth rate figure that applied in 2023 was an accepted valuation methodology.

3592 See par 3919 above.

of Cargill Malt did not assist in any meaningful way in checking relevant assumptions for a 2013 assessment, as Potter himself readily acknowledged.

4301 When Cargill Malt was sold, Joe White had been owned by Cargill Australia for over 5 years. During this period there had been numerous extrinsic factors that impacted the value of Joe White, including both market factors and changes made to Joe White under the control of Cargill. Supervening events should not be taken into account in assessing true value.[3593] Given that supervening events were embedded within the value at the time at which Joe White was sold (and accounted for by Potter),[3594] it was inappropriate to consider that value when determining true value or using the information as some method of checking the reasonableness of the assumptions that would have been made by a hypothetical purchaser in 2013. Further, it was irrelevant whether Potter's determination of Joe White's value as a result of the sale of Cargill Malt was similar to his valuation in his first report, because the later "valuation" did not reflect or have any real connection with the true value at the time of Acquisition.

X.73.16 What was the true value of Joe White at the time of the Acquisition?

4302 Broadly speaking, for the reasons set out above, Klein's strategic bidder valuation of Joe White as at 31 October 2013, subject to certain necessary re-calculations, provided the appropriate method of establishing the true value of Joe White.[3595]

4303 As a result of the findings made, the following adjustments are necessary to Klein's strategic bidder valuation:

(1) A reduction in dis-synergies by $7.2 million, resulting in $2.4 million of dis-synergies, being 25 percent of $9.6 million, as not all strategic bidders

---

3593 See par 3920 above.

3594 There was no attempt by any party to definitively and exhaustively identify every factor impacting the Joe White Business between 31 October 2013 and December 2018, and then seek to establish whether such factors were extrinsic or intrinsic.

3595 Given the fundamental difficulties with some aspects of Potter's capitalisation of maintainable earnings approach and that no other expert sought to use this method of valuation, on the evidence before the court it is appropriate to confine the assessment of the true value of Joe White as at 31 October 2013 to the discounted cash flow method.

would have incurred dis-synergies at the same level as forecast for Cargill.[3596]

(2) A lower discount rate of 13.7 percent.[3597]

(3) Removal of the additional line item for integration costs,[3598] being $2.3 million in 2014 and $2.8 million per year thereafter.[3599]

(4) Removal of $2.18 million on account of the dispute with Co-Operative Bulk.[3600]

4304 Klein's valuation, subject to these adjustments, provides the true value of Joe White at the time of Acquisition.

4305 A further observation should be made about the approach taken in assessing the true value. There was no dispute that Joe White as a going concern was a business that was valuable and was capable of generating profits based on Unadjusted Earnings. It was common ground that, given Joe White was operating as a going concern, a valuation based on net realisable value of Joe White's assets was not appropriate. However, the value as at 31 October 2013 of the land and buildings, together with plant and equipment, being $63.2 million and $174.8 million respectively, must have provided a floor on any estimate of value of Joe White as these amounts were realisable regardless of the state of the Joe White Business itself.

X.73.17 What conclusions should be drawn from the valuation of Joe White by Potter in his third report and any other evidence as to the value of Joe White at the time of sale of Cargill's global malt business or judgment?

4306 Potter concluded that Joe White's sale price was $410.1 million, as a proportion of the total sale price of Cargill Malt.[3601] On that basis Potter concluded that Cargill had

---

3596 See par 4202 above.
3597 See par 4239 above.
3598 See par 4263 above.
3599 See par 4258 above.
3600 See pars 4266-4267 above.
3601 See pars 4291-4294 above.

$410.1 million left in hands, which was a benefit that Cargill would not have had if it had not acquired Joe White.

X.73.17.1 The Viterra Parties' submissions

4307 The Viterra Parties submitted that the sale of Joe White was relevant to an assessment of loss on the basis of the left in hands approach. Further, it was submitted that the value received was also relevant for the purpose of any other approach to assessment, given that it was a benefit that Cargill would not have obtained had Cargill not acquired Joe White.

4308 It was submitted that Potter never indicated a preference for valuing Joe White in accordance with his first report, which valued Joe White at the time of Acquisition, as opposed to valuing it as at the time of sale of Cargill Malt.[3602]

4309 Further, the Viterra Parties submitted that the court should accept Potter's assessment of the value of Joe White at the time of sale of Cargill Malt given that the Cargill Parties did not adduce any of their own expert evidence and did not adequately challenge Potter's valuation. It was submitted that the Cargill Parties' submissions on the sensitivities of particular integers[3603] lacked merit in the absence of any evidence that demonstrated that Potter's methodology or the integers adopted were incorrect.

4310 The Viterra Parties submitted that it was irrelevant to the question of what loss Cargill suffered whether or not Potter included synergies for which the purchaser paid into his assessment in his third report. It was submitted that even if the payments for the purchaser's synergies were not treated as part of the Joe White Business, they were a separate benefit which Cargill acquired as a consequence of the Acquisition and received as a consequence of selling Joe White.

4311 As an aside, the Viterra Parties submitted that Cargill had constantly contested and resisted providing the Viterra Parties access to documents relevant to the sale of

---

3602 The Viterra Parties submitted that Potter said that assuming 1 of the scenarios in his first report was correct, the true value was the value generated in his first report rather than in his second report and that the scenario approach was his preferred method to arrive at the true value. It was submitted that this did not amount to an indication of preference of his first report as opposed to calculating the value of Joe White at the time of the sale of Cargill Malt: see fn 3307 above.

3603 See par 4299(4) above.

Cargill Malt, together with delaying the details of region allocations without explanation, which they contended was entirely unsatisfactory. However, as the final allocation was the subject of evidence in November 2019, these matters need not be considered further.

X.73.17.2 The Cargill Parties' submissions

4312 The Cargill Parties' relied on their submissions as set out above.[3604]

X.73.17.3 Analysis

4313 In the circumstances of this case, a valuation of Joe White at the time of the sale of Cargill Malt did not assist in the assessment of loss.[3605] Even if Potter's approach to valuing Joe White in 2019 were accepted as fair,[3606] the lapse of time and the myriad of extrinsic or potentially extrinsic factors made it impossible to draw any sensible conclusions about true value in 2013 or benefits being derived in any relevant sense. Further, these matters also made it completely inapposite for a left in hands approach to be taken in assessing loss. Accordingly, there is no need to discuss any further Potter's allocation of value attributable to Joe White.

X.73.18 What conclusions should be drawn from Potter's third report and any other evidence as to what other benefits Cargill obtained as a consequence of the Acquisition of Joe White and the value of those benefits?

4314 This question has essentially been addressed in answering the previous question. However, in deference to the submissions made, a short account of the points raised follows.

4315 Potter's third report identified the following benefits he suggested were obtained by Cargill as a consequence of owning Joe White:

(1) An additional $39.7 million added to the sale price for Cargill Malt through the inclusion of Joe White in addition to the $410.1 million for

---

3604 See pars 4298-4299 above.
3605 See pars 3935-3939 above.
3606 This would not have been a conclusion I would have reached for various reasons.

Joe White.

(2) Benefits of $70.9 million in financial years 2014 to 2019.[3607]

(3) An unknown amount for adjustment to the cash free, debt free price obtained from the sale of Cargill Malt in the form of working capital.

(4) An unknown amount of value obtained by other Cargill entities due to Cargill Australia owning Joe White.

(5) An unknown amount of sales to Joe White customers from other Cargill plants.

X.73.18.1 The Viterra Parties' submissions

4316 The Viterra Parties submitted that the benefits received by Cargill as a consequence of acquiring Joe White were relevant to an assessment of loss on the basis of the left in hands approach or otherwise. It was submitted that had Cargill not acquired Joe White, it would not have obtained the abovementioned benefits and therefore those benefits needed to be accounted for in order to avoid overcompensating Cargill.

4317 It was submitted that the amount of an additional $39.7 million to the sale price was likely to be understated because it did not necessarily include the value that would be attributed to an organisation with a complete global footprint, including for the reason that additional value could be attributed to a company with primary operations in Asia (being a higher growth region). Further, the Viterra Parties submitted that even though Potter did not quantify the value obtained by other Cargill entities, there were benefits realised by other parts of Cargill, including the grain and oilseeds supply chain. Furthermore, for the payment of an additional $15 million Cargill obtained a benefit in the form of an agreement from the Viterra Parties regarding key terms of the Acquisition Agreement, including the final form of the Warranties, and the benefit of those terms was not a component of the purchase price that Cargill lost as a result

3607 This was said to consist of $48.8 million in profits (being Joe White's 99 percent share of $49.33 million for the Asia-Pacific region (1 percent was allocated to Japan), taking into account "over-allocated corporate costs" of $22.1 million).

of its claims.[3608]

4318 The Viterra Parties also noted that Potter did not attribute any benefits in respect of synergies. However, the Viterra Parties submitted that the Cargill Parties failed to adduce evidence establishing the proportion of estimated synergies that was acquired for the benefit of Cargill Australia and what proportion was acquired for the benefit of other Cargill entities. Accordingly, it was submitted that it could not be said on the evidence that Cargill Australia suffered any loss by reason of a synergy that was forecast to be earned by some other entity within the group, therefore it was irrelevant if that synergy was realised or not.

X.73.18.2 The Cargill Parties' submissions

4319 The Cargill Parties again relied on their submissions above.[3609]

X.73.18.3 Analysis

4320 Leaving aside the distinction between Cargill Australia and Cargill, Inc (or other companies in the Cargill group), the benefits Cargill obtained as a consequence of the resale and the value of those benefits were of little assistance to an assessment of loss. As already explained, in the circumstances of this case, the left in hands approach was inappropriate.[3610] Further, there was no sensible basis upon which a relevant connection could be made between the business acquired in 2013 and the business sold in 2019 so that benefits could be accounted for in a manner that did not include extrinsic or independent factors. Thus, there is no need to discuss any further Potter's assessment of any alleged additional benefits attributable to Cargill Australia's ownership and subsequent sale of the shares in Joe White (and the related assets).

X.73.19 What loss, if any, did Cargill Australia suffer, and to what, if any, damages is Cargill Australia entitled in respect of its claims for misleading or

---

3608 As to this last submission, it must have been made as a matter of logic on the premise that there was some form of parity between the $15 million increase in the purchase price from $405 million and the further amendments to the Acquisition Agreement. While it must be accepted that some changes were made in connection with the agreement to pay a further $15 million (there was no evidence as to what might have been agreed or not agreed had the additional $15 million not been offered), such a premise is contrary to the findings on this point: see issues 54 to 60 above.

3609 See pars 4298-4299 above.

3610 See pars 3939-3943 above.

deceptive conduct?

4321 As it has been found that, if Cargill had been properly informed about the Viterra Practices it would never have agreed to acquire Joe White, or having so agreed would not have completed the Acquisition, the loss suffered by Cargill Australia was the difference between what it paid for Joe White, $420 million, and the true value of Joe White at Completion.

4322 For completeness, it should be observed that on any view Cargill Australia suffered a substantial loss. On the assumption, which has been found, that each of the practices comprising the Viterra Practices occurred as alleged, Potter's opinion was that the true value of Joe White on 31 October 2013 was $384.8 million, thereby establishing a loss of up to $35.2 million. Although capital expenditure of $30 million over 5 years has been accepted as the appropriate assumption, this fact was of little moment in considering Potter's analysis. This is because it was only on the basis that $30 million was expended over 2 years that Potter was willing to assume (at least initially) that there would be no reduction in production capacity, sales or price.[3611]

X.73.20 What loss, if any, did Cargill Australia suffer, and to what, if any, damages is Cargill Australia entitled in respect of its claims for deceit?

4323 The approach in *Potts v Miller* is often adopted in assessing loss by reason of a plaintiff being induced by deceit to make an acquisition.[3612] On the facts of this case, it was appropriate that any assessment of loss by reason of Cargill Australia's cause of action in deceit be approached on this basis. This was because it has been found that, but for the deception, Cargill Australia would never have purchased Joe White.[3613] Accordingly, it never would have paid $420 million for the Acquisition. It is entitled to the return of those moneys, less the value of what it received at Completion.

3611 See par 4158 above.

3612 *HTW Valuers (Central Queensland) Pty Ltd v Astonland Pty Ltd* (2004) 217 CLR 640, 656-657 [35], 667 [65] (Gleeson CJ, McHugh, Gummow, Kirby and Heydon JJ). See also *Kenny & Good Pty Ltd v MGICA (1992) Ltd* (1999) 199 CLR 413, 449 [93] (Gummow J), 459 [123] (Kirby and Callinan JJ); *Smith New Court Securities Ltd v Scrimgeour Vickers (Asset Management) Ltd* [1997] AC 254, 284A (Lord Steyn, with whom Lords Keith and Slynn agreed).

3613 See issue 33 above.

X.74 To what, if any, damages is Cargill Australia entitled, and against any or which of Glencore or Viterra:

(1) Pursuant to section 236 of the Australian Consumer Law?
(2) For deceit?
(3) For breach of the Acquisition Agreement?
(4) For breach of the Due Diligence Information Duty?
(5) For breach of the Co-Operative Bulk Information Duty?

4324 The answer to (3), (4) and (5) is none.[3614] Accordingly, only the damages claimed under the Australian Consumer Law and for deceit need to be addressed.

X.74.1 The approach for claims under the Australian Consumer Law and in deceit

4325 The appropriate basis upon which Cargill Australia's loss is to be quantified is the same whether it is calculated for the purposes of section 236 of the Australian Consumer Law or for its claims in deceit. As explained in issues 73.19 and 73.20 above, on either basis the assessment is to be made on the premise that the loss suffered was represented by the amount paid by Cargill Australia less the true value of what it acquired, which value was substantially less than $420 million.[3615]

4326 Further, the amount derived using this approach need not be adjusted by reason of any of the terms of the Acquisition Agreement. This follows from the fact that, had Cargill not been misled and deceived, or alternatively been subjected to fraudulent conduct by way of deceit, Cargill Australia would never have entered into the Acquisition Agreement, or having done so acting on the impugned conduct it would never have completed the Acquisition.[3616]

3614 See par 3907 above and pars 5294-5325 below.

3615 In circumstances where Cargill Australia has been successful in establishing its claim for misleading or deceptive conduct based upon the Financial and Operational Performance Representations as well as its claim for misleading or deceptive conduct based on the Warranty Representations, it is unnecessary to consider separately its claim for loss based upon the Pre-Completion Representations, which were made subsequent to the Acquisition Agreement being entered into. For completeness, the claims based upon both the Warranty Representations and the Pre-Completion Representations were quantified by Cargill Australia on the same basis as the claims made concerning the Financial and Operational Performance Representations and for deceit.

3616 *Warwick Entertainment Centre Pty Ltd v Alpine Holdings Pty Ltd* (2005) 224 ALR 134, 147-148 [59] (Steytler P, with whom McLure and Pullin JJA agreed); *Marks v GIO Australia Holdings Ltd* (1996) 63 FCR 304, 323D; (Einfeld J); *Henjo Investments Pty Ltd v Collins Marrickville Pty Ltd* (1988) 39 FCR 546, 561.2 (Lockhart J, with whom Burchett J agreed and Foster J relevantly agreed); *Clark Equipment*

4327 Despite the apparent simplicity of such an exercise, for the reasons explained below there were difficulties in calculating the precise amount that ought to be awarded to Cargill Australia.

X.74.2 Evidentiary matters

4328 On 27 June 2018, being day 7 of the trial, a direction was given that the parties were not permitted to tender any spreadsheets without specifically identifying which part or parts of the spreadsheets were relied upon by the party or parties tendering the document, and also explaining why they were relied upon. This direction arose out of the fact that the court book contained numerous spreadsheets that were voluminous both in relation to the number of sheets that had been created within them and, in some cases, the vast amount of information they contained.

4329 On 1 May 2019, the Viterra Parties tendered a joint report of Klein, Meredith and Potter dated 3 December 2018, together with all the appendices and annexures. This was done effectively on behalf of both the Viterra Parties and the Cargill Parties, as both groups of parties sought to rely upon this joint report. Relevantly, the joint report as inserted in the court book did not contain the spreadsheets concerning the strategic bidder valuations in their original form, but rather showed the product of the work that had been done in single page spreadsheets that did not reveal all underlying workings, including any formulas used. Accordingly, for the purpose of the court making any adjustments to the assumptions that had been made by Klein as part of his calculations, it did not have the benefit of the specific workings that gave rise to the totals contained in the spreadsheets.[3617]

4330 In February 2021, the court emailed the parties requesting that the Cargill and Viterra

---

Australia Ltd v Covcat Pty Ltd (1987) 71 ALR 367, 371.5-372.1 (Sheppard J, with whom Fox J agreed and Jackson J relevantly agreed); *Petera Pty Ltd v EAJ Pty Ltd* (1985) 7 FCR 375, 377.9-378.4 (Wilcox J), and the cases there cited; *Commercial Banking Co of Sydney Ltd v R H Brown & Co* (1972) 126 CLR 337, 344.7 (Menzies J, with whom Barwick CJ, McTiernan and Gibbs JJ agreed). Mindful, of course, of the fact that the terms of a disclaimer may be otherwise relevant to questions of fact concerning whether misleading or deceptive conduct has been engaged in, and whether loss or damage has been suffered because of any such conduct: see pars 2941-2944 above. See also issue 33 above.

3617 To be clear, the spreadsheets (coupled with the explanations in the joint report) made plain the basis upon which the totals were arrived at, but the precise formulas used and calculations undertaken for some items were not readily apparent.

Parties provide the underlying spreadsheets used by the respective experts as part of the preparation of the 3 December 2018 joint report. Soon after, the Cargill Parties provided the spreadsheets of their experts. However, the Viterra Parties' solicitors informed the court that in the time available they had not had the opportunity to check what had been provided by the Cargill Parties or complete their response to the court's request.[3618] Further, additional time was sought by the Viterra Parties coupled with a request that the court would not seek to access the spreadsheets provided by the Cargill Parties until the Viterra Parties had had the opportunity to review them. This request was acceded to.

4331 Subsequently, the position changed. The Viterra Parties ultimately objected to the further spreadsheets being accessed. The court was notified accordingly. As a result, a directions hearing was listed for the following day.

4332 At the directions hearing, the Cargill Parties submitted that the further spreadsheets should not be treated as new evidence and could be accessed by the court on that basis. However, it was further submitted that if the court considered them to be fresh evidence then they should not be accessed under objection. The Viterra Parties maintained their objection. Accordingly, directions were given for the filing of submissions by the Viterra Parties setting out the basis of their objection, and for submissions in response from the Cargill Parties. Further, the parties were informed that the court would not access the further spreadsheets without giving the parties notice of its intention to do so (if that were the position that the court was minded to adopt after considering the written submissions).

4333 On 11 March 2021, the Viterra Parties filed submissions maintaining their objection broadly on the basis that the underlying formulas in the spreadsheets tendered were not in evidence and could not be relied upon by the court. They submitted that it would be inappropriate for the court to change any figures in the spreadsheets as tendered at trial as complex interactions might have existed between formulas, and

---

3618 The Viterra Parties' current solicitors were not retained until 2020 and were not involved in the conduct of the trial.

unforeseen issues may arise as a result. Further, they contended that the prudent course would be for the court to seek the assistance of the parties with any calculations of any complexity.[3619]

4334 On 18 March 2021, the Cargill Parties filed responding submissions in which they contended that the position was not entirely clear on whether the underlying spreadsheets had been tendered at trial. Further, they submitted that if there were any "non-straightforward mathematical calculations", then the parties should be given the opportunity to make submissions with respect to them.

X.74.3 The approach to quantifying Cargill Australia's loss

4335 There was no issue between the parties that if the court were only required to make mathematical calculations that were relatively straightforward (in the sense that it did not need the assistance of expert evidence or the parties), then it could proceed to calculate the amount of any loss without their involvement.[3620] Further, there was no suggestion that the court could not perform calculations on a provisional basis, subject to the parties checking the calculations before any final orders were made.[3621] However, on the state of the evidence that the parties agreed was formally tendered, there is little that may be done presently beyond setting out the relevant findings and directing the parties to assist the court in calculating the precise amount that ought to be awarded.[3622]

4336 In some respects, this is regrettable as the sooner this litigation may be brought to its finality the better. There was a strong desire on my part to seek to perform the calculations as part of these reasons. However, having considered the submissions of the parties, I have decided to err on the side of caution.

4337 In adopting this approach, no invitation is made to the parties to revisit the premise

---

3619 *Government Insurance Office of New South Wales v Rosniak* (1992) 27 NSWLR 665, 671D (Kirby P).

3620 See, for example, *Schmidt v AHRKalimpa Pty Ltd* [2020] VSCA 193, [199]-[200], [241]-[242] (Kyrou, Hargrave and Emerton JJA).

3621 *Campton v Centennial Newstan Pty Ltd (No 2)* [2014] NSWSC 1799, [843]-[845] (Hall J); *Long v McDonald* [2000] NSWCA 10, [13] (Priestley JA, with whom Mason P agreed).

3622 In making this observation, there is no intention to make any definitive ruling on the status of the further spreadsheets.

upon which loss is to be calculated. It is envisaged that the court will be provided with calculations based upon the approach used by Klein, with the amounts that ought to be inserted to reflect these reasons in order to arrive at the amount of loss to be awarded. Of course, while the parties will be able to make submissions on the correct approach, any such submissions will only be permitted to be made on the basis that they align with the findings made concerning the true value of Joe White as at 31 October 2013.

X.74.4 Quantum

4338 It suffices for present purposes to state that the findings set out in paragraph 4303 above are to form the basis upon which the true value of Joe White is to be assessed, which amount shall then be deducted from the sum of $420 million, the product of which will be awarded as the quantum of Cargill Australia's loss.

4339 As would be apparent from the previous paragraph, the amount to be awarded shall include the additional $15 million that Cargill agreed would be paid as a result of the Other Bidders Representations. Even if Cargill Australia had been unsuccessful in establishing its claims based upon the difference between $420 million and the true value of Joe White, it would have been entitled to judgment in its favour in the sum of $15 million.[3623]

X.75 Is Cargill entitled to payment in the sum of $774,886.64 together with interest, under the Acquisition Agreement, in respect of the Adjustment Amount?

4340 It is unnecessary to answer this question.[3624]

X.76 What is the effect, if any, of clauses 10.2 and 10.3 of the Confidentiality Deed on Cargill Australia's claims?

3623 See issue 60.3 above.
3624 See pars 3908-3910 above.

4341 Clauses 10.2 and 10.3 are set out above,[3625] but for convenience were as follows:

> **10.2 No legal proceedings to be brought by Recipient**
>
> Subject to clause 10.4 ("Representations") and absent fraud or wilful misconduct by [Glencore], [Cargill, Inc] agrees to:
>
> (a) not bring or institute any legal proceedings against [Glencore] or its Representatives in respect of any Confidential Information; and
>
> (b) procure that its Representatives do not bring or institute any proceedings of the kind specified in clause 10.2(a) above.
>
> **10.3 Release by Recipient**
>
> Subject to clause 10.4 ("Representations") [Cargill, Inc] unconditionally and irrevocably releases [Glencore] and its Representatives from any liability which (notwithstanding the disclaimer in clause 10.1 ("Disclaimer by [Glencore]")) may arise, whether directly or indirectly, in relation to, in connection with, or as a result of the provision of the Confidential Information or any reliance placed by any person on any Confidential Information or the non disclosure of any Information including any liability resulting from any negligence, default or lack of care on the part of [Glencore] or any of its Representatives or from any misrepresentation or any other cause.

X.76.1 The Cargill Parties' submissions

4342 The Cargill Parties submitted that clauses 10.2 and 10.3 of the Confidentiality Deed had no effect on Cargill Australia's claims and relied on their submissions under issues 84 to 86 below, and principally issues 100 to 103 below. The Cargill Parties listed the following 4 principal reasons why it was contended that these clauses relevantly had no effect:

(1) Clauses 10.2 and 10.3 were ineffective or unenforceable as against public policy to the extent that they purported to bar an action in deceit or under section 18 of the Australian Consumer Law.[3626]

(2) Cargill, Inc's obligations under the Confidentiality Deed were released by the Deed of Release.[3627]

3625 See par 590 above.
3626 They referred to their submissions in relation to issue 100 below.
3627 Ibid.

(3) As a matter of construction, there was no breach of clauses 10.2 and 10.3 of the Confidentiality Deed by reason of Cargill Australia commencing this proceeding.[3628]

(4) Even if the clauses were breached, there was no loss caused by that breach.[3629]

X.76.2 The Viterra Parties' submissions

4343 The Viterra Parties referred to their submissions for issue 86 below to submit that Cargill Australia had breached clauses 10.2 and 10.3 of the Confidentiality Deed by instituting legal proceedings. It was submitted that for the reasons outlined under issue 144 below, the clauses did not constitute any attempt to contract out of the Australian Consumer Law, and accordingly were not void or unenforceable, nor contrary to public policy. Further, it was submitted that the effect of these breaches entitled the Viterra Parties to relief,[3630] including damages for that breach or alternatively that Cargill, Inc be ordered to procure that Cargill Australia not continue with this proceeding. In this respect, it was submitted that the third party claims against Cargill, Inc indirectly impacted Cargill Australia's claims.[3631]

X.76.3 Analysis

X.76.3.1 Clause 10.2

4344 There are a number of reasons why clause 10.2 could have no effect on Cargill Australia's claims.

4345 *First*, clause 10.2 was subject to clause 10.4. By clause 10.4, it was agreed that Glencore and its Representatives (which included Viterra)[3632] would be responsible for representations or obligations set forth in separate written agreements. Obviously, the contemplated separate written agreements included an agreement of the kind that became the Acquisition Agreement, which contained the Warranty Representations.

3628 See the Cargill Parties' submissions in relation to issue 102 below.
3629 See their submissions in relation to issues 103, 106 below.
3630 See the Viterra Parties' submissions in issues 88, 110-114 below.
3631 See their submissions in issues 103, 106, 109 below.
3632 Viterra was a Related Body Corporate: see par 588 above.

Accordingly, under the express terms of clause 10.2, Cargill Australia was entitled to sue to hold Viterra responsible for the representations and obligations made in or arising from the Acquisition Agreement.

4346 *Secondly*, the allegations made by Cargill Australia included claims based upon fraud and wilful misconduct by Glencore and Viterra. In circumstances where those allegations have been upheld with respect to the Financial and Operational Performance Representations (as against Viterra)[3633] and the Other Bidders Representations (as against Glencore and Viterra),[3634] the further express limitation of the operation of clause 10.2 was incontrovertibly enlivened.[3635]

4347 *Thirdly*, in circumstances of fraud or wilful misconduct by Glencore, clause 10.2 could have no operation in relation to Cargill Australia's claims. On the face of the wording of the clause, once this proviso was enlivened, then there was no limit on the claims that Cargill, Inc (as the Recipient) could bring or institute in any legal proceeding against Glencore or Viterra, or that Cargill, Inc was required to procure that Cargill Australia (as a Representative) did not bring or institute. The same observation is made in relation to Cargill Australia to the extent that clause 10.2(a) operated directly against Cargill Australia by operation of clause 2.1.

4348 This position may be contrasted with the proviso in relation to clause 10.4. When clauses 10.2 and 10.4 are read together, the apparent intention was that Glencore and its Representatives would only be liable under separate written agreements to the extent they contained representations or obligations;[3636] but neither that proviso nor clause 10.2 generally applied in circumstances where fraud or wilful misconduct was established.

3633 Express allegations of fraud or wilful misconduct against Glencore were not made in relation to the Financial and Operational Performance Representations, but Hughes was acting for both Glencore and Viterra at the relevant times: see issues 11, 22, 23 above.

3634 See issues 59, 60 above.

3635 In light of these findings, it is unnecessary to consider whether simply making allegations of fraud or wilful misconduct in itself would be sufficient to establish that clause 10.2 had not been breached.

3636 This position was based on the terms of the Confidentiality Deed itself, without consideration of any effect the Deed of Release may have subsequently had on the continued operation of these provisions.

X.76.3.2 Clause 10.3

4349 The position with respect clause 10.3 was the same as clause 10.2 in relation to the proviso that it was subject to clause 10.4. In other words, this proviso made clear that nothing contained in clause 10.3 was intended to provide a release in relation to representations or obligations set forth in separate written agreements between the parties.

4350 However, clause 10.3 was to be contrasted with clause 10.2 insofar as clause 10.3 did not contain a proviso in relation to fraud or wilful misconduct. Accordingly, on its face, clause 10.3 purported to release Glencore and Viterra from any liability which might have arisen directly or indirectly in connection with or as a result of the provision of any Confidential Information.

4351 Further, also in contrast to clause 10.2, clause 10.3 did not refer to Cargill, Inc's Representatives expressly. Despite this, the giving of a release fell within the description of the giving of an undertaking in the Confidentiality Deed as referred to in clause 2.1.[3637] Accordingly, the release in clause 10.3 was given by Cargill, Inc on behalf of itself and also on behalf of its Representatives, including Cargill Australia.[3638]

X.76.4 Conclusion

4352 In summary, clause 10.2 had no effect on Cargill Australia's claims. However, clause 10.3 provided that Cargill had released each of the Viterra Parties in relation to all of Cargill Australia's claims, except those that fell within clause 10.4. Other related issues concerning the proper construction and operation of these types of clauses, whether these 2 clauses were breached and whether a claim based on either clause

---

3637 See par 590 above.

3638 Although Cargill Australia joined issue in the pleadings on the matter of whether Cargill Australia was bound, the fact that the terms of cl 10.3 meant a release was also given by Cargill Australia (at least from around 27 May 2013: see issue 5 above) was effectively conceded in the Cargill Parties' closing submissions. In referring to clauses 10.1, 10.2 and 10.3 of the Confidentiality Deed collectively, the Cargill Parties' senior counsel stated that it was plain "that those clauses *both alone* and in combination purport to prevent Cargill, Inc *or its Representatives* bringing any proceedings and achieving any recovery in relation to the Confidential Information" (emphasis added).

was enforceable are dealt with elsewhere.[3639]

X.77 What is the effect of clauses 15.8(b) and 15.9 of the Acquisition Agreement on Cargill Australia's claims for loss and damage?

X.77.1 Clause 15.8

4353 Clause 15.8 is set out above.[3640] In the absence of fraud, a cap on liability was sought to be imposed in relation to some claims up to the amount of the purchase price, being $420 million, and a cap of $100 million for all other claims. As the Viterra Parties acknowledged, this clause would not apply if Cargill Australia established fraud by means of establishing knowledge on the part of Viterra sufficient to justify a finding of deceit. As Cargill Australia has been successful in its claims for deceit with respect to the Financial and Operational Performance Representations, no issue of a cap arises under clause 15.8.

X.77.2 Clause 15.9

4354 Clause 15.9 is set out above.[3641] Essentially, the clause was directed to excluding consequential liability by seeking to confine any claim to direct Loss. It provided that no party would be liable for any indirect Loss.

4355 After referring to the inclusive definition of indirect Loss as set out in clause 15.9, the Viterra Parties' written submissions were confined to submissions concerning contractual damages. In so doing, the Viterra Parties contended that by Cargill Australia pursuing them on the basis of the difference between the purchase price and the true value of Joe White, such contractual damages must have included components of indirect Loss because there was no attempt to quantify losses directly referable to any breach of any particular Warranty. Implicitly, this appeared to be a recognition of the fact that in relation to claims for loss by reason of deceit, or because of misleading or deceptive conduct under the Australian Consumer Law, where the

---

3639 See issues 84-86, 100, 102, 108, 144 below.
3640 See par 1030 above.
3641 Ibid.

deceit or misleading conduct had been established there could be no lawful means by which Viterra could exclude a claim for loss by contractual provisions that were agreed because of the deceitful or misleading conduct.[3642]

4356 However, in oral closing submissions, the Viterra Parties argued that clause 15.9 was not an exclusion clause but merely a limitation clause that permissibly provided for a cap on any loss that could be claimed by restricting any such claim to direct Loss.[3643] It was contended that clauses such as clause 15.9 did not exclude the operation of the Australian Consumer Law, but rather merely regulated its application.

4357 Leaving aside the issue as to whether or not the loss claimed by Cargill Australia fell within the description of "indirect Loss", on the assumption that it (or part of it) did, to give effect to clause 15.9 would be to deny Cargill Australia a statutory remedy to which it was entitled for offending conduct under the Australian Consumer Law. It would be contrary to long-standing authority to permit such a denial.[3644] The same may be said in relation to the position with Cargill Australia's claim in deceit.[3645] In short, clause 15.9 could not be characterised as a contractual provision simply regulating the Australian Consumer Law's application, as to give effect to its terms would be to deny Cargill Australia compensation in relation to any indirect Loss to which it was statutorily entitled as a matter of public policy.

4358 In circumstances where it has been found that Cargill Australia was not entitled to contractual damages for any breach of the Acquisition Agreement,[3646] it is unnecessary to address this issue further with respect to any contractual issue.

3642 See, for example, in relation to deceit *Commercial Banking Co of Sydney Ltd v RH Brown & Co* (1972) 126 CLR 337, 344.7 (Menzies J, with whom Barwick CJ, McTiernan and Gibbs JJ agreed) 349.5-350.3 (Gibbs J, with whom McTiernan J agreed); and in relation to misleading conduct *Henjo Investments Pty Ltd v Collins Marrickville Pty Ltd* (1988) 39 FCR 546, 561.5 (Lockhart J, with whom Burchett J agreed and Foster J relevantly agreed).

3643 This argument was also put in relation to clause 15.8, but for reasons already explained it is unnecessary to refer to this matter. Clause 15.8 was inapplicable because of the existence of fraud: see par 4353 above.

3644 *Henjo Investments Pty Ltd v Collins Marrickville Pty Ltd* (1988) 39 FCR 546, 561.5 (Lockhart J, with whom Burchett J agreed and Foster J relevantly agreed). See also issue 144 below.

3645 See *Commercial Banking Co of Sydney v RH Brown & Co* (1972) 126 CLR 337, 344.8 (Menzies J, with whom Barwick CJ, McTiernan and Gibbs JJ agreed), 350.2 (Gibbs J, with whom McTiernan J agreed).

3646 See issue 145 below.

X.78 Is Cargill Australia prevented from recovering any loss in relation to the Co-Operative Bulk Representations or the Co-Operative Bulk Information Duty by reason of:

(1) Clauses 10(a), 10(b), 10(c) and 11 of the 31 October Agreement (as defined in paragraph 42 of the Defence);
(2) Clauses 4.2, 8.1(k)(1) and 8.2(a) of the Co-Operative Bulk Agreement, and Cargill Australia's knowledge of the content of the Co-Operative Bulk Agreement prior to entering into the Acquisition Agreement; and/or
(3) Clause 15.2 of the Acquisition Agreement?

4359 It is unnecessary to answer these questions.[3647]

X.79 Did Cargill Australia take reasonable steps to mitigate the losses alleged at paragraphs 63M,[3648] 63N[3649] and 75 to 77[3650] of the Statement of Claim?

4360 Broadly, the principle of mitigation is a common law concept, and is a corollary to the principle of compensation for breach of contract or in tort that a plaintiff is only entitled to recover losses actually sustained.[3651] Put succinctly, mitigation embraces 2 ideas:[3652]

> First, a plaintiff cannot recover damages for a loss which he or she *ought to have* avoided, and secondly, a plaintiff cannot recover damages for a loss which he or she *did* avoid.
>
> (Emphasis in original.)

4361 The duty to mitigate imposes the duty of taking all reasonable steps to mitigate the loss consequent on a breach of contract or tort.[3653] The onus of proof in respect of an

---

3647 See par 3907 above.
3648 Paragraph 63M concerned losses claimed based on contraventions of section 18 of the Australian Consumer Law.
3649 Paragraph 63N concerned losses claimed based on deceit.
3650 Paragraph 75 concerned losses claimed based on contraventions of section 18 of the Australian Consumer Law, breach of the Due Diligence Information Duty and deceit. Paragraph 76 concerned losses for breach of the Warranties as claimed. Paragraph 77 concerned the Co-Operative Bulk Information Duty.
3651 *Love v Thwaites* [2014] V ConvR 54-852, 65,716 [46]-[48] (Warren CJ and Beach JA, with whom Tate JA agreed); *British Westinghouse Electric and Manufacturing Company Ltd v Underground Electric Railways Company of London Ltd* [1912] AC 673, 689.4 (Viscount Haldane LC, with whom Lords Ashbourne, Macnaghten and Atkinson agreed).
3652 *Clark v Macourt* (2013) 253 CLR 1, 9 [17] (Hayne J).
3653 *Unity Insurance Brokers Pty Ltd v Rocco Pezzano Pty Ltd* (1998) 192 CLR 603, 654 [134] (Hayne J); *Burns v MAN Automotive (Aust) Pty Ltd* (1986) 161 CLR 653, 658.8 (Gibbs CJ); *British Westinghouse Electric and*

allegation of a failure to mitigate rests on the wrongdoer (in this case, the Viterra Parties).[3654]

4362 In respect of claims made pursuant to the Australian Consumer Law, common law principles "are not controlling" on the assessment of damages for claims,[3655] nor do they confine such claims.[3656] That said, there are a number of decisions applying or contemplating the application of the duty to mitigate or at least something akin to that duty. Although not always applied in name, notions analogous to the duty to mitigate may be weighed when considering issues of causation in assessing damages for breach of the Australian Consumer Law. The result of such an exercise may be that an applicant is unable to recover damages for loss that could have reasonably been avoided.[3657]

4363 That said, it is unnecessary to discuss this issue further. Even assuming the law in this area in terms most favourable to the Viterra Parties, this issue did not arise in any substantive way. The Viterra Parties made no submissions of substance in respect of this issue.[3658] Further, the issue was only faintly addressed in the evidence adduced

---

Manufacturing Company Ltd v Underground Electric Railways Company of London Ltd [1912] AC 673, 689.4.

3654 *Burns v MAN Automotive (Aust) Pty Ltd* (1986) 161 CLR 653, 673.9 (Brennan J, dissenting); *Metal Fabrications (Vic) Pty Ltd v Kelcey* [1986] VR 507, 512.7-513.3, 514.4 (Murphy J, with whom Brooking and Nicholson JJ agreed); *Watts v Rake* (1960) 108 CLR 158, 159.4 (Dixon CJ). See also *Murphy v Overton Investments Pty Ltd* (2004) 216 CLR 388, 414-415 [70] (Gleeson CJ, McHugh, Gummow, Kirby, Hayne, Callinan and Heydon JJ).

3655 See, for example, *Henville v Walker* (2001) 206 CLR 459, 470 [18] (Gleeson CJ). His Honour further acknowledged that common law notions "represent an accumulation of valuable insight and experience which may well be useful": ibid. Note, this case, and those in fn 3657 below concern the predecessor to the Australian Consumer Law, but plainly cases concerning the interpretation of the *Trade Practices Act* may be relevant to the interpretation of the Australian Consumer Law.

3656 *Marks v GIO Australia Holdings Ltd* (1998) 196 CLR 494, 503 [15], [17] (Gaudron J), 510-512 [38]-[40] (McHugh, Hayne and Callinan JJ), 529 [103] (Gummow J). See also *Murphy v Overton Investments Pty Ltd* (2004) 216 CLR 388, 407 [44] (Gleeson CJ, McHugh, Gummow, Kirby, Hayne, Callinan and Heydon JJ); *Accounting Systems 2000 (Developments) Pty Ltd v CCH Australia Ltd* (1993) 42 FCR 470, 504.2, 506.5 (Lockhart and Gummow JJ). See especially in relation to mitigation: *Argy v Blunts & Lane Cove Real Estate Pty Ltd* (1990) 26 FCR 112, 138.3 (Hill J), quoting *Kewside Pty Ltd v Warman International Ltd* (1990) ASC 55-564, 58,824.7 col 2 (French J); *Henjo Investments Pty Ltd v Collins Marrickville Pty Ltd (No 2)* (1989) 40 FCR 76, 93.6 (Lee J).

3657 *Murphy v Overton Investments Pty Ltd* (2004) 216 CLR 388, 413-415 [67]-[70] (Gleeson CJ, McHugh, Gummow, Kirby, Hayne, Callinan and Heydon JJ); *Finucane v New South Wales Egg Corporation* (1988) 80 ALR 486, 519.6 (Lockhart J). See also *Munchies Management Pty Ltd v Belperio* (1988) 58 FCR 274, 287C (Fisher, Gummow and Lee JJ).

3658 The Viterra Parties' written submissions said nothing on the point. In oral closing submissions, reference was made to a duty to mitigate. It was contended, very broadly, that such mitigation had occurred by making profits and ultimately by selling the Joe White Business. For reasons discussed in

at trial, and not in a manner which was capable of discharging the onus of proof. In short, the Viterra Parties have not established that Cargill failed to mitigate its loss so as to justify a reduction in any award of damages.

X.80 If Cargill Australia has suffered loss as a result of any contraventions by Glencore and/or Viterra of section 18 of the Australian Consumer Law, has Cargill Australia suffered that loss partly as a result of its failure to take reasonable care, and ought Cargill Australia's recoverable loss be reduced?

4364 This issue relates only to Cargill's claim for misleading or deceptive conduct under section 18 of the Australian Consumer Law, and is not relevant to the claim for deceit.

X.80.1 Legal principles

4365 There is authority for the proposition that section 18 of the Australian Consumer Law is directed to whether the conduct would be likely to mislead or deceive a reasonable person and therefore was not designed for the benefit of persons who fail, in the circumstances of the case, to take reasonable care of their own interests;[3659] and what is reasonable will depend on all the circumstances.[3660]

4366 The extent to which claimants who failed to take reasonable care of their own interests are able to recover for conduct that contravenes section 18 is governed by section 137B of the *Competition and Consumer Act,* which provides that:

> If:
>
> (a) a person (the ***claimant***) makes a claim under subsection 236(1) of the Australian Consumer Law in relation to economic loss, or damage to property, suffered by the claimant because of the conduct of another

---

issue 73 above, the appropriate means by which to assess the loss suffered did not involve bringing to account any such profits or the amount received from the more recent completion of the sale in 2019 of the shares in Joe White and the assets utilised in the Joe White Business.

3659 *Elders Trustee and Executor Co Ltd v E G Reeves Pty Ltd* (1987) 78 ALR 193, 241.9 (Gummow J), considering s 52 of the *Trade Practices Act,* replaced by s 18 of the Australian Consumer Law. Also see *Australian Competition and Consumer Commission v TPG Internet Pty Ltd* (2013) 250 CLR 640, 651-652 [39] (French CJ, Crennan, Bell and Keane JJ); *Australian Competition and Consumer Commission v Dukemaster Pty Ltd* [2009] FCA 682, [10] (Gordon J); *Parkdale Custom Built Furniture Pty Ltd v Puxu Pty Ltd* (1982) 149 CLR 191, 199.4 (Gibbs CJ).

3660 Ibid.

person; and

(b) the conduct contravened section 18 of the Australian Consumer Law; and

(c) the claimant suffered the loss or damage as result:

(i) partly of the claimant's failure to take reasonable care; and

(ii) partly of the conduct of the other person; and

(d) the other person did not intend to cause the loss or damage and did not fraudulently cause the loss or damage;

the amount of the loss or damage that the claimant may recover under subsection 236(1) of the Australian Consumer Law is to be reduced to the extent to which a court thinks just and equitable having regard to the claimant's share in the responsibility for the loss or damage.

4367 Thus, under section 137B, certain claims are apportionable between the claimant and another person whose conduct caused the loss where the claimant contributed to their loss by failing to take reasonable care.

4368 In *Pennington v Norris*,[3661] the High Court provided guidance on the approach to be taken with regard to contributory negligence:[3662]

> What has to be done is to arrive at a "just and equitable" apportionment as between the plaintiff and the defendant of the "responsibility" for the damage. It seems clear that this must of necessity involve a comparison of culpability. By "culpability" we do not mean moral blameworthiness but degree of departure from the standard of care of the reasonable [person].

4369 Further, in *Podrebersek v Australian Iron and Steel Pty Ltd*,[3663] the High Court addressed the approach to apportionment, saying:[3664]

> The making of an apportionment as between a plaintiff and a defendant of their respective shares in the responsibility for the damage involves a comparison both of culpability, ie of *the degree of departure from the standard of care of the reasonable [person] and of the relative importance of the acts of the parties in causing the damage*. It is *the whole conduct of each negligent party* in relation to the circumstances of the accident which must be subjected to comparative examination. The significance of the various elements involved in such an examination will vary from case to case; for example, the circumstances of some cases may be such that a comparison of the relative importance of the acts

3661 (1956) 96 CLR 10 (Dixon CJ, Webb, Fullagar and Kitto JJ).
3662 Ibid, 16.3. See also *Merost Pty Ltd v CPT Custodian Pty Ltd* [2014] FCA 97, [138] (North J).
3663 (1985) 59 ALR 529 (Gibbs CJ, Mason, Wilson, Brennan and Deane JJ).
3664 Ibid, 532.9-533.3 See also *Merost Pty Ltd v CPT Custodian Pty Ltd* [2014] FCA 97, [139] (North J).

> of the parties in causing the damage will be of little, if any, importance.
>
> (Emphasis added, citations omitted.)

4370 By operation of section 137B(d), apportionment is inapplicable under this statutory regime where the misleading or deceptive conduct was intentional or fraudulent. In the context of misrepresentations, fraud may be established in various ways.[3665] It has been said that:[3666]

> If a [person] makes a statement knowing it to be untrue with the intention that another should act upon it, that obviously is fraud: so also if a [person] recklessly, not caring whether it be true or false, makes a statement with the intention that another should act upon it, that also is fraud. In both cases there is the moral turpitude which in my opinion is necessary to maintain an action for damages for deceit.

4371 "Fraudulent" has been given its statutory meaning within the context of the proportional liability regime in the *Competition and Consumer Act*.[3667] It has been held to require "no more than that a defendant has acted dishonestly 'judged by the standards of ordinary, decent people, without [necessarily] appreciating that the act in question was dishonest by those standards'", but also to require proof at least that the defendant knew that the alleged representation was misleading or deceptive.[3668]

X.80.2 The Viterra Parties' submissions

4372 In the Defence, the Viterra Parties pleaded that Cargill Australia failed to take reasonable care in:[3669]

(1) Relying on various representations, notwithstanding the Sale Process

---

3665 See issue 22 above.

3666 *Joliffe v Baker* (1883) 11 QB 255, 275.1-3 (A L Smith J, agreeing with Watkin Williams and Cave JJ).

3667 And as previously set out in the *Trade Practices Act*.

3668 *Wieland v Texxcon Pty Ltd* (2014) 313 ALR 724, 750 [102] (Nettle, Hansen and Beach JJA) in which the Victorian Court of Appeal considered s 87CC(1)(b) of the *Trade Practices Act*, citing *Farah Constructions Pty Ltd v Say-Dee Pty Ltd* (2007) 230 CLR 89, 162 [173] (Gleeson CJ, Gummow, Callinan, Heydon and Crennan JJ).

3669 Allegations were made in relation to the Co-Operative Bulk Agreement, and Cargill's knowledge of certain matters, including Co-Operative Bulk's ability to terminate the Co-Operative Bulk Agreement in the event that Joe White became a subsidiary of Cargill Australia. As Cargill Australia did not press its claims in relation to Co-Operative Bulk, it is unnecessary to include these matters in considering this issue as no part of the loss claimed was referable to these issues, which were distinct from the other matters the subject of the Due Diligence.

Disclaimers and the Acquisition Agreement Liability Terms.

(2) Failing to include warranties in the Acquisition Agreement that were sufficient to protect Cargill Australia's interests.

As to the second of these matters, the particulars identified the warranties Cargill Australia failed to include as those that were sufficient to protect Cargill Australia's interests, being whatever warranties Cargill Australia required in order to address the matters the subject of its claims in this proceeding having regard to the Sale Process Disclaimers, and Cargill Australia's obligations as at 4 August 2013 by reason of the terms of the Confidentiality Deed and the Acquisition Agreement.

4373 In their submissions the Viterra Parties contended there were 4 ways in which Cargill Australia failed to take reasonable care of its own interests.

4374 *First,* it was submitted that Cargill Australia's agents failed to have regard, and often ignored, the terms of the Sale Process Disclaimers, which were contended to be obviously relevant to the process by which Cargill Australia formed opinions about the Joe White Business. Specifically, they referred to Eden's evidence that he did not make reference to the Confidentiality Deed to identify the use that he could make of the relevant information and he could not recall reading it, he did not read the Information Memorandum Disclaimers and left that to the lawyers,[3670] and nor did he read the Management Presentation Memorandum Disclaimers.[3671] Further, Le Binh could not recall reading the Information Memorandum Disclaimers or whether he read the Confidentiality Deed.[3672] Furthermore, they pointed to Sagaert's evidence that she did not read the Confidentiality Deed, the Phase 1 Process Letter or the Information Memorandum Disclaimers.[3673] Moreover, Jewison gave evidence that she did not look at the Confidentiality Deed when it was executed and could not recall if she looked at it before entry into the Acquisition Agreement. Turning to Conway, his

3670 See par 485 above.
3671 See fn 512 above.
3672 See par 485 above.
3673 In cross-examination, Sagaert gave evidence that "it was not necessarily expected from [her] in [her] role as global commercial manager" to "read the document from front to end".

evidence was that he did not read the Confidentiality Deed, the Information Memorandum or the Acquisition Agreement as that "was a level of operational detail that [he] didn't have the capacity to do that for every transaction that [Cargill was] doing, and that was not what [his] role was designed to do". Finally, the Viterra Parties submitted that while Engle gave evidence that he read the entire Information Memorandum, he admitted that he probably did not read the legal disclaimer page in great detail and gave further evidence that he could not recall if he read it.

4375 The Viterra Parties submitted that the failure of many of Cargill Australia's agents to read the Sale Process Disclaimers meant that Cargill failed to take those disclaimers into account when conducting the Due Diligence. Therefore, it was submitted, these persons failed to take into account a critical part of the context in which each and all of the Pre-Execution Statements were made, which amounted to a failure to take reasonable care. The Viterra Parties relied on the High Court's statement in *Butcher v Lachlan Elder Realty Pty Ltd* that it was important that the agent's conduct be viewed as a whole and that it was "not right to characterise the problem as one of analysing the effect of its 'conduct' divorced from 'disclaimers' about that 'conduct' and divorced from other circumstances which might qualify its character".[3674] On this basis, the Viterra Parties submitted that it was just as important that a representee, in this case Cargill Australia, view the representor's conduct as a whole when the representee considers the meaning of a statement that the representor made, which Cargill Australia failed to do by selectively reading the documents.

4376 Further, it was submitted that "Cargill Australia's failure"[3675] to read the Sale Process Disclaimers was particularly unreasonable given that Cargill Australia knew that the disclaimers were a customary feature of these transactions.[3676]

3674 (2004) 218 CLR 592, 605 [39] (Gleeson CJ, Hayne and Heydon JJ) in the context of considering whether behaviour was misleading under section 52 of the *Trade Practices Act*.

3675 The submission expanded from "many of Cargill Australia's agents" to Cargill Australia itself. Compare the submissions in par 4378 below.

3676 The Viterra Parties relied on evidence given by Clark that it was customary for disclaimers to be included in information memoranda, evidence from Engle that the terms of the Confidentiality Deed were similar to previous confidentiality deeds he had executed and evidence from Van Lierde that the legal team were expected to advise him of any extraordinary or uncommon terms and did not do so. See also par 475 above.

4377 Therefore, the Viterra Parties submitted that Cargill Australia's failure to view the Viterra Parties' conduct as a whole caused Cargill Australia loss as it precluded Cargill Australia from taking the steps it ought to have taken to avoid loss. For example, it was submitted that Engle failed to read the Information Memorandum Disclaimers and therefore misunderstood the analytical exercise that he was required to carry out when conducting the Due Diligence. It was submitted that Engle understood his function to involve "tak[ing] the information that is provided by the seller" to prepare the valuation and by reference to his own experience of other due diligence processes. Whereas, the Viterra Parties contended, if Engle had read the Sale Process Disclaimers, he could have used (and ensured that Cargill Australia's other agents used) the information provided to him during the Due Diligence in the ways the information was permitted to be used.[3677]

4378 *Secondly*, the Viterra Parties submitted that even when some of Cargill Australia's agents read some of the Sale Process Disclaimers, they failed to ensure that Cargill Australia took those statements into account in the Due Diligence. The Viterra Parties pointed specifically to the warning "you are required to make and rely on your own investigations and satisfy yourself in relation to all aspects of the Proposed Transaction".[3678] It was submitted that at least 1 Cargill representative, if not more, read the Sale Process Disclaimers,[3679] and ought to have known that Cargill Australia was operating under the false assumption that the Viterra Parties or Joe White warranted information to be true, complete and reliable. Therefore the representatives would have known that Cargill Australia was making a mistake in the way it was analysing information and as such, failing to take reasonable care of its own interests.

3677 Precisely what ways the Viterra Parties contended use was permitted was not identified in this submission.

3678 The Viterra Parties referred to terms to a similar effect that were included in the Phase 1 Process Letter (see par 468 above), cl 8.3(c) of the Confidentiality Deed (see par 590 above), the Information Memorandum Disclaimers (see par 475 above), the Management Presentation Memorandum Disclaimers (see pars 711-714 above) and the Phase 2 Process Letter: see par 643 above.

3679 The Viterra Parties submitted that Hawthorne read the Confidentiality Deed, Engle, Viers and Van Lierde were likely to have read the Confidentiality Deed, and Jewison read many parts of the legal disclaimer page of the Information Memorandum: see par 485 above.

4379 The Viterra Parties provided 3 reasons why Sale Process Disclaimers were necessary to take into account when viewing the Viterra Parties' conduct as a whole and understanding the meaning of any of the Pre-Execution Statements:

(1) The Pre-Execution Statements needed to be read alongside the Sale Process Disclaimers, which it was submitted made clear that any Pre-Execution Statements made were only starting points.

(2) The Sale Process Disclaimers were not obscured or hidden, rather they were in prominent positions in each of the relevant documents and were regular features of these types of transactions.

(3) The Pre-Execution Statements were made in the context of the Sale Process Disclaimers and no part of any of the Pre-Execution Statements suggested the Sale Process Disclaimers did not apply.

4380 *Thirdly,* the Viterra Parties submitted that Cargill Australia failed to take care of its own interests by failing to verify the information contained in any of the Pre-Execution Statements. It was submitted that Cargill had experience undertaking these kinds of acquisitions and Cargill Australia knew that its role as purchaser required it to verify the information provided to it during the Due Diligence. The following evidence provided by Cargill representatives was relied upon:

(1) Engle said that in his "experience the confidentiality deed sets up for a requirement that a purchaser is going to need to independently evaluate materials".

(2) Sagaert said that she was told that the due diligence process "is where you go in, that is on behalf of Cargill, and independently assess the information that's been given by the seller".

(3) Jewison said that she understood that "[she] needed to make [her] own

determination or investigation in terms of additional information".[3680]

4381 *Finally,* the Viterra Parties submitted that Cargill Australia failed to take reasonable care of its own interests by failing to conduct its own independent investigations of the Undisclosed Matters. This was said to be because Cargill Australia had reason to suspect that *first,* there was a risk the Operational Practices were a feature of any malting business and *secondly,* because of specific knowledge Cargill became aware of, there was a risk that the Viterra Practices were a feature of the Joe White Business.

4382 Further, the Viterra Parties referred to their submissions regarding the inferences to be drawn from the Cargill Parties' failure to call Hermus[3681] and Christianson[3682] as witnesses.

4383 For these reasons, the Viterra Parties submitted that Cargill Australia's loss was partly a result of its own failure to take reasonable care and the quantum of loss recoverable should be significantly reduced. The Viterra Parties then referred to 2 factors in support of this submission:

(1) The "causative potency" of Cargill Australia's failure to take reasonable care outweighed the "causative potency" of Glencore or Viterra's contravention of section 18.[3683] It was submitted that in circumstances where Cargill Australia knew that no vendor due diligence was available to be relied upon, the onus remained on Cargill Australia to identify the facts about the Joe White Business that Cargill Australia considered to be relevant to its decision to acquire Joe White.

(2) Given that only Cargill Australia knew and had the capacity to know of

---

3680 The Viterra Parties also acknowledged that Jewison went on to limit the categories of information that she understood Cargill Australia was required to independently verify to only that information concerning projections, but submitted that she could not provide an explanation for why the Phase 1 Process Letter should be read in that limited way.

3681 See par 2042 above.

3682 See par 2093 above.

3683 Adopting the language used in *Zraika v Walsh* (2015) Aust Torts Reports 82-218, 68,698 [235] (Campbell J) which considered apportionment of liability for negligence.

the matters that were subjectively relevant to its decision to acquire Joe White, and given that Cargill Australia did not let Glencore or Viterra know of the importance of the Viterra Practices before Completion, Cargill Australia was, compared with Glencore or Viterra, more able effectively to prevent loss happening.[3684]

X.80.3 The Cargill Parties' submissions

4384 The Cargill Parties submitted that for the reasons addressed in issues 22 to 23 and 35 to 38 above in respect of representations made both in advance of the Acquisition Agreement being executed and in the period following execution but before Completion respectively,[3685] the Viterra Parties knowingly made false representations with the intention that they would be relied upon. It was submitted that such conduct established that the Viterra Parties fraudulently caused Cargill's loss for the purposes of section 137B of the *Competition and Consumer Act*. As such, the Cargill Parties submitted that section 137B had no application.

4385 In the alternative, if section 137B did apply, the Cargill Parties submitted that Cargill's loss was not caused by a failure to take reasonable care of its own interests. Further, even if Cargill ought to have taken more care, the comparative culpability of the parties was such that there ought to be no reduction to Cargill's recoverable loss pursuant to section 137B.

X.80.3.1 Submissions that there was no failure to take reasonable care

4386 The Cargill Parties submitted that the question of whether or not Cargill failed to take reasonable care should be assessed against the standard of care of a reasonable and sophisticated purchaser of a business. It was submitted Cargill met this standard for a number of reasons.[3686]

4387 *First,* it was submitted that Cargill did not fail to take reasonable care in relying on the

---

3684 *Reinhold v New South Wales Lotteries Corporation (No 2)* (2008) 82 NSWLR 762, 778 [58] (Barrett J), citing *Yates v Mobile Marine Repairs Pty Ltd* [2007] NSWSC 1463, [97] (Palmer J).

3685 The Cargill Parties' submissions referred to "pre-completion and post-completion representations", but this was plainly an error as there were no post-completion representations alleged to have been made.

3686 The submissions also referred to conduct relating to the Co-Operative Bulk Agreement, which is unnecessary to set out: see issues 61-64, 67-68 above.

Viterra Parties' representations before entering into the Acquisition Agreement. This was because Cargill was invited to participate in a sale process in which the information provided failed to disclose the existence of the Viterra Practices which underpinned the Joe White Business. The Cargill Parties submitted that in that environment Cargill diligently and conscientiously undertook the Due Diligence, which amounted to at least reasonable care, noting the following:[3687]

(1) Cargill's decision-making structure required careful and reasoned assessment by senior people within Cargill of the materials provided.

(2) Upon analysing the Data Room Documentation, Cargill identified a question about Joe White's limited storage and systematically pursued that question through the Management Presentation and discussions with senior people in the Joe White Business, and had the minutes of those discussions annexed to the Acquisition Agreement.

(3) The relevant risks identified in the Due Diligence were pursued to a satisfactory end, within the limits of the interrogation allowed due to strictures imposed by Glencore on the Due Diligence.

(4) De Samblanx, as the person in charge of operations, carried out a thorough and diligent assessment of Joe White's operations, which assessment was considered by the Due Diligence team.

4388 The Cargill Parties submitted that there was no occasion to ask for the Viterra Policies. De Samblanx's evidence was that he did not ask any questions about any policy or procedures because it did not occur to him that there would be an organised system of the kind he discovered subsequently and because he knew the Joe White employees were required to sign a code of conduct requiring they be truthful with customers.[3688] Further, the Cargill Parties referred to evidence that Cargill was ultimately going to implement its own Certificate of Analysis policy if it acquired Joe White.

3687 The Cargill Parties referred to their submissions in relation to issue 20 above.

3688 See par 1134 above.

4389 Furthermore, it was submitted that the fact that the Viterra Policies were concealed from auditors and not disclosed by the Viterra Parties in October 2013 suggested that there was no reason to believe that they would have been disclosed to Cargill if Cargill had asked whether such policies existed.

4390 *Secondly,* it was submitted that Cargill did not fail to take reasonable care in relying on the Viterra Parties' representations in October 2013 and deciding to complete the Acquisition. This was put on the basis that Cargill sought information directly from Glencore, obtained legal advice and did all it reasonably could do to protect its interests in the circumstances.

4391 *Thirdly,* referring to their submissions set out in issues 39 to 47 above, the Cargill Parties submitted that there was no failure to take care in securing warranties as the Warranties incorporated into the Acquisition Agreement were comprehensive and sufficient to respond to the existence and non-disclosure of the Viterra Practices.

4392 *Fourthly,* the Cargill Parties submitted that Cargill did not fail to take reasonable care by relying on the Equal to or Better Bids Representation to pay $15 million more to acquire Joe White. It was submitted that Cargill tested the Other Bidders Representations made by Mahoney in both of the Further Bid Calls and received responses that were false and misleading.[3689] The evidence showed Cargill debated whether Mahoney was bluffing and asked Mahoney again why it had to increase the bid by $15 million on the Second Further Bid Call, to which the Cargill Parties submitted that Mahoney represented again that it was an auction and Cargill was not the highest bidder.

X.80.3.2 Submissions on the Viterra Parties' conduct

4393 The Cargill Parties submitted that due to the comparative culpability of the key parties, having regard to the deliberate nature of their acts and the importance of Glencore and Viterra's conduct in causing the loss, there should be no reduction to Cargill's recoverable loss under section 137B. The Cargill Parties pointed to King's

3689 See issues 57-58 above.

evidence that if a business practice had a material bearing on profitability of the business on an ongoing basis, then that practice should be disclosed by a vendor,[3690] and submitted that the Viterra Parties abjectly failed in that regard. The Cargill Parties made further submissions concerning the Viterra Parties' conduct.

4394 *First,* the Cargill Parties submitted that when Glencore acquired Viterra it planned and elected to retain Joe White rather than engage in a back-to-back sale. They contended that, in choosing to run a competitive auction sale process, Glencore accepted exposure to the risks inherent in that process and in Joe White and its management. Instead of managing the risks it had accepted by virtue of this choice, Glencore failed to take adequate steps and ignored the advice received to conduct a vendor due diligence.

4395 The Cargill Parties referred to when Glencore announced that it would acquire Viterra, and that it told a ratings agency that it planned to retain Joe White and sell it after completing the acquisition of Viterra.[3691] They submitted that if Glencore had sold Joe White on a back-to-back basis or as part of a consortium, it would have avoided providing any representations and warranties and would have left the purchaser to accept it *as is where is* without an opportunity to undertake the ordinary level of due diligence.

4396 It was submitted that King acknowledged that the disadvantage of a back-to-back sale was that the sale price was likely to be lower than that achieved by retaining the asset and conducting a private auction. Further, King understood that his role was to create maximum competitive tension and achieve the best price for Glencore.[3692] Furthermore, the "worldwide managing director" of Glencore, Glasenberg, reiterated to management that he wanted Glencore to create "massive tension" and to be pushing bidders to the US$400 million mark.[3693]

3690 See par 495 above.
3691 See also par 352 and fn 291 above.
3692 See par 110 above.
3693 See par 766 above.

4397 Therefore, in electing to sell Joe White via a competitive auction process, instead of on an *as is where is* basis, it was submitted Glencore accepted exposure to Joe White and its incumbent management, which was a known risk that could be significant.[3694]

4398 It was submitted that the fact that Glencore had limited experience in operating a malting business only increased the risks to which Glencore exposed itself. In reliance on King's evidence, the Cargill Parties submitted that an acquirer of a business who has no or limited experience of that business or its industry faces a "known unknown" of there being practices going on within the business that have not manifested and may involve exposure to regulators or third parties. Further, it was submitted that King accepted that if a vendor did not make its own enquiries, it deprived itself of the opportunity to find out whether there was something going on inside the business that should not be happening.[3695]

4399 Further, they submitted Glencore ignored Merrill Lynch's written advice to conduct a vendor due diligence[3696] and the advice it was contended must have been given in a meeting on 26 February 2013,[3697] which the Cargill Parties submitted was reckless. Furthermore, Merrill Lynch wrote internally that there was a risk that Glencore was "being very naïve".[3698]

4400 Moreover, the Cargill Parties referred to King's acknowledgement that a vendor due diligence would have involved a consideration of the matters the subject of financial data packs containing historical information, would have provided an overview of the industry and would have involved more extensive enquiries of management in

---

3694 The Cargill Parties relied on evidence given by King: see par 364 above.

3695 See pars 364, 394 above.

3696 See pars 387-388 above. Further, the Cargill Parties referred to Merrill Lynch's "Targeted 2-Stage Auction" presentation (see pars 372-373 above) which stated that a vendor due diligence "show[ed] the 'real' picture at an early stage" and provided "higher confidence on Business Plan and comparability to historic financials".

3697 The meeting on 26 February 2013 was attended by King and others, and Merrill Lynch had included an agenda item for vendor due diligence: see par 396 above. The Cargill Parties referred to Mattiske's evidence (see par 392 above) that Glencore chose not to undertake vendor due diligence because the potential purchasers were likely to have a much better understanding of the malting industry and the Joe White Business: see also par 398 above.

3698 See par 389 above.

respect of operational matters.[3699] Therefore, it was submitted that a vendor due diligence would have enabled an investigation of practices of which the repeatability was essential for the repeatability of financial performance, which were matters that should have been disclosed to Cargill upfront, particularly if known.[3700]

4401 Finally, the Cargill Parties submitted that King attempted to defend Glencore's decision by explaining that it was inherent in Glencore running the Joe White Business that it conducted a vendor due diligence. They contended that this evidence was based on King's assumption that Glencore's agriculture business in Australia would have undertaken an element of due diligence in running the Joe White Business.[3701] The Cargill Parties pointed to Mattiske's evidence that he only spent a small amount of his time on the Joe White Business given Glencore's intention to sell it.[3702]

4402 Overall, it was submitted that Glencore accepted the risks inherent in Joe White and rejected its adviser's advice to conduct a vendor due diligence, and yet pitched the Joe White Business to the market as a high quality asset, including as a business which met its customers' exact specifications and requirements.

4403 *Secondly,* it was submitted that Glencore incentivised Hughes and Argent to sell Joe White, while failing to interrogate them about risks and accuracy of the representations.[3703] It was submitted that Glencore, largely through King, sought to ensure that the financial projections and information provided put the Joe White Business in the best possible light.[3704] Further, it was contended that in order to obtain the best possible sale price, Glencore allocated and incentivised Hughes and Argent

---

3699 The Cargill Parties did not include the fact that King said he would expect a vendor due diligence to cover operational matters at a high level but did not expect that a vendor due diligence would have uncovered the "covert practices that were alluded to": see par 394 above.

3700 See par 497 above.

3701 The Cargill Parties noted that nothing was said to King in 2013 to this effect, referring to Mattiske's evidence of his understanding that it was unnecessary to engage in any form of vendor due diligence (see par 392 above) and to the kick-off meeting notes, which noted that there was management preference not to obtain a vendor due diligence: see par 398 above.

3702 See par 106 above.

3703 See pars 368-369, 1876-1877 above.

3704 See par 493 above.

to perform tasks beyond their ordinary roles.[3705]

4404 With regard to the Information Memorandum, the Cargill Parties submitted that King, Mattiske and Merrill Lynch liaised with Hughes and Argent during its preparation[3706] and that the Information Memorandum sought to sell the Joe White Business to the market by reference to Joe White's proven effective business model.[3707]

4405 The Cargill Parties highlighted the fact that, on 6 April 2013, King sent an email to Merrill Lynch copied to Hughes and Argent, which attached handwritten mark-ups to the Information Memorandum. They referred to King's comment that management's belief that $30 million was an appropriate level of net working capital for the business was "value destructive to the tune of $3.5 [million]!" and that the comment was subsequently removed from the final form of the Information Memorandum.[3708]

4406 Similarly, it was submitted that in an email in March 2013, from King to Merrill Lynch copied to Hughes and Argent, King determined that the dispute concerning the Co-Operative Bulk Agreement should not be included in the Information Memorandum.[3709] The Cargill Parties pointed to other instances in respect of this dispute, submitting that King had at least 3 opportunities to ensure that the dispute was disclosed,[3710] but chose not to do so and thus conveyed to Hughes and Argent that Glencore sought to avoid disclosing information that might negatively affect the purchase price.

4407 Further, the Cargill Parties submitted that King involved himself closely with the

---

3705 See par 368 above.

3706 See pars 470, 482 above.

3707 See par 504 above.

3708 See par 436 above.

3709 See par 539 above. The Cargill Parties further submitted that although King suggested in his evidence that information about the dispute in relation to the Co-Operative Bulk Agreement was provided in the Data Room, his email of 21 March 2013 gave no such direction and it did not occur.

3710 These included in July 2013, when (according to an email sent by Argent) King again was involved in discussions about this dispute. In response to an email from Wilson-Smith, Argent noted that the dispute was not considered in the Data Books, and that any impact would be negligible as any payout would be offset by a reduction in operating expenses.

messages to be conveyed by Hughes and Argent, wanting to ensure the messages given to prospective purchasers were positive.[3711] The messages that were conveyed at the Management Presentation included that Joe White's business model was focused on ensuring customers received the highest quality malt to meet their exact specifications and requirements.[3712] It was submitted that the messages Hughes conveyed in the Management Presentation were the messages Glencore wanted to convey. Thus, when asked how Joe White managed malt quality and grades of barley for its customers with such limited storage capacity,[3713] it was submitted Hughes gave a misleading response that Joe White was able to "meet quality and few complaints so system works",[3714] instead of disclosing the Operational Practices.[3715] Therefore, it was submitted that Hughes stayed on message, ensuring value enhancing information was disclosed and value destructive information was not.

4408 Furthermore, the Cargill Parties pointed to King's discussions with Hughes, Argent and Merrill Lynch regarding how to explain to Cargill the uplifts of contracted malt margins based on blending, which resulted in amendments to a footnote. They submitted that this was in order to ensure that the practice of using off-grades was not disclosed.[3716] Having been told that the use of off-grades was generally not disclosed to customers,[3717] they contended King accepted that he faced a dilemma because revealing the margin would involve revealing a practice not known to customers.[3718] The Cargill Parties rejected King's justification for not needing to go into details about the breakdown of margins because it was an inherent industry practice so therefore other maltsters "would understand this". They submitted that this evidence could not be accepted as King admitted industry practices were not referred to in the email chain in question and that he knew they were part of Glencore's defence in this case. They

---

3711 See par 699 above.
3712 See par 716 above.
3713 See par 702 above.
3714 See fn 520 above.
3715 Evidence that King reviewed the questions submitted by Cargill before the Management Presentation and stated that the majority of questions were ones management were well prepared for was also referred to: see par 703 above.
3716 See pars 797-816 above.
3717 See par 805 above.
3718 See par 806 above.

also noted that King gave evidence that he was keen to support Glencore's interests in relation to this topic.

4409 Moreover, the Cargill Parties submitted that King's desire was to avoid disclosing information that could negatively affect the view of bidders, confirmed by King's answer to the question of why he did not disclose the off-grade margin. King first explained his approach on the basis that "there's an element of sensitivity associated with individual contracts", but then they contended that he changed his explanation to "it's a very fine line and difficult balance to meet, trying to run a competitive sale process whilst wanting to disclose as much information to potential purchasers around the contracts".

4410 With regard to Argent's edits to the footnote,[3719] it was submitted that although King did not accept the proposition, his silence following the amendment constituted assent to an amendment by which Argent made sure there was no disclosure of the fact that the practice of using off-grade barley was not disclosed to customers. The Cargill Parties submitted that King was shown a form of the final document,[3720] and accepted that nothing on the face of the document related to off-grade barley and that it merely made a comment about other revenue.

4411 In addition, it was submitted that it was in that context that Merrill Lynch informed Hughes that Cargill had requested an operational call between De Samblanx and Youil, and that Merrill Lynch suggested to Hughes that he might also want to be on that call to ensure consistent messaging with what was said in the Management Presentation. Hughes attended the Operations Call and the Cargill Parties submitted that he gave misleading responses to Cargill's questions about quality problems and specifications,[3721] which was again in line with Glencore's messaging and followed the example set by King of disclosing value-enhancing information and not disclosing value-destructive information.

3719 See pars 810-812 above. Argent deleted the reference to "off take" in the description of other revenue.

3720 Being the sales volume analysis disclosed to Cargill in the Data Room: see par 815 above.

3721 See par 884 above.

4412 *Thirdly,* the Cargill Parties submitted that for the purposes of disclosure in the Data Room, Glencore and Viterra failed to take any steps to locate any policies relating to the Joe White Business other than policies relating to safety, health and the environment, despite acknowledging the importance of disclosing relevant policies. Consequently, it was submitted, the Joe White executives were not asked to provide policy documents relating to the way in which the Joe White Business operated, or relating to the technical aspects of malt production, and as a result the Viterra Policies were not placed in the Data Room or disclosed.

4413 The Cargill Parties referred to Fitzgerald asking Bickmore to set up the Data Room,[3722] Bickmore's discussions with Argent, the fact Argent started sending documents to Bickmore and that Bickmore obtained documents from others, including human resources, property, and safety and environment departments within Viterra. They further referred to the meeting between Wilson-Smith, Lindner, Hughes, Argent and Merrill Lynch on 5 June 2013, and the document circulated after the meeting entitled "Data Room Information Log". In particular, they referred to the allocation in that document to Fitzgerald and Wilson-Smith of responsibility for company policies, both in the category of safety, health and environment and the category of "Other".[3723]

4414 It was submitted that Wilson-Smith, who performed the task of locating Joe White company policies, was aware that there were policies but did not know what they were.[3724] Instead of asking for any policies pertaining to the operation of the Joe White Business, it was submitted that Wilson-Smith confined his search to policies relating to safety, health and environment. The Cargill Parties submitted that Wilson-Smith's evidence demonstrated he understood the importance of disclosing any relevant policies and it would have been easy for him to arrange meetings with Joe White executives, but he failed to make enquiries beyond policies relating to safety, health and environment.

4415 Further, the Cargill Parties submitted that Bickmore accepted that policy documents

---

3722 See par 663 above.
3723 See pars 615-618 above.
3724 See par 669 above.

that governed the way in which the Joe White Business operated should have been considered for inclusion in the Data Room, but gave no evidence that she asked anyone to locate such policies. Furthermore, they referred to Bickmore's evidence that it did not occur to her that documents relating to technical production or the technical aspects of the production of malt might be relevant.

4416 Therefore, the Cargill Parties submitted that the failure of Wilson-Smith and Bickmore to take steps to locate policies other than those relating to safety, health and environment, and Fitzgerald's failure to discharge his responsibility to ensure such policies were located, constituted a departure from the standard of care of a reasonable vendor.

4417 *Fourthly*, the Cargill Parties submitted that Glencore and Viterra failed to take reasonable care in verifying the Warranties.

4418 The Cargill Parties submitted that Wilson-Smith failed to adequately verify the Warranties for the following reasons:[3725]

(1) Wilson-Smith failed to ask Hughes, Argent, Youil, Stewart or Wicks if they had been asked to verify contractual warranties before.

(2) Wilson-Smith did not advise the executives of the need to take care in verifying the Warranties.[3726]

(3) The meetings Wilson-Smith held with each of the executives were short.[3727]

(4) Wilson-Smith did not provide the executives with a copy or extract of the Acquisition Agreement in advance of the meetings.[3728]

(5) Wilson-Smith did not go through the relevant definitions with the

---

3725 The Warranty verification process is considered in detail at issue 125.6 below.
3726 See, for example, par 4992 below.
3727 See pars 4966, 5002, 5016 below.
3728 See par 4969 below.

executives during the meetings and did not have a copy of the definitions with him at the meetings.[3729]

(6) Wilson-Smith did not test or interrogate the answers given, follow up or invite supplementary information,[3730] rather he accepted answers given at rushed, face-to-face meetings.

(7) Wilson-Smith failed to verify whether information raised by Joe White executives had been adequately disclosed to Cargill.[3731]

(8) Wilson-Smith met with Hughes and Argent together and was not able to ascertain which Warranties were verified by whom.[3732]

(9) There were discrepancies between Wilson-Smith's handwritten and typed notes, and he was not in a position to say which was correct.[3733]

(10) Warranty 12 was amended after Wilson-Smith finished the Warranty verification process, but he did not attempt to re-verify the Warranty with any of the executives.[3734]

(11) Wilson-Smith said that with the benefit of hindsight he would have conducted the process differently.[3735]

(12) Wilson-Smith accepted that he could not be satisfied that the Warranties had been properly understood by the executives.[3736]

(13) Wilson-Smith accepted that any opaqueness or lack of clarity that arose out of the Warranty verification process arose directly out of the rushed

---

3729 See pars 4970-4982 below.
3730 See par 4995 below.
3731 The Cargill Parties provided the example that Wilson-Smith's notes recorded that Hughes and Argent had identified the dispute with Co-Operative Bulk and indicated they thought it had been disclosed and similarly, Youil thought it had been disclosed.
3732 See par 5005 below.
3733 See pars 5006-5013 below.
3734 See pars 5034(12)-5039 below.
3735 See par 4998 below.
3736 See par 5002 below.

and slipshod way in which that process was conducted.[3737]

4419 The Cargill Parties submitted that the failure to adequately verify the Warranties being given, without appropriate disclosures being made in respect of them, constituted a significant departure from the standard of care of a reasonable vendor. The consequence was that the Warranties were breached and the Warranty Representations were false by reason of the Viterra Practices and that they were not disclosed to Cargill.

4420 *Fifthly*, the Cargill Parties submitted that the Viterra Practices were revealed at the last available moment so far as the Joe White executives were concerned. They submitted that these executives were acting as employees of Viterra Ltd and Viterra Malt, and represented Glencore during the sale process. The Cargill Parties outlined some of the events that occurred after the Acquisition Agreement was entered into and pre-Completion,[3738] noting that on 9 or 10 October 2013 Youil disclosed some details of the Reporting Practice.[3739] Further, it was submitted that at the 15 October Meeting Stewart and Hughes explained the Operational Practices at a high level to De Samblanx and Viers,[3740] but did not explain the significance of the Operational Practices nor how the Joe White Business would be impacted if they were discontinued.[3741] Furthermore, it was submitted that they did not explain the instances or extent of the Operational Practices, which customers were affected, the volumes affected for each customer or the extent to which the profitability of the Joe White Business was underpinned by and dependent on the use of the Operational

3737 See par 4998 below.

3738 See generally pars 1040-1556 above.

3739 See pars 1086-1088 above.

3740 See pars 1100-1154 above.

3741 The Cargill Parties relied on various matters in support of this proposition, including: (1) De Samblanx's evidence that, in October 2013 because he "was not aware of the extent of these practices, and therefore the size of the problem, [he] was unable to assess what the impact on operations might be of ceasing these practices from day 1"; (2) the email from Hughes instructing Joe White executives not to discuss the content of documents with Cargill (see par 1268 above); (3) the document Stewart presented at the 15 October Meeting (see pars 1102-1117 above); and (4) Youil's statement regarding what was discussed in the 15 October Meeting, as recorded in Lindner's notes, that "Didn't go into customers etc, impact on [Joe White Business]": see par 1289 above.

Practices.[3742] Moreover, it was submitted that they did not provide the Viterra Certificate of Analysis Procedure or explain that it was kept concealed in an obsolete folder.[3743]

4421 *Sixthly,* in terms of Glencore and Viterra's knowledge, the Cargill Parties referred to Cargill's request for information regarding the extent of the Viterra Practices on 22 October 2013[3744] and Mattiske's subsequent investigations.[3745] They referred to the evidence that Mattiske appointed Fitzgerald to direct how the investigation was to be carried out.[3746] They submitted Mallesons was also appointed to carry out this task with Fitzgerald.[3747]

4422 The Cargill Parties submitted that Glencore and Viterra received full and frank disclosure of the Viterra Practices on 22 and 23 October 2013 from Hughes, Youil, Stewart and Wicks,[3748] who disclosed matters including that:

(1) Joe White had been breaching contracts and not telling its customers.[3749]

(2) There was no communication with customers about the Viterra Practices or around the contracts.[3750]

(3) Gordon "said to do it" in or about "Oct/Nov 2011".[3751]

(4) The Viterra Practices were used because Joe White was "[t]rying to make malt as cheap as possible"[3752] and Joe White had done this to make as

---

3742 Ibid. The Cargill Parties also relied on evidence given by Stewart: see par 1118 above.
3743 See pars 287-288 above. The Cargill Parties also referred to their submissions for issues 24-29 above regarding the actions taken by some of the Joe White executives and Glencore and Viterra in October to conceal the Reporting Practice from Cargill.
3744 See par 1236 above.
3745 See par 1319 above.
3746 See par 1246 above.
3747 The evidence referred to by the Cargill Parties did not support the submission that Mattiske knew at the time that Mallesons was involved in this process. The evidence directly to the contrary was not referred to in making this submission: see par 1277 above.
3748 The Cargill Parties referred to their submissions at issues 24-29 above.
3749 See par 1299 above.
3750 See pars 1299, 1306, 1307 above.
3751 See par 1299 above, but note fn 793 above.
3752 See par 1299 above.

much profit as possible whilst keeping customers happy.[3753]

(5) The practices were implemented because Joe White had been told to reduce the quality of the product.[3754]

(6) The practices were used because Joe White had been getting bad barley from Glencore which eroded its ability to meet specifications and Glencore did not supply Joe White with required varieties.[3755]

4423 Further, it was submitted that the Joe White executives conveyed further information to Glencore and Viterra, including:

(1) Stewart said that the Reporting Practice ensured that the customer was always right and that Stewart did not know of the legal implications of misreporting.[3756]

(2) Wicks or Hughes stated on 23 October 2013 that Joe White was trying to guess what the customer wanted and act accordingly rather than just telling them,[3757] that Joe White's malt often had specifications outside of contract[3758] and that if Joe White had to supply in accordance with contracts it would be commercial suicide and result in brand decimation.[3759]

(3) Youil noted on 23 October 2013 that the information disclosed in respect of the Operational Practices did not provide details of the customers and impact on business.[3760]

(4) Wicks or Hughes advised that the Cargill 22 October Letter was a fair

statement of what was said in the 15 October Meeting.[3761]

(5) When Hughes was asked if he felt there had been a misrepresentation he replied, "Yes but I was looking at customer practice."[3762]

(6) While Hughes, Youil and Stewart provided estimates of the impact on the Joe White Business of ceasing the Viterra Practices in meetings on 23 October 2013, Hughes noted that Stewart was pulling together numbers to more accurately identify the financial impact.[3763]

(7) Stewart provided Fitzgerald with copies of the Viterra Certificate of Analysis Procedure which were not shared with Cargill after the interviews conducted on 23 October 2013,[3764] and Stewart also sent additional information analysing the extent of the Operational Practices in a memorandum to Fitzgerald.[3765]

(8) The Customer Review Spreadsheet[3766] identified the Viterra Practices and that Joe White was unable to produce malt within customer specifications without adjusting Certificates of Analysis for any of its customers.[3767]

Furthermore, they submitted Glencore and Viterra had access to copies of Certificates of Analysis and the Laboratory Information System containing information about the instances of the Reporting Practice and Varieties Practice occurring (from which Ryan conducted his analysis).[3768]

4424 The Cargill Parties submitted that on 22 October 2013 both Fitzgerald and Hughes instructed Joe White staff to cease communications with Cargill and not discuss the

content of the "Cargill Customer Review" and "Cargill Customer Review Key Recommendations Document".[3769]

4425 Further, it was submitted that despite the disclosure made to Glencore, the 25 October Reply Letter was a misleading response to the Cargill 22 October Letter, which did not disclose the frequency of the Viterra Practices and downplayed Cargill's concerns by suggesting they were unfounded. They submitted that, subsequently the Cargill 29 October Letter identified that the response was inadequate as the impact of the matters remained uncertain and that Cargill sought clarification.[3770] However, they submitted that rather than providing the information sought, Glencore's response maintained that no further access to information would be provided, despite Glencore having access to the Joe White executives, Certificates of Analysis and the Laboratory Information System.[3771]

4426 Furthermore, the Cargill Parties submitted that Glencore made the decision to require Cargill to close the deal rather than provide Cargill with the information it had requested. The Cargill Parties referred to the fact that Walt told King that Glencore's view was to close the sale, and to deal with a potential warranty claim thereafter.[3772] It was submitted that King's question, "whether we can push to close given this?",[3773] was appropriately raised. The Cargill Parties also submitted that Mattiske admitted that he did not want to defer Completion and he did not want to continue having to

---

3769 These documents being the Customer Review Spreadsheet and the Key Recommendations Memorandum: see par 1268 above.

3770 Specifically the Cargill Parties referred to the request in the Cargill 29 October Letter for clarification "not only on differences in analysis outcomes that may result from tests undertaken at different times but whether the certificates themselves did not reflect accurately the outcomes of the test on which each certificate reports". Further, the Cargill 29 October Letter asked whether customers had been informed and consented to the Varieties Practice and the Gibberellic Acid Practice. Cargill also requested details of the frequency of occurrence, the percentage of affected contracts, how many customers were affected and the total volume those customers represented: see par 1451 above.

3771 The Cargill Parties also referred to the fact that the 30 October Reply Letter stated that "Certificates of [A]nalysis have been issued in compliance with [Joe White's] ISO accredited quality system and [Joe White's] documented procedures"; "[Joe White] management are currently considering how to manage" a shortage of barley; and "[Joe White] management have taken steps to ensure that going forward no [gibberellic acid] is added to malt where customers require that it not be used in production": see pars 1512, 1524 above.

3772 See par 1454 above.

run Joe White.[3774]

4427 In circumstances where Glencore required Cargill to complete the Acquisition Agreement despite having access to information regarding the extent of the Operational Practices in October 2013, and failed to disclose this information to Cargill before Completion notwithstanding Cargill specifically requesting it, it was submitted that Glencore and Viterra refused to provide Cargill with information that would have enabled Cargill to properly understand its rights and obtain informed legal advice.[3775] In addition, it was submitted they insisted on Cargill completing despite having the knowledge they did, including that Cargill would suffer loss by completing.

4428 For the reasons outlined, the Cargill Parties submitted that Glencore and Viterra were overwhelmingly culpable for the loss suffered by Cargill Australia on Completion. If there was any failure by Cargill to take reasonable care, they submitted that justice and equity required that no reduction be made to the loss suffered by Cargill having regard to the comparative culpability.

X.80.4 Analysis

X.80.4.1 Section 137B of the Competition and Consumer Act

4429 Cargill Australia's claim is not apportionable under section 137B of the *Competition and Consumer Act* as the Viterra Parties intentionally and fraudulently caused the loss Cargill Australia suffered.[3776] Hughes had knowledge of the Viterra Practices and such knowledge was attributable to Viterra.[3777] Hughes was aware of the statements made in the Information Memorandum and the Management Presentation Memorandum because he was directly involved in settling their contents; and he was also aware of the Management Presentation Statements, the Operations Call Statements and the Commercial Call Statements because either he made them himself or he was present when they were made. By reason of these matters, Hughes was

---

3774 See further fn 4545 below, and in particular (9).
3775 See issue 31 above.
3776 See par 4370 above.
3777 See pars 2660-2676 above and see issues 11, 22 more generally.

aware of what had been represented by the Viterra Parties to be the financial and operational performance of Joe White. In addition, notwithstanding the Due Diligence, he must have known from the exchanges in the Operations and Commercial Calls that there had been no disclosure of the Viterra Practices,[3778] and thus the manner in which they underpinned the financial and operational performance of Joe White. Further, by reason of Hughes' knowledge of all of the Pre-Execution Statements, Viterra knew that material statements made pertaining to the financial and operational performance of Joe White were false. Further, although the allegations concerning deceit relevantly were confined to Viterra, the position was not materially different with respect to Glencore given Hughes' role and authority.[3779]

4430 Furthermore, despite what was stated in the Sale Process Disclaimers, Glencore and Viterra intended that Cargill Australia would rely on the information provided. This intention was evident from a number of matters, including:

(1) The intention to create maximised or massive competitive tension.[3780]

(2) The intention to omit certain information if it was destructive of perceived value.[3781]

(3) The contents of the Phase 1 Process Letter setting out the basis of any indicative bid.[3782]

(4) The contents of the Information Memorandum (which Hughes relevantly approved) included patently false statements that Joe White ensured its customers received the highest quality malt and met their exact specifications and requirements.[3783]

3778 Hughes also having been fully aware that the Viterra Policies had been archived in a manner to conceal their true status: see pars 90, 287 above. Further, the presentation given at the 15 October Meeting overseen by Hughes, at which the Operational Practices were disclosed to De Samblanx and Viers, was indicative of Hughes' awareness of the lack of previous disclosure: see pars 1102-1142, 3260.

3779 See issues 11, 22 above, esp par 2672 above.

3780 See par 4396 above.

3781 See par 4405 above.

3782 See pars 466, 2926, 3056-3059 above.

3783 See par 504 above. See also par 522 above.

(5) The continuation of the sale process by the Viterra Parties, including the provision of the Phase 2 Process Letter, when they were informed that Cargill was relying on the contents of the Information Memorandum not only for the Cargill Indicative Bid but also in its subsequent appraisal of Joe White together with the more detailed information provided by the Viterra Parties in Phase 2.[3784]

(6) The contents of the Management Presentation Memorandum (which Hughes relevantly approved) included repeating patently false statements that Joe White ensured its customers received the highest quality malt and met their exact specifications and requirements.[3785]

(7) The intention not to disclose anything other than what was asked despite Hughes knowing that material information had been omitted that underpinned the financial and operational performance of Joe White and which would be likely to be directly relevant to assessing its value and the appropriate amount for any bid.

4431 It is clear that the Viterra Parties, given their knowledge of false information provided and their intention for Cargill Australia to rely on it,[3786] intended to induce Cargill to acquire Joe White at a high price and, as things transpired, fraudulently caused the loss suffered.

4432 Equally, to the extent this proceeding relates to the Other Bidders Representations, it has been found that Glencore and Viterra made false representations with the intention of inducing Cargill to agree to pay an additional $15 million.[3787] Such conduct fraudulently caused Cargill Australia to suffer a loss of $15 million (as part of its overall loss).

4433 That said, for completeness, I will proceed to consider, if (contrary to what has been

---

3784 See par 623 above.

3785 See par 716 above. See also pars 718, 727 above.

3786 Obviously, this finding does not carry with it that all persons involved on behalf of the Viterra Parties had such knowledge or intention.

3787 See issues 54, 59, 60 above.

found) section 137B had been applicable, whether Cargill Australia's loss was caused in part by its own failure to take reasonable care of its own interests and whether there ought to be a reduction in the amount of damages recoverable.

X.80.4.2 Cargill Australia's conduct

4434 The sale of Joe White was a "Wall Street" deal, which could be expected to attract sophisticated prospective purchasers.[3788] Cargill was such a purchaser, and its conduct must be considered accordingly. For the reasons that follow, Cargill, Inc (and therefore Cargill Australia)[3789] acted with reasonable care in entering into the Acquisition Agreement and completing the Acquisition.

4435 *First,* Cargill did not fail to act with reasonable care as a result of not asking for the Viterra Policies either before it entered into the Acquisition Agreement or before Completion. Despite the Sale Process Disclaimers (including the disclaimers contained in the Data Room Protocol Terms), it could have reasonably been expected that the Viterra Parties would have disclosed material documents, such as the Viterra Policies which underpinned Joe White's performance, as part of the Due Diligence. There were a number of reasons for this. This was a large commercial transaction and there were strict confidentiality protocols (including a limited means by which relevant information could be obtained) which surrounded access to documents in the Data Room and access to information as part of the Q&A Process. As King himself explained,[3790] in such an environment it would be reasonably expected that any significant information or materials, including any policies that underpinned the financial performance of Joe White such as the Viterra Policies, would be disclosed in an information memorandum or, if not an information memorandum, then in a data room or by way of other disclosure as part of a due diligence. So much was reflected in each limb of Warranty 12.[3791]

3788 See pars 3005, 4003 above.

3789 Cargill Australia's case as pleaded was that Cargill, Inc participated in the sale process on its own behalf and on behalf of Cargill Australia at all times from early 2013: see further issue 104 below.

3790 See pars 365, 373, 385, 474, 494-498, 619-620, 659, 943, 974, 1019 above.

3791 See issue 42 above.

4436 Further, Cargill Australia knew that Viterra employees, including those at Joe White, signed an ethical code of conduct.[3792] Therefore, in the absence of notice to the contrary, there were no reasonable grounds to suspect a company policy existed that directly contradicted this code and was implemented such that it underpinned or even materially affected the financial and operational performance of Joe White.

4437 In addition, as part of the Due Diligence Cargill asked a series of questions that, if they were properly answered, ought to have unearthed improper conduct or any inability to perform in accordance with customers' contracts.[3793] In such circumstances, where information was provided that conveyed to Cargill Australia that Joe White was conducted in a particular manner, and having conducted an extensive due diligence and raised queries which did not relevantly disclose anything to the contrary,[3794] there was no reasonable basis for Cargill Australia to distrust the information provided by Glencore or Viterra and to enquire even further about Joe White's operations than it already had, including regarding compliance with the Viterra Code. Furthermore, Cargill had its own policy, so there was no material need to have access to any policies concerning Certificates of Analysis unless there was reason to suspect that such a policy undermined the Viterra Code or formed the basis for any material breaches of customer contracts on the critical matter of malt specifications. In light of the information that was provided there was no reasonable basis for any ongoing suspicion of any material degree.

4438 Finally, in October 2013, Cargill was told, incorrectly and materially so, that Certificates of Analysis were issued in accordance with an International Organisation for Standardisation accredited quality system of Joe White.[3795] There was nothing in this information that suggested an improper and clandestine means of recording testing results and misreporting them was in place.

3792 See par 889 above.

3793 See, for example, pars 873-881, 884-888, 891-909, 911-921, 924-930, 957 above.

3794 Amongst other steps taken, the Data Room was accessed by Cargill representatives 1250 times, and 466 documents were reviewed. Out of a total of 71 persons who had permission to have access, 59 availed themselves of that opportunity.

3795 See par 1405 above.

4439 It is not necessary to consider whether the Viterra Policies would have been provided if Cargill Australia had asked for them, as it was clear on the facts that Cargill Australia acted with reasonable care. As it is unnecessary, in circumstances where many of the relevant witnesses were not called and Mattiske did not know of the Viterra Policies until October 2013, it is not appropriate to make any finding on this issue.

4440 *Secondly*, acting in a sensibly commercial manner, there was little Cargill could have meaningfully done in October 2013 beyond what it did. Having been alerted to the existence of the Operational Practices, Cargill properly sought relevant information from Glencore and the Sellers themselves. Both in the written correspondence and in the discussions between Purser and Mattiske, Cargill made it plain that such practices were unacceptable, and that Cargill considered the ramifications they could have on Joe White's operations and Cargill Australia's rights to be significant.[3796] Given the October 2013 Responses,[3797] and the way in which the Viterra Parties cut off access to any other meaningful source of information,[3798] there was little Cargill could do other than to proceed to Completion (to avoid taking the serious commercial risk of being in material breach of contract for failing to complete).[3799]

4441 *Thirdly*, the Warranties incorporated into the Acquisition Agreement did not fall short of a reasonable standard of care.[3800] The Warranties included Warranties 7.3 (there being no material default of any Material Contract), 9.2 (there being no facts or circumstances to the Share Seller's knowledge that might give rise to a Claim), 12(a) (the Data Room Documentation had been collated and disclosed in good faith and with reasonable care), 12(b) (to the Share Seller's knowledge, no material information had been omitted from the Data Room Documentation), 12(c) (to the Share Seller's knowledge, the Data Room Documentation was true and accurate in all material respects), 13.4 (the Joe White Business had been conducted in the ordinary course in a

---

3796 See pars 1234, 1236, 1319-1322, 1372, 1443-1451, 1473 above.
3797 See issue 24 above.
3798 See pars 1235, 1265-1275 above.
3799 See fn 2638 above.
3800 Numerous Warranties were breached as a result of the Viterra Practices. See issues 42 to 45, 47 above.

proper and efficient manner since the Last Balance Sheet Date) and 17(a) (the Joe White Business had been conducted in accordance with applicable Laws in all material respects). Each of these Warranties individually, as well as collectively, provided protection to Cargill Australia in relation to materially misleading information or the omission of material matters.[3801]

4442 *Fourthly*, Cargill Australia did not fail to act with reasonable care in relying on the Other Bidders Representations to complete the Acquisition Agreement. The Other Bidders Representations were made with the intention to induce Cargill Australia to enter into the contract,[3802] and reliance on them was not a consequence of a failure to take reasonable care. On the contrary, the evidence showed that in the narrow timeframe of 2 hours that Glencore gave to Cargill to consider its position, Cargill diligently and assiduously considered the Other Bidders Representations, including the possibility that they may be untrue.[3803]

4443 *Fifthly*, Cargill Australia did not fail to take reasonable care of its own interests because some of Cargill Australia's agents did not have regard to the terms of the Sale Process Disclaimers for at least 2 reasons.

4444 In a commercial transaction of this size, where multiple individuals are involved and responsible for overseeing various parts of the transaction,[3804] it is a commercial reality that not all individuals can sensibly be expected to be across every aspect of the entire transaction. It cannot be the case that on these facts, given a transaction of this scale, there was a need for every person involved to read all the detail of all the documents. As Conway in substance explained,[3805] it is simply not practical to expect every executive in a large organisation to read the minutiae of every document. As all the executives were undoubtedly aware, Cargill Australia had a legal team that was directly responsible for reading and considering any Sale Process Disclaimers, and

---

3801 See issues 41-45, 47 above.
3802 See issue 60 above.
3803 See issues 57-58 above.
3804 There were well in excess of 50 persons working on the transaction for Cargill.
3805 See par 4374 above.

advising Cargill Australia and its agents how such terms impacted the transaction.

4445 Further, it was not as if the Sale Process Disclaimers were unusual. The thrust of the evidence on this point was that in a transaction such as this, disclaimers seeking to reduce or extinguish any liability of a seller or its agent were to be expected.[3806]

4446 Furthermore, it was not the case that Engle or other key individuals involved in putting together the Cargill deal model misunderstood Cargill's obligation. Broadly, it was understood by those involved that Cargill was required to take the information provided, to test that information, to input information of its own and to prepare its own valuation. Engle's evidence was that in his experience "the Confidentiality Deed sets up for a requirement that a purchaser is going to need to independently evaluate materials" and that a valuation was built by "independently analys[ing]" and "applying business judgment" to the information provided by the seller. The submission by the Viterra Parties that some Cargill employees did not appreciate the significance of the Confidentiality Deed in relation to the task at hand fell away in light of evidence that, in valuing Joe White, it was done on the basis that Cargill needed to independently analyse the information provided.[3807] The product of this approach was the base case contained in the Cargill deal model, which included things such as a 10 year forecast and a terminal value, and addressed synergies (none of which was contained in the Information Memorandum or the Management Presentation Memorandum). It was the base case that formed the basis of Cargill's assessment.[3808] Further, Cargill primarily used a discounted cash flow analysis in valuing Joe White after independently considering a variety of alternative valuation methods.[3809]

4447 To be clear, there was no question that Cargill Australia read the Sale Process

---

3806 See, for example, par 1845 above.

3807 See pars 454-455, 459, 472, 574, 643, 743, 4380 above. See also issue 105 below.

3808 See pars 571, 576, 759, 840, 850, 853, 945, 959-961, 1010, 3971 above.

3809 The uncontested evidence of Hawthorne was that: (1) Cargill considered various methodologies; (2) Cargill also had available to it the Goldman Sachs valuation (in which various methods of valuation were considered in addition to the discounted cash flow); and (3) in the end, Cargill relied on its own valuation.

Disclaimers. Cargill Australia's lawyers were involved from the outset.[3810] The fact that some individuals did not read particular disclaimers did not amount to evidence that Cargill Australia thereby did not read those disclaimers. In the circumstances, it was reasonable for people such as Eden, Le Binh, Sagaert, Jewison, Conway and Engle to leave it to the lawyers, who had direct expertise in dealing with the legal documents, to read and understand the implications of these documents and provide any necessary advice.

4448 *Sixthly,* Cargill Australia did not fail to take reasonable care because of the way in which it read each or any of the Pre-Execution Statements. There was a warning, found in various disclaimers, to the effect that Cargill was required rely on its own investigations. This was the substance of clause 8.3(c) of the Confidentiality Deed, which required Cargill, Inc to "rely solely on its own investigations and analysis in evaluating the Transaction".[3811] It has been found elsewhere that Cargill Australia did not breach clause 8.3(c).[3812] For the reasons outlined,[3813] Cargill did not analyse the information in a way that was not in accordance with clause 8.3(c). This applied to the other instances in which similar warnings were said to be contained in the Sale Process Disclaimers.[3814] There was no suggestion that any of the other disclaimers meant that conduct that was not in breach of clause 8.3(c) of the Confidentiality Deed might somehow still have been contrary to another disclaimer dealing with the same subject matter.

4449 Further, even if the Sale Process Disclaimers imposed obligations as the Viterra Parties alleged, this would not result in Cargill Australia somehow discovering information that was not disclosed, nor be the subject of some form of notice despite reasonable enquiries having been made and the relevant information not being disclosed. In any event, Cargill did undertake extensive investigations and a detailed analysis, and in

3812 See issue 87 below.
3813 See issue 105 below.
3814 Similar terms were contained in the Phase 1 Process Letter (see par 468 above); the Information Memorandum (see par 475 above); the Phase 2 Process Letter (see par 643 above) and the Management Presentation: see par 712 above.

doing so did not uncover the Viterra Practices or anything of that nature, much less that the Joe White Business was underpinned by improper routine practices that had not been disclosed. In summary, it could not be said that Cargill Australia had failed to take reasonable care of its own interests simply because it did not discover matters that reasonable steps during the Due Diligence did not reveal.

4450 *Seventhly,* Cargill Australia did not fail to take reasonable care as a result of the steps it did and did not take to verify whether each of the Pre-Execution Statements was accurate. The purpose of the Due Diligence was to independently assess the information provided and then conduct independent investigations and analyses in evaluating the Transaction. But the extent to which assessments, investigations and analyses could take place, as a matter of practicality, was necessarily limited. A significant amount of the information provided was not publicly available, and therefore Cargill Australia's only option for verifying the accuracy of such information, as well as investigating matters relevant to it itself, was by making reasonable enquiries of the Viterra Parties. This is what it did.[3815]

4451 Further, when Cargill Australia questioned the accuracy of particular information and the existence of a certain state of affairs, and sought to verify the information provided at the 15 October Meeting, the Viterra Parties responded by providing the October 2013 Responses, which were woefully inadequate and did not come close to addressing the issues that had been raised despite the far more extensive relevant information that was available to the Viterra Parties.[3816] Furthermore, in

---

3815 In contending otherwise, the Viterra Parties referred to evidence of persons involved in the Due Diligence (principally Engle and De Samblanx) seeking to identify failures in the process. I will not address the matters raised individually. Much of the evidence relied upon consisted of an inability of a witness to recall specific steps taken in the Due Diligence conducted 5 or so years before the evidence was given, including whether or not particular steps were taken in accordance with a spreadsheet prepared in anticipation of a due diligence being undertaken (see pars 441, 2000, 2054 above). Also much was made of the absence of reports, without referring to the evidence of the weekly calls between workstream leaders or the spreadsheets that were created and repeatedly updated. In particular, it was submitted "most importantly" De Samblanx did not produce an operations due diligence report, but this failed to give due weight to the Operations Spreadsheet, the significant amount of information it contained, its circulation to relevant Project Hawk members and De Samblanx's evidence that he intended the Operations Spreadsheet to stand as his due diligence report: see further pars 755, 771-780, 783-795, 817-821, 825-826, 860-861 above. See also pars 4479-4481 below.

3816 See annexure C to these reasons and issues 24-26 above.

circumstances where the main, if not only, source of information that could have disclosed the inaccuracy of the information provided in the Pre-Execution Statements rested with the Viterra Parties and was not publicly available, Cargill could hardly be criticised for not discovering the hidden business practices comprising the Viterra Practices. In this context it bears repeating that even the Viterra Parties denied knowledge of the Viterra Policies and Viterra Practices up until 22 October 2013,[3817] and, despite everything that was raised, failed to provide any evidence of the Viterra Policies to Cargill Australia in October 2013.

4452 *Eighthly*, Cargill Australia did not fail to take reasonable care because it did not conduct its own independent investigations of the Undisclosed Matters. It was not established that the Alleged Industry Practices were the standard practices in the malting industry,[3818] and beyond that there was nothing to suggest that Cargill Australia had reason to suspect that these practices were a feature of any established, legitimate malting business. Further, the Viterra Parties failed to prove that the Undisclosed Matters were disclosed in the Information Memorandum or during the Due Diligence,[3819] or that Cargill was or ought to have been aware of them despite having the knowledge or state of mind pleaded in paragraph 31A of the Defence.[3820] Therefore, it was not established that before 4 August 2013 Cargill had knowledge about the Joe White Business that objectively would have alerted it to the fact that there was a risk that Joe White was engaging in some or any of the Viterra Practices. As for the position after 4 August 2013 and before Completion, that is addressed above.[3821]

X.80.4.3 The Viterra Parties' conduct

4453 Having regard to the behaviour of the Viterra Parties and Cargill Australia in entering into the Acquisition Agreement, the comparative culpability of the Viterra Parties was grave and deliberate in numerous material respects. Speaking broadly, the Viterra Parties' culpability far outweighed any possible failure by Cargill Australia to take

3817 See issue 11 above.
3818 See issue 13 above.
3819 See issue 12 above.
3820 See issue 21 above.
3821 See pars 3418-3424, 4440, 4451 above.

reasonable care for the reasons outlined below.

4454 *First*, Glencore elected to run the sale process as a competitive auction sale process, instead of on a back-to-back basis.[3822] Had Glencore conducted the sale process differently it could have avoided making representations and providing warranties, and Cargill Australia, or any other purchaser, would have been in a position where it was required to accept Joe White on an *as is where is basis*. By choosing to conduct the sale of Joe White in the manner that it did, so that there was maximum competitive tension, Glencore adopted an increased level of exposure than it otherwise would have had in order to seek to obtain a significantly greater return on the sale of a business it had only acquired 6 months or so before the Information Memorandum was disseminated.

4455 *Secondly*, Glencore did not undertake a vendor due diligence, notwithstanding advice from its financial advisers to do so.[3823] Glencore (in contrast to Viterra) had limited experience in operating a malting business and therefore took on a risk, however remote, that policies or practices within the Joe White Business could have put the business in a position where it was not complying with regulations or contractual obligations.[3824] Having not conducted a vendor due diligence, Glencore elected not to pursue an opportunity to uncover any inappropriate practices relevant to the true value of the Joe White Business, such as the Viterra Practices and Policies, before commencing the sale process.

4456 In this regard, it must be noted that King, not surprisingly, expected a form of due diligence to have been undertaken by the mere fact that Glencore had been in control of the Joe White Business from late 2012.[3825] In circumstances where Glencore had its

---

3822 Obviously, it is not being suggested that there was anything untoward per se in choosing an auction process.

3823 Lindner gave evidence that a vendor had options when preparing for a sale from "providing a full due diligence report to be made available to bidders *who are granted reliance on that report*, to the vendor *merely* providing an information memorandum or flyer of some kind and populating a data room" (emphasis added).

3824 See pars 364, 388-391 and fn 342 above.

3825 See par 391 above.

own representative in Australia as a director of Viterra and Joe White from this time, it would be expected that Mattiske, taking a diligent and intelligent interest in company affairs consistent with his duties as a director,[3826] would have had a not insignificant understanding of the Joe White Business. As the 15 October Meeting demonstrated, it would have taken very little effort on the part of Mattiske (or anyone else from Glencore, including the other directors of Joe White)[3827] to have made it clear that the Joe White Business had to be conducted strictly in accordance with the Viterra Code and have explained to him (or the others at Glencore acting as directors) in broad terms how the Joe White Business operated in order to be so satisfied.

4457 In summary, Glencore was in a position of selling a newly acquired business in an industry where it did not have significant experience and in which Mattiske (and the other Joe White directors associated with Glencore) chose to take not much more than a passive role. In consciously choosing not to conduct a vendor due diligence, Glencore knowingly assumed the risk that it would not have a proper understanding of the business it was selling, including the existence of any underlying improper practices within Joe White, while at the same time seeking to achieve a maximum price on the basis that the Joe White Business was being conducted in a proper and efficient manner.

4458 Further, the riskiness of such behaviour was exacerbated due to the fact that Merrill Lynch, who was employed as Glencore's financial adviser in the sale and was a known expert in its field, encouraged Glencore to undertake a vendor due diligence and believed that by electing not to do so Glencore was "being very naïve" and "taking a decent risk in launching".[3828] It expressed these views despite having had the benefit of Glencore's opinion and being told that Mattiske was very comfortable with the Joe White Business. Therefore, regardless of King's views on the lack of any need for a

3827 See fn 298 above.

3828 See par 389 above.

vendor due diligence,[3829] by rejecting Merrill Lynch's advice Glencore consciously decided not to conduct a vendor due diligence and willingly accepted the risks of not doing so.

4459 *Thirdly,* for the reasons discussed in issue 42 above, the Data Room Documentation was not collated or disclosed with reasonable care. No substantive steps were taken regarding company policies material to operations other than those relating to safety, health and environment.[3830] Further, Fitzgerald failed to discharge his responsibility to ensure all operative policies material to the operations of Joe White were located. A simple enquiry of Hughes or Youil (amongst others) would have been sufficient to avoid what became a critical oversight in the sale process. In conjunction with other failings in the Due Diligence, including in response to questions asked by Cargill as part of the Q&A Process, the failure to provide the Viterra Policies meant Cargill was unable to learn of the existence of the Viterra Practices (or at least the Reporting Practice). This had the consequence not only that the Reporting Practice documented in the Viterra Policies was not disclosed, but also Cargill was not alerted to the fact that the Joe White Business was being conducted improperly (which undoubtedly would have led to further enquiries if this had been revealed).[3831]

4460 Objectively, given their contents and the extent to which they were implemented,[3832] any reasonable vendor would have appreciated that the Viterra Policies would have been material to a decision to acquire Joe White. This conclusion is supported by the fact that Hughes, Youil, Wicks and Stewart felt it necessary to draw the Operational Practices to the attention of Cargill before Completion so that Cargill had a better appreciation of how the Joe White Business operated (although, despite some

---

3829 See pars 388, 391 above.

3830 In making this observation, it is not being suggested that Wilson-Smith or Bickmore were personally at fault. They were not involved in the day-to-day conduct of the Joe White Business and there was nothing to suggest that they ought to have known that documents like the Viterra Policies would have been likely to have been in existence. Further, there were a considerable number of policies included in the Data Room: see par 669 above.

3831 See pars 905-906 above.

3832 Which was largely apparent on the face of the documents.

impressions,[3833] they chose not to be completely transparent by failing to disclose the prevalence of the Operational Practices or the existence of the Viterra Policies themselves). It is also borne out by Purser's communications with Mattiske upon learning of the possible implementation of the Operational Practices in October 2013. Purser told Mattiske that the issues that had been raised were very serious.[3834] This was also abundantly clear from the contents of the Cargill 22 and 29 October Letters.

4461 Accordingly, in the highly unlikely event that it was not apparent to the Viterra Parties already (by reason of Hughes' knowledge), by late October 2013 the Viterra Parties must have fully appreciated that Cargill would have treated the matters pertaining to the implementation and scope of material operational policies such as the Viterra Policies very seriously had they been pointed out.

4462 Thus, upon senior executives of Viterra, including Fitzgerald, learning of the Viterra Policies in the context of the enquiries that had been made by Cargill, the failure to take proper steps to disclose the Viterra Policies to Cargill increased their culpability and deprived Cargill of the opportunity of being properly informed about the Joe White Business. This meant that Cargill was equally deprived of the ability to get meaningful legal advice and make a properly informed decision about whether to proceed with the Acquisition.

4463 *Fourthly,* the verification process for the Warranties, as outlined below,[3835] was wholly inadequate, for reasons including:

(1) The process was unduly rushed because it commenced on Thursday 1 August 2013, a short period of time before the Acquisition Agreement was entered into, and was required to be completed within a day (albeit the process was not entirely completed within the time allocated).[3836]

(2) The task of conducting the verification process was assigned to a

3833 See par 1140 above.
3834 See par 1234 above.
3835 See issue 125.6 below.
3836 See pars 4956-4964 below.

relatively junior lawyer who had never conducted a warranty verification process before.[3837]

(3) No one with the requisite level of experience, including either Mallesons or Fitzgerald, properly oversaw the verification process. The most elementary questions of Wilson-Smith would have exposed the inadequacy of what had taken place.

(4) Overall, the process was conducted poorly, was deficient in a number of ways and lacked the care that was required.[3838]

4464 Further, after the Warranty verification process was completed by Wilson-Smith, he advised Mattiske, Fitzgerald, Rees and Mann of the "need" for these individuals to make reasonable enquiries in relation to the subject matter of the Warranties.[3839] There was no evidence that any of Mattiske, Fitzgerald or Rees ever did. Although Mann did take steps in light of this advice, his responsibilities were limited to safety, health and environment.[3840]

4465 *Fifthly*, in October 2013 there were substantial discussions with the Joe White executives regarding the Viterra Practices that should have raised concerns for Glencore and Viterra. This was in addition to Purser having made clear to Mattiske that Cargill appreciated that if its concerns were well-founded, they were serious.[3841] The failure to follow up or properly investigate relevant matters[3842] amounted to a failure to take reasonable care. Once the level of information was as disclosed on 23 October 2013 by Hughes, Youil, Wicks and Stewart, the culpability of the Viterra Parties became greater for their failure to disclose material information to Cargill. Further, the information that Stewart and others were able to put together in only a few days[3843] demonstrated that, if proper investigations had been carried out after

---

3837 See pars 4957-4959 below.
3838 See pars 4966-5000 below for problems that pertained generally to the process adopted.
3839 Compare par 3528 above.
3840 See pars 996-1001 above.
3841 See par 1372 above.
3842 See, for example, pars 1339, 1342, 1485, 1544 above.
3843 See pars 1210-1211, 1387 above.

receipt of the Cargill 22 October Letter, there would have been plenty of time to obtain the information that was necessary to properly understand how the Joe White Business was conducted. In other words, not only was this failure a substantive oversight as a matter of process, but it also had the substantive consequence of Cargill not being properly informed in response to its enquiries when there was ample opportunity for the Viterra Parties to do so.

4466 *Sixthly,* given the matters of which the Viterra Parties were aware in October 2013, and notwithstanding requests for disclosure of the extent of the Operational Practices from Cargill, not only did the Viterra Parties not disclose information which went to the core of the queries raised, including the existence of the Viterra Policies and the prevalence of the Viterra Practices, but instead they decided not to properly investigate the issues and proceed to Completion as scheduled.[3844] This was done when Mattiske was cognisant that he did not know all the relevant facts and was a conscious decision to take the risk that nothing too significant would flow from such a course.[3845]

4467 For completeness, the Cargill Parties' submission that Glencore and Viterra had the opportunity to interrogate Hughes and Argent did not advance the Cargill Parties' case in any material way. The Viterra Parties, mainly through King and Merrill Lynch,[3846] instructed Hughes and Argent to present Joe White in a positive light. However, it would not have been immediately apparent that there would have been a need to interrogate Hughes or Argent when they formally verified the Information Memorandum to the extent that they did,[3847] and when they collectively approved of the terms of the Management Presentation Memorandum. Equally, there was nothing improper about the arrangements which incentivised Hughes and Argent. By agreeing to assist, both Hughes and Argent were committing to perform substantial

---

3844 For completeness, there was no explanation given as to why, late on 22 October 2013, Hughes (if not at the direction, then with the knowledge and presumably the consent, of Fitzgerald) instructed Youil, Wicks, Stewart and other Joe White executives to cease work on the Customer Review Spreadsheet and the Key Recommendation Memorandum despite that work going to the heart of the queries that had been raised by Cargill: see par 1265 above.

3845 See, for example, par 1467 above.

3846 See, for example, par 367 above.

3847 See pars 446-452 above and pars 4811-4812, 4822 below.

tasks beyond their usual duties for which they might have reasonably expected to receive some remuneration. Further, there was nothing wrong in seeking to align their interests with a successful sale; such a position could reasonably be entirely consistent with a sale that occurred without any misleading or deceptive conduct.

4468 Notwithstanding it was not unreasonable to incentivise Hughes and Argent and not to interrogate them, Glencore plainly had a substantial influence over how the Joe White Business was presented, including by Hughes and Argent. For example, with regard to the Information Memorandum, Hughes and Argent were copied to an email from King which prompted Glencore to remove a comment from the Information Memorandum concerning management's belief that $30 million was an appropriate level of net working capital for the Joe White Business.[3848] Further, Hughes and Argent were copied to an email that determined the Co-Operative Bulk dispute should not be included in the Information Memorandum.[3849] These examples were used by the Cargill Parties to seek to demonstrate a failure by Glencore and Viterra to take reasonable care in how they engaged Hughes and Argent in the sale. Whether or not the conduct amounted to a lack of reasonable care, it certainly sent a message to Hughes and Argent as to how the presentation of the Joe White Business was to be approached.

4469 There were additional examples which demonstrated the guidance Hughes and Argent received from Merrill Lynch and King for the Management Presentation,[3850] correspondence between Hughes, Argent, King and Merrill Lynch about how to deal with margin uplifts to avoid revealing the margin gained by the use of off-grades,[3851] and the fact that Hughes was invited by Merrill Lynch to attend the Operations Call to ensure consistent messaging with what was said at the Management Presentation.[3852] From these examples, it was clear that Glencore and Viterra encouraged Hughes and Argent to convey value enhancing information and not to

---

3848 See par 436 above.
3849 See par 539 above.
3850 See pars 699-700 above.
3851 See pars 796-814 above, but also see par 926 above.
3852 See par 872 above.

disclose value destructive information.

4470 So there is no misunderstanding, there was no evidence that Argent knew anything represented was inaccurate or that he was on notice that anything in the Information Memorandum or the Management Presentation Memorandum was wrong. Therefore, had Glencore taken further steps to question Argent on the financial matters (in contradistinction to operational matters), it seemed unlikely this would have revealed anything more. In a similar vein, there was no evidence that King knew anything represented in the Information Memorandum or the Management Presentation Memorandum was wrong (as opposed to optimistic).

4471 On the other hand, Hughes must have known what was contained in the Information Memorandum and the Management Presentation Memorandum, and, in the context of what had preceded them, what was conveyed on the Operations Call and the Commercial Call was wrong (and in some respects patently so).[3853] Even assuming that Hughes did not get caught up in the fact that this was a sale being driven to get the maximum price, it was clear he was willing for things to be put inaccurately.[3854] Further, Hughes knew that others more senior than him in the Glencore and Viterra organisations, as well as a senior Viterra lawyer, Fitzgerald, were also involved in approving the information, so presumably thought what was being presented carried their approval (particularly in October 2013, after Mallesons and Fitzgerald had been told directly about the Operational Practices). Whatever be Hughes' rationale for the dishonest way he behaved in approving statements that were plainly and unequivocally false, he was acting for Glencore and Viterra in doing so.

4472 Again so there can be no misunderstanding, this finding concerning Hughes' conduct does not mean that, in putting together the Information Memorandum, the Management Presentation Memorandum and the Management Presentation, and facilitating the Operations Call and the Commercial Call, others at Glencore were

---

3853 See, for example, par 3278 above.

3854 Hughes' knowledge was the knowledge of the Viterra Parties and therefore to the extent that Hughes was acting dishonestly, so were the Viterra Parties: see issues 11, 22 above. As to the likely reason Hughes adopted the position he did, see pars 3279-3280 above.

somehow complicit in Hughes' conduct insofar as it involved dishonesty. There was nothing in the evidence to suggest Merrill Lynch, King, Mattiske or anyone else from or acting for Glencore or Viterra, including Argent, had any knowledge of the operational matters before 22 October 2013 that meant that they knew many of the statements made completely misrepresented the operations of the Joe White Business.

4473 In summary, although it could be argued that Glencore might have done more to interrogate the information provided by Hughes and Argent or to satisfy itself of the accuracy of the Information Memorandum and other materials that were disseminated as a result, up until the events in October 2013 there was no reason for others involved in the sale objectively to suspect Hughes had been materially misrepresenting the financial and operational performance of Joe White.[3855] Further, the steps that Glencore did take in requiring Hughes and Argent to verify the pages in the Information Memorandum provided it with assurances that the information was substantially accurate. These were reasonable steps to have taken. Given the manner in which it was done, it did not call for an interrogation above and beyond the verification that occurred.

X.80.5 Conclusion

4474 The amount that Cargill Australia can recover under section 236 because of contraventions of section 18 of the Australian Consumer Law will not be reduced. Principally, this was because section 137B(d) applied and excluded the statutorily prescribed basis upon which any reduction might have been determined. Even if that provision did not apply, there was no basis to reduce the amount awarded for Cargill Australia's loss as it was not partly due to its own failure to take reasonable care.

4475 Also on the assumption that section 137B(d) did not apply (contrary to what has been found), the conclusion that no reduction should be made was buttressed by the Viterra Parties' culpability during the sale process. The Viterra Parties on numerous occasions acted recklessly, and failed to take reasonable care. As a result of the extent of their

3855 This finding does not diminish other findings made concerning the risks that Glencore chose to take as part of the sale process: see pars 4454-4458 above.

behaviour and consistent failures, the Viterra Parties had a high level of culpability for their misleading conduct.

4476 Each of the Viterra Practices, being routinely and secretly engaging in the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice, went to the heart of the operations of the Joe White Business. The Viterra Practices were seriously reprehensible and were plainly something that was material to any decision about whether to acquire Joe White. There could have been no question that they ought to have been disclosed to Cargill.

4477 At numerous stages throughout the sale process, the Viterra Parties' actions either carelessly, recklessly or deliberately resulted in the non-disclosure of the Viterra Practices. This included the way in which Glencore and Viterra conducted the sale, the absence of a vendor due diligence, the collation of Data Room Documentation, the Warranty verification process, non-disclosure of the Viterra Practices and the Viterra Policies in October 2013, failures to properly investigate the disclosures made by Joe White executives in October 2013, and their responses to Cargill's requests for disclosure. The causal potency of the Viterra Parties' conduct was far greater than that of Cargill Australia for any possible inadequacy of Cargill in investigating, assessing and analysing the Joe White Business as part of the decision-making process to acquire Joe White and then to proceed with Completion.

4478 In short, the Viterra Parties' culpability far outweighed any shortcomings in Cargill Australia's conduct, such that Cargill Australia should not be apportioned any proportion of the loss suffered.

X.80.6 Some further remarks

4479 It is necessary to point to a tension between the Viterra Parties' submissions in relation to this issue and their approach to loss taken in issue 73 above.

4480 As part of their approach to valuing loss, the Viterra Parties called a chartered

accountant and valuation expert, Potter,[3856] to give evidence on the value of Joe White.[3857] Potter conducted his analysis using the assumptions set out in Cargill's deal model on the basis that he had reviewed it and he considered the deal model was professionally prepared after a period of extensive due diligence. Having considered its contents, Potter also thought that the forecasts Cargill prepared represented an informed assessment of the prospects of Joe White. Most importantly, Potter expressed the view that he considered it was reasonable to assume that a hypothetical purchaser would have undertaken similar work to Cargill and formed similar views to those formed and reflected in Cargill's deal model. Equally, the Viterra Parties submitted that Potter's use of Cargill's deal model was a reasonable approach given the extensive due diligence conducted by Cargill in order to prepare the forecast contained in the deal model.[3858]

4481 Accordingly, the submissions by the Viterra Parties considered above must be read in light of the fact that both Potter, in his expert opinion, and the Viterra Parties, in making submissions on loss, considered that the Due Diligence as actually undertaken by Cargill and reflected in Cargill's deal model was appropriate for the purposes of valuing Joe White.[3859]

4482 Finally, the reasons given in addressing issue 80 are not intended to be exhaustive. Many of the matters raised have been addressed in more detail in other issues the subject of these reasons. Accordingly, the reasons above concerning section 137B need to be read in conjunction with the more extensive reasons given on the various topics discussed.

X.81 If Cargill Australia has suffered loss or damage as a result of any wrongs by Glencore and/or Viterra, has Cargill Australia suffered that loss or damage partly as a result of its failure to take reasonable care, and ought Cargill Australia's damages be reduced under section 26(1) of the *Wrongs*

3856 See fn 3303 above.
3857 See issue 73 above, and in particular par 3971 above.
3858 See, for example, par 4051 above. See also fnn 525, 2371 above.
3859 No inferences will be drawn from the Cargill Parties' decision not to call Hermus or Christianson as witnesses: see pars 2043-2073, 2094-2100 above.

Act 1958 **(Vic)?**

4483 To the extent this issue arose in light of Cargill Australia's remaining claims, for the reasons discussed in issue 80 above, the answer is no.

X.82 Are Cargill Australia's claims for contravention of section 18 of the Australian Consumer Law apportionable claims within the meaning of section 87CB(1) of the *Competition and Consumer Act*? If so, are Joe White, Hughes, Youil and/or Cargill, Inc concurrent wrongdoers? If so, what proportion of the damage or loss claimed by Cargill Australia does the court consider just for the defendants to bear?

4484 Both the Cargill Parties and the Viterra Parties agreed that claims for contraventions of section 18 of the Australian Consumer Law were apportionable claims within the meaning of section 87CB(1) of the *Competition and Consumer Act*. Section 87CB(1) falls within Part VIA of the *Competition and Consumer Act* and provides that "apportionable claims" are claims for damages made under section 236 of the Australian Consumer Law for "economic loss" or "damage to property" caused by conduct that was done in contravention of section 18 of the Australian Consumer Law. Under section 87CB(2), there is a single apportionable claim in proceedings in respect of the same loss or damage, even if a claim for the loss or damage is based on more than 1 cause of action (whether of the same or a different kind).

4485 Proportionate liability for an apportionable claim is established by section 87CD of the *Competition and Consumer Act*. Pursuant to section 87CD(1), each concurrent wrongdoer's liability is limited to the proportion of damage or loss claimed that the court considers just having regard to the extent of the defendant's responsibility for the damage or loss.[3860] The approach is to consider first the loss or damage that is the subject of the claim, and second, whether there is a person other than the defendant

[3860] A concurrent wrongdoer is defined in the *Competition and Consumer Act*, s 87CB(3), as a person who is 1 of 2 or more persons whose acts or omissions (or act or omission) caused, independently of each other or jointly, the damage or loss that is the subject of the claim.

or defendants whose acts or omissions contributed to the loss or damage.[3861]

4486 However, Cargill Australia relied upon section 87CC which provides that if a concurrent wrongdoer intentionally or fraudulently caused the loss then they are excluded under this apportionment regime and their liability is to be determined in accordance with the legal rules (if any) that are relevant apart from Part VIA of the Act.

4487 Cargill Australia has established that each of the Viterra Parties contravened section 18 of the *Competition and Consumer Act*. Therefore, prima facie, Cargill Australia's claims for damages under section 236 of the *Competition and Consumer Act* are apportionable within the meaning of 87CB(1) of the *Competition and Consumer Act*.

4488 Proceeding for the moment on the basis that section 87CB was applicable, for reasons discussed elsewhere there would be no basis to find that any of Joe White,[3862] Youil[3863] or Cargill, Inc[3864] had any responsibility for the loss suffered by Cargill Australia. Accordingly, if section 87CB had any applicability, it could have only related to Hughes' conduct. However, as it has been found that the Viterra Parties and each of them acted with intent in making the Financial and Operational Performance Representations and that that conduct was fraudulent and caused Cargill Australia's loss, section 87CB cannot apply because each of the Viterra Parties was an "excluded concurrent wrongdoer" within the meaning of section 87CC(1). The same observations are equally applicable in relation to the making of the Other Bidders Representations.

4489 In light of these findings, the entirety of Cargill's Australia's loss is recoverable without being affected by the operation of section 87CB. Accordingly, it is unnecessary to consider the position concerning other claims made by Cargill Australia where a contravention of section 18 has been established.

3861 *Hunt & Hunt Lawyers v Mitchell Morgan Nominees Pty Ltd* (2013) 247 CLR 613, 627 [19] (French CJ, Hayne and Kiefel JJ).

3862 See issue 124 below.

3863 See issue 2 above and issue 125.2 below.

3864 See issue 80, and in particular 80.6, above.

X.83 Are Cargill Australia's Negligence Claims (as defined in the Defence at paragraph 116(a)) apportionable claims within the meaning of section 24AE of the *Wrongs Act*? If so, are Joe White, Hughes, Youil and/or Cargill, Inc concurrent wrongdoers? If so, what proportion of the damage or loss claimed by Cargill Australia does the Court consider just for the defendants to bear?

4490 This issue did not arise in light of the relevant claims not being pressed by the Cargill Parties in closing submissions.

X.84 What is the effect of the Deed of Release dated 31 October 2013?

4491 This issue was confined to the proper construction of the Deed of Release and its operation with respect to the Confidentiality Deed. Related issues concerning the enforceability of the Confidentiality Deed and whether breaches of the Confidentiality Deed occurred (and, if so, whether any right, obligation, Claim or liability arising from its enforceability or any such breach was affected by the Deed of Release) are discussed below.[3865]

4492 Clause 2 of the Deed of Release provided that, on and from Completion and subject to clause 3, Glencore released Cargill, Inc from all "Claims and obligations"[3866] under the Confidentiality Deed.[3867] Clause 3(a) provided that the rights and obligations of any party arising under or in relation to the Acquisition Agreement were unaffected and not prejudiced by the Deed of Release. There was no dispute concerning this clause. Essentially, this issue turned on the meaning of clause 3(b) of the Deed of Release which stated: "Nothing in [the Deed of Release] affects or otherwise prejudices … any accrued rights, obligations, Claims or liabilities arising under or in connection with the [Confidentiality Deed] before Completion which the parties may have against each other".

3865 See issues 86, 87, 100, 101, 102, 105, 108 below.

3866 "Claims" was a defined term, whereas "obligations" was not.

3867 For the terms of the Confidentiality Deed and the Deed of Release, see pars 585-590, 1553 above respectively.

X.84.1 Legal principles

4493 A release discharges or extinguishes an existing obligation or right.[3868] Commonly, they are effected by deed or by agreement for valuable consideration.[3869] A release may be granted before,[3870] or after,[3871] a breach of contract or any other facts giving rise to a dispute,[3872] and can be absolute or conditional.[3873] Conceptually, a release is different from a covenant not to sue.[3874] However, functionally in some circumstances the practical difference between the effect of these types of arrangements (which often may sit side-by-side in an agreement or deed)[3875] may be more apparent than real. Indeed, an unconditional covenant not to sue may effectively operate so as to be equivalent to a release.[3876] Conversely, a release may impliedly give rise to an obligation not to sue.[3877] Whether or not it does so is a question of the proper construction of the release in question.[3878]

4494 At common law, an obligation that was created other than by deed could be released

3870 See, for example, *MWH Australia Pty Ltd v Wynton Stone Australia Pty Ltd (in liq)* (2010) 31 VR 575, 582 [21]-[24] (Warren CJ), 592-596 [70]-[85] (Buchanan and Nettle JJA).

3871 See, for example, *Tetley v Wanless* (1867) LR 2 Exch 275, 279.8-280.5 (Willes J, on behalf of the Exchequer Chamber).

3872 That is, there need not be a dispute on foot at the time a release is granted.

3873 LexisNexis, *Halsbury's Laws of England,* vol 22 (2019), Contract, "5 Discharge by Subsequent Agreement", [405].

3874 See, for example, *Lavin v Toppi* (2015) 254 CLR 459, 470 [37] (French CJ, Kiefel, Bell, Gageler and Keane JJ); *James v Surf Road Nominees Pty Ltd* [2004] NSWCA 475, [41]-[44] (Beazley, Tobias and McColl JA).

3875 Compare the agreement in cl 10.2 and the release in cl 10.3 of the Confidentiality Deed: see par 590 above.

3876 However, a covenant not to sue for a defined period or a covenant which was not meant to release joint and several promisors will not amount to a release: LexisNexis, *Halsbury's Laws of England,* vol 22 (2019), Contract, "5 Discharge by Subsequent Agreement", [406]; *Lavin v Toppi* (2015) 254 CLR 459, 470 [37]. See also *Butler v Fairclough* (1917) 23 CLR 78, 96.1 (Isaacs J). The distinction is a question of construction: *James v Surf Road Nominees Pty Ltd* [2004] NSWCA 475, [41].

3877 *Rectron Australia BV v Lu* [2014] NSWSC 1367, [53]-[54] (Lindsay J), noting that in that case the proceeding found to be the subject of the implied obligation not to sue was already on foot at the time the release was granted as part of a settlement of another proceeding: see [6], [10], [51]-[52].

3878 Ibid, [55].

by agreement for valuable consideration, or under seal.[3879] In *McDermott v Black*,[3880] Dixon J accepted that obligations created by deed and released not under seal could be enforced in equity if the release was given for consideration.[3881] That type of release, an accord and satisfaction, is a form of conditional agreement by which a plaintiff accepts some form of consideration in place of a cause of action.[3882] Until whatever is agreed to be provided is provided and accepted, the cause of action remains alive and unimpaired.[3883] This stands in contrast to a release by deed, where consideration is not necessary.[3884]

4495 A release effected by deed is commonly used to resolve a dispute between parties or to bring an end to an agreement. In *Angas Securities Ltd v Small Business Consortium Lloyds Consortium No 9056*,[3885] Leeming JA explained that the point of a deed of release is "to draw a line under the parties' pre-existing contractual rights, which are ordinarily the subject of a dispute, so that thereafter the parties may look exclusively to the rights in the deed".[3886]

4496 The scope and effect of a deed of release will depend on its terms, as to which the ordinary principles of contractual construction apply.[3887] A release must therefore be construed objectively to determine the common intention of the parties, with reference to the context and surrounding circumstances, in order to give effect to the object and

purpose of the document.[3888] As such, the effect of a deed of release on any claims, rights or obligations, whether pre-existing or prospective, will largely turn on its language, considered in light of the surrounding facts and circumstances.

4497 Subject always to the proper construction of the terms of the release, a number of common law and equitable principles guide the construction of a deed of release.[3889] *First*, general or sweeping words of release may be curtailed or controlled by the context and recitals of an instrument.[3890] *Secondly*, general words in a release may often be read down or restricted by reference to the dispute which existed between the parties at the time the deed of release was executed, and not construed as encompassing facts or circumstances that were not in the contemplation of the parties at that time.[3891] *Thirdly*, a closely related principle of equity prevents "unconscientious reliance upon the general words of a release" by restricting those words to matters that were specially contemplated by the parties at the time the release was given.[3892] However, a party may agree to release claims of which it is unaware and could not have been aware, if clear language is used to make such an intention plain.[3893] If very

broad language is used in a manner which objectively reflects the common intention, then the release will operate with respect to unknown claims, unless the subject matter of the unknown claim was something that could not have been contemplated and was unrelated to the unknown matters or possibilities being addressed in the release.[3894]

X.84.2 The allegations

4498 In the Defence, in response to the allegations in the Statement of Claim generally, the Viterra Parties referred to clause 10.3 of the Confidentiality Deed in pleading that Cargill Australia had unconditionally and irrevocably released Glencore and Viterra from any liability which may have arisen, whether directly or indirectly, in relation to, in connection with, or as a result of the provision of Confidential Information, or any reliance placed by any person on any Confidential Information or the non-disclosure of any information, including any liability resulting from any negligence, default or lack of care on the part of Glencore or Viterra or from misrepresentation or any other cause.

4499 In the Reply, Cargill Australia denied this allegation. Further, Cargill Australia alleged that if it was bound by the release in clause 10.3 as a result of Cargill, Inc executing the Confidentiality Deed,[3895] then all obligations under the Confidentiality Deed (including those under clause 10.3) were released by the Deed of Release.[3896]

4500 Further, in the defence of Cargill, Inc and Joe White to the Third Party Claim in responding to an allegation that Cargill, Inc had breached any and all of clauses 3.3, 10.2(b) and 10.3 of the Confidentiality Deed by causing or permitting Cargill Australia to commence this proceeding, similar allegations were made to those made by Cargill

---

3894 Ibid.

3895 See fn 3638 above.

3896 In the Reply, Cargill Australia also alleged that clause 10.3 did not apply to: the Information Memorandum because the Confidentiality Deed was not executed by Glencore before the Information Memorandum was provided to Cargill, Inc; and the October 2013 Responses or the Pre-Completion Representations because the Approved Purpose did not extend beyond the point at which the Acquisition Agreement was entered into. Both these matters have been addressed elsewhere and have been rejected: see issues 5 above and 105 below respectively. (Allegations were also made in relation to section 18 of the Australian Consumer Law and public policy. Like allegations were made in relation to fraudulent conduct. In addition, it was alleged that the release did not extend to claims made for breaches of obligations, Warranties or misrepresentations under the Acquisition Agreement. These further allegations are not relevant to the questions of construction addressed in this issue.)

Australia referred to in the preceding paragraph. In this context, Cargill, Inc alleged that any obligations under clauses 3.3, 10.2(b) and 10.3 had been released by operation of the Deed of Release.

4501 In the Viterra Parties' reply to this third party defence, after pleading the relevant terms of the Deed of Release and alleging that by reason of those terms the Deed of Release did not apply to clauses 3.3, 10.2(b) and 10.3, they denied Cargill, Inc's allegations. Further, the Viterra Parties alleged each of the agreement and acknowledgement recorded in clauses 8.3(a) and 8.3(c) was an accrued right, obligation, Claim or liability arising under or in connection with the Confidentiality Deed before Completion, and accordingly the Deed of Release had no application in relation to those clauses.

4502 To reiterate briefly,[3897] by clause 3.3 Cargill, Inc undertook to procure that its Representatives would not do anything that, if done by Cargill, Inc, would be a breach of the Confidentiality Deed. By clause 8.3(a), Cargill, Inc agreed it was required to make its own assessment of all Confidential Information. By clause 8.3(c), Cargill, Inc agreed to rely solely on its own investigations and analysis in evaluating the Transaction. Clause 10.2 stated that, absent Glencore's fraudulent or wilful misconduct, Cargill, Inc would not bring proceedings against Glencore or its Representatives, and agreed to procure that its Representatives would not do so. Clause 10.3 provided that Cargill, Inc unconditionally and irrevocably released Glencore and its Representatives from any liability in connection with the Confidential Information, including liability resulting from Glencore's negligence. Both clauses 10.2 and 10.3 were expressly subject to clause 10.4.[3898]

X.84.3 The submissions

4503 The Cargill Parties contended that clause 2 of the Deed of Release had the effect of

---

3897 See pars 585-590 above for the terms of the Confidentiality Deed.

3898 Clause 10.4 provided that, notwithstanding anything in the Confidentiality Deed, Glencore and its Representatives would be responsible for representations or obligations set forth in separate written agreements. As a result, clauses 10.2 and 10.3 had no operation in respect of the Warranty Representations as set forth in the Acquisition Agreement.

releasing Cargill, Inc from any obligations imposed under clauses 3.3, 8.3(a), 8.3(c), 10.2 and 10.3 of the Confidentiality Deed. Further, they submitted that none of Glencore's or Viterra's Claims under these clauses had accrued before Completion. With respect to the release in clause 10.3, it was submitted it did not operate when the Confidentiality Deed was entered into as there was nothing to release at that time. It was contended that on the proper construction of clause 10.3, it created a prospective obligation or a prospective release and that nothing accrued until entry into the Acquisition Agreement. When it was pointed out that this occurred well before Completion and the Deed of Release being executed, this part of the Cargill Parties' submission was withdrawn.

4504 The Cargill Parties further contended that any cause of action in relation to any breach of clauses 10.2 and 10.3 of the Confidentiality Deed could have accrued only when Cargill instituted this proceeding, which occurred after Completion; that is, until this proceeding commenced there could be no breach of contract as nothing had been done contrary to clause 10.2(b) or inconsistent with clause 10.3. Therefore, it was submitted the claims for breach of the Confidentiality Deed advanced by the Viterra Parties were not preserved by clause 3(b) of the Deed of Release.

4505 The Viterra Parties referred to the broadness of the definition of "Claim" in the Deed of Release. They submitted that the rights under clauses 10.2 and 10.3 were all accrued before Completion. With respect to the alleged breaches of clauses 3.3, 8.3(a), 8.3(c) and 10.2, the Viterra Parties referred to the fact that this proceeding concerned events which occurred before Completion. In short, they contended that the events before 31 October 2013 were caught by the Confidentiality Deed but not by the Deed of Release. Thus, it was submitted the Deed of Release had no effect upon these issues because any rights in relation to them also arose before Completion. It was submitted that such rights were rights "arising under or in connection with" the Confidentiality Deed.

4506 In referring to both clauses 8 and 10, the Viterra Parties submitted that objectively it was highly implausible that it was the common intention of the parties that Cargill,

Inc ought to be relieved from its obligations under those clauses. This was put on the basis that it was implausible for Glencore to have gone to great lengths to agree upon a regime where the potential purchaser was required to make its own enquiries and not to rely upon anything that Glencore said as part of the sale process, only for the actual purchaser to be free to make claims about the process. It was submitted that such a construction would defeat the whole purpose of the foundation of the transaction.

4507 Specifically in relation to clause 8.3, it was submitted that Cargill was required to make its own assessment of the Confidential Information and rely solely on its own investigations and analysis in evaluating the Transaction, which necessarily occurred before Completion. For "similar reasons", it was submitted that under clause 3.3 Cargill, Inc was responsible for its Representative's (being Cargill Australia's) conduct up to Completion and that Glencore's right to rely upon this clause was unaffected by the Deed of Release.

4508 In relation to clause 10.3, the Viterra Parties submitted the release had operative effect as soon as the Confidentiality Deed was entered into. The Viterra Parties contrasted clause 10.3 with clause 3.1. They submitted that by clause 3.1 Cargill, Inc had agreed to do various things in the future, whereas clause 10.3 operated immediately. Further, they contended that once the release in clause 10.3 had been given it was given for all time and was unaffected by a subsequent release of obligations where accrued rights were preserved. Accordingly, it was submitted, if this proceeding had been commenced before Completion the release in clause 10.3 could have been pleaded as "a bar". It was submitted that it followed from this that clause 2 of the Deed of Release did not apply to a "claim for breach" of clause 10.3 of the Confidentiality Deed, whether made before or after Completion.[3899]

[3899] Curiously, the Viterra Parties also submitted that once the release under clause 10.3 was effective then clause 10.2 of the Confidentiality Deed had "no more room to operate in the sense that how can you bring an action when you've released the other party from all liability in respect of it". This submission did not appear to depend upon the Deed of Release because the Viterra Parties contended that the release in clause 10.3 was operative from the moment the Confidentiality Deed was executed. However, it appeared to conflate the concepts of a release and a covenant not to sue and not to recognise the differing consequences which may arise from these agreements: see further issue 86 below.

4509 In addressing this issue (and other issues concerned with the Deed of Release), neither the Cargill Parties nor the Viterra Parties referred to any authority concerning the nature or effect of releases, or how a deed of release ought to be construed.

X.84.4 Analysis

4510 There was no real issue between the parties as to the proper interpretation of clauses 2 and 3 of the Deed of Release. The parties agreed that to the extent a right, obligation, Claim or liability *accrued* in relation to the Confidentiality Deed and before Completion, the Deed of Release was of no effect. Equally all other rights, obligations, Claims or liabilities were released on and from Completion, at which point the Confidentiality Deed was no longer enforceable against Cargill, Inc.

4511 In order to determine the effect the Deed of Release had on the Confidentiality Deed, both documents need to be considered in their entirety, in the context of the purpose and object of the transaction more broadly.

4512 As its recitals recorded, the Deed of Release was concerned with Glencore agreeing to release Cargill, Inc "from any further liability under the [Confidentiality Deed]".[3900] Thus, consistent with clauses 2 and 3, Cargill, Inc was to have no liability at all under the Confidentiality Deed unless a right, obligation, Claim or liability had actually accrued under or in connection with the Confidentiality Deed before Completion. In interpreting the meaning of the word "accrued" in clause 3(b) of the Deed of Release, it is necessary to identify a meaning which is consistent with that intention.

4513 Turning to the scope of the Confidentiality Deed, its terms were confined to governing the position between the parties to facilitate the Approved Purpose and not to give rise to any form of agreement to sell. This was expressly agreed under clause 9.3 and implicitly acknowledged in clause 10.4. Thus, it was contemplated that Cargill, Inc, as a potential purchaser, would obtain the Confidential Information for the Approved Purpose and either reach an agreement with Glencore and its Representatives (that is,

---

[3900] Liability in this context was used in a broad sense, as the operative clause (clause 2) released "Claims and obligations".

Viterra) to acquire the Joe White Business or no agreement would be reached. In the latter scenario, the provisions concerned with maintaining confidentiality would continue to operate (in accordance with their terms)[3901] to protect the confidentiality of the Confidential Information. However, if Cargill, Inc and its Representative (that is, Cargill Australia) agreed to acquire the Joe White Business then it would plainly have been contemplated that such an acquisition would be accompanied by access to and use of the information pertaining to the ongoing operation of the Joe White Business once acquired without all the strictness and limitations of the Confidentiality Deed.

4514 In relation to the terms of the Confidentiality Deed, it contained clauses that gave rise to various types of rights or obligations (which had the potential to give rise to a Claim or liability). Significantly for present purposes, and consistent with its scope referred to above, the Confidentiality Deed contained a number of clauses that were not simply directed towards what was permitted to be done specifically as part of the assessment of the Confidential Information for the purpose of evaluating the Joe White Business.[3902] Pursuant to these more general clauses, Cargill, Inc agreed to certain matters on an ongoing basis. These included an agreement to: (1) maintain the confidential nature of the Confidential Information;[3903] (2) not disclose or otherwise provide any Confidential Information (including the existence or terms of the Confidentiality Deed itself) to any person other than in accordance with the Confidentiality Deed;[3904] (3) not use, disclose or reproduce any Confidential Information for any purpose other than the Approved Purpose;[3905] (4) establish and maintain effective security measures to safeguard the Confidential Information;[3906] (5) immediately notify Glencore of any potential, suspected or actual breach of the

3914 Clause 4.3.
3915 Clause 5(b).

such complaint or investigation;[3916] (15) return, at Cargill, Inc's expense, by delivering to Glencore, all documents and other materials in any medium which contained or referred to any Confidential Information on the written demand of Glencore or when the documents and other materials were no longer required for the Approved Purpose (whichever occurred earlier);[3917] (16) delete any Confidential Information that had been entered into a computer, database or other electronic means of data or information storage by Cargill, Inc or any of its Representatives on the written demand of Glencore or when the documents and other materials were no longer required for the Approved Purpose (whichever occurred earlier);[3918] (17) where Cargill, Inc was unable to return, destroy or delete any Confidential Information, to take other prescribed steps;[3919] (18) not be released from Cargill, Inc's and its Representatives' obligations under the Confidentiality Deed as a result of returning, deleting or destroying any documents, other materials or information;[3920] (19) on completion of the return, destruction or deletion of documents, materials and information, promptly notify Glencore of compliance with the Confidentiality Deed;[3921] (20) not disclose to any person without the prior consent of Glencore, or except as permitted by the Confidentiality Deed or as might have been required by law, the existence and contents of the Confidentiality Deed and the contents of any discussions between the parties relating to the Approved Purpose or the Transaction;[3922] (21) not bring or institute any legal proceedings against Glencore or its Representatives in respect of the Confidential Information;[3923] (22) procure that Cargill, Inc's Representatives did not bring or institute any proceedings of the kind specified in clause 10.2(a) of the Confidentiality Deed.[3924]

4515 Although a little lengthy, I have referred to each of the matters to which Cargill, Inc specifically agreed on an ongoing basis under the Confidentiality Deed to

3916 Clause 5(c), (d).
3917 Clause 6.1 (a), (c), (d).
3918 Clause 6.1 (b), (c), (d).
3919 Clause 6.3 (a), (b), (c), (d).
3920 Clause 6.4.
3921 Clause 6.5.
3922 Clause 9.1.
3923 Clause 10.2(a).
3924 Clause 10.2(b).

demonstrate that it was abundantly clear (and no submission was made otherwise) that each of the first 20 of the 22 matters agreed to by Cargill, Inc as set out above was not intended to continue beyond Completion. Further, there was nothing in the language of the Deed of Release to single out or distinguish clause 10.2 from the other clauses of the Confidentiality Deed that Cargill, Inc had agreed to accept obligations in respect of on an ongoing basis.[3925]

4516 Further, in this context "accrued" rights and obligations under the Deed of Release could not sensibly be interpreted to mean all obligations under the Confidentiality Deed which were in effect at the time the Deed of Release became operational. If that were the meaning, other obligations, including Cargill, Inc's extensive obligations referred to above, would not be encompassed by the release in clause 2 of the Deed of Release, and Cargill would remain bound by obligations to, for example, maintain the confidential nature of the Confidential Information. Clearly, this could not have been the parties' intention. Applying the same approach, the obligations placed on Cargill, Inc by clause 10.2 could not be considered to have accrued merely because they were imposed and operative prior to the execution of the Deed of Release.

4517 In relation to the Viterra Parties' submission that it was implausible that the parties had a common intention to include clause 10.2 under the umbrella of the Deed of Release because the regime created by Glencore to protect it from litigation would effectively be undermined, that consequence (if it were the fact) could equally have been said to have arisen because Glencore (and Viterra) did not seek to maintain the position created under clause 10.2 pursuant to the separate written agreements subsequently agreed to (which agreements had been expressly contemplated under clause 10.4 of the Confidentiality Deed). Further, the submission that the "whole purpose of the foundation of the transaction" would be thwarted conflated the different stages of the sale process. The purpose of the initial stage the subject of the

---

[3925] For completeness, to the extent that it might have been contemplated that cl 8.3 potentially related to conduct after Completion, plainly it was not intended that Cargill (as the direct and indirect owners upon Completion) would have been restricted in any further assessment, investigation, analysis or evaluation of the information pertaining to the Joe White Business. Thus, subject to cl 3, this clause would have also been covered by cl 2 of the Deed of Release in relation to any conduct after Completion that would otherwise have been a breach of the clause.

Confidentiality Deed was to allow the Joe White Business to be evaluated in order for Cargill, Inc to decide if and, if so, for how much it was willing to bid for the Joe White Business and on what terms. The second stage, which was not covered by the Confidentiality Deed (except to the extent that the Approved Purpose remained relevant and operative after the Acquisition Agreement was executed and before Completion), was always contemplated to be dealt with in a separate agreement, being the agreement to acquire the Joe White Business. Furthermore, the submission that the same considerations applied to both stages for the purpose of discerning the common intention of the parties ignored the fact that in the first stage Glencore and its Representatives were making the Confidential Information available for the Approved Purpose at no cost to the potential purchaser, and in the second stage Cargill was agreeing to pay a significant sum to complete the Acquisition and to become the owner of Information the subject of the Confidentiality Deed. Moreover, as clause 10.4 expressly contemplated, if separate written agreements were entered into subsequent to the Confidentiality Deed, then Glencore and its Representatives would be responsible for representations and obligations set forth in those agreements. The Acquisition Agreement expressly dealt with the manner in which the parties to that agreement were to be held responsible. Although Glencore was not a party to the Acquisition Agreement, both Cargill, Inc and Cargill Australia were, and they were both subject to the limitations contained in the terms of the Acquisition Agreement (whatever they might have been). In other words, at the time that the Deed of Release was executed, another legal regime had already been put in place (as had been expressly contemplated under the Confidentiality Agreement). Accordingly, it could not be said that a lacuna would have been created, or an obvious error or omission in clause 3(b) of the Deed of Release would have existed, if clause 10.2 was contemplated to be part of the subject matter that was being released by the Deed of Release. As referred to in the introduction to this issue, the rights and obligations in existence because the Acquisition Agreement had been entered into were unaffected and not prejudiced by the Deed of Release.

4518 Further, it was common ground that no legal proceeding had been commenced by

Cargill, Inc or any of its Representatives at any time on or before 31 October 2013. Thus, clause 10.2 had not been breached before Completion. Hypothetically, if a proceeding had been commenced before Completion, Glencore would have had an accrued right under clause 10.2 (subject to any questions about enforceability of that clause), which would have fallen squarely within clause 3(b) of the Deed of Release. However, that possibility did not eventuate. The fact that there had been a mere possibility that such a step could have been taken but was not, did not give rise to any accrued right, obligation, Claim or liability as no breach of the clause had been committed. Accordingly, no rights, obligations, Claims or liabilities could have arisen under that clause (so as to be caught by clause 3(b) of the Deed of Release) simply because Cargill Australia decided to commence a proceeding after Completion. It did not matter that such a proceeding concerned events that occurred before Completion as this fact alone did not bring the act of commencing the proceeding within clause 10.2 before it was the subject of the release in the Deed of Release.

4519 This position was markedly different to that under clause 8.3, where (if there had been a failure to comply with the obligations stipulated during the course of the evaluation and before Completion),[3926] a breach would have occurred and certain rights would have accrued. By extension, the position under clause 3.3 was also different to that under 10.2. If there had been a breach of clause 8.3(a) or 8.3(c) by Cargill Australia before Completion, then Cargill, Inc would have also breached clause 3.3 by failing to procure that Cargill Australia not engage in such conduct; and rights would have accrued to Glencore for the purposes of clause 3(b) of the Deed of Release.

4520 Also, for different reasons, the position was distinct from that under clause 10.3. Pursuant to that clause, the release was given by Cargill, Inc at the time the Confidentiality Deed was executed.[3927] Even if, contrary this finding, the Cargill Parties' submission that clause 10.3 did not give rise to any release at the time the Confidentiality Deed was executed and delivered by Cargill, Inc were accepted, there could have been no question that causes of action accrued in favour of Cargill at the

3926 See issue 105 below.

3927 This is discussed in more detail in issue 100 below.

time the Acquisition Agreement was entered into. Obviously, this occurred months before Completion and before the Deed of Release was executed. Any Claims based on such causes of action would have necessarily been subject to the Viterra Parties' accrued right to rely on the release granted pursuant to clause 10.3 of the Confidentiality Deed (again, subject to any issues concerning the enforceability of that release).

4521 In summary, to the extent that the Confidentiality Deed may have been breached by Cargill up until Completion, then rights in relation to any such breaches would have accrued. Therefore, those rights and related obligations, Claims or liabilities, would have been the subject of clause 3(b) of the Deed of Release. Further, leaving aside questions of the subject matter and enforceability of clause 10.3, the Deed of Release had no effect on the release given pursuant to clause 10.3 as that release had already been given before the time of Completion. However, unless a breach had occurred by Completion in relation to clauses containing ongoing obligations on the part of Cargill, Inc, then they were caught by the Deed of Release inasmuch as they were the subject of the release in clause 2. For the reasons explained above, clause 10.2 fell into this category.

X.85 Is the Confidentiality Deed enforceable by Glencore and/or Viterra against Cargill Australia?

4522 As a prelude to addressing this issue, there were numerous matters concerning the enforceability of the Confidentiality Deed which were raised in issues as identified below. Consideration of this issue as framed will be confined to the question of whether Cargill Australia, not being a party to the Confidentiality Deed, was nevertheless bound by its terms such that, relevantly,[3928] they could be enforced by Glencore or Viterra, or both. Accordingly, the conclusion reached on this question is subject to the other matters addressed below concerning the enforceability of the Confidentiality Deed.

3928 Some terms were solely directed towards imposing obligations on Cargill, Inc.

4523 The Confidentiality Deed, both as executed by Cargill, Inc on 13 May 2013 and as executed subsequently, provided that Cargill, Inc gave the undertakings in the Confidentiality Deed on behalf of itself and also on behalf of its Representatives.[3929] Cargill Australia, as a related body corporate, was incontrovertibly a Representative of Cargill, Inc. So much was not in dispute.

X.85.1 Submissions

4524 The Cargill Parties contended that clause 2.1 did not have the effect of binding Cargill Australia to Cargill, Inc's obligations under the Confidentiality Deed. They submitted that the Confidentiality Agreement was only enforceable against Cargill Australia on the basis that Cargill, Inc was contractually responsible for Cargill Australia's conduct by operation of clause 3.3 of the Confidentiality Deed, but not otherwise.

4525 The Viterra Parties submitted that Cargill Australia was bound by the Confidentiality Deed on 2 bases. *First*, they submitted that the Confidentiality Deed provided benefits to the Representatives of both Glencore and Cargill, Inc and in those circumstances rules concerning privity of contract did not prevent the application of the Confidentiality Deed being enforced.[3930] *Secondly*, they relied upon the doctrine of agency. They submitted that there was "an agency relationship between the respective parties to the Confidentiality Deed and the Representatives for whom they were acting *as agents*" (emphasis added); that is, Glencore was Viterra's agent and Cargill, Inc was Cargill Australia's agent.

X.85.2 Analysis

4526 The pleaded case of Cargill Australia was that from early 2013 Cargill, Inc participated in the sale process on its own behalf and on behalf of Cargill Australia. In the Defence, the Viterra Parties admitted Cargill Australia was a subsidiary of Cargill, Inc and that from 14 May 2013 Cargill, Inc participated in the sale process on its own behalf.

3929 Clause 2.1: see par 590 above.

3930 Relying on *Benson v Rational Entertainment Enterprises Ltd* (2018) 355 ALR 671, 691-693 [112]-[124] (Leeming JA, with whom Beazley P and Emmett AJA agreed); *Trident General Insurance Co Ltd v McNiece Bros Pty Ltd* (1988) 165 CLR 107 (Mason CJ, Wilson, Toohey and Gaudron JJ, Brennan, Deane and Dawson JJ dissenting).

Otherwise, they denied the allegation concerning a relationship of agency between Cargill, Inc and Cargill Australia. However, later in the Defence after pleading the terms of the Confidentiality Deed including clause 2.1, the Viterra Parties alleged Cargill Australia was a Representative of Cargill, Inc at all material times after about 22 May 2013.[3931] In the Reply, this allegation was admitted. Cargill Australia also admitted that at all material times Cargill Australia was aware of the terms of the Confidentiality Deed.

4527 Accordingly, it is necessary to make a finding as to whether or not Cargill, Inc was acting as agent for Cargill Australia on and from 13 May 2013, when it first executed the Confidentiality Deed. In circumstances where it was Cargill Australia's pleaded case that Cargill, Inc was so acting,[3932] and the Viterra Parties' closing submissions also contended that that was the position, it would appear that there could be little controversy about the matter. In any event, the evidence indicated that at all times it was contemplated that Cargill, Inc was not the intended purchaser and that it was participating in the sale process so that it might facilitate the purchase of Joe White by Cargill Australia.[3933] Thus, at least by 13 May 2013, Cargill, Inc was acting both in its own right and as an agent for Cargill Australia. Clause 2.1 of the Confidentiality Deed as executed by Cargill, Inc both on 13 May 2013 and 22 May 2013 was entirely consistent with this position.

4528 In circumstances where there was an established relationship of principal and agent between Cargill Australia and Cargill, Inc in order that Cargill Australia might have been able to acquire Joe White, there could be no real issue that, in Cargill, Inc executing the Confidentiality Deed (both on 13 May 2013 and 22 May 2013) in terms that included clause 2.1, Cargill, Inc was binding its principal in this agency relationship, Cargill Australia, to the Confidentiality Deed. Contrary to the Cargill

---

3931 It would appear the reason that the date of 22 May 2013 was alleged in the Defence was because this was the date upon which Cargill, Inc executed the later version of the Confidentiality Deed. However, the Defence also alleged that the Confidentiality Deed as executed by Cargill, Inc on 13 May 2013 was binding from that date. Clause 2.1 was identical in each version of the Confidentiality Deed.

3932 See also par 4635 below.

3933 See, for example, par 622 above.

Parties' submissions, the fact that the Confidentiality Deed contained terms that imposed obligations upon Cargill, Inc alone, such as clause 3.3 which directly required Cargill, Inc to ensure that its Representatives complied with the Confidentiality Deed,[3934] did not detract from the fact that Cargill, Inc as a duly authorised agent of Cargill Australia was also acting in that capacity in binding its principal.

4529 In light of this conclusion, it is unnecessary to consider the Viterra Parties' alternate submission based on *Trident General Insurance Co Ltd v McNiece Bros Pty Ltd*.[3935] As that decision is the subject of considerable uncertainty in relation to the extent of its application to contract law,[3936] it would be more appropriate that that matter be considered in a case where the issue needs to be decided.

X.85.3 Conclusion

4530 Subject to other issues concerning the question of enforceability of the particular aspects of the Confidentiality Deed, by operation of clause 2.1 the Confidentiality Deed was enforceable by both Glencore and Viterra against Cargill Australia.

X.86 Has Cargill Australia breached clauses 10.2 and 10.3 of the Confidentiality Deed by instituting this legal proceeding against Glencore and Viterra?

4531 The Viterra Parties alleged that because Cargill Australia agreed to be bound by the Confidentiality Deed and the undertakings given by Cargill, Inc on its behalf, by instituting this proceeding against each of the Viterra Parties Cargill Australia breached subclauses (a) and (b) of clause 10.2, and clause 10.3.

4532 Clauses 10.2 and 10.3 have already been considered in issue 76 above. It is unnecessary to repeat what is said there.

4533 For the reasons already explained, there could be no issue of Cargill Australia

---

3934 By way of another example, cl 10.2(b): see par 590 above.

3935 (1988) 165 CLR 107 (Mason CJ, Wilson, Toohey and Gaudron JJ, Brennan, Deane and Dawson JJ dissenting).

3936 The majority did not decide the case on the same basis, with Gaudron J agreeing with the minority that the respondent could not recover under contract because of lack of privity: (1988) 165 CLR 107, 173.5-174.3.

breaching clause 10.2 in circumstances where fraud and wilful misconduct on the part of the Viterra Parties have both been established. In these circumstances, clause 10.2 did not provide any bar to Cargill Australia commencing this proceeding.[3937] Further, and in any event, this proceeding was commenced after Completion so that any obligations under clause 10.2 had been released at the time the proceeding commenced.[3938]

4534 In relation to clause 10.3, it was subject to clause 10.4 which meant that there could be no breach of clause 10.3 to the extent that Cargill Australia's claims related to holding the Viterra Parties responsible for representations or obligations set forth in the Acquisition Agreement. With respect to claims that went beyond this, the making of such claims in this proceeding did not breach clause 10.3. In short, in contrast to clause 10.2, clause 10.3 said nothing about Cargill Australia's right to commence or maintain a proceeding. Clause 10.3 contained a release in favour of the Viterra Parties which (if relied upon) might or might not have been effective in relation to defeating any claims made by Cargill Australia. However, even if it were ultimately determined that the release was effective in providing a complete defence to any claim made,[3939] Cargill Australia simply making such claim would not in itself be in breach of clause 10.3.[3940]

4535 For completeness, the Defence did not contain any allegation to the effect that clause 10.3 implied by its terms that Cargill, Inc also covenanted not to sue any of the Viterra Parties.[3941] Any such allegation would have been bound to fail in circumstances where the entitlement or otherwise of Cargill, Inc or its Representatives was expressly dealt with in clause 10.2 and the restrictions imposed were more confined than the subject of the release in clause 10.3. Thus any implied term based on the wording in clause 10.3 would have contradicted the express agreement contained in clause 10.2.[3942]

3937 See also the discussion concerning the applicability of clause 10.4: see par 4345 above.
3938 See par 4518 above.
3939 See further par 4629 below.
3940 See further issue 102 below.
3941 Compare fn 3899 above.
3942 See par 4493 above. See also *BP Refinery (Westernport) Pty Ltd v Shire of Hastings* (1977) 180 CLR 266, 283.2 (Lords Simon, Dilhorne and Keith).

X.87 Has Cargill Australia breached clauses 8.3(a) and 8.3(c) of the Confidentiality Deed by relying upon the Financial and Operational Performance Representations, the Warranty Representations, the Pre-Completion Representations, the Other Bidders Representations and/or the Co-Operative Bulk Representations?

4536 The question of whether or not Cargill Australia breached these clauses of the Confidentiality Deed also arose on the pleadings in the context of addressing whether or not Cargill, Inc breached the Confidentiality Deed. It is convenient to deal with these issues together. They are addressed in issue 105 below. For the reasons stated there, the answer is no.[3943]

X.88 To what relief, if any, is Glencore and/or Viterra entitled as a consequence?

4537 This issue does not arise. See issues 105 and 106 below.

X.89 Did Cargill Australia convey the Confidentiality Deed Representations as pleaded in paragraph 120C of the Viterra Parties' counterclaim?

4538 The Viterra Parties alleged in their counterclaim in the Defence that Cargill Australia conveyed 2 representations to Glencore or Viterra, or both, arising out of the execution of the Confidentiality Deed.[3944] These allegations mirrored allegations made against Cargill, Inc and were alleged to have been made by reason of Cargill, Inc entering into the Confidentiality Deed and giving certain undertakings on behalf of its Representatives, including Cargill Australia. Accordingly, the allegations against Cargill Australia can rise no higher than the allegations made by the Viterra Parties directly against Cargill, Inc.

4539 In circumstances where it has been found that Cargill, Inc did not make the equivalent representations such that it engaged in misleading or deceptive conduct in trade or

---

3943 No decision has been made in relation to the Co-Operative Bulk Representations: see issues 61 to 64 above.

3944 See par 4730 below.

commerce,[3945] it is unnecessary to consider this issue separately.

X.90 Were the Confidentiality Deed Representations made in trade or commerce within the meaning of section 18 of the Australian Consumer Law?

4540 It was accepted by the Cargill Parties that if the Confidentiality Deed Representations were made by Cargill Australia, they were made in trade or commerce.

X.91 Did Viterra rely on the Confidentiality Deed Representations in entering into the Acquisition Agreement?

4541 The answer to this issue is not straightforward. See issue 112 below.

X.92 If the Confidentiality Deed Representations were representations as to future matters, did Cargill Australia have reasonable grounds for making them?

4542 Yes. See issue 113 below.

X.93 Were the Confidentiality Deed Representations misleading or deceptive or likely to mislead or deceive and did Cargill Australia thereby engage in misleading or deceptive conduct in contravention of section 18 of the Australian Consumer Law?

4543 No. See issue 114 below.

X.94 What, if any, damages or other relief is Glencore and/or Viterra entitled to as a consequence?

4544 This issue does not arise.

X.95 Did Cargill Australia convey the No Reliance Representations as alleged in paragraph 121 of the Defence and paragraph 38 of the Third Party Claim?

3945 See issues 110 to 114 below.

X.95.1 Allegations

4545 Relying upon the terms of clause 13.4(a) and (d) of the Acquisition Agreement,[3946] the Viterra Parties counterclaimed that in early August 2013, Cargill Australia represented to Viterra that Cargill Australia:

(1) In entering into the Transaction Documents and in proceeding to Completion, did not rely on any statement, representation, warranty, condition, promise, forecast or other conduct which may have been made by or on behalf of Viterra, except the Warranties.

(2) Irrespective of whether or not the Due Diligence was as full or exhaustive as Cargill Australia would have wished, had nevertheless independently and without the benefit of any inducement, representations or warranty (other than the Warranties) from Viterra or any Representatives of Viterra, determined to enter into the Transaction Documents.

(Collectively, the "No Reliance Representations".)

4546 In its defence to this part of the Viterra Parties' counterclaim, Cargill Australia acknowledged the terms of clause 13.4(a) and (d), and referred to clause 13.7(b) in alleging that the matters agreed to by Cargill Australia in clause 13.4 did not give Viterra a cause of action against Cargill Australia.[3947] Further, Cargill Australia referred to other allegations in the Statement of Claim and alleged that the Warranties given under the Acquisition Agreement in respect of "Records" were given in relation to the Information Memorandum and the Financial and Operational Information.[3948] Furthermore, amongst other things, they referred to the terms of the Phase 1 Process Letter, the Confidentiality Deed, the Cargill Indicative Bid, the Phase 2 Process Letter and the First Final Bid in alleging that Cargill relied upon the accuracy of the Financial and Operational Information. Moreover, they alleged that, to the extent that the Sale

3946 See par 1029 above.
3947 Ibid.
3948 With respect to the Warranties dealing with Records, the relevant Warranty was Warranty 4.2.

Process Disclaimers or the Acquisition Agreement Liability Terms purported to entitle Glencore or Viterra to engage in misleading or deceptive conduct in contravention of section 18 of the Australian Consumer Law, they were void and unenforceable.

X.95.2 Submissions

4547 The Viterra Parties submitted that Cargill Australia conveyed the No Reliance Representations to Viterra by entering into the Transaction Documents, particularly the Acquisition Agreement, and by agreeing to the Acquisition Agreement's key terms, particularly clause 13.4(a) and (d).

4548 The Cargill Parties' submissions for the purposes of issue 95 were directed at the interpretation that should be given to the No Reliance Representations, had they been made. These submissions are addressed below, in the context of the Viterra Parties' claim that the No Reliance Representations were misleading or deceptive.[3949]

X.95.3 Analysis

4549 By way of general observation, when construing a contract or deed, the role of the court is to construe the relevant clauses objectively to determine the common intention of the parties by reference to what a reasonable businessperson placed in their position would have understood them to mean, in the context of the terms of the contract as a whole, the known surrounding circumstances and the purpose or objects to be secured. To understand the purpose or objects, the court must take into account the genesis of the transaction, the background and context, including the market in which the parties operated.[3950]

4550 While the court is always confined by the words used in determining the meaning, the court should avoid construing a clause in a manner that would give rise to a

---

3949 See issue 98 below.

3950 *Electricity Generation Corporation v Woodside Energy Ltd* (2014) 251 CLR 640, 656-657 [35] (French CJ, Hayne, Crennan and Kiefel JJ). See also *Ecosse Property Holdings Pty Ltd v Gee Dee Nominees Pty Ltd* (2017) 261 CLR 544, 551 [17]-[18] (Kiefel, Bell and Gordon JJ), 571 [73] (Nettle J); *Mount Bruce Mining Pty Ltd v Wright Prospecting Pty Ltd* (2015) 256 CLR 104, 116-117 [46]-[52] (French CJ, Nettle and Gordon JJ).

commercial absurdity or nonsense.[3951] Further, if more than 1 meaning is open, then a construction that avoids a capricious, unreasonable, inconvenient or unjust outcome must be preferred.[3952]

4551 Neither the Cargill Parties nor the Viterra Parties referred to any authority in their written submissions on this point. As has been noted above,[3953] the question of whether contractual promises can form representations for the purposes of the Australian Consumer Law remains "a matter of controversy". Where a representation is said to appear in a contract, "it will be necessary to examine all the terms of the contract to see if the allegation that there is a representation is made good".[3954]

4552 Clause 13.4 began with the phrase "[Cargill Australia] acknowledges and agrees". Clause 13.4(a) and (d) then contained statements of factual circumstances that related to Cargill Australia's actions or state of mind, the accuracy of which was known by Cargill Australia and not known by Viterra.[3955] Clause 13.4(a) related to Cargill Australia's non-reliance on statements and other communications, and clause 13.4(d) related to Cargill Australia's independent determination to enter into the Transaction Documents. For the reasons that follow, by Cargill Australia agreeing to clause 13.4(a) and (d) representations were made by Cargill Australia in the same terms at the time it entered into the Acquisition Agreement.

4553 *First,* it must be presumed the words "acknowledges and" were intended to add additional meaning to the word "agrees". If it were intended that no more than an agreement was being documented then the words "acknowledges and" would have

3954 Ibid, [64].

3955 These subclauses may be contrasted with other subclauses that purported to record the position of the Sellers or their Representatives.

been superfluous.

4554 *Secondly*, neither subclause (a) or (d) of clause 13.4 was a "Warranty".[3956] Warranties as defined were confined to those set out in schedule 4 to the Acquisition Agreement. However, that fact did not preclude it from being a warranty in the ordinary sense. On the contrary, giving such an acknowledgement fell squarely within what a warranty is generally understood to encapsulate, namely a contractual affirmation of a fact or promise, if not a representation of fact, the truth of which is a condition of entering into the contract.[3957] Reading clause 13.4 alone, it would seem clear that a warranty was given in the form of each of the subclauses in that clause.

4555 However, in determining the correct interpretation of clause 13.4, it was necessary to consider the contract as a whole, including clause 13.7(b). By this subclause it was stated that each Seller acknowledged that "the matters agreed by [Cargill Australia] in clause 13.4 do not give that Seller a cause of Action against [Cargill Australia] and may only be raised by that Seller as a defence to any Claim by [Cargill Australia]".[3958] Plainly, if clause 13.7(b) were to operate according to its terms, then the remedies that would ordinarily be available for breach of warranty would not be available. Nonetheless, this fact did not alter the proper characterisation of clause 13.4 as a warranty. The fact that another clause may limit the remedies available did not mean that the meaning of clause 13.4 was somehow relevantly altered.

4556 *Thirdly*, a factor which weighed in favour of an interpretation that clause 13.4 was not intended to amount to a representation was that the wording "acknowledges and agrees" in clause 13.4 may be contrasted with "represent and warrant" in clause 13.1.[3959] The wording in clause 13.1, and the fact that the definition of Warranties in the Acquisition Agreement included "the warranties *and representations* set out in

---

3956 This is confirmed by cl 13.7(b) and the text and context of cl 13.4.

3957 *Accounting Systems 2000 (Developments) Pty Ltd v CCH Australia Ltd* (1993) 42 FCR 470, 504.8-505.2 (Lockhart and Gummow JJ).

3958 For completeness, it is noted that this subclause referred to matters that had been "agreed", rather than matters that had been "acknowledged and agreed" and therefore did not fully reflect the wording used in cl 13.4. No submission was made suggesting anything turned on this.

3959 See par 3730 above.

Schedule 4", were relevant to the finding that Viterra both gave the Warranties and made the Warranty Representations as a consequence of clause 13.1 of the Acquisition Agreement.[3960]

4557 It was open for the parties to have used the word "represents" in clause 13.4; this word was plainly in the contemplation of the parties given its use in clause 13.1.[3961] The choice by the parties to use different wording between clause 13.1 and clause 13.4 may have suggested that the operation of these clauses was intended to differ.[3962] The same may be said by reason of clause 13.7(b) having been included.

4558 However, the fact that the word "represent" had been used in the contract, or in the lengthy and detailed clause 13, did not necessarily mean that, in the remainder of the contract or clause, only statements explicitly referred to as being "represented" were intended to amount to representations. Each part of the contract or clause must be interpreted according to its text, context and purpose, in light of the contract as a whole.[3963]

4559 Further, clause 13.1 and clause 13.4 had quite different purposes. Clause 13.1 related to obligations and assurances of Viterra as Sellers, while clause 13.4 related to Cargill Australia's position as Buyer. Further, in clause 13.1 Viterra gave the Warranties. If the word "represent" had not been used in clause 13.1, there may have been some ambiguity about whether the clause was intended to constitute a representation in addition to its clear purpose of the giving of the Warranties.[3964] The reference to "represent" was presumably introduced to ensure no such ambiguity existed. In clause 13.4 there was no comparable issue.

3960 See issue 48 above.

3961 By way of further example, by cl 16.1 of the Acquisition Agreement it was provided that each of Cargill Australia and Cargill, Inc "represents and warrants to the Sellers" that certain statements were correct.

3962 It was somewhat difficult to reconcile the Viterra Parties' submission to the effect that the words "acknowledges and agrees" conveyed a representation in addition to a contractual promise, with their submission for the purposes of issue 48 above that the words "represent and warrant" conveyed a contractual promise only without also conveying a representation.

3963 See pars 4549-4550 above.

3964 See issue 48 above.

4560 *Fourthly* and in any event, little turns on the use of the classification as a "representation". The question for the purpose of section 18 was not whether a representation was made, but rather whether conduct was engaged in.[3965] Even if the making of the acknowledgements in clause 13.4(a) and (d) were not strictly representations as that term was to be understood in the context of the Acquisition Agreement or otherwise, the giving of the acknowledgements was more than merely entering into an agreement to perform obligations and was separate conduct in trade or commerce.[3966]

4561 For these reasons, by not only agreeing but also acknowledging the matters set out in clause 13.4(a) and (d), Cargill Australia engaged in conduct for the purposes of section 18 of the Australian Consumer Law by giving the assurances that it did. The No Reliance Representations therefore were made.

X.96 Were the No Reliance Representations made in trade or commerce within the meaning of section 18 of the Australian Consumer Law?

4562 Cargill Australia conceded that, if the No Reliance Representations were made, they were made in trade or commerce.

X.97 Did Viterra rely on the No Reliance Representations in entering into the Acquisition Agreement?

X.97.1 Submissions

4563 The Viterra Parties submitted that Viterra entered into the Acquisition Agreement in reliance on the No Reliance Representations. The Viterra Parties submitted that the court could infer that a party relied on certain conduct in order to enter into a contract in circumstances where the conduct in question took the form of a representation which by its nature was calculated to induce the representee to contract.

4564 The Viterra Parties submitted that the Acquisition Agreement was the product of

---

3965 See par 5046 below. See also par 3769 above.

3966 See in particular *MWH Australia Pty Ltd v Wynton Stone Australia Pty Ltd (in liq)* (2010) 31 VR 575, 598 [92] (Buchanan and Nettle JJA).

detailed negotiations between well advised and exceptionally well resourced corporate groups, and was prepared in the context of the parties engaging with each other pursuant to the Sale Process Disclaimers. The Acquisition Agreement, the Viterra Parties submitted, was a commercial agreement and clearly delineated the parties' respective rights and obligations, including by setting out the Warranties that were provided and relied upon, and expressly recording that no other representations were made or relied upon by Cargill Australia. The Viterra Parties submitted that Viterra was entitled to rely upon the terms of the Acquisition Agreement.

4565 The Viterra Parties submitted that it was evident from the terms of the Acquisition Agreement itself that Viterra would not have entered into the Acquisition Agreement if it could not rely upon the No Reliance Representations.

4566 The Cargill Parties submitted that the Viterra Parties had adduced no evidence to support Viterra's reliance on the No Reliance Representations in entering into the Acquisition, either through lay witness statements or through the Viterra Parties' oral evidence, and that as a result the Viterra Parties had not discharged the evidential burden of establishing that they relied upon the No Reliance Representations.[3967]

X.97.2 Analysis

4567 The legal principles for determining reliance, or more accurately causation, have been set out above.[3968] In this case, the circumstances of Viterra's entry into the Acquisition Agreement were sufficient to give rise to a fair inference that Viterra relied on the No Reliance Representations. The Viterra Parties' submissions concerning the parties being well resourced and well advised corporate groups, and the fact that the terms of the Acquisition Agreement were the subject of detailed negotiations, were uncontroversial. On the facts, there could be no basis to find anything other than all

---

3967 The Cargill Parties' written submissions on this point referred to the Confidentiality Deed Representations, rather than the No Reliance Representations. It was clear from the context and from the pleadings that this was an error, and the submissions were intended to refer to the No Reliance Representations.

3968 See issue 20.2 above.

the parties to the Acquisition Agreement fully understood the terms they agreed to enter into.

4568 Further, given what had occurred during the sale process, the terms of clause 13.4(a) and (d) were material. The sale process had involved the Due Diligence and the Viterra Parties providing a considerable amount of information and making numerous representations. In these circumstances, it was objectively highly likely that the Sellers would have been induced to enter into the Acquisition Agreement by reason of the acknowledgements given to the extent that they had the relevant causative effect.[3969] In light of the terms of the Acquisition Agreement and the circumstances in which it was entered into, the absence of direct evidence of actual reliance did not alter the appropriateness of such an inference being drawn.[3970]

4569 A question thus arises as to whether the inference of reliance was rebutted, on the basis that Viterra knew the true facts in advance of the claimed reliance.[3971] The Cargill Parties have referred to evidence of communications between Cargill and Viterra in advance and at the time of Cargill making the First Final Bid, which expressly conveyed that Cargill Australia was relying on the accuracy of the Financial and Operational Information.[3972] However, this evidence was not inconsistent with the claimed reliance by the Viterra Parties. The simple fact was that, whatever had been stated in the lead up to the parties reaching an agreement, Cargill Australia solemnly and unambiguously disavowed relying on any representations made by or on behalf of Viterra, except the Warranties, in entering into the Acquisition Agreement and in proceeding to Completion. There was no evidence to suggest Viterra was aware that at the time of entry by Cargill Australia into the Acquisition Agreement, contrary to the clear wording of clause 13.4(a) and (d), such a cessation of reliance had not

---

3969 See, for example, *MWH Australia Pty Ltd v Wynton Stone Australia Pty Ltd (in liq)* (2010) 31 VR 575, 599-603 [96]-[106] (Buchanan and Nettle JJA).

3970 Ibid.

3971 *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 321 [31] (French CJ), 348 [130] (Gummow, Hayne, Heydon and Kiefel JJ).

3972 See pars 623-624, 976-977 above. See also issue 107 below.

occurred for the purposes expressly stated. The inference of reliance was thus not rebutted.

4570 It follows that the Viterra Parties have established that Viterra relied on the No Reliance Representations.

X.98 Were the No Reliance Representations misleading or deceptive or likely to mislead or deceive and did Cargill Australia thereby engage in misleading or deceptive conduct in contravention of section 18 of the Australian Consumer Law?

X.98.1 Submissions

4571 The Viterra Parties submitted that, if Cargill Australia was found to have relied on the Warranty Representations, the Financial and Operational Performance Representations or the Other Bidders Representations, it would follow that Cargill Australia had relied on matters expressly excluded by clause 13.4 of the Acquisition Agreement. Thus, it was contended as a consequence the No Reliance Representations would have been misleading or deceptive.

4572 The Cargill Parties denied that Cargill Australia made the No Reliance Representations based on 3 contentions directed towards the construction of clause 13.4(a) and (d).

4573 *First*, the Cargill Parties submitted that, properly construed, clause 13.4(a) and (d) were to the effect that Cargill Australia could rely on its own assessment of the information provided.

4574 *Secondly*, the Cargill Parties submitted that it had been expressly conveyed to the Viterra Parties that Cargill Australia was relying on the accuracy of the Financial and Operational Information in the sale process and during the Due Diligence. The Cargill Parties referred to the following in support of this submission:

(1) The Phase 1 Process Letter required Cargill, Inc to submit an indicative

bid by 7 June 2013 "based on the 31 January 2013 balance sheet in Section 5 of the Information Memorandum" and setting out where the key assumptions underpinning the bid varied from the information disclosed in the Information Memorandum.[3973]

(2) Clauses 1.3, 3, 6, and 9.1 of the Confidentiality Deed restricted Cargill, Inc's ability to use, disclose or conduct independent investigations into the accuracy of the Financial and Operational Information provided by Glencore or Viterra, or both.[3974]

(3) The Cargill Indicative Bid expressly stated that:[3975]

(a) It was based on Cargill's "review of the information contained within the Information Memorandum" and the "information and forecasts contained within the [Information Memorandum] and the [Phase 1 Process Letter]".

(b) Cargill, Inc's valuation would be refined "based on more detailed information provided in Phase 2".

(c) Cargill "assume[d] that the information provided by Glencore, Joe White and Merrill Lynch [was] true and accurate and supported by due diligence findings".

(d) Cargill, Inc assumed that "Joe White [was] being acquired on a going concern, steady state basis without issues such as contingent liabilities, unusual terms and conditions in key contracts, outstanding litigation, or any other matters that could result in a material adverse change to Joe White's business or significantly affect the value of Joe

3973 See par 466 above.
3974 See pars 585-590 above.
3975 See par 623 above.

White".

(4) It was contended the Phase 2 Process Letter was premised on the basis that Cargill, Inc would be able to make a final bid based upon the Financial and Operational Information provided by Glencore or Viterra, or both, during the Due Diligence. The Phase 2 Process Letter also imposed restrictions on Cargill, Inc's ability to independently investigate the accuracy of the Financial and Operational Information.[3976]

(5) The First Final Bid expressly stated that:[3977]

(a) "Based on the due diligence that [Cargill, Inc had] undertaken and discussions with Joe White management, [Cargill, Inc had] confirmed [its] view that Joe White [was] an impressive business with a portfolio of top-tier assets and a strong strategic fit with Cargill."

(b) Cargill, Inc had "conducted its due diligence based on the information provided to date in the process. This include[d] a review of the information provided in the Information Memorandum, management presentations, site visits, the… [Data Room] (including responses provided through [the Q&A Process]) and some public registers."

4575 *Thirdly*, the Cargill Parties submitted that clause 13.4(a) and (d) of the Acquisition Agreement expressly acknowledged that Cargill Australia was entitled to rely upon the Warranties, and it was submitted this included its own assessment of the information the subject of the Warranties such as the Information Memorandum and

---

3976 See pars 639-644 above. In their submissions, the Cargill Parties relied on pars 1(a)-(d), 2, 6, 8 and appendix B pars 2(b) and (c) of the Phase 2 Process Letter.

3977 See pars 976-977 above.

the Data Room Documentation, and all of the Financial and Operational Performance Representations.[3978]

X.98.2 Analysis

4576 To determine the meaning of the No Reliance Representations, it was necessary to consider the words of subclauses (a) and (d) of clause 13.4, together with the effect of the Acquisition Agreement and the context and background to its execution.[3979]

4577 It was apparent from the plain words of the No Reliance Representations that they were not inconsistent with reliance by Cargill Australia on the Warranty Representations. Reliance on the Warranty Representations was expressly permitted by the No Reliance Representations, because the definition of "Warranties" in the Acquisition Agreement included "the warranties *and representations* set out in Schedule 4 …".[3980]

4578 By the same token, on the face of the plain words of the No Reliance Representations, the making of them was inconsistent with reliance on the Financial and Operational Performance Representations and the Other Bidders Representations,[3981] and indeed with any reliance on any "statement, representation, warranty, condition, promise, forecast or other conduct which may have been made by or on behalf of Viterra, except the Warranties".[3982] In essence, the Cargill Parties' submissions consisted of arguments for departing from this natural meaning of the No Reliance

---

3978 They further contended that those clauses were not intended to, and did not, have any operation in relation to the provision of misleading information involving fraud or wilful misconduct by the Viterra Parties. These submissions are addressed at par 4593 below.

3979 *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 319-310 [26]-[27] (French CJ), 341-342 [102] (Gummow, Hayne, Heydon and Kiefel JJ), the plurality citing *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592, 625 [109] (McHugh J).

3980 See par 3749 above.

3981 The claim by the Viterra Parties also referred to reliance by Cargill Australia on the Pre-Completion Representations. As it has been found that Cargill Australia did not rely on the Pre-Completion Representations (see issue 30 above), it is not necessary to consider those representations for the purposes of this claim.

3982 See par 4545 above. Naturally, to the extent the Warranty Representations might have been said to overlap with the Financial and Operational Performance Representations or the Other Bidders Representations, no inconsistency would have arisen; but these representations were far broader than the subject matter of the Warranty Representations.

Representations.

4579 *First*, in relation to the Cargill Parties' submission that the No Reliance Representations were to the effect that Cargill Australia could rely on its own assessment of the information it was provided, this appeared to be drawn from clause 8.3(a) of the Confidentiality Deed[3983] and like phrases in other documents created during the sale process.[3984] It was of limited utility in considering the meaning of the No Reliance Representations. The controversy did not concern whether Cargill Australia was entitled to rely on its own assessment, nor whether Cargill had breached the Confidentiality Deed or any other document it might have agreed to be bound by, but rather whether it was entitled to rely on representations made by or on behalf of Viterra other than the Warranties (which included the Warranty Representations).

4580 *Secondly*, in relation to the correspondence which indicated that Cargill was relying on the Financial and Operational Information,[3985] Cargill stating how it carried out its assessments, investigations and analyses in evaluating the Joe White Business before any binding agreement was entered into did not preclude the parties from subsequently contractually agreeing on a more narrow basis upon which they were willing to enter into the Acquisition Agreement or to proceed to Completion. In any event, while this correspondence formed part of the context by reference to which the No Reliance Representations must be interpreted, it could not displace the plain words of clause 13.4(a) and (d).

4581 *Thirdly*, with respect to Cargill Australia being expressly permitted to rely upon the Warranties and its own assessment of the information the subject of the Warranties, again, whether or not Cargill Australia was entitled to rely on its own assessment was not to the point. Even if the Cargill Parties' submissions were considered to be responsive to the issue, it would not follow that the Financial and Operational Performance Representations or the Other Bidders Representations fell outside the

---

3983 See par 590 above.

3984 For example, the Information Memorandum, the Phase 1 and 2 Process Letters and the Management Presentation Memorandum: see pars 468, 475, 643, 712 above.

3985 See par 4574 above. See also issue 107 below.

category of any "statement, representation, warranty, condition, promise, forecast or other conduct which may have been made by or on behalf of Viterra, except the Warranties". To the extent that the subject matter of either of these sets of representations did not fall within the Warranty Representations,[3986] reliance upon them would thus remain directly inconsistent with the No Reliance Representations.

4582 None of Cargill Australia's submissions provided a compelling reason to interpret clause 13.4(a) and (d) other than in accordance with their plain words or to diminish the effect of the No Reliance Representations.[3987] As such, the No Reliance Representations were inconsistent with and directly contrary to reliance by Cargill Australia on the Financial and Operational Performance Representations and the Other Bidders Representations. It has also been found, and formed part of the case advanced by Cargill Australia, that Cargill Australia did in fact rely on the Financial and Operational Performance Representations and the Other Bidders Representations.[3988] From these 2 findings, it necessarily follows that the No Reliance Representations were misleading and deceptive or likely to mislead or deceive. In short, Cargill Australia represented it was not doing precisely what it had done and was continuing to do at the time it entered into the Acquisition Agreement. To the extent that the No Reliance Representations related to matters in the future, there could be no suggestion that the No Reliance Representations were reasonably based. No such argument was put by the Cargill Parties. Indeed, such a contention would have run contrary to their case.

X.99 What, if any, damages or other relief is Glencore and/or Viterra entitled to as a consequence of the matters in issues 95 to 98 above?

X.99.1 Submissions

4583 The loss claimed by the Viterra Parties was pleaded to comprise any liability for damages or costs which Viterra was held to have to pay to Cargill Australia, together

3986 See also fn 3982 above.
3987 See also par 3206 above.
3988 See issues 20, 58 above.

with Viterra's costs of this proceeding.

4584 The Viterra Parties submitted that if Cargill Australia's primary claims based on misleading or deceptive conduct succeeded, they suffered loss and were entitled to damages pursuant to section 236, or alternatively to orders under section 237, of the Australian Consumer Law compensating them for the loss or damage. They also referred to their submissions made in relation to issue 88 above without further specificity in submitting the Viterra Parties' loss would include compensation for the losses referred to.

4585 The Cargill Parties submitted that the loss claimed by the Viterra Parties did not arise from Cargill Australia's representations in the Acquisition Agreement at clause 13.4(a) or (d),[3989] but rather from the Viterra Parties' own conduct. [3990]

X.99.2 Analysis

4586 Insofar as the Viterra Parties referred to their submissions under issue 88 above, plainly, to the extent those submissions were concerned with alleged breaches of the Confidentiality Deed, they need not be considered here. As best as I could discern from the submissions, the permanent injunction sought to restrain Cargill Australia from continuing this proceeding in respect of Confidential Information and the non-disclosure of Information had no applicability to claims made with respect to the No Reliance Representations. If that is incorrect, in any event, the matters raised above gave no basis for the permanent injunction sought.

4587 The remaining submissions were concerned with the liability of the Viterra Parties that would arise in respect of Cargill Australia's claims if Cargill Australia was successful, namely liability in damages to Cargill Australia as well as liability in

---

3989 The reference in this part of Cargill's submission referred to cl 13.4(b) rather than 13.4(d), but was presumably a typographical error.

3990 The Cargill Parties also made submissions, citing *Venerdi Pty Ltd v Anthony Moreton Group Funds Management Ltd* [2015] 1 Qd R 214, 223 [45]-[47] (Jackson J), that the claim by the Viterra Parties must fail because it sought to "extinguish" Cargill Australia's statutory right to compensation. Given the other findings made, it is not necessary to consider this issue here. For consideration of similar arguments on public policy and the Australian Consumer Law, see issue 144 below.

relation to any award for Cargill Australia's costs of this proceeding. In essence, the Viterra Parties sought to obtain relief to set-off any liability they had to Cargill Australia by reason of Cargill Australia's claims, together with their own costs.

4588 As noted above,[3991] in assessing a claim for loss under section 236 of the Australian Consumer Law, the question for the court is whether the plaintiff has established that it suffered loss or damage because of the contravening conduct.[3992] In answering this question, the court is not constrained to principles of common law relevant to assessing damages in contract or tort.[3993] However, in many cases the measure for damages in tort, where damages are awarded with the object of placing the plaintiff in the position they would have been had the tort not been committed, [3994] has been considered appropriate for assessing damages in claims made under the Australian Consumer Law.[3995]

4589 The claim by the Viterra Parties under this issue was that they entered into the Acquisition Agreement in reliance on the No Reliance Representations and would not have done so if those representations had not been made. In essence, the Viterra Parties contend that the position they would have been in had they not relied upon the No Reliance Representations was that they would not have been exposed to Cargill Australia's claims. However, this was an overly simplistic and entirely artificial measure by which to assess any alleged loss.

4590 The relief as sought by the Viterra Parties, if granted, would put Viterra in the position

---

3992 *Henville v Walker* (2001) 206 CLR 459, 501-502 [130]-[132] (McHugh J, with whom Gummow J agreed); *Marks v GIO Australia Holdings Ltd* (1998) 196 CLR 494, 512-513 [42] (McHugh, Hayne and Callinan JJ).

3993 *Murphy v Overton Investments Pty Ltd* (2004) 216 CLR 388, 403 [31] (Gleeson CJ, McHugh, Gummow, Kirby, Hayne, Callinan and Heydon JJ); *Marks v GIO Australia Holdings Ltd* (1998) 196 CLR 494, 503-504 [17] (Gaudron J), 510 [38], 512 [40]-[41] (McHugh, Hayne and Callinan JJ), 529 [102]-[103] (Gummow J); *Wardley Australia Ltd v Western Australia* (1992) 175 CLR 514, 526.2 (Mason CJ, Dawson, Gaudron and McHugh JJ); *Gates v City Mutual Life Assurance Society Ltd* (1986) 160 CLR 1, 14.8 (Mason, Wilson and Dawson JJ).

3994 *Gates v City Mutual Life Assurance Society Ltd* (1986) 160 CLR 1, 12.2 (Mason, Wilson and Dawson JJ). See also *Gould v Vaggelas* (1984) 157 CLR 215, 265.5 (Dawson J); *Toteff v Antonas* (1952) 87 CLR 647, 650.5 (Dixon J).

3995 See, for example, *Henville v Walker* (2001) 206 CLR 459, 470 [18] (Gleeson CJ); *Gates v City Mutual Life Assurance Society Ltd* (1986) 160 CLR 1, 6.8-7.1 (Gibbs CJ), 14.8 (Mason, Wilson and Dawson JJ). See also *Sellars v Adelaide Petroleum NL* (1994) 179 CLR 332, 348.6 (Mason CJ, Dawson, Toohey and Gaudron JJ).

it would have been in if the Acquisition had proceeded, but Cargill Australia had never brought this proceeding. This may have been the position, subject to the Cargill Parties' other claims, that Viterra would have been in had the No Reliance Representations been true at the time the Acquisition Agreement was entered into; but this scenario was not the correct counterfactual. On the case as put by the Viterra Parties, had they known the No Reliance Representations were misleading, Viterra would not have entered into the Acquisition Agreement.

4591 If Viterra had never entered into the Acquisition Agreement, it would never have received the purchase price paid by Cargill Australia, and its position would have been materially different than the position into which it sought to be put. In short, Viterra would have still owned the Joe White Business; a business it did not want to continue to own and operate and for which the next highest bid, which was presumably also based on the misleading information in the Information Memorandum that had been disseminated as part of the sale process, was $335 million.[3996] The Viterra Parties' position would have borne no resemblance whatsoever to the basis upon which they claimed Viterra was entitled to damages; namely, on the basis that it would have sold Joe White for $420 million (being an amount well in excess of its true value)[3997] with no exposure for the misleading conduct in which *the Viterra Parties* engaged.

4592 In their submissions on the loss claimed by Cargill Australia, the Viterra Parties submitted that, since Cargill Australia had chosen to adopt only 1 measure of damages, if the approach Cargill Australia adopted was not the appropriate means of calculating the amount of loss, it would necessarily follow that Cargill Australia's claims for compensation must fail.[3998] The same reasoning applied here. No alternate measure of damages was claimed. Since the compensation claimed by the Viterra Parties was not available on the basis they adopted, and since the suggested counterfactual bore no resemblance to the circumstances that would have arisen if

---

3996 See par 983 above. There was no meaningful and reliable evidence to indicate on what basis the 2 other final bids were made, and no finding is made in that regard.

3997 See issue 73 above.

3998 See fn 3292 above for the relevant authorities.

Cargill Australia had not engaged in misleading or deceptive conduct, the Viterra Parties' claim cannot succeed.

X.99.3 Further observations

4593 In light of this conclusion, for the purposes of issues 95 to 98 above it is unnecessary to consider the Cargill Parties' submissions based on fraud or wilful misconduct.[3999] However, the authorities are clear that, broadly speaking, if a person is induced to enter into a contract by reason of fraud, then the fraudster cannot avoid liability by relying on a provision in a contract which would not have been entered into if the fraudulent conduct had not occurred.[4000] Further, it must be noted that in limiting the liability of each Seller or any of its Representatives except under the Warranties, clause 13.4(f)(ii) had an express carve-out in relation to fraud.[4001]

4594 Equally, it is unnecessary to consider the Viterra Parties' submission that Cargill ought not be able to rely upon clause 13.7(b) to deny the cause of action against Cargill based upon clause 13.4. The Viterra Parties submitted that the effect the court gave to clause 13.7(b) "in seeking to abrogate a statutory cause of action" should be determined consistently with similar issues that arose elsewhere. They submitted that if the court were to find against the Viterra Parties elsewhere, the principles underlying those findings should be applied consistently in relation to clause 13.7(b). It suffices to say that there was no apparent reason why such principles ought not equally be applicable to clause 13.7(b).[4002]

4595 On another matter, although Glencore was not a party to the Acquisition Agreement, if, as has been found, the making of the No Reliance Representations was misleading or deceptive, this circumstance may also have provided a basis for Glencore to make a claim for contravention of section 18 if that conduct also caused it loss.[4003] Naturally,

---

3999 See fn 3978 above.

4000 *Rise Home Loans Pty Ltd v Dickinson (No 2)* [2010] VSC 29, [57] (Robson J), citing *Jennings v Zilahi-Kiss* (1972) 2 SASR 493, 510.4 (Bray CJ). See also fn 3642 above.

4001 See par 1029 above.

4002 See issue 144 below.

4003 *Australian Competition and Consumer Commission v Valve Corp (No 3)* (2016) 337 ALR 647, 691-692 [222] (Edelman J), citing *Accounting Systems 2000 (Developments) Pty Ltd v CCH Australia Ltd* (1993) 42 FCR

issues of causation as they related to Glencore would need to be considered afresh given the lack of privity of contract. However, as the issue did not arise because of the way in which compensation was claimed, it will not be considered further.

4596 Finally, it is worthwhile to comment on the findings above in relation to the making of the No Reliance Representations. Although clearly relevant, the fact that the No Reliance Representations were made was not determinative of questions relating to whether the Viterra Parties engaged in misleading or deceptive conduct in trade or commerce that caused Cargill Australia to suffer loss. As explained elsewhere,[4004] whether section 18 of the Australian Consumer Law had been contravened was a question of fact to be considered in light of all the relevant circumstances, including the terms of any contract entered into.

X.100 Is the Confidentiality Deed enforceable by Glencore and/or Viterra against Cargill, Inc?

X.100.1 Introduction

4597 On the pleadings, this issue arose in the context of the operation and enforceability of clauses 3.3, 10.2 and 10.3 of the Confidentiality Deed. The Viterra Parties alleged in the Third Party Claim that, by causing or permitting Cargill Australia to institute this proceeding against Glencore and Viterra in respect of Confidential Information and the alleged non-disclosure of Information,[4005] Cargill, Inc breached each of these clauses.[4006] In addition to denying this allegation generally and raising a construction issue in relation to clause 3.3, Cargill, Inc pleaded that by operation of the Deed of

---

470, 506.7 (Lockhart and Gummow JJ). See *RCR Energy Pty Ltd v WTE Co-Generation Pty Ltd* [2017] VSCA 50, [62]-[63] (Weinberg, Whelan and Santamaria JJA).

4004 See issue 15 above.

4005 In the context of the Confidentiality Deed, the meanings of "Confidential Information" and "Information" are set out at par 586 above.

4006 In addition, in their defence to the Third Party Claim, Cargill, Inc alleged Glencore and Viterra were estopped from maintaining a claim under clauses 8.3(a) and 8.3(c) of the Confidentiality Deed. In the Viterra Parties' reply to Cargill, Inc's third party defence, they denied any estoppel arose and also relied, amongst other things, on the release in cl 10.3 of the Confidentiality Deed. As the Cargill Parties made no submissions with respect to this issue based on this allegation of estoppel it will not be considered here; but see issue 107 below.

Release any claims based on clauses 3.3, 10.2 and 10.3 had been released.

4598 The clauses are set out in full above.[4007] To reiterate briefly, by clause 3.3 Cargill, Inc undertook to procure that its Representatives would not do anything that, if done by Cargill, Inc, would be a breach of the Confidentiality Deed. Clause 10.2 stipulated that, absent Glencore's fraudulent or wilful misconduct, Cargill, Inc would not bring proceedings against Glencore (or its Representatives) and agreed to procure that its Representatives would not do so. Clause 10.3 provided that Cargill, Inc[4008] unconditionally and irrevocably released Glencore (and its Representatives) from any liability, including liability resulting from Glencore's negligence, default or lack of care or from any misrepresentation or any other cause. Both clauses were expressly subject to clause 10.4.

4599 The first issue to be addressed is whether the Confidentiality Deed, at a broader level, was enforceable by Glencore *and* Viterra as against Cargill, Inc. This has already been touched upon in issue 85 above. For similar reasons to those discussed there, generally speaking, each of Glencore (as a named party) and Viterra (each of the 3 as a Representative of Glencore) was entitled to enforce the Confidentiality Deed.[4009]

4600 Thus what remains to be addressed are the alleged breaches and the enforceability of clauses 3.3, 10.2 and 10.3 (noting that the effect of the Deed of Release on these clauses has already been considered).[4010]

X.100.2 The Viterra Parties' submissions

4601 The Viterra Parties repeated their submission that the Deed of Release did not apply to Glencore's and Viterra's rights under clauses 3.3, 10.2 and 10.3 of the Confidentiality Deed.

4602 Further, the Viterra Parties submitted neither clause 10.2 nor 10.3 made a "direct attempt" to exclude or modify section 18 of the Australian Consumer Law. In relation

4007 See par 590 above.
4008 This undertaking was also given on behalf of Cargill Australia: see par 4351 above.
4009 See also clause 11: see par 590 above.
4010 See issue 84 above.

to clauses 3.3 and 10.2(b), the Viterra Parties submitted that issues of public policy did not arise because the making of a promise that someone else would not sue in relation to particular causes of action was not a promise that had to be made and it did not stop that other person from commencing a proceeding to pursue those causes of action. In relation to clause 10.3, it was submitted that the unconditional and irrevocable release of Glencore and its Representatives from any liability did not expressly seek to exclude or modify section 18.[4011]

X.100.3 The Cargill Parties' submissions

4603 In addition to submitting there had been no breach of clause 10.2 or 10.3 (and therefore no breach of clause 3.3),[4012] or if there had been a breach the Viterra Parties suffered no loss,[4013] the Cargill Parties made 2 overarching submissions.

4604 *First*, noting the exception for fraud or wilful misconduct in clause 10.2, the Cargill Parties submitted that to the extent it might still be said that clause 10.2 or 10.3 of the Confidentiality Deed purported to prevent Cargill from pursuing a claim for fraud, deceit or for contravention of section 18 of the Australian Consumer Law, these were unenforceable by virtue of being contrary to public policy.

4605 *Secondly*, it was submitted that if, contrary to the first submission, clause 10.2 or 10.3 were found to be enforceable, all obligations under these clauses were released by the Deed of Release.[4014]

X.100.4 Analysis

X.100.4.1 Has there been a breach of the Confidentiality Deed?

4606 For the reasons explained in issue 76 above, there was no breach of clause 10.2 of the Confidentiality Deed because of the fact that Cargill Australia commenced this proceeding. Not only were some of Cargill Australia's claims within clause 10.4, but there was no absence of fraud or wilful misconduct. Thus, clause 10.2 was not

4011 See further par 5274 below.
4012 See issues 76, 84 above and issue 102 below.
4013 See issues 103, 106 below.
4014 See issue 84 above.

enlivened and accordingly no real issue arose with respect to the effect of the Deed of Release on this clause.

4607 In relation to clause 10.3, as discussed in issues 76 and 86 above, the giving of a release by Cargill, Inc (and its Representatives) did not create any bar to Cargill Australia commencing this proceeding. Accordingly, doing so was not in breach of clause 10.3.

4608 It follows from the absence of any breach of clause 10.2 or 10.3 that Cargill, Inc was not in breach of clause 3.3 as it had not failed to procure that Cargill Australia did not do or omit to do anything which if done by Cargill, Inc would have been a breach of its obligations. In short, neither clause 10.2 nor 10.3 would have been breached if Cargill, Inc itself had commenced a proceeding which alleged fraud or wilful misconduct by the Viterra Parties or sought to hold them responsible for representations or obligations set forth in the Acquisition Agreement (assuming it had any proper basis to do so).

4609 Accordingly, based on these findings, it is unnecessary to consider the broader issues raised. However, it is appropriate that they are addressed in case I am incorrect with respect to the findings in relation to any of clauses 3.3, 10.2 and 10.3.

X.100.4.2 Unenforceable as a matter of public policy

4610 Generally speaking, as a matter of public policy, liability for fraud, deceit or contravention of section 18 of the Australian Consumer Law cannot be excluded by a provision of a contract.[4015] Naturally, it is a question of fact as to whether a person has engaged in misleading or deceptive conduct or in deceit and the existence of a release may be directly relevant to this ultimate factual question. However, requiring a counterparty to enter into a release at the commencement of commercial dealings

---

4015 In relation to liability for an action under the Australian Consumer Law, see, for example, *Brighton Australia Pty Ltd v Multiplex Constructions Pty Ltd* (2018) 56 VR 557, 598-600 [113]-[116], 600-601 [118]-[120] (Riordan J); *Secure Parking Pty Ltd v Woollahra Municipal Council* [2016] NSWCA 154, [112] (Meagher JA, with whom Beazley P and Ward JA agreed); *Henjo Investments Pty Ltd v Collins Marrickville Pty Ltd* (1988) 39 FCR 546, 561.1 (Lockhart J, with whom Burchett J agreed and Foster J relevantly agreed), in relation to s 52 of the *Trade Practices Act*, the predecessor of s 18 of the Australian Consumer Law. In relation to liability for an action in deceit, see, for example, *Commercial Banking Co of Sydney Ltd v R H Brown & Co* (1972) 126 CLR 337, 344.7 (Menzies J, with whom Barwick CJ, McTiernan and Gibbs JJ agreed).

cannot provide a mechanism for the released party to then be absolved absolutely from subsequently engaging in misleading or deceptive conduct in trade or commerce contrary to the Australian Consumer Law. This is discussed in issue 144 below, and will not be considered further here. Leaving aside the causes of action not based on these grounds, as it has been found as a matter of fact that the Viterra Parties did engage in misleading or deceptive conduct and Viterra did act in deceit of Cargill Australia, neither clause 10.2 or 10.3 of the Confidentiality Deed was enforceable against Cargill, Inc (or Cargill Australia) in relation to such matters. The necessary consequence of this is that if any clause was breached as alleged, that was no bar to Cargill Australia instituting this proceeding.

4611 Further, leaving aside the fact that the Viterra Parties contended that Cargill Australia itself was bound by the terms of the Confidentiality Deed, there were still a number of problems with the Viterra Parties' submission concerning clauses 3.3 and 10.2(b) not being contrary to public policy.

4612 *First*, clause 10.2 was not confined to Cargill, Inc procuring that its Representatives not bring or institute any proceedings. It also purported to prevent Cargill, Inc itself from doing so.[4016]

4613 *Secondly,* the Viterra Parties' submission was made on the basis of someone making a promise to "stop the man next door" from suing. That position is not analogous to the relationship between a holding company and its subsidiary.

4614 *Thirdly,* and in any event, the consequence of permitting such a clause to be enforceable in the circumstances of this case would be that Glencore and Viterra would be able to seek damages for breach which, they contended, would equate to any amounts recoverable by Cargill Australia against them or any of them. The Viterra Parties claimed that damages arising from their liability with respect to Cargill Australia's claims should be "off-set by the liability of Cargill, Inc arising from breach of the clauses of the Confidentiality Deed". In short, if clauses 3.3 and 10.2(b) were

4016 There was nothing in the Confidentiality Deed to suggest Cargill, Inc's obligations in cl 10.2 were severable.

enforceable in this regard, the Viterra Parties (although still having some exposure by reason of the requirement to recover from Cargill, Inc) effectively would be enabled to thwart the public policy that underlies section 18 of the Australian Consumer Law by obtaining damages and thereby effectively being fully indemnified for their loss arising out of having to pay damages to Cargill Australia as a consequence of engaging in the contravening conduct. It might be envisaged that in some cases a contractual provision of this nature may not be in breach of or offend public policy. However, when such a clause was sought to be imposed in relation to the very transaction that was the subject of the claims for misleading or deceptive conduct and by the subsidiary utilised to effect the transaction, allowing clauses 3.3 and 10.2(b) to operate according to their terms would effectively allow the Viterra Parties to circumvent the consequences of contravening section 18. Such a result would undermine the public policy of prohibiting persons from engaging in misleading or deceptive conduct in trade or commerce.

X.100.4.3 Whether clauses unenforceable because of the Deed of Release

4615 It has been found that from Completion, clause 2 of the Deed of Release operated to release Cargill, Inc and Cargill Australia from all obligations under clause 10.2 of the Confidentiality Deed. However, it has also been determined that the Deed of Release did not affect the release given pursuant to clause 10.3 of the Confidentiality Deed.[4017] (This finding concerning clause 10.3 does not affect the conclusion that clause 10.3 was unenforceable as a matter of public policy to the extent it operated contrary to the Australian Consumer Law.)

4616 As the Viterra Parties correctly submitted, the release given pursuant to this clause had an operative effect as soon as the Confidentiality Deed was entered into. Similar to the submission made with respect to clause 10.2, the Viterra Parties observed that if a proceeding had been commenced before Completion, the release contained in clause 10.3 could have been pleaded as a bar to the claim.

4617 The Cargill Parties relied upon the broad definition of "Claims", and the fact that all

---

4017 In relation to both of these matters, see issue 84 above.

Claims and obligations were released, subject to clause 3. It was submitted that the claims now made by Glencore and Viterra were not preserved by clause 3(b) because those claims had not, and could not have, accrued before Completion because no breach had occurred up to this time. It was further submitted that any cause of action in relation to any breach of clause 10.2 or 10.3 only accrued when Cargill, Inc or its Representative filed the writ to institute this proceeding.

4618 The difficulty with the Cargill Parties' submission was that it focused upon the timing of when a cause of action might accrue, rather than addressing whether or not Glencore and Viterra had an accrued right before Completion. Upon the execution of the Confidentiality Deed, Glencore accrued an unconditional and irrevocable right of release which remained extant from that time on. In my view, there was nothing in the language of the Deed of Release, which was concerned with releasing Cargill, Inc from *any further liability* under the Confidentiality Deed,[4018] which indicated that it was intended to undo what had been done by way of granting a release in favour of Glencore and its Representatives. In short, and in contrast to the position under clause 10.2, a pre-existing release in favour of Glencore did not amount to an ongoing Claim against, or obligation upon, Cargill, Inc.

4619 Even if this construction was incorrect, the Cargill Parties' submission was no answer to the accrued rights that must have arisen before Completion under clause 10.3. Part of Cargill Australia's case was that it suffered loss because it entered into the Acquisition Agreement. Further, any claims based on breach of contract accrued at the time of the breach, which Cargill Australia alleged included breaches on 4 August 2013. Therefore, even if the Cargill Parties' submission had some force, the causes of action as pleaded irrefutably accrued before Completion and were affected by the terms of the Confidentiality Deed then on foot.[4019]

X.100.5 Conclusion

4620 In summary, no breach of the Confidentiality Deed has been established. That

4018 See fn 3900 above.
4019 See par 4520 above.

conclusion addresses the issue as pleaded. In any event, neither clause 10.2 nor clause 10.3 was enforceable against Cargill, Inc as a matter of public policy insofar as they would operate to prevent Cargill Australia bringing claims for fraud, deceit or for contravention of section 18 of the Australian Consumer Law. (For completeness, in relation to other causes of action of Cargill Australia,[4020] neither Glencore nor Viterra has any right to enforce clause 10.2(b) of the Confidentiality Deed by reason of the release given under clause 2 of the Deed of Release. However, with respect to those other causes of action, the release given by Cargill, Inc pursuant to clause 10.3 of the Confidentiality Deed enures and its operation was not affected by the Deed of Release.)

X.101 Did Cargill, Inc cause or permit Cargill Australia to institute this proceeding in respect of Confidential Information and the alleged non-disclosure of Information?

X.101.1 Submissions

4621 There was a paucity of evidence on this issue and the submissions were very brief. No witness gave any evidence directed to the issue of how Cargill Australia decided to commence this proceeding. In this context, the Cargill Parties' submissions were confined to the simple point that Cargill, Inc and Cargill Australia were separate legal entities.[4021]

4622 The issue of whether Cargill, Inc was involved in the decision to commence this proceeding arose from an allegation in the Third Party Claim against Cargill, Inc, in which it was pleaded that the alleged conduct of Cargill, Inc was in breach of clauses 3.3, 10.2(b) and 10.3 of the Confidentiality Deed. In its defence to this claim, Cargill, Inc pleaded that Cargill Australia instituted the proceeding and otherwise denied the allegation. As a result of the matters pleaded, the onus was squarely upon the Viterra Parties to establish the conduct alleged was in breach of contract.

4020 That is, other than fraud, deceit or for contravention of section 18 of the Australian Consumer Law.

4021 *Lee v Lee's Air Farming Ltd* [1961] AC 12, 27.1 (Lord Morris, on behalf of the Privy Council); *Salomon v Salomon* [1897] AC 22, 30.8-31.3 (Lord Halsbury LC).

4623 The Viterra Parties submitted that the evidence supported the overwhelming inference that Cargill, Inc caused or permitted its indirect subsidiary, Cargill Australia, to institute this proceeding. The evidence relied upon was not directed to events concerning the decision-making processes leading to the commencement of this proceeding, but rather to those leading up to the Acquisition. In so doing, the Viterra Parties focused on the uncontroversial fact that it was Cargill, Inc that drove that transaction,[4022] and was involved in the key decisions made in late October 2013.[4023] Reference was also made to certain allegations in the Statement of Claim to demonstrate the role Cargill, Inc played.

4624 It was then submitted that there was nothing to indicate that, having driven the transaction resulting in the Acquisition, Cargill, Inc was not involved in the decision to initiate this proceeding. In seeking to have the court draw the suggested inference, reliance was also placed upon the fact that Cargill, Inc and Cargill Australia had the same legal representation and that a large number of current and former Cargill, Inc employees were called as witnesses in support of Cargill Australia's claim.[4024]

4625 In addition, the Viterra Parties referred to Purser. They submitted she was 1 of the few Cargill Australia witnesses to give evidence and that she gave evidence that she was not a decision-maker within the Project Hawk team. They also referred to her dual role, which included being Cargill, Inc's country representative for Australia. However, there was no suggestion that she, or anyone else, gave any evidence which shed any light on who actually made the decision to sue the Viterra Parties or how that decision came about.

X.101.2 Analysis

4626 Remarkable as it may seem in a case of this size and with the resources at hand, there was simply no documentation or any other evidence that actually showed how it was

---

4022 See, for example, pars 622, 705, 843-854, 976 above.

4023 See, for example, pars 1204-1206, 1409-1415, 1422, 1424 above.

4024 For completeness, reference was also made to the fact that Savona, being in-house counsel for Cargill Australia, was not called to give evidence. Her absence from the trial has been addressed: see pars 2101-2108 above.

decided that Cargill Australia instituted this proceeding. Hence, the Viterra Parties' invitation to the court to draw an inference.

4627 In my view, there was no proper basis for the inference the Viterra Parties submitted the court ought to draw. The circumstances leading up to the Acquisition (which was funded by, and could only be approved by the board of, Cargill, Inc) were fundamentally different to any decision made with respect to the commencement of this proceeding. There was simply nothing to indicate that, before or as part of the decision made by Cargill Australia to commence this proceeding, Cargill, Inc somehow caused or permitted its indirect subsidiary to act as it did. Further, there was no evidence to suggest that Cargill Australia, as a separate legal entity, was anything other than capable of making the decision itself. Although no finding is made that that was what occurred, there was no basis to find that that was not the position and accordingly the Viterra Parties' allegation was not made out.

X.102 Did that constitute a breach of clauses 3.3, 10.2(b) and/or 10.3 of the Confidentiality Deed?

4628 In light of the previous answer, this question does not arise.[4025] If it had arisen and a breach had been established, similar issues concerning enforceability would have also arisen (as discussed in issue 100 above). Equally, it does not arise to the extent that it has been found that clauses 10.2(b) and 10.3 are unenforceable.[4026]

4629 Furthermore, for completeness, even if clause 10.3 was not unenforceable for the reasons stated, it did not follow that, by reason that Cargill Australia commenced a proceeding, there had been a *breach* of clause 10.3 of the Confidentiality Deed. Speaking generally, in response to a proceeding against it, a defendant with the benefit of a release may or may not choose to rely upon that release as a defence to the claim. If the release were a complete answer to the claim made and the release is pleaded as

---

4025 In relation to the construction and operation of cll 10.2 and 10.3, see issue 86 above. In their submissions on this issue, the Cargill Parties made no submission on the proper construction of cl 3.3, and simply submitted that because there were no breaches of cl 10.2 or cl 10.3, there was thus no breach of cl 3.3.

4026 Also see issue 100 above and issue 144 below.

a defence, then the claim will fail and judgment would be entered for the defendant (either summarily or after a trial depending on the approach taken and the level of complexity of the issues involved).[4027] However, it does not follow from the mere existence of a release without more (such as an undertaking not to sue, either express or implied)[4028] that a person will be in breach of agreement by suing on a claim that is the subject of a release. The release remains unaffected by the mere fact that a proceeding has been commenced.

X.103 What, if any, damages or other relief is Glencore and/or Viterra entitled to as a consequence?

4630 In relation to the Viterra Parties' allegations concerning breaches of clauses 10.2 and 10.3, a permanent injunction was sought requiring Cargill, Inc to procure that Cargill Australia not continue this proceeding. Further or alternatively, if the Viterra Parties were liable to pay damages and costs to Cargill Australia, any amounts payable by reason of those liabilities were claimed as losses suffered by the Viterra Parties on the basis that they were caused by either Cargill Australia's breach, or alternatively Cargill, Inc's breach of any or all of clauses 8.3(a), 8.3(c), 10.2 and 10.3.

4631 However, as a result of the answers given above, the questions raised by this issue do not arise.

X.104 Did Cargill, Inc cause or permit Cargill Australia to rely on any of the Financial and Operational Performance Representations, the Warranty Representations, the Pre-Completion Representations, the Other Bidders Representations or the Co-Operative Bulk Representations?[4029]

4632 It has been found that the Financial and Operational Performance Representations,[4030] the Warranty Representations,[4031] the Pre-Completion Representations,[4032] and the

4027 See issue 84 above.
4028 See pars 4493, 4535 above.
4029 The Co-Operative Bulk Representations were not pressed: see issues 61-64 above.
4030 See issue 15 above.
4031 See issue 48 above.
4032 See issue 25 above.

Other Bidders Representations[4033] were made.

X.104.1 Submissions

4633 The Viterra Parties alleged that, contrary to the Viterra Parties' primary case, if these representations were made and Cargill Australia relied on them, then this was because Cargill, Inc caused or permitted such reliance. In response, the Cargill Parties denied this allegation. The Cargill Parties confined their submissions very simply to the doctrine of separate legal entities;[4034] and the Viterra Parties relied on their submissions made for issue 101 above, which in essence relied upon the evidence of Cargill, Inc's substantial involvement in driving the Acquisition.

X.104.2 Analysis

4634 For the reasons that follow, Cargill, Inc did cause or permit Cargill Australia to rely on each of the representations that Cargill Australia relied upon.

4635 *First*, the Cargill Parties, by way of an explanation of their general approach in their closing submissions, stated that "[t]here is no meaningful difference between [Cargill, Inc and Cargill Australia] for the purposes of engagement with the facts in 2013". They explained that "Cargill, [Inc] … conducted the [D]ue [D]iligence and made the offers to purchase the [Joe White Business]. Cargill Australia … bought the [Joe White Business]". This position was consistent with the case pleaded by Cargill Australia.[4035] No doubt, this position was adopted because in 2013, when the events leading to the Acquisition took place, employees of Cargill, Inc took on the role of performing the enquiries, assessments, the Due Diligence and negotiations and all other substantive steps in the presale process for and on behalf of both Cargill, Inc and Cargill

---

4033 See issue 54 above.

4034 See issue 101 above, in relation to whether Cargill, Inc caused or permitted Cargill Australia to commence this proceeding.

4035 The Statement of Claim contained an allegation that from early 2013 Cargill, Inc participated in the sale process on its own behalf and on behalf of Cargill Australia. It was also alleged by Cargill Australia that Cargill, Inc made the Cargill Indicative Bid and the First Final Bid, and used the information provided by the Viterra Parties, on behalf of Cargill Australia.

Australia.[4036]

4636 *Secondly,* and as an extension of the first point, there was simply no evidence that any of the key decisions involved in the Acquisition were made by Cargill Australia employees.[4037] In fact, it was uncontroverted that Cargill, Inc drove, funded and approved the transaction.[4038] The only Cargill Australia employee called to give evidence was Purser,[4039] who gave evidence that she was not a decision-maker for the purposes of the Acquisition. The inference that Cargill, Inc caused or permitted Cargill Australia to rely on the representations necessarily followed from the fact that those with the knowledge of the representations were the key decision-makers and all employees of Cargill, Inc.

4637 *Thirdly*, in their submissions for issues 20, 23, 30, 36, 38, 49 and 58, which were framed in respect of Cargill Australia, the Cargill Parties did not draw any real distinction between Cargill, Inc and Cargill Australia as separate legal entities. Rather, the submissions were put by using the unifying term "Cargill", thereby identifying the 2 entities for the issues related to reliance without distinguishing between them.

4638 *Fourthly,* in issue 60 above, the Cargill Parties made the submission that "[i]t can further be inferred that Glencore made the [Other Bidders Representations] with the intent that Cargill should rely on them to raise its bid by [$15 million] and that Cargill Australia should rely on them by entering into the Acquisition Agreement". This submission reflected the reality that it was Cargill, Inc and its employees that were conducting the sale process for Cargill Australia. It also ran counter to the proposition that Cargill, Inc did not cause or permit Cargill Australia to rely on the representations.

4639 To elaborate on this last point, the acknowledgement that Cargill Australia entered

---

4036 This can be distinguished from issue 101 above, on the basis that the particular conduct referred to in that issue was the commencement of this proceeding, which occurred in late 2014 and well after Completion. Further, as noted above, the circumstances leading up to the Acquisition were wholly different and separate to any decision made to commence this proceeding.

4037 See, for example, pars 1204-1206, 1409-1415, 1424 above.

4038 See, for example, pars 622, 705, 843-854, 976 above.

4039 Who also had a role as country representative in Australia for Cargill, Inc.

into the Acquisition Agreement on the basis of the Other Bidders Representations (which were made to, and only considered by, Cargill, Inc employees in a 2 hour period on 2 August 2013), demonstrated that the impugned conduct was engaged in with Cargill, Inc, who then caused or permitted Cargill Australia to rely on the relevant conduct. This admission in the context of issue 60 above could not simply be side-stepped when dealing with another related issue.

4640 Similarly, shortly before the Acquisition when the Pre-Completion Representations had been made, a number of Cargill, Inc employees had the ability to decide that the transaction should not proceed.[4040] However, each of them permitted the steps to be taken so that Completion could occur. Leaving aside any formal decision-making process of Cargill Australia itself (about which there was no evidence), the only means by which Cargill Australia could have relied on the representations in entering into the Acquisition Agreement and completing the Acquisition, was to act upon the decisions that had been made by Cargill, Inc employees, including the decision to proceed with the Acquisition.

4641 Thus, Cargill, Inc caused or permitted Cargill Australia to rely on the representations in the manner that Cargill Australia did.

X.105 Did that constitute a breach by Cargill, Inc of clauses 3.3 and/or 8.3(a) and/or (c) of the Confidentiality Deed?

4642 The Viterra Parties alleged that by causing or permitting Cargill Australia to rely on the various representations pleaded in the Statement of Claim,[4041] Cargill, Inc breached any or all of clauses 3.3, 8.3(a) and 8.3(c) of the Confidentiality Deed.

4643 The Confidentiality Deed clauses are set out in detail above.[4042] Although the relevant clauses must be construed as part of the Confidentiality Deed as a whole, for convenience the relevant clauses are reproduced here:

4040 See par 3394 above.
4041 See, relevantly, par 4632 above.
4042 See par 590 above.

3.3 [Cargill, Inc]'s responsibility for Representatives' conduct

[Cargill, Inc] must procure that its Representatives do not do or omit to do anything which if done or omitted to be done by [Cargill, Inc], would be a breach of [Cargill, Inc]'s obligations under this deed or an obligation of confidence owed to [Glencore] or any of its Representatives.

…

8.3 [Cargill, Inc] to make its own assessment

[Cargill, Inc] agrees and acknowledges that:

(a) it must make its own assessment of all Confidential Information and satisfy itself as to the accuracy, content, legality and completeness of the information;

…

(c) it will rely solely on its own investigations and analysis in evaluating the Transaction.

X.105.1 The Viterra Parties' submissions

4644 The Viterra Parties relied on their submissions regarding issue 87 above, by which they submitted that, to the extent Cargill Australia was found to have relied upon the Financial and Operational Performance Representations, the Warranty Representations, the Pre-Completion Representations and the Other Bidders Representations, Cargill Australia had failed to adequately make its own assessment of the Confidential Information, or failed to rely solely on its own investigations and analysis in evaluating the Transaction, in breach of clauses 8.3(a) and 8.3(c) respectively. The Viterra Parties submitted that, if Cargill Australia so relied, by causing or permitting Cargill Australia to do so, Cargill, Inc was also in breach of clause 3.3, in addition to clauses 8.3(a) or 8.3(c), or both. The Viterra Parties also referred to their submissions concerning issues 101 and 104 above.

4645 Further, they contended that the Approved Purpose (as defined in the Confidentiality Deed)[4043] had not been completed by entry into the Acquisition Agreement, but continued to Completion. Therefore, it was submitted that the terms of the Confidentiality Deed operated in relation to any representations alleged to have been

[4043] See par 586 above.

made up until Completion.

4646 Furthermore, it was submitted that the Deed of Release had no effect on the obligations pleaded by the Viterra Parties as applying to Cargill, Inc under clauses 8.3(a) and 8.3(c). The Viterra Parties repeated their submissions to the effect that, because this proceeding concerned facts which occurred before Completion, the Deed of Release had no effect upon the Viterra Parties' rights to rely upon clauses 3.3 and 8.3 of the Confidentiality Deed. This was put on the basis that the release the subject of the Deed of Release did not affect accrued rights, obligations, Claims or liabilities in connection with the Confidentiality Deed.[4044]

X.105.2 The Cargill Parties' submissions

4647 *First,* it was submitted Cargill, Inc did not breach clause 8.3(a) or 8.3(c) for the following reasons:

(1) The clauses were not promissory, but were "representations as to future intention". The Cargill Parties referred to case law to the effect that whether a statement is promissory is to be determined by reference to the whole of the relevant circumstances,[4045] and by answering the question of what a reasonable person in the position of the parties would necessarily have understood to have been intended.[4046]

(2) Clause 8.3 did not cover Confidential Information that Glencore and Viterra knew, or ought to have known, was inaccurate or incomplete because that would defeat the purpose of the Confidentiality Deed.[4047]

(3) In any event, Cargill Australia did make its own assessment of the Confidential Information; it undertook its own investigations by

---

4044 See issue 84 above.

4045 *Emu Brewery Mezzanine Ltd (in liq) v ASIC* (2006) 32 WAR 204, 211 [20] (McLure JA).

4046 The Cargill Parties relied on *Crown Melbourne Ltd v Cosmopolitan Hotel (Vic) Pty Ltd* (2016) 260 CLR 1, 12 [22] (French CJ, Kiefel and Bell JJ), in which the High Court considered whether a representation made in the course of negotiations amounted to a collateral agreement or gave rise to an estoppel.

4047 The submission made no reference to fraud and appeared to make this contention purely as a matter of the proper construction of the Confidentiality Deed.

requesting further information and sought to satisfy itself that the information was accurate. The Cargill Parties submitted that the evidence demonstrated that Cargill Australia entered into the Acquisition Agreement off the back of its own investigations and analysis of the material supplied to it by Glencore and Viterra. It was submitted that it did not follow from the fact that the material that was disclosed by Glencore and Viterra was misleading or deceptive, Cargill Australia did not make its own assessment of that material and its accuracy and did not rely upon its own analysis of the material.

4648 *Secondly,* it was submitted the Confidentiality Deed did not apply to the Pre-Completion Representations and the Other Bidders Representations on the premise that they did not fall within the scope of the Confidentiality Deed. This was put in relation to the Pre-Completion Representations because they post-dated the Acquisition Agreement. Further, it was submitted that the Other Bidders Representations were not provided under or pursuant to the Confidentiality Deed as that information was not disclosed to Cargill, Inc for the purposes of Cargill, Inc's evaluation, as Cargill had already submitted its final bid and completed its evaluation. The Cargill Parties contended the defined terms "Confidential Information", "Transaction" and "Approved Purpose" as used in clause 8.3 of the Confidentiality Deed, meant that clause 8.3 did not include information that was not provided for, or in connection with, Cargill, Inc's evaluation of whether to acquire Joe White.

4649 *Thirdly,* it was submitted Cargill was released from the obligations under clauses 8.3(a) and 8.3(c) of the Confidentiality Deed by the Deed of Release for the same reasons it was released from the obligations in clauses 10.1 and 10.2.[4048] Whilst the Deed of Release preserved accrued rights, obligations, Claims or liabilities arising under the Confidentiality Deed,[4049] they submitted the Viterra Parties' claims under clauses 3.3, 8.3(a) and 8.3(c) of the Confidentiality Deed had not accrued prior to Completion.

4048 See issue 84 above.

4049 See the Deed of Release, cl 3(b), which is set out at par 1553 above.

X.105.3 Analysis

X.105.3.1 Contractual construction and operation of the Confidentiality Deed

4650 The principles relevant to the interpretation of a commercial contract are set out above.[4050]

4651 In issue 104 above, it was determined that Cargill, Inc caused or permitted Cargill Australia to rely on the relevant representations. It must follow that clause 3.3 of the Confidentiality Deed would have been breached if Cargill Australia's reliance on the representations amounted to a breach of clause 8.3(a) or 8.3(c). Thus, it was the operation of these 2 clauses that was critical.

4652 Dealing with the Cargill Parties' general submissions in paragraph 4647(1) and 4647(2) above, the submission that the sub-clauses in question were not promissory was not on point. The cases relied upon were concerned with whether statements made were a mere representation or an opinion in relation to a future matter, or whether they were promissory such that they could be characterised as contractual. Obviously, the "undertakings"[4051] in clauses 8.3(a) and 8.3(c) were contractual and binding.

4653 Further, on its face, each subclause was a promise; the Recipient "agrees … that it must make its own assessment" and "agrees … that it will rely solely on its own investigations". Thus, Cargill, Inc agreed to undertake, or not undertake, specific acts in a legally binding deed, the purpose of which was for the Recipient of the Confidential Information immediately to take on certain obligations. Furthermore, the same wording was used in a primary obligation in the Confidentiality Deed, clause 9.1, in which Cargill, Inc "agree[d] not to disclose" the Confidential Information; which was plainly an ongoing obligation that arose immediately upon the Confidentiality Deed becoming operative. There were no additional words or other factors to indicate that clause 8.3(a) or 8.3(c) was distinct, or contrary to the position under clause 9, did not impose an obligation on Cargill, Inc. The objective intention

---

4050 See pars 4549-4550 above.

4051 See Confidentiality Deed, cll 2.1, 11: par 590 above.

of the parties was plain. The undertakings in clauses 8.3(a) and 8.3(c) were immediate in operation[4052] and promissory in nature.[4053]

4654 In relation to the Cargill Parties' submission that clause 8.3 did not cover Confidential Information that Glencore and Viterra knew, *or ought to have known*, was inaccurate or incomplete, leaving aside the question of fraud, this must also be rejected. As a matter of construction clause 8.3 operated to protect Glencore from potential liability as a consequence of Cargill, Inc relying on Confidential Information that might have been inaccurate or might have formed the basis of some representation by, or warranty of, Glencore. Again subject to the question of fraud, to accept this submission of the Cargill Parties would be to ignore the express language of clauses 8.1, 8.2 and 8.3(a).[4054]

4655 Turning from these more general submissions, in order to determine if Cargill Australia's reliance on the representations amounted to a breach of clause 8.3(a) or 8.3(c), it was necessary to consider what representations were captured by the operation of the Confidentiality Deed. This required a determination of whether each representation alleged was included within the meaning of Confidential Information in clause 8.3(a) and whether the representations were part of Cargill Australia's evaluation of the Transaction for the purposes of clause 8.3(c).

4656 The definitions of Confidential Information and Approved Purpose are set out above.[4055] To paraphrase, Confidential Information was all Information[4056] made available by Glencore or its Representative for or in connection with the Approved Purpose and all Information created by Cargill, Inc in the course of carrying out the Approved Purpose. Approved Purpose was defined as Cargill, Inc's evaluation of whether to acquire Joe White.

4052 The existence of the terms of the Confidentiality Deed itself were confidential: cl 3.1(b), see par 590 above.

4053 See *Crown Melbourne Ltd v Cosmopolitan Hotel (Vic) Pty Ltd* (2016) 260 CLR 1, 12 [22] (French CJ, Kiefel and Bell JJ).

4054 See par 590 above.

4055 See par 586 above.

4056 The definition of Information included all information, regardless of its form, relating to the Approved Purpose: see par 586 above.

4657 Thus, the Financial and Operational Performance Representations having been made before, and alleged to have been relied upon in deciding to enter into, the Acquisition Agreement necessarily came within the definition of Confidential Information. Equally, the Warranty Representations were of the same character, being made and relied upon respectively upon entry into the Acquisition Agreement.[4057] As for the Other Bidders Representations, they also were Confidential Information. That was because, in determining whether to increase its bid, Cargill was required to re-evaluate if it was willing to acquire Joe White at the significantly higher price of $420 million. As part of the decision to proceed on this basis, a number of Cargill executives considered whether to acquire Joe White at the higher price[4058] and a revised analysis of the valuation model was performed by Cargill.[4059] Notwithstanding Cargill had presumably believed it was likely it had completed its evaluation when the First Final Bid was submitted,[4060] when the Other Bidders Representations were made, they (along with the remaining contents of the Further Bid Calls) consisted of Information disclosed to Cargill for the purpose of Cargill further evaluating whether to acquire Joe White. So much was demonstrated by the fact that Cargill actually conducted a re-evaluation on a number of levels based on the further information provided.[4061]

4658 The Pre-Completion Representations, which involved representations made by the provision of the October 2013 Reponses,[4062] occurred after entry into the Acquisition Agreement. Thus, in order to determine whether or not the Pre-Completion Representations amounted to Confidential Information, it is necessary to determine the meaning of Approved Purpose.

4659 This question centred around the meaning of "acquire" and, in objectively viewing the terms of the Confidentiality Deed, determining when it would have been intended that a Recipient's evaluation of any acquisition would be complete. The question of

---

4057 See issue 49 above, in which it has been found that the Warranty Representations were made at the time the Acquisition Agreement was entered into.

4058 See pars 3783-3799 above.

4059 See par 1010 above.

4060 But also see pars 950, 964 above.

4061 See par 1010 above.

4062 See issues 24, 25 above.

when a Recipient might have acquired Joe White would not necessarily be determined by when an agreement for sale might have been entered into. Naturally, any sale agreement might provide for immediate transfer of ownership, or alternatively for the transfer of ownership upon settlement of the agreement for sale after all necessary steps for the transfer had been taken (the latter objectively presumed to have been contemplated as more likely in the case of a sale for a going-concern business to a foreign Recipient). Leaving aside what actually occurred in this case (which was the latter), the simple point is that a Recipient would not acquire Joe White until it had taken ownership of the issued shares held by Viterra Malt in Joe White and any related assets utilised by Joe White.[4063]

4660 Turning to the facts, the Acquisition Agreement did not provide for the transfer of ownership until Completion.[4064] Cargill Australia had not acquired the Joe White Business at the time the Acquisition Agreement was entered into, but had only entered into an agreement to acquire Joe White. The Acquisition did not occur until 31 October 2013.

4661 The remaining question of the proper construction of Approved Purpose was whether, in May 2013, it would have been contemplated that if Cargill was the successful bidder and if it were to enter into an agreement to purchase with provision for a later settlement of the transfer of ownership, Cargill would have continued to evaluate whether or not to acquire the Joe White Business until the transfer of ownership.

4662 Viewed objectively and as a matter of commercial common sense, the question must be answered in the affirmative. This conclusion applied although it would have been understood that the position of Cargill after any purchase agreement had been entered into would have been fundamentally different to the position that preceded its execution. Obviously, the freedom of Cargill to be able to choose whether or not to acquire the Joe White Business would have been contemplated to have been materially

---

4063 The precise means by which ownership might have been contemplated to have been taken need not be considered.

4064 See cl 2.1: par 1023 above.

fettered by the terms of any acquisition agreement being entered into, but objectively it must have been presumed that it would also have been contemplated that Cargill might have had legal rights available to it not to proceed with any acquisition in certain circumstances or to seek other remedies based on any further evaluation of the Joe White Business.

4663 Further, although subsequent facts are not relevant to this question of construction,[4065] it has already been noted that as a matter of fact Cargill did engage in an evaluation as to whether or not to proceed with the Acquisition upon learning of the matters disclosed on or about 15 October 2013 and as a result of the October 2013 Responses.[4066] The Cargill 22 and 29 October Letters raised queries directly relevant to Cargill's ability to evaluate the operations and value of the Joe White Business.[4067]

4664 Accordingly, as the Confidentiality Deed remained on foot until 31 October 2013 and the Approved Purpose of the Confidentiality Deed remained operative up until that time, the Pre-Completion Representations formed part of the Confidential Information and were governed by the Confidentiality Deed.

X.105.3.2 Alleged breaches

4665 Commencing with matters that were uncontroversial, the recitals to the Confidentiality Deed recorded that the Confidential Information was to be provided to Cargill, Inc so that Cargill, Inc could make an evaluation of whether to acquire the Joe White Business. Further, as previously noted, the Viterra Parties accepted that the Information Memorandum was a starting point, in that its contents could be relied upon for the purposes of an indicative offer.[4068] That is, it was accepted that there was nothing in the terms of the Confidentiality Deed which prevented Cargill, Inc from relying on the information contained in the Information Memorandum for the purposes of Phase 1 and that, if it did so, it would not be acting in breach.

4065 See, for example, *FAI Traders Insurance Company Ltd v Savoy Plaza Pty Ltd* [1993] 2 VR 343, 350.5 (Brooking J), 353.3 (Nathan J).

4066 See issue 31 above.

4067 Which was also reflected in Viers' attempt to carry out a further evaluation of what the repercussions were upon learning of the Operational Practices: see pars 1419-1421 above.

4068 See par 2926 above. For the avoidance of doubt, the concession was plainly correct. A contrary position would have been entirely inconsistent with the Phase 1 Process Letter.

Furthermore, Cargill, Inc made it clear in early June 2013 that it did carry out its own assessment based on a review of the information in the Information Memorandum in formulating and proffering the Cargill Indicative Bid as part of Phase 1. Moreover, in late July 2013 Cargill reported, as was the fact, that it had conducted its own due diligence, and that the Due Diligence included a review of the information in the Information Memorandum, the "management presentations", the site visits, the Data Room and the responses in the Q&A Process. Although far from determinative, it was noteworthy that there was no suggestion from the Viterra Parties in 2013 that, in Cargill doing so, any breach of the Confidentiality Deed had been committed.

4666 As to whether there was a breach of clause 8.3(a), any reliance on the relevant representations by Cargill Australia did not preclude or impair Cargill from undertaking its own assessment of the Confidential Information and satisfying itself as to its accuracy, content, legality and completeness. In other words, whether Cargill complied with clause 8.3(a) was a question of fact which was not necessarily determined in the negative simply because Cargill relied on the relevant representations.

4667 It was clear that Cargill, Inc, in its own right and also for and on behalf of Cargill Australia, undertook its own assessment of the Confidential Information in order to value Joe White for the purpose of evaluating whether to acquire Joe White. Further, Cargill did take steps to satisfy itself as to the accuracy, content, legality and completeness of the Confidential Information.[4069] For example, Cargill created the Cargill deal model (which contained both information from the Information Memorandum and some of Cargill's own assumptions and inputs),[4070] asked questions during the Management Presentation, attended during a number of site

---

4069 As Engle explained under cross-examination in rejecting various propositions put to him, such a process did not involve verifying the truth of every piece of information that was provided, or having to prove all information was true. As a matter of fact, such an approach would not have been possible given that Cargill did not have access to much of the underlying information that would have been necessary to verify whether every piece of information was proven to be true: see also par 4446 above. (The fact that Engle did not read the exact wording of the Sale Process Disclaimers did not undermine the cogency of this evidence.)

4070 See, for example, pars 546, 556, 574-583, 688-695, 904-909, 1076 above.

visits, participated in the Operations, Commercial and Barley Inventory Calls, held numerous internal meetings to evaluate the relevant information, prepared assessments for the leadership team and the Cargill, Inc board, and requested further information via the Q&A Process;[4071] all of which demonstrated that Cargill made its own assessment.

4668 Further, both the contemporaneous documents and the evidence of the relevant witnesses called by Cargill demonstrated that Cargill did satisfy itself as to the accuracy, content, legality and completeness of the Confidential Information to such a level that Cargill was willing to rely upon much of the Confidential Information as part of conducting its own analysis.[4072] Therefore, the Viterra Parties have not established a breach of clause 8.3(a) of the Confidentiality Deed by reason of the fact that the relevant representations were relied upon.

4669 Turning to clause 8.3(c), Cargill was required to rely solely on its own investigations and analysis in evaluating the "Transaction". Transaction was defined as any transaction, acquisition or investment contemplated in connection with the Approved Purpose.[4073] Some observations need to be made in determining the proper construction of clause 8.3(c).

4670 *First*, there was nothing stated in the clause (or any other part of the Confidentiality Deed) that indicated that Cargill could not make use of the Confidential Information and rely on such use.[4074] On the contrary, it was implicit that Cargill would do so in making its own assessment in accordance with clause 8.3(a) and conducting its own investigations and analysis pursuant to clause 8.3(c). *Secondly*, nothing stated in clause 8.2 or 8.3 precluded Cargill, after properly making its own assessment, from treating

---

4071 See pars 652-658, 702-703, 735-741, 743-750, 765, 838-854, 866-885, 910-914, 925-929 above.

4072 This statement is necessarily qualified as Cargill made assumptions of its own (such as provision for floods or drought in seeking to verify for itself the volatility of the price of barley: see par 947 above) which did not always align with information that was provided by the Viterra Parties.

4073 See par 588 above.

4074 In making this observation, clause 8.1(a) stated that most or all of the Confidential Information consisted of data prepared in the ordinary course of business and had not been prepared with the intention that Cargill, Inc should rely on it. Such a clause was entirely consistent with Cargill relying on the Confidential Information after making the acknowledgements in clause 8.2 and complying with its obligations in clause 8.3(a) and other terms of the Confidentiality Deed.

the Confidential Information as accurate or reliable. *Thirdly*, relying solely on Cargill's "own investigations and analysis" did not require Cargill to exclude the Confidential Information from consideration; quite the opposite. Given the strict confidentiality regime that Glencore had insisted upon, it was the Confidential Information that was largely to be the subject of the investigations and analysis that Cargill was required to undertake. *Fourthly*, the acknowledgement in clause 8.3(b) was limited to forecasts and estimates. *Fifthly*, the attempt by the Viterra Parties to have some form of clear demarcation concerning reliance between the process up to the Cargill Indicative Bid being submitted and the process thereafter found no support in the wording of clause 8.3. There was nothing in the language of the clause that suggested it was intended to permit use of the Confidential Information in Phase 1 as a starting point, but to treat such an approach as a breach of the Confidentiality Deed in Phase 2.[4075] Relevantly, the key difference between Phase 1 and Phase 2 was the amount of information Cargill could access, and the extent to which it could consequently investigate and analyse the relevant information. However, under both Phases 1 and 2 a key (if not the key) source of information upon which Cargill was to conduct its investigations and analysis was necessarily the Confidential Information. These matters were all relatively uncontroversial.

4671 That said, a real difficulty arose in construing clause 8.3(c) in seeking to determine what was objectively intended in relation to any reliance by Cargill on the investigations or analyses that formed part of the Confidential Information itself; that is, investigations or analyses performed for or on behalf of the Viterra Parties (including by their subsidiary, Joe White) which Glencore or Viterra (or both) chose to disclose to Cargill in the Information Memorandum or as part of the Due Diligence. On a literal reading of the clause, if Cargill relied on anything at all that arose out of the investigations or analyses of Glencore or its subsidiaries as recorded in the Information Memorandum or otherwise disclosed as part of the Confidential Information, then it would not be relying solely on its own investigations and analysis

4075 Consistent with this lack of distinction, the Phase 2 Process Letter made no such suggestion and simply reiterated the ongoing applicability of the Confidentiality Deed as previously conveyed in the Phase 1 Process Letter: see par 639 above.

and would be in breach of the clause.

4672 Consistent with the position adopted by the Viterra Parties, on this basis it would follow that, to the extent that the Confidential Information consisted of investigations or analyses of others (for example, the normalised financial results contained in the Information Memorandum),[4076] then reliance on such matters (rather than, or even in conjunction with, Cargill's investigations and analysis) would be inconsistent with relying *solely* on Cargill's own investigations and analysis.

4673 However, such a construction would make no commercial sense for a number of reasons and if it were adopted would lead to an absurd scenario.

4674 *First and foremost*, consistent with the concession made, it would have been known by Glencore (who had already had the Information Memorandum prepared at the time Cargill executed the Confidentiality Deed) and contemplated by Cargill, Inc (who was familiar with the type of information that would ordinarily be included in an information memorandum for a transaction of this kind) that the Information Memorandum contained or would contain analyses (such as profit and loss statements and a balance sheet) that were clearly intended to be the basis of an evaluation of any bid. Whatever investigations or analyses Cargill might have been capable of performing, it was completely implausible that such historical financial statements would be ignored such that it would not be relied upon at all. Both Glencore and Cargill, Inc would have contemplated that the historical financial performance of Joe White would have to be taken into account to some significant degree in evaluating the Transaction.[4077] Thus, the requirement to rely solely on Cargill's own investigations and analysis did not contemplate the exclusion of Cargill taking into account any analysis contained in the Confidential Information, provided that Cargill ultimately relied solely upon its own investigations and analysis.

4675 *Secondly*, the nature of the confidentiality regime was significant. At the time the Confidentiality Deed was executed by Cargill, Inc it was contemplated that Glencore

4076 See par 523 above.
4077 See, for example, pars 473-474, 766 above.

would be disclosing Confidential Information that Cargill was obliged to keep confidential, and could only be the subject of questions to Glencore or the Sellers through the Due Diligence. Again, a useful example was the historical financial statements and the "normalised" statements, which clearly by their very nature must have been the subject of investigations and analysis before finalisation. Such statements as to past performance were integral to any evaluation of the Joe White Business. There was simply no other source of information with respect to these matters and no capacity to obtain the information from any other source.

4676 *Thirdly*, the whole purpose of Glencore providing the Confidential Information, including such analyses that had already been conducted in relation to the Joe White Business, was so that Cargill could form its own view as to the value of the Joe White Business and what amount it would be willing to pay for it.[4078] If the clause were construed in the manner contended for by the Viterra Parties, it would follow that every Cargill employee that had viewed any of the Confidential Information pertaining to an investigation or analysis (which would have included any employee who had read the Information Memorandum) would either have to completely eliminate such information from her or his mind or be completely excluded from the evaluation process. In other words, it would have been necessary to exclude any meaningful consideration or any form of reliance on the very information it was necessary to refer to in order to evaluate the Joe White Business. Not only would this have been nonsensical, it would be entirely inconsistent with the contemplated investigations and analysis. Thus, a possible literal reading of the clause would run entirely counter to what the parties understood was the reason for their commercial relationship and the provision of the Confidential Information.

4677 The better view is that the limitation on reliance did not mean that Cargill could not consider and take into account the Confidential Information when conducting its own investigations and analysis. Accordingly, "solely" in this context must be understood

---

4078 King's evidence made it clear that a reason he was so fastidious to get all the relevant figures included and accounted for was so that the valuation by a prospective purchaser would be more favourable to the Sellers than if the information concerning margins was not provided: see, for example, par 797 above.

to mean that Cargill would only rely on its own investigations and analysis after duly considering all the Confidential Information provided, such consideration being consistent with the obligation to satisfy itself as to its accuracy and so on.[4079] The evidence demonstrated that this was precisely what Cargill did.[4080]

4678 In light of the surrounding circumstances and the purpose and object of the Confidentiality Deed, the wording of clause 8.3(c) was not intended to prevent Cargill from relying on the Confidential Information as part of its own investigations and analysis. Essentially, it was contemplated the clause would foreclose any exposure of the Viterra Parties to liability for Cargill making a claim based on the provision of the Confidential Information, including Glencore's or Viterra's investigations or analyses, separate and distinct from the investigations and analyses required to be conducted by Cargill. In other words, Cargill was required to rely solely on its own investigations and analyses, in circumstances where it was contemplated those investigations and analyses would be based on information including the Confidential Information, and subject to the limitations otherwise imposed by the Confidentiality Deed, including those in clause 8.

4679 It follows that reliance upon each of the Financial and Operational Performance Representations, the Warranty Representations, the Pre-Completion Representations and the Other Bidders Representations was entirely consistent with Cargill relying solely on its own investigations and analysis as that phrase was intended to be understood.

4680 To summarise, Cargill was required to rely solely on its own investigations and analysis. Cargill understood this,[4081] and did in fact conduct its own investigations and analysis in evaluating the Joe White Business and determining the amount it was willing to bid. Broadly, the product of Cargill's investigations and analyses was what

---

4079 That is, consistent with its obligations under the Confidentiality Deed, including clause 8.3(a).

4080 Indeed, in contending that Cargill did not rely on the Financial and Operational Performance Representations, the Viterra Parties submitted that the evidence demonstrated that Cargill conducted the Due Diligence in accordance with the Sale Process Disclaimers "in that Cargill proactively and independently investigated the facts on which Cargill proposed to base their decision to enter into the Acquisition Agreement": see par 3182 above. See also par 735 and fnn 452, 495 above.

4081 Ibid. See also, for example, pars 472, 743, 947-948, 960-961, 969-974 above.

was presented to the Cargill, Inc board and the Cargill leadership team, and it was this information which was relied upon in deciding to make US$400 million available for any purchase. By Cargill solely relying on these investigations and its analyses, such conduct was not to the exclusion of the matters that had formed part of, and had been relied upon as part of, the investigations and analyses. In practical terms, the clause was to operate to prevent Cargill, Inc and its Representatives from relying upon an evaluation confined to details of the Confidential Information, including any investigations or analyses provided by Glencore, without satisfying its obligation to rely ultimately solely on its own investigations and analyses (which necessarily included investigating and analysing the Confidential Information). Thus, Cargill was prevented from adopting a position where it could claim that it relied both on its own investigations and analyses, and separately also relied upon the Confidential Information in any event, including the investigations and analyses provided by the Viterra Parties.

4681 It must follow from these conclusions regarding clauses 8.3(a) and 8.3(c) that there was no breach of clause 3.3. Further, this construction of clause 8.3 was not inconsistent with the other provisions of the Confidentiality Deed. In particular, provisions concerning potential liability and the ability to make any claim were distinct matters from whether or not Cargill was acting in breach of the Confidentiality Deed by conducting itself in the manner that it did.

X.105.3.3 The Deed of Release

4682 The Deed of Release and its effect is set out elsewhere in the judgment.[4082] For present purposes, it suffices to say that if, contrary to the findings set out above, Cargill, Inc breached either clause 8.3(a) or 8.3(c) then a cause of action would have accrued to Glencore at the time of any breach. Accordingly, as each of the matters relied upon in contending that a breach occurred happened before 31 October 2013, it would have followed that such accrued causes of action would not have been the subject of the release contained in the Deed of Release. However, for the reasons stated, no such

4082 See issue 84 above.

causes of action arose.

X.105.3.4 Further observations

4683 It is convenient to deal with a general submission made by the Viterra Parties that this case was about whether Cargill could succeed in disturbing the parties' agreed allocation of risk in circumstances where Cargill was experienced, highly sophisticated and expertly advised. This submission appeared to be premised on the basis that the terms of the Confidentiality Deed and the Acquisition Agreement (amongst other documents) allocated all risk in the transaction to Cargill and none to the Viterra Parties beyond what was expressly stated in the Warranties. In relation to the construction issues dealt with above, it suffices to say that none of the clauses in question, in terms, stated that all risk lay with Cargill. In negotiating the terms of the Confidentiality Deed,[4083] undoubtedly the Viterra Parties sought to minimise or even extinguish any liability they might otherwise have been exposed to by reason of the sale of Joe White to the maximum extent permitted by law. However, the language used must still be construed according to established contractual principles of construction to produce a commercially sensible result consistent with the wording used.

X.106 What, if any, damages or other relief is Glencore and/or Viterra entitled to as a consequence?

4684 This issue does not arise.

X.107 Are Glencore and/or Viterra estopped from making a claim against Cargill, Inc for breach of clauses 8.3(a) and/or 8.3(c) of the Confidentiality Deed?

4685 Although this issue also does not arise in light of the finding that neither Cargill, Inc nor Cargill Australia breached clause 8.3(a) or 8.3(c), it should be considered as it raised questions of fact that ought to be determined.

4083 The terms of the Confidentiality Deed were not simply terms put forward by Glencore and adopted by Cargill, but were the subject of negotiation: see par 458 above.

X.107.1 Principles

4686 Broadly speaking, an estoppel at common law may arise where a representor induces a person to adopt and act upon an assumption of an existing fact.[4084]

4687 Common law estoppel may be established where the relying party acts on an assumption of fact and would subsequently suffer detriment if the representor denied the truth of that assumption.[4085] Therefore, the representor may be estopped from departing from the assumed truth of the representation.[4086] The detriment is that which would flow to the person who has acted on the assumption from the change of position if the representor resiled from the assumption and made a different state of affairs the basis of their respective rights and liabilities.[4087]

4688 Equitable estoppel has its basis in unconscionable conduct.[4088] It comes to the relief of a plaintiff who has acted to its detriment on the basis of an assumption induced by the conduct of the representor where it would be unconscionable for the representor to resile from the assumption. The form of relief a plaintiff may obtain depends on what would do justice in the circumstances. In *Waltons Stores (Interstate) Ltd v Maher*, Brennan J outlined the elements of equitable estoppel as follows:[4089]

(1) The representee assumed that a particular legal relationship existed or would exist and, in the latter case, that the representor would not be free to withdraw from the expected legal relationship.

(2) The representor induced the representee to adopt that assumption or expectation.

(3) The representee acted or abstained from acting in reliance on the

assumption or expectation.

(4) The representor knew or intended that the representee acted or abstained from acting.

(5) The representee's action or inaction will occasion detriment if the assumption or expectation is not fulfilled.

(6) The representor failed to act to avoid that detriment, whether by fulfilling the assumption or expectation or otherwise.

4689 Whilst the courts have noted distinctions between common law estoppel and equitable promissory estoppel,[4090] some common principles and elements underscore both.[4091] The object of estoppel, both at common law and in equity, is "to prevent an unjust departure by one person from an assumption adopted by another as the basis of some act or omission which, unless the assumption be adhered to, would operate to that other's detriment".[4092] The representor may be taken to have induced an assumption in various circumstances. These include where the assumption formed the conventional basis upon which the parties entered into a contractual relationship; or where the representor's imprudence was a proximate cause of the assumption made and acted upon when care was required of the representor; or if the representor has failed to take steps to correct a mistake that it knew the other party was labouring under in circumstances where it was under a duty to do so.[4093]

4690 In respect of this last circumstance, a duty not to remain silent and correct a mistake will arise where the assumption or expectation can be fulfilled only by a transfer of the representor's property, a diminution of the representor's rights or an increase in the representor's obligations. Where a representor knows that the representee is

labouring under such an assumption, they must either warn the representee that they deny the truth of the assumption, or otherwise act in a way that will avoid any detriment the representee may suffer in reliance on the assumption.[4094]

X.107.2 The Cargill Parties' submissions

4691 The Cargill Parties submitted that Glencore or Viterra, or both, were estopped from making a claim against Cargill, Inc for breach of clauses 8.3(a) and 8.3(c). Their submissions relied on common law estoppel, acknowledging that for common law estoppel to operate there must have been assumptions as to an existing state of affairs and not future conduct.

4692 The Cargill Parties addressed the elements of estoppel, as follows::

(1) Cargill, Inc assumed that it was entitled to rely upon the accuracy of the financial and operational performance information of the Joe White Business provided by Glencore or Viterra, or both (that is, the Financial and Operational Information), in the sale process and in relation to the Other Bidders Representations ("the Assumption").

(2) By reason of Glencore or Viterra, or both, continuing to deal with Cargill, Inc and provide information to it despite Cargill, Inc making known its position, Cargill, Inc was induced to make the Assumption.

(3) In reliance upon the Assumption, Cargill Australia entered into the Acquisition Agreement.

(4) By reason of the dealings between the parties, Glencore and Viterra knew and intended that Cargill, Inc and Cargill Australia would rely on the Assumption.

(5) Cargill, Inc would suffer detriment if Glencore and Viterra were permitted to resile from the Assumption.

4094 Ibid, 428.4 (Brennan J), 462.5 (Gaudron J).

(6) It would be unconscionable to permit Glencore and Viterra to resile from the Assumption including by maintaining a claim for breach of clauses 8.3(a) and 8.3(c) of the Confidentiality Deed and each of Glencore and Viterra are estopped from doing so.

4693 The Cargill Parties submitted that the Phase 1 Process Letter[4095] established that Cargill was expected to be able to determine its indicative bid on the basis of the financial and operational information provided in the Information Memorandum.[4096] They repeated their contention (which has been rejected)[4097] that it was not until later in May 2013 and after receipt of the Information Memorandum that the Confidentiality Deed imposed restrictions on Cargill's ability to use, disclose and conduct investigations into the Confidential Information. It was submitted that it was clear to the Viterra Parties that Cargill had approached the sale process on the basis that it could, and did, rely on the financial and operational information provided in the Information Memorandum and that it would proceed to rely upon more detailed information obtained during the Due Diligence. This submission was based on the contents of the letter accompanying the Cargill Indicative Bid, which stated:[4098]

(1) The Cargill Indicative Bid was based on Cargill's review of the information contained within the Information Memorandum.

(2) Cargill intended to refine its valuation with an expectation that it could enhance its assessment of value based on more detailed information provided in Phase 2.

(3) For the purposes of Cargill's valuation, Cargill had based its analysis on the pro forma [normalised Unadjusted Earnings] provided in the

4095 See pars 461-469 above.

4096 In the Cargill Parties' closing submissions, Cargill Australia was referred to as the entity determining an indicative bid. In the defence to the Third Party Claim, it was Cargill, Inc that was referred to. A similar discrepancy appeared in other aspects of the Cargill Parties' submissions on this issue. Nothing turns on this in circumstances where the Cargill, Inc employees were acting for and on behalf of both Cargill, Inc and Cargill Australia in evaluating the Joe White Business.

4097 See issue 5 above.

4098 See par 623 above.

Information Memorandum.

Further, it was submitted that Glencore and Viterra did not disabuse Cargill of the Assumption when the Phase 2 Process Letter was sent by Merrill Lynch as agent for Glencore and Viterra.[4099] The Phase 2 Process Letter stated that, in "order to assist [Cargill] in making" its final bid, Phase 2 would include access to the Data Room and the Q&A Process, a management presentation, site tours of Joe White's "Export Super Sites" in Sydney, Adelaide and Perth and the provision of a draft share purchase agreement.

4694 The Cargill Parties submitted that by continuing to deal with Cargill notwithstanding its openly disclosed reliance upon the financial and operational information provided, Glencore and Viterra, through their agent Merrill Lynch, induced Cargill to continue to proceed upon the Assumption as to the reliability of the Confidential Information.

4695 Furthermore, the Cargill Parties submitted that at all times Glencore and Viterra had knowledge that Cargill Australia proceeded to act upon the Assumption, given that the First Final Bid stated that Cargill had confirmed its view that the Joe White Business was impressive based on the Due Diligence and its discussions with Joe White management.[4100] In addition, they pointed to the confirmation by Cargill that it had conducted the Due Diligence based on the information provided to date in the sale process and that it had included a review of the information provided in the Information Memorandum, management presentations, site visits, the [Data Room] (including responses provided through the Q&A Process) and some public registers.[4101]

4696 Moreover, it was submitted that in reliance on the Assumption, after conducting its own investigations and analyses of the Confidential Information, Cargill Australia entered into the Acquisition Agreement and proceeded to Completion.

4099 See pars 639-644 above. See also issues 18 and 19 above in relation to the attribution of Merrill Lynch's conduct to Glencore and Viterra.

4100 See pars 976-978 above.

4101 Ibid.

4697 Finally, if it were found that there had been a breach of clause 8.3, it was submitted that Cargill would suffer significant detriment if the Viterra Parties were permitted to resile from the Assumption (which detriment was suggested to be the equivalent of Cargill Australia's claimed loss and damage in this proceeding). The Cargill Parties submitted that in these circumstances it would be unconscionable for Glencore and Viterra to resile from the Assumption by maintaining a claim for breach of clause 8.3 of the Confidentiality Deed. Therefore, it was submitted that the Viterra Parties should be estopped from doing so.

4698 The Cargill Parties concluded their submissions on this point by noting that Glencore and Viterra provided the information for the purpose of wanting to sell Joe White to the highest bidder, and for that purpose alone. Therefore, it was contended their claim for breach of clause 8.3 of the Confidentiality Deed was in direct contradiction of their conduct throughout the sale process and the singular motivation underpinning that process.

X.107.3 The Viterra Parties' submissions

4699 In contrast to the Cargill Parties' submissions regarding common law estoppel, the Viterra Parties considered this issue under the doctrine of equitable estoppel. They referred to the 6 elements of equitable estoppel as set out above[4102] and submitted that there was no basis for Glencore or Viterra to be estopped as claimed.

4700 *First,* the Viterra Parties submitted that there was no factual basis to find that Cargill, Inc assumed that it was entitled to rely upon the accuracy of the information obtained during the sale process, including by reason of the Other Bidders Representations. The Viterra Parties contended that there was an absence of lay evidence from Cargill's witnesses to support the Assumption and that the pleaded sources of the Assumption were misrepresented, for example:

(1) No part of the Phase 1 Process Letter stated that it was premised on the basis that Cargill, Inc would be able to make an indicative bid and

4102 See par 4688 above.

determine the amount of any such bid based on the financial and operational information provided. It was contended that the Phase 1 Process Letter specifically stated that the Information Memorandum was provided pursuant to the terms contained in the Information Memorandum and constituted Confidential Information for the purpose of the Confidentiality Deed. The letter further stated that Cargill, Inc was required to make and rely on its own investigations.

(2) The Confidentiality Deed imposed restrictions on Cargill, Inc's ability to use or disclose Confidential Information, but did not restrict its ability to conduct its own investigations into the accuracy of the information. The clauses of the Confidentiality Deed relied upon in particulars[4103] all related to the handling of the Confidential Information and did not impose restrictions on Cargill, Inc conducting and relying on its own investigations.

(3) The Cargill Parties misrepresented the Phase 2 Process Letter. The letter reiterated that all the information provided in that phase, including the Management Presentation and site visits, was subject to the Confidentiality Deed and further, stated that Cargill, Inc was required to make and rely on its own investigations.

(4) Cargill, Inc's own letters could not constitute a basis for an assumption.[4104]

(5) The Other Bidders Representations were not conveyed.[4105]

4701 *Secondly,* relying on their submissions above, the Viterra Parties submitted that the Cargill Parties failed to establish that Glencore or Viterra induced Cargill, Inc into making the Assumption as the basis for the inducement was the same sources as the

---

4103 The particulars referred to cll 1.3, 3, 6 and 9 of the Confidentiality Deed.

4104 Why this might have been so was not explained.

4105 This is addressed in issue 54 above. This submission was contrary to the findings made.

basis of the Assumption itself.

4702 *Thirdly*, the Viterra Parties submitted the court should not find that Cargill Australia entered into the Acquisition Agreement in reliance upon the Assumption. They referred to their submissions in issue 15 above in support of this contention.[4106]

4703 In addition, the Viterra Parties submitted that Cargill, Inc was informed, and expressly agreed by signing the Confidentiality Deed twice, that all information provided to it in the sale process was and could be nothing more than a starting point, and were not statements of fact. Particularly, the terms of the Confidentiality Deed that stated that Cargill, Inc would not draw any inference of fact made it clear that none of the information had been sufficiently verified so as to make it reliable for any inference. Subsequent to entry into the Confidentiality Deed, it was submitted that the following also made it clear that the information provided a starting point and not a statement of fact:

(1) The Phase 1 and Phase 2 Process Letters, which told Cargill that it was "required to make and rely on [its] own investigations and satisfy [itself] in relation to all aspects of the Proposed Transaction".[4107]

(2) The Information Memorandum Disclaimers and the Management Presentation Memorandum Disclaimers included:[4108]

> A Recipient that is considering the Proposed Transaction must make, and will be taken to have made, its own independent investigation and analysis of the information in this document … To the maximum extent permitted by law, no representation, warranty or undertaking, express or implied, is made. ... The information contained in this document has not been independently verified. … In particular, no representation or warranty is given as to the accuracy, completeness, likelihood of achievement or reasonableness of any forecasts, projections or forward-looking statements contained in the document. Forecasts, projections and forward-looking statements are by their nature subject to significant uncertainties and contingencies. You should make your own independent assessment of the information and seek your own independent professional advice in relation to the information and any

4106 With regard to issue 15 above, the Viterra Parties' submissions did not expressly address whether Cargill, Inc relied on the Assumption.

4107 See pars 468, 643 above.

4108 See par 475 above.

action taken on the basis of the information.

(3) The Data Room Protocol, which provided that all persons accessing the Data Room agreed that they would rely on their own independent assessment of any information in the Data Room, and further agreed that they did not rely on any representation, guarantee or warranty by Glencore or its Representatives.[4109]

4704 Further, it was submitted that clause 13.1 of the Acquisition Agreement identified to Cargill the statements that the Viterra Parties could make with enough confidence for them to be statements of fact and none of the Warranties contained any of the Financial and Operational Performance Representations.[4110] In relation to the terms of the Acquisition Agreement, the Viterra Parties also relied upon the acknowledgements of Cargill Australia in clause 13.4.[4111]

4705 Furthermore, the Viterra Parties relied upon the Refusal of Certain Terms. They noted that in negotiations Cargill requested further terms,[4112] including a warranty to the effect that, to Viterra Malt's knowledge and awareness, Joe White had not committed any default of Material Contracts and that the knowledge of the knowledge individuals for the purposes of clause 31.15 of the Acquisition Agreement included knowledge of information disclosed to Cargill in writing in the Due Diligence, both of which Viterra refused. Therefore, the Viterra Parties submitted that Cargill was testing whether it could rely on information provided in the Due Diligence for the purposes of the Acquisition Agreement, to which the answer was no.

4706 Moreover, the Viterra Parties submitted that for 3 reasons objectively it was made plain that no inference could safely be drawn from the information provided to Cargill in the sale process:

(1) The Cargill Group knew that the Glencore Group had no involvement or experience in running a malt company. Further, they referred to

4109 See par 655 above.
4110 See par 1029 above.
4111 Ibid.
4112 See pars 979, 992 above.

Eden's evidence that he knew that Joe White had only recently been acquired and that Eden considered that Glencore would have relied on Joe White in the preparation of the Information Memorandum.[4113] As such, it was submitted Cargill must have known that any information provided should have been treated with the caution afforded to any statement made by a non-industry player.

(2) Cargill knew that Glencore decided not to conduct a vendor due diligence,[4114] and therefore must have known that the information provided was not provided with the confidence that a vendor due diligence may have given.

(3) Much of the information provided was by way of documents, the purpose of which was no more than to identify a relevant starting point for Cargill's own investigations. It was contended the Information Memorandum was little more than a brochure provided to give an impression of the Joe White Business and to assist with the decision of whether to place an indicative bid, without the sign off of an accounting firm.[4115] Cargill, Inc knew that the Information Memorandum did not displace the need for a due diligence on Joe White, and Le Binh's evidence was that when he received the Information Memorandum, he understood that Cargill, Inc was required to conduct its own investigations and satisfy itself in relation to all aspects of the transaction.[4116]

4707 *Fourthly,* the Viterra Parties submitted that the evidence did not support the allegation that Glencore or Viterra knew and intended that Cargill, Inc and Cargill Australia would rely on the Assumption.

4113 See par 513 above.
4114 See pars 561, 623, 974 above.
4115 Compare pars 473-474 and fn 364 above.
4116 See par 472 above.

X.107.4 Analysis

4708 As already noted, the Cargill Parties relied on the doctrine of common law estoppel, whereas the Viterra Parties' submissions were directed to equitable estoppel. Submissions on both approaches will be dealt with below.

4709 The *first* matter to consider was whether Cargill, Inc made the Assumption. The first substantive step in the sale process, after the Confidentiality Deed was executed and delivered by Cargill, Inc on 13 May 2013,[4117] was that Cargill was provided with the Phase 1 Process Letter.[4118] By that letter, Cargill was informed that it was entitled to rely upon the financial and operational performance information of the Joe White Business provided in the Information Memorandum. The Phase 1 Process Letter established that Cargill was expected to be able to determine its indicative bid on the basis of the 31 January 2013 balance sheet set out in the Information Memorandum. This expectation was created by the direction of Merrill Lynch, which was plainly considered to be consistent with the simultaneous further direction of Merrill Lynch for Cargill, Inc to act in accordance with the terms of the Confidentiality Deed. In addition, Cargill was expressly required to inform the Viterra Parties if it made any assumptions that varied from information disclosed in the Information Memorandum.[4119] Thus, at a time when Cargill had already signed the Confidentiality Deed, the position was unequivocally established in writing for the purposes of Phase 1; namely that, unless Cargill stated in writing that it had done otherwise, Cargill was directed to: (1) rely upon the information and "key assumptions" contained in the Information Memorandum; and (2) represent that it had so relied.

4710 As already observed,[4120] the Viterra Parties' senior counsel stated that the Information Memorandum was a starting point "in the sense that it could be relied upon" for the purpose of an indicative offer, and that was what "everything" said. Therefore, it was clear that even though the Confidentiality Deed and the Information Memorandum

---

4117 See par 459 above.
4118 See par 461 above.
4119 See par 466 above.
4120 See par 2926 above.

contained disclaimers and references to recipients conducting and relying on their own investigations, the Phase 1 Process Letter was to be read in conjunction with these documents and expressly indicated that it was intended for Cargill, Inc to be able to arrive at an indicative offer based on the historical financial and operational information in the Information Memorandum.[4121] Accordingly, the Viterra Parties' submission that there was no factual basis to find that Cargill assumed it was entitled to rely upon the accuracy of the Financial and Operational Information must fail, at least to the extent that it was the documented common intention of Cargill and the Viterra Parties that the Information Memorandum could be used as a starting point for establishing an indicative offer.[4122]

4711 Further, it must be noted that up until the end of Phase 1, Cargill had very little information about the financial position of Joe White beyond what was contained in the Information Memorandum. While Cargill undoubtedly had a large amount of knowledge concerning many aspects of the malting industry in light of its extensive experience in that industry,[4123] in order to make any meaningful assessment of the value of Joe White it had very little empirical and detailed information about the financial performance of Joe White itself beyond what was contained in the Information Memorandum. This fact was known to Glencore and Viterra as they held the Financial and Operational Information, had kept it confidential and were only willing to disclose it on the basis that it was (and remained) Confidential Information.[4124] In short, any suggestion that Cargill was precluded from assuming it could rely on the Financial and Operational Information contained in the Information Memorandum in formulating an indicative bid was contrary to the agreed arrangement.

4712 The next critical matter was what Cargill represented at the time it made the Cargill Indicative Bid. Not only did Cargill state that the bid had been made based on its

---

4121 A balance sheet by its nature reflecting the financial position at any particular point in time in light of the historical performance of a company.

4122 In fairness, this conclusion largely aligns with the position ultimately put by the Viterra Parties.

4123 See par 511 above.

4124 Though noting for completeness, certain obligations in relation to Confidential Information did not apply to information Cargill already had: see par 586 above.

review of the information contained in the Information Memorandum, but it further informed the Viterra Parties that Cargill intended to "refine" its valuation in Phase 2. This was expressed in terms of an expectation that the existing preliminary valuation (based on the contents of the Information Memorandum) could be enhanced based on the more detailed information to be provided in Phase 2. In other words, Cargill stated it was a continuous process and was not a situation where it was going to start afresh with a completely new valuation once Phase 1 had been completed. Further, Cargill expressly recorded that Cargill assumed at the time of making the Cargill Indicative Bid that the information that had been provided was true and accurate and supported by due diligence findings.[4125] Furthermore, the Viterra Parties were expressly told that Cargill's valuation of Joe White was based on Cargill's analysis of the normalised Unadjusted Earnings provided in the Information Memorandum. Cargill then reserved its right to vary its valuation assumptions in making any final offer.

4713 The Phase 2 Process Letter sent after the Cargill Indicative Bid did not gainsay or attempt to undermine the position that Cargill was entitled to rely upon the Assumption after the Cargill Indicative Bid in order to make the First Final Bid. The Phase 2 Process Letter stated that information would be provided to Cargill, Inc to "assist [it] in making [its] Final Bid," including by access to the Data Room, the Q&A Process, the Management Presentation, site tours and a share purchase agreement, in the context of the ongoing operation of the Confidentiality Deed.[4126] There was also a reminder of the requirement for Cargill, Inc to make its own investigations.[4127]

4714 Moreover, the Phase 2 Process Letter must be considered within the context in which it was provided. The Cargill Indicative Bid had outlined the approach that had been taken by Cargill, which was based on the directions in the Phase 1 Process Letter. Both the Phase 1 Process Letter and the Phase 2 Process Letter were expressly subject to the Confidentiality Deed. Further, both the Phase 1 and Phase 2 Process Letters stated that Cargill, Inc was required to make and rely on its own investigations. In short, the

---

4125 This was a reflection of Cargill's belief at that time, but for the position shortly before the end of Phase 2 see pars 973-974 above and fn 4130 below.

4126 See par 639 above.

4127 See pars 642-643 above.

reminders about the usage of information in the Phase 1 and Phase 2 Process Letters were not materially dissimilar. Thus, even though the Phase 2 Process Letter contained references to the Confidentiality Deed, the Data Room Protocol (which included the Q&A Process terms and procedures) and to Cargill, Inc undertaking its own investigations, given that it provided information to assist Cargill to reach a final bid and given its similarities to the Phase 1 Process Letter (which was a starting point for determining the Cargill Indicative Bid), it was reasonable that, based on the Phase 2 Process Letter, Cargill assumed that it was entitled to rely on the accuracy of the Financial and Operational Information obtained (subject to the terms of the Confidentiality Deed and any information it might have discovered as part of the Due Diligence as part of properly conducting its own investigations and analysis).

4715 Therefore, nothing contained in the Phase 2 Process Letter informed Cargill that it was not entitled to proceed in the manner that it had expressly stated it would in the Cargill Indicative Bid.

4716 *Secondly,* at least up until the time the First Final Bid had been made, the Viterra Parties induced Cargill to make the Assumption. This was because Cargill had made it clear that it was relying on the information obtained during the Due Diligence. Significantly, as part of Cargill making the First Final Bid by email, it attached a draft acquisition agreement which included draft terms concerning "Warranties and representations".[4128] Since, on the Viterra Parties' case (and contrary to what has been found), such reliance from Cargill would amount to a breach of clause 8.3 of the Confidentiality Deed, the only way that the Assumption could be fulfilled would be through the diminution of Glencore or Viterra's rights under that deed. On the Viterra Parties' construction of the Confidentiality Deed, this would give rise to a duty on Glencore or Viterra, or both, to inform Cargill that they disputed the truth of the Assumption. However, Glencore and Viterra continued to deal with Cargill without giving any indication as to any incorrectness of the Assumption upon which Cargill was conducting its affairs.[4129] In particular, nothing was stated by the Viterra Parties

4128 See par 979 above.
4129 See par 4689 above.

to gainsay Cargill's ability to act in accordance with the stated intention of refining the valuation that it had already performed (for the purposes of the Cargill Indicative Bid) on the basis that the Financial and Operational Information was "true and accurate and supported by due diligence findings".[4130]

4717 In short, Cargill, Inc made the fact that it was making the Assumption clear. Neither Glencore nor Viterra corrected Cargill, Inc or disabused it of the belief that it had the ability to make the Assumption in formulating its First Final Bid (and then increasing that bid to $420 million). In particular, there was no suggestion that the manner in which Cargill had unequivocally indicated it intended to proceed was contrary to the terms of anything that had been agreed or stated previously. Such a position induced Cargill to rely on the Assumption. In my view, the manner in which the terms of the proposed acquisition agreement were subsequently negotiated (including the precise ambit of the Warranties) could not alter the position as to what had come before in establishing the assumed basis on which Cargill was to formulate (and did formulate) its evaluation of, and bids for, Joe White.

4718 Further, Glencore's conduct, at least up until 2 August 2013,[4131] induced Cargill to rely on the Assumption on an ongoing basis. As noted above, the Phase 2 Process Letter took no exception to Cargill's stated position. Nothing changed concerning the existence of Financial and Operational Information which had been provided to be used as a starting point. In other words, the "starting-point" use of the Financial and Operational Information provided up to that time did not somehow cease to exist once the Cargill Indicative Bid was made. Further, Cargill made it clear that that information would remain the foundation of its ongoing evaluation as part of, and in accordance with, Phase 2.

4130 To reiterate, in relation to the issue of due diligence findings, it was clear that at the time the Cargill Indicative Bid was sent it was Cargill's belief that the financial and operational performance information was supported by due diligence findings: see pars 561, 623 above. However, in late July 2013 this position changed (see par 974 above), but it did so at a time when Cargill itself had conducted the Due Diligence and satisfied itself as to its ability to rely upon the financial and operational performance information it had been provided, coupled with the Warranties.

4131 See par 992 above, noting that the initial position on 1 August 2013 was expressly stated to be subject to further instructions from Glencore and subject to Mallesons' further review: see par 989 above.

4719 Further, the confidentiality regime remained consistent throughout Phase 1 and Phase 2. The key difference between the 2 phases was that in Phase 2 Cargill was given access to more information in order to assess the Confidential Information and more meaningfully conduct its own investigations and analysis. This being the case, neither Glencore nor Viterra disabused Cargill of the Assumption by simply reiterating the restrictions on information usage in the Phase 2 Process Letter.

4720 As such, in continuing to deal with Cargill in the manner in which they did notwithstanding its evident reliance upon the Financial and Operational Information, Glencore and Viterra induced Cargill Australia to proceed upon the Assumption.

4721 *Thirdly,* as a matter of fact Cargill acted in reliance on the Assumption, by relying on the Financial and Operational Information in making the First Final Bid, and then in increasing that bid to $420 million.[4132]

4722 *Fourthly*, Glencore and Viterra knew that Cargill continued to rely on the Financial and Operational Information. In addition to the Cargill Indicative Bid stating that Cargill had relied on the information provided and intended to continue to do so based on more detailed information provided in Phase 2, in the First Final Bid, Cargill, Inc confirmed that:[4133]

> it has conducted its due diligence based on the information provided to date in the process. This includes a review of the information provided in the Information Memorandum, management presentations, site visits, the [Data Room] (including responses provided through [the Q&A Process]) and some public registers.

When this statement was read in the context of what had been stated at the time of the Cargill Indicative Bid, the Viterra Parties were again informed that Cargill Australia had proceeded on the basis that it was entitled to rely on the Assumption.

4723 It was of little moment that no witness called by the Cargill Parties gave specific

---

4132 See issue 20 above. There was no evidence to suggest that at the time the Cargill executives considered what to do in response to the First Further Bid Call they had taken into account any proposed changes to the draft agreement that were forwarded by Mallesons late in the afternoon of 2 August 2013 Australian eastern standard time: see par 992 above.

4133 See par 976 above.

evidence of reliance upon the Assumption. The contemporaneous documentation made the position Cargill was adopting perfectly clear. Further, as explained in issue 20 above, there was a large body of evidence to indicate that at the time Cargill was compiling and then refining the Cargill deal model, Cargill was proceeding on the basis that the Financial and Operational Information contained in the Information Memorandum and subsequently obtained during Phase 2 was reliable, such that it could be relied upon in valuing Joe White and formulating a bid.

4724 Thus, to summarise the position as at 2 August 2013, Cargill had made it clear it was relying on the Assumption, which it did in carrying out the Due Diligence in accordance with the Confidentiality Deed. Further, it was acting on the Assumption when it made the First Final Bid and its last bid of $420 million. On the basis of the findings made, it was of no moment whether the Assumption was characterised as an assumed position in relation to a fact or an assumed position in relation to Cargill's and the Viterra Parties' approach in the future. On either basis, at least up until 2 August 2013, the facts above were relevant to whether an estoppel would have arisen if a breach of clause 8.3 had been established.

4725 However, the Acquisition Agreement was not entered into until 4 August 2013. Between late 2 August and 4 August 2013, Cargill Australia negotiated and ultimately agreed the terms of the Acquisition Agreement, including clauses 13.1 and 13.4. Therefore, the question of whether the Assumption could continue to operate in these circumstances arose. Further, the manner in which Cargill Australia pleaded its case was that it not only conducted the Due Diligence and made each of its bids based on the Assumption, but it also alleged that it entered into the Acquisition Agreement itself on the same basis.

4726 As it has been found there was no breach of clause 8.3 of the Confidentiality Deed, it is not strictly necessary to deal with the issues that arise concerning whether Cargill Australia was entitled to continue to rely on the Assumption up to and upon entering into the Acquisition Agreement. Although Cargill made clear at the time of its First Final Bid on 29 July 2013 that it was continuing to do so and the First Final Bid

included a draft acquisition agreement which contained clauses concerned with Warranties and representations (and limiting reliance in relation to such matters), there were subsequent changes to this draft. No party made any submissions on the significance or otherwise of such changes to the question of whether they altered the position that existed as at 29 July 2013 when the First Final Bid was made.[4134]

4727 In those circumstances, I do not propose to make any final determination on the questions raised in issue 107, including what effect the release in clause 10.3 of the Confidentiality Deed may have had on any plea of estoppel. If it ever becomes necessary for another court to determine this issue, all relevant facts have been found. Further, on that occasion the court would have the benefit of the parties' submissions on the significance, if any, of the amendments that were made up to 4 August 2013, on the issues relating to whether Glencore or Viterra were estopped as alleged.

X.108 Did Cargill, Inc wrongfully induce Cargill Australia to breach clauses 10.2(a) and/or (b) and/or 10.3 of the Confidentiality Deed?

4728 As it has not been found that Cargill Australia breached clause 10.2(a) or (b), or clause 10.3, this issue does not arise.

X.109 What, if any, damages or other relief is Glencore and/or Viterra entitled to as a consequence?

4729 This issue also does not arise.

X.110 Did Cargill, Inc represent to Glencore and/or Viterra the Confidentiality Deed Representations as pleaded in paragraph 27 of the Third Party Claim?

X.110.1 Allegations

4730 Paragraph 27 of the Third Party Claim alleged, in substance, that in May 2013 Cargill, Inc represented to Glencore and Viterra that Cargill, Inc and Cargill Australia would:

4134 A large number of the clauses remained the same or were only the subject of very minor amendments (including clauses 13.1 and 13.4).

(1) Rely solely on their own investigations and analysis in evaluating a possible Joe White acquisition ("the First Confidentiality Deed Representation").

(2) Not rely on Confidential Information[4135] in evaluating the proposed Joe White acquisition ("the Second Confidentiality Deed Representation").

(Together, "the Confidentiality Deed Representations".)[4136]

4731 In support of this allegation, the Viterra Parties relied upon certain terms of the Confidentiality Deed.[4137] The first of the alleged Confidentiality Deed Representations was reflective of clause 8.3(c), which stated that "[t]he Recipient agrees and acknowledges that: it will rely solely on its own investigations and analysis in evaluating the Transaction".

X.110.2 Principles

4732 In some circumstances it has been suggested a contractual term can amount to a representation for the purposes of establishing misleading or deceptive conduct under the Australian Consumer Law.[4138] Whether such is the case is a question that must be determined by reference to all the circumstances, including the terms of the contract as a whole.[4139] Equally, a clause such as clause 8.3(c) may be nothing more than the

---

4135 The reference to Confidential Information was a reference to the expression as defined in the Confidentiality Deed: see par 586 above.

4136 In making this allegation the Viterra Parties sought to establish a contravention of the Australian Consumer Law. Importantly, for the purposes of section 18, the term "conduct" is not limited to conduct that amounts to representations. A reference to "engaging in conduct" for the purposes of the Australian Consumer Law, includes "the making of, or the giving effect to a provision of, a contract or arrangement": s 2(2)(a)(i); see also for example, *Hunt Contracting Co Pty Ltd v Roebuck Resources NL* (1992) 110 ALR 183, 187.10-189.5 (French J). However, the manner in which the Viterra Parties pleaded their case confined the relevant conduct to be considered as a representation.

4137 The terms relied upon by the Viterra Parties were those specifically pleaded in the Third Party Claim, which included key definitions and clauses 2, 3, 8, 9, 10 and 11: see pars 586-590 above for an extract of the relevant definitions and clauses.

4138 See, for example, *RCR Energy Pty Ltd v WTE Co-Generation Pty Ltd* [2017] VSCA 50, [61]-[64] (Weinberg, Whelan and Santamaria JJA); *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 322 [35] (French CJ); *Australian Competition and Consumer Commission v Valve Corporation (No 3)* (2016) 337 ALR 647, 691-692 [222] (Edelman J); *Futuretronics International Pty Ltd v Gadzhis* [1992] 2 VR 217, 239.8 (Ormiston J). See further the definition of "engaging in conduct" referred to in fn 4136 above. See also issue 48 above.

4139 Ibid.

undertaking of an obligation. The mere undertaking of an obligation does not amount to a representation other than that the obligation has been undertaken, which ordinarily reflects the fact.[4140]

X.110.3 Analysis

X.110.3.1 The First Confidentiality Deed Representation

4733 There was nothing in clause 8.3(c) to indicate expressly that this clause amounted to a express representation.[4141] Clause 2.1 of the Confidentiality Deed described the obligations set out in the Confidentiality Deed as "undertakings".[4142] Thus, on 1 view, it might be said that this clause amounted to nothing more than an undertaking of an obligation.

4734 The finding that a contractual promise does not amount to an express representation does not, however, preclude that same promise being construed as an implied representation. Recognising the uncertainty in the state of the law, Ormiston J in *Futuretronics International Pty Ltd v Gadzhis* surmised that:[4143]

> It is not difficult to see that particular promises may be expressed in terms which can properly be characterised as representations as to future conduct, albeit that the promises form part of the process of making a contract. It is another matter to take obligations arising under a contract and imply from them representations from each side that it will perform the agreed obligations.

Reservations aside, and after making the obvious observation that it would be wrong to treat every contractual obligation as an unqualified promise to perform, his Honour concluded that the weight of the authorities supported the proposition that a contractual promise could amount to an implied representation that the promisor had

---

4140 *RCR Energy Pty Ltd v WTE Co-Generation Pty Ltd* [2017] VSCA 50, [65] (Weinberg, Whelan and Santamaria JJA).

4141 Compare this with the circumstances in issue 48 above. In finding that the Warranty Representations were representations in the Acquisition Agreement, a key factor noted was the presence of the words "represent and" in cl 13.1, as well as the definition of "Warranties" itself providing that that term meant "warranties and representations set out in Schedule 4".

4142 See par 590 above. In brief, clause 2.1 set out the consideration and described the promises and obligations in the Confidentiality Deed as "undertakings" given by Cargill, Inc in exchange for the disclosure of the Confidential Information.

4143 [1992] 2 VR 217, 235.2. See also *Comalco Aluminium Ltd v Mogal Freight Services Pty Ltd* (1993) 113 ALR 677, 694.6 (Sheppard J).

an intention, and current ability, to carry out the promise when it was made.[4144] His Honour further stated that where an unconditional promise forms part of the contract, "then it is proper to treat the giving of that promise, at least in the ordinary case, as the making of a representation as to a future matter".[4145]

4735 The promise set out in clause 8.3(c) might be viewed as unconditional, in the sense that it was not qualified by any reciprocal obligation of Glencore or Viterra beyond the provision of the Confidential Information. On another view, the promise could be considered conditional in the sense that it was provided in return for the provision of information pursuant to the Confidentiality Deed.

4736 There is no binding authority that has definitively resolved the question of when a contractual promise may amount to a representation (and therefore conduct for the purpose of section 18 of the Australian Consumer Law).[4146] Perhaps that reflects the position that each contractual provision must be considered on its particular terms in its particular context. In short, whether the contractual promise reflected in clause 8.3(c) was a representation remains a question of fact.[4147] For reasons that will become apparent, it is not necessary to determine conclusively whether agreeing to clause 8.3(c) amounted to a representation. For the sake of addressing this and related issues, I will proceed on the basis that it did.

X.110.3.2 The Second Confidentiality Deed Representation

4737 As to the second alleged Confidentiality Deed Representation, no such term was expressly stated in the Confidentiality Deed. The manner in which the allegation was made and the submissions that accompanied it were somewhat obtuse. The particulars to the allegation stated that the Viterra Parties relied on all the terms of the Confidentiality Deed pleaded. In the Viterra Parties' submissions, it was contended

---

4144 Ibid, 239.8.

4145 Ibid, 241.1; quoted in *RCR Energy Pty Ltd v WTE Co-Generation Pty Ltd* [2017] VSCA 50, [61] (Weinberg, Whelan and Santamaria JJA).

4146 See *RCR Energy Pty Ltd v WTE Co-Generation Pty Ltd* [2017] VSCA 50, [62] (Weinberg, Whelan and Santamaria JJA); *Futuretronics International Pty Ltd v Gadzhis* [1992] VR 217, 239.1 (Ormiston J). In both decisions it was made clear that this issue remained a matter of controversy.

4147 *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 322 [35] (French CJ).

that the Confidentiality Deed Representations were made by Cargill, Inc entering into the Confidentiality Deed and agreeing to its terms, "particularly … clause 8,[4148] as further outlined in Issue 87". The submissions in respect of issue 87 only referred to clause 8.3.

4738 In short, there was no clear allegation or submission made on how it was contended that Cargill, Inc represented it would not rely on the Confidential Information. In any event, there was nothing contained in clause 8 or any other provision of the Confidentiality Deed that could have given rise to the alleged prohibition, much less any representation to that effect.[4149] Leaving aside the commercial impracticality of such a prohibition in the confidentiality regime created by Glencore, which imposed significant limitations on Cargill's access to relevant information beyond that provided by the Viterra Parties, clause 8.3(a) expressly contemplated such reliance. For Cargill, Inc to make its own assessment of the Confidential Information and to conclude it was satisfactory, it would necessarily have had to place some reliance on its contents. The fact that the Confidentiality Deed provided in clause 8.3(b) that forecasts or estimates may not prove to be correct or be achieved only touched upon some aspects of the use or potential use of the historical information underlying such forecasts or estimates. Further, the requirement that Cargill, Inc rely solely on its own investigations and analysis did not shut out reliance on the underlying information. Quite the contrary, such information would have been contemplated to have been the very focus of much of the foreshadowed investigations and analysis. Furthermore, the investigations and analysis were in a context where the only possible source of information from which Joe White's historical performance could be derived was the Confidential Information.

4739 Therefore, leaving aside the issue of whether a representation could be made by the execution of the Confidentiality Deed, there was simply no basis for any implied representation to the effect of the Second Confidentiality Deed Representation.

4148 See par 590 above.

4149 See par 4670 above.

X.111 Were the Confidentiality Deed Representations made in trade or commerce within the meaning of section 18 of the Australian Consumer Law?

4740 The Cargill Parties conceded that, if the Confidentiality Deed Representations were made, then they were made in trade or commerce.

X.112 Did Viterra rely upon the Confidentiality Deed Representations in entering into the Acquisition Agreement?

4741 As it has been assumed that the First Confidentiality Deed Representation was made, this issue will be addressed on the basis of this assumption. The Viterra Parties led no oral evidence from any witness to suggest that Viterra relied upon the Confidentiality Deed Representations. Accordingly, this issue fell to be determined based on the existence of the Confidentiality Deed itself, and the context in which it was executed as part of the sale process. Nothing stated by Cargill subsequently concerning what it was relying upon,[4150] suggested that Cargill was doing anything other than acting in accordance with clause 8.3(c). Further, the Confidentiality Deed remained on foot at the time the Acquisition Agreement was executed.

4742 The legal principles relevant to causation are referred to above.[4151] In the Defence, the Viterra Parties alleged Viterra entered into the Acquisition Agreement "in reliance upon" the Confidentiality Deed Representations.

4743 At the commencement of the sale process, the provision of the Confidential Information was predicated on Cargill, Inc's acceding to the terms of the Confidentiality Deed.[4152] The inclusion of a clause such as clause 8.3(c) is standard commercial practice in large acquisitions. There were good commercial reasons for including such a clause, including that it limited, or attempted to limit, the scope of responsibility of possible sellers in the context of a sale. The fact that the terms of the Confidentiality Deed were a necessary part of the sale process was repeated in writing on numerous occasions. When considering the approach taken by Glencore for and

4150 See issue 107 above.
4151 See issue 20.2 above.
4152 See issue 5 above.

on behalf of the Sellers, there can be no doubt that the Confidential Information would not have been provided, and Cargill would not have been able to participate in the sale process, unless Cargill, Inc had executed the Confidentiality Deed and agreed to its terms. Further, the fact that there may have been a host of other matters that also contributed to Viterra's decision did not preclude a finding of reliance.[4153]

4744 In summary, the Confidentiality Deed was an integral part of the process. Its execution by Cargill, Inc was an essential step in allowing Cargill to have access to the Confidential Information and to participate in the bidding process. On this basis it must be inferred that the Viterra Parties relied upon the undertakings given by Cargill, Inc, including pursuant to clause 8.3(c), at all relevant times in determining Cargill Australia was an appropriate prospective purchaser, and the purchaser with whom the Sellers were willing to enter into the Acquisition Agreement.[4154] It follows that, on the assumption that the First Confidentiality Deed Representation was made, it would have formed part of what was relied upon by Viterra in entering into the Acquisition Agreement.

X.113 If the Confidentiality Deed Representations were representations with respect to future matters, did Cargill, Inc have reasonable grounds for making them?

4745 This issue was framed on the basis of the allegation that 2 representations were made comprising the Confidentiality Deed Representations. As it has been found that the Second Confidentiality Deed Representation was not made, this issue will be confined to the First Confidentiality Deed Representation, but only on the basis that it has been assumed it was made.

X.113.1 Submissions

4746 The Viterra Parties' primary position was that the Confidentiality Deed Representations were not representations as to a future matter. They submitted they

4153 See par 3153 above.
4154 See pars 3154-3157 above.

were statements of present intention. Alternatively, they contended that if they were representations as to future matters, Cargill, Inc had failed to establish reasonable grounds on the basis that Cargill, Inc did not adduce any evidence of reasonable grounds.

4747 The word "will", its textual placement in clause 8.3(c), and the fact that it was agreed and acknowledged before the Confidential Information was available (and therefore related only to a forthcoming event of reliance), connoted a concept of future conduct. The definition of "will" in the Macquarie Dictionary includes "indicating future likelihood".[4155] Further, clause 8.3(c) read in the wider context of clause 8.3 was an immediate undertaking, which took effect once the Confidentiality Deed was executed. The prelude to clause 8.3(c) conveyed a statement of present intention. Upon execution of the Confidentiality Deed, Cargill, Inc "agree[d] and acknowledge[d]" to comply with the obligations set out in clause 8.3 both presently and on an ongoing basis.

4748 The Cargill Parties addressed both limbs of the Viterra Parties' submissions. They contended that on either basis there was no evidence of any intention of Cargill to do anything other than make its own assessment, and to rely on its own investigations and analysis. They contended the evidence demonstrated that that was what Cargill actually did.

X.113.2 If with respect to future matters, Cargill, Inc had reasonable grounds

4749 As a preliminary point, the Viterra Parties' submission that there was no evidence of reasonable grounds was misplaced. Hawthorne, the person who executed on behalf of Cargill, Inc, gave evidence that he read and understood the terms of the Confidentiality Deed. There was no suggestion that Hawthorne's understanding of the terms was incorrect. Although the subsequent conduct was not determinative of the issue, it was instructive that Cargill did in fact engage in its own investigations and analysis, and made its own very detailed assessment of the Confidential

4155 *Macquarie Dictionary* (8th ed, 2020) "will" (v, def 1).

Information. This evidence from the person who executed the Confidentiality Deed on behalf of Cargill, Inc (and therefore Cargill Australia) demonstrated a proper understanding of the obligations, which was supported by actions in 2013 entirely consistent with the acknowledgements contained in the clause. Further, Hawthorne was not alone in his understanding about Cargill being required to conduct its own investigations.[4156]

4750 On the basis that the First Confidentiality Deed Representation was a representation as to the future, section 4 of the Australian Consumer Law reads as follows:[4157]

> (1) If:
>
> (a) a person makes a representation with respect to any future matter (including the doing of, or the refusing to do, any act); and
>
> (b) the person does not have reasonable grounds for making the representation;
>
> the representation is taken, for the purposes of this Schedule, to be misleading.

4751 Pursuant to this provision, it may be deemed that the First Confidentiality Deed Representation was misleading if there was no evidence adduced by the representor to the contrary.[4158] However, for the reasons outlined above, to the extent that Cargill, Inc made any representation as to a future matter, it had reasonable grounds for doing so.[4159] For completeness, subsequent events demonstrated that Cargill did not breach clause 8.3(c).

4156 See, for example, pars 472, 554, 643, 660, 743 above. See also par 1845 above.

4157 See also generally *Futuretronics International Pty Ltd v Gadzhis* [1992] 2 VR 217, where Ormiston J considered the scope of s 10A of the *Fair Trading Act 1985* (Vic), the equivalent of which was at that time s 51A of the *Trade Practices Act*. Section 51A was the predecessor of s 4 of the Australian Consumer Law: see Explanatory Memorandum, Trade Practices Amendment (Australian Consumer Law) Bill (No 2) 2010 (Cth), [2.22], [6.7].

4158 Australian Consumer Law, s 4(2) and (3)(b).

4159 As to proving whether there were reasonable grounds, the representor faces an evidentiary, as opposed to legal, burden. In other words, the representor can adduce evidence to demonstrate a genuine intention to perform or an ability to perform, or both, which will displace the presumption, but if evidence on the issue is led then ultimately it is for the court to consider whether the representation was misleading on the balance of probabilities: *McGrath v Australian Naturalcare Products Pty Ltd* (2008) 165 FCR 230, 242 [44] (Emmett J), 283 [192] (Allsop J).

X.113.3 Conclusion

4752 The contractual promise (in the form of the First Confidentiality Deed Representation assumed to have been given) was not inaccurate at the time it was made. Further, there was no probative evidence Cargill had any intention of breaching that clause.

X.114 Were the Confidentiality Deed Representations misleading or deceptive or likely to mislead or deceive and did Cargill, Inc thereby engage in misleading or deceptive conduct in contravention of section 18 of the Australian Consumer Law?

4753 The negative answer to this question is already apparent from issue 113 above. However, some further observations should be made.

4754 Whether or not the Confidentiality Deed Representations were made, the manner in which the Viterra Parties pleaded this part of their case was somewhat deficient. There was no elaboration as to how it was alleged the Confidentiality Deed Representations were said to be misleading or deceptive. Instead the Viterra Parties confined themselves to: (1) referring to the allegations in the Statement of Claim; (2) noting that the Viterra Parties denied the allegations; (3) alleging the execution of the Confidentiality Deed on 2 occasions and pleading its terms; (4) referring to Cargill Australia being a Representative of Cargill, Inc and the Viterra entities being Representatives of Glencore; (5) alleging that the Confidentiality Deed Representations were made in trade or commerce; (6) alleging that the Acquisition Agreement was entered into in reliance upon the Confidentiality Deed Representations; (7) alleging the Confidentiality Deed Representations were misleading or deceptive (without saying how); (8) alternatively to (7), alleging that if the Confidentiality Deed Representations were representations as to future matters, they were made without Cargill, Inc having reasonable grounds to do so and Cargill, Inc had therefore engaged in conduct that was misleading or deceptive or likely to mislead or deceive. In other words, there was no positive allegation as to why it was

said that the alleged conduct contravened the statutory prohibition.[4160]

4755 Even if it had been established that the First Confidentiality Deed Representation had been made by reason of the words in clause 8.3(c) viewed in the broader context and that the representation turned out to be incorrect because clause 8.3(c) had not been complied with, "[t]he non-fulfilment of a promise when the time for performance arrives does not of itself establish that the promisor did not intend to perform it when it was made or that the promisor's intention lacked any, or any adequate, foundation".[4161] Therefore, the precise basis on which it was said that Cargill, Inc had contravened section 18 was far from clear.[4162] In any event, for the reasons set out in issue 113 above, I am not satisfied that Cargill, Inc engaged in any misleading or deceptive conduct by reason of the undertaking given in the form of clause 8.3.

4756 Some further observations should also be made about the surrounding circumstances. Considering the relevant circumstances objectively, it would have made little commercial sense for Cargill not to make its own assessment of the information provided and to form its own view as to whether it was satisfied with it based on its own independent enquiries and analysis. There was no probative evidence to suggest Cargill had any other intention in May 2013 (or at any other time). Further, Cargill did conduct its own investigations and analysis, which was made clear in submitting the First Final Bid.[4163] This and other evidence also indicated that Cargill relied on its own investigations and analysis.

4757 Finally, for reasons discussed elsewhere,[4164] relying solely on Cargill, Inc's investigations and analysis did not remove the need for due consideration of, and the taking into account of, the underlying information contained in the Confidential

---

4160 While this might have been acceptable if the allegations had been made based solely on the Confidentiality Deed Representations being with respect to a future matter, that was not how the matter was pleaded.

4161 *Global Sportsman Pty Ltd v Mirror Newspapers Pty Ltd* (1984) 2 FCR 82, 88.6 (Bowen CJ, Lockhart and Fitzgerald JJ). See also *HTW Valuers (Central Qld) Pty Ltd v Astonland Pty Ltd* (2004) 217 CLR 640, 649 [13] (Gleeson CJ, McHugh, Gummow, Kirby and Heydon JJ).

4162 In making this observation, issues relating to the onus of proof have not been overlooked: see the Australian Consumer Law, s 4(3)(b). Further, the primary position put by the Viterra Parties was that the Confidentiality Deed Representations were *not* representations as to future matters.

4163 See par 976 above.

4164 See issue 105 above.

Information as it formed a necessary part of the analysis that it was contemplated that Cargill would engage in.

X.115 What, if any, damages or other relief is Glencore and/or Viterra entitled to as a consequence?

4758 This issue does not arise.

X.116 Are Glencore and/or Viterra estopped from maintaining a claim against Cargill, Inc based upon the Confidentiality Deed Representations?

4759 This issue does not arise.

X.117 If Cargill Australia is held to have engaged in misleading or deceptive conduct by:

(1) Making the Confidentiality Deed Representations; and/or
(2) Making the No Reliance Representations,

was Cargill, Inc involved in that misleading or deceptive conduct, within the meaning of section 2(1) of the Australian Consumer Law?

4760 This issue does not arise in relation to the Confidentiality Deed Representations. Although strictly the issue does arise concerning the No Reliance Representations, as it has been found that those representations did not cause any loss as claimed, it is unnecessary to consider this issue further.

X.118 What, if any, damages or other relief is Glencore and/or Viterra entitled to as a consequence?

4761 This issue does not arise.

X.119 Are Glencore and/or Viterra estopped from maintaining a claim against Cargill, Inc based upon its alleged involvement in any misleading or deceptive conduct by Cargill Australia?

4762 This issue does not arise.

X.120 If Glencore and/or Viterra have suffered loss as a result of any

contraventions by Cargill, Inc of section 18 of the Australian Consumer Law, has Glencore and/or Viterra suffered that loss partly as a result of their failure to take reasonable care and ought their recoverable loss be reduced?

4763 This issue does not arise, but see issue 80 above in relation to the failure of Glencore and Viterra to take reasonable care.

X.121 Are Glencore and/or Viterra's claims against Cargill, Inc for contravention of section 18 of the Australian Consumer Law apportionable claims within the meaning of section 87CB(1) of the *Competition and Consumer Act*? If so, are Cargill, Inc, Hughes, Stewart, Youil, Wicks, Argent, Fitzgerald, Rees and/or Mattiske concurrent wrongdoers? If so, what proportion of the damage or loss claimed by Glencore and/or Viterra does the court consider just for each party to bear?

4764 This issue does not arise.

X.122 Were the No Reliance Representations incorrect or misleading?

4765 As has been found above, Cargill Australia conveyed the No Reliance Representations by clauses 13.4(a) and (d) of the Acquisition Agreement,[4165] and those representations were incorrect and misleading or deceptive within the meaning of section 18 of the Australian Consumer Law.[4166]

X.123 Is Cargill, Inc required by reason of clause 20.3(a)(iv) of the Acquisition Agreement to indemnify Viterra against any liability arising as a consequence of the No Reliance Representations?

4766 By the Third Party Claim, the Viterra Parties pleaded that Cargill, Inc was required by clause 20.3(a)(iv) of the Acquisition Agreement to indemnify Viterra against any liability arising as a consequence of the No Reliance Representations. Clause 20.3(a)(iv) relevantly set out that Cargill, Inc indemnified Viterra against any liability

4165 See issue 95 above.
4166 See issue 98 above.

or loss arising, and any reasonable costs it incurred, if a representation or warranty by Cargill Australia in the Transaction Documents was found to be incorrect or misleading when made or taken to be made.[4167]

4767 This claim must fail for the following reasons.

4768 *First*, the similar basis upon which the Viterra Parties claimed loss in their counterclaim against Cargill Australia has already been rejected. Paragraph 40 of the Third Party Claim against Cargill, Inc pleaded that by clause 20.3(a)(iv) of the Acquisition Agreement and the existence of the No Reliance Representations, Cargill, Inc was required to indemnify Viterra against any liability for damages and costs that were found contrary to the Viterra Parties' case, including costs reasonably incurred by Viterra, arising as a consequence of the No Reliance Representations being incorrect or misleading.

4769 This basis was materially similar to the loss claimed by paragraph 126 of the counterclaim, which characterised the loss suffered as a result of the No Reliance Representations against Cargill Australia as Viterra's liability for damages and costs which, contrary to the Viterra Parties' case, Viterra would be held to have to Cargill Australia, including the costs of the proceeding. For reasons outlined above,[4168] that claim has been rejected.

4770 Specifically, the relief sought would place Viterra in the position it would have been in if the Acquisition had proceeded, but Cargill Australia had not brought the proceeding. There was dissonance between this result and the case put by the Viterra Parties, and accepted, whereby Viterra would not have entered into the Acquisition Agreement had it known the No Reliance Representations were misleading. Therefore, to allow the present measure of loss to be claimed by way of "indemnity" would be to accept a counterfactual where, had the Viterra Parties still owned Joe White, they could have sold it for $420 million with no exposure for misleading or deceptive conduct to any prospective purchasers. This counterfactual has been found

4167 See par 1032 above.
4168 See pars 4590, 4592 above.

to be inappropriate and not a scenario remotely open on the facts. As the Viterra Parties have not advanced any alternate measure of compensation, this claim must be rejected.

4771 *Secondly*, clause 20.3(a)(iv) provided that Viterra was indemnified against any liability or loss *arising from* any representation or warranty by Cargill Australia in the transaction documents which was found to be incorrect or misleading. The Cargill Parties correctly submitted that Viterra's liability in this proceeding did not *arise from* the No Reliance Representations, but rather from Viterra's own conduct. It follows that Viterra's loss is directly attributable to its own misleading or deceptive conduct and misrepresentations, without which this proceeding would not have been brought.

4772 In conclusion, clause 20.3(a)(iv) cannot be used to indemnify Viterra for any liability or costs it has incurred by this proceeding.

4773 Given this finding, it is not strictly necessary to consider whether, if the indemnity was to have the effect claimed by the Viterra Parties, it would also be unenforceable as contrary to public policy. However, if it had been found that the indemnity contained in clause 20.3(a)(iv) was enlivened by Cargill Australia's conduct in making the No Reliance Representations, then it would also have been found in the particular circumstances of this case that the indemnity was unenforceable.[4169]

X.124 Prior to entry into the Acquisition Agreement, did Joe White represent to Glencore or Viterra, or both, that:

(1) the Information Memorandum Statements were true and correct;

(2) the Financial and Operational Information was true and correct;

(3) the Operations Call Statements were true and correct;

(4) the Commercial Call Statements were true and correct;

(5) the Management Presentation Statements were true and correct;

(6) the Undisclosed Matters did not exist; and/or

(7) the Warranties (being Warranties 4.2(a)-(c), 6.1(e), 7.3, 9.2, 12(a)-(c),

4169 See issue 144 below.

13.4, and 17(a) of the Acquisition Agreement) were true and correct? (Collectively, "the Joe White Representations".)

4774 For reasons discussed elsewhere, the representations comprising (1) to (7) above have been found, in most respects, to have been made.[4170]

X.124.1 Any representations made as alleged not made by Joe White

4775 The relevant representations were not made by Joe White. Quite simply, to the extent they were involved in them being made, the Third Party Individuals made the representations above in the course of their employment by Viterra Ltd, and participated either at the direction or request of Glencore or Viterra, or both, for the purposes of Viterra selling the issued capital in Joe White and related assets. Further, to the extent they were made by the Third Party Individuals themselves, they were made in that capacity and not on behalf of Joe White.[4171]

4776 The Viterra Parties contended that the Third Party Individuals had roles within Joe White and therefore their conduct could be attributed to Joe White. However, this argument failed to grapple properly with the fact that, to the varying degrees to which they were involved in the sale process, the Third Party Individuals' conduct was occurring in the context of each individual assisting Glencore and Viterra in the sale of Joe White. In other words, in providing such assistance, the Third Party Individuals were acting outside of their usual respective roles for Viterra Ltd as Joe White executives within the Joe White Business insofar as they were performing services or related activities outside the usual conduct of the Joe White Business.[4172]

4777 Given this issue arose in the context of the Australian Consumer Law, the statutory

---

4170 In respect of the representations comprising the Information Memorandum Statements, see issue 1; the Financial and Operational Performance Representations, see issue 15; the Operations Call Statements, see issue 2; the Commercial Call Statements, see issue 3; the Management Presentation Statements, see issue 4; and the Undisclosed Matters, see issue 10. The representations alleged to have been made as part of the Warranty verification process have not been found to have been made, see issue 125.6 below.

4171 After Viterra acquired Joe White, each Third Party Individual was a party to a contract of service with Viterra Ltd: see issues 136, 137 below. These contracts and other employment documents demonstrated each Third Party Individual was treated as a Viterra employee; for example, position descriptions for each of Stewart and Argent placed them as "a valued member of the Viterra team". See also par 121 above.

4172 See also par 483 above.

principles of attribution were relevant. Section 139B(2) of the *Competition and Consumer Act* relevantly states:[4173]

> Any conduct engaged in on behalf of a body corporate:
>
> (a) by a director, employee or agent of the body corporate within the scope of the actual or apparent authority of the director, employee or agent;
>
> …
>
> is taken … to have been engaged in also by the body corporate.

4778 Statutory attribution under this provision is considered at length in issue 18 above. Although considering this issue with respect to the Third Party Individuals crosses into the territory of issue 125 below, it is convenient to address this briefly to demonstrate why it was not Joe White that made the representations in question.

4779 The Third Party Individuals, as employees of Viterra Ltd, were engaged in conduct on behalf of Glencore or Viterra, or both. This was done at the direction of Viterra Ltd, and within the scope of their actual authority as given by Viterra Ltd.[4174] Objectively, the representations were made for the purposes associated with enabling the sale of the shares in Joe White (owned by Viterra Malt) and the assets used in the Joe White Business (owned by Viterra Operations and Viterra Ltd). Further, the Third Party Individuals made the representations in the course of Viterra's affairs, again being the selling of the shares in Joe White and related assets used in the Joe White Business.[4175] It was no part of Joe White's usual operations or affairs to be selling its issued shares owned by Viterra Malt, or assets it did not own.

4780 In addition, in relation to the requirement in section 139B(2)(a) that the conduct in question fell within the scope of authority imparted on the Third Party Individuals (whether actual, and express or implied, or apparent),[4176] Hughes and Argent were subject to a retention program with Glencore or Viterra.[4177] Thus, they were furnished

---

4173 See par 3077 above for the provision set out in full.
4174 See pars 3080-3081 above.
4175 See pars 3083, 3085 above.
4176 See pars 3087, 3090 above.
4177 See par 1876 above for an excerpt of Hughes' retention letter.

with actual authority on the further basis that they were specifically retained by Viterra (with Glencore's express approval) to be involved in the sale of Joe White to "assist in divesting the [Joe White Business] and ensuring that operations [continued] in a professional and efficient manner".[4178] The entitlement to a retention bonus to be paid by Viterra upon the sale of Joe White was in recognition of their work in assisting Glencore and Viterra with the divestment of Joe White. Further, the final amount and timing of the bonus payment was left entirely to Viterra's (and therefore presumably Glencore's) discretion.[4179]

4781 Furthermore, the work performed by Hughes and Argent in preparing Joe White for sale was largely directed and managed by representatives of Glencore or Viterra.[4180] In some respects, this direction and management was to a great level of detail.

4782 In relation to Youil, Wicks and Stewart, to the extent of their involvement in the Joe White sale, those employees acted under direction from Hughes and, more generally, Viterra.[4181] Indeed, their respective contracts of service contained a "reporting" clause, which stated that "[t]he employee shall report to and be directly responsible to the Executive Manager, Malt, Gary Hughes", and Hughes was, up until December 2012, a director of Viterra, and thereafter remained a Viterra executive until Completion. Although there was no formal arrangement in place for Youil, Wicks or Stewart's role in the sale process, their involvement in stages of the sale process to varying degrees up to Completion was at the direction of Viterra, with the approval of Glencore.[4182] Finally, there was simply no evidence that any of Youil, Wicks or Stewart conducted themselves for a purpose other than as directed by Hughes or

---

4178 See par 368 above.

4179 Although it was stated this would be no less than 3 months' and no more than 6 months' pay.

4180 See, for example, pars 470, 492-493, 507, 543 above in relation to the Information Memorandum, and pars 709, 2175-2179 above in relation to the Management Presentation and the Management Presentation Memorandum. Furthermore, key documents such as the Information Memorandum and the Management Presentation Memorandum were presented with the name or logo of Glencore, and these 2 documents were finalised by others (including Mattiske and Fitzgerald) in addition to Hughes and Argent: see pars 470, 711 above.

4181 See, for example, in relation to Stewart's position as a Viterra Ltd employee, pars 161, 167-168, 1104 above.

4182 See, for example, pars 2161-2162 above in respect of Youil. Further, the fact that Youil, Wicks and Stewart were involved in the Warranty verification process was also indicative of their role in assisting Glencore and Viterra with the sale: see issue 125.6 below.

Viterra for the overall purpose of selling Joe White.

4783 Accordingly, to the limited extent it was alleged Youil, Wicks and Stewart were involved, they were so involved as representatives of Viterra and perhaps also Glencore, but not of Joe White. It follows that any representations they might have made could not be attributed to Joe White.

4784 Speaking generally, although not determinative to the issue of establishing statutory attribution, it was significant that any benefit to be derived from the involvement of the Third Party Individuals in the sale process was to be derived by Viterra and Glencore, not Joe White.

4785 The Viterra Parties also made a very general submission that in order to determine whether Joe White made the Joe White Representations, Joe White's conduct needed to be viewed as a whole. In submitting that all statements should be considered together, they referred specifically to the Warranty verification process. In so doing, they submitted any deficiencies in that process needed to be considered alongside the conduct of Joe White as a whole in making the other statements comprising the Joe White Representations. While it was unquestionable that there were significant deficiencies in the Warranty verification process,[4183] this general submission did not affect the fundamental underlying circumstances that the conduct in question that was engaged in by the Third Party Individuals was done for, and at the request of, Glencore and Viterra in their positions as Viterra Ltd employees.

X.124.2 The Viterra Parties' submission suggesting murkiness

4786 Succinctly, to adopt the words of King, "[i]n any business you are selling you need the incumbent management to sell the business *for you*" (emphasis added). Although King's evidence was that he believed Hughes and Argent were making the representations that they did at the Management Presentation in their capacity as Joe White executives, that was an overly simplistic view. The knowledge they had was because of their role as Joe White executives (and Viterra Malt executives), but in

4183 See issue 125.6 below.

making representations about the Joe White Business as set out in the Management Presentation Memorandum and more generally, they were not acting in that capacity, but rather were involved as employees of Viterra Ltd, at the direction of Viterra and in pursuit of Viterra's interests. No labelling of Hughes and Argent as "Joe White management" (which they plainly were) altered this fact.

4787 An exchange that took place during closing submissions exposed the artificiality the Viterra Parties sought to impose on the situation, which undoubtedly was done in order to seek to distance themselves from what was represented and to lay the blame at the feet of Joe White and the Third Party Individuals. It was submitted by the Viterra Parties that Glencore controlled the sale process and was not familiar with the malting industry. In the same breath, it had to be conceded that Viterra was so familiar. When it was suggested that Viterra also controlled aspects of the sale process and that it was being performed by Viterra's officers, this was rejected on the basis that those involved were Joe White's officers. However, when it was raised by way of example that the Warranty verification process was being conducted by Viterra's in-house counsel, Wilson-Smith, in speaking to Viterra Ltd employees, it was then conceded that there was a "mixture perhaps". After then suggesting that the Third Party Individuals were "in 1 sense Viterra employees and in another sense were Joe White … employees",[4184] it was further conceded that Wilson-Smith was talking to Viterra employees. It was then submitted the position was a bit murky.

4788 With respect, any murkiness arose because of the artificial construct that was sought to be created by the Viterra Parties to distance themselves from the fact that, to the extent that Viterra Ltd employees were involved in the sale process, they were involved because they had been directed or asked to be so involved by Glencore and Viterra. Further, they were so directed or asked because of their knowledge of running the Joe White Business (treated as a business unit of Viterra for a number of years), but that fact did not make their conduct in responding to the directions or requests in the manner instructed conduct that was attributable to Joe White.

4184 In fact, they were not "Joe White employees", but were only employed by Viterra Ltd.

4789 But the matter did not rest there. Subsequently, the Viterra Parties submitted that their primary position was Wilson-Smith was acting for Glencore, and the Third Party Individuals were acting for Joe White. Notwithstanding Wilson-Smith's evidence that he provided legal services to the "Viterra Group", it was submitted that in performing the task concerning the Warranty verification process, Wilson-Smith was acting exclusively for Glencore. When this was queried, the submission was made that it was a fact of modern life that "the way large organisations organise themselves" is to have a single treasury company and usually a single human resources company. This was said to be done for tax and other "efficiencies". However, so it was submitted, in analysing the true state of affairs, the court ought to put such matters aside and focus on and identify what and for whom those services were being predominantly provided.

4790 Not surprisingly, a number of counsel for the Third Party Individuals took exception to this later submission on the basis that it was embarrassing. Leaving aside that the position put was inconsistent with what the court had been told 2 days before, it was not the manner in which the case was pleaded in the Third Party Claim.[4185] In short, this was another attempt to characterise the situation in a way that suited the Viterra Parties' case by effectively ignoring or seeking to diminish the significance of some of the material facts before the court (including as pleaded by the Viterra Parties).

X.125 Prior to entry into the Acquisition Agreement, did Hughes, Youil, Wicks, Stewart and/or Argent represent to Glencore and/or Viterra the representations set out below in relation to each of them (collectively defined as "the Joe White Executives' Representations")?

(1) Did Hughes represent to Glencore and/or Viterra that:

(a) the Information Memorandum Statements were true and correct;
(b) the Financial and Operational Information was true and correct;
(c) the Operations Call Statements were true and correct;

4185 In the Third Party Claim, it was alleged that each of the Third Party Individuals represented to both Glencore and Viterra that the Warranties were true and correct, and that both Glencore and Viterra relied upon such representations. This was alleged to have been done by each of them verifying the relevant Warranties in a meeting with Wilson-Smith.

(d) the Commercial Call Statements were true and correct;
(e) the Management Presentation Statements were true and correct;
(f) the Undisclosed Matters did not exist; and/or[4186]
(g) the Warranties (being, in relation to Hughes, Warranties 4.2, 6.1(e), 7.3, 9.2, 12 and 17(a)) were true and correct?

(Collectively, "the Hughes Representations".)

(2) Did Youil represent to Glencore and/or Viterra that:

(a) the Operations Call Statements were true and correct;
(b) the Undisclosed Matters did not exist; and/or
(c) the Warranties (being, in relation to Youil, Warranties 4.2, 7.3, 9.2, 12 and 17(a)) were true and correct?

(Collectively, "the Youil Representations".)

(3) Did Wicks represent to Glencore and/or Viterra that:

(a) the Undisclosed Matters did not exist; and/or
(b) the Warranties (being, in relation to Wicks, Warranties 4.2, 7.3, 9.2, 12 and 17(a)) were true and correct?

(Collectively, "the Wicks Representations".)

(4) Did Stewart represent to Glencore and/or Viterra that:

(a) the Undisclosed Matters did not exist; and/or
(b) the Warranties (being, in relation to Stewart, Warranties 7.3 and 17(a)) were true and correct?

(Collectively, "the Stewart Representations".)

(5) Did Argent represent to Glencore and/or Viterra that:

(a) the Information Memorandum Statements were true and correct;
(b) the Financial and Operational Information was true and correct;
(c) the Commercial Call Statements were true and correct;
(d) the Management Presentation Statements were true and correct;
(e) the Undisclosed Matters did not exist; and/or
(f) the Warranties (being, in relation to Argent, Warranties 4.2, 6.1(e), 7.3, 9.2, 12, 13.4, and 17(a)) were true and correct?

(Collectively, "the Argent Representations".)

X.125.1 The case against each Third Party Individual on this issue

4791 It is important to address the manner in which this part of the case was pleaded against the Third Party Individuals. The relevant allegations were concerned with

---

4186 The "and/or" in the framing of this issue did not reflect the pleadings in relation to Hughes or any of the other Third Party Individuals. With respect to each Third Party Individual, the specific representations were pleaded with "and" (and no "/or") appearing after the penultimate allegation: see further par 4797 below.

alleged contraventions of the Australian Consumer Law. Broadly, the Viterra Parties sought to establish that each of the Third Party Individuals engaged in conduct by making various representations, in trade or commerce, that were misleading or deceptive or likely to mislead or deceive.

4792 In alleging the different components for each of the Hughes Representations, the Youil Representations, the Wicks Representations, the Stewart Representations and the Argent Representations, the Viterra Parties adopted various definitions used by Cargill Australia in the Statement of Claim. Some of those definitions, namely the Information Memorandum Statements, the Operations Call Statements, the Commercial Call Statements and the Management Presentation Statements, were cumulative. Other definitions, namely the Financial and Operational Information and the Undisclosed Matters, were defined by reference to "collectively, individually, or in any combination", thereby picking up each matter within the definition.

4793 For the purposes of this and subsequent issues, it is important to identify precisely what these latter 2 terms defined in paragraph 19 of the Statement of Claim.[4187] "Financial and Operational Information" was pleaded to be a reference to information about Joe White's financial and operational performance for the financial years from 2010 to part of the 2013 financial year (to the extent it was disclosed in the Information Memorandum and during the Due Diligence) collectively or in any combination. Although "Undisclosed Matters" was defined to include the matters in paragraph 19 of the Statement of Claim that preceded its definition "collectively, individually or in any combination", this must be understood based on each of the earlier definitions in paragraph 19. "Viterra Practices" was defined cumulatively. Thus, the definition of Undisclosed Matters did not refer to each of the Operational Practices individually, but only holistically,[4188] and on the basis that they were routinely engaged in without informing customers. A like observation applies to the definition of "Viterra Policies",

---

4187 See par 1851 above.

4188 This was confirmed during the Cargill Parties' opening, when the Viterra Practices collectively were identified as the "first undisclosed matter".

which was a reference to both documents identified.[4189]

4794 The last substantive matter said to form part of the Undisclosed Matters was Joe White's inability, but for the Viterra Practices, to produce and sell malt in a particular manner. The alleged inability (unless the Viterra Practices were implemented) had 2 limbs. *First*, "in the volumes and to the specifications required by customers", and *secondly*, "in the volumes and for the returns reflected in the Financial and Operational Information". Although they were not expressly linked by "and", the 2 limbs need to be considered together for the purposes related to the definition of the Undisclosed Matters.[4190]

4795 Further, in adopting the definitions from the Statement of Claim, the Viterra Parties did not seek to rely upon individual representations, but rather alleged a series of representations (as set out in the questions as framed above). By this means, it was alleged the representations pleaded cumulatively comprised the conduct forming the basis of the respective claims. No doubt, this was done advisedly in order to seek to encapsulate the allegations made by Cargill Australia against the Viterra Parties in seeking indemnity or contribution from the Third Party Individuals as part of the "pass through" approach to the Third Party Claim.[4191]

4796 Based on the pleadings, the consequence of such an approach would be that it was incumbent upon the Viterra Parties to prove (respectively against the relevant Third Party Individual) each of the components of the Hughes Representations, the Youil Representations, the Wicks Representations, the Stewart Representations and the Argent Representations, to the extent that Cargill Australia proved the corresponding representations against any of the Viterra Parties, in order to make out this part of the Third Party Claim. In other words, in order to establish, for example, as against

---

4189 The Viterra Policies together were described in the Cargill Parties' opening as the "second undisclosed matter".

4190 In the Cargill Parties' opening, these 2 limbs were referred to as the "fourth undisclosed matter".

4191 Compare par 53 above. The fact that "and" was intended to be read to have its natural meaning in making these allegations, and not be read as "or" or "and/or", was clear from the repeated use of "and/or" in other parts of the Third Party Claim. If a party chooses to approach a case in such a manner then the court should determine the issues accordingly: compare *Ridd v James Cook University* [2021] HCA 32, [63]-[65] (Kiefel CJ, Gageler, Keane, Gordon and Edelman JJ).

Hughes that the Hughes Representations were made, based on the pleadings it would be necessary for the Viterra Parties to prove that Hughes himself represented that all (not just some) of the Information Memorandum Statements were true and correct, as it has been proven by Cargill Australia that all the Information Memorandum Statements were made by the Viterra Parties. Further, because of the matters referred to in the preceding paragraph, in addition to all the Information Memorandum Statements, the Third Party Claim was based on the Viterra Parties proving: (1) Hughes had made representations as to the truth of all of the Financial and Operational Information, all of the Operations Call Statements, all of the Commercial Call Statements and all of the Management Presentation Statements; (2) Hughes represented all of the Undisclosed Matters did not exist (to the extent these statements and matters were established by Cargill Australia); and (3) all of the Warranties alleged to have been verified by Hughes as true and correct were represented by Hughes as such.

4797 However, the matter was somewhat clouded by the way the parties agreed to formulate this issue. By introducing "and/or" at the penultimate level of the question pertaining to each Third Party Individual, the issue as identified for determination did not strictly mirror the pleadings.[4192] The parties had been directed to ensure that the issues for determination faithfully reflected the pleadings, and this use of "and/or" was not raised as an issue during the trial. Accordingly, in construing this issue consistent with the pleadings it must be assumed that "and/or" was inserted because of nature of the definitions of the Financial and Operational Information and of the Undisclosed Matters. Principally, this issue and related issues will be addressed accordingly.[4193]

4798 Before turning to allegations against each of the Third Party Individuals, a further observation should be made. As lead senior counsel for the Viterra Parties properly acknowledged in closing submissions, it was necessary for the Viterra Parties to prove

---

4192 See fn 4186 above.

4193 To be clear, to be consistent with the manner in which the Third Party Claim was pleaded, the "and/or" shall be applied to each defined set of representations alleged and as proven by Cargill Australia, rather than each individual representation said to make up each defined set of representations.

the case against each of the Third Party Individuals separately. In other words, it did not follow from the mere fact that Cargill Australia managed to prove that a particular representation was made or a certain state of affairs existed that such a circumstance could simply be "passed through" to each of the Third Party Individuals. The specific allegations made against each Third Party Individual needed to be established.

X.125.2 Hughes

4799 It has been found that Hughes agreed to assist, and did in fact assist, Glencore and Viterra in the sale of the shares in Joe White and some related assets.[4194] Before turning to each of the matters alleged to comprise the Hughes Representations, an all-encompassing submission of Hughes' must be addressed.

4800 Hughes alleged that Glencore and Viterra knew and were aware of, or should have been aware of, the Viterra Practices prior to entry into the Acquisition Agreement by reason of the knowledge of a large number of individuals at Viterra. These persons included Fitzgerald, Rees, Mattiske, Ross, Malecha, Gordon, Ward Ast (head of finance of Viterra and a former director of Joe White from 28 September 2010 to 23 March 2012),[4195] Dean McQueen (executive manager of Viterra Australia's grain division and a former director of Joe White from 13 December 2011 to 17 December 2012),[4196] Simon Stone (manager of transformation consulting Australia and New Zealand of Viterra),[4197] Jones, Mayo Schmidt (president and chief executive officer of Viterra in 2010), Peter Davey (director and executive manager "agriproducts" of Viterra and a former director of Joe White from 14 December 2011 to 17 December 2012), Warren Buck (head of information technology), Wilson, Don Drombolis (general manager operations of Viterra), Rex McLennan (global chief financial officer of Viterra), Steve Berger (global senior vice president of human resources and

4194 See, for example, pars 367-369, 373, 1876-1877 above.

4195 Ward Ast was also a director of Viterra Ltd and Viterra Operations from 4 June 2010 to 23 March 2012, and of Viterra Malt from 28 September 2010 to 23 March 2012.

4196 Dean McQueen was also a director of Viterra Ltd and Viterra Operations from 8 November 2011 to 17 December 2012, and of Viterra Malt from 13 December 2011 to 17 December 2012.

4197 Simon Stone was originally an Accenture consultant retained as part of the Malt Cost Reduction Transformation Project, but then joined Viterra in May 2010.

transformation), Doug Wonnacott (global senior vice president "agriproducts" of Viterra), Karl Gerrand (global senior vice president food processing of Viterra), Merrill Lynch, Roelfs, Walt, Maw, King, Argent, Youil, Stewart, as well as Hughes himself.[4198]

4801 The submissions in support of these allegations referred to a large number of documents connected with the Malt Cost Reduction Transformation Project, a number of which are set out in the facts as stated above. Hughes referred to these documents and submitted that, from Hughes' point of view, he was required by his employer to deliver on the objectives of the Malt Cost Reduction Transformation Project notwithstanding the issues and concerns he had brought to the attention of Viterra "by reason of the 10 August 2010 email".[4199]

4802 While Viterra was responsible for the creation, supervision and implementation of the Malt Cost Reduction Transformation Project as part of a global strategy by Viterra to reduce costs and increase profits, nothing contained in any of the documents referred to by Hughes demonstrated that Hughes informed others at Viterra (not including the Viterra Ltd employees working at Joe White who reported to him) of the existence of the Operational Practices.[4200] The fact that a direction was given to increase the use of off-grade barley, or even that Viterra was informed that customers were being incorrectly told that grade 1 malting barley was being used when it was not, said nothing about the existence of the Operational Practices. It must follow that, to the extent that Hughes sought to establish that others in Viterra senior to him had been informed of the Viterra Practices, Hughes' submissions on this point must be rejected.[4201] That said, Hughes was correct to submit that Viterra knew of the Viterra Practices by reason of his own knowledge, as well as the knowledge of the other Third

---

4198 The inclusion of Hughes in this list effectively reflected the acceptance by Hughes that his knowledge was attributable to both Glencore and Viterra for the purposes of the issues in this proceeding.

4199 See pars 162-163 above.

4200 The reference to "other minor changes on the Certificate of Analysis", in the context of the 10 August 2010 email, did not give notice to recipients of that email that Joe White was engaged in the Reporting Practice as it involved far more than that: see par 162 above. See also fn 153 above in relation to the Varieties Practice and the Gibberellic Acid Practice.

4201 See more generally pars 161-166 and fn 793 above.

Party Individuals (except Argent).[4202]

4803 In relation to the submission that Glencore and Viterra should have been aware of the Viterra Practices beyond the knowledge of the individuals referred to in the last sentence of the preceding paragraph, I accept there was some force in this submission insofar as both Glencore (since late 2012) and Viterra (since late 2009) had representatives who were directors of Joe White. Further, it was not possible to quibble with Hughes' general submission that, as a director of Joe White, Mattiske was required to be involved in the company's management and to take all reasonable steps to guide and monitor the Joe White Business. In circumstances where the Viterra Practices were such an integral part of Joe White's operations, it might have been expected that the directors of Joe White, acting consistent with duties imposed upon them by reason of that position, would have gained some knowledge of at least the Operational Practices.[4203] However, this observation is made with considerable circumspection in circumstances where the Viterra Practices were concealed by Hughes and others such that it appeared on the evidence that even Argent, who by all accounts was diligent and hard-working as financial controller, was not aware of the Operational Practices. In particular, in none of the evidence regarding what Hughes, Youil, Wicks or Stewart said about the Viterra Practices in 2013 was there anything to suggest that Argent was aware of them and no submission was made to that effect on their behalf.

4804 In any event, this aspect of Hughes' case was not advanced by consideration of what ought to have been known by Glencore and Viterra by reason of the directorships held over a number of years.[4204] That was because Hughes fully appreciated in 2013 that the existence and implementation of the Viterra Practices was not known by Glencore[4205] and was not generally known within Viterra beyond those Viterra Ltd

---

4202 See issues 11, 18, 22 above in relation to Hughes. See also pars 1102-1132, 1276-1313 above in relation to Hughes, Youil, Wicks and Stewart.

4203 See pars 2688, 3281, 4456 above.

4204 Noting also that Fitzgerald was company secretary: see par 114 above.

4205 See par 1281 above. See further par 4877 below.

employees engaged in the operations of Joe White.[4206] Further, for reasons explained above,[4207] it has not been established that, in 2010 or at any time while Gordon was in charge, Hughes properly disclosed to Gordon the existence of the Operational Practices.[4208]

4805 It followed that, in 2013, when Hughes participated in the sale process there was no basis for him to assume that the Viterra Practices were known by Glencore or those representatives of Viterra engaged in that process. Accordingly, it was highly likely that Hughes appreciated that, if he failed to disclose the Viterra Practices as part of the sale process, their existence and implementation would likely have remained unknown by Glencore and the relevant representatives of Viterra. I so find.[4209]

X.125.2.1 Information Memorandum Statements

4806 There was no issue that the Information Memorandum contained the Information Memorandum Statements.[4210]

X.125.2.1.1 The Viterra Parties' submissions

4807 The Viterra Parties made a number of submissions that sought to establish that Hughes represented to Glencore or Viterra, or both, that the Information Memorandum Statements were true and correct. The Viterra Parties noted that "Hughes and Argent" participated in preparation of the Information Memorandum and submitted that because of that participation each of the relevant statements was verified by Hughes or Argent, or largely by both. Additionally, the Viterra Parties submitted that Hughes and Argent were told that the verification of the Information Memorandum meant ensuring the contents were true and correct. Further, the Viterra Parties submitted that King relied on Joe White management to verify the information

---

4206 See pars 1255-1256 above. In the interviews conducted by Fitzgerald (with Lindner and Rees) on 23 October 2013, there was no suggestion by any of Hughes, Youil, Wicks or Stewart that Fitzgerald had already been told about the Operational Practices.

4207 See pars 162-166, 1299 above.

4208 See also par 4874 below.

4209 See par 1281 above. See also Hughes' submission querying why he would have disclosed the Viterra Policies to Viterra (par 4871 below), thereby apparently acknowledging that they were not generally known (beyond those aware by reason of the Viterra Policies having been uploaded on Pulse and Hughes having authorised their circulation to Joe White's operational staff).

4210 See par 2146 above.

in the Information Memorandum. Furthermore, the Viterra Parties relied on the fact that when Merrill Lynch emailed the then final version of the Information Memorandum to Hughes, Argent and others, it stated that verification would be undertaken by "management"[4211] and that Hughes and Argent had "primary responsibility" for general business and industry information.

X.125.2.1.2 Hughes' submissions

4808 In addition to the general submissions referred to in the introduction to this sub-issue, Hughes submitted that no representation as alleged was made by him to Glencore or Viterra. He submitted that the whole of the course of conduct involved in the preparation of the Information Memorandum must be considered.[4212] Broadly, Hughes referred to the following.

4809 *First*, that the Information Memorandum was expressly stated to be a document prepared by Glencore and its subsidiaries, not by Hughes, and was drafted by the Viterra Parties, including King, and not by Hughes. *Secondly*, Hughes was asked to verify the Information Memorandum in the context of his employment relationship with Viterra, which it was submitted included the 10 August 2010 emails[4213] and Hughes' belief that the Viterra Parties were aware of the practices prevailing in the commercial malting industry. *Thirdly*, Hughes' role in the preparation and finalisation of the Information Memorandum was limited and subject to the direction and supervision of Glencore employees. *Fourthly*, Hughes noted that the Information Memorandum was drafted in the context of the regime in which Glencore and Viterra disavowed making any representations to Cargill, including that the Viterra Parties were making no representations and taking no responsibility for any omissions in the Information Memorandum. Further, Hughes was a "Discloser" and a "Representative" for the purposes of disclaimers included in the sale process.[4214] Hughes submitted that this demonstrated that comments by Hughes on the Information Memorandum could not be characterised as a representation that the

4211 The Viterra Parties submitted that this was a reference to the Joe White management.
4212 Relying on *Butcher v Lachlan Elder Realty Pty Ltd* (2004) 218 CLR 592, 625 [109] (McHugh J).
4213 See par 162 above.
4214 See par 475 above.

Information Memorandum was true and correct. *Fifthly*, Hughes noted that none of the representatives of Glencore or Viterra gave evidence that they regarded Hughes' conduct as constituting a representation of truth and correctness, which Hughes submitted was a telling factor in relation to the nature and effect of the verification. *Sixthly*, Hughes submitted that the recipients of an email sent on 23 April 2013, which stated Hughes had "been through" the Information Memorandum,[4215] were not from the Viterra Parties and the actual recipients were not called to give evidence. Further, there was no evidence the 23 April 2013 email itself was subsequently forwarded to the Viterra Parties. *Seventhly*, King's evidence was to the effect that he could not recall much about the verification process and that he did not make any enquiries himself about whether there was any statement in the Information Memorandum that required verification or some level of assurance.

X.125.2.1.3 Analysis

4810 The verification process for the Information Memorandum is described above.[4216] Notwithstanding written assurances from Mallesons that "prospectus-type" verification was not required and that Hughes and Argent were not concerned with a process involving "prospectus liability", it was still made clear that the accuracy of the Information Memorandum was to be verified by them.[4217] In short, Hughes was informed that the purpose of the verification process was to "ensure the [Information Memorandum was] accurate by having the relevant person(s) within the business focus on an allocated section and verify the accurateness of that section".[4218] The process was recorded in the verification table, which Hughes was required to sign off on, and did in fact place his initials upon the table for all but 2 of the pleaded statements comprising the Information Memorandum Statements.[4219]

4215 See par 448 above.

4216 See pars 442-452 above.

4217 Every page of the Information Memorandum was allocated to either Hughes or Argent or both (as well as others in relation to a small number of pages), except page 1 which contained the Information Memorandum Disclaimers.

4218 See par 447 above. See also par 446 above.

4219 The remaining Information Memorandum Statements appeared on pages which were not verified by Hughes. The statements Hughes did not verify were, *first*, that over the last 10 years Joe White had undertaken a substantial capital investment program which had created a state-of-the-art

4811 By inserting his initials in the specified parts of the verification table, Hughes represented that the relevant pages of the Information Memorandum were true and correct. The representation was to Glencore and Viterra. Not only had Hughes agreed to assist these entities with the sale process, and did so, but Hughes was instructed to undertake the verification by Mallesons and Merrill Lynch, who were engaged to act in relation to the sale.[4220]

4812 Hughes' submission that he made no representation, because the Information Memorandum was expressly stated to be prepared by Glencore and its subsidiaries and not by Hughes, cannot be accepted. The attribution of the contents of the Information Memorandum more generally did not change the effect of Hughes participating in the preparation of parts of the Information Memorandum, and then initialling the verification table and having it provided to Merrill Lynch. Further, regardless of the vagueness of the evidence concerning the exact scope of Hughes' role in the preparation of the Information Memorandum, it included verifying the accuracy of specified pages of the Information Memorandum, which conduct of itself amounted to making representations as to the truth and accuracy of what had been verified by him.

4813 In relation to the submissions concerning the events in 2010, including the 10 August 2010 emails[4221] and the disquiet in response to the introduction of the Viterra Code,[4222] it was unclear precisely the link Hughes sought to make. No doubt at that time there was some level of disclosure of practices engaged in with respect to the Joe White Business, but the extent of this disclosure was unclear.[4223] In any event, the limited

---

manufacturing footprint with high operational efficiency and low future capital needs in the short to medium term. This statement appeared on page 4, which page Hughes did not verify. Pages 8 and 21 were also referred to in the Statement of Claim, but only the reference to a "state-of-the-art manufacturing facility" and a chart setting out historical and forecast capital expenditure (without the alleged statement as to the level of investment) appeared on page 8. The remainder of the statement was only on page 4. *Secondly*, statements of the historical and forecast future operational and financial performance of Joe White appeared on pages 42 and 47, which Hughes did not verify. For completeness, the pages that Argent alone verified were 4, 5, 10, 41-43, 45-49 and 51-55.

4220 See par 367 above.

4221 See pars 162-163 above.

4222 See pars 64, 156-164 above.

4223 In circumstances where Hughes himself would have been in a position to elaborate on this issue and chose not to give evidence, the lack of clarity did not advance his submission: see also par 4802 above.

evidence concerning these historical events could not change the proper characterisation of Hughes' verification of the Information Memorandum as a representation that the statements he verified were true and correct.

4814 Further, to elaborate on Hughes' fourth submission, he relied upon the Viterra Parties' allegations concerning the Sale Process Disclaimers. In particular, Hughes highlighted the contention that, by reason of the Sale Process Disclaimers, Cargill was taken to accept that the Information Memorandum did not purport to contain all necessary information to evaluate the transaction, that the Viterra Parties were under no obligation to disclose various matters, and that there were no consequences for non-disclosure. Hughes submitted that in the context of this regime, his comments on the Information Memorandum could not be characterised as a representation that the Information Memorandum Statements were true and correct.

4815 The existence of disclaimers in the regime that existed as between Cargill (and other prospective purchasers) and the Viterra Parties did not materially change the nature of Hughes' verification of the Information Memorandum for Glencore and Viterra. It formed no part of his role in verifying various parts of the Information Memorandum to review what was stated in the Information Memorandum Disclaimers, and there was nothing in the responses sent to Merrill Lynch to suggest that he did. Hughes chose not to give evidence. Even in the highly unlikely event that he carefully read the Information Memorandum Disclaimers before or at the time of engaging in the verification process, the terms of the Information Memorandum Disclaimers did not alter what Hughes agreed to do as between himself and the Viterra Parties, in his role as a senior executive of Viterra Ltd who had agreed to assist Glencore and Viterra in the sale of the shares in Joe White.[4224]

4816 The written instructions given to Hughes clearly required him to confirm the statements in the relevant section were true and correct by ensuring the relevant information was "factual" and "accurate" and by verifying "the accurateness" of each section. This position was confirmed by the verification table itself, which listed

[4224] See pars 373, 1876-1877 above.

Hughes as the "Verification Party" for each section he verified. The absence of further evidence from representatives of Glencore or Viterra could not alter the proper characterisation of Hughes' written verification, nor the effect of its provision to Merrill Lynch.

4817 Finally, the submission regarding the 23 April 2013 email did not take the matter any further. Although neither the email nor the attachment identified who was responsible for each of the suggested changes,[4225] it was sent to Merrill Lynch on behalf of both Hughes and Argent. Merrill Lynch was charged with the responsibility of co-ordinating the verification process so that the Information Memorandum could be finalised. Additionally, as would be expected, Merrill Lynch promptly informed Glencore that the document then under consideration had been verified and signed off by management.[4226] Following this, the remaining steps were taken to finalise and distribute the Information Memorandum. In these circumstances, it was of no moment that no one from the Viterra Parties gave evidence of having received or relied upon Hughes' response. The evidence demonstrated that the verification process was a step that Glencore required to be completed before dissemination of the Information Memorandum could occur.

4818 In conclusion, the Viterra Parties have established that Hughes represented to them that, to the extent that they were verified by Hughes, the statements contained in the Information Memorandum were true and correct. However, Hughes did not verify all of the Information Memorandum Statements. With respect to the historical financial information and various other financial matters that formed part of the Financial and Operational Information, it was clear that primarily Deloitte, Merrill Lynch and King (with the assistance of Argent) were responsible for collating this information and Argent was responsible for verifying it.[4227] Accordingly, although Hughes verified a significant number of pages of the Information Memorandum, the

---

4225 See par 448 above. Further, for this reason these documents did not establish that Hughes or Argent individually were making representations as to the truth or accuracy of the entirety of the Information Memorandum Statements.

4226 An email to this effect was sent to King on 24 April 2013.

4227 See fn 4219 above.

Viterra Parties have not established that Hughes himself represented that all of the Information Memorandum Statements were true and correct.

X.125.2.2 The Financial and Operational Information

4819 The Financial and Operational Information included information disclosed in the Information Memorandum and during the Due Diligence.

X.125.2.2.1 The Viterra Parties' submissions

4820 In the Third Party Claim it was alleged that "Hughes and Argent" provided the Financial and Operational Information by their participation in the preparation and finalisation of the Information Memorandum. It was further alleged that they were responsible for providing, and provided, the Financial and Operational Information to Glencore and Viterra *for disclosure* during the Due Diligence. That is, the particulars of the allegations appeared to be confined to information alleged to have been provided to Glencore and Viterra for the purpose of that information being disclosed by Glencore and Viterra during the Due Diligence. The Viterra Parties submitted that this provision of information during the Due Diligence involved:

(1) Discussions between Bickmore and Argent regarding documents required to be included in the Data Room,[4228] including Bickmore asking Argent if he had spoken with Stewart about documents relevant to fields for which Stewart was responsible,[4229] as well as Argent informing Bickmore that he had "liaised with Hughes in relation to the contents of the Data Room".[4230]

(2) Bickmore's understanding that, in relation to her working list of documents to go into the Data Room, Argent was responsible for co-ordinating document collection within Joe White, and she believed that the documents provided were complete because she trusted that Argent

4228 See par 663 above.

4229 Bickmore's evidence concerning Stewart was of little probative value: see fn 482 above.

4230 In fact, Bickmore's conclusory evidence was that she knew that Argent had discussions with Hughes "and then fed that back to me": see fn 482 above.

would let her know if anything was missing.[4231]

X.125.2.2.2 Hughes' submissions

4821 Broadly, in addition to the submissions made in relation to the Information Memorandum Statements, Hughes submitted that the factual matters relied upon by the Viterra Parties did not establish that Hughes was responsible for providing the Financial and Operational Information for disclosure during the Due Diligence. He contended the Viterra Parties adduced no specific evidence of him providing information in relation to the operational performance of Joe White for disclosure in either the Information Memorandum or during the Due Diligence. Hughes submitted the evidence that was relied upon only went to illustrate his limited role.

X.125.2.2.3 Analysis

4822 Naturally as part of finalising the Information Memorandum, to the extent the statements Hughes verified as accurate were statements that contained the Financial and Operational Information, it must follow that he represented that that information was true and correct. However, there were some deficiencies and limitations with the evidence upon which the Viterra Parties sought to rely in seeking to establish that Hughes represented that *all* the Financial and Operational Information was true and correct.

4823 *First,* to reiterate, significant aspects of the Financial and Operational Information contained in the Information Memorandum were contained on pages that were not verified by Hughes.[4232] Further, to Hughes' knowledge (as it was expressly stated on the verification table that Hughes initialled repeatedly), Argent was given the specific responsibility to verify some of the Information Memorandum Statements. Thus, by reason of the level of dependence placed on Argent in preparing the Information

---

4231 Part of Bickmore's evidence on this issue was limited under the *Evidence Act*, s 136, to her state of mind rather than being evidence of the truth of the fact. See also pars 663-667 above.

4232 The pleaded statements of the historical and forecast future operational and financial performance of Joe White alleged in the Statement of Claim, and as repeated by the Viterra Parties in their Third Party Statement of Claim, were extracted from pages 42 and 47 of the Information Memorandum, neither of which were verified by Hughes. For completeness, with respect to most pages in the Information Memorandum that would fall under the description of financial performance, these were verified by Argent and not by Hughes: see fn 4219 above.

Memorandum, including Argent's role in the verification process, Hughes made no representation that the information verified by Argent alone was true and correct.[4233]

4824 *Secondly,* the Statement of Claim identified the Financial and Operational Information as including all financial and operational information disclosed during the Due Diligence. This necessarily included the financial and operational information disclosed in the Management Presentation, the Operations Call and the Commercial Call. On each of these occasions, Merrill Lynch was present. In substance, with some minor exceptions in relation to the Operations Call,[4234] the allegations concerning various statements having been made on these occasions have been established. Further, with the exception of the financial information presented by Argent at the Management Presentation, Hughes either made or was effectively responsible for the making of each relevant representation. To that extent, but not otherwise, Hughes represented to the Viterra Parties that those aspects of the Financial and Operational Information were true and correct.[4235]

4825 *Thirdly,* in relation to the Financial and Operational Information disclosed in the Data Room, the Viterra Parties relied on evidence that Argent told Bickmore that he had "liaised with Hughes in relation to the contents of the Data Room".[4236] The suggestion that Hughes "liaised" with Argent fell significantly short of establishing a representation by Hughes that the Financial and Operational Information, disclosed by inclusion of documents in the Data Room, was true and correct. When the vagueness of this submission was raised in closing submissions, the Viterra Parties submitted the evidence suggested Hughes was accepting some responsibility for the contents of the Data Room, or "perhaps" some responsibility was being thrust upon him. It was then acknowledged the matter could not be taken any further than what the evidence said, noting that neither Hughes nor Argent was called as a witness. Further, the evidence of Bickmore on a number of issues (including this matter) was vague and self-serving. Many of the conclusory statements she made about what

4233 See par 4810 above.
4234 See pars 2155-2156 above.
4235 See par 4847, 4862 below.
4236 See par 4820(1) above.

allegedly had occurred more than 5 years before she gave her evidence, often without the benefit of contemporaneous documents to corroborate her account, were of limited probative value. Furthermore, there was no evidence to indicate that before 4 August 2013 Hughes was ever told what was or was not in the Data Room.

4826 In conclusion, the Viterra Parties have not established that Hughes represented that *all* the Financial and Operational Information was true and correct. However, given the variable way in which the issue was defined, the Viterra Parties have proven that Hughes represented some of the Financial and Operational Information was true and correct through the representations Hughes made to the effect outlined above and below.[4237]

4827 Before leaving this particular topic, it must be noted that it has been determined on a basis which perhaps went beyond the manner in which the allegations were particularised by the Viterra Parties. As noted above,[4238] the Third Party Claim appeared to confine the allegations concerning what occurred during the Due Diligence to the provision of information for disclosure. Consistent with this, the Viterra Parties' submissions only addressed matters in connection with information that was collated for the purposes of the Data Room. The same position was adopted by Hughes. If this more narrow understanding of the issue had been adopted, then the only manner in which it could have been found that Hughes represented that the Financial and Operational Information was true and correct would have been to the extent that Hughes was engaged in verifying the Information Memorandum. In short, there was no basis to find Hughes assumed, or was given, any responsibility by the Viterra Parties for the appropriateness or completeness of the contents of the Data Room.

4237 That is, the Financial and Operational Information was represented to be true and correct by reason of Hughes making the Information Memorandum Statements (to the extent that he did: see par 4818 above), the Operational Call Statements (to the extent that he did: see par 4824 above and par 4838 below), the Commercial Call Statements (see par 4824 above and par 4846 below) and the Management Presentation Statements (to the extent that he did: see par 4824 and pars 4864, 4866 below), but not otherwise.

4238 See par 4820 above.

4828 However, I decided it was appropriate to determine this issue on the broader basis set out above. The meaning of "Financial and Operational Information" in the Statement of Claim, and accordingly adopted in the substantive allegations made in the Third Party Claim,[4239] was not confined to matters related to the compilation of the Data Room. This was not only how the issue was pleaded, but also how the case was run more generally.[4240] As may be seen from the determination of related issues below, ultimately nothing turned on this broader approach being adopted.

X.125.2.3 The Operations Call Statements

4829 The circumstances and content of the Operations Call have been described elsewhere.[4241] It has been established that all but 2 of the statements were made by Hughes or Youil, or both.[4242] That is, it has not been proven that some statements as pleaded were expressly made, namely that "Joe White's plants were sufficient to produce malt to customer specifications", and that in substance after 2 additional storage silos in Sydney had been built there would be sufficient storage at that plant. Otherwise, the allegations concerning the Operations Call have been made out.[4243]

4830 In addition to Hughes and Youil, the Operations Call was attended by Goldman Sachs, Merrill Lynch and De Samblanx. The questions raised were answered by Hughes or Youil, or both.[4244] Hughes and Youil were asked to provide comments on a summary of the call. Hughes confirmed that he was happy with Youil's comments on the summary. The summary was attached to the Acquisition Agreement as annexure E.

X.125.2.3.1 The Viterra Parties' submissions

4831 To establish that Hughes made the representation that the Operations Call Statements were true and correct, the Viterra Parties submitted that, if the statements in the Operations Call were made, they were made by Hughes or Youil, or both. Further, they pointed to Hughes having expressed agreement with the contents of the

---

4239 See pars 4791-4796 above and par 5117 below.
4240 See, for example, pars 3541, 3552, 3564, 4824 above.
4241 See pars 865-884 above. See also issue 2 above.
4242 See pars 2151, 2155-2156 above. See also par 4889 below.
4243 See par 2156 above.
4244 See par 873 above.

summary.

X.125.2.3.2 Hughes' submissions

4832 Hughes submitted that his act of confirming that he was happy with the summary did not constitute a representation that the Operations Call Statements were true and correct. *First*, Hughes repeated his submission that the disclaimers made by Glencore and Viterra to Cargill meant it was inconsistent for the Viterra Parties to argue they received unqualified representations from Hughes. *Secondly*, Hughes referred to that fact that he was instructed by Glencore not to provide information that had not been requested or to answer questions that had not been asked. *Thirdly*, Hughes submitted that there was no evidence that he was informed that the notes of the Operations Call would be annexed to the Acquisition Agreement or fall within the definition of "Disclosure Material", or that comments in relation to the accuracy of the notes would be a "verification" of the process. *Fourthly*, Hughes submitted that statements he made during the Operations Call were relevantly communicated only to De Samblanx, and that the representatives of the Viterra Parties (being Merrill Lynch) present on the call did not give evidence. *Fifthly*, Hughes submitted that no evidence was adduced by the Viterra Parties in relation to how they understood or relied on any representation.

X.125.2.3.3 Analysis

4833 It is highly likely that Hughes made each of the statements found to have been made on the Operations Call given that he spoke for 90 to 95 percent of the time.[4245] However, what Hughes himself actually said was not the subject of any evidence. Strictly on the confined question of whether or not Hughes made the representations as alleged, this was of little significance as Hughes reviewed and agreed to the entire contents of the summary.[4246]

4834 The Operations Call occurred between representatives of the Sellers and a potential purchaser in the context of the sale process. In the absence of any instruction to the

---

4245 The pleaded statements did not amount to the entirety of what was said on the Operations Call. Therefore, logically it must follow that, although Hughes spoke for 90 to 95 percent of the time, this did not necessarily reflect the precise proportion of the pleaded statements that were made by Hughes.

4246 See pars 4836-4838 below.

contrary, it was implicit in Hughes' instruction to participate in the Operations Call that he should provide information that was true and correct for the following reasons. *First*, Glencore and Viterra were engaged in a substantial commercial sale in providing information to Cargill. *Secondly*, the Operations Call was part of a due diligence by which a potential purchaser was seeking information in order to determine whether to make a significant investment. *Thirdly*, it was a relatively formal process to be conducted in accordance with an agenda, with Merrill Lynch and Goldman Sachs in attendance. *Fourthly*, the process was being managed by Merrill Lynch and King, and there was no indication that either Merrill Lynch or King was intending to provide information to Cargill that was untrue or inaccurate.

4835 Hughes' submission in relation to the disclaimers must be rejected for the reasons discussed above.[4247] Further, Hughes was correct that he was instructed not to provide information that had not been requested in the Q&A Process.[4248] However, this did not carry with it any basis for providing anything other than accurate information; nor did it impact on whether the information that was provided in response to questions asked was true and correct, or whether Hughes represented that this was so. Equally, an express understanding that Hughes and Youil were not to stray from the message Glencore sought to deliver did not convey to Hughes that he was required or permitted to provide information that was not true or accurate.[4249]

4836 In relation to Hughes providing comments on the summary of the Operations Call, both Hughes and Youil were provided with the draft summary and asked to let Merrill Lynch know if they had any comments, in particular in relation to certain highlighted items. Youil responded with an updated version, stating that he had made "some clarifications". Youil specifically asked Hughes whether he had anything to add to Youil's clarifications. Hughes confirmed it was "all good" and he was happy with Youil's comments. The final version of the summary of the Operations Call reflected Youil's amendments as approved by Hughes.

4247 See par 4812 above.
4248 See par 943 above.
4249 See par 872 above.

4837 In essence, Hughes' and Youil's review of the summary was directed towards ensuring the statements it contained were true and correct. This was demonstrated by Youil's comments, which added further detail, made amendments that changed the meaning of the statements and made amendments to the information that had been included. As a result, Youil's comments went further than merely ensuring the summary was an accurate record of what was said. This was demonstrated by the following examples:

(1) A comment left by Youil expressly stated, "This is true".

(2) In relation to Perth, Youil amended a statement that "all blending and storage" would occur at Co-Operative Bulk to state that "the majority of blending" would occur at Joe White and then provided further explanation in relation to blending and packing.

(3) In the draft notes there was a statement that "Sydney – currently in the process of building additional storage silos to increase capacity to over 3kt". This conveyed that storage at the Minto plant was currently less than 3000 metric tonnes. Youil amended this, adding a comment that "actual storage in Minto is 3600 metric tonnes of malt" and stating that storage would be increased to 4,800 tonnes.

4838 Thus, in considering the circumstances as a whole, it has been established that Hughes represented the Operations Call Statements were true and correct (in relation to the Operations Call Statements that Cargill was able to prove were made). Further, in this context, the review and approval with amendments of the summary by Hughes and Youil, and its provision to Merrill Lynch, amounted to a representation not only of what was said during the Operations Call, but also that those statements contained in the summary were true and correct.

4839 All of this said, a further matter must be considered in light of the next issue concerning whether any of the Joe White Executives' Representations were made in

trade or commerce.[4250] In circumstances where Hughes spoke on the Operations Call for 90 to 95 percent of the time, it must be more probable than not that he made each of the Operations Call Statements orally during the Operations Call.[4251] In the context that they were made, for the reasons set out above, Hughes represented both orally and in writing that the Operations Call Statements (to the extent proved) were true and correct.

X.125.2.4 The Commercial Call Statements

4840 The circumstances and content of the Commercial Call are described above.[4252] The Commercial Call was between Hughes, Eden, Viers (and perhaps Engle) and representatives of Merrill Lynch and Goldman Sachs. The Commercial Call Statements were made by Hughes.[4253] Hughes reviewed the minutes of the Commercial Call.

X.125.2.4.1 The Viterra Parties' submissions

4841 The Viterra Parties made brief submissions noting that if the Commercial Call Statements were made in the Commercial Call, they were made by Hughes, and also pointed to Hughes' review of the minutes of the Commercial Call.

X.125.2.4.2 Hughes' submissions

4842 Hughes submitted that he did not represent to the Viterra Parties that the Commercial Call Statements were true and correct. Hughes referred to a number of his submissions in relation to the Operations Call. It is unnecessary to repeat them.

X.125.2.4.3 Analysis

4843 The Commercial Call, like the Operations Call, occurred between representatives of the Sellers and a potential purchaser as part of a sale process. The context of the Commercial Call was materially similar to that of the Operations Call. Therefore, for the reasons stated concerning the Operations Call, the statements made by Hughes in the Commercial Call amounted to a representation to Glencore and Viterra, through

---

4250 See issue 126 below.

4251 Even accepting the possibility that Youil may have made 1 or more of the Operations Call Statements, it was more probable than not that Hughes made each of them. In any event, by Hughes allowing any such statement to be made by someone who answered to him and not correcting Youil but continuing with his responses, if that was what occurred, Hughes would have effectively made the statement.

4252 See pars 910-915 above.

4253 See pars 910-914 and issue 3 above.

their adviser Merrill Lynch, that the Commercial Call Statements were true and correct.

4844 Whether or not Hughes himself made the amendments that were made to the summary (the evidence was not clear on this), the review by Hughes of the summary of the Commercial Call amounted to a representation that the statements made in the call were true and correct. The following factors were relevant:

(1) The summary of the Commercial Call was for the purpose of being provided to Merrill Lynch.

(2) The review involved changes to the factual accuracy of the statements, for example, a statement regarding a $25 per tonne margin was changed to a range of $20 to $25 per tonne.

(3) The meaning of some statements was changed, for example, a line that said "Australian Malt commands a price premium…" was replaced with "Efficiencies in the Australian Malt production allow for margin premiums".

4845 While it was possible that such amendments were made merely to reflect accurately what was said, in the overall context of the Due Diligence, it suggested the review was a more meaningful process. In my view, it was relevant that Hughes participated not only in settling this summary, but it was part of a process in which he also gave and conveyed approval of the statements in the Operations Call in the manner that he did.[4254]

4846 Thus, the Commercial Call Statements conveyed both during Hughes' participation in, and by his review and approval to amendments of the summary of, the Commercial Call amounted to representations that the Commercial Call Statements made were true and correct.

4254 See par 4837 above.

X.125.2.5 The Management Presentation Statements

4847 The circumstances of the Management Presentation Statements are described above.[4255] All but 1 of the Management Presentation Statements were recorded in the Management Presentation Memorandum.[4256] The evidence of De Samblanx has been accepted that Hughes made the remaining statement; words to the effect that "whilst Joe White had limited storage capacity, Joe White managed their customers well, and there were no real quality issues".[4257]

4848 In substance, insofar as it related to Hughes, this issue has been addressed in dealing with the allegations concerning the Financial and Operational Information above.[4258] However, as the issues raised were dealt with separately by the parties, the additional submissions on this topic are addressed here.

X.125.2.5.1 The Viterra Parties' submissions

4849 The Viterra Parties submitted that there was overlap in the content of the Management Presentation Statements and the content of the Information Memorandum Statements, and relied on their submissions in respect of the Information Memorandum to the extent of the overlap. The Viterra Parties made a number of further submissions.

4850 *First*, the Viterra Parties submitted that Hughes and Argent were "intimately involved" in making the Management Presentation Statements and in doing so represented to the Viterra Parties that they were true and correct. In seeking to establish this proposition, the Viterra Parties identified a series of 8 emails of which Hughes and Argent were recipients, and in which some of Hughes' and Argent's involvement was evidenced.

4851 *Secondly*, the Viterra Parties pointed to King's evidence that in selling any business it is the management team of the business who are ultimately familiar with the business, and a management presentation is an opportunity for them to convey messages about the business.

4255 See pars 708, 742 above.
4256 See par 2168 above.
4257 See pars 2169-2171 above.
4258 See par 4824 above.

4852 *Thirdly*, the Viterra Parties submitted that the drafting of the Management Presentation Memorandum was run by Merrill Lynch working with Hughes and Argent and contended that Hughes and Argent controlled the content of the slides.

4853 *Fourthly*, the Viterra Parties submitted the Management Presentation was given by Joe White alone. They submitted that Hughes and Argent gave the presentation in the capacity of Joe White management representatives, giving a formal presentation around the Management Presentation Memorandum. They further submitted that "[n]o one from the [Viterra Parties] attended the Management Presentation".

4854 *Fifthly*, the Viterra Parties submitted that Merrill Lynch prepared the summary in consultation with Hughes and Argent, which formed part of the Disclosure Material for the purposes of the Acquisition Agreement.

X.125.2.5.2 Hughes' submissions

4855 Hughes referred to his submissions in relation to the Information Memorandum Statements. In addition, he pointed to a number of further matters.

4856 *First*, he submitted the evidence demonstrated that persons from within the Viterra Parties and their advisers were primarily responsible for preparation of the Management Presentation Memorandum.

4857 *Secondly*, Hughes contended that King accepted that it was Glencore and Merrill Lynch who controlled the direction of the Management Presentation, including that Hughes and Argent had to convey Glencore's messages.

4858 *Thirdly*, it was submitted that, in the slides comprising the Management Presentation Memorandum, it was expressly stated to be a document prepared by Glencore and its subsidiaries and was not a document of Hughes' creation.

4859 *Fourthly*, Hughes submitted that anything said during the Management Presentation was communicated by Hughes or Argent, or both, on behalf of the Viterra Parties to Cargill, and the representatives of the Viterra Parties who attended the Management Presentation (being Merrill Lynch employees) did not give evidence.

4860 *Fifthly*, notes of the Management Presentation were sent by Merrill Lynch to Mallesons (copied to people including Fitzgerald, Hughes and Argent) and the Viterra Parties adduced no evidence in relation to reliance by any person on these notes.

4861 *Sixthly*, in the same vein as the Operations Call submissions, it was submitted there was no evidence Hughes was informed the notes of the Management Presentation would be annexed to the Acquisition Agreement or fall within the definition of "Disclosure Material" in the Acquisition Agreement. Equally, it was put that Hughes was not told any comments in relation to the amendments or accuracy of those notes would be "verification" of the process in which he had been directed to participate.

X.125.2.5.3 Analysis

4862 In relation to the contents of the Management Presentation Memorandum, the process adopted for the drafting was significant.[4259] Some of the contents of the Management Presentation Memorandum were a repetition or an expansion of what had already been stated in the Information Memorandum, which statements had been verified in large part by Hughes or Argent, or both. Further, notwithstanding the initial drafting by Merrill Lynch and then the supervisory and controlling role played by the Viterra Parties and their advisers in producing the Management Presentation Memorandum,[4260] Hughes also played a role. There was no evidence to suggest that he did anything other than generally endorse its contents. However, none of the emails relied upon by the Viterra Parties specifically stated that Hughes was taking responsibility for everything that was said. On the contrary, an email sent by Merrill Lynch on 21 June 2013 specifically identified that it was Argent that was expected to address risk management, a topic that was ultimately presented by Argent and not Hughes.

4863 Conversely, all of the Management Presentation Statements other than those concerning risk management were addressed by Hughes as part of the Management Presentation. In doing so, Hughes, as an employee of Viterra Ltd who had agreed to

4259 See pars 696-697 above.

4260 Similar to the position with respect to the Information Memorandum: see, for example, par 399 above.

assist with the sale of the shares in Joe White, represented to Glencore and Viterra, both initially through King (and perhaps Mattiske),[4261] and through their advisers Merrill Lynch, that the Management Presentation Statements within the area Hughes agreed to present (being statements other than those which Argent presented in the "Financials" section)[4262] were true and correct. Further, what it was that Hughes was and was not representing needed to understood through the prism of how things had been approached in presenting the Joe White Business. There was a clear demarcation between information to be addressed by Hughes (either on his own or together with Argent) and that covered solely by Argent. The manner in which the information contained in the Information Memorandum had been dealt with previously, and the manner in which the Management Presentation was conducted under the supervision of Glencore, demonstrated that the Viterra Parties were looking to Argent, and not to Hughes, to make certain representations in relation to a number of the financial and other matters pertaining to the Joe White Business.

4864 Furthermore, to the extent Hughes was given responsibility for statements made, it was not only Hughes' involvement in the preparation of the document that became the Management Presentation Memorandum that gave rise to the representations being made.[4263] By speaking to the slides when delivering the Management Presentation in the presence of Merrill Lynch, Hughes further represented not only to Cargill but also to the Viterra Parties that the Management Presentation Statements within the area that it had been agreed he would take responsibility for and would present were true and correct.

4865 Similar to the position in relation to the Operations Call and the Commercial Call, it did not matter that Hughes may not have understood the Merrill Lynch summary of what had been presented was intended to be verified or was to form part of the

---

4261 See par 699 above. Essentially, this was done by Hughes participating in the rehearsals preceding the Management Presentation by which Hughes indicated his agreement to present those parts of the Management Presentation Memorandum for which he was responsible in the manner that he did.

4262 See pars 728, 733 above.

4263 Although the evidence on this was far from certain, it was highly likely that Hughes indicated to those present at the rehearsals by what he rehearsed that he would in substance convey what was in the relevant parts of the Management Presentation Memorandum. However, any uncertainty in this regard did not enure in light of what occurred at the Management Presentation itself.

Disclosure Material. To establish that representations were made by Hughes to the Viterra Parties in relation to the Management Presentation, it sufficed that a management presentation was part of the sale process and that Hughes (as someone who had agreed to assist Glencore and his employer, Viterra Ltd, in the sale) had agreed to the operational and some financial aspects of the Management Presentation Memorandum, and then gave a presentation in accordance with the substance of its terms.

4866 The oral statement not contained in the Management Presentation Memorandum was made by Hughes in response to a question during the Management Presentation.[4264] The Management Presentation, like the Operations Call and Commercial Call, occurred between representatives of the Sellers and a potential purchaser in the context of the sale process. The position was the same as that for Hughes' statements made in the Operations Call and Commercial Call, namely, the making of this further statement constituted a representation by Hughes to Glencore and Viterra, through their adviser Merrill Lynch, that it was true and correct.

4867 In conclusion, although Hughes made most of the statements covered by this issue, the Viterra Parties have not established Hughes made them all or that he verified them all (as some were made and verified by Argent) and accordingly have not proven he represented the Management Presentation Statements were true and correct.

X.125.2.6 The Undisclosed Matters

X.125.2.6.1 The Viterra Parties' submissions

4868 The Viterra Parties submitted that the Third Party Individuals, including Hughes, represented that the Undisclosed Matters did not exist, based on the following:

(1) The Third Party Individuals did not disclose to the Viterra Parties the Undisclosed Matters in circumstances where there was a reasonable expectation that they would do so.

(2) The circumstances of the verification of the statements in the

4264 See pars 737, 2169-2171, 4847 above.

Information Memorandum, the Financial and Operational Information, the Operations Call, the Commercial Call, the Management Presentation and of the verification of the Warranties were opportunities to convey the existence of the Undisclosed Matters.

(3) Based on the evidence, the Viterra Parties did not know about the existence of the Undisclosed Matters prior to entry into the Acquisition Agreement and the Third Party Individuals had superior knowledge about Joe White's engagement in the Viterra Practices.

X.125.2.6.2 Hughes' submissions

4869 Hughes submitted that a failure to disclose would only give rise to an inference that a fact did not exist if there was a reasonable expectation that if the fact existed it would have been disclosed.[4265] Hughes submitted that this required the Viterra Parties to identify the circumstances that gave rise to a reasonable expectation to disclose.

4870 Hughes submitted that the definition of Undisclosed Matters involved a very broad concept, as it incorporated "routinely". In relation to the allegation that, but for the Viterra Practices Joe White could not produce malt in the volumes and to the specifications required by customers, Hughes referred to the matters disclosed in 2010 to Gordon.[4266] In addition, Hughes relied upon Argent revealing to King on 2 July 2013 that the use of off-grade barley contributed to a component of the malt margin, and that such use was not disclosed to customers.[4267]

4871 In relation to the further allegation that, but for the Viterra Practices Joe White could not produce and sell malt in the volumes and for the returns reflected in the Financial and Operational Information, Hughes submitted that it did not follow from what Hughes disclosed in October 2013 that he must have known of the relevant matters before 4 August 2013. Further, it was submitted there was no reason for Hughes to disclose Joe White's processes when the evidence of what was said in October 2013

4265 See, for example, *Demagogue Pty Ltd v Ramensky* (1993) 39 FCR 31, 32.3 (Black CJ); *Kimberley NZI Finance Ltd v Torero Pty Ltd* (1989) ATPR (Digest) 46-054, 53,195.5 col 1 (French J).

4266 See pars 162-163 above.

4267 See pars 804-805 above.

indicated he believed that Joe White's processes were robust and better than Cargill's theoretical blend approach. Furthermore, Hughes queried why he would have disclosed the Viterra Policies to Viterra when they had been uploaded on Pulse and when he thought it was a sensible process. Insofar as the Reporting Practice contemplated malt being shipped to customers even when results for specifications went beyond 2 standard deviations without disclosing that fact to the customer, Hughes' senior counsel put the question rhetorically, "What is Mr Hughes' involvement in that?". Further, it was submitted that there were only 2 relevant documents signed by Hughes over thousands of contracts, with no explanation as to how supplying malt out of specification would offend a customer's sensibility to the extent a result was more than 2 standard deviations from the specification.

4872 In addition, Hughes referred to that fact that in 2013 he was no longer a board member of Viterra and to his limited role in the sale process. He submitted that he could not have known what had gone on in the broader milieu between Glencore and Cargill when the alleged time for non-disclosure came up. He also contended that he was not told that something that he had disclosed to his employer had not been disclosed to Cargill.

4873 More generally, Hughes pointed out that it was an "all or nothing case on non-disclosure".[4268] Hughes contended that it had to be shown that his state of mind was "all of paragraph 19" of the Statement of Claim, and that if he did not know all of the items pleaded then the case against him was bound to fail. He also referred to the Viterra Parties' submission that the time of the Warranty verification process "in particular" was when Hughes should have disclosed the Undisclosed Matters. In this regard, it was submitted that accordingly this was when it was alleged any disclosure should have occurred.

X.125.2.6.3 Analysis

4874 In considering this issue, the level of disclosure Hughes (or others to his knowledge)

4268 See pars 4791-4796 above.

had previously made to his superiors at Viterra was relevant. As already discussed,[4269] the evidence in relation to the events in 2010 was far from clear. It was of particular significance that the email Gordon sent seeking advice after being informed by Hughes of his version of the issue at the time stated that he understood the malt being delivered was in specification.[4270] In the absence of any evidence from Hughes, it can only be assumed that Hughes either misrepresented the position or, at best, explained it in such a manner that the true nature of the Operational Practices was not exposed in a way that enabled Gordon to properly appreciate the conduct involved.

4875 Further, reliance upon what Argent disclosed to King and others in early July 2013 concerning the undisclosed use of off-grade barley did not assist Hughes' submission that the Undisclosed Matters had been communicated to Glencore and Viterra. As a matter of definition, the Undisclosed Matters did not expressly include non-disclosure in relation to off-grade barley.[4271] As a matter of fact, the use of off-grade barley was disclosed.[4272] In any event, by revealing this information about the use of off-grade barley, Argent did not disclose to King that customer specifications were not being met or that customer contracts were not being complied with. (For the avoidance of doubt, there was no evidence to suggest Argent ever knew of such matters.)

4876 Furthermore, to the extent that Hughes' submissions invited a finding that Hughes was not aware, or not fully aware, of the existence of the Viterra Practices, they must be rejected. Stewart's evidence, regarding both when he first joined Joe White and subsequently,[4273] made it clear Hughes was very conscious of the nature of the conduct involved in the Reporting Practice. Additionally, Hughes' submission that the fact that the Viterra Policies were available on Pulse provided a legitimate reason for not disclosing the Viterra Policies appeared to run counter to any suggestion about any lack of knowledge on his part of the Reporting Practice. Also, contrary to Hughes'

4269 See par 4813 above.
4270 See par 156 above.
4271 See par 1851 above.
4272 See par 926 above.
4273 See pars 73, 168 above.

submission, when the events of October 2013 were viewed in their totality, there could be little doubt that Hughes had a complete understanding of the substance of each of the elements of the Viterra Practices.[4274]

4877 Moreover, Hughes was fully appreciative that Mattiske, who became a director of Joe White and Viterra in December 2012, was not across the details of the Viterra Practices.[4275] He must have had the same appreciation with respect to King, who had no background in malting. Equally, there was nothing to suggest that the other more senior Glencore executives could have had any real understanding of the way in which Joe White operated; in particular, that it engaged in the Viterra Practices.

4878 To put things in context, Hughes must have understood that the Viterra Practices involved seriously inappropriate conduct. Leaving aside the remote possibility that he might have held any (misguided) view that the Reporting Practice could have been justified,[4276] the events of October 2013 starkly exposed Hughes' appreciation that the concealment from customers of the Varieties Practice and the Gibberellic Acid Practice was entirely unsatisfactory, as was the fact. Thus, given the lack of knowledge of the relevant facts by Glencore and Viterra (obviously not including Hughes and some of those Viterra Ltd employees that worked underneath him), objectively, at the very least,[4277] the circumstances gave rise to a reasonable expectation that the Operational Practices would be disclosed to Mattiske and others representing Glencore and

---

4274 See, for example, pars 1211-1218, 1279-1288 above. In Hughes' defence, it was pleaded that he was unaware of the full extent of the Viterra Practices. Such an allegation was likely to have been accurate insofar as it seems highly unlikely he could have been aware of every instance when steps were taken in accordance with the Viterra Practices (it is not possible to say so with complete certainty given Hughes did not give evidence). However, any such a lack of knowledge did not alter Hughes' general awareness of the existence of the Viterra Practices, including their routine implementation.

4275 See, for example, par 1281 above in relation to the Varieties Practice. Also the manner in which Hughes reacted to the Cargill 22 October Letter demonstrated that Hughes was conscious that Mattiske was not aware of the Operational Practices. Finally, in Mattiske's cross-examination by Hughes' senior counsel, it was not put to Mattiske that Hughes had ever told Mattiske about the Operational Practices before 22 October 2013.

4276 Although Hughes (like Stewart) sought to justify it in October 2013, it is difficult to perceive objectively how he would have done anything other than make substantially the same sort of concessions that Stewart did: see, for example, pars 168-176 above.

4277 Compare *Miller & Associates Insurance Broking Pty Ltd v BMW Australia Finance Ltd* (2010) 241 CLR 357, 371 [23] (French CJ and Kiefel J).

Viterra.[4278] Such an expectation required disclosure in such a manner so as to properly expose the nature and extent of the existence and implementation of the Operational Practices; that is, that the Viterra Practices were an ongoing part of the operations of the Joe White Business.

4879 In addition, Hughes must have been aware that the Information Memorandum, the contents of which he had assisted in drafting and had been asked to verify substantial parts of, contained patently false statements such as:[4279] (1) Joe White had the ability to produce to a customer's exact specifications; (2) Joe White's business model was focused on delivering high quality products adhering to specific customer requirements; (3) Joe White's business model was focused on ensuring its customers received the highest quality malt to meet their exact specifications and requirements; and (4) once a customer's specific needs had been identified, the procurement function ensured that the appropriate quantity of malting barley was acquired to meet these specifications. In such circumstances, it was incumbent on Hughes to point out these falsehoods, at least at the time of the verification (if not earlier) and before any distribution of the Information Memorandum by the Viterra Parties. Subject to the events being later in time, the same applied to the Management Presentation Statements, at least insofar as they consisted of patently material incorrect information, such as:[4280] (1) Joe White's business model was focused on ensuring customers received the highest quality malt to meet their exact specifications and requirements; (2) in relation to procurement, Joe White selected and had access to high-quality barley that best met customer specifications; and (3) Joe White had a reputation for production uniformity, consistency and the ability to meet exact specifications.[4281]

4880 Whatever Hughes' lack of knowledge of the "broader milieu", he must have known

---

4278 This conclusion is expressed on the assumption that the rubric of the Australian Consumer Law applied (see further issue 126 below) and is entirely consistent with the terms of the Hughes/Viterra Contract: see issue 136 below.

4279 Hughes verified each of the statements set out in these examples.

4280 Each of these examples were Management Presentation Statements that Hughes presented orally at the Management Presentation.

4281 Even if it might have been thought that Joe White did in fact have such a reputation, Hughes must have known that such a reputation was based upon deceiving customers by means of the Viterra Practices.

(without being exhaustive) all of these statements materially misrepresented the operations of a business that engaged in the Viterra Practices.

4881 The consequence of this ongoing failure of disclosure by Hughes during the sale process was that before the Acquisition Agreement was entered into, Hughes represented to Glencore and Viterra that each of the Undisclosed Matters did not exist. Although Hughes did not verify every aspect of the Information Memorandum or present every component of the Management Presentation Memorandum, what he did positively represent by his endorsement of key parts of the majority of each of those documents was that: (1) the Viterra Practices and Policies did not exist; (2) the Financial and Operational Information was not substantially underpinned by supplying malt in accordance with the Viterra Practices and Policies when specifications did not comply with customer contracts; and (3) Joe White could produce and sell malt in the volumes and to the specifications required by customers, and in the volumes and for the returns reflected in the Financial and Operational Information. This necessarily followed from the numerous statements contained in the Information Memorandum and the Management Presentation Memorandum as to, speaking broadly, the ability of Joe White to perform satisfactorily and to meet the exact specifications and requirements of its customers. These statements ran entirely counter to the non-disclosure to customers of the existence of the Viterra Practices and Policies, and to the Joe White Business being underpinned by routine conduct of misrepresenting malt as complying with customer specifications when it did not.

4882 Although it was correct for Hughes to submit that this part of the case was "all or nothing" with respect to non-disclosure, that meant no more than the Viterra Parties were required to prove Hughes failed to disclose each element of the Undisclosed Matters pleaded in paragraph 19 of the Statement of Claim when there was a reasonable expectation that he would do so. Further, contrary to Hughes' submission, the case against him was not confined to the time of the Warranty verification process. The particulars to the representation that the Undisclosed Matters did not exist (and the existence of a reasonable expectation of disclosure in that context) traversed all

aspects of Hughes' involvement, including participation in the preparation of the Information Memorandum, and its verification. Thus, at the risk of being repetitious, the Viterra Parties needed to prove that Hughes did not disclose: (1) in the preparation and verification of the Information Memorandum or during the Due Diligence, the implementation of the Viterra Practices and existence of the Viterra Policies; (2) the Financial and Operational Information was substantially underpinned by the Viterra Practices and the Viterra Policies; and (3) Joe White could not produce and sell malt in the volumes and to the specifications required by customers, and in the volumes and for the returns reflected in the Financial and Operational Information. For the reasons stated, as against Hughes each of these matters and the reasonable expectation of disclosure has been established.

X.125.2.7 Warranties

4883 On the basis upon which the case was pleaded, unless the Viterra Parties established Hughes verified the Warranties as being true and correct, then the allegations could not be made out.[4282] For reasons discussed below,[4283] it has not been established that Hughes represented that any of the Warranties he was asked to verify were true and correct. Accordingly, this issue need not be considered further at this point.

X.125.2.8 Conclusion as to representations made by Hughes

4884 In conclusion, the Viterra Parties have established that Hughes made representations that the following were true and correct:[4284]

(1) The Financial and Operational Information he conveyed (not being all the information potentially encompassed by that term as defined).[4285]

(2) The Operations Call Statements (as found to have been made).

4282 In other words, there was no alternative allegation that, even if the Warranties were not verified as alleged, the circumstances relating to when the Warranties were discussed with Hughes were such that disclosure of the relevant matters should have occurred.

4283 See issue 125.6 below.

4284 For the reasons stated, it has not been established that, as alleged, Hughes made all the Information Memorandum Statements or all the Management Presentation Statements.

4285 That is, the information represented by reason of the Information Memorandum Statements he verified, the Management Presentation Statements he made, the Operations Call Statements found to have been made and the Commercial Call Statements.

(3) The Commercial Call Statements.

(4) The Undisclosed Matters did not exist.

X.125.3 Youil

X.125.3.1 Operations Call

4885 The details of the Operations Call Statements are outlined above.[4286] For the reasons that follow, it has been established that Youil represented to Glencore and Viterra that the Operations Call Statements, to the extent that they have been found to have been made, were true and correct.[4287] However, it has only been so established because of the events that occurred after the Operations Call. In other words, it has not been proven that Youil actually made any oral statements on the Operations Call to the effect that any of the Operations Call Statements were true and correct.

X.125.3.1.1 The Viterra Parties' submissions

4886 The Viterra Parties submitted that, if the Operations Call Statements were made, they were made by Hughes or Youil, or both, and in the making of the statements they represented that they were true and correct. Further, it was submitted that Youil, along with Hughes, reviewed and confirmed his agreement with a draft of the summary prepared by Merrill Lynch of the Operations Call, which was placed in the Data Room and included in Annexure E to the Acquisition Agreement.

X.125.3.1.2 Youil's submissions

4887 *First*, Youil submitted that based on De Samblanx's evidence that Youil only spoke 5 to 10 percent of the Operations Call, the Viterra Parties failed to discern between statements made by Hughes and Youil and, consequently, failed to establish that Youil made any of the statements.

4888 *Secondly,* Youil submitted that the Operations Call was in the context of Hughes and Youil acting as representatives of Viterra in the telephone conference with De Samblanx, and that the summary uploaded to the Data Room was only accessed by

---

4286 See issue 2 above.

4287 See also par 4838 above.

Engle.[4288] Therefore, it was submitted, anything stated during the Operations Call was represented to Cargill, not to Viterra. Youil submitted that aside from Hughes and himself, Viterra was not privy to the Operations Call or the summary of the Operations Call. It was submitted that the Viterra Parties' particulars were vague in claiming that the representations were made to "officers, employees and agents of Glencore and Viterra" involved in various processes. Accordingly, it was submitted that Youil did not represent to Viterra that the Operations Call Statements were true and correct.

X.125.3.1.3 Analysis

4889 In relation to the making of the statements in the Operations Call, Youil spoke only 5 to 10 percent of the time.[4289] Although it was clear that Youil did make some statements, what Youil himself actually said was not the subject of any evidence.[4290] Accordingly, the Viterra Parties did not establish that Youil made any of the representations during the Operations Call.

4890 However, with regard to the review of the summary of the Operations Call, for the reasons outlined above,[4291] the review of, agreement with and provision of the summary by Youil represented to Glencore and Viterra that, regardless of who actually made the statements, to the extent the Operations Call Statements were made, they were true and correct.

X.125.3.2 The Undisclosed Matters

4891 For the reasons that follow, it has not been established that Youil represented to Viterra or Glencore that any of the Undisclosed Matters did not exist.

X.125.3.2.1 The Viterra Parties' submissions

4892 Similar to the position with Hughes,[4292] the Viterra Parties submitted in relation to Youil that a reasonable expectation arose for Youil to disclose the existence of the Undisclosed Matters in relation to the Operations Call and the verification of the

4288 See fn 575 above.
4289 See par 873 above.
4290 See also fn 4245 above.
4291 See pars 4836-4838 above.
4292 See par 4868 above.

Warranties. With regard to the verification process, the Viterra Parties submitted that a reasonable expectation arose to disclose the Undisclosed Matters given that Wilson-Smith asked the Joe White executives, including Youil, whether the Warranties were true and correct and each of them said that they were. It was also alleged that this expectation arose as Wilson-Smith asked each of the Joe White executives whether there was any inconsistent information in the Data Room and each of them said that there was not.

X.125.3.2.2 Youil's submissions

4893 Youil denied that such a representation was made. Youil submitted that the alleged opportunities for disclosure referred to by the Viterra Parties did not create a reasonable expectation of disclosure.

4894 *First*, Youil submitted that the Operations Call was between 2 negotiating counterparties and section 18 of the Australian Consumer Law did not require Youil to volunteer information which would be of assistance to the decision-making of another party.[4293] Further, Viterra had instructed employees not to provide information to Cargill that had not been requested and therefore Glencore and Viterra could not have reasonably expected Youil to volunteer information to Cargill as this would have contravened Viterra's own instructions. For these reasons, Youil submitted that the Viterra Parties could not have had an expectation that Youil would disclose the existence of the Undisclosed Matters in the Operations Call.

4895 *Secondly,* Youil submitted that the Viterra Parties failed to establish that Youil represented that the Warranties were true and correct. This meant they failed to establish that there was a reasonable expectation of disclosure, and consequently failed to establish that he represented on this occasion that the Undisclosed Matters did not exist.[4294]

4293 *Miller & Associates Insurance Broking Pty Ltd v BMW Australia Finance Ltd* (2010) 241 CLR 357, 371 [22] (French CJ and Kiefel J). See also *Lam v Austinel Investments Australia Pty Ltd* (1989) 97 FLR 458, 475.3 (Gleeson CJ, with whom Meagher JA and Samuels AJA agreed).

4294 Youil also made submissions regarding insufficient evidence about the conversations between Youil and Wilson-Smith, but it is unnecessary to discuss this.

X.125.3.2.3 Analysis

4896 Based on the findings concerning the Warranty verification process,[4295] the issue of whether a reasonable expectation arose for Youil to disclose the Undisclosed Matters to Viterra and Glencore need only be considered in the context of the Operations Call.

4897 There could have been no such reasonable expectation in this limited context. Even if Youil provided any of the relevant responses (with Hughes) which comprised the Operations Call Statements, they were in relation to a confined subject matter and in a regime where he was expressly required not to provide information beyond that that was the subject of enquiry. Further, there was no evidence to suggest that Youil had any idea what other representations had been made by the Viterra Parties as part of the sale process, such that there could be any expectation that he would be able to assess whether further disclosure to the Viterra Parties would be expected to have taken place. The same observation may be made with respect to Youil's involvement in finalising the agreed record of what was said during the Operations Call.

4898 Further, there are 6 key points that apply to all the Third Party Individuals other than Hughes which make it difficult to conceive what it was about the circumstances that would have given rise to any reasonable expectation.

4899 *First*, it has not been established that any of Youil, Wicks or Stewart had knowledge of a substantial part of the Undisclosed Matters as defined. These 3 individuals all worked in the operations of the Joe White Business. Although they knew of the Viterra Practices and the Viterra Policies, there was nothing to suggest they were familiar with the manner in which the financial performance of Joe White was reported to Viterra. To the extent the Undisclosed Matters embraced financial-reporting related matters regarding the Financial and Operational Information, it was conceded in closing submissions by the Viterra Parties that there was no evidence to suggest they knew anything of substance about the accuracy or otherwise of Joe White's financial accounts.[4296] In short, insofar as the Viterra Parties maintained that these 3 executives

4295 See issue 125.6 below.

4296 The concession, namely, that the relationship between the Viterra Practices and the financial accounts

represented *all* of the Undisclosed Matters did not exist, it was without merit.

4900 Similarly, Argent, as the financial controller, was not directly involved in operations. There was no evidence from which it might be inferred that he was familiar with or even knew of the existence of the Viterra Practices. In closing submissions, the Viterra Parties submitted that, as financial controller, Argent would be "up to his elbows every day in the details of the finances of the company and how the income of the company is earned and whether the contracts are being performed and so on".[4297] Of the thousands of documents tendered in this case, the Viterra Parties did not identify a single document which might have suggested that Argent knew or was given notice of the Viterra Practices or the Viterra Policies. Further, in circumstances where the Viterra Policies were marked "obsolete" in the Records System to enable them to be concealed and to disguise the fact that they were operative documents, and where there were no records to formally document the Varieties Practice or the Gibberellic Acid Practice, there was no basis to infer that Argent knew of the Viterra Practices. Therefore, the contention that Argent represented that *all* the Undisclosed Matters did not exist was equally devoid of merit.

4901 *Secondly*, it has not been established that any of Youil, Wicks, Stewart or Argent had any knowledge that the Undisclosed Matters had not been disclosed. Again, in relation to the first 3 individuals, they were not involved in preparation of the Information Memorandum or the Management Presentation Memorandum, or the presentation of the latter. Further, there was no evidence to suggest that they were ever asked by the Viterra Parties to review or consider the contents of these documents or the topic of what ought to be disclosed to any prospective purchaser.[4298] As for Argent, there was no evidence to suggest that he might have had a basis for suspecting that, relevantly,[4299] the operations of the Joe White Business had not been disclosed

---

was not something about which there was any evidence regarding the existence of knowledge in 2013, was confined to Youil and Wicks. However, the observation about the lack of evidence in this regard was equally applicable to Stewart.

4297 See also fn 1624 above.

4298 As these documents were Confidential Information for the purposes of the Confidentiality Deed, it was highly unlikely they were aware of any of the details.

4299 Argent was aware that Glencore had chosen not to disclose some information, but this information was

accurately and fairly in the documents put forward by the Viterra Parties during the sale process.[4300]

4902 *Thirdly*, in relation to the existence of the Viterra Practices, it must be presumed that each of the Third Party Individuals other than Hughes would have assumed that Hughes, as the executive manager with a very hands-on approach,[4301] would have been fully across the operational side of the Joe White Business. Up until 17 December 2012, Hughes was a director of each of the companies comprising Viterra working full time in the Joe White Business, and continued on as an executive of Viterra after that time. There was no suggestion at trial that any of these 4 individuals had ever concealed anything concerning the Viterra Practices from Hughes. Thus, to the extent that any of the Joe White executives had knowledge of the Undisclosed Matters,[4302] they were entitled to assume that these matters were also known to Hughes and accordingly had been known by Viterra.[4303] In such circumstances, there was no reasonable expectation to make any further disclosures pertaining to the Undisclosed Matters to the extent they were aware of them.[4304]

4903 *Fourthly*, it has not been established that there was any basis for any of these 4 individuals (including Argent for the sake of the point, despite his apparent lack of the relevant knowledge)[4305] to assume that in 2010 or otherwise Hughes would have been holding anything material back from Viterra or from late 2012, Glencore. In circumstances where Hughes was effectively the Viterra executive in charge of the

---

not indicative of Argent being put on notice that what was disclosed was incorrect or materially incomplete: see pars 436, 536, 805 above.

4300 See also par 958 above; the enquiry in that case being confined to material contracts.

4301 See par 47 above.

4302 See, for example, pars 156, 161-162, 1289-1311 above.

4303 See par 4874 above.

4304 Ordinarily, an obligation to disclose does not include an obligation to communicate information to someone who already knows the facts in question: *Federal Commissioner of Taxation v Levy* (1961) 106 CLR 448, 469.1 (Owen J); *National Trustees Executors and Agency Co of Australasia Ltd v Federal Commissioner of Taxation* (1954) 91 CLR 540, 589.3 (Kitto J).

4305 Generally speaking, there cannot be a failure to disclose something about which you had no knowledge or were not reasonably capable of knowing in the circumstances: *Australasian Jam Co Pty Ltd v Federal Commissioner of Taxation* (1953) 88 CLR 23, 33.2 (Fullagar J); *Federal Commissioner of Taxation v Westgarth* (1950) 81 CLR 396, 407.3 (Latham CJ), 411.9-412.1 (Williams J), 415.9-416.3 (Fullagar J). See also in this context par 2955 above.

affairs of Viterra Malt and Joe White and was taking a direct role in the conduct of the sale,[4306] these 4 individuals were not on notice before 4 August 2013 that there had been any failure to disclose any material information. On the contrary, based on Stewart's evidence it appeared that Hughes gave the impression that at least the issue of pencilling had been raised by Hughes with his superiors and that those superiors had given their imprimatur to proceed with the same conduct.[4307]

4904 *Fifthly*, independent of Hughes, from 2009 when Joe White became a wholly-owned subsidiary of Viterra Malt, Viterra had been hands-on in numerous material respects in relation to the operations of the Joe White Business. Not only had an extensive review been conducted as part of the implementation of the Malt Cost Reduction Transformation Project, but the issue of the manner in which Joe White conducted its operations had been raised in 2010 with senior Viterra executives (in addition to Hughes) as part of the introduction of the Viterra Code. Again, from the perspective of these individuals there was no reason to suspect that Viterra was not properly informed at that time.

4905 *Sixthly*, with Mattiske's appointments in December 2012, Mattiske was a director of both Viterra and Joe White.[4308] As the executive manager of Viterra Malt and Joe White, and an executive of Viterra employed by Viterra Ltd, Hughes reported to Mattiske directly on a regular basis. There was no evidence to suggest that, in these circumstances there was any reason why it could not reasonably be expected that Hughes would have reported to Mattiske accurately and fairly, and would have disclosed any material issues.[4309]

4906 Accordingly, the Third Party Individuals, other than Hughes, were reasonably entitled to assume that Viterra had knowledge of all matters material to the Joe White Business. Further, the matter that the Warranty verification process itself was

---

4306 The retainer of Hughes itself was confidential: see par 1877 above.
4307 See par 161 above.
4308 See par 97 above.
4309 There was no evidence that any of Youil, Wicks or Stewart were aware or suspected that Argent did not know about the Viterra Practices.

fundamentally flawed and riddled with deficiencies did not displace the reasonableness of making such an assumption.[4310] Furthermore, these Third Party Individuals were entitled to proceed at least up until 4 August 2013 on the basis that, in the absence of any notice to the contrary (none was alleged), it would reasonably be expected that any material matter would have been conveyed to Glencore by Hughes or others in Viterra more directly involved in the sale process, such as Mattiske or Fitzgerald.

4907 In short, for these reasons no reasonable expectation arose for Youil (or Wicks, Stewart or Argent) to disclose the Undisclosed Matters during any of the alleged opportunities noted by the Viterra Parties. As a result, Youil did not make a representation that the Undisclosed Matters did not exist.

X.125.3.3 Warranties

4908 For reasons discussed below,[4311] this issue need not be considered further on the basis that it has not been established that Youil represented that any of the Warranties he was asked to verify were true and correct.

X.125.3.4 Conclusion as to representations made by Youil

4909 In conclusion, the Viterra Parties have established that Youil made the representation that the Operations Call Statements as found to be made were true and correct by way of the summary of the Operations Call. They have otherwise failed to establish Youil made any further representation as alleged.

X.125.4 Wicks and Stewart

4910 As the allegations against Wicks and Stewart raised substantially the same issues, it is convenient to deal with them together. Wicks and Stewart both submitted that they did not make the alleged representations.

4310 That is, a process to have executives formally verify certain matters the subject of a sale agreement, including if they were told not to hide anything (see par 996 above) did not carry with it any notice to the Third Party Individuals that Viterra itself did not already have knowledge of the Undisclosed Matters: see also fn 4282 above.

4311 See issue 125.6 below.

X.125.4.1 Warranties

4911 Similar to the position with Hughes and Youil, it has not been established that Wicks or Stewart represented that any of the Warranties they were asked to verify were true and correct.

X.125.4.2 The Undisclosed Matters

X.125.4.2.1 The Viterra Parties' submissions

4912 The Viterra Parties' submissions are outlined above.[4312] The Viterra Parties submitted that the Warranty verification process was a circumstance where a reasonable expectation arose for Wicks and Stewart to disclose the existence of the Undisclosed Matters.

X.125.4.2.2 Analysis

4913 The entirety of this part of the case against each of Wicks and Stewart concerning an alleged failure to disclose the Undisclosed Matters also was dependent on the Viterra Parties establishing that each of them made the representations that the Warranties were true and correct. As the Viterra Parties wholly failed to establish this, it must follow that neither Wicks nor Stewart represented to Viterra and Glencore that the Undisclosed Matters did not exist.[4313]

X.125.4.3 Conclusion as to representations made by Wicks and Stewart

4914 In conclusion, the Viterra Parties have not established that Wicks or Stewart made any of the alleged representations.

X.125.5 Argent

X.125.5.1 Information Memorandum Statements

X.125.5.1.1 The Viterra Parties' submissions

4915 Largely, the Viterra Parties relied on the same submissions in relation to Argent as were made in relation to Hughes based on the same alleged representations.[4314] The

---

4312 See par 4868 above.

4313 See also pars 4898-4907 above.

4314 In the Third Party Claim, further particulars of this allegation were provided in relation to Argent. In addition to referring to his position as financial controller of Joe White and his verification of parts of the Information Memorandum, the particulars asserted Argent was allocated responsibility for certain aspects of the Due Diligence "as noted in document VIT.701.012.6345 [CB 3816]". The court book contained a document with the discovery number referred to, but it was not tendered at trial. Further, the court book did not contain a document which commenced with page 38169.

exceptions to this were that the Warranties identified as being verified by Argent did not overlap entirely with those as being verified by Hughes, and that there were no allegations against Argent in relation to the Operations Call.

X.125.5.1.2 Argent's submissions

4916 Argent submitted that the Viterra Parties failed to identify the individual participation of Hughes and Argent in preparation of the Information Memorandum. As a result, it was submitted the allegation lacked substance because the alleged representation could not be defined. Further, Argent submitted that the Viterra Parties "rolled up" the participation of Hughes and Argent so it was unclear whether Argent's or Hughes' participation was relied upon.

4917 Argent admitted that he initialled parts of the verification table.[4315] However, Argent submitted that the Viterra Parties' claim failed because they had failed to prove his participation in preparation of the Information Memorandum. Accordingly, it was contended they had failed to prove 1 of the 2 limbs of the key allegation; those 2 limbs being *first,* participation in preparation of the Information Memorandum; and *secondly,* verification of the Information Memorandum.

X.125.5.1.3 Analysis

4918 Argent initialled the verification table in relation to all but 3 of the Information Memorandum Statements.[4316] The remaining statements appeared on a page that was not verified by Argent and it has not been established he made those

---

4315 See pars 450-451 above.

4316 See par 451 above. Argent initialled the relevant pages assigned to him, however he also initialled 3 pages that were not assigned to him. To elaborate, the statements pleaded in the Statement of Claim at par 12 (b4), (b5), (j), (l), (m) and (n) each appeared on page 21 of the Information Memorandum, and those in par 12(b6) and (i) on page 22. Argent initialled these pages but they had not been allocated to him. The statement pleaded at par 12(e) appeared on page 4, which was allocated to and initialled by Argent. Pages 8 and 21 were also referred to in the Statement of Claim as being relevant to the statement pleaded in par 12(e). Page 8 was allocated to and initialled by Argent and page 21 was not allocated to but was initialled by him. Only the reference to a "state-of-the-art manufacturing facility" appeared on page 8 and no part of the statement appeared on page 21. The statements pleaded at par 12(f) and (l) appeared on page 9, which was allocated to and initialled by Argent. Page 21 was also referred to in the Statement of Claim in relation to these statements, and was not allocated to but was initialled by Argent, but the statements alleged did not appear there. The fact that Argent's initials appeared in unallocated rows of the table was not explored at trial, nor were the circumstances in which this came about. In light of the conclusion ultimately reached in relation to issue 125, it is unnecessary to consider what further significance, if any, attached to the fact that Argent initialled parts of the verification table that were not allocated to him.

representations.[4317] On the contrary, the fact that Argent was not asked to verify the relevant page indicated he was not being requested to, and did not, make any representation in that regard. There was no probative evidence which suggested Argent's role encroached into the verification of the statements he did not formally verify.

4919 There was a substantial body of evidence to demonstrate that Argent, in a diligent and thorough manner,[4318] was materially involved in assisting Glencore and Viterra in finalising those parts of the Information Memorandum he was asked to work on. In addition to this evidence, the Viterra Parties have established Argent participated in the preparation of the Information Memorandum by sending the email on 23 April 2013 to Merrill Lynch.[4319] However, as already noted, that email did not represent that Argent had considered all the Information Memorandum Statements or that all of them were true and correct. That said, Argent emailed the verification table to Merrill Lynch the following day, and by so doing identified precisely what he had verified.[4320] As a result, Argent's submissions put on the basis that the Viterra Parties failed to identify or prove specific participation by Argent must be rejected.

4920 Argent's submission that the Viterra Parties needed to prove both participation and verification on his part of every single statement sought to be established against him was misplaced. For the reasons already stated,[4321] proof of his participation generally and the verification of various Information Memorandum Statements, together with the provision of the verification table to Merrill Lynch, was sufficient to establish that

---

4317 The Information Memorandum Statements that were not verified by Argent were: (1) Joe White's procurement process was focused on meeting customer specifications; (2) once a customer's specific needs had been identified, the procurement function ensured the appropriate quantity of malting barley was acquired to meet those specifications; and (3) the barley procurement function was driven by the Sales and Marketing team, together with Technical, identifying varieties best suited to meeting customers' malt specifications.

4318 This included Mattiske's evidence that he believed Argent did an excellent job in the preparation for the sale of the Joe White Business and that he had been able to detect no problem or error with the numbers that Argent reported in relation to what Joe White had achieved. In giving this evidence, Mattiske acknowledged that he understood the issue in this case was about the practices underpinning the numbers achieved rather than the numbers themselves.

4319 See par 448 above.

4320 See par 451 above.

4321 See pars 4810-4811 above.

a representation was made by Argent that the statements he verified were true and correct. However, it has not been proved he made any representation beyond this in relation to the remaining Information Memorandum Statements.

X.125.5.2 Financial and Operational Information

X.125.5.2.1 The Viterra Parties' submissions

4921 The Viterra Parties relied on the same submissions in relation to Argent as made in relation to Hughes.[4322]

X.125.5.2.2 Argent's submissions

4922 Argent made a number of submissions in contending that the alleged representations were not made.

4923 *First,* Argent referred to the Viterra Parties treating Hughes and Argent together in their submissions. Argent contended this made it impossible to separate their alleged conduct. *Secondly,* the claims against Argent concerned the period prior to entry into the Acquisition Agreement on 4 August 2013, and so any responsibility of Argent should not extend to the date of Completion. It was submitted that Argent's lack of involvement in the events of October 2013 underscored the point. *Thirdly,* Argent relied upon the fact that the Viterra Parties had control over what information and documents were disclosed to Cargill during the Due Diligence and prior to Completion. *Fourthly,* Argent's responsibility for providing particular financial and operational information during the Due Diligence was not capable of amounting to a representation that the Financial and Operational Information was true and correct and there was no suggestion that the financial information provided by Argent was incorrect. *Finally*, more generally, Argent contended that in the absence of proper particularisation as to how Argent failed to act in accordance with his responsibilities,

---

4322 See par 4820 above. Again, further particulars relating solely to Argent were set out in the Third Party Claim in relation to this allegation. In addition to referring to the particulars concerning the Information Memorandum Statements, the particulars stated Argent was responsible for providing, and provided, the Financial and Operational Information to Glencore and Viterra for disclosure during the Due Diligence as the financial controller of Joe White at all material times from about 6 February 2010 to at least 31 October 2013. The precise information the subject of these particulars was not identified.

the alleged representation had not been established.[4323]

X.125.5.2.3 Analysis

4924 As discussed above,[4324] in relation to the Information Memorandum and its preparation, Argent initialled and verified certain financial and operational information that was contained in the Information Memorandum, and thereby represented to Glencore and Viterra that those statements were true and correct.

4925 The Financial and Operational Information disclosed during the Due Diligence included the statements recorded in annexures D and E to the Acquisition Agreement. Annexure D contained some questions and answers relating to financial matters discussed at the Management Presentation. For present purposes, it suffices to record that at the Management Presentation Argent did make some relevant representations, but only with respect to a very small portion of the Management Presentation Statements alleged.[4325] Annexure E comprised a record of a "Finance and Accounting Discussion" held on 5 July 2013, the Operations Call, the Commercial Call, the Barley Inventory Call, and a record of a phone call in relation to environmental issues held on 26 July 2013. With respect to Argent, no reliance was placed on these records other than the contents of the Commercial Call, which is discussed below.[4326]

4926 Generally, Argent's role was to assist Bickmore to obtain some of the documents that were required by the Viterra Parties to be included in the Data Room.[4327] Precisely what Bickmore requested of Argent was not the subject of evidence, and her evidence in a number of respects was far from persuasive.[4328]

4927 In any event, by assisting Bickmore to obtain documents for the Data Room that

---

4323 Submissions were made in relation to the Co-Operative Bulk Agreement, but it is unnecessary to refer to these as that matter was abandoned by the Cargill Parties: see issues 61-64 above.

4324 See par 4918 above.

4325 The only pleaded statements that Argent was alleged to have made at the Management Presentation, by reason of the statements being in the "Financials" section of the Management Presentation Memorandum, were in relation to risk management. They consisted of 2 statements which were contained in only 1 of the 11 subparagraphs alleging the making of the Management Presentation Statements in accordance with the contents of the Management Presentation Memorandum: see pars 732-733, 2168(11) above.

4326 See par 4935 below.

4327 See par 665 above. See also par 958 above.

4328 See par 4825 above.

contained financial and operational information, there could be no real issue that Argent was providing the information to Glencore and Viterra. Further, given Argent's position as financial controller and the role he had agreed to with respect to assisting with the sale process, to the extent he provided documents, in the absence of any evidence to the contrary, this must have been taken to amount to a representation that the documents he produced were the records that were responsive to the requests made (whatever they might have been). But, on the evidence at trial, subject to a minor exception,[4329] any representation by Argent did not go beyond that. In circumstances where the relevant evidence of Bickmore as to what was actually said to Argent was extremely vague, there was no basis to conclude that Argent was representing anything further about the documents or their contents than they were responsive to the requests made. Furthermore, there was no attempt during the trial to identify precisely which documents Argent produced that might be said to contain relevant information that he was alleged to be effectively representing was true and correct. In other words, Argent simply producing documents or classes of documents the subject of a request or requests did not amount to any representation that the information contained in each produced document itself was true and correct with respect to every single piece of information that was recorded in the documentation.

4928 In conclusion, similar to the position with Hughes,[4330] the Viterra Parties have proven that Argent made some representations concerning financial and operational matters being true and correct. But these are confined to the matters that Argent verified in the Information Memorandum and the matters he spoke to at the Management Presentation. To this limited extent, the Viterra Parties have established that Argent represented that the Financial and Operational Information was true and correct, but not otherwise.[4331]

X.125.5.3 Commercial Call Statements

4929 The circumstances and content of the Commercial Call are described above.[4332]

4329 See par 958 above.
4330 See par 4826 above.
4331 Including not by reason of events relating to the Commercial Call: see pars 4929-4935 below.
4332 See pars 910-915, 4840 above.

Argent did not attend the Commercial Call.

X.125.5.3.1 The Viterra Parties' submissions

4930 The Viterra Parties alleged on or about 1 August 2013 Argent reviewed and agreed to the summary of the Commercial Call. The particulars to that allegation referred to 2 documents in addition to the summary contained in the Acquisition Agreement. The *first* was an email from Argent dated 1 August 2013 which attached both the "minutes" of the Commercial Call and the Barley Inventory Call. The covering note simply stated, "[Hughes] and I have reviewed". The *second* was a draft of the Commercial Call summary, which had some tracked changes on it. The Viterra Parties made no substantive submission regarding Argent in respect of this allegation. On the contrary, in their summary of the facts it was submitted that the draft minutes were prepared by Merrill Lynch, and reviewed and approved *by Hughes*.

X.125.5.3.2 Argent's submissions

4931 Argent submitted that there was no evidence he reviewed and agreed to the draft summary of the Commercial Call and that the Viterra Parties' allegation that he did so was fundamentally misconceived. Argent noted the email sent on 30 July 2013 by Merrill Lynch to Hughes and Argent attached 3 draft summaries in respect of 3 calls for review; the Commercial Call, the Barley Inventory Call,[4333] and the environmental discussion.[4334] In that email, Merrill Lynch referred to the fact that the environmental discussion was "not in [Hughes' and Argent's] court", as neither Hughes nor Argent had attended the call, and requested that Hughes or Argent forward the summary to the appropriate person within Joe White or Viterra. Argent duly forwarded the relevant document for review by others.

4932 Argent submitted that on no sensible reading of the documents could it be suggested he reviewed the summary of the Commercial Call, which he had not attended. Argent submitted that, when Argent emailed Merrill Lynch on 1 August 2013 attaching the reviewed summaries of both the Commercial Call and the Barley Inventory Call and stated "[Hughes] and I have reviewed", this was a reference to Hughes having

4333 See par 924 above.
4334 See par 1039 above.

reviewed the summary of the Commercial Call and Argent the summary of the Barley Inventory Call.

X.125.5.3.3 Analysis

4933 Argent's submissions should be accepted. On its face, the statement in Argent's email that "[Hughes] and I have reviewed" was ambiguous. It could have meant either that both Hughes and Argent had reviewed the 2 documents, or that each had reviewed the single document that was relevant to the call each had attended respectively. In the circumstances, the latter interpretation must be preferred. *First*, Hughes had attended 1 call and Argent the other and there was no apparent reason why it was necessary for either to be checking a summary of a meeting he had not attended. *Secondly*, neither Hughes nor Argent was asked to review the summary of the environmental discussion, which neither of them had attended. *Thirdly*, the environmental summary was on-forwarded to persons who had attended the call without any apparent review by Argent or Hughes. *Fourthly*, there was no evidence to suggest Argent had ever been approached to participate in the Commercial Call. *Fifthly*, there must be a real issue of whether Argent was capable of meaningfully reviewing what purported to be a record of a meeting he did not attend.

4934 In any event, the onus of establishing this allegation rested with the Viterra Parties. On the documents relied upon, it has not been discharged.

4935 As a result, the Viterra Parties have failed to establish that Argent reviewed and agreed to the summary of the Commercial Call, or that he had represented that he had done so. Thus, they have not established that he represented that the Commercial Call Statements were true and correct.

X.125.5.4 Management Presentation Statements

4936 The circumstances of the Management Presentation Statements are described above.[4335]

4335 See pars 708-742, 4862-4866 above.

X.125.5.4.1 The Viterra Parties' submissions

4937 The Viterra Parties relied on the same submissions as made in relation to Hughes.[4336] When the Viterra Parties' senior counsel was asked during closing submissions how it was put that Argent was representing that each of the operational (as distinct from the financial) matters referred to in the Management Presentation was true and correct, the submission was made that it was a matter of inference.

X.125.5.4.2 Argent's submissions

4938 Argent accepted that he presented the "Financials" section of the Management Presentation.[4337] He submitted the evidence showed that he spoke only to this section and Hughes addressed the remaining topics.

4939 Argent submitted that the relevant allegation was vague and ambiguous. Further, he submitted that the Viterra Parties had not defined with precision the conduct of Argent that they sought to rely upon, other than particularising email correspondence, in which Argent and others were asked to provide comment or were said to have provided "input" or "comments" on drafts of the Management Presentation Memorandum.

X.125.5.4.3 Analysis

4940 Argent, like Hughes, played a role in drafting the Management Presentation Memorandum. From the emails relied upon by the Viterra Parties,[4338] it appeared that Argent specifically provided direct assistance in relation to finalising the risk management section (which was drafted by Merrill Lynch) and must be taken to have accepted the final form of what was said on this topic. In so doing, Argent represented to Glencore and Viterra, through their advisers, that the pleaded statements concerning risk management, located in the "Financials" section, were true and correct. Furthermore, by speaking to that part of the Management Presentation Memorandum allocated to him in the presence of Merrill Lynch (and as had been foreshadowed with King and others in the lead-up to the Management Presentation), Argent further represented that the risk management statements were true and

4336 See pars 4849-4854 above.
4337 At pages 24 to 39 of the Management Presentation Memorandum: see pars 728-733 above.
4338 See par 4850 above.

correct.

4941 However, there was no proper basis to draw any inference that Argent was representing all of the pleaded Management Presentation Statements were true and correct. It would be bordering on the absurd to suggest that anyone at Glencore or Viterra understood that Argent as financial controller was able to positively represent the truth and correctness of every aspect of the operational matters the subject of the Management Presentation Statements. Not surprisingly, no one gave evidence to this effect. Further, given the clear delineation between Hughes' presentation and Argent's presentation, if any inference were to be drawn it would be that Argent was not making any representation as to the truth or correctness of any part of the Management Presentation other than the part he spoke to in the "Financials" section and any questions he answered on that topic.[4339]

4942 Accordingly, the Viterra Parties have established the limited part of the case concerning risk management statements against Argent in relation to the Management Presentation Statements, but not that he made all the Management Presentation Statements as alleged in the Third Party Claim.

X.125.5.5 The Undisclosed Matters

4943 For the reasons that follow, it has not been established that Argent represented that the Undisclosed Matters did not exist.

X.125.5.5.1 The Viterra Parties' submissions

4944 The Viterra Parties' submissions are outlined above.[4340] There were no separate submissions on this point directed towards Argent alone, despite the fact he stood in quite a different position to the other Third Party Individuals (who were all involved in operations). When the Viterra Parties' senior counsel was asked to identify the facts the Viterra Parties relied upon to establish that Argent knew of the Undisclosed Matters, reference was made to sections "GG and HH" of the facts section of their

4339 It was not contended by reference to annexure D to the Acquisition Agreement or otherwise that Argent addressed any questions that went beyond matters raised in the financial section of the Management Presentation Memorandum.

4340 See par 4868 above.

closing submissions. In substance, no relevant reference was made to Argent in any part of those sections of the Viterra Parties' submissions.[4341] Further, sections GG and HH were concerned entirely with events after 4 August 2013. In short, there was no further evidence identified to support this part of the case against Argent other than Argent's alleged involvement in the Warranty verification process.

4945 The Viterra Parties submitted that the Warranty verification process was a circumstance where a reasonable expectation arose for Argent to disclose the existence of the Undisclosed Matters.

X.125.5.5.2 Argent's submissions

4946 Argent simply submitted that he did not represent that the Undisclosed Matters did not exist.

X.125.5.5.3 Analysis

4947 The Viterra Parties have established neither that Argent knew or even suspected that anything that was stated by him throughout the sale process was incorrect, nor that he knew or suspected that anything anyone else had said was incorrect. Further, in light of the way in which Hughes and others were not entirely open about the Viterra Practices, the Viterra Parties have not demonstrated that, in his role as financial controller, Argent ought to have known of the Undisclosed Matters.[4342] Furthermore, in circumstances where Argent knew Hughes, as the executive manager of Viterra responsible for the malt business, was part of a substantial number of the relevant communications pertaining to the Undisclosed Matters[4343] and had not taken any exception to what was represented, there could be no reasonable expectation of disclosure by Argent where it has not been established Argent knew or believed anything inaccurate had been stated. In addition, for the same reasons outlined above,[4344] Argent did not represent to Glencore and Viterra that the Undisclosed

---

4341 Argent was only referred to twice in those sections of the submissions, both times erroneously suggesting Argent was involved in discussions with other Joe White executives in late October 2013 concerning the issues that had been raised by Cargill: see par 4948 below.

4342 By making this finding, it is naturally not suggested that Argent should not have been properly informed about the Viterra Practices by Hughes and others.

4343 Including those relating to his approval of most of the Information Memorandum and a large part of the Management Presentation Memorandum.

4344 See pars 4898-4907 above.

Matters did not exist.

4948 Further, it must be emphasised that Argent fell into a unique category so far as the Third Party Individuals were concerned. To reiterate, there was no evidence that he was ever aware of the Viterra Practices. Furthermore, when the issue of the Operational Practices was raised in late October 2013 by Cargill, Argent was not included by the Viterra Parties in discussions about how to respond to the issues that had been raised.[4345] Both of these matters were highly material to the evidence falling well short of establishing that Argent ever made any representation to the effect that the Undisclosed Matters did not exist.

X.125.5.6 Warranties

4949 For reasons discussed below,[4346] it has not been established that Argent represented that any of the Warranties he was asked to verify were true and correct. Accordingly, this issue need not be considered further.

X.125.5.7 Conclusion as to representations made by Argent

4950 In conclusion, the Viterra Parties have established Argent made representations that the Financial and Operational Information he conveyed was true and correct (not being all the information potentially encompassed by that term).[4347] Otherwise, the remaining representations alleged to comprise the Argent Representations have not been proven.[4348]

X.125.6 The Warranty verification process

X.125.6.1 General observations

4951 Given the significant overlap of issues which arise, it is convenient to deal with the Warranty verification process collectively.[4349] Before turning to the specific circumstances attending the Warranty verification process undertaken in relation to

---

4345 He also did not attend the 15 October Meeting where Cargill received a briefing from some of the Joe White executives on the Operational Practices: see par 1103 above.

4346 See issue 125.6 below.

4347 See par 4928 above.

4348 See issue 125.6 in relation to the Warranty verification process.

4349 The substance of the Cargill Parties' submissions on this issue have already been set out in addressing issue 80: see pars 4417-4419 above. It is unnecessary to repeat them. The Viterra Parties' submissions are addressed in dealing with the topics relevant to this issue.

each Third Party Individual, some observations about the conduct of the Warranty verification process as a whole must be made.

4952 In setting out what follows, no personal criticism of Wilson-Smith is made. At the time, Wilson-Smith was a relatively inexperienced lawyer,[4350] unfamiliar with both warranty verification and the processes involved in mergers and acquisitions more generally. The evidence did not meaningfully disclose why it was that Wilson-Smith was left to perform the Warranty verification process essentially on his own.[4351]

4953 Wilson-Smith was a credible and forthright witness. He readily acknowledged the significant flaws in the process that he undertook. He endeavoured to answer questions posed to him (which were at times very pointed and critical) to the best of his ability. In a transaction involving hundreds of millions of dollars and a very tight timetable, Wilson-Smith was given the task of arranging for the verification of the Warranties, in circumstances where the finalisation of the transaction was imminent and where he had had limited involvement before that point.

4954 Wilson-Smith was fully aware of the pressure under which he had been placed. At various points in his evidence, Wilson-Smith agreed that he was "absolutely" under time pressure to complete the Warranty verification process; that he believed the signing of the Acquisition Agreement was "imminent"; and that the Warranty verification process was "extremely urgent".

4955 The Viterra Parties' suggestion, in closing submissions, that Wilson-Smith was "palpably overborne", "unnerved" or "confused" by the process of giving evidence to the court did not reflect what occurred. On the contrary, in what must have been a difficult subject matter for him to address, Wilson-Smith was composed and measured

---

4350 Wilson-Smith commenced his employment with Viterra in July 2011, having been admitted to practice in South Australia on 11 September 2006. Wilson-Smith obtained a first class honours degree of bachelor of laws from the University of Adelaide in 2006. In July 2014, he obtained a masters of applied laws (in-house practice). On 1 March 2016, Wilson-Smith was appointed to the position of senior legal counsel at Viterra. At the time he gave his evidence he was no longer employed by Viterra, but was general counsel and company secretary of Land Services, South Australia.

4351 Lindner did not recall any discussion with the Viterra Parties about whom Mallesons would engage in the verification process on behalf of Glencore or the Sellers.

while giving his evidence. True enough, he made a number of concessions in the witness box that weakened the Viterra Parties' case.[4352] However, those concessions reflected Wilson-Smith's actual recollections, beliefs or state of mind and were, in the circumstances, properly made. It was not contended by any party, including the Viterra Parties, that Wilson-Smith was an untruthful witness.

4956 Turning to the events in 2013, and as a reflection of the time pressures involved, the Warranty verification process was effectively set in motion late on Wednesday, 31 July 2013.[4353] At 9.50pm, Lindner sent Fitzgerald and Wilson-Smith the following email:

> Damian, Josh,
>
> Attached is the definitions and interpretation and warranties sections of the current draft of the Acquisition Agreement.
>
> *During the course of Thursday*, could you please sit down with the appropriate people within the business and seek to verify each warranty? That is: (1) please discuss the warranty (*obviously having regard to the definitions and interpretation provision[s] around contracts*); and (2) to the extent the warranty is incorrect *and we have not made disclosure in the [D]ata [R]oom* in respect of the inaccuracy, include a note in the document and provide any relevant documents.
>
> We will *need to make a disclosure* in the [D]ata [R]oom to address any inaccuracy that we have not already made a disclosure about. To the extent the team think the issue was addressed in Q&A for [Cargill], perhaps note this in the document and we will confirm this.
>
> If you wish to discuss how best to approach this please give us a call.
>
> (Emphasis added).

4957 The email attached a copy of the Warranties and some relevant definitions (but only those contained in the "Interpretation" section of the draft acquisition agreement current at that time). By way of example, "Disclosure Material" was defined by reference to "information set out or referred to in Schedule 8". Schedule 8 was not attached to Lindner's email. Further, a number of Warranties referred to "the Share Seller's knowledge and awareness". No definition of that term appeared in the "Interpretation" section of the document.

4958 Wilson-Smith gave evidence that, at this point, he was working under time pressure.

4352 See further pars 4998-4999 below.

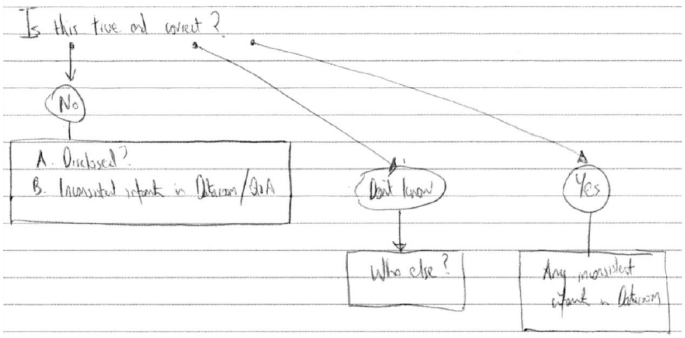
4353 There had been some minor steps taken before this time: see par 4974 below.

Lindner had only given him the following day to complete the task. He forwarded Lindner's email, without the attachments, to Hughes and Argent (copied to Fitzgerald) at 10.17pm the same night. Wilson-Smith's email stated:

> Hi Gary and Scott
>
> …
>
> We will need to discuss a plan in the morning to achieve this. This will likely take some time. If possible we will be looking to both of you to help us get all of your team on board to ensure we meet the deadline in verifying these warranties.

4959 Wilson-Smith had never conducted a warranty verification process before. He gave evidence about his approach to the task. When he received Lindner's email, he thought to himself, "What do I do?". The following morning he conducted a search on an internet search engine, and based on what he read he drafted a diagram of what he thought he had to do.

4960 The diagram that Wilson-Smith drew, in the nature of a very basic flowchart, was:[4354]



4961 Wilson-Smith gave evidence that he spoke to Lindner to confirm his approach. Lindner said that the above process was appropriate. For her part, Lindner gave evidence that she believed she had a "more fulsome discussion about how to go about the verification process" on the phone with Wilson-Smith after sending her initial email. What exactly was said in that discussion was not the subject of evidence. The Viterra Parties referred to Lindner's evidence as to what, in her professional experience, she would do in order to obtain the verification of warranties, and then

---

4354 The first question was: "Is it true and correct?". If no, the next questions were: "Disclosed?" and "Inconsistent information in Data room/Q&A". If "Don't know" the next question was: "Who else?". If yes, the next question was: "Any inconsistent information in Data [R]oom?".

submitted that what Wilson-Smith set out to do was "little different" to what Lindner recommended. This submission overlooked Lindner's evidence that if she were undertaking the process she would either read each warranty to the person or have the person actually read the warranty. Nowhere in Wilson-Smith's proposed process were either of these steps provided for. Further, neither of them occurred.

4962 Returning to the steps taken, Wilson-Smith then went through the Warranties and assessed who *he* thought were the individuals within Joe White who were best placed to verify each Warranty, according to where *he* understood they would "fit" in the Joe White Business.

4963 Pausing here, the Joe White Business did not rely heavily on the legal department, and did not tend to engage the in-house lawyers at all on day-to-day matters of the Joe White Business. Generally, the only exceptions to this were when there was a requirement, by Viterra policy, to seek legal advice on large value contracts (over $200,000). Further, Wilson-Smith, who was employed by Viterra as 1 of Viterra's in-house legal counsel, was not overly familiar with the inner workings of the Joe White Business. Under cross-examination, Wilson-Smith agreed that his knowledge of the malting industry was "very limited"; he also agreed that his involvement in the proposed acquisition agreement and the sale of Joe White up until that point had also been "pretty limited".

4964 On 1 August 2013, Wilson-Smith commenced the Warranty verification process by meeting with some of the individuals he had identified. At the time he and the individuals were Viterra Ltd employees. Wilson-Smith believed that both himself and those he met with were performing duties "as employees of Viterra".[4355] He met with Hughes and Argent together. He also purported to verify certain Warranties with others, in individual meetings. Altogether, Wilson-Smith conducted a process of Warranty verification with 9 different people on 1 August 2013. On 2 August 2013, Wilson-Smith also purported to verify certain Warranties with Wicks and Vern Chubb

[4355] This evidence was given during cross-examination by Stewart's senior counsel about Stewart's position, but Wilson-Smith's belief clearly applied to the other Third Party Individuals as well.

("Chubb")[4356] by telephone.

4965 The individual circumstances of each of these conversations are set out in further detail below.[4357] It is appropriate to make some general observations about the circumstances that attended each.

4966 *First*, the meetings that Wilson-Smith held with the executives were short, relative to the amount of information to be discussed. Wilson-Smith did not dispute the meeting with Hughes and Argent was in the range of 20 to 30 minutes; and I find the meeting lasted approximately this long.[4358] Wilson-Smith gave evidence that this meeting was the "longest of all of them". Under cross-examination, Wilson-Smith agreed that there was not enough time in each meeting for him to read out the full text of the Warranties to the executives.

4967 *Secondly,* Wilson-Smith's evidence in his witness statement was that he told each person "the substance of what the warranty provided and asked them whether this was correct".[4359] What the "substance" of the Warranties meant in reality was not clear on the evidence. What was clear was that Wilson-Smith did not read the full text of the Warranties (or the relevant definitions) to any of the executives. Having acknowledged that he did not do this, Wilson-Smith could not recall how he described each Warranty, nor could he recollect the executives' responses. Further, neither of the 2 versions of his notes of the meetings[4360] recorded what he said to each executive about the Warranties he was asking them to verify, nor each executive's exact response. On the evidence, it was simply not possible to determine what Wilson-Smith actually said to each executive when he put the Warranties to them, or even what he considered to represent the substance of the Warranties. It follows that the court has no meaningful way of assessing whether Wilson-Smith's statements as to the "substance" of the Warranties in fact accurately conveyed the meaning of each of

4356 Viterra's property services manager.
4357 See pars 5001-5032 below.
4358 See further par 5002 below.
4359 Although this evidence was not in admissible form, no objection was taken by the Third Party Individuals to it on the basis that they submitted it should be afforded little weight.
4360 See pars 4993-4994 below.

those Warranties.[4361]

4968 *Thirdly*, it must follow that if, as has been found, it was not possible to be satisfied that what Wilson-Smith said to the executives sufficiently resembled the text of the Warranties or the substantive meaning of the Warranties, there can be no basis to find that the executives, in turn, represented that the Warranties as they appeared in the Acquisition Agreement were true and correct.

4969 *Fourthly,* Wilson-Smith did not provide Hughes, Youil, Stewart or Wicks with a copy of either the Warranties or the definitions in advance of, or during, the meetings that he held with them (Youil); (Wicks); (Stewart); (Hughes). With respect to Argent, the position was less clear, but there was no proper basis to find Argent was provided with the materials before he met with Wilson-Smith (and Hughes).[4362] Thus, no executive was given the opportunity to read or digest the Warranties or the definitions, or to make sure he understood the actual words and terms comprising the Warranties.

4970 *Fifthly,* the Viterra Parties did not prove Wilson-Smith had a copy of the definitions referred to in the Warranties with him when he conducted any of the Warranty verification meetings. Whilst describing the conduct of the Warranty verification process in his evidence in chief, Wilson-Smith never referred to the definitions or said anything to suggest that he had a copy of the definitions available. During cross-examination, Wilson-Smith stated several times that he could not recall whether or not he had a copy of the Warranty definitions. In another instance, he agreed that "to the best of his recollection", he did not have a copy of the definitions with him when conducting the Warranty verification process with Hughes and Argent.[4363]

4361 In closing submissions, the Viterra Parties contended that the evidence suggested Wilson-Smith described the Warranties in layman's terms and what Wilson-Smith said was his interpretation of what the Warranties meant. Wicks' senior counsel submitted this effectively amounted to a concession that what Wilson-Smith did was fundamentally different to conveying the terms of the Warranties; there was considerable force in this submission.

4362 Wilson-Smith emailed Argent a copy of the Warranties and the definitions (as had been emailed to him by Lindner) at 10.24am on 1 August 2013, with the message "As discussed". The evidence did not indicate whether this was before or after Wilson-Smith's meeting with Argent.

4363 See also par 5015 below in relation to Youil.

4971 Further, not only was there no basis for positively finding that Wilson-Smith had the definitions with him when speaking with each of the executives, but on the balance of probabilities, and taking into account the other defects that attended the Warranty verification process, it was substantially more likely than not that Wilson-Smith in fact did not have a copy of the definitions with him when conducting the Warranty verification process with any of the Third Party Individuals. In addition to the evidence referred to in the preceding paragraph, a principal reason for this finding was that Wilson-Smith took a "hard copy document" containing the Warranties to each meeting. In fact there were 2 such documents. The first of them commenced at a first page which was page 16 of the document Lindner had emailed through late on 31 July 2013.[4364] It contained notations on it, including the date of 1 August 2013 in Wilson-Smith's handwriting. Wilson-Smith accepted it was the first page of *that* document, being the document he used as part of the verification process. The second of them was substantially the same as the first, except the footer of the first page referred to page 1 (and following on the subsequent pages) rather than page 16 (and following).[4365] Neither of these documents contained the definitions.

4972 The Viterra Parties submitted the court should conclude that Wilson-Smith did have a copy of the definitions with him, and that he was willing to explain them if asked, during the verification interviews. The first thing to note about this submission was there was no suggestion that Wilson-Smith actually explained the definitions, but merely that he was willing to do so. This reflected the fact that Wilson-Smith gave no probative evidence that he did in fact explain them.[4366]

4973 Further, insofar as this submission was directed to whether he was in actual possession of the definitions at the time of the interviews, it was made on the basis that none of the Third Party Individuals gave evidence (other than Stewart, who was called by the Viterra Parties). Somewhat presumptively, it was submitted this was

---

4364 The footer of the page was numbered 16. The first 15 pages of the original document sent by Lindner to Wilson-Smith contained the draft of the definitions from the interpretation section of the document: see par 4956 above.

4365 This document also contained typewritten notes purporting to record the position of Hughes and Argent in relation to some of the Warranties.

4366 See pars 4983-4990 below.

telling as the Third Party Individuals had not given evidence about any failure of Wilson-Smith to explain the definitions. Furthermore, with respect to Stewart, it was said that the only evidence he gave concerning Wilson-Smith was by reference to a brief meeting concerning "how we should behave … prior to the sale of the business" and also "about [whether there were] any impending risks to the business".[4367] The Viterra Parties noted that Stewart's counsel chose not to ask any questions of Wilson-Smith about the meeting. Significantly, however, in adducing evidence in chief from Stewart, neither did the Viterra Parties.[4368]

4974 The Viterra Parties relied upon Wilson-Smith agreeing under cross-examination that he adverted to the importance of the definitions as part of his discussions with the executives. They also relied upon the fact that Wilson-Smith sent an email to Hughes, Argent and Stewart on 30 July 2013, in which he referred to a Warranty concerning "ISO Standards" and expressly referred to the definition of that in the Acquisition Agreement, as well as identifying the particular standards in question.

4975 The Viterra Parties also made a number of general submissions which, it was contended, suggested Wilson-Smith had the definitions with him at the relevant times. They relied upon the fact that the diagram Wilson-Smith had prepared[4369] expressly contemplated an executive responding that they did not know the position with respect to a Warranty and then having to enquire as to who else might be asked to verify the Warranty.

4976 Next, the Viterra Parties suggested there was no basis to conclude that any of the senior executives had in some way been overborne by Wilson-Smith with pressure to say something was true and correct when it was outside their knowledge. (No such allegation in this regard was made in the proceeding.)

4977 Finally, it was suggested that the cross-examination of Wilson-Smith was "crafted with razor-sharp hindsight", and that any concessions made, including that with the

---

4367 This evidence was given by Stewart under cross-examination by the Cargill Parties' senior counsel.
4368 See par 5023 below.
4369 See par 4960 above.

benefit of hindsight Wilson-Smith would have conducted the process differently, did not alter "the fact" that he followed the process recorded in the contemporaneous documents.

4978 These submissions failed to grapple with the substance of Wilson-Smith's evidence.[4370] Wilson-Smith's own evidence, considered in light of the numerous other deficiencies that attended the Warranty verification process, did not come close to establishing that he brought the definitions with him to any of the meetings.

4979 The fact that Wilson-Smith adverted to the definition of "ISO Standard" in an email to Hughes, Argent and Stewart was equivocal at best. It did not establish that it was more probable than not that he had the definitions with him when speaking with the executives and did not fill the material gaps in Wilson-Smith's evidence in relation to the definitions as detailed in the preceding paragraphs.

4980 Further, Wilson-Smith's diagram contemplating that a possible response from the executives would be that they did not know whether a Warranty was true and correct was similarly equivocal. Wilson-Smith's evidence was that he did not in fact test the answers given by the executives. Furthermore, there was no suggestion any executive positively stated he did not know the answer in response to any purported description of a Warranty. Accordingly, as a matter of fact, the scenario the Viterra Parties adverted to never arose.

4981 To repeat, in light of the way in which the Warranty verification process was conducted generally, it was not possible to conclude that it was more likely than not that Wilson-Smith brought the definitions into his meetings with the executives.

4982 This conclusion has not been reached as a result of viewing the Warranty verification process with "razor-sharp hindsight" or holding the evidence given by Wilson-Smith to an inappropriately high standard. Instead, this finding was the result of inconclusive evidence about whether or not Wilson-Smith brought the definitions

---

4370 See par 4970 above.

with him, considered in the context of a process that was materially deficient overall.

4983 *Sixthly,* even if, contrary to the finding above, Wilson-Smith did have a copy of the definitions with him when conducting the Warranty verification process, he certainly did not draw the attention of any of the Third Party Individuals to the details of them. Wilson-Smith gave clear and unequivocal evidence under cross-examination with respect to his meetings with each of the executives that "I didn't go to the definitions and I know I didn't do that". This evidence cannot be doubted. Not only was it uncontradicted but, given the timeframe in which each meeting of the Warranty verification process was conducted, it would not be realistic to conclude Wilson-Smith went through the text, or even the substance meaningfully, of all of the relevant definitions. The Warranties referred to by Wilson-Smith contained approximately 44 definitions in total, used on over 220 occasions. Although Wilson-Smith did not go through all the Warranties with all the executives, Wilson-Smith discussed a Warranty with 10 employees as part of the verification process on 254 separate occasions.[4371] The sheer volume of information involved could not have been traversed in a manner that could have been properly understood in the time available.[4372]

4984 Wilson-Smith's failure to refer to the definitions in any substantive way fundamentally undermined the efficacy of the Warranty verification process, rendering significant aspects of it virtually meaningless.[4373]

4985 By way of example, each of Hughes, Argent, Youil and Wicks were alleged to have verified Warranty 12. This allegation was maintained despite the fact that this Warranty was amended subsequent to each of Wilson-Smith's meetings with the executives, and was not re-verified by anyone in its final form.[4374] In any event, the

---

4371 This calculation was based on the final version of the typed notes Wilson-Smith emailed to Mattiske, Fitzgerald, Rees and Mann on 3 August 2013: see par 996 above. As Hughes and Argent met together, when Wilson-Smith referred to a Warranty with them, it has only been included once as part of the total of 254.

4372 This conclusion includes definitions in cl 29, which clause was referred to in Wilson-Smith's typed notes.

4373 Further, technically, the only manner in which to properly understand the meaning of the definitions was to read them in their context, because the meanings given to them in the Acquisition Agreement only applied to the extent that a contrary intention did not appear: see par 1022 above.

4374 See further par 4996 below.

original text of Warranty 12 read:

> Disclosure Material
>
> The Disclosure Material has been collated and disclosed in good faith and with reasonable care. To the Share Seller's knowledge and awareness, no material information has been omitted from the Disclosure Material.

4986 In order to be able to understand each of the terms "Disclosure Material" and "Share Seller's knowledge and awareness", it was necessary to have access to other parts of the Acquisition Agreement. "Disclosure Material" was defined as "the information set out or referred to in Schedule 8". Cross-examined by counsel for Youil, Wilson-Smith acknowledged he did not possess a copy of Schedule 8 during his meeting with Youil; further, he could not recall what his understanding was of what was contained in Schedule 8 at the time. Notably, Schedule 8 had not been forwarded by Lindner at the time she emailed the proposed Warranties.[4375]

4987 "Share Seller's knowledge and awareness", as described by clause 31.15 of the Acquisition Agreement, was limited to the actual knowledge of Rees, Fitzgerald, Mann or Mattiske or facts, matters or circumstances of which they would have been aware had they made reasonable enquiries on either 4 August 2013 or 31 October 2013. This clause was not included in the materials Lindner attached in her original email to Wilson-Smith. He had no memory of what he understood the term to mean at the time he conducted the Warranty verification process. Further, he agreed that it was a "ridiculous idea" to have asked Youil[4376] to verify the Warranty by reference to what he understood about what Fitzgerald (for example) knew.

4988 Self-evidently, without the benefit of the meanings of "Disclosure Material" or "Share Seller's knowledge or awareness", none of the executives was capable of properly understanding, and therefore properly verifying, Warranty 12 (in its original form).[4377] Because of the manner in which "knowledge and awareness" of the Share Seller was encapsulated in the Acquisition Agreement, it was an open question as to whether any

---

4375 See par 4957 above.

4376 This reflected the particular cross-examination, but the point applied to the other Third Party Individuals.

4377 Cf *BHP Billiton Iron Ore Pty Ltd v National Competition Council* (2008) 236 CLR 145, 159 [32] (Gummow, Kirby, Hayne, Heydon, Crennan and Kiefel JJ).

of the executives with whom Wilson-Smith met were in fact capable of verifying the Warranty even had they understood it. In any event, there was nothing to suggest that, without this additional information, Wilson-Smith was even capable of accurately and exhaustively summarising that Warranty in his exchanges with the executives in question. Further, when it was raised in closing submissions as to whether, for example, Hughes could possibly verify all of the matters the subject of, say, Warranty 4.2,[4378] the response was that Hughes would only be liable "[t]o his knowledge". This was not how this part of the case was pleaded in the Third Party Claim.

4989 A further point must be made on this issue. The fact that "Share Seller's knowledge and awareness" in clause 31.15 included the knowledge of Mattiske was not the position when Wilson-Smith carried out this verification process. It was not until 3 August 2013 that Mattiske was informed of, and acceded to, being a knowledge individual for the purpose of this clause.[4379] There was no evidence to suggest Wilson-Smith was aware this was going to occur or that he had any understanding of whether Mattiske's knowledge was to be included or otherwise with respect to this clause. In short, "Share Seller's knowledge or awareness" had a different meaning in the Acquisition Agreement as executed to that which was proposed at the time of the verification process.[4380]

4990 Numerous other examples could be given as to why an explanation of the definitions would have been integral to any meaningful verification process.[4381]

4378 See further fn 4381 below.

4379 See par 999 above.

4380 See also par 992 above; the draft circulated late on 2 August 2013 made the first reference to the possibility of Mattiske and Mann being included in what became cl 31.15 of the Acquisition Agreement.

4381 Without being exhaustive, Warranty 4.2 referred to "the Records", a defined term that was extensive, and included 10 subparagraphs, and which was so broad it would seem highly unlikely that any individual would be capable of having the requisite knowledge to verify the accuracy of the Warranty. Further, the definition itself contained an additional 5 defined terms. Warranty 7.3 referred to "Share Seller's knowledge and awareness" (see par 4987 above) as well as the defined term "Material Contract". The definition of Material Contract consisted of 8 subparagraphs, some very specific and some very broad. It was not suggested any of this was explained. Moreover, the definition included an additional 6 defined terms: see pars 1022, 1034 above.

4991 *Seventhly*, Wilson-Smith agreed that, at the time he undertook the Warranty verification process, with the possible exception of Argent,[4382] he had not ascertained whether the executives had any familiarity with the Data Room. Wilson-Smith gave evidence that he had expected that the executives knew the Data Room's contents, given that they were the senior members of the business in charge of the sale. There was no suggestion he asked each of them the extent of their knowledge of what was in the Data Room. Further, as a matter of fact, all of them had not been involved in the Data Room's compilation and there was no evidence that any of them had a complete understanding of what had been included (or not included). Wilson-Smith also made no enquiry of any of the Third Party Individuals about any company policies that might have been relevant to any of the Warranties because he believed (incorrectly) that such matters had already been dealt with in the Data Room and the Q&A Process.

4992 *Eighthly*, although Wilson-Smith stated in his witness statement that he "said to each of the persons with whom [he] spoke [on 1 August 2013] that this was not a time to hide anything",[4383] he did not warn the Third Party Individuals that they needed to be careful in verifying the Warranties because, in the event the Warranties were incorrectly verified, they could be exposing themselves to legal liability. He could not explain why he did not do this. Further, Wilson-Smith did not advise the executives to seek independent legal advice.[4384]

4993 *Ninthly,* Wilson-Smith made notes of his meetings with the executives in 2 different forms, namely handwritten and typed notes. Neither version of Wilson-Smith's notes purported to record what Wilson-Smith said to the executives, but only their responses in a formulaic manner (rather than recording what was actually said).

4994 Wilson-Smith took handwritten notes of each meeting on 1 August 2013 as they

---

4382 In answering a question on this issue, Wilson-Smith said Argent had been very heavily involved in the Data Room. It was not clear from his answer whether he knew the extent of Argent's involvement and knowledge of the Data Room at the time he conducted the verification process.

4383 This was reflected in a contemporaneous email (see par 996 above) but as detailed further below, Wilson-Smith clarified under cross-examination that he did not recall stating this to Wicks when he spoke to him on 2 August 2013: see par 5025 below.

4384 Compare par 997 above.

occurred. Subsequently, he transposed those notes into a typed document, which he emailed to Mallesons. The typed document took the form of the draft Warranties, with Wilson-Smith's annotations below each Warranty in red text. Wilson-Smith followed the same process for his conversation by telephone with Wicks the next day, taking handwritten notes and then updating the original typed document. As explored further below, there were differences, in some cases significant, between the responses recorded by Wilson-Smith in the handwritten and typed notes. At trial, Wilson-Smith was not able to say which version of his notes correctly recorded what the executives said to him.

4995 *Tenthly*, Wilson-Smith did not challenge any of the Third Party Individuals about the responses provided, and he did not follow up with the Third Party Individuals to confirm their responses (for example, by email) after his meetings with them.

4996 *Eleventhly,* as referred to above,[4385] Warranty 12 was altered following Wilson-Smith's meetings with the executives. The original text of proposed Warranty 12 has been set out above. The altered Warranty 12, in the form that it was included in the executed Acquisition Agreement, read:

> Data Room Documentation
>
> (a) The Data Room Documentation has been collated and disclosed in good faith and with reasonable care.
>
> (b) To the Share Seller's knowledge and awareness, no material information has been omitted from the Data Room Documentation.
>
> (c) To the Share Seller's knowledge and awareness, the Data Room Documentation is true and accurate in all material respects.

4997 By reason of the new version of Warranty 12, "Disclosure Material" was replaced with the new defined term "Data Room Documentation", which naturally Wilson-Smith would not have referred to when purporting to verify this Warranty. Further, Warranty 12(c) was omitted from the text used by Wilson-Smith and thus was not verified in its altered form by any of the executives.[4386]

4385 See par 4985 above.

4386 See further pars 5035-5039 below.

4998 *Twelfthly*, Wilson-Smith agreed, under cross-examination, that generally the process that he undertook was "deficient in a number of ways". With respect to Hughes and Argent, Wilson-Smith accepted "any opaqueness or lack of clarity in the Warranty verification process … [arose] directly out of the rushed and slipshod way in which that process was conducted". When cross-examined, Wilson-Smith accepted he "could have done a lot more"; that "in hindsight, [he] would have done it differently"; and that he "did what [he] could do in the timeframe". He observed: "It doesn't sound good and I appreciate that".

4999 This evidence represented acknowledgements by a lawyer being honest and open to the court, and fairly reflected the inadequacies in the process. As already stated, Wilson-Smith showed no signs of being overborne or confused when giving his evidence; on the contrary, he was attentive throughout his evidence and, where appropriate, made sure he fully understood the questions being put to him before he answered. Further, when confronted during cross-examination with a proposition with which he disagreed, he lucidly stated his response in rebutting what had been put.

5000 For the most part, the preceding paragraphs largely describe the serious problems that attended each meeting or phone call that Wilson-Smith undertook with each of Hughes and Argent, Youil, Stewart and Wicks. It is also instructive to briefly recount each instance of the Warranty verification process to draw out circumstances that were individual to each.

X.125.6.2 Hughes and Argent

5001 On 1 August 2013, Wilson-Smith met with Hughes and Argent together. They had very different roles. Argent's role was focused on financial matters, and he did not have direct knowledge of many aspects of the operational affairs of Joe White.[4387]

[4387] Argent's role was the subject of a position description issued by Viterra Ltd in February 2012. That document recorded that Argent reported to Viterra Ltd's finance director for Australia and New Zealand. It stated that Argent's primary responsibility was to manage the delivery of timely, accurate and cost-effective financial reporting and management information and related financial services "for the Malt and NZ Feeds" business units of Viterra. The primary responsibility also extended to other

5002 The meeting took between around 20 and 30 minutes.[4388] This timing was significant. Wilson-Smith's notes record that Hughes or Argent, or both, verified a total of approximately 60 Warranties over the course of this meeting. If the meeting was 20 minutes long, each Warranty verification would have had to have taken around 20 seconds on average. If the meeting was 30 minutes long, that timeframe extends to approximately 30 seconds per Warranty. In the circumstances of such a "quick" process, Wilson-Smith accepted he could not have been satisfied that each Warranty had been properly understood in the context of what it actually meant in the Acquisition Agreement. It was little wonder Wilson-Smith could not be so satisfied. No lawyer of any proper standing, considering the circumstances objectively, would have been. No doubt, Wilson-Smith proceeded on this basis as he was doing the best he reasonably could in the very limited timeframe that he had been afforded.

5003 Wilson-Smith's initial handwritten notes of the meeting listed the Warranty numbers under a heading that read "GH/SA" (meaning "Hughes/Argent"). Next to the Warranty numbers, Wilson-Smith handwrote a single response. Wilson-Smith was not able to say who out of Hughes or Argent provided the responses that he recorded. His witness statement states:

> I cannot now recall which of [Hughes] or [Argent] said what has been recorded in those instances, but in each instance one of them said what has been recorded and the other either expressly agreed, indicated agreement nonverbally (such as by a nod) or remained silent (from which I understood that he agreed with what he had just heard).

5004 Under cross-examination, Wilson-Smith agreed he could not recall with respect to which of the individual Warranties that Hughes or Argent had "indicated agreement nonverbally". Further, he could not recall which of the individual Warranties Hughes or Argent had indicated agreement with by staying silent, acknowledging it being equally possible that silence in that context could have meant a lack of knowledge on

---

matters directed to financial plans and policies. It was not part of Argent's responsibility to negotiate or be involved in the administration of customer contracts, or to be aware of specific customer specifications, or the reporting of any such specifications. Further, it was no part of Argent's role to conduct any technical analysis of malt, or to make decisions with respect to how that might be done or reported.

4388 See par 4966 above.

the subject, rather than agreement. Wilson-Smith confirmed it was not possible for him to tell the court which of the Warranties were verified by Hughes and which were verified by Argent.

5005 Wilson-Smith also acknowledged that Hughes and Argent had defined areas of expertise and skill sets within the Joe White Business, and therefore that it had not been a good idea to meet with them together. He agreed that had he not met with them together, the confusion arising out of who had ostensibly verified which Warranties would not have occurred.

5006 Further compounding these problems were inconsistencies between the different versions of Wilson-Smith's notes, which purported to record Hughes' and Argent's responses. General deficiencies in Wilson-Smith's notetaking have been set out above.[4389] In addition to these issues, Wilson-Smith's typed document recorded, in some instances, different or inconsistent responses to those recorded in his contemporaneous handwritten notes. A number of examples may be given.

5007 *First,* Wilson-Smith's witness statement stated that Hughes or Argent, or both, had stated to him that Joe White was potentially in breach of the Co-Operative Bulk Agreement, but that this had been disclosed in the Data Room. However, a discrepancy existed between what Wilson-Smith's handwritten notes recorded and what Wilson-Smith wrote in the typed document he sent to Mallesons in the evening of 1 August 2013. In Wilson-Smith's handwritten notes, he wrote next to the number "7.3" the words "Potentially [Co-Operative Bulk] Agreement disclosed – may be in breach". In Wilson-Smith's typed document, under Warranty 7.3 he wrote "GH/SA – Potentially in breach of [Co-Operative Bulk] Agreement – has been disclosed". In cross-examination, Wilson-Smith correctly agreed that these 2 sets of notes "don't say the same thing". When pressed by counsel for Argent, Wilson-Smith was unable to say which version of his notes was correct. He could not provide an explanation for the difference between the 2 statements as recorded. He agreed that his typed notes could be wrong. When it was put to Wilson-Smith that neither Hughes nor Argent

4389 See pars 4993-4994 above.

had said what was recorded in his typed document, he responded, "That's not what my notes say, no"; "my notes" in this answer being a reference to his handwritten notes.

5008 Ultimately, Wilson-Smith agreed that he could not be "as definite" as he had been in his witness statement that either Hughes or Argent had told him that the potential breach of the Co-Operative Bulk Agreement had been disclosed.[4390] As a matter of fact, it had not been disclosed.[4391] This, of itself, created serious doubt that both Hughes and Argent together positively represented, or at least acceded to the proposition, that it had. Further, on no view could a response identifying a particular agreement with respect to an enquiry as to whether there were any "Claims" equate to it being represented that it was correct that there were no Claims.

5009 *Secondly*, Wilson-Smith wrote the words "only Perth silo agreement"[4392] next to the number "9.2" in his handwritten notes. However, in his typed document, Wilson-Smith merely wrote "Correct" under Warranty 9.2. He could not explain the difference between the 2 recorded responses. He was unable to say which response was correct.

5010 *Thirdly*, in his handwritten notes, Wilson-Smith wrote "no" next to numbers "13.1" and "13.3". However, in his typed notes, Wilson-Smith attributed the response "Correct" to "SA" (meaning Argent) under both Warranty 13.1 and Warranty 13.3. Wilson-Smith speculated that he might have intended to write "no issues" in relation to 13.1 instead of "no", but could not explain the difference between the recorded responses and was unable to say which response was correct.

5011 *Fourthly*, the particulars of the allegation concerning Warranty 13.4 alleged Wilson-Smith asked Argent whether Warranty 13.4 was true and correct (to which it was

---

4390 Wilson-Smith's witness statement reflected his typed note rather than his handwritten note.

4391 Only the Co-Operative Bulk Agreement itself had been disclosed. Wilson-Smith gave evidence that at the time of the verification process he believed the dispute had been disclosed based on a litigation report he had read.

4392 In deciphering his note in the witness box, Wilson-Smith thought this sentence could read either "only Perth silo agreement" or "only Perth sub agreement". Undoubtedly, it was a reference to the Co-Operative Bulk Agreement, which had also been referred to in response to Warranty 9.1(a).

alleged Argent said yes) and also whether there was any information inconsistent in the Data Room (to which Argent said there was not). However, Wilson-Smith's handwritten note adjacent to "13.4" simply stated "yes". Similarly, under Warranty 13.4 in Wilson-Smith's type notes appeared nothing more than "[Scott Argent] - Correct". In short, neither version of Wilson-Smith's notes substantiated the allegation that 2 questions were asked and 2 responses were given to the effect alleged. In circumstances where Wilson-Smith had no memory at all of what was said, there was a complete absence of evidence upon which the Viterra Parties might have sought to make out this allegation. Indeed, the limited evidence that was available supported a conclusion that Argent was not asked questions in the form alleged.

5012 *Fifthly*, in his handwritten notes, Wilson-Smith wrote "no" next to the number "17(b)". However, in his typed notes, under Warranty 17(b), he wrote "GH/SA – correct". He could not explain the difference between the 2 responses.

5013 Wilson-Smith agreed that it would have been a lot clearer if he had adopted the same terminology across both his handwritten notes and the typed document. Further, he accepted that, as a result of failing to adopt consistent terminology, he was not in a position to know whether he had correctly transposed the answers or gotten them wrong.

X.125.6.3 Youil

5014 After meeting with Hughes and Argent, Wilson-Smith met with Youil in Youil's office. He had with him his handwritten notes from his meeting with Hughes and Argent. Immediately below those notes he recorded notes of his meeting with Youil.

5015 According to Wilson-Smith's handwritten notes, he raised approximately 50 different Warranties with Youil. There was no direct evidence as to the length of the meeting between Wilson-Smith and Youil but, as set out above, Wilson-Smith's evidence was that his meeting with Hughes and Argent was the longest of those he conducted. Wilson-Smith's failure to advert to the Warranty definitions in his meeting with Youil was effectively established in cross-examination with respect to a number of Warranties (being Warranties 4.2, 7.3, 9.2, 12 and 17(a); (Warranty 4.2); (Warranty 7.3);

(Warranty 12); (Warranty 17(a)).[4393]

X.125.6.4 Stewart

5016 After his meeting with Youil, Wilson-Smith met with Stewart in Stewart's office without giving Stewart any advanced notice. He described "the whole meeting [as] short". Wilson-Smith understood Stewart had a technical role, and his responsibilities did not include commercial or operational areas. He did not check whether Stewart had been involved in the Data Room or the formal Q&A Process.

5017 Wilson-Smith recorded his handwritten notes of his meeting with Stewart below his handwritten notes of his meetings with Hughes and Argent, and with Youil. His handwritten notes record that he raised 13 Warranties with Stewart, which Warranties were confined to contracts,[4394] intellectual property,[4395] and compliance with "Laws".[4396] However, as with Hughes and Argent, Wilson-Smith's handwritten notes of his meeting with Stewart differed in significant respects from the typed document he later prepared.

5018 *First,* the typed document prepared by Wilson-Smith records an additional response by Stewart from those recorded in Wilson-Smith's contemporaneous handwritten notes. In the typed document, Wilson-Smith wrote "DS – Correct" under Warranty 25, headed "Disclosure Material". However, Wilson-Smith's handwritten notes recorded no responses by Stewart past a response to Warranty 17(c); and immediately below that response appeared 2 lines that extended horizontally across the page. Under cross-examination, Wilson-Smith agreed that the double underline he made in his handwritten notes indicated there had been no further discussion as to Warranties between himself and Stewart beyond Warranty 17(c). Wilson-Smith was unable to account for the difference between these 2 sets of notes.

5019 Wilson-Smith properly accepted that if Stewart had had no involvement in connection

---

4393 Wilson-Smith answered the relevant questions during cross-examination based on the supposition that he did not have the definitions with him rather than having a specific recollection.

4394 Warranties 7.1(a) and (b) to 7.6.

4395 Warranties 8.1 to 8.3.

4396 Warranty 17(a) to (c).

with the Data Room or the Q&A Process (as was the fact), he would have been in no position to say whether Warranty 25 was correct in any event.[4397]

5020 *Secondly*, when it was put to Wilson-Smith in cross-examination that he did not methodically go through the Warranties with Stewart by way of a checklist, but rather had an informal and fluid discussion with him, Wilson-Smith could not dispute the proposition and could only state that he could not recall.[4398] This answer raised serious doubt concerning the generic and conclusory evidence given in Wilson-Smith's witness statement[4399] about the manner in which he conducted his interview with Stewart.

5021 *Thirdly*, Wilson-Smith's handwritten notes recorded responses of either "Yes" or "No" by Stewart. However, Wilson-Smith's typed document attributed the response "Correct" to Stewart under several Warranties. Thus, Wilson-Smith's handwritten notes recorded Stewart's response to Warranties 7.2, 7.3, 7.4, 7.5, 7.6, 8.2, 17(b) and 17(c) as "No", however, in the typed document Stewart's response was recorded as "Correct" under each of these Warranties. Given the contents of these Warranties, an answer of "no" was entirely consistent with an indication that the Warranty was correct. However, the matter was not free from doubt. Given the brevity of the note recording the response, there was quite a realistic possibility that Wilson-Smith's typed note did not accurately record Stewart's actual response.

5022 *Fourthly*, with respect to Warranty 7.3, concerned with whether Joe White was "in material default of any Material Contract", Wilson-Smith did not recall whether he explained what that language meant by reference to any definitions or sales documentation, or even if he used that language. He accepted he did not ascertain whether Stewart was familiar with the contractual terms of the "Material Contracts".

4397 Warranty 25 concerned the collation and disclosure of specific types of documents and contained warranties relating to good faith, reasonable care, the absence of material omission and being true and accurate.

4398 Earlier on in his evidence, Wilson-Smith had agreed with the suggestion that in meeting with Stewart he adopted an informal style.

4399 See par 4967 above. See also par 5027 below.

5023 Stewart was called as a witness by the Viterra Parties. As noted above,[4400] he was not questioned by them about this meeting with Wilson-Smith. In circumstances where Stewart willingly gave evidence on issues asked of him, including making serious concessions as to the inappropriateness of, or at least aspects of, the Operational Practices, the only appropriate inference to draw was that the Viterra Parties considered it would not have assisted their case to ask questions on this topic.[4401]

X.125.6.5 Wicks

5024 Wilson-Smith did not discuss the Warranties with Wicks until the next day, 2 August 2013. He did so via telephone, as Wicks was travelling.

5025 At the time the call took place, Wicks was about to get on a plane. In response to a question that the call might have been about 5 minutes, Wilson-Smith agreed that it was "brief, yes". He said he "took an 'informal approach' to get [it] done", stating that at that stage he "had to get it done". Not only could Wilson-Smith not recall saying to Wicks that it was not a time to hide anything, but when it was put to him that he did not say it, Wilson-Smith said his evidence in his witness statement on this issue was confined to the people he spoke to in person, and then stated "No, I can't recall saying that to Rob [Wicks]". In light of this evidence, and mindful of the very brief and informal nature of the call, I find that no such statement was made to Wicks notwithstanding the contents of Wilson-Smith's email sent 3 August 2013.[4402]

5026 Wilson-Smith took handwritten notes of the call with Wicks on a printed copy of the Warranties. As already noted,[4403] this print-out also did not include the definitions.

5027 The notes appear to record responses from Wicks to 22 Warranties. However, under cross-examination, Wilson-Smith agreed that he had no recollection of putting the "substance" of these Warranties to Wicks. (This was contrary to his witness statement which was filed in December 2017 and adopted by Wilson-Smith as his evidence in

4400 See par 4973 above.
4401 See pars 1989-1990 above concerning inferences that might be drawn in such circumstances.
4402 See par 996 above.
4403 See par 4971 above.

chief, which positively stated that he had put the "substance" of the Warranties to the Third Party Individuals in his meetings with each of them.[4404] Wilson-Smith acknowledged that at the time of giving his evidence the whole of his knowledge of what he said to Wicks was based on his handwritten and typed notes.

5028 In the afternoon of 2 August 2013, Wilson-Smith sent an updated typed document to Lindner and Allan, which purported to record Wicks' responses (alongside those of Chubb, with whom Wilson-Smith had also spoken that day regarding the Warranties). Wilson-Smith stated in that email that there did "not seems (sic) to be any material issues relating from the warranty verification".

5029 As with the other executives, Wilson-Smith's handwritten and typed notes concerning Wicks were inconsistent.

5030 *First*, the typed notes recorded responses by Wicks to certain Warranties when no equivalent response was recorded by the handwritten notes. This was the case in relation to Warranties 4.1, 6.2(b), 12, 17(c)(ii) and 25, where no response at all from Wicks was recorded in the handwritten notes, but the typed document recorded "RW – Correct" ("RW" meaning Wicks) in relation to each.[4405] Next to Warranty 7.2, the handwritten notes recorded some text about Lion Nathan (which was difficult to understand), but there was no response attributed to Wicks directly. Nevertheless, in the typed document, the words "RW – Correct. Already disclosed Lion Nathan contract in [D]ata [R]oom" were recorded under Warranty 7.2.

5031 *Secondly*, the handwritten notes recorded some responses by Wicks that did not appear in the typed document. Both Warranties 7.6 and 29 had the response "RW – No" set out next to them in the handwritten notes. However, in the typed document, no response was attributed to Wicks under either Warranty.

5032 *Thirdly*, as was the case in relation to the other executives, the nature of the response attributed to Wicks in the handwritten document was in some instances different to

---

4404 See par 4967 above.

4405 As to the practical incapacity of Wicks to verify Warranty 25, he was in the same position as Stewart: see par 5019 above.

that recorded in the typed document. Wicks' responses to Warranties 4.2(a), 4.2(b), 4.2(c) and 17(a) were recorded as "Yes" in the handwritten notes, whilst the response in the typed notes was "Correct". Conversely, his response to Warranties 7.3, 7.4, 7.5, 8.2(a), 9.1(a), 9.1(b) and 17(c)(i) was recorded as "No" in the handwritten notes but "Correct" in the typed notes. In cross-examination, Wilson-Smith agreed that the records were different and that he did not know which version of his notes was correct. Again, given the contents of these Warranties, the answers of yes and no respectively were consistent with an indication that the Warranty was correct (with the exception of Warranty 4.2(b), which was put in the negative and noted with a "Yes" response). But again, the matter of whether the typed notes accurately recorded the responses given to whatever description Wilson-Smith gave of these Warranties was not free from material doubt. Given the numerous flaws in the process, such a level of uncertainty meant it was not possible to form a view that it was more probable than not that what was ultimately recorded was correct.

5033 Before leaving Wicks, his apparent response to Warranty 9.2 (concerning the absence of any claims or disputes) should be noted.[4406] Although the wording was slightly different, in both sets of Wilson-Smith's notes he recorded Wicks saying, in addition to "no" (handwritten note) or "correct" (typed note), that there was the odd quality claim from a customer, but that was usual in the business. Not only did this create some real doubt about the meaning of "no" in the handwritten note, but on either version it raised further doubts about whether this Warranty was verified by Wicks or was the subject of a material proviso.

X.125.6.6 Summary and further findings

5034 Without being exhaustive, some of the key points to emphasise are:

(1) Wilson-Smith was a relatively junior lawyer (compared to Fitzgerald) tasked with conducting the Warranty verification process alone.

(2) Wilson-Smith was not very familiar with the Joe White Business.

4406 See issue 44 above.

(3) Wilson-Smith had never conducted a warranty verification process before and was generally unfamiliar with how to conduct such a process properly.

(4) The discussions with the Third Party Individuals were short or extremely short relative to the information alleged to have been conveyed during them.

(5) Wilson-Smith did not provide or refer to the content of the definitions intrinsic to the meaning of the Warranties during his discussions with the executives.

(6) Wilson-Smith did not read out the full text of the Warranties.

(7) Wilson-Smith assumed a level of familiarity on the part of the executives with the transaction and related steps, which assumption was predominantly incorrect (as the steps taken in the sale process were confidential and some of the executives had had very little to do with it). He did not raise or clarify this with them.

(8) Wilson-Smith did not record what he said to the executives in either version of his notes, only the executives' purported responses or nothing at all.

(9) Wilson-Smith had no independent recollection at all of what he actually said to the executives in relation to each Warranty.

(10) There were inconsistencies (some fundamental) between the responses attributed to the executives in the different versions of his notes.

(11) The Viterra Parties never verified the purported responses with any of the executives.

(12) With respect to Warranty 12, it was materially altered after the verification process.

5035 As to the last of these points, the Viterra Parties submitted the court should find that there was only 1 "change of substance" to Warranty 12, which change was in effect subsumed by other Warranties purportedly verified by the executives. This submission must be rejected.

5036 The changes made to Warranty 12 are apparent from what is set out at paragraphs 4985 and 4996 above, but are identified here for convenience. The changes have the deleted text struck through and the added text underlined:

> 12 ~~Disclosure Material~~ Data Room Documentation
>
> (a) The ~~Disclosure Material~~ Data Room Documentation has been collated and disclosed in good faith and with reasonable care.
>
> (b) To the Share Seller's knowledge and awareness, no material information has been omitted from the ~~Disclosure Material~~ Data Room Documentation.
>
> (c) To the Share Seller's knowledge and awareness, the Data Room Documentation is true and accurate in all material respects.

5037 The Viterra Parties submitted that the replacement of the defined terms after the Warranty was purportedly verified was immaterial, as the term "Disclosure Material" encompassed the term "Data Room Documentation". As such, it was contended the amendment only limited the scope of the material requiring verification. In relation to the addition of subparagraph (c), they submitted that it should be read in light of the fact that the Third Party Individuals had already verified that the "Data Room Documentation" had been "collated and disclosed in good faith and with reasonable care" and "no material information [had] been omitted" (through the purported verification of "Disclosure Material"). It was also contended that it was relevant that the Warranty was limited to matters within the Share Seller's (ie Viterra Malt's) knowledge and awareness, which was the subject of clause 31.15 of the Acquisition Agreement.[4407]

5038 As is clear from the foregoing, the submissions rested heavily on technical constructions of, and interconnections between, the several defined terms utilised in

---

4407 As to which, see pars 4988-4989 above.

each version of the Warranty's text. The submissions appeared to ignore a number of key matters. Wilson-Smith was not provided with the definition of "Disclosure Material".[4408] Further, there was no evidence to suggest he ever explained what that term meant. Furthermore, in these circumstances it was not possible for the Third Party Individuals to ascertain the true meaning of that term. In light of this, it was bordering on fanciful to suggest that the Third Party Individuals could be held to have represented that Warranty 12 in its final form was true and correct, inferentially reasoning backwards from their purported verification of the originally proposed Warranty 12. In addition, the Viterra Parties' submissions, dependent as they were on the exact text of the altered Warranty, did not sit comfortably with Wilson-Smith's evidence that he provided only the "substance" of each Warranty in raising them with the Third Party Individuals.

5039 Moreover, I do not accept that subparagraph (c) added nothing more to the meaning of the original version of Warranty 12. It is plain on their terms that in their final form subclauses (a) and (b) referred to the inclusion or otherwise of materials in the Data Room. Subclause (a) provided that the material had been "collated and disclosed" in good faith and with reasonable care, whilst subclause (b) provided that nothing material had been "omitted". Neither subclause referred at all to verification of the truth or accuracy of the content of the materials included in that documentation. In short, subclause (c) materially expanded the nature and effect of what would otherwise have been Warranty 12. Therefore, regardless of the findings with respect to Wilson-Smith's failure to advert to the definitions, subclause (c) was well outside of the scope of the Warranty purportedly verified by the Third Party Individuals in their discussions with him (and consequently well outside the scope of any representations allegedly made in those discussions).

X.125.6.7 Conclusion

5040 The circumstances attending Wilson-Smith's meetings with the Third Party Individuals are set out in paragraphs 4951 to 5039 above. Although the questions as framed by the parties invited a yes or no answer, the essential question was whether

4408 See pars 4957-4986 above.

or not the Viterra Parties established that representations were made to the effect that the relevant Warranties were true and correct.

5041 It will be apparent from what is set out above that the Warranty verification process was materially deficient in both scope and execution. The process undertaken with respect to each of the Third Party Individuals was so flawed as to render it completely inutile as a warranty verification exercise. It follows that there was no proper basis to find that Hughes, Youil, Wicks, Stewart or Argent represented to Glencore or Viterra that any of the Warranties that they were asked to verify were true and correct.

5042 As a result, it must also follow that if (contrary to the findings in issue 124 above) any of the Third Party Individuals were making representations on behalf of Joe White, the Viterra Parties have failed to establish that any such representations concerning the Warranties were made *by Joe White* to Glencore or Viterra.

5043 Finally, the Viterra Parties submitted the court should draw a negative inference from the fact that none of Hughes, Youil, Wicks, Stewart or Argent chose to give evidence as to their discussions with Wilson-Smith.[4409] No such inference will be drawn. Put simply, even putting Wilson-Smith's evidence at its highest, none of the Third Party Individuals had a case to answer in respect of the Warranty verification process. Further, it was telling that the Viterra Parties had every opportunity to adduce evidence from Stewart as to how Wilson-Smith conducted the verification process with him, and chose not to avail themselves of it.[4410] Quite the contrary, they essentially chose to avoid putting any detailed evidence before the court on the subject matter.[4411]

X.125.7 Summary of findings

4409 See also pars 2126-2133 above.

4410 See par 5023 above.

4411 In putting forward Stewart's witness statement as his evidence in chief, the paragraphs dealing with the Warranty verification process were removed by the Viterra Parties before the document was verified by Stewart in the witness box. Obviously, I have not read these paragraphs as they were not in evidence, but Stewart's closing submissions referred to the fact that these paragraphs addressed the subject and no opposing position was put by the Viterra Parties.

5044 In relation to the Joe White Executives' Representations, the Viterra Parties have not established any of the components of the Wicks Representations or the Stewart Representations.[4412] In relation to the Hughes Representations, some but not all of those representations alleged to comprise the Hughes Representations have been found to have been made.[4413] It has been found that Youil did not make the Youil Representations, except for the statements that were found to be made during the Operations Call insofar as he approved the summary of the Operations Call.[4414] Finally, in relation to Argent it has only been found he represented the Financial and Operational Information in a limited form was true and correct.[4415]

X.126 Were the Joe White Representations or the Joe White Executives' Representations, or both, made in trade or commerce within the meaning of section 18 of the Australian Consumer Law?

5045 It has been found that the Joe White Representations were not made,[4416] and only some of the Joe White Executives' Representations were made.[4417] Therefore, in considering this issue, strictly it is only necessary to refer to the Joe White Executives' Representations to the extent it has been found that they were made. However, in case my approach to the pleadings is not correct,[4418] I will also consider the conduct of Hughes and Argent insofar as it has been found to have been engaged in by each of them making some, but not all, of the Information Memorandum Statements and the Management Presentation Statements.

5046 While the issue was phrased by reference to representations, section 18 requires consideration of the conduct by which those representations were made. As Hayne J observed in *Google Inc v Australian Competition and Consumer Commission*:[4419]

4412 See pars 4796-4797, 4914 above.
4413 See par 4884 above.
4414 See par 4909 above.
4415 See par 4950 above.
4416 See par 4775 above.
4417 See pars 5041, 5044 above.
4418 See pars 4791-4797 above.
4419 (2013) 249 CLR 435, 464-465 [89].

Section 52 and the identification of impugned conduct

> The generality with which s 52 was expressed should not obscure one fundamental point. The section prohibited engaging in *conduct* that is misleading or deceptive or is likely to mislead or deceive. It is, therefore, always necessary to begin consideration of the application of the section by identifying the conduct that is said to meet the statutory description "misleading or deceptive or ... likely to mislead or deceive". The first question for consideration is always: "What did the alleged contravener do (or not do)?" It is only after identifying the conduct that is impugned that one can go on to consider separately whether that conduct is misleading or deceptive or likely to be so.

(Emphasis in original.)

5047 A key case on the question of whether conduct was in trade or commerce is *Concrete Constructions (NSW) Pty Ltd v Nelson*.[4420] The plurality in that case held that the phrase "in trade or commerce" should be construed as:[4421]

> referring only to conduct which is itself an aspect or element of activities or transactions which, of their nature, bear a trading or commercial character. So construed, to borrow and adapt words used by Dixon J in a different context in *Bank of New South Wales v The Commonwealth*,[4422] the words "in trade or commerce" refer to "the central conception" of trade or commerce and not to the "immense field of activities" in which corporations may engage in the course of, or for the purposes of, carrying on some overall trading or commercial business.

5048 The instances of conduct that have been found to have been engaged in, by which certain of the Joe White Executives' Representations were alleged to have been made, are as follows:

(1) Conduct by Hughes:

(a) Initialling the relevant cells in the Information Memorandum verification table.[4423]

(b) Involvement in drafting portions of the Management Presentation Memorandum.[4424]

4420 (1990) 169 CLR 594.
4421 Ibid, 603.4; see also 603.9-604.9 (Mason CJ, Deane, Dawson and Gaudron JJ).
4422 (1948) 76 CLR 1, 381.7.
4423 See par 4811 above.
4424 See par 4862 above.

(c) Making statements in the Management Presentation,[4425] the Operations Call[4426] and the Commercial Call.[4427]

(d) Approving the summaries of the Operations Call[4428] and the Commercial Call.[4429]

(e) Representing the Financial and Operational Information was true and correct to the extent he engaged in the conduct referred to in subparagraphs (a) to (d) above.[4430]

(2) Conduct by Youil: approving the summary of the Operations Call.[4431]

(3) Conduct by Argent:

(a) Initialling the relevant cells in the Information Memorandum verification table.[4432]

(b) Providing direct assistance in finalising the risk management section of the Management Presentation Memorandum.[4433]

(c) Making statements concerning risk management in the Management Presentation.[4434]

(d) Representing the Financial and Operational Information was true and correct to the extent he engaged in the conduct referred to in subparagraphs (a) to (c) above.[4435]

X.126.1 The Viterra Parties' submissions

4425 See pars 4863-4864 above.
4426 See pars 4838-4839 above.
4427 See par 4846 above.
4428 See par 4838 above.
4429 See par 4846 above.
4430 See par 4826 above.
4431 See par 4890 above.
4432 See par 4919 above.
4433 See par 4940 above.
4434 Ibid.
4435 See par 4928 above.

5049 The Viterra Parties submitted that the Joe White Executives' Representations were made in trade or commerce because they were made by the Joe White executives in order to describe the nature of the Joe White Business and the way Joe White carried on its commercial activities in the context of an ongoing sale process. They further submitted that such a description was properly characterised as a business activity of Joe White.

5050 The Viterra Parties submitted that the executives made the representations in circumstances where it was contended Joe White and its executives had always operated relatively autonomously,[4436] and in the context where, once Joe White was ultimately sold, the executives would no longer remain employees of Viterra. They submitted that the representations were not antecedent nor preparatory to conduct in trade or commerce, because at the time they were made the sale process was well advanced.

5051 The Viterra Parties submitted that it was not necessary for the Joe White executives to be engaged in their own trade or commerce when the representations were made. They relied for this point on *Firewatch Australia Pty Ltd v Country Fire Authority*.[4437] They submitted this case demonstrated that conduct which involved preparing a document for internal circulation could be in trade or commerce where the document was intended to have a consequence or impact on trading and commercial activities, and so had more than an internal character.

X.126.2 Hughes' submissions

5052 Hughes submitted that the conduct pleaded by the Viterra Parties was wholly internal to the companies owned by Glencore and Viterra, and was therefore not in trade or commerce but was antecedent to any commercial conduct.

5053 Hughes emphasised that the words "in trade or commerce" have a temporal element. Hughes submitted that conduct which preceded, was preparatory to or was incidental

4436 But see par 2655 above.
4437 (1999) 93 FCR 520, 544 [64] (Goldberg J).

to a corporation's trading or commercial activities was not in trade or commerce.[4438]

5054 Hughes submitted that internal communications that do not constitute conduct with the outside world are anterior to the conduct of the relevant entity ultimately engaged in trade or commerce. Hughes contended that any representations made were made as part of a process in which Hughes was required to participate by reason of his employment and at Glencore's direction that he assist in the sale of Joe White.

5055 Hughes also submitted that, because the representations relied on by the Viterra Parties were said to have been made to his employer, Viterra, or Glencore, or both, the conduct by which those representations were made was not in trade or commerce *as between* Hughes and the Viterra Parties. Hughes' submissions on this point appeared to be made on the premise that, where a party engages in trade or commerce involving 2 other parties, the conduct may be in trade or commerce for 1 of those 2 parties but not for the other. Further, Hughes submitted that to the extent any conduct was engaged in it was conduct of Glencore or Viterra, or both, but was not his conduct for the purposes of the Australian Consumer Law.[4439]

X.126.3 Youil's submissions

5056 Youil submitted that while his conduct may have been in connection with or in relation to trade or commerce, it was not, as between Youil and Viterra, in trade or commerce. In respect of the Operations Call, Youil submitted that the Viterra Parties had not articulated how they actually apprehended the pleaded representations, and highlighted that the Viterra Parties submitted in closing that the notes of the Operations Call were not reviewed by any witnesses in the proceeding apart from Engle (of Cargill). Youil submitted that this limited his ability to appropriately characterise the conduct.

5057 Youil further submitted that in making statements to Viterra, he acted in response to

---

4438 See *Auswest Timbers Pty Ltd v Secretary to the Department of Sustainability & Environment* (2010) 241 FLR 360, 434-435 [156]-[157] (Croft J); *Robin Pty Ltd v Canberra International Airport Pty Ltd* (1999) 179 ALR 449, 460 [49] (Gyles J).

4439 See *Swiss Re International SE v Simpson* (2018) 354 ALR 607, 695 [527]-[529], 699 [561], [564]-[565], 701 [584] (Hammerschlag J).

a request for information from his employer in the ordinary course of his employment. Youil submitted that before the information conveyed by him to Viterra could be deployed in a trading or commercial context, it needed to undergo at least 1 necessary integer, being Viterra's reliance on the information when conveying it to Cargill.

X.126.4 Argent's submissions

5058 Argent submitted that for conduct to be in trade or commerce, it must be part of trade or commercial activities and not merely incidental to them. Argent submitted that the mere potential for trade or commerce preceding an instance of conduct was insufficient to render the conduct in trade or commerce.[4440]

5059 Argent's submissions drew a distinction between internal communications engaged in without persons present from outside the business, and communications made to persons outside the business and intended to have a consequence on trading and commercial activities. Argent submitted that the latter category would most likely be in trade or commerce, but that the former category would likely be antecedent to the relevant entity engaging in conduct in trade and commerce.[4441] Drawing on this distinction, Argent submitted that with the exception of communications with Deloitte, Merrill Lynch, Mallesons and any representatives of Cargill, his conduct during the sale process was wholly antecedent to any conduct of a commercial or trading character.

5060 Argent also submitted that he was acting in response to requests for information, which were made in the ordinary course of his employment. On the basis of his submissions, Argent contended that none of his conduct was in trade or commerce.

4440 Relying upon *Concrete Constructions (NSW) Pty Ltd v Nelson* (1990) 169 CLR 594, 604.5-605.2 (Mason CJ, Deane, Dawson and Gaudron JJ, with Toohey J in agreement). Reference was also made to *Murphy v Victoria* (2014) 45 VR 119, 143 [77], 148-149 [90]-[92] (Nettle AP, Santamaria and Beach JJA); *Auswest Timbers Pty Ltd v Secretary to the Department of Sustainability & Environment* (2010) 241 FLR 360, 434-435, [156]-[157] (Croft J).

4441 See *Vanguard Financial Planners Pty Ltd v Ale* [2018] NSWSC 314, [207]-[209] (Black J); *New Cap Reinsurance Corporation Ltd v Daya* (2008) 216 FLR 126, 135-137 [47]-[53] (Barrett J); *Firewatch Australia Pty Ltd v Country Fire Authority* (1999) 93 FCR 520, 543-544 [62]-[67] (Goldberg J); *Concrete Constructions Pty Limited v Nelson* (1990) 169 CLR 594, 604.5-605.2.

X.126.5 Analysis

5061 The possible distinction between conduct involving internal communications within a company and conduct involving external communications as part of a sale process is important in the circumstances of this case. It provides a useful starting point in considering the relevant conduct.

X.126.5.1 External communications

5062 Some of the instances of conduct identified as having conveyed certain of the Joe White Executives' Representations[4442] occurred in a context of external communications between Glencore or Viterra, or both, and Cargill. The statements made by Hughes on the Operations Call and the Commercial Call, and the statements made by Hughes and Argent at the Management Presentation, were all made to an audience that included not only representatives of Glencore and Viterra but also representatives of Cargill. Specifically, the Operations Call involved De Samblanx;[4443] the Commercial Call involved Viers, Eden and perhaps Hawthorne or Engle;[4444] and the Management Presentation was attended by a large number of Cargill employees.[4445] Further, on each of these occasions, Cargill was represented by Goldman Sachs.

5063 Given these audiences and the fact that each of the Calls and the Management Presentation occurred in the context of a proposed sale of a business, it must follow that each of the statements made during the Management Presentation, the Operations Call and the Commercial Call were made in trade or commerce. The decision of the High Court in *Houghton v Arms*[4446] shows it is not an impediment to a finding that the relevant conduct was in trade or commerce that it was not the trade or commerce of the person against whom the claim is brought.[4447] The fact that the trade or commerce being engaged in was that of Glencore or Viterra, rather than

---

4442 See par 5048 above.
4443 See par 865 above.
4444 See par 910 above.
4445 See par 710 above.
4446 (2006) 225 CLR 553.
4447 Ibid, 565 [35] (Gleeson CJ, Gummow, Hayne, Heydon and Crennan JJ).

Hughes or Argent as individuals,[4448] did not change the fact that the making of the statements was conduct in trade or commerce.

5064 Consistent with this approach on the facts of this case, the suggestion implicit in Hughes' submissions that the same instance of conduct may be in trade or commerce for 1 of the parties present when the relevant conduct occurred but not for another of those parties cannot be accepted. As these instances of overt external communications with Cargill were conduct in trade or commerce between Glencore and Viterra and Cargill, they must also be treated as being in trade or commerce when considering the Viterra Parties' claims against the relevant Third Party Individuals.

5065 Of course, separate and distinct questions may arise as to what "conduct" was engaged in, and whose "conduct" it was. These questions will always be answered by considering the particular facts at hand. It may be readily envisaged that there would be occasions when it was clear that the "conduct" of an employee or other agent of a company would be treated as different "conduct" to that of the company. For example, a lengthy presentation given by a company which was attended by an employee for only a short period of time, during which the employee made a limited statement on a topic that was addressed by others as well in the employee's absence and about which the employee had no knowledge of what was actually said. In these circumstances, the making of the limited statement by the employee on the topic would necessarily be viewed as different conduct to the more extensive conduct of the employer in relation to the same topic; and further the limited statement by the employee may have conveyed a different representation (viewed as the employee's conduct) to the representation conveyed by the same statement in the broader context (viewed as the employer's conduct). The difference between the 2 positions may become even more apparent if the relevant conduct is alleged to include non-disclosure. In the confined scenario referred to, ordinarily it would be expected to be less likely that the employee's conduct would be seen to include non-disclosure if that employee was aware that others were addressing the same topic but was unaware of

---

4448 Youil has not been referred to as part of this passage as it has not been found that he made any of the Operations Call Statements during the Operations Call: see pars 4839, 4885 above.

any lack of disclosure in that regard. However, the converse may be equally true if the employee knew that material information relevant to what she or he had stated was being withheld. In this latter scenario, the question would arise as to whether the employee's knowledge could be attributed to the company (which again would depend on the particular facts of the case). Similarly, in some circumstances the acts of an employee or other agent could only be characterised as "conduct" of the company if the employee or agent was acting strictly within the directions given by the company to that person in that capacity.

5066 However, in many cases the position will be less clear and all the circumstances would need to be considered in order to determine whether the employee or agent was engaging in "conduct" as well as the company and, if so, whether the "conduct" of the employee or agent was the same or different "conduct" to that of the company.

5067 Also, it is important to recognise the different relationships involved. In most cases, the conduct of an employee or agent of the company is the subject of a claim from some other person who has dealt with the company. This is to be contrasted with a claim by the company against its own employee or agent. It is the latter relationship that arose for consideration in this and related issues.

5068 Further, in the Third Party Claim the Viterra Parties did not simply replicate the allegations of Cargill Australia in identifying the conduct alleged to be misleading or deceptive in trade or commerce. To elaborate, the conduct which was alleged to contravene section 18 was the components of the Joe White Executives' Representations, which were different from the Financial and Operational Performance Representations and the Warranty Representations the subject of allegations in the Statement of Claim. In essence, the Viterra Parties identified conduct they alleged was engaged in by each Third Party Individual and alleged they relied upon that conduct in making the Financial and Operational Performance Representations and the Warranty Representations. Accordingly, the question that arose did not involve considering the same conduct in determining to whom it may be attributed, but rather involved different conduct to that alleged by Cargill Australia

to have been engaged in by the Viterra Parties.

5069 Following on from this, the facts in *Swiss Re International SE v Simpson*[4449] were readily distinguishable from those that arise in this case. Very broadly, that case involved a claim for losses suffered as a result of performance bonds being called upon after the collapse of a company. The performance bonds had been provided as security by insurers, with some of the bonds issued less than a month before the company's demise. Amongst others, 3 directors of the company were sued for misleading or deceptive conduct in trade or commerce. It was alleged that their conduct in approving certain submissions, alternatively in relation to a presentation given, resulted in the performance bonds being issued.[4450] Thus, the plaintiffs were entities that had dealt with the failed company, rather than being claimants who were the entities for whom the directors were acting.

5070 It is unnecessary to go through the extensive factual background of the case against each of the 3 directors. In essence, the relevant aspect of the case for present purposes was concerned with non-disclosure of information the insurers claimed ought to have been disclosed and, if it had been disclosed, would have resulted in the performance bonds not being issued.[4451] In dealing with 1 of the directors and in distinguishing *CH Real Estate v Jainran Pty Ltd*,[4452] including on the basis that that case involved positive acts,[4453] Hammerschlag J held that the director was not a principal of the company, was not its mind and was not directing it, but was merely answering questions and providing information known to him about the failed company *which did not call for disclosure of the particular matters identified*.[4454]

4449 (2018) 354 ALR 607 (Hammerschlag J).

4450 Ibid, 666 [341], [343].

4451 Ibid, 696 [534]-[536]. In addition to claims relating to non-disclosures, Hammerschlag J also addressed whether representations made by way of public announcement were the representations of 2 directors: see 699 [555]-[562].

4452 (2010) 14 BPR 27,361. In this case it was held that the individual, as the mind of the company, was personally directly liable for the misleading and deceptive conduct because he engaged in it and the liability was the product of his own conduct rather than merely accessorial liability: 27,378-27,379 [104]-[105] (Basten JA, with whom Beazley JA relevantly agreed).

4453 (2018) 354 ALR 607, 695 [528]-[529].

4454 Ibid, 695 [527], [530]. See also *Robinson v 470 St Kilda Road Pty Ltd* [2018] FCAFC 84, [50]-[51]

X.126.5.2 Internal communications

5071 The situation is less straightforward when considering the remaining conduct, which included initialling the relevant cells in the verification table by Hughes and Argent, assisting in the drafting of the Management Presentation Memorandum by Hughes and Argent, and the approval of the summaries of the Operations Call and the Commercial Call by Youil in relation to the former and by Hughes in relation to both. The immediate audience in relation to the relevant communications did not include individuals from outside the Glencore corporate group.

5072 In *Firewatch Australia Pty Ltd v Country Fire Authority*,[4455] the second respondent (who was the first respondent's manager of community risk management) circulated a bulletin, which was critical of a foam spray fire extinguisher that the applicant had introduced to the Victorian market.[4456] The bulletin was circulated through various offices and brigades within the first respondent.[4457] The bulletin contained a strong recommendation that "brigades not become involved in the distribution or recommendation" of the applicant's product, which recommendation was maintained despite complaint from the applicant.[4458] The bulletin was only sent internally, but it became the subject of wider circulation despite the fact that this larger distribution was never intended by the 2 persons responsible for its initial distribution.[4459]

5073 In his reasons, Goldberg J noted that "[a]n internal communication within an organisation which is intended to be read only by addressees within the organisation ordinarily is not a dissemination which has a trading or commercial character".[4460]

(McKerracher and Markovic JJ, with whom Rangiah J agreed) in which it was considered whether, in circumstances where the act of an individual is also the act of a company, this constitutes multiple acts (1 of each of the individual and the company) for the purposes of s 87CB(3) of the *Trade Practices Act* (this question was answered in the negative); *Australian Securities and Investments Commission v Narain* (2008) 169 FCR 211, 216-217 [19]-[20] (Finkelstein J), 225 [97]-[100] (Jacobson and Gordon JJ). More recently, in *Australian Securities and Investments Commission v GetSwift Ltd* [2021] FCA 1384 (Lee J), *Swiss Re International SE v Simpson* was distinguished in holding 2 individuals directly liable for misleading or deceptive conduct under s 1041H of the *Corporations Act* and s 12DA of the *Australian Securities and Investments Commission Act 2001* (Cth): at [2121], [2124], [2126]-[2129].

4455 (1999) 93 FCR 520 (Goldberg J).

4456 Ibid, 521-522 [1].

4457 Ibid.

4458 Ibid, 523 [2]-[3].

4459 Ibid, 527-528 [21], 535 [38].

4460 Ibid, 543 [62].

However, his Honour held that although the bulletin was an internal document, it had more than an internal character, because it was intended to have a consequence or impact on trading and commercial activities.[4461] It was found that the intention of the bulletin was that in dealings or potential dealings with consumers, fire equipment maintenance servicing brigades would be influenced not to become involved in the distribution or recommendation of the product.[4462] This was in a context where these brigades had the right and opportunity to replace extinguishers, and the applicant's extinguishers were within the range of products which it was open to them to purchase.[4463] His Honour concluded that "if information is provided for the purpose of it being used for carrying out work in trade or commerce it has… a trading or commercial character".[4464]

5074 *Firewatch Australia Pty Ltd v Country Fire Authority* was considered by McCallum J in *Templar v Watt (No 3)*.[4465] In that case, her Honour was asked to characterise a specialist paediatrician's conduct in sending an email to a government department expressing concerns about a provider of hearing tests for primary school children. It was held the conduct was not in trade or commerce. In distinguishing *Firewatch Australia Pty Ltd v Country Fire Authority*, the following was stated about that case in relation to the bulletin sent to the offices and brigades:[4466]

> The bulletin was widely distributed, including to prospective customers of the applicants. The decision appears to have been influenced by his Honour's finding that the bulletin was sent to brigades that did maintenance servicing on fire equipment and so might become involved in the distribution of fire extinguishers … the bulletin expressly recommended to fire brigades that they not be involved in the distribution of the extinguisher as part of their own commercial activity. Those features distinguish it from the present case.

5075 The decision in *Firewatch Australia Pty Ltd v Country Fire Authority* and its consideration in *Templar v Watt (No 3)* demonstrate that close attention needs to be paid to the specific circumstances in which an internal communication is made,

---

4461 Ibid, 544 [64].
4462 Ibid.
4463 Ibid, 544 [66].
4464 Ibid, 544 [67].
4465 (2016) 313 FLR 387.
4466 Ibid, 407-408 [99].

including the intention behind the communication. This intention should be determined objectively, looking both at the content of the communication and the context in which the communication was made.

5076 The decision in *Firewatch Australia Pty Ltd v Country Fire Authority* was also distinguished by Griffiths J in *National Roads and Motorists' Association Limited v Construction, Forestry, Maritime, Mining and Energy Union*.[4467] This was done on the basis that, amongst other things, what was done by the union in adopting a particular logo depicting the "NRMA" in less than positive terms in the context of a lengthy industrial dispute was not intended to encourage others to invest or continue investments, but was designed to secure improved working conditions.[4468]

5077 I will now turn to each of the relevant internal communications.

5078 *First,* the intention behind Hughes and Argent's initialling of the relevant squares in the Information Memorandum verification table can be surmised in large part from the email from Mallesons sent on 21 April 2013. In that email, the solicitor explained that the Information Memorandum did not "require 'prospectus type' verification", and explained that through the verification process they were trying to ensure the Information Memorandum was accurate by having the relevant persons focus on allocated sections going forward.[4469] Although far from determinative, it should be mentioned that in Mallesons providing the advice that it did, there was no suggestion to either Hughes or Argent that there might be any personal exposure to liability if the contents of the draft information memorandum were inaccurate in any way.[4470]

5079 Unlike the Information Memorandum itself, the verification table was not intended to be distributed widely outside those persons responsible for the sale of Joe White. The completion of the verification table was an internal exercise aimed to ensure that information which would eventually be provided to prospective purchasers was accurate. In this context, the conduct of Hughes and Argent in initialling the relevant

4467 (2019) 291 IR 28.
4468 Ibid, 68-69 [149]-[150].
4469 See par 447 above.
4470 Ibid.

squares in the verification table can be properly characterised as antecedent to or preparatory to trade or commerce, but not as being conduct in trade or commerce. Importantly, neither Hughes nor Argent was identified as making any particular representation in the Information Memorandum itself. With the distribution of the Information Memorandum, the conduct in question was expressly stated to be the conduct of Glencore and its subsidiaries. Further, it was Glencore and its advisers that had the final say in what was stated in the Information Memorandum, not Hughes or Argent.

5080 *Secondly,* turning to the summary of the Operations Call, it has been found that both Hughes and Youil represented to Glencore and Viterra that the Operations Call Statements were true and correct by their conduct in reviewing and agreeing with the summary.[4471] The particulars of that conduct are relevant to the present analysis. On 24 July 2013, a representative of Merrill Lynch emailed Hughes and Youil, attaching draft notes from the Operations Call and stating, "We should be grateful if you were please able to let us know if you have any comments on the attached (in particular the items highlighted in yellow)".[4472] That email was copied to 2 other Merrill Lynch representatives. Youil replied 1 hour later, attaching an amended draft of the notes and stating "I have made some clarifications in Red font". Youil included Hughes in his reply and queried, "Gary [d]o you have anything to add?". A Merrill Lynch representative sent a follow up reply to Hughes on 25 July 2013, which did not copy Youil or the other Merrill Lynch representatives. Hughes replied to that email on the same day, stating "… all good, I am happy with Peter's [Youil's] comments". Hughes' reply was sent to this Merrill Lynch representative alone.

5081 In short, Hughes and Youil sent their emails to a small, identified group. Further, the emails sent by Hughes and Youil did not contain any comparable express recommendation (of the kind referred to in *Firewatch Australia Pty Ltd v Country Fire Authority*) which might have been acted on by the recipients. Furthermore, while the

4471 See par 4838 above.
4472 See par 4830 above.

summary of the Operations Call was ultimately annexed to the Acquisition Agreement,[4473] this eventual use was not foreshadowed in the request for review from Merrill Lynch, nor was its annexure to the Acquisition Agreement done at the instigation of Hughes or Argent. Indeed, there was no evidence to suggest either of them were aware that such a course was even contemplated. Taken together, these factors demonstrated that the emails sent by Hughes and Youil did not have more than an internal character, and consequently that their conduct in sending these emails with their responses was not done in trade or commerce.

5082 *Thirdly*, a similar analysis applies to Hughes' review of the Commercial Call summary. A representative of Merrill Lynch emailed Argent and Hughes on 30 July 2013, attaching the minutes for 3 calls and requesting a review.[4474] Argent replied on 1 August 2013, copying Hughes. Argent said in the body of the email, "Minutes of the commercial and barley calls – [Hughes] and I have reviewed". I accept Argent's submission that by this email, Argent undoubtedly meant to convey that he had reviewed the summary of the Barley Inventory Call and Hughes had reviewed the summary of the Commercial Call.[4475] The communication by Hughes (through Argent's email) was made to a limited group and contained no express recommendation intended to influence trade or commerce. Again, while the summary of the Commercial Call was annexed to the Acquisition Agreement,[4476] this was not foreshadowed in the request for review or prompted by Hughes. Accordingly, Hughes' conduct in reviewing the summary and providing his response was not done in trade or commerce.

5083 The *final* instances of conduct to be considered are those of Hughes and Argent assisting in the drafting and finalising of some sections of the Management Presentation Memorandum.[4477] The detailed drafting of the Management Presentation Memorandum was done by Merrill Lynch at the instruction of

4473 See par 884 above.
4474 See par 4931 above.
4475 See par 4932 above.
4476 See par 910 above.
4477 See par 4862 above.

Glencore.[4478] As part of the finalisation of the drafting, many people were given a chance to review the presentation as a work in progress and to provide feedback.[4479] Hughes and Argent were among those asked to review.[4480]

5084 The evidence did not indicate that Hughes or Argent distributed the Management Presentation Memorandum to any external recipient, or that they had control over the final version of the Management Presentation Memorandum which was distributed. King accepted that he had had a significant role in drafting the Management Presentation Memorandum, and that he had fastidiously reviewed it until he was satisfied with the final product.[4481]

5085 In the drafting and finalising of the Management Presentation Memorandum itself, Hughes and Argent did not have direct communication with the prospective purchasers. King's evidence supports the conclusion that he (in conjunction with Merrill Lynch) had final control over the content of any recommendations or representations made to potential purchasers through the Management Presentation Memorandum. While the ultimate distribution of the Management Presentation Memorandum was undoubtedly in trade or commerce, as was the giving of the Management Presentation itself, all the work done in preparing the Management Presentation Memorandum (such as circulating various drafts, discussing amendments that might be made and the making of amendments) was not conduct in trade or commerce. Rather, this work was antecedent and preparatory to conduct in trade or commerce.

5086 As already explained,[4482] to the extent Hughes or Argent represented the Financial and Operational Information was true and correct, that representation was only made by reason of the other representations that have been found to be made. Accordingly, it is unnecessary to consider this aspect of the case separately in determining this issue.

4478 See par 696 above.
4479 Ibid.
4480 See par 697 above.
4481 Ibid.
4482 See pars 4826, 4928 above.

X.126.6 Conclusion

5087 For the reasons set out above, the conduct of Hughes in making the Operations Call Statements and the Commercial Call Statements, and the conduct of Hughes and Argent in speaking to the Management Presentation Memorandum and making the Management Presentation Statements to the extent that they did respectively, was conduct in trade or commerce within the meaning of section 18 of the Australian Consumer Law. Otherwise, the remaining conduct by which some of the Joe White Executives' Representations have been found to have been made was not conduct engaged in in trade or commerce.

X.127 Did Glencore and/or Viterra rely upon the Joe White Representations and/or the Joe White Executives' Representations in making the Financial and Operational Performance Representations and the Warranty Representations, and did Viterra rely upon the Joe White Representations and/or the Joe White Executives' Representations in giving the Warranties?

X.127.1 Scope of the matters for determination

5088 While issue 127 as framed did not refer to the Australian Consumer Law, given the related issues and the manner in which this issue was raised in the Third Party Claim, it was clear that the question of reliance to be determined forms part of the causation element in the Viterra Parties' claim for compensation because of the alleged contraventions of section 18 of the Australian Consumer Law. As a result, it is only necessary to consider conduct identified in issue 126 to the extent that that conduct has been found to have been engaged in in trade or commerce.[4483] Further, insofar as this issue referred to the possibility of Glencore making the Warranty Representations, it did not accurately reflect the allegations made by Cargill Australia against the Viterra Parties.[4484] The Warranty Representations were made when the Acquisition

---

4483 To be clear, as the Viterra Parties have not established the Joe White Representations were made, any determinations in relation to this issue may be confined to the extent to which findings have been made that the Joe White Executives' Representations were made in trade or commerce.

4484 Issue 127 was drafted by reference to pars 47 and 59 of the Third Party Claim, which both referred to "Glencore and Viterra" making the Warranty Representations. However, the allegations of Cargill Australia were confined to Viterra making the Warranty Representations: see issue 48 above.

Agreement was entered into (to which Glencore was not a party). Accordingly, it is only necessary to consider this issue in relation to Viterra having made the Warranty Representations.

5089 Therefore the questions to decide are whether Glencore or Viterra in making the Financial and Operational Performance Representations, and whether Viterra in giving the Warranties and making the Warranty Representations, relied on the conduct engaged in in trade or commerce that has been established against some of the Third Party Individuals, namely Hughes and Argent.

5090 To recapitulate, it has been found that the following conduct was in trade or commerce:[4485]

(1) Hughes making the Operations Call Statements and the Commercial Call Statements.

(2) Hughes and Argent making different statements which together, though not respectively, comprised the Management Presentation Statements.

It fell to the Viterra Parties to show that either Glencore or Viterra made the Financial and Operational Performance Representations in reliance on this conduct of either Hughes or Argent (or both) to the extent that each of Hughes or Argent respectively made the statements referred to immediately above. A like observation is made in relation to Viterra giving the Warranties and making the Warranty Representations. In other words, the Viterra Parties were required to prove their claims against each of Hughes and Argent separately based on the conduct engaged in in trade or commerce by the particular individual.

5091 The legal principles governing considerations of causation (including reliance) in relation to section 18 of the Australian Consumer Law have been set out above.[4486]

X.127.2 The allegation of reliance upon the Third Party Individuals having

4485 See par 5087 above.
4486 See issue 20.2 above.

represented that the Warranties were true and correct

5092 The allegations as pleaded by the Viterra Parties were that in relation to the Warranties the Viterra Parties relied on what they were informed as a result of the Warranty verification process managed by Wilson-Smith.[4487] The allegations were that 1 or more of Hughes, Youil, Wicks, Stewart and Argent informed Glencore and Viterra that each of the Warranties was accurate by verifying the accuracy of it.[4488] There was no suggestion in the Third Party Claim or the Viterra Parties' submissions that, in Glencore or Viterra making the Warranty Representations, any reliance was placed on any other conduct of the Third Party Individuals other than their participation in the Warranty verification process and the alleged verification of the various Warranties. As it has been found that there was no proper basis to conclude that any of Hughes, Youil, Wicks, Stewart or Argent represented to Glencore or Viterra that any of the Warranties that they were respectively asked to verify as part of the Warranty verification process were true and correct,[4489] it necessarily follows that the Viterra Parties could not make out their claim that they relied on any alleged representations by any of the Third Party Individuals concerning the accuracy or otherwise of the Warranties.

X.127.3 Submissions

5093 The submissions made by Wicks and Stewart only addressed the Warranty Representations and the giving of the Warranties, and so are not necessary to consider here given the findings made in relation to the Warranty verification process. While it has also been found that the Viterra Parties have not established that Youil made any of the Operations Call Statements *in trade or commerce* or any other Joe White Executives' Representation, his submissions went beyond the Warranty verification

---

4487 A separate allegation was made in relation to each of the Third Party Individuals, which were then referred to collectively.

4488 The particulars to this allegation identified the specific Warranties each of the Third Party Individuals were alleged to have verified.

4489 See the specific Warranties referable to each Third Party Individual in the questions framed for issue 125 above, at 125(1)(g), (2)(c), (3)(b), (4)(b), (5)(f).

process and thus are referred to below.

X.127.3.1 The Viterra Parties' submissions

5094 The Viterra Parties relevantly referred to their factual submissions on the preparation of the Information Memorandum, the Management Presentation, the Operations Call and the Commercial Call. These factual submissions have been considered above,[4490] and it is not necessary to revisit them in detail here. The Viterra Parties contended that these submissions supported the conclusion that the Viterra Parties relied upon the Joe White Executives' Representations. The Viterra Parties also submitted that there was an asymmetry of knowledge between Joe White (including the Joe White executives) and the Viterra Parties, which meant that the reliance was significant. They further submitted that the actions of the Viterra Parties in the period following disclosure by the Joe White executives to Cargill in the 15 October Meeting were consistent with the Viterra Parties' reliance being genuine.

X.127.3.2 Hughes' submissions

5095 Hughes submitted that the Viterra Parties had failed to establish reliance because they had adduced no evidence of direct reliance and there was no available evidence from which any inference of reliance could be drawn.

5096 Hughes also submitted that the Viterra Parties' submissions regarding the asymmetry of knowledge between the Joe White executives and the Viterra Parties was made without a factual basis. He noted that the Viterra Parties had adduced no evidence to the effect that Mattiske or anyone else from Glencore had ever told Hughes that Glencore and its employees had no experience in the running of a malting company or in the malting industry generally. Hughes submitted that he was entitled to assume Glencore was familiar with the business it had purchased and that the Viterra Parties understood the industry in which they operated.[4491]

4490 For the factual background on these matters, see pars 421-424, 427-430, 433-439, 442-452 above in respect of the Information Memorandum, pars 708-742 above in respect of the Management Presentation, pars 865-903 above in respect of the Operations Call, and pars 910-921 above in respect of the Commercial Call.

4491 Implicit in this submission was the premise that persons that were familiar with the malting industry would anticipate the existence of the Viterra Practices or something similar. This submission is at odds

X.127.3.3 Youil's submissions

5097 Youil submitted that reliance had not been established in circumstances where Viterra had failed to call several key decision-makers as witnesses. In respect of the Operations Call Statements, Youil queried how the causational chain alleged by the Viterra Parties could operate, noting that the Viterra Parties would have to identify how any statement made by Youil to Cargill was relied upon by the Viterra Parties in making some other statement to Cargill.

5098 Youil accepted that the causational chain could potentially be made out where someone within Viterra had read the summary of the Operations Call and then went on to make further statements to Cargill, but submitted that there was no evidence of such a sequence of events. Youil highlighted that the Viterra Parties had not led evidence that anyone had read and comprehended the summary, but rather had admitted in their closing submissions that the summary was accessed by a single Cargill employee, Engle, and otherwise not reviewed by any of the persons who were witnesses in the proceeding.

X.127.3.4 Argent's submissions

5099 Argent referred to King's evidence to the effect that Glencore's intention was to present the Joe White Business in the best possible light in order to sell it for the highest price.[4492] Further, Argent submitted that there was no suggestion that any financial information provided by Argent was wrong other than by reason of the mischief created by the Viterra Practices underpinning Joe White's performance, about which there was no evidence that Argent had any knowledge. Argent referred to other evidentiary matters in submitting that he did not make the Financial and Operational Performance Representations.

5100 Further, he submitted that the notion that the Viterra Parties relied on Joe White's management to provide the Management Presentation was highly improbable in circumstances where the Viterra Parties expressly disclaimed that Cargill and any

---

with the finding that the Viterra Parties have not established that the Alleged Industry Practices existed, nor that anything resembling such practices was common in the commercial malting industry: see par 2816 above.

4492 See pars 110, 402, 709 above.

other potential bidders could rely on the information conveyed by that presentation. Argent submitted it was perverse that the Viterra Parties sought the benefit of extensive disclaimers, but contrastingly then alleged that they relied on the accuracy of the information provided by management.

X.127.4 Analysis

5101 Given the limited number of representations found to have been made by the Third Party Individuals in trade or commerce (confined to only some of the conduct of only Hughes and Argent), the facts as found bore little resemblance to the manner the Viterra Parties alleged that either Glencore or Viterra relied on the Joe White Executives' Representations in making the Financial and Operational Performance Representations; or that Viterra relied on them in giving the Warranties or in making the Warranty Representations.

5102 Dealing with the matter strictly as it was pleaded, the allegations must be rejected as the Viterra Parties have failed to establish that the Joe White Executives' Representations as alleged were made. Specifically, in relation to the Third Party Individuals collectively, it was alleged that the Hughes Representations, the Youil Representations, the Wicks Representations, the Stewart Representations and the Argent Representations comprised the Joe White Executives' Representations. It was then alleged Glencore and Viterra relied on the Joe White Executives' Representations in their entirety in engaging in certain conduct. As some of the Joe White Executives' Representations have not been found to have been made, and much of the remainder found to have been made but not in trade or commerce,[4493] there was a significant evidentiary gap in this part of the Third Party Claim.[4494] If there were only a small number of aspects of the Joe White Executives' Representations which had not been established, then a finding of reliance may have been theoretically possible. As it stands, given the contrast between what was alleged to have been relied upon and

---

4493 Only a relatively small subset of the Joe White Executives' Representations have been found to have been made in trade or commerce: see issue 126 above.

4494 See also pars 4791-4797 concerning the problems with proving the components of the Joe White Executives' Representations.

what has been proven, the allegation of reliance must fail at the threshold.

5103 In addition, no direct evidence of reliance on the particular representations found to have been made in trade or commerce was adduced. It is also not possible to infer reliance on these representations from the evidence available. Applying the test in *MWH Australia Pty Ltd v Wynton Stone Australia Pty Ltd (in liq),*[4495] the Viterra Parties have not shown that "common sense dictates" that the limited representations found to have been made in trade or commerce by Hughes and Argent played at least some part in inducing Viterra to make the Financial and Operational Performance Representations to Cargill.[4496] This approach cannot be satisfied in circumstances where the representations were not calculated to induce Glencore or Viterra to make any further representations and where the relevant statements were a very small subset of the basis upon which it was alleged by the Viterra Parties that the Financial and Operational Performance Representations were made.

5104 To elaborate, the Viterra Parties made no attempt to link any particular statement or statements of the Management Presentation Statements, the Operations Call Statements or the Commercial Call Statements to any particular representation of the numerous Financial and Operational Representations alleged, or to identify any combination of statements of Hughes, or separately Argent, of the statements relied upon said to comprise a particular representation or particular representations. Indeed, regardless of any findings, mindful of the fact that the case against each of the Third Party Individuals had to be established separately and that their involvement was different such that none of them was involved in all aspects of the conduct the subject of claims by Cargill Australia, there was a flaw in this aspect of the Third Party Claim. That is, the Viterra Parties failed to identify particular statements alleged to have been made by each of the Third Party Individuals in the Third Party Claim against that person that were then said to have been relied upon in making any, some

---

4495 (2010) 31 VR 575.

4496 Ibid, 603 [106] (Buchanan and Nettle JJA). See also *Hanave Pty Ltd v LFOT Pty Ltd* (1999) 43 IPR 545, 556 [45] (Kiefel J, with whom Wilcox J agreed); *Ricochet Pty Ltd v Equity Trustees Executors and Agency Co Ltd* (1993) 41 FCR 229, 234.3 (Lockhart, Gummow and French JJ); *Gould v Vaggelas* (1984) 157 CLR 215, 238.5 (Wilson J).

or all of the Financial and Operational Performance Representations.

5105 A simple example may be given to illustrate the point. Stewart was alleged to have caused the Viterra Parties loss by reason that they were not informed of the Undisclosed Matters and that the Warranties were incorrect. In turn, in relation to the Stewart Representations said to form part of the Joe White Executives' Representations, this was based on allegations that Stewart represented that the Undisclosed Matters did not exist and that the Warranties were true and correct. The particulars of the Stewart Representations referred to the entirety of particulars earlier in the Third Party Claim which provided the basis upon which it was alleged that it was represented that each of the Information Memorandum Statements, the Financial and Operational Information, the Operations Call Statements, the Commercial Call Statements, the Management Presentation Statements and the Warranties were true and correct as well as why the Undisclosed Matters did not exist. Stewart had no involvement at all in any of the Information Memorandum Statements, the Operations Call Statements, the Commercial Call Statements or the Management Presentation Statements. Reflecting this lack of involvement, of the 10 pages of particulars referred to which were claimed to support these allegations against Stewart, in substance Stewart was only mentioned twice, and in a limited manner.

5106 *First*, it was pleaded that Stewart, along with the other Third Party Individuals, did not disclose the Undisclosed Matters in circumstances where there was a reasonable expectation that they would do so because of 5 matters which were identified. Four of these matters concerned events in which Stewart simply had no involvement. The other matter related to his involvement in the Warranty verification process.

5107 *Secondly*, his involvement in the Warranty verification process was relied upon separately, and even then not in relation to all of the Warranties that were alleged to have been verified by the Third Party Individuals. Quite the contrary, in relation to Stewart there were only 2 Warranties that were referred to, namely Warranty 7.3 (concerning material defaults of Material Contracts) and Warranty 17(a) (concerning compliance with Laws). No doubt this was because these were the only Warranties

Stewart was asked to verify that were relevant to the Warranty Representations. After referring to these matters, the Viterra Parties repeated the pleading that after the "respective verifications" and before the Acquisition Agreement was entered into, Stewart and the other Third Party Individuals did not inform the Viterra Parties that any of the Warranties was not accurate in circumstances where there was a reasonable expectation that they would.[4497]

5108 And yet, despite this very small fraction of involvement of Stewart in the overall conduct (being the entirety of the Joe White Executives' Representations) alleged to constitute the basis upon which Glencore and Viterra made all of the Financial and Operational Performance Representations, and Viterra gave the Warranties and made the Warranty Representations, it was alleged that those representations were made by the Viterra Parties because of Stewart's conduct.

5109 It follows that, in essence, there was only 1 relatively brief meeting on the cusp of the Acquisition Agreement being entered into[4498] that Stewart attended which was relied upon for the allegations that: (1) he represented the Undisclosed Matters did not exist; (2) he represented all the Warranties the subject of the Statement of Claim were true and correct; (3) the Viterra Parties made all the Financial and Operational Performance Representations; and (4) the Viterra Parties gave the Warranties and made all the Warranty Representations.[4499]

5110 Accordingly, even if the Warranty verification process had been properly conducted and Stewart had actually verified Warranties 7.3 and 17(a) as being true and correct (contrary to what has been found above),[4500] such a finding could not possibly have supported the allegation that the Stewart Representations were made; namely that *all*

4497 The Third Party Claim had previously included the words "despite having been requested to do so if any of the Warranties was not accurate", but these words were struck through in subsequent iterations. There was no evidence that would have supported any such request had this been maintained.

4498 See pars 4966, 5016 above.

4499 These 4 matters are a reference to par 59 of the Third Party Claim, which actually alleged Glencore also made the Warranty Representations (see par 5088 above), adjusted to reflect that it was only alleged by Cargill Australia that Viterra made the Warranty Representations.

4500 See issue 125.6 above.

of the Undisclosed Matters did not exist or that *all* of the Warranties giving rise to the Warranty Representations were true and correct.

5111 Dealing with the Undisclosed Matters first, there could not have been any reasonable expectation as alleged. At the time Stewart attended the brief meeting with Wilson-Smith without any prior notice on 1 August 2013, a large body of information had been provided by the Viterra Parties to Cargill on a confidential basis about which Stewart had not been informed. Accordingly, he did not know what had been stated to Cargill about the Viterra Practices or any other operational matters concerning the Joe White Business. Further, there was no allegation to suggest why Stewart would have assumed that Hughes would not have disclosed all relevant matters to the Viterra Parties as the chief executive officer involved in the sale process. In these circumstances, it was bordering on the fanciful to suggest that Wilson-Smith approaching Stewart without warning to discuss a very limited number of Warranties gave rise to a reasonable expectation that Stewart would have disclosed any, much less each, of the Undisclosed Matters.[4501]

5112 Equally, there was a complete absence of connection between Stewart's verification of 2 of the relevant Warranties and the remaining Warranties which were the basis of the claims concerning the Warranty Representations. By way of simple example, by Stewart allegedly verifying Warranties 7.3 and 17(a), such conduct could not possibly have touched upon the manner in which the Records were compiled or maintained (Warranty 4.2(a)), whether the Records were complete or up-to-date (Warranty 4.2(c)), whether the Data Room Documentation had been collated and disclosed in good faith and with reasonable care (Warranty 12(a)) and so on.

5113 Finally regarding Stewart, the Viterra Parties alleged *all* the Financial and Operational Performance Representations were made by reason of Stewart making the Stewart Representations on 1 August 2013. A fundamental difficulty with this was that many of the matters alleged by Cargill Australia to give rise to the Financial and Operational

4501 See pars 5016-5017 above.

Performance Representations occurred long before 1 August 2013 (and had nothing to do with Stewart).

5114 Returning to the matters relating to Hughes and Argent, there was nothing in the broader context around the making of the statements as found that was sufficient to support an inference of reliance being drawn. While Hughes' submissions disputing the asymmetry of knowledge between the Viterra Parties and the Joe White executives were not persuasive to the extent of their apparent reliance on the Alleged Industry Practices,[4502] he was correct to submit that any asymmetry (leaving Hughes' knowledge aside) would not without more be sufficient to establish reliance on any particular representations. Similarly, the actions of the Viterra Parties following the 15 October Meeting were not sufficient evidence of any reliance on the Management Presentation Statements, on the Operations Call Statements, or on the Commercial Call Statements. Further, given Hughes was a senior employee of Viterra Ltd and a senior executive of Viterra, the dichotomy sought to be established by the Viterra Parties concerning Viterra's knowledge and Hughes' knowledge was entirely artificial.

5115 In any event, with the exception of Hughes and Argent, no one from Glencore or Viterra attended the Management Presentation,[4503] the Operations Call[4504] or the Commercial Call,[4505] although each of these gatherings was attended by representatives of Merrill Lynch. The Viterra Parties' factual submissions did not identify any decision-maker within Glencore or Viterra who was influenced by and made any decision as a result of what was said by Argent in relation to his very limited statements during the Management Presentation or in relation to Hughes concerning the statements he made during the Management Presentation, the Operations Call or the Commercial Call. In contrast to the position with respect to the Information Memorandum, where it could readily be inferred that the Information Memorandum

4502 See issue 13 above.
4503 See par 710 above.
4504 See par 865 above.
4505 See par 910 above.

would not have been circulated until it had been duly verified,[4506] there was nothing of substance[4507] to indicate that the particular statements made by Argent at the Management Presentation, or by Hughes on the 3 occasions in question, had any causal connection with the actual decision of the Viterra Parties to make all the Financial and Operational Performance Representations or give all the Warranties, or for that matter proceed with the sale of Joe White.

5116 On the question of reliance on anything represented by Argent as alleged, the events in late October 2013 demonstrated that the Viterra Parties did not rely upon what Argent may have relevantly represented before that time in determining to proceed with the transaction. The fact that Argent was not approached at all by Mattiske or Fitzgerald (or anyone else on behalf of the Viterra Parties) indicated that it was appreciated by the Viterra Parties that the issues raised in the Cargill 22 October Letter did not concern the accuracy of the actual financial results achieved by Joe White from 2010 to 2013 from an accounting point of view, but rather concerned how operationally those results had been achieved. In this regard, as would be expected, the Viterra Parties turned to the Joe White executives that were involved in conducting Joe White's operational activities. Implicit in the fact that Argent was not approached at all to address the issues that had been raised by Cargill was that the Viterra Parties understood that Argent would have had little, if anything, of substance to convey concerning the existence and implementation of the Operational Practices. This circumstance presented another difficulty for the Viterra Parties in establishing any reliance upon any of the Argent Representations, at least insofar as they decided to proceed with Completion.

5117 Lastly, the Financial and Operational Performance Representations were alleged by Cargill Australia to be made based on particular conduct of the Viterra Parties. The particulars to the 10 representations were set out individually in the Statement of Claim. Although these allegations were denied by the Viterra Parties, for the purposes

4506 See pars 449-452 above.

4507 Including the provision of summaries of the Operations Call and the Commercial Call to Merrill Lynch: see pars 4838-4843 above.

of making the allegations in the Third Party Claim only,[4508] the Viterra Parties repeated these allegations. Importantly, with respect to every Financial and Operational Performance Representation, the particulars of the representation included numerous Information Memorandum Statements.[4509] Critically, as against neither Hughes nor Argent have the Viterra Parties established any conduct engaged in *in trade or commerce* for the purpose of any alleged contravention of section 18 of the Australian Consumer Law. In other words, none of the conduct of either Hughes or Argent engaged in with respect to the Information Memorandum was in trade or commerce, which necessarily meant an essential element of each Financial and Operational Performance Representation could not be established by the Viterra Parties to have been engaged in in trade or commerce against Hughes or Argent. Although the Viterra Parties alleged different conduct against Hughes and Argent to the conduct alleged against the Viterra Parties by Cargill Australia,[4510] it was significant that none of the conduct found to have been engaged in by Hughes and Argent in trade or commerce bore any resemblance to the composition of the acts alleged to comprise the conduct giving rise to the Financial and Operational Performance Representations.

5118 Accordingly, the answer to each of the questions raised in issue 127 is no.

X.128 Were the Joe White Representations and/or the Joe White Executives' Representations misleading or deceptive or likely to mislead or deceive and did Joe White and/or the Third Party Individuals thereby engage in misleading or deceptive conduct in contravention of section 18 of the Australian Consumer Law?

5119 As a result of the findings in issues 124 to 127 above, these questions do not arise.

X.129 Were the Third Party Individuals involved within the meaning of section 2(1) of the Australian Consumer Law in any misleading or deceptive

---

4508 In par 52 of the Third Party Claim, Glencore and Viterra referred to and repeated "the matters pleaded in the [S]tatement of [C]laim" and proceeded in pars 53 to 64 to make allegations against each of the Third Party Individuals based upon the Joe White Executives' Representations.

4509 See pars 2835, 2856, 2872, 2877, 2882, 2889, 2896, 2907, 2910, 2914 above.

4510 See par 5067 above.

conduct by Joe White?

5120 As Joe White has not been found to have engaged in any misleading or deceptive conduct, this question does not arise. However, it cannot be passed over that in the Viterra Parties' closing submissions there was simply no attempt to identify how it was said that each Third Party Individual's conduct amounted to involvement in each of the Joe White Representations or each of the Joe White Executives' Representations. On the evidence, this was impossible as some executives were simply not present and had no knowledge of what other executives had done.

5121 When this was raised with the Viterra Parties' lead senior counsel, after yet again acknowledging that the case against each Third Party Individual had to be considered separately and that there was no attribution of knowledge between them,[4511] no attempt was made to fill the void. The response was simply that the court was only required to determine the case on the pleadings as dealt with in the submissions. This approach was consistent with an earlier exchange with another of Viterra Parties' senior counsel concerning the position of Argent. When the question was asked directly how it was being suggested that Argent was "involved" in any representations concerning the Viterra Practices when the Viterra Parties had only referred to 2 documents in seeking to establish Argent's knowledge,[4512] both of which on the Viterra Parties' case did not disclose the existence of the Operational Practices (as was the fact), the court was told:

> This is the only evidence we rely upon, and I'm dealing here, Your Honour, in relation to the breach of his duties to act in the best interests and to be ethical; that's all. The logic of the proposition I'm putting to you is that if we are liable, that is Mattiske and King are held to have the requisite knowledge, then Argent on the same logic must be. I put it no higher than that, Your Honour. Argent disputes his knowledge, and they are the only matters we put forward on that point.

Effectively, the point was conceded.[4513]

4511 To make clear the matter was not in issue, it was suggested by senior counsel that it had been said 50 times.

4512 See pars 375, 796-813 above.

4513 During oral closing submissions, after I had read all the written submissions, I enquired of the Viterra

X.130 Prior to entry into the Acquisition Agreement, by reason of the Joe White Representations and/or the Joe White Executives' Representations, were Glencore and/or Viterra not informed of the existence of any Undisclosed Matters or the inaccuracy of any Warranties?

5122 For the reasons given in issues 124 to 127 above, including that the Viterra Parties have failed to establish that either the Joe White Representations or the Joe White Executives' Representations were made in trade or commerce, these questions do not arise.

X.131 If Glencore or Viterra had been informed of the existence of any "Undisclosed Matters found by the court" (as defined in paragraph 49A(a) of the Third Party Claim) or the inaccuracy of any "Incorrect Warranties found by the court" (as defined in paragraph 49A(b) of the Third Party Claim) prior to entry into the Acquisition Agreement would Glencore and/or Viterra have taken steps to:

(1) Disclose to potential purchasers of Joe White, including Cargill Australia, the Undisclosed Matters?

(2) Amend the terms of the Acquisition Agreement, before it was entered into, including the Warranties?

(3) Investigate the Undisclosed Matters?

(4) Cause Joe White to cease any "Viterra Practices found by the court" (as defined in paragraph 49B(f) of the Third Party Claim)?

and, were Glencore and/or Viterra therefore deprived of the opportunities to:

(5) Take the steps set out in sub-paragraphs (1) to (4) above (or any of them) prior to entry into the Acquisition Agreement?

(6) Avoid any liability to Cargill Australia in respect of:

(a) Any misleading or deceptive conduct in which Glencore and/or Viterra are held to have engaged in contravention of section 18 of the Australian Consumer Law?

Parties whether they intended to maintain every claim against each and every third party. The question was taken on notice. When I revisited the issue, I was told that the Viterra Parties had given instructions that they maintained every aspect of the Third Party Claim. Given the obvious difficulties, including with respect to this issue, I responded directly. I said I would say candidly that such a position was surprising in light of the written submissions. Even after the exchanges referred to above, the Viterra Parties chose not to withdraw any claim the subject of the Third Party Claim.

(b) Any conduct amounting to deceit in which Glencore and/or Viterra are held to have engaged?
(c) Any conduct held to amount to breach by Viterra of the Acquisition Agreement?
(d) Any conduct amounting to negligent misrepresentation in which Glencore and/or Viterra are held to have engaged?

X.131.1 Refining the issue to reflect the findings made

5123 Strictly, it is unnecessary to answer the questions that arise under this issue.

5124 The allegations in paragraphs 49A, 49B, 49C and 50 of the Third Party Claim were premised on the basis that if, which was denied, the Financial and Operational Performance Representations and the Warranty Representations were made by the Viterra Parties to Cargill Australia, they were made *because Joe White made the Joe White Representations*. Further, by "reason of the matters pleaded" (which included the making of the Joe White Representations), the Viterra Parties alleged:

(1) In paragraph 49A, that before entering into the Acquisition Agreement they were not informed of the Undisclosed Matters or that the Warranties were incorrect.

(2) In paragraph 49B, that if Glencore or Viterra had been informed of the Undisclosed Matters or that the Warranties were incorrect they would have taken certain steps.[4514]

(3) In paragraph 49C, that "[b]y reason of the matters pleaded in paragraphs 44 to 49B", the Viterra Parties lost the opportunity to take those certain steps and avoid any liability to Cargill Australia.

(4) In paragraph 50, that "[b]y reason of the matters pleaded in paragraphs 44 to 49C", the Viterra Parties have suffered or will suffer loss or damage.

As it has been found that the Joe White Representations were not made, the underlying premise of this aspect of the Third Party Claim has not been established.

4514 See par 5128 below.

5125 Further, this issue was raised later in the Third Party Claim on the basis that the Joe White Executives' Representations were made in trade or commerce within the meaning of section 18 of the Australian Consumer Law. As this has also not been established,[4515] this other aspect of the Third Party Claim relevant to this issue was not made out.

5126 However, it is appropriate that certain factual matters that otherwise would have arisen under this issue be considered.[4516] Before doing this, there have been a number of further findings made that should be referred to in order to clarify the questions to be determined on this issue.

5127 The Undisclosed Matters (including the Viterra Practices) have been found to have existed and not to have been disclosed to Cargill Australia.[4517] Further, in relation to the Warranties, not only has it been found that Joe White did not make any representations in that regard,[4518] it has also been found that none of the Third Party Individuals made any of the alleged representations concerning the Warranties.[4519] Finally, for the reasons stated above,[4520] I am not satisfied that Mattiske did not know that Joe White's customers were ignorant of the Viterra Practices, at least in relation to the Varieties Practice and the Gibberellic Acid Practice. Also at the very least, Mattiske must have strongly suspected that customers had not been fully informed about the manner in which the Reporting Practice was being implemented.[4521]

X.131.2 The Viterra Parties' submissions

5128 In line with the pleaded allegations, the Viterra Parties submitted that because Glencore and Viterra were not informed of the existence of the Undisclosed Matters[4522] or the inaccuracy of any incorrect Warranties before the Acquisition Agreement was

4515 See issue 126 above.
4516 See also issue 139 below.
4517 See issue 10 above.
4518 See issue 124 above.
4519 See issue 125.6 above.
4520 See pars 1537-1540 above.
4521 See pars 1541-1545 above.
4522 Necessarily, this submission was put on the basis that the knowledge of Hughes and the other Third Party Individuals was not the knowledge of Glencore or Viterra: see issues 11, 22 above.

executed, they lost the opportunity to take the following steps:

(1) Disclose the Undisclosed Matters to potential purchasers, including Cargill Australia.

(2) Amend the terms of the Acquisition Agreement before it was entered into, including the Warranties.

(3) Investigate the Undisclosed Matters.

(4) Cause Joe White to cease the Viterra Practices.

(Together, "the Alleged Steps".)

5129 The Viterra Parties acknowledged the onus of proving causation of loss would only be discharged by them if they could prove that "it was more probable than not that they would have received a valuable opportunity".[4523]

5130 The Viterra Parties submitted that, if they had been informed of the existence of any Undisclosed Matters or the inaccuracy of any incorrect Warranties prior to entry into the Acquisition Agreement, the following uncontradicted evidence from Mattiske should be accepted:[4524]

(1) If, before the Information Memorandum was provided to prospective purchasers, Mattiske had become aware of the Viterra Practices,[4525] "and

---

4523 *Badenach v Calvert* (2016) 257 CLR 440, 455 [41] (French CJ, Kiefel and Keane JJ). This case concerned factual causation by reference to a "but for" test, pursuant to the *Civil Liability Act 2002* (Tas), s 13(1)(a): 454 [36].

4524 The manner in which the evidence was said to be uncontradicted is discussed below: see par 5157.

4525 In Mattiske's witness statement, he referred to the "alleged Viterra Practices, as defined in paragraph 19(a) of the [Statement of Claim]". Despite this, when asked during his cross-examination what he understood by "Viterra Practices" as that term was used in this proceeding, Mattiske gave a different meaning. In responding to this question, Mattiske referred to 3 separate practices, being the adjustment or changing of Certificates of Analysis by 2 standard deviations, the use of barley varieties that were "not specific within the customer contracts" and the use of gibberellic acid where contracts specifically requested that it not be used. Thus, although the Viterra Parties in their submissions correctly distinguished the Viterra Practices as defined in the Statement of Claim and those referred to in this oral evidence of Mattiske, by defining those "Viterra Practices" in their submissions as the "Mattiske Defined Practices", in substance, Mattiske accepted the definition as including the Reporting Practice (in saying this, I have assumed that Mattiske's evidence was a reference to changing the reported results by up to 2 standard deviations, though it would appear he was not aware that adjustments or changes

he had not known whether or not customers were aware of the [Operational][4526] Practices",[4527] he would have needed to investigate whether the Operational Practices were material or not.[4528] Further, reference was made to Mattiske's evidence that had he become aware of the Operational Practices and that customers were not aware of them, he would have done what the Glencore Group normally did; namely, rectify the situation by amending contractual arrangements with customers to ensure the contracts reflected what was actually happening.

(2) If, after the Information Memorandum had already been provided to prospective purchasers, Mattiske had become aware that Joe White was engaging in the Operational Practices and that customers did not know, he "probably would have stopped the process and investigated and probably halted the process until we could get to the bottom of what was going on".

(3) If, prior to the signing of the Acquisition Agreement, Mattiske had been told that Joe White was engaging in the "Viterra Practices"[4529] he would have taken certain steps to ensure that:[4530]

(a) An investigation was undertaken to determine whether, and to what extent, the Viterra Practices were actually occurring.

(b) Insofar as the Viterra Practices were occurring (and should not

---

were made when results were greater than 2 standard deviations), the Varieties Practice and the Gibberellic Acid Practice; that is, in substance largely reflecting the Operational Practices as defined in these reasons (but acknowledging the language he used was not identical). In the circumstances, it is convenient in addressing this issue to continue to use the term Operational Practices (and the term Viterra Practices, when referring to the Operational Practices performed routinely) as those terms are defined in these reasons.

4526 The Viterra Parties' submissions referred to the "Viterra Practices" rather than the Operational Practices, but as they themselves submitted, by definition "Viterra Practices" encompassed the fact that Joe White's customers did not know about the Viterra Practices: see fn 4525 above.

4527 As to which, see pars 1537-1545 above.

4528 See par 1495 above.

4529 The Viterra Parties' submissions referred specifically to the Viterra Practices as pleaded rather than the Mattiske Defined Practices.

4530 See par 1494 above.

have been), the practices were immediately ceased.

(c) Glencore and Viterra obtained legal advice on what to do next, including in particular on how to disclose information to Cargill.

(d) A recommendation was made by him to his superiors that an acquisition agreement ought not be executed until the issues were resolved.

5131 The Viterra Parties submitted that because the Viterra Practices were part of the Undisclosed Matters, it should be found that, if Mattiske had been informed of the existence of *any* of the Undisclosed Matters prior to entry into the Acquisition Agreement, Mattiske would have taken the same steps as were pleaded.[4531]

5132 Further, the Viterra Parties submitted that as a result of Mattiske not being made aware of the existence of the Viterra Practices prior to the execution of the Acquisition Agreement, Viterra and Glencore lost the opportunity to:

(1) Ensure that practices that were occurring (and should not have been) ceased.

(2) Obtain legal advice on what to do next.

(3) Inform Cargill of the existence and extent of the Operational Practices.

(4) Reach a resolution in relation to these issues prior to execution of the Acquisition Agreement (including the amendment of any Warranties potentially relevant to the Viterra Practices).

(5) And thus avoid liability to Cargill Australia arising from any claims relating to any allegations of non-disclosure of the Viterra Practices.

X.131.3 The Cargill Parties' submissions

5133 The Cargill Parties took issue with the submission that, had the Viterra Parties not

4531 See par 5130(3) above.

been misled, they would have undertaken remedial steps. It was submitted that, if the court were to find the Viterra Parties had been misled, the evidence did not establish that Glencore or Viterra would have done anything other than what they did. Referring to issues 24 and 38 above, the Cargill Parties submitted that in October 2013 when the Operational Practices were raised, neither Glencore nor Viterra took steps to disclose the full truth to Cargill. They contended that this was because Glencore and Viterra's principal aim in that period was to complete the sale of Joe White to Cargill Australia.

X.131.4 Hughes' submissions

5134 Hughes submitted that the Viterra Parties' pleaded case[4532] was different to Mattiske's evidence.[4533] It was submitted that the pleaded case assumed that each of the relevant representations had been made out, in contrast to any 1 of those matters being found.[4534] It was contended if any 1 of those matters were found it would give rise to a different or alternative course of conduct for which an opportunity to pursue was lost. Therefore, it was submitted that insofar as issue 131 referred to "any" Undisclosed Matters, it went beyond the pleading.[4535] The pleading was confined to how Glencore and Viterra would have acted if either of them had known of *each* of the relevant matters, not simply any of them.[4536] In addition to this general submission, some further points were raised.

5135 *First,* it was submitted that Mattisske's witness statement was silent in relation to the actual steps that he claimed would have been taken in amending the terms of the

---

4532 See pars 5123, 5128 above.

4533 In particular, see pars 5130(3), 5132(3) above.

4534 Mattiske's evidence concerned the Viterra Practices, which was only 1 of the matters that formed the Undisclosed Matters: see pars 1851, 5131 above.

4535 When asked why this had not been raised earlier when the list of issues was being settled in conjunction with the court, Hughes' senior counsel explained that the issue only surfaced for him and his junior when final submissions were being prepared.

4536 Hughes submitted that if a party alleges that it would have acted in a certain way because of matters not disclosed, it must prove that fact. Further, he submitted if evidence establishes that disclosure was made of 1 of multiple matters, but the evidence as to causation only goes to how a wronged party would have acted if it did not know of all the matters, the case must fail for want of proof, citing *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 329 [53]-[55] (French CJ), 353 [146]-[147] (Gummow, Hayne, Heydon and Kiefel JJ).

Acquisition Agreement and disclosing the Undisclosed Matters to potential purchasers. Hughes submitted that given there was no other evidence on how the Viterra Parties would have sought to amend the Acquisition Agreement had they learned of the Undisclosed Matters or the incorrect Warranties,[4537] this element of the case should be taken to have been abandoned. Consequently, Hughes contended that there could be no finding of any loss of opportunity to avoid liability by taking the Alleged Steps and ultimately the claim for causation was bound to fail.

5136 *Secondly,* Hughes submitted that the pleaded assertion that the Viterra Parties would have disclosed the matters to potential purchasers, including Cargill, was also contrary to other evidence at trial. It was submitted that Mattiske's subjective counterfactual evidence as to what he would have done if the conduct in question had not occurred should not be accepted in light of contemporaneous material and objectively credible evidence. Hughes noted that:

(1) Mattiske gave evidence that in October 2013 he did not consider there to be any real or material issues, creating the inference that he would not have conducted further investigations or made any disclosure had he discovered the information earlier.[4538]

(2) It was clear that various senior individuals in the Viterra Parties' wider business knew about the use of off-grade barley. King and Merrill Lynch knew that customers were not generally told about the use of off-grade barley.[4539] Further, it was contended the evidence demonstrated that Gordon told Joe White executives not to communicate with customers around contracts.[4540] Furthermore, Hughes referred to evidence that he had raised concerns with Gordon, Fitzgerald and Ross, and contended that as a result of these exchanges: (a) Joe White was being run in a

4537 Further, Hughes submitted that the prospect of Cargill agreeing to amendments was wholly unsupported by Cargill's evidence at trial.
4538 See par 1495 above.
4539 See par 805 above.
4540 See par 1299 above.

manner inconsistent with the Viterra Code; (b) the Viterra Practices and Viterra Policies had been enshrined in Viterra corporate documents; (c) the Viterra Policies were accessible on Pulse to all Viterra's employees who were all required to follow Viterra policies.[4541]

(3) The above matters supported drawing an inference that the Viterra Parties made a conscious decision not to communicate these details to prospective purchasers, including Cargill, during the sale process.

(4) In October 2013, the Viterra Parties did not disclose everything that they knew about the Operational Practices.[4542]

5137 Further, Hughes submitted that the Viterra Parties instructed Joe White executives to cease all communications with Cargill in relation to these matters.[4543] Clark gave evidence that he had been told that Glencore had instructed Joe White employees not to talk to Cargill and Viers gave evidence that both Hughes and Rees informed him that they could not discuss matters with him.[4544]

5138 *Thirdly,* the assertion that the Viterra Parties would have undertaken further

---

4541 See par 278 above. However, see also pars 166, 287-292 above.

4542 It was submitted in particular that the following was not disclosed: (1) it was known that between October 2013 and March 2014, Joe White would not always have the barley that it required available to it the consequence of which "could be big dollars"; (2) the cost base for that year would be $1.5 million higher if Joe White had been using the correct barley varieties; (3) the impact on the Joe White Business by reason of ceasing the Gibberellic Acid Practice was possibly to move from 4 day germination to 5 days, but if Joe White had access to certain grain, that risk would be lower; (4) a Joe White survey of barley varieties used for a specific week found that on average there was 74 percent compliance with respect to barley variety, which was in line with the Malt Cost Reduction Transformation Project targets for off-specification barley usage; (5) it was estimated that there would be a 2.5 percent loss in production to achieve the appropriate malt quality in the absence of exogenous gibberellic acid, but it would decrease as new barley varieties with higher levels of vigour became available; (6) the Varieties Practice was an internal Viterra-driven initiative to improve profitability and it was stretching things to refer to it as an industry practice; (7) Joe White was short 29,500 tonnes of barley to meet the specifications for Lion Nathan and Heineken; (8) the 3 barley varieties permitted by Heineken were diminishing; (9) a new crop year of the barley required by Lion Nathan was available, but Lion Nathan would say Joe White was in breach if that crop year was provided; (10) the Tamworth and Sydney plants needed Gairdner or Commander and there was not enough barley in Australia to fill the shortfall; (11) Joe White was unable to supply malt only if it was required to supply exactly as specified; (12) Joe White would lose US$10 per tonne if it had to replace barley for someone else's; and (13) 70,000 tonnes would be affected by the Gibberellic Acid Practice for Heineken and Asia Pacific Breweries, and Admiral would solve the problem for that contract (but it was not the whole solution).

4543 See par 1268 above.

4544 See pars 1203, 1269 above.

investigations upon learning of the Undisclosed Matters and the incorrect Warranties was submitted to be undermined by the lack of response by King to the email sent 2 July 2013 coupled with Mattiske's position in October 2013.[4545]

5139 *Fourthly*, (on the basis that the Viterra Parties could establish they did not know of the Operational Practices before October 2013, which Hughes denied) Hughes submitted the Viterra Parties' reaction to the events of late October 2013 was indicative of how they would have reacted prior to 4 August 2013 if they had known of the Operational Practices at the time.

5140 *Fifthly*, no evidence was called from those within Glencore or Viterra who had the power to withdraw from the transaction and an inference should be drawn that those with authority would not have given evidence they would have taken the Alleged Steps.[4546]

4545 In relation to King, see pars 804-806 above. As for Mattiske, Hughes pointed to Mattiske's evidence that Mattiske: (1) did not ask the Joe White executives if an analysis had been undertaken of the scope of the Operational Practices and the extent to which they affected customers following the issues raised by Cargill (see pars 1267, 1338-1342 above); (2) did not cause enquiries or analyses to be made internally regarding the extent of the Operational Practices (see par 1313 above); (3) was responsible for driving the October 2013 investigation and he believed the size of the investigation was sufficient given what they thought was the size of the issue (see par 1357 above); (4) while not believing the Operational Practices were confined to an isolated instance, did not ask Hughes about the extent of the Operational Practices, which customers were affected by the Operational Practices, or investigate these matters (see par 1531 above); (5) upon being informed by Purser that Cargill disagreed with the idea that the Operational Practices were standard in the industry, relied on Fitzgerald, Norman and Rees to follow up with Hughes for a response about whether it was industry practice or not (see pars 1342, 1443-1445, 1447, 1450, 1535 above); (6) did not enquire as to whether customers were informed (see pars 1357, 1535, 1542, fn 819 above) in circumstances where he did not know what customers knew and it had crossed his mind that the Operational Practices could be wrongful (see pars 1357, 1542 above); (7) did not recall asking Fitzgerald to ask if Joe White had any documents recording the results of analyses (see par 1531 above); (8) did not raise with Purser the option of deferring the contract to enable a proper investigation to be carried out and was not sure if this was an option: (see par 3504 above); and (9) did not specifically want to defer the contract and while he agreed he could have alleviated the constraints regarding not having sufficient time to investigate by offering to extend the time for settlement, he did not want to take this course: see par 1485 above.

4546 Hughes submitted that the executives in the Netherlands and Switzerland were ultimately responsible for conducting the Acquisition: see pars 362-363 above. Had Mattiske discovered the Operational Practices before the contract was entered into, Hughes submitted it would have been ultimately the decision of the leadership of Glencore how to proceed with the transaction and Mattiske did not recommend deferring the transaction as he thought the issue was not serious could be resolved: see par 1485 above. He submitted the ultimate decision-maker short of the chief executive officer, namely Mahoney, was not called as a witness: see par 3830 above. This was despite Mahoney still being a Glencore employee and a witness statement having been filed on his behalf. In these circumstances, it was contended that an inference should be drawn that both Mahoney and Mostert would not have given evidence that Glencore or Viterra would have taken the Alleged Steps. For discussion on the principles relating to inferences to be drawn from the absence of witnesses, see pars 1988-1996 above.

X.131.5 Youil's submissions

5141 Youil adopted Hughes' submissions in contending that the Viterra Parties already knew of the relevant matters prior to the Acquisition Agreement and failed to avail themselves of an opportunity to take the Alleged Steps. Therefore, Youil submitted they were not deprived of any such opportunity.

5142 Alternatively, Youil submitted that in assessing Viterra's counterfactual, what the Viterra Parties may have done prior to entry into the Acquisition Agreement could be gleaned from what they actually did in the period between execution and Completion. It was submitted that the Viterra Parties wanted to sell Joe White for the largest sum of money, and in October 2013, being more fully apprised of certain matters, Viterra sought to withhold information from Cargill. Therefore, Youil submitted that the Viterra Parties' motivations and general attitude to complying with their legal obligations militated against a finding that, if Viterra had been informed of the Undisclosed Matters prior to 4 August 2013, it would have undertaken the Alleged Steps.

X.131.6 Wicks' submissions

5143 Wicks submitted that Mattiske's evidence about what Mattiske would have done if he was informed about the Viterra Practices did not establish the Viterra Parties' pleaded counterfactual, for a number of reasons.

5144 *First,* it did not follow from Mattiske's evidence of the steps he would have taken, outlined above (investigation, cessation of the Operational Practices, legal advice and recommendation to his superiors),[4547] that it was more likely than not that those actions would have occurred.

5145 *Secondly*, Mattiske's evidence did not identify how any 1 or more of the actions he identified would have avoided liability to Cargill.

4547 See par 5130(3) above.

5146 *Thirdly,* as mentioned above,[4548] Mattiske was not the ultimate decision-maker. Mattiske's evidence was not sufficient for the court to determine what the Viterra Parties would have done in the counterfactual and it was significant that none of the relevant decision-makers were called to give evidence.

5147 *Fourthly,* the counterfactual as pleaded was not established as it related to the Undisclosed Matters broadly and the Warranties, whereas Mattiske's evidence was directed to the Viterra Practices only. Wicks submitted that it did not follow that because the Viterra Practices "were part of" the Undisclosed Matters,[4549] it should be found that the existence of any of the Undisclosed Matters would have resulted in Mattiske taking the Alleged Steps.

5148 *Fifthly,* both the Undisclosed Matters and the Warranties comprised a number of different parts or components. Only a subset of the Warranties were the subject of allegations made against Wicks. The Viterra Parties rolled up the breaches relating to the Undisclosed Matters and the Warranties without differentiating between the impact of any purported breach by any executive or by Joe White itself. As a result, there was no evidence that the Viterra Parties would have taken the Alleged Steps if Wicks specifically had not engaged in the impugned conduct.

5149 *Sixthly,* in the context of the October 2013 correspondence, Mattiske did not consider the Viterra Practices to be serious or material,[4550] and the Viterra Parties proceeded with Completion, undermining any suggestion that Mattiske or the Viterra Parties would have been proactive in taking any steps other than what they in fact did.

5150 *Seventhly,* Mattiske's evidence in cross-examination was less definitive than what had been set out in his witness statement. Wicks highlighted that in cross-examination Mattiske said that if he had discovered the Viterra Practices before the Information Memorandum was disseminated, Mattiske would have needed to investigate the Operational Practices to assess whether they were material or not. Wicks contrasted

---

4548 See fn 4546 above.
4549 See par 5131 above.
4550 See pars 1485, 1495 above.

this with Mattiske's evidence that if he had discovered the Viterra Practices were occurring after the Information Memorandum was disseminated to prospective purchasers, "we probably would have stopped the process and investigated and probably halted the process until we could get to the bottom of what was going on". Then Wicks referred to the fact that, when asked later in his cross-examination about what he previously said in the witness box about a discovery of the Viterra Practices before the Information Memorandum was provided, Mattiske stated "I would've needed to investigate the practices, find out what's going on, and try and resolve the issues. Beyond that, you know, I still don't have enough knowledge about the practices. So to say we would suspend the process as a result of something I'm not sure about, then, you know, I can't give you an unequivocal answer about that." Finally, when asked whether, if he knew of the Viterra Practices before 4 August 2013, he would have suspended the sale, Mattiske said "I honestly don't know what I would have done in that situation".[4551]

5151 For these reasons, Wicks submitted that, based on Mattiske's own evidence, it could not be concluded that it was more probable than not that the Viterra Parties would have taken any of the Alleged Steps.

5152 Finally, in addition to the Cargill Parties' submissions above,[4552] Wicks referred to and adopted submissions made by the Cargill Parties on other issues as follows:

4551 For further details on Mattiske's cross-examination, see pars 1485-1488, 1495-1496 above. Further, the questions as framed during cross-examination which gave rise to this referred to "these practices" without being clear as to whether reference was being made to the Viterra Practices or was being limited to the Operational Practices: see also fn 4525 above. For completeness, Mattiske was cross-examined about hypothetical matters based on the assumption that he was told before the Information Memorandum was disseminated that "the practices" were occurring and that Joe White's customers did not know about them. Mattiske gave evidence that he would have resolved the issue by speaking to the customers and renegotiated the contracts "to make sure that we could deliver product within those terms or we would have washed out the contract at the market price and delivered the malt to other customers". When he was asked whether that meant he would have disclosed to customers what had been occurring, his evidence was that he was not saying that exactly. He then gave further answers to the effect that he would have made sure that "we had resolved these practices" so that there would not have been an issue. This evidence was of limited probative value as the assumptions were not clearly defined and bore no resemblance to the facts, however it must be said that the events after 1 November 2013 indictated that resolving the issues that confronted Joe White by reason of the Viterra Practices would have been no easy matter if it had been attempted before May 2013.

4552 See par 5133 above.

(1) In relation to issue 127 above, Glencore and Viterra did not rely on any of the alleged representations, as they, *first,* would not have taken steps to disclose the full truth to Cargill, in circumstances where King set the example for Hughes and Argent that Glencore sought to disclose value enhancing information and not disclose value destructive information to the greatest extent possible (as set out in issue 80 above),[4553] and *secondly,* would not have taken steps to disclose the full truth to Cargill, Inc because in fact they did not do so in October 2013 as set out in issues 24 to 38 above.

(2) In relation to issue 134 below, that on no view could the alleged representations have caused Glencore and Viterra loss or damage as Joe White was the "product" for sale and the Viterra Parties' liability to Cargill Australia would merely return Glencore and Viterra to the position that they would have been in had Joe White been sold for its real market price in 2013.

X.131.7 Stewart's submissions

5153 Stewart submitted that the Viterra Parties did not establish that, by reason of any conduct of Stewart, Viterra lost the opportunity to take alternative steps to avoid liability to Cargill before entering into the transaction.

5154 Stewart submitted the legal principles for loss of opportunity required the Viterra Parties to establish, on the balance of probabilities, the existence of an opportunity and the loss of it caused by the respondent to the claim.[4554] Further, he noted damages for a loss of chance will not be awarded where the chance is purely speculative.[4555]

5155 To this extent, Stewart submitted that there was no direct evidence to support the proposition that the Viterra Parties would have taken the Alleged Steps but for

---

4553 See issues 80.3 and 80.4 above.
4554 *Sellars v Adelaide Petroleum NL* (1994) 179 CLR 332, 353.7 (Mason CJ, Dawson, Toohey and Gaudron JJ).
4555 *Malec v JC Hutton Pty Ltd* (1990) 169 CLR 638, 643.4 (Deane, Gaudron and McHugh JJ).

Stewart's conduct, rather than proceeding to enter the Acquisition Agreement, and the objective evidence pointed to the contrary. It was submitted that, as mentioned above,[4556] key decision-makers were not called to give evidence and the court should not infer that they would have given favourable evidence on the issue.[4557] Furthermore, it was submitted that Mattiske's witness statement was full of formulaic and self-serving hypothetical statements tainted by hindsight, with little probative value;[4558] and when tested under cross-examination Mattiske was unsure what he would have done if certain matters were disclosed to him prior to entry into the Acquisition Agreement.[4559] Moreover, it was submitted that, in contrast, Viterra's actions in continuing to pursue the transaction and deciding not to investigate or disclose information to Cargill in October 2013 indicated that it would not have taken the Alleged Steps.[4560] Stewart submitted there was ample evidence of careful strategic decision-making by Viterra in pursuit of the goal of completing the Acquisition.

X.131.8 Argent's submissions

5156 Similarly, Argent submitted that the events that transpired in October 2013 were inconsistent with a finding in favour of the Viterra Parties on this issue. It was submitted that those events demonstrated that Viterra would not have taken the Alleged Steps. When the Viterra Parties were informed by Hughes, Youil, Wicks and Stewart of the existence of the Undisclosed Matters and therefore knew of the inaccuracies of the Warranties, Argent submitted the Viterra Parties failed to make

---

4556 See par 5146 and fn 4546 above.

4557 For discussion on the principles relating to inferences to be drawn from the absence of witnesses, see pars 1988-1996 above.

4558 *Fabcot Pty Ltd v Port Macquarie-Hastings Council* [2011] NSWCA 167, [186]-[187] (Sackville AJA, with whom Beazley and Campbell JJA agreed).

4559 See pars 5150-5151, including fn 4551 above.

4560 In relation to the lack of investigation, Stewart submitted that although Stewart met with Fitzgerald, Norman and Lindner on 23 October 2013 by telephone, provided a copy of the Viterra Certificate of Analysis Procedure at that time and prepared a memorandum which analysed the proportion of barley varieties used in a particular week's production (see pars 1335, 1387-1389 above), there were no further discussions with Stewart after that information had been provided despite a full week remaining before Completion. This lack of investigation included that there was no follow-up with Stewart after the Cargill 29 October Letter had been received: cf pars 1510-1511 above. In relation to the lack of divulging information, Stewart referred to the non-disclosure of the Viterra Certificate of Analysis Procedure itself, as well as the failure to provide to Cargill details of the estimated usage of gibberellic acid and the proportion of compliance with barley varieties in production.

any relevant disclosure or take any of the Alleged Steps besides commencing an internal investigation following the Cargill 22 October Letter and directing that the Gibberellic Acid Practice cease.

X.131.9 Analysis

5157 It must be said at the outset that some of the evidence relating to this issue was a little unclear and confusing. The invitation to Mattiske during cross-examination to give his own definition of the Viterra Practices,[4561] which was then adopted subsequently (at least to some extent), resulted in a level of uncertainty in relation to the substance of some of Mattiske's evidence. The Viterra Parties emphasised this uncertainty in contending that Mattiske's evidence in chief was uncontradicted and therefore ought to be accepted.[4562] In my view, they were correct to identify the distinction, and it was clear that on occasions Mattiske was only addressing, in substance, the Operational Practices rather than the Viterra Practices when giving evidence about what he would have done. However, the onus was on the Viterra Parties to establish that they would have adopted a course as pleaded if they had known of the Undisclosed Matters or the inaccuracy of the Warranties before the execution of the Acquisition Agreement. Thus, generally speaking, any lack of clarity with respect to some of the evidence did not necessarily advance this aspect of their case.[4563]

5158 In any event, even taking into account the uncertainty of the evidence in a manner favourable to the Viterra Parties, and proceeding on the basis that Mattiske was "sincere" when giving his evidence about what he would have done in certain circumstances,[4564] for a number of reasons I am not satisfied that Glencore or Viterra

---

4561 See fn 4525 above.

4562 As discussed above, the absence of cross-examination does not mean the unchallenged evidence in question must necessarily be accepted by the court: see fn 2697 above.

4563 In their submissions, the Viterra Parties compared various pieces of evidence concerning what Mattiske would have done if he had known of the Viterra Practices. With reference to the third occasion on which the issue was raised, they submitted that it was "likely" that the evidence given by Mattiske was in contemplation of the hypothetical concerning the Operational Practices rather than the Viterra Practices.

4564 To adopt the language of the trial judge, Hammerschlag J, as referred to in *Fabcot Pty Ltd v Port Macquarie-Hastings Council* [2011] NSWCA 167, [186]-[187] (Sackville AJA, with whom Beazley and Campbell JJA agreed). See also fn 2383 above.

would have taken the Alleged Steps if Glencore or Viterra had been informed before 4 August 2013 that the Undisclosed Matters existed or that the Warranties were not true and correct.[4565]

5159 Although the circumstances were not directly analogous to what might have occurred on or before 4 August 2013, there were a number of informative matters that fell from the events of the last week or so of October 2013.

5160 *First*, Mattiske's approach to the issues raised in the Cargill 22 October Letter was instructive. Notwithstanding the obvious seriousness with which Cargill was treating the issues raised, which was emphasised in his discussions with Purser,[4566] Mattiske's actions between 22 and 31 October 2013 were not those of someone who earnestly wanted to understand and address those issues;[4567] nor of someone who intended to diligently oversee the necessary investigative process.[4568] So much was effectively acknowledged by Mattiske himself.[4569]

5161 *Secondly*, the approach Mattiske took did not afford sufficient weight to the views of Cargill with respect to the Operational Practices.[4570] Mattiske knew Cargill was an established and significant participant in the malting industry.[4571] However, Mattiske was apparently content to act upon what he was told by Hughes in the presence of other Joe White executives,[4572] and (perhaps to a lesser extent) others,[4573] concerning what was standard industry practice despite Purser unequivocally informing Mattiske that none of the Operational Practices was standard industry practice.[4574] This approach was taken even though Mattiske considered Cargill to be a very major

---

4565 Naturally, this is premised on the assumption (contrary to what has been found) that Viterra did not know of the Undisclosed Matters despite the knowledge of Hughes. Obviously, there was also the knowledge of other senior Viterra Ltd employees, including Youil, Wicks and Stewart.
4566 See pars 1319-1322 above.
4567 See pars 1531-1546 above.
4568 See, for example, par 1342 above.
4569 See par 1485 above.
4570 See pars 1372, 1443-1446, 1473, 1535, 1541-1542, 1545, 1549 above.
4571 See, for example, pars 398, 1444 above.
4572 See, for example, pars 1250-1251 above.
4573 Including persons who were not maltsters: see, for example, pars 1337-1341 above.
4574 See pars 1443-1446 above.

player in the malting industry and to know far more about that industry than he or anyone at Glencore did. Mattiske effectively ignored what Cargill had stated about what was not industry practice and failed to reconcile that position with what Hughes had said.[4575] This reflected an attitude of seeking to deflect or minimise the issues raised rather than address them directly and properly.

5162 *Thirdly*, the investigation process itself, conducted in October 2013 by persons acting for both Glencore and Viterra, was wholly inadequate. A simple comparison between what Glencore and Viterra were told by Joe White executives and what was contained in the Reply Letters was a reflection of this.[4576] However, it was also demonstrated by the many issues that were raised that were not followed up or investigated on or shortly after 23 October 2013.[4577] These included the Viterra Parties being told Joe White was always struggling to meet specifications and that specifications were often outside contractual terms; if Joe White was required to supply in accordance with contractual specifications it would be commercial suicide and the brand would be decimated; Joe White could be exposed to big dollars concerning problems with supplying malt using the required barley varieties; and Joe White engaged in using gibberellic acid when it was prohibited routinely at all plants.[4578] The excuse given by Mattiske that he did not have time to investigate, including to follow up what Hughes had told him on 29 October 2013,[4579] did not account for the fact that Hughes and the other Joe White executives were available to be spoken to throughout the period following 22 October 2013 and that much more could have been done to get to the bottom of things if there had been a genuine desire to do so. Given the glaring deficiencies of the investigation in a situation of commercial significance and seriousness,[4580] it was far from apparent that Glencore or Viterra would have conducted a proper investigation before 4 August 2013.

4575 His suggestion to the contrary during cross-examination was far from convincing: see pars 1250, 1444-1446 above.

4576 See annexure C to these reasons. See also pars 1373-1375, 1402-1404, 1514-1523 above.

4577 See, for example, pars 1265, 1285-1288, 1312, 1314-1318, 1387-1389, 2419 and fn 3844 above.

4578 See annexure C to these reasons.

4579 See pars 1320, 1370, 1450, 1462, 1504 above.

4580 See, for example, pars 1470-1472, 1532, 1535 and fn 4545 above.

5163 *Fourthly*, not only was the investigation in October 2013 inadequate, but Mattiske's evidence suggested his understanding of what had been conveyed as a result of the investigation was lacking. On the assumption that his evidence accurately reflected what occurred, it need not be determined whether this position was because of inadvertence, a decision to keep things from Mattiske, or because Mattiske was willing to leave it to others to investigate and did not himself take a sufficient interest.[4581] The simple fact was that on Mattiske's account the internal reporting of the investigations conducted was materially inadequate. Further, it seems probable that Mattiske was not informed of everything that Fitzgerald had been told because, if he had been, he could not have plausibly formed the views about materiality that he says he did.

5164 *Fifthly*, the lack of transparency and meaningful communication to Cargill in relation to relevant matters uncovered in October 2013 militated against any finding that Glencore or Viterra would have disclosed the Undisclosed Matters to prospective purchasers, including Cargill Australia.[4582] This point was highlighted by the fact that the Viterra Parties did not even deign to disclose the Viterra Certificate of Analysis Procedure despite Fitzgerald and Mallesons being told directly of its existence and contents and it not being included in the Data Room.[4583] The document was incontrovertibly relevant and material to Cargill's queries, but remained hidden from its view.[4584]

5165 *Sixthly*, the direction given to certain Joe White executives (including Youil, Wicks and Stewart) not to have any further communications with Cargill demonstrated that the Viterra Parties were careful to ensure that only information provided by them was available to Cargill.[4585] This cautious approach, while in itself not inappropriate, demonstrated a desire to control information being provided and resulted in a possible method of meaningful disclosure to Cargill being thwarted.

4581 See pars 1276, 1373-1375 above and par 5167 below.

4582 See pars 1373-1375, 1402, 1514 above, annexure C to these reasons and fn 4542 above.

4583 See pars 1324-1333 above.

4584 Further, it was plainly relevant to Viterra's ongoing obligations pursuant to cl 13.8 of the Acquisition Agreement: see par 1029 above.

4585 See pars 1203, 1265-1269 above.

5166 *Seventhly*, despite all the information that was provided by Hughes, Youil, Wicks and Stewart (on Mattiske's evidence, only some of which was provided to Mattiske), Mattiske formed the view on behalf of both Glencore and Viterra that the matters raised were not material for the purpose of their dealings with Cargill. This view was not unqualified, as Mattiske perceived the real possibility of Cargill taking a different view of things.[4586] However, the fact that Mattiske was willing to form and act upon such a view when there were obvious deficiencies in the basis of his understanding (including apparently not knowing the extent to which Joe White's customers were aware of the Viterra Practices) was illuminating.

5167 *Eighthly*, both Mattiske's report to his superiors and their responses to that report demonstrated a willingness on the part of Glencore and Viterra to take the attendant risks on board and deal with any claims later, rather than seek to properly address the issues at hand.[4587] There was a clear mindset to complete the Acquisition despite the issues that had been raised.[4588]

5168 *Ninthly*, in the absence of any evidence from Fitzgerald, Norman or Rees and in light of the evidence given by Mattiske, it must be inferred that there were serious deficiencies in the reporting of the results of the investigation.[4589] Accordingly, there was no basis to infer that Mattiske's shortcomings in approach would have been ameliorated by anyone else at Viterra conducting a thorough investigation which would have resulted in the decision-makers of Glencore and Viterra being properly informed of the relevant circumstances.

5169 *Tenthly,* and going beyond the events of October 2013, this attitude towards risk was consistent with the approach taken before the sale process commenced. Glencore chose not to accept the advice of Merrill Lynch and did not carry out a vendor due diligence.[4590] In the context of declining the recommendation to do a vendor due

---

4586 See pars 1475-1477 above.
4587 See pars 1467-1484, 1490-1493 above.
4588 See also par 1377 above.
4589 See also par 5163 above.
4590 See pars 387-393 above.

diligence, King stated at the time that Mattiske, as head of "Australia Agri", was very comfortable with the Joe White Business.[4591] This information was conveyed to Merrill Lynch, but did not change the advice given. Merrill Lynch persisted, and advised that Glencore was taking a decent risk in launching the sale process if no one had looked at the Joe White Business other than a "light touch vendor assist" and Mattiske saying it was all fine. Further, King had anticipated that, in Australia, Mattiske, Rees and Fitzgerald would have carried out some form of vendor due diligence. There was no evidence that King checked whether this had occurred. Mattiske did no such thing; and there was nothing to suggest that Rees or Fitzgerald did any form of vendor due diligence. As King acknowledged, a decision not to conduct a vendor due diligence was a decision to take a risk,[4592] and it was a risk that Glencore was willing to take.

5170 *Eleventhly*, Mattiske's general approach to the affairs of Joe White was somewhat offhanded. Despite being appointed as a director of Joe White in December 2012, as well as agreeing to the directorships for Viterra, Mattiske took very little interest directly in the operations of Joe White.[4593] Further, when it came to the sale process itself Mattiske largely left the responsibility to others.[4594] Mattiske considered his many other responsibilities meant that he could only devote a limited amount of attention to affairs concerning Joe White, including the sale. Accordingly, if the issue had been raised before 4 August 2013 it would have been unlikely that Mattiske would have been any more diligent in his approach to any investigation than the deficient level of care he gave the matter in October 2013.

5171 *Twelfthly*, and critically, no one with authority on the matters that were raised in addressing this issue was called to give evidence on behalf of the Viterra Parties. Mattiske's evidence itself was categorical that persons other than himself would have been responsible for any decision to halt the sale process before 4 August 2013.[4595]

4591 Mattiske was willing to make this assessment despite his own evidence that he was not very familiar with the operations of the Joe White Business: see further par 5170 below.

4592 See pars 390, 394 above.

4593 See, for example, pars 98-99 above.

4594 See par 392 above.

4595 See par 363 above.

Further, in contrast to the managerial structure of Cargill,[4596] there was no evidence to suggest that those at various levels of management had the authority to withdraw or delay the sale of Joe White.

5172 In summary, each of these matters weighed strongly against any finding that the sale process would have been stopped and the Alleged Steps would have been taken if the Viterra Practices or any of the other Undisclosed Matters had been brought to the attention of the Viterra Parties (that is, beyond the knowledge that Viterra already had because of the knowledge of Hughes and others). When viewed collectively, the prospect of the Alleged Steps having been taken in the hypothetical circumstances raised appeared extremely remote.

5173 In addition, the propensity of Mattiske to argue the Viterra Parties' case rather than confining himself to giving evidence directly responsive to questions put was relevant to this issue. Viewing Mattiske's evidence as a whole, he can be fairly characterised as a witness whose evidence was infected by his desire to argue the case on behalf of the Viterra Parties.[4597]

5174 For completeness, the circumstances surrounding the Other Bidders Representations cannot be ignored. By making the Other Bidders Representations in the misleading way in which he did, Mahoney, as a key decision-maker in the sale process, demonstrated a particular level of desire on the part of Glencore to obtain the highest price for the sale of the shares in Joe White and the steps he was willing to take to achieve this goal.[4598]

5175 Although the above findings deal with the issue raised, particular mention should be made of each of the Third Party Individuals. The positions of Youil, Wicks and Stewart are straightforward. Generally speaking, they were not involved in the relevant events leading up to 4 August 2013 in any significant way.[4599] They did not

---

4596 See pars 297-299 above.

4597 See, for example, pars 1977-1979 above.

4598 See also par 766 above.

4599 The very minor exceptions to this being Youil's involvement in the Operations Call (overseen and largely conducted by Hughes) (see pars 865-884 above) and his attendance at some of the site visits in

make any representation that any Warranty was true or correct. In the circumstances, there was simply no foundation to allege that any of them deprived any of the Viterra Parties from the opportunity to take the Alleged Steps. To the extent that each of them was engaged in the implementation of the Viterra Practices, he was acting with the express approval of the person to whom they all reported, being Hughes. Further, in light of the issues concerning the Viterra Code in 2010,[4600] there could be no sensible basis for thinking that others in Viterra's senior management took a different view to Hughes with regard to the ongoing implementation of the Viterra Practices.[4601]

5176 Argent's position must also be singled out for mention, but for a different reason. Although he was far more involved in the events leading up to 4 August 2013 (including his participation in the preparation of the Information Memorandum, his involvement in the preparation of the Management Presentation Memorandum and the Management Presentation itself, and his role in the Barley Inventory Call), there was no evidence that he knew of any of the Undisclosed Matters. Accordingly, on the facts before the court, there was no basis to find that Argent deprived Glencore or Viterra of any relevant opportunity.

5177 Further, with respect to Hughes' submissions about Viterra's knowledge of the use of off-grade barley more broadly within the corporate group, that knowledge of itself did not indicate that Joe White was not complying with customer contracts.[4602] Furthermore, the submission to the effect that Gordon gave a direction not to communicate with customers in relation to the Operational Practices cannot be accepted for reasons explained above.[4603] Moreover, although Hughes was correct to point out that the Viterra Policies were part of Viterra's records and had been for a significant period of time, the fact that their materiality was masked by having them marked "obsolete" took much of the force out of this submission.[4604]

---

late June 2013 (see pars 786, 788 above), and each of them participating in the deficient process of Wilson-Smith attempting the verification of the Warranties: see issue 125.6 above.

4600 See pars 156-167 above.

4601 See par 4903 above.

4602 See pars 919, 928 above.

4603 See pars 166, 1299 and fn 793 above.

4604 See pars 287-292, 1324, 1533, 2113, 4900 above.

5178 Of more substance was Hughes' submission concerning the absence of any evidence about what changes might have been made to any acquisition agreement if Glencore or Viterra had been informed of the Undisclosed Matters before 4 August 2013. If it had been found that Glencore and Viterra would have taken the Alleged Steps upon learning of the Undisclosed Matters or that the Warranties were incorrect, it was not readily apparent how any acquisition agreement might have been amended, including with respect to the Warranties; much less how, as a matter of causation, it would be found that prospective purchasers, including Cargill Australia, would have found any such amendments acceptable or would have remained interested in acquiring the shares in Joe White and related assets at a purchase price anywhere in the vicinity of $420 million.

5179 Some further observations should be made concerning the scope of the issue as pleaded. The Viterra Parties sought to make this particular third party claim on a premise which was variable in its scope. The case of the Viterra Parties was not premised on all the matters pleaded in paragraph 19 of the Statement of Claim being disclosed before 4 August 2013, but only "the Undisclosed Matters found by the court". Although all the Undisclosed Matters have been found to have existed, the case of the Viterra Parties included that any 1 of them would have triggered the Alleged Steps. In light of the limited evidence given on the topic, there were obvious problems with this.

5180 In a similar vein, the submissions concerning the difference between Mattiske's evidence in chief (which was confined to disclosure of the Viterra Practices) and the Third Party Claim addressing the broader issue of Glencore and Viterra being informed of potentially all of the Undisclosed Matters (of which the Viterra Practices was only 1 component) may also have had some materiality if (contrary to the findings made above) Mattiske's evidence as to what he would have done had been accepted.

5181 To explain, there was no issue that there was a difference between Mattiske's evidence and the potential scope of the Third Party Claim. The Viterra Parties' submission on

the point effectively acknowledged as much.[4605] Further, to the extent that this submission of the Viterra Parties addressed part of the issue, it ought to be accepted. That is, if, contrary to the findings set out above, Mattiske would have taken the Alleged Steps as pleaded upon being informed of the specific subset of the Undisclosed Matters about which he gave evidence, being the Viterra Practices, then it would have necessarily followed as a matter of common sense that he would have done so if he had been informed of the entirety of the Undisclosed Matters. However, it would not follow from that that he would have taken the Alleged Steps if any single component of the other Undisclosed Matters were drawn to his attention. In particular, the Viterra Policies were Undisclosed Matters. Regardless of the findings made above, the court would not have been satisfied that if the Viterra Policies alone had been drawn to Mattiske's attention he would have taken the Alleged Steps. Quite the contrary, Mattiske knew the practices relating to Certificates of Analysis (to put it neutrally) were documented, but did not even ask to see the relevant documents. Further, he was willing to accept Hughes' explanation of the Reporting Practice, including that it was a standard industry practice, despite Cargill's position to the contrary and with only limited enquiries on the issue. Furthermore, the events in late October 2013 resulted in the existence of the Viterra Certificate of Analysis Procedure being drawn to Fitzgerald's attention;[4606] and yet no disclosure of it to Cargill occurred before Completion.

5182 That said, in light of the findings made above, it is unnecessary to explore these matters any further.

X.132 If Glencore and/or Viterra have suffered loss as a result of any contraventions by Joe White and/or the Third Party Individuals of section 18 of the Australian Consumer Law, has Glencore and/or Viterra suffered that loss partly as a result of their failure to take reasonable care and ought their recoverable loss be reduced?

4605 See par 5131 above.

4606 See par 1324 above.

X.132.1 Introduction

5183 In light of the findings made concerning issues 124 to 131 above, and the resultant failure of the Viterra Parties to make out a claim based on either the Joe White Representations or the Joe White Executives' Representations, it is not strictly necessary to consider this issue. However, as it raises some factual matters, a brief reference to the submissions will be made, together with some factual conclusions.

X.132.2 The Cargill Parties' and the Third Party Individuals' submissions

X.132.2.1 Submissions made generally

5184 All the Third Parties submitted that if third party liability was established, then the Viterra Parties failed to take reasonable care and any damages should be reduced, pursuant to section 137B of the *Competition and Consumer Act*, to the extent that the court thinks just and equitable having regard to the Viterra Parties' share of responsibility for the loss.[4607]

5185 Further, the Third Party Individuals submitted that, pursuant to section 26(1) of the *Wrongs Act*, damages should be reduced having regard to the Viterra Parties' share in the responsibility for loss and damage.[4608] In accordance with the approach taken in *Angas Securities Ltd v Valcorp Australia Pty Ltd*,[4609] Hughes submitted that the court should proceed on the assumption that the *Competition and Consumer Act*, the *Wrongs Act* and the *Law Reform (Contributory Negligence and Apportionment of Liability) Act 2001* (SA) do not involve different legal tests. Furthermore, the Third Party Individuals each pleaded that, pursuant to section 7 of the *Law Reform (Contributory Negligence and Apportionment of Liability) Act*, damages should be reduced to the extent that the Viterra Parties' contributory negligence contributed to the harm.[4610]

5186 Broadly, the Cargill Parties, Youil and Wicks submitted that Glencore or Viterra failed to take reasonable care for the following reasons. *First,* Glencore or Viterra knew the

4607 See par 4366 above.

4608 Stewart's principal position was that the laws of the Commonwealth and of South Australia were applicable, but he also relied on s 26 of the *Wrongs Act* if it applied.

4609 (2011) 277 ALR 538, 562 [144] (Besanko J).

4610 Ibid.

true position in relation to the matters alleged to have been withheld from Glencore or Viterra, or had grounds to suspect information was inaccurate or had been withheld. *Secondly*, Glencore or Viterra was exercising control over all the Joe White executives and could have ascertained the matters had they made enquiries. *Finally*, to the extent Glencore or Viterra did not know the true position prior to entry into the Acquisition Agreement, both were subsequently alerted to it and therefore bear all the responsibility for loss and damage arising from the October 2013 Responses and Pre-Completion Representations.

5187 Further, various Third Party Individuals made submissions regarding how the Viterra Parties failed to take reasonable care by reason of their own actions in the sale, including contending they failed to:

(1) Undertake a vendor due diligence despite being advised to do so.

(2) Disclose relevant information, including the substantial amount of information raised by Hughes, Youil, Wicks and Stewart in late October 2013.

(3) Properly engage in the Due Diligence to ensure all relevant policies were in the Data Room, including the Viterra Policies.

(4) Properly approach and administer the Warranty verification process.

(5) Properly investigate the Undisclosed Matters, including in October 2013 by Mattiske not treating the issues Cargill had raised as serious.

(6) Inform Cargill of a possible breach of Warranty as required under the Acquisition Agreement.[4611]

(7) Investigate the use of off-grade barley by Joe White.

(8) Make reasonable enquiries of the Joe White executives as to the accuracy of the contents of the Information Memorandum and the Management

4611 Pursuant to cl 13.8: see par 1029 above.

Presentation Memorandum, or what was disclosed during the Due Diligence, or otherwise before executing the Acquisition Agreement.

5188 Furthermore, Hughes submitted that the Viterra Parties failed to take reasonable care because of their knowledge of the Undisclosed Matters and the fact that they knew or should have known that the Financial and Operational Performance Representations, the Warranty Representations and the Warranties were false.

X.132.2.2 Stewart's additional submissions

5189 Stewart referred to the general principles of contributory negligence, and submitted that apportionment of contributory negligence was an evaluative exercise, with attention to relative culpability and causative potency of the conduct.[4612] Stewart submitted that any loss or damage Viterra suffered as a result of Stewart's conduct should be entirely or very substantially reduced because of Viterra's share of the responsibility.

5190 Further, Stewart submitted that, if he was liable, the conduct alleged involved a failure by Stewart to take care, by an omission to disclose information. He referred to the fact that it was not alleged that Stewart's conduct was deliberate or intentionally misleading, and was capable of being framed as "negligent wrongdoing". Stewart submitted that if such conduct caused loss to the Viterra Parties, then the Viterra Parties were contributorily negligent. It was contended that, even if those responsible for the sale process were ignorant of the relevant matters, the Viterra Parties failed to ascertain the existence of the Viterra Practices and Policies, and failed to disclose them in the Data Room or before Completion. It was submitted that culpability arose because the Viterra Parties ought to have exposed anything which purportedly ought to have been communicated by Stewart, for the following reasons:

(1) Viterra had responsibility for making disclosure to Cargill of all relevant

4612 Stewart cited the following authority: *Merost Pty Ltd v CPT Custodian Pty Ltd* [2014] FCA 97, [136]-[147] (North J); *Valcorp Australia Pty Ltd v Angas Securities Ltd* [2012] FCAFC 22, [114] (Jacobson, Siopis and Nicholas JJ); *Podrebersek v Australian Iron and Steel Pty Ltd* (1985) 59 ALR 529, 532.5-533.2 (Gibbs CJ, Mason, Wilson, Brennan and Deane JJ); *Pennington v Norris* (1956) 96 CLR 10, 16.3 (Dixon CJ, Webb, Fullagar and Kitto JJ).

matters and failed to gather all relevant information.

(2) A large team of representatives from Viterra, Merrill Lynch and Mallesons worked extensively on the sale process.

(3) Viterra knew (by its company-wide corporate records and across its staff in the Viterra Malt division) of the Viterra Practices and Policies.

(4) The Warranty verification process was brief and not detailed, under-prepared, and did not allow for preparation or reflection by the "Viterra Malt Executives" (being a reference to the Third Party Individuals).

(5) Viterra did not fully inform Cargill in October 2013 of a possible breach of Warranty under the Acquisition Agreement.

5191 By contrast, Stewart submitted that he was an employee in a technical division with no involvement in or insight into the sale process, he was not consulted about what information to disclose in the Data Room, and only shortly before signing was subjected without notice to a quick and high-level meeting concerning the Warranties. Further, it was submitted that because evidence was not led from Stewart about the conduct of his meeting with Wilson-Smith, an adverse inference should be drawn against the Viterra Parties.[4613] It was submitted that there was only 1 brief meeting between Stewart and Wilson-Smith shortly before entry into the Acquisition Agreement, and that there was no evidence that any information Stewart could have given in that meeting would have led Viterra to make disclosure to Cargill on the eve of signing the Acquisition Agreement. Based on the communications between Stewart and Fitzgerald in October 2013,[4614] it was submitted that inferences should be drawn that *first,* Stewart was ready to provide detailed information when asked, and *secondly,* Viterra would only have responded in a limited way in the 3 days between the meeting between Stewart and Wilson-Smith and signing the Acquisition Agreement.

5192 Stewart submitted that Viterra's failures were more causally potent because they were

4613 See pars 1990, 4973, 5023 above.
4614 See pars 1296-1304, 1313, 1323, 1334-1336, 1387-1389, 1510-1511 above.

far wider (involving many different personnel and channels of information) and operated earlier in time, so that Viterra was in a better position to consider and address the information with Cargill.

X.132.3 The Viterra Parties' submissions

5193 The Viterra Parties submitted that the loss they alleged they suffered was not partly because of their failure to take reasonable care. Referring to their earlier submissions on various topics, the Viterra Parties submitted that during the relevant timeframe they did not have knowledge of the Undisclosed Matters and the asymmetry of knowledge between them and Joe White and the Joe White executives was such that it was not reasonable in the circumstances to expect they would conduct the sale process in any other way.

X.132.4 Analysis

5194 In circumstances where this issue does not arise, the relevant statutory provisions will not be discussed further. The remainder of the reasons on this issue will be confined to factual matters that would have been relevant if, contrary to the findings above, the Viterra Parties were entitled to an award of damages as a result of a contravention of section 18 of the Australian Consumer Law.

5195 Put simply, if an award of damages had been made in favour of the Viterra Parties against any of the Third Party Individuals, it would have been substantially reduced as a result of the Viterra Parties' failure to take reasonable care in the conduct of the sale of Joe White. Before turning to the conduct of the Viterra Parties, the position of the Third Party Individuals must be referred to.

5196 Dealing first with Youil, Wicks and Stewart, none of these persons was responsible for what had been disclosed during the sale process.[4615] Not only were they not involved in the preparation and dissemination of the Information Memorandum or the Management Presentation Memorandum, they were not part of any decision-making

[4615] See par 4782 above.

concerning how the sale process ought to be conducted, including what ought to be disclosed. They simply were not informed of what was disclosed or how the sale process was supposed to operate.[4616] Indeed, it was not apparent why they would have assumed that any material information had been withheld.[4617] The very limited involvement of Youil by reason of his participation in the Operations Call was not significant in this context when Youil was not familiar with what had otherwise been disclosed and was directed only to respond to questions asked (most of which were answered by Hughes).[4618]

5197 Additionally, Stewart's detailed submissions on this issue as summarised above fairly reflected the facts as found. In my view, for the reasons stated in those submissions, they properly characterised Stewart's role.

5198 Further, although Argent was familiar with the contents of the Information Memorandum and the Management Presentation Memorandum, and had direct involvement in aspects of the drafting of both, there was no evidence that he had any knowledge of the Viterra Practices (which were clandestine operational practices).[4619] Adding to this, there was nothing to suggest that Argent knew (or in the secretive circumstances ought to have known) that the contents of these documents or anything else communicated to Cargill during the sale process were inaccurate in any material respect.

5199 Furthermore, with respect to each of Youil, Wicks, Stewart and Argent, they were subjected to a Warranty verification process that was woefully inadequate.[4620] The process did not give them the opportunity to properly understand the Warranties they were being asked to verify or give rise to an occasion where it could reasonably have been expected that they would have disclosed the Undisclosed Matters (if, or to the extent that, they had known about them).

4616 See par 4899 above.
4617 See pars 4902-4905 above.
4618 See pars 865-884 above. See also pars 786, 788 in relation to Youil's attendance at 2 site visits.
4619 See pars 2561, 4900, 4944, 4947-4948 above.
4620 See issue 125.6 above.

5200 Moreover, the events of late October 2013 demonstrated that Youil, Wicks and Stewart were open and responsive to issues raised. There was no reason to infer that any of them would have acted otherwise if the issues had been raised before the Acquisition Agreement was entered into.

5201 In short, the context in which the conduct of Glencore and Viterra would be considered concerning their failure to take reasonable care such that their recoverable loss would have been reduced would be that no fault or want of care could have been attributed to any of Youil, Wicks, Stewart or Argent.

5202 In relation to Hughes, the position was substantially different. In his senior role, Hughes oversaw the implementation of the Viterra Practices for many years. His approval of such a regime, and his direction to others to adopt it, was inexcusable. Further, given his knowledge of the Viterra Practices, he could have been in no doubt that there were material inaccuracies in what was contained in the Information Memorandum and the Management Presentation Memorandum, as well as material non-disclosures during the Operations Call and the Commercial Call.[4621] However, in circumstances where it has been found that Hughes' knowledge was the knowledge of Viterra, this state of affairs could only be relevant to the questions raised in this issue as between Hughes and the Viterra Parties.

5203 Further, the events of October 2013 demonstrated that when Hughes was actually asked direct questions about matters relevant to the Viterra Practices, he was also open and responsive to the issues raised. In circumstances where Hughes did not give evidence, it was difficult to reconcile his position at the time he approved the Information Memorandum Statements and the Management Presentation Statements (to the extent that he did) with what he willingly disclosed in October 2013 (albeit, he sought to justify the Reporting Practice and at least to some extent, the Varieties Practice and the Gibberellic Acid Practice).[4622] However, as no ruling on issue 132 is

4621 See, for example, pars 3262-3264, 3278 above.
4622 See, for example, pars 1251-1254, 1279-1288, 1395 above.

required, it is unnecessary to explore these matters further.[4623]

5204 The position of the Cargill Parties has been discussed elsewhere.[4624]

5205 In relation to the Viterra Parties, there was a combination of matters which demonstrated a lack of reasonable care. They included:[4625]

(1) Glencore taking the risk of not conducting a vendor due diligence in circumstances where it had only owned Joe White for a very short period of time and was not familiar with the operations of the Joe White Business.

(2) The failure of the Viterra Parties (including the failure by Hughes) to take reasonable steps to ensure the contents of the Information Memorandum and the Management Presentation Memorandum were substantially accurate and that they did not have material misstatements or omissions concerning the financial and operational performance of the Joe White Business.

(3) The failure of Viterra up to December 2012 and then Glencore until August 2013 (in particular Mattiske as a Glencore employee and a director of Viterra and Joe White) to put in place adequate administration and procedures to prevent the Viterra Practices from being implemented (including in a concealed manner) with the result that the performance of the Joe White Business as stated during the sale process was materially underpinned by improper operational practices.[4626]

(4) Upon the Operational Practices being drawn to the attention of those responsible at Glencore and Viterra for the sale process on behalf of the Viterra Parties, the failure to properly investigate the Viterra Practices

4623 See also par 3280 above.
4624 See issue 80 above.
4625 For a more extensive analysis of the Viterra Parties' position, see issue 80 above.
4626 Compare *Merost Pty Ltd v CPT Custodian Pty Ltd* [2014] FCA 97, [140] (North J).

or to take the steps necessary to be able to give substantially accurate and informative responses to the Cargill 22 October Letter; or to cause such an investigation to be carried out or such steps to be taken.

(5) Implementing a Warranty verification process in a rushed manner and appointing an inexperienced person to oversee that process without proper instruction or supervision.

(6) Upon Cargill raising issues concerning the Operational Practices in October 2013, the failure to make reasonable enquiries so as to be in a position to inform Cargill that certain Warranties had been breached both at the time of the execution of the Acquisition Agreement and at the time of Completion.

5206 The content of the Sale Process Disclaimers did not alter the position. Whether or not care was taken was a matter of objective fact in the context of the surrounding circumstances.[4627] Specifically, the provisions which sought to reduce the Viterra Parties' liability for any failure to take reasonable care did not mean that for the purposes of the statutory regime this ceased to be a relevant factor.

X.133 Are Glencore and/or Viterra's claims for contravention of section 18 of the Australian Consumer Law apportionable claims within the meaning of section 87CB(1) of the *Competition and Consumer Act* and/or section 24AI of the *Wrongs Act* and/or section 8 of the *Law Reform (Contributory Negligence and Apportionment of Liability) Act*? If so, are Cargill, Inc,[4628] Joe White, the Third Party Individuals, Fitzgerald, Rees, Mattiske, King,[4629]

4627 These included the fact that it was a "Wall Street" deal involving hundreds of millions of dollars (see par 486 above), that there were certain reasonable and customary expectations regarding disclosure which were properly understood by the Viterra Parties (see pars 494-498, 619 above), the limited access Cargill had to certain information and the strictures imposed upon obtaining access to the Confidential Information (see, for example, pars 461-469, 639-644 above), as well as the other terms upon which the Confidential Information was disclosed: see pars 586, 590 above.

4628 Wicks was the only third party to allege concurrent wrongdoings by Cargill, Inc.

4629 Hughes and Argent were the only third parties to allege concurrent wrongdoing by King.

Viterra Malt, Viterra Operations, Viterra Ltd[4630] **and/or Glencore**[4631] **concurrent wrongdoers? If so, what proportion of the damage or loss claimed by Glencore and/or Viterra does the court consider just for each party to bear?**

5207 The questions raised by issue 133 were premised on the court finding Glencore or Viterra, or both, were successful in a claim against a third party for loss or damage because of a contravention of section 18 of the Australian Consumer Law. As the Viterra Parties have failed to establish this premise, these questions do not arise.[4632]

X.134 What, if any, damages or other relief is Glencore and/or Viterra entitled to against Joe White and/or the Third Party Individuals as a consequence?

5208 For the reasons in issues 124 to 131 above, the answer is none.

X.135 Were the Third Party Individuals parties with Viterra Ltd to the service contracts pleaded in paragraph 66 of the Third Party Claim?

5209 Paragraph 66 of the Third Party Claim stated that at all material times, until at least the date of Completion, each of Hughes, Youil, Wicks, Stewart and Argent was a party to a contract of service with Viterra Ltd.[4633]

5210 The service contracts were largely materially in the same form. Each contract set out the rights and obligations of the relevant executive. These included, amongst other things, the terms and conditions of employment, the code of conduct,[4634] and other clauses such as termination, remuneration, redundancy and leave.

5211 But for Hughes,[4635] the Third Party Individuals conceded this issue in their pleadings.

4630 The Third Party Individuals were the only third parties to allege concurrent wrongdoing by Viterra Operations and Viterra Ltd.

4631 Wicks, Stewart and Argent were the only third parties to allege concurrent wrongdoing by Glencore.

4632 See par 4484 above.

4633 It was alleged that the contract of service with: (1) Hughes was dated 1 November 2009; (2) Youil was dated 1 November 2011; (3) Wicks was dated 30 May 2011; (4) Stewart was dated 1 November 2011, signed by Stewart on 14 February 2012; and (5) Argent was dated 1 November 2011.

4634 This listed 8 matters and was separate to the Viterra Code: see par 5213 below.

4635 See pars 188-196, 1873 above in relation to the Hughes/Viterra Contract.

Hughes, on the other hand, initially contested the allegation that he was a party to the Hughes/Viterra Contract on the basis that the contract of service was not signed by Hughes himself.[4636] However, in closing submissions Hughes correctly conceded this issue,[4637] accepting that his employment by Viterra Ltd "was subject to the terms and conditions of the [Hughes/Viterra Contract] pleaded at paragraph 66 of the Third Party Claim".[4638]

5212 Thus, it was common ground each of the Third Party Individuals was the subject of a contract of service with Viterra Ltd as alleged.

X.136 Did the terms of the service contracts require the Third Party Individuals to behave ethically and honestly and act in the best interest of Viterra Ltd?

5213 Clause 2 of the contracts of service for each of the Third Party Individuals set out a code of conduct and stipulated as follows: [4639]

> In general, the employee is required to:
>
> (a) Behave ethically and honestly;
>
> (b) Act in the best interest of Viterra [Ltd];[4640]

4636 That said, Hughes acknowledged that he was provided with a copy of the draft contract of service and the accompanying cover letter dated 23 June 2010 with "Viterra" as the letterhead and the details of Viterra Ltd as its footer, signed by Gordon.

4637 If Hughes had not conceded this point, the Hughes/Viterra Contract would have been found to be in existence on the basis that a binding agreement can arise by conduct, the relevant conduct here being that Hughes acted in the role of Executive Manager – Malt at all times from late 2009 until Completion (see pars 1873-1875 above): see, for example, *Brambles Holdings Ltd v Bathurst City Council* (2001) 53 NSWLR 153, 177-178 [74]-[78], 179 [81], 181 [85] (Heydon JA), 197 [173] (Ipp AJA, with whom Mason P agreed).

4638 For completeness, Hughes also referred to his previous employment contract with Viterra. In that contract, Viterra was noted as having its address in Saskatchewan, Canada. Hughes was required to continue on the same terms and conditions that were already in place as "Executive Manager – Malt with Viterra Australia". He was also bound as an employee of Viterra, "to abide by the policies and procedures of Viterra Australia as varied and amended from time to time". The contract was signed by Hughes and by Malecha, as chief operating officer of Viterra.

4639 The code of conduct was set out in clause 2 of each service contract and also required that the relevant executive: avoid conflicts of interest; where conflicts of interests are unavoidable, declare the conflict in writing … and avoid further involvement without appropriate management authorisation; ensure that employment opportunities are dealt with in accordance with relevant legislation and on the basis of merit; avoid unlawful discrimination; avoid illegal behaviour; and comply with all legal and other compliance obligations.

4640 The contracts of service simply stated "Viterra" without identifying the specific entity, but it was plain this was a reference to Viterra Ltd.

…

5214 The Third Party Individuals admitted, in substance, that their contracts of service contained the terms as set out above.[4641] Youil, Wicks and Argent simply accepted that this required them to behave ethically and honestly. Hughes and Stewart made further submissions in relation to the objective meaning of "to behave ethically and honestly" and "to act honestly" The obligations imparted by this code of conduct were not further defined in the contracts of service. Interpreting the meaning of these obligations is necessary for the determination of the issues that follow.

5215 As has been stated,[4642] construing the terms of a contract requires an assessment of the text, context and purpose of the obligations; the meaning must be assessed by reference to what a reasonable business person would have understood the obligations to mean in the context of the contract of service.

5216 Clause 2 prescribed certain uniform expectations of conduct on the relevant employee. It was provided that if the code of conduct was not complied with, it was considered a "serious disciplinary matter" which may have warranted termination.

5217 The Macquarie Dictionary defines "ethical" as "in accordance with the rules or standard for right conduct or practice" and imports notions of morality.[4643] Hughes relied upon the definition of "ethical" in Black's Law Dictionary, which referred to moral obligations owed to another and conforming to moral norms or standards of professional conduct.[4644] The term, much like the term "improper", is "indefinite" meaning it cannot be reduced to some exhaustively defined standard.[4645] Rather, the meaning of "ethical" should be determined by reference to the relevant executive's

---

4641 Hughes accepted in closing submissions that his employment with Viterra Ltd was subject to the terms and conditions of the contract of service. Youil, Wicks and Stewart admitted, in their pleadings, that their respective contracts of service provided that, in general, they were required to behave ethically and honestly and in the best interest of Viterra Ltd subject to production of the contracts of service. Argent admitted that the contract of service provided that, in general, he was required to behave ethically and honestly and in the best interest of Viterra Ltd.

4642 See par 4549 above.

4643 *Macquarie Dictionary* (8th ed, 2020) "ethical" (adj, def 1), (n, def 2).

4644 Bryan A Garner (ed), *Black's Law Dictionary* (10th ed, 2009) "ethical" (n, def 1, 2).

4645 See *R v Byrnes & Hopwood* (1995) 183 CLR 501, 513.7-515.4 (Brennan, Deane, Toohey and Gaudron JJ).

duties, powers, authority and responsibilities. Deciding whether conduct is ethical requires an objective assessment, judged by the standard of a reasonable person in a similar position.[4646]

5218 In determining whether certain conduct has infringed upon a code of conduct, which sets out an obligation to act ethically, the whole of the relevant person's conduct must be considered.[4647] In *Office of Local Government v Toma*,[4648] the New South Wales Civil and Administrative Tribunal considered, in the context of a code of conduct prohibiting unethical conduct by city councillors, whether the respondent councillor's conduct was unethical. In so doing, it was considered unnecessary to state an exhaustive definition of unethical conduct. Rather, it was enough to note that the expression encompassed conduct which, viewed objectively, would be regarded by reasonable persons as falling below the standards of conduct to be expected.[4649] Further, in concluding that the respondent councillor's conduct "[fell] on the wrong side of line" and therefore breached the applicable code of conduct,[4650] the following passage in *Dallas Buyers Club LLC v iiNet Limited (No 3)* was relied upon:[4651]

> The difficulty in locating where a line is to be drawn is a well-known problem in legal discourse. But here, as in other contexts, it is best answered not by seeking to find where the line is but instead by asking which side of the line one happens to be on.

5219 In relation to the second component of subclause (a), to act "honestly", the ordinary meaning of the expression was described in *Australian Securities & Investments Commission v Healey (No 2)* as follows:[4652]

> … a person acts honestly, in the ordinary meaning of the term, if the person's

---

4646 Ibid, 514.3, 515.4.

4647 Ibid, 514.7-516.4.

4648 [2016] NSWCATOD 21 (Renwick SC, SM).

4649 Ibid, [25].

4650 Ibid, [26].

4651 [2015] FCA 422, [5] (Perram J).

4652 (2011) 196 FCR 430, 442 [88] (Middleton J), noting that this meaning was provided for "the purposes of this proceeding" in the context of the *Corporations Act*. That being so, the way in which the term was described broadly fits with the ordinary meanings provided in dictionary definitions of "honest", which includes "honourable in principles, intentions, and actions", "showing uprightness and fairness", "open; sincere", "genuine or unadulterated", "truthful; creditable; candid" and "chaste or virtuous; respectable": *Macquarie Dictionary* (8th ed, 2020) "honest" (adj, def 1), (n, def 2), (n, def 4), (n, def 5), (n, def 6), (n, def 7).

conduct is without moral turpitude, that is:

(a) without deceit or conscious impropriety;

(b) without intent to gain an improper benefit or advantage; and

(c) without carelessness or imprudence that negates the performance of the duty in question.

Additionally, it was noted that in assessing whether a person has acted honestly, "the seriousness of the contravention and its potential or actual consequences, impropriety such as deceptiveness or personal gain, and contrition" were relevant considerations.[4653]

5220 Turning to subclause (b), "best interest of Viterra" was also not defined. The requirement to act in this manner reflected the crux of the relationship between each employee and Viterra Ltd.[4654] As was expressed by Jessup J in *Commonwealth Bank of Australia v Barker*, the obligation to act in the best interest of the employer is a critical feature of the relationship which means "the employee agrees to act for or on behalf of or in the interests of the employer in the exercise of a power or discretion which will affect the interests of the employer in a legal or practical sense".[4655] Thus, the assessment of whether the relevant employee acted in the best interest of the employer will turn on the facts of the case, including the nature of the position of the employee and the duties that she or he was required to perform.[4656]

5221 Therefore, in determining whether any of the Third Party Individuals breached their respective duties to behave ethically and honestly, and to act in the best interest of Viterra Ltd, the principles outlined above must be applied to the specific facts as they

---

4653 Ibid, 442 [89]. Again, these observations were made in the statutory context (including whether a person ought fairly be excused), but are also applicable in this contractual context.

4654 For the avoidance of doubt, 2 points must be briefly made: (1) the duty to act in the best interest of the employer generally corresponds with the duty to act with fidelity: see *Concut Pty Ltd v Worrell* (2000) 75 ALJR 312, 322 [51], 324 [57] (Kirby J); *Wessex Dairies Ltd v Smith* [1935] 2 KB 80, 84.6, 85.5 (Greer LJ), 88.5-90.1 (Maugham LJ), see also *Blyth Chemicals Ltd v Bushnell* (1933) 49 CLR 66, 72.8-73.1 (Starke and Evatt JJ); and (2) the employment relationship is an accepted category of fiduciary relationship: see *Commonwealth Bank of Australia v Barker* (2013) 214 FCR 450, 464 [101]-[102] (Jacobson and Lander JJ); *Hospital Products Ltd v United States Surgical Corporation* (1984) 156 CLR 41, 96.8-97.4 (Mason J, dissenting on the point).

4655 (2013) 214 FCR 450, 516-517 [300]. See also *Concut Pty Ltd v Worrell* (2000) 75 ALJR 312, 317 [25] (Gleeson CJ, Gaudron and Gummow JJ).

4656 Ibid, 517 [302] (Jessup J).

apply to each of them individually.

5222 In any event, the answer is yes.

X.137 Have the Third Party Individuals (including Hughes) failed to act in the best interest of Viterra Ltd and/or failed to act ethically, and thereby breached their service contracts, by reason of the making of the Joe White Executives' Representations?

X.138 Further to issue 137, has Hughes failed to act in the best interest of Viterra Ltd, failed to act ethically and/or failed to act honestly, and thereby breached his service contract, by reason of the making of the Hughes Representations?

X.138.1 Overview

5223 It is convenient to consider these 2 issues together. The contractual breaches alleged by the Viterra Parties were said to have resulted from the making of the Joe White Executives' Representations. Each of Stewart and Wicks has been found not to have made any of the Stewart Representations and the Wicks Representations respectively.[4657] Accordingly, the claims against Stewart and Wicks for breach of contract necessarily fail.[4658]

5224 Further, the Hughes Representations, the Youil Representations and the Argent Representations have only been found to have been made in part.[4659] However, in contrast to the manner in which the claims alleging misleading or deceptive conduct based on the Joe White Executives' Representations were pleaded,[4660] the Viterra Parties relied upon each of the components of the representations individually, which altogether comprised the Joe White Executives' Representations, in alleging that at the time each of them was made it was a breach of the relevant service contract. In doing

4657 See issue 125.4 above.

4658 Thus, those claims need not be referred to any further beyond the extent necessary to address the claims for breach of contract against the remaining Third Party Individuals.

4659 See issues 125.2, 125.3, 125.5, 125.7 above and the summary at par 5048 above.

4660 See pars 4791-4796 above.

so against each Third Party Individual, the Third Party Claim largely followed the same format, but as there were differences in the case pleaded against each of Hughes, Youil and Argent some elaboration is required.

X.138.2 The allegations

5225 The allegations made with respect to breach of contract by each of the Third Party Individuals for not acting ethically or in the best interest of Viterra Ltd were made principally in 2 ways.[4661] *First*, as against all Third Party Individuals, it was alleged that each of them had acted in breach of contract to the extent that each of them made the Joe White Executives' Representations, which were misleading or deceptive or likely to mislead or deceive. *Secondly*, further or alternatively only as against Hughes, Youil, Wicks and Stewart (but not Argent),[4662] the Undisclosed Matters and the Cargill 22 and 29 October Letters were referred to.[4663] It was alleged that if Hughes, Youil, Wicks and Stewart disclosed the Operational Practices at the 15 October Meeting (which was not admitted),[4664] then each of the Operational Practices was known to 1 or more of Hughes, Youil, Wicks and Stewart in October 2013 and accordingly also at the time of making each of the Joe White Executives' Representations to Glencore and Viterra on or before 4 August 2013.

5226 In addition, in relation to Hughes alone, it was alleged that, in making the Hughes Representations, Hughes was not acting honestly and therefore was in breach of the

---

4661 In the Third Party Claim, it was alleged that each Third Party Individual had "not acted in the best interest of Viterra Ltd and/or not acted ethically". Each contract of service provided the employee was required to behave ethically and honestly, and act in the best interest of Viterra: see par 5213 above. Accordingly, the order in which these matters were referred to in the contracts will be adopted rather than that used in the Third Party Claim.

4662 This was because these allegations were premised on the basis (which was not admitted in the Third Party Claim) that the court found the Operational Practices were disclosed at the 15 October Meeting (which Argent did not attend).

4663 For the purposes of the Third Party Claim only.

4664 In the Third Party Claim, reference was made in substance to the Operational Practices, but to be precise the practices as pleaded were: (1) issuing Certificates of Analysis to customers which represented that malt supplied to the customers met with particular specifications where the malt supplied did not meet those specifications; (2) supplying malt to customers which had not been produced from the specific barley varieties required by those customers; and (3) supplying malt to customers which had been produced from a malting process that involved the addition of gibberellic acid where those customers required that gibberellic acid not be used in the production of malt supplied to them. To avoid any confusion, the term "Operational Practices" will be used in addressing these issues.

Hughes/Viterra Contract. In support of this allegation, the Viterra Parties referred to the particulars of the Statement of Claim setting out Hughes' background, including: the various positions he held;[4665] his involvement in the Malt Cost Reduction Transformation Project;[4666] the introduction of the Viterra Code and the Viterra Practices and Policies;[4667] his "high level of responsibility in the sale process" (including as part of a working group);[4668] the email he sent on 16 January 2013;[4669] and his knowledge of the Undisclosed Matters.[4670]

X.138.3 The Viterra Parties' submissions

5227 The Viterra Parties submitted the contractual requirement to act ethically should be understood in the context of the Viterra Code.[4671] In particular, they referred to the Viterra Code providing that Viterra was committed to conducting its business with integrity in accordance with high ethical standards and in compliance with all applicable laws, rules and regulations. They submitted that the Viterra Code emphasised customer-oriented service, honesty, fairness and integrity and rejected improper or illegal business practices. Further, they submitted the Viterra Code encouraged employees to speak out when they observed unethical behaviour or activity, noting the Viterra Code contained express obligations to comply with all laws, be accurate and truthful in all dealings with customers and accurately represent the quality of Viterra products. Furthermore, reference was made to the express obligation not to create or condone the creation of a false record. Moreover, it was contended that by signing an acknowledgement form,[4672] an employee expressly declared she or he did not know of any unreported violations or possible violations of the Viterra Code.

5228 The Viterra Parties submitted that by failing to disclose the Viterra Practices and by

---

4665 See par 47 above.
4666 See pars 136, 145, 163, 230 above.
4667 See pars 155-166, 199-206 above.
4668 See pars 440, 3097 and fn 2251 above.
4669 See par 375 above.
4670 See issues 11, 22 and pars 4874-4882 above.
4671 See pars 58-63 above.
4672 See par 63 above.

making the Joe White Executives' Representations, the Third Party Individuals had each violated the Viterra Code, including by failing to disclose violations of the Viterra Code. The Viterra Parties submitted that those violations constituted a breach of the contractual requirement to act ethically.

5229 Further, the Viterra Parties referred to their submissions regarding the Joe White Executives' Representations in issue 125 above, and relied on the disclosures made to Cargill at the 15 October Meeting to the effect that the Operational Practices were occurring.[4673] The Viterra Parties submitted that, in order for those disclosures to have been made, each of the Operational Practices must have been known to at least 1 or more of Hughes, Youil, Wicks and Stewart. It was submitted that the court should infer that these Joe White executives had the same knowledge 2 or so months earlier, in the period prior to the execution of the Acquisition Agreement. It was also submitted that the same knowledge could be inferred from these Joe White executives' senior roles within Joe White and their direct involvement in the Operational Practices themselves.

5230 Citing the definition of duty to act in the best interest of an employer set out in the Encyclopaedic Australian Legal Dictionary, the Viterra Parties submitted the duty to act in an employer's best interest required an employee to act in the employer's interest rather than in the employee's own interest. They submitted an employee who wilfully obstructed an employer during the course of its business would be in breach of the duty.[4674] It was submitted that by failing to disclose the Operational Practices and by making the Joe White Executives' Representations, the Joe White executives had exposed Viterra Ltd to 1 or more successful claims for misleading or deceptive conduct, deceit, breach of contract or negligent misrepresentation. They contended this occurred in circumstances where Mattiske would have taken various steps had he been properly informed: namely, to (1) cease the Operational Practices; (2) investigate their effect; (3) take advice on how to disclose them to Cargill; and (4) recommend to

4673 See pars 1102-1142 above.

4674 *Secretary of State for Employment v Associated Society of Locomotive Engineers and Firemen (No 2)* [1972] 2 QB 455, 491F-492B (Lord Denning MR).

his superiors not to sign an acquisition agreement.[4675] The Viterra Parties submitted that given this, it could not be said the Third Party Individuals had acted in Viterra Ltd's best interest.

5231 In respect of the contractual obligation on Hughes to act honestly, the Viterra Parties submitted that if the Cargill Parties were successful in their claim that Viterra had knowledge that the Financial and Operational Performance Representations were false, and therefore that Viterra's conduct (through the conduct of Hughes) was deceitful,[4676] it would follow that Hughes had breached his obligation to act honestly.

X.138.4 Hughes' submissions

5232 In addition to the submissions made above concerning the meaning of "ethically and honestly",[4677] Hughes submitted that the Viterra Parties' submissions relied upon an unpleaded allegation. Hughes noted that the Viterra Parties' submissions referred to the Joe White executives failing to disclose the Viterra Practices *and* to the making of the Joe White Executives' Representations having constituted violations of the Viterra Code, which allegations had not been pleaded in this manner. It was submitted that, in contrast to the pleaded case, what was stated in the Viterra Parties' closing submissions was the basis upon which it was asserted the Joe White executives had failed to act ethically.

5233 In relation to his position as an employee, Hughes referred to the obligation to comply with commands of the employer. He submitted that provided a command did not involve illegality and was reasonable according to established usages and common practices, then he was bound to comply.[4678] Further, he referred to the events in August 2010[4679] in contending that Viterra's response to the issues raised by Hughes

---

4675 Reference was made to the Viterra Parties' submissions with respect to issues 130, 131 above and issue 139 below. It should be noted that these submissions did not precisely replicate the Alleged Steps: see par 5128 above.

4676 See issues 22, 23 above.

4677 See issue 136 above.

4678 *McManus v Scott-Charlton* (1996) 70 FCR 16, 21C (Finn J), quoting *R v Darling Island Stevedoring & Lighterage Co Ltd; Ex parte Halliday* (1938) 60 CLR 601, 621-622 (Dixon J).

4679 See pars 155-166 above.

at that time was to enshrine "the practices of the [Joe White Business]"[4680] in corporate policies that Viterra employees were bound to follow in accordance with the terms of their service contracts. It was submitted that accordingly at all relevant times Hughes was entitled to assume that the Viterra Parties were familiar with and approved of the way in which the Joe White Business had been conducted. Thus, it was submitted, it was not open to the Viterra Parties to rely upon any conflict between the Viterra Code and the business practices of Joe White to make a claim for breach of the Hughes/Viterra Contract.

5234 In respect of the obligation to act honestly, Hughes referred to the statement of Middleton J in *Australian Securities and Investments Commission v Healey (No 2)*.[4681] Hughes submitted that the Viterra Parties had alleged no moral turpitude against Hughes and he contended that no moral wrongdoing was established. It was submitted that during the sale process Hughes acted in accordance with the directions and limited guidance he received from the Viterra Parties, including not to provide information that had not been requested. He further submitted that he was entitled to assume that his employer and corporate superiors were aware of the way in which the Joe White Business was run. In these circumstances, it was submitted that *as between Hughes and Viterra* no conscious impropriety could be found against Hughes. In this regard, it was noted that Hughes did not stand to benefit from the sale of Joe White in any relevant sense.

5235 Without going into the specifics of what was contended to be his knowledge, Hughes submitted that, to the extent that he had the knowledge as alleged and it was found he made the Hughes Representations, that did not indicate any moral wrongdoing or impropriety. This was put on the basis that the Hughes Representations to his employer and corporate supervisors were best characterised as no more than an expression of his opinion and belief.

4680 There was no attempt to specify precisely what this phrase encapsulated for the purpose of this submission.

4681 (2011) 196 FCR 430, 442 [88]. See par 5219 above.

5236 In respect of the contractual duty to act in the best interest of Viterra Ltd, Hughes submitted that the Viterra Parties had only referred to the same conduct relied upon for the misleading or deceptive conduct claim,[4682] and that his conduct, when viewed as a whole, could not be said to amount to any failure to act in the best interest of Viterra Ltd. Hughes submitted that at all times he was acting in good faith, honestly and with a view to the best interest of the corporation.

5237 In the alternative, Hughes submitted if he was not acting in the best interest of Viterra Ltd, an inference should be drawn that he intended to act in the Viterra Parties' best interest and believed that he was doing so, for the following reasons:[4683]

(1) Hughes had been involved in the Malt Cost Reduction Transformation Project at Viterra's direction,[4684] and the objective of that project was to achieve savings for Viterra and increase profits. Hughes had complied with a direction of his employer and assumed that doing so was in the best interest of Viterra. This was contended to be the position even if it was found by the court that the Malt Cost Reduction Transformation Project had the result of supplying malt that was not within customers' specifications.

(2) Hughes had sent the 10 August 2010 email to Gordon,[4685] and in doing so had acted in the best interest of Viterra by escalating employees' concerns, "identifying the practices that were being engaged in",[4686] seeking to ensure compliance with the Viterra Code, and ensuring savings could be made through the "Viterra-led" Malt Cost Reduction Transformation Project. He submitted that the Viterra Certificate of

---

4682 See issue 125 above.

4683 In addition to the matters referred to, Hughes also relied on what he disclosed to other prospective purchasers. At management presentations to Co-operative Bulk and Sumitomo, Hughes referred to Joe White using off-grade barley and such use being consistent with industry practice. However, this information did not touch directly upon any of the Operational Practices.

4684 The submission referred to the Viterra Parties, but undoubtedly it was intended to be a reference to Viterra as Glencore had no involvement at the relevant time.

4685 See pars 162-163 above.

4686 Again, there was no attempt to identify precisely what practices that it was contended Hughes had specifically identified.

Analysis Procedure was introduced as Viterra's response to the issues raised by Hughes and was viewed by Viterra as a response which was in its best interest.

(3) The bonus that was offered by Glencore to Hughes for assisting in the sale process was payable at the discretion of Glencore, and was not dependent on the success of the sale.[4687] Accordingly, Hughes' participation in the sale was with a view to the best interest of the company (rather than his own self-interest).

(4) Hughes was always careful to answer only what was asked of him when providing responses to bidders during the sale process. This action was in accordance his instructions, and thus was in the best interest of Viterra.

(5) In the preparation of the Information Memorandum and the Management Presentation Memorandum, Hughes had deferred to the amendments and decisions of his superiors who were more experienced in sale processes, and accordingly was acting in the best interest of Viterra when doing so.

(6) Hughes had signed the Information Memorandum verification table, and discussed the Warranties raised by Wilson-Smith, believing that conduct to be in the best interest of Viterra because he was directed to do so. Hughes had not been advised about what "verification" entailed.[4688] He had also provided comments on the notes of the Management Presentation questions and answers, the Operations Call and the Commercial Call in good faith, honestly and in the best interest of Viterra, without being advised that those notes would subsequently form part of the transaction documents with Cargill or that he could

4687 See par 1876 above.
4688 See par 447 and issue 125.6 above.

expose himself to legal action by providing comments.

(7) Hughes' compliance with his employer's requests and directions, and that he was acting in his employer's best interest, was also evident from the fact that:

(a) The presentation given at the 15 October Meeting did not disclose customer-specific data, prices or volumes, and instead only provided information specifically requested by Cargill on practices and policies.

(b) Hughes had complied with Fitzgerald's direction to cease all communications with Cargill while the Viterra Parties assessed the implications of the Cargill 22 October Letter. Hughes' compliance had extended to emailing executives as directed,[4689] ceasing communications with Cargill in relation to preparation for conducting the Joe White Business after Completion, attending meetings with the Viterra Parties at which he disclosed what he knew or had learned about the Operational Practices and their extent,[4690] and reviewing draft responses.[4691]

X.138.5 Youil's and Argent's submissions

5238 Youil and Argent each submitted that they had not breached their service contracts because the conduct relied on by the Viterra Parties, being the making of the Youil Representations and the Argent Representations respectively, had not been proved. Argent submitted that Viterra Ltd had failed to identify precisely how he had failed to act ethically or in the best interest of Viterra Ltd. Argent also submitted the terms "to behave ethically" and "to act in the best interest of Viterra Ltd" were not only undefined in his contract of service, but were imprecise and vague. Argent further

4689 See par 1268 above.
4690 See pars 1277-1288 above.
4691 See pars 1395-1401, 1513 above.

submitted these terms should be considered in light of the preceding words, "in general", which augmented the issues associated with delineating the precise circumstances in which Argent ought to be held to these standards.

X.138.6 Analysis

X.138.6.1 Pleading issues

5239 As a matter of principle in construing contracts, the requirement in each of Hughes', Youil's and Argent's contracts to act ethically must be considered in the context of the Viterra Code.[4692] Obviously, the contracts in question must be construed in light of the surrounding circumstances.[4693] The Viterra Code was introduced to Viterra Ltd employees working at Joe White in 2010. Both Wicks' and Argent's employment contracts post-dated this introduction.[4694] Further, although the Hughes/Viterra contract was dated 1 November 2009, he did not sign it then; and he was not provided with a contract signed on behalf of Viterra Ltd until 23 June 2010 (which coincided with the introduction of the Viterra Code).[4695] Furthermore and in any event, whenever each of these contracts was entered into, each of them expressly provided that the Viterra Ltd employee in question was required at all times to comply with operational practices, procedures, policies and directions as made, amended or given from time to time.[4696] The Viterra Code plainly fell within this description. Moreover, Hughes' employment contract that preceded the Hughes/Viterra Contract also required him to comply with Viterra policies and procedures as varied and amended from time to time.[4697] In short, there could have been no real issue that each of Hughes, Youil and Argent were bound by the terms of the Viterra Code in 2013.[4698]

4692 For clarity, there was no express reference to the Viterra Code in the Third Party Claim. However, the allegations in the Statement of Claim were adopted generally by the Viterra Parties for the purposes of making the third party claims only, and the particulars to the Statement of Claim made express reference to the Viterra Code in the context of its introduction in 2010 to Viterra Ltd employees and the practices engaged in at Joe White. The Viterra Code was tendered at trial without any order sought for a limitation on its use.

4693 See pars 4549, 4650-4651 above.

4694 See fn 4633 above.

4695 See par 190 and fnn 70, 4633 above.

4696 See, for example, par 191 above.

4697 See fn 4638 above.

4698 For completeness, it was submitted by Wicks' senior counsel in closing that there was no evidence that

5240 The Viterra Code set out ethical standards for employees applicable across relevant fields of conduct, including the provision of products and services and the keeping of books and records.[4699] The primacy of the Viterra Code was emphasised by the requirement that Joe White employees complete a form indicating they had read and understood the Viterra Code (including the ongoing obligation to disclose any violation or possible violation of it), both at the commencement of employment with Viterra and each year during the employee's annual review.[4700] Given this importance and the relevance of the Viterra Code to the understanding of ethical conduct within Viterra at all times the 3 contracts of service in question were on foot, coupled with the term in each contract imposing an obligation to comply with operational practices, procedures, policies and directions as made, amended or given, it must follow that the Viterra Code informed the requirements of contractual obligations to act ethically.

5241 Further, as to the submission that the relevant allegations did not include an alleged failure to disclose the Viterra Practices, such an allegation was implicit in alleging the making of the Joe White Executives' Representations was in breach of contract because they were misleading or deceptive (including by representing that the Undisclosed Matters did not exist). Furthermore, after these breaches were alleged the very next allegation in the Third Party Claim was to the effect that by reason of the conduct alleged to give rise to the breaches, the Viterra Parties were not informed of the Undisclosed Matters and that the Warranties were incorrect. Therefore, the Third Party Claim made clear the substance of the circumstances of the alleged breaches, such that it could not be considered that the Third Party Individuals were taken by surprise in any material manner.

Wicks ever signed an acknowledgement form in accordance with the Viterra Code. This lack of evidence with respect to Wicks or any of the Third Party Individuals was of little moment. As demonstrated by a series of communications (see pars 59-64 above), all employees including the Third Party Individuals were repeatedly reminded of their obligations pursuant to the Viterra Code, including the obligation to sign the acknowledgement form. Any failure by Viterra Ltd employees to do so possibly may only have indicated a breach of an obligation under the employment contracts (though no such allegation was made) and was not evidence of any lack of an obligation of any such employees to comply with the Viterra Code.

4699 See pars 60-61 above.

4700 See par 63 above.

X.138.6.2 Hughes

X.138.6.2.1 Obligation to act ethically

5242 To reiterate, the Viterra Parties' case as closed was that making the Hughes Representations and not disclosing Joe White was engaging in the Viterra Practices amounted to a violation of the Viterra Code and thus a breach of the contractual obligation to act ethically. This was put on the premise that: (1) there had been a failure to disclose any violation or possible violation of the Viterra Code; (2) there had been a breach of the obligation requiring all employees to accurately represent the quality, features and availability of Viterra's products and services; and (3) what had occurred was contrary to directors and employees being forbidden from creating or condoning the creation of a false record.

5243 As against Hughes, each of these matters was substantiated. Starting with the Viterra Practices, their existence and implementation were glaringly inconsistent with each of these requirements, and of themselves they amounted to violations of the Viterra Code. As a result, by making the Hughes Representations, including by failing to disclose the Undisclosed Matters (including the Viterra Practices), Hughes did not comply with the disclosure requirement in the Viterra Code. Further, to his knowledge the conduct also resulted in a failure to accurately represent the quality, features and availability of Viterra's products and services, as well as creating or condoning the creation of false records. By acting incompatibly with the Viterra Code in these various ways, Hughes breached his contractual obligation to act ethically.

5244 This position was not affected by the events in or around August 2010. What Hughes disclosed to his superiors at that time did not result in them being informed of the Viterra Practices.[4701] While Viterra may have been aware that customers were being told that grade 1 malting barley was being used when it was not, this said nothing about the existence and prevalence of the Operational Practices.[4702] Further, the limited disclosure made to King about the use of off-grade barley not being disclosed to customers as part of the preparation of the Information Memorandum also did not

4701 See pars 156-166, 4874 above.

4702 Ibid.

alert Glencore to the existence of the Operational Practices.[4703] Furthermore, the Viterra Policies did not disclose all aspects of the Viterra Practices. The Varieties Practice and the Gibberellic Acid Practice were not recorded anywhere as being a policy of Viterra or Joe White, or referred to at all by Hughes in August 2010, much less being the subject of any response so as to be enshrined by Viterra.[4704] Moreover, the fact that the Viterra Policies were marked "obsolete" concealed that the Viterra Policies were operative documents.[4705]

5245 In any event, stripping back this contractual claim against Hughes to the more narrow way in which this third party claim might be construed, that is by confining it to the fact that he made the Hughes Representations to the extent it has been found that he did, that conduct alone was unethical. As explained elsewhere,[4706] Hughes knew there were numerous statements in the Information Memorandum that he had verified as being correct which were materially inaccurate. Further, as he made the later representations comprising the Hughes Representations as found, he must have also fully appreciated that what was being portrayed in relation to the operations of the Joe White Business was patently false in circumstances where, at the very least, the Viterra Practices were being concealed. There was simply no evidence (including in relation to the events around August 2010) that could have provided any basis for Hughes to have reasonably believed in 2013 that the Viterra Practices were known to Glencore or to those at Viterra who were engaged to assist in the sale (including Argent). Indeed, he knew full well that Glencore had no such knowledge.[4707]

X.138.6.2.2 Obligation to act honestly

5246 None of the bases upon which Hughes contended he was acting honestly in making the Hughes Representations can be accepted. The directions and "limited guidance" Hughes received did not suggest that Hughes should materially misrepresent financial and operational information concerning the Joe White Business or give him

4703 See par 805 above.
4704 Compare par 5233 above.
4705 See par 287 above.
4706 See, for example, par 3278 above.
4707 See par 1281 above.

some form of licence to mislead in that regard. Further, for reasons already explained,[4708] there was no reasonable basis upon which he could have assumed that his employer or corporate supervisors were properly informed as to the way in which the Joe White Business was conducted such that it might have been possible for him to have understood that they were sanctioning him knowingly misleading prospective purchasers in a material way. Even if such a view might possibly have been held based on how the Information Memorandum and other documents were drafted,[4709] from late April 2013 Hughes was directly informed that his role included verifying the substantial parts of the Information Memorandum allocated to him to confirm they were accurate.[4710]

5247 It has been found that Hughes had a complete understanding of each of the elements of the Viterra Practices, including their concealment.[4711] The evidence demonstrated that Hughes had this knowledge prior to the execution of the Acquisition Agreement. There was nothing to suggest that Hughes gained any knowledge of the Viterra Practices after 4 August 2013 of which he had not previously been fully aware. While it may be accepted that Hughes did not stand to benefit materially from the sale of Joe White (that is, to a level that might have induced him to act in the manner that he did), it did not follow from this that Hughes' conduct in making the Hughes Representations was honest or likely to be honest.[4712]

5248 Further, to the extent that it might have been said that some of the Hughes Representations were expressions of Hughes' opinion or belief,[4713] it was instructive that there was no attempt in Hughes' closing submissions to identify precisely what statements fell within this description or how it could be put that Hughes had reasonable grounds for making them. As no attempt was made to identify the

4708 See pars 4874-4882 above.
4709 See, for example, pars 436, 536, 805-815 above.
4710 See par 447 above.
4711 See issues 11, 22 above.
4712 See issue 23.4 above.
4713 See, for example, *Forrest v Australian Securities and Investments Commission* (2012) 247 CLR 486, 506-507 [38] (French CJ, Gummow, Hayne and Kiefel JJ); *Campbell v Backoffice Investments Pty Ltd* (2009) 238 CLR 304, 321 [33] (French CJ).

opinions or beliefs being referred to, it suffices to say that Hughes knew much of what was being said as part of the Hughes Representations was patently false and that the ongoing non-disclosure of the Viterra Practices meant the information being provided was materially misleading.[4714]

5249 In summary, at the time of making each of the Hughes Representations as found, Hughes knew they were misleading, not least because he continued to ensure that the Viterra Practices were concealed from those responsible for the sale of the Joe White Business. As a result, Hughes breached his contractual obligation to act honestly.

X.138.6.2.3 Obligation to act in the best interest of Viterra Ltd

5250 Although the Viterra Parties have not established that Hughes preferred his own interest above Viterra Ltd's interest in the sense that he acted with the intention of obtaining a benefit for himself, for the same reasons that Hughes has been found to have acted unethically and dishonestly, it must follow that in making the Hughes Representations to the extent found, he was not acting in the best interest of Viterra. It barely needs to be said that an employee or agent facilitating the employer or principal to engage in deceitful conduct without disclosing that fact could rarely (if ever) be considered to be in the best interest of the employer or principal.

5251 Turning to the facts at hand, by Hughes making the Hughes Representations in the manner in which he did without informing the Viterra Parties of the Undisclosed Matters (and in particular the Viterra Practices), he was acting contrary to their interests by continuing to conceal that Joe White was operating unlawfully, in breach of customer contracts and in a manner that was not consistent with the way in which the Joe White Business was being presented to the market. Whatever Hughes may have thought about managing Joe Whites' risks by implementing the Viterra Practices,[4715] on no view could it have been reasonably thought that secretly making materially misleading statements about the Joe White Business in the context of its sale by his employer and related entities could have been in Viterra Ltd's best interest. By this conduct, Hughes was exposing Viterra Ltd and other entities to claims that the

4714 See par 3278 above.
4715 See par 1284 above.

subject matter of the proposed sale had been fraudulently misrepresented.

5252 In relation to each of Hughes' submissions concerning his belief that he was acting in the best interest of Viterra Ltd,[4716] those submissions must also be rejected. Addressing each of them in the order in which they were made: (1) Hughes' involvement in the Malt Cost Reduction Transformation Project, and the directions given by Viterra in that regard, did not provide any basis for Hughes to assume that Viterra approved of customers' contracts being breached or their specifications not being met; (2) there was no evidence that anything disclosed by Hughes in or around August 2010 gave rise to Viterra signifying to Hughes and others involved in operations at Joe White that the Viterra Practices (including the Viterra Certificate of Analysis Procedure being disguised as "obsolete" and being hidden from auditors) had been approved or were considered to be in any way in the best interest of Viterra; (3) any incentivisation of Hughes gave no imprimatur to mislead, or for Hughes to have assumed that should he have done so he would have been acting in the best interest of Viterra; (4) the direction only to answer what was asked of him during the Due Diligence was not a direction to mislead or to conceal clandestine operations fundamental to the performance of Joe White; (5) the fact that ultimate responsibility for the amendments and decisions with respect to the Information Memorandum and the Management Presentation Memorandum rested with Glencore provided no basis for Hughes to believe that withholding material information from the Viterra Parties was acceptable or in the best interest of Viterra, particularly in circumstances where Hughes appreciated what was being stated by the Viterra Parties was materially misleading in the absence of any disclosure of the Viterra Practices and Policies;[4717] (6) leaving aside the flawed verification process in relation to the Warranties, the communication by Mallesons to Hughes about verification of the Information Memorandum requiring confirmation of its accuracy for the parts allocated to him could have left him with no doubt that he was only to verify those parts of the

4716 See par 5237 above.

4717 Of course, the events in October 2013 demonstrated that, it was most likely that if Hughes had been asked directly about the existence and details of the Viterra Practices and Policies, it was highly likely he would have been forthcoming: see par 3529 above.

Information Memorandum that were accurate as a matter of fact; and (7) the extent to which Hughes complied with directions concerning communications (and cessation of communications) with Cargill in October 2013 did not address the serious shortfalls in Hughes's conduct in failing to act in the best interest of Viterra for the reasons set out above.

X.138.6.2.4 Conclusion

5253 For these reasons, on each occasion Hughes made the Hughes Representations in the circumstances that he did, he breached the Hughes/Viterra Contract, as such conduct was not ethical, honest or in the best interest of Viterra Ltd.

5254 For completeness, the finding above that Hughes acted in breach of his service contract was not dependent in any way on what Mattiske or anyone else may or may not have done if the Viterra Practices (or more broadly the Undisclosed Matters) had been disclosed in 2013 by any of the Third Party Individuals to Glencore or to others involved in the sale process.[4718] Either the impugned conduct was in breach or it was not. How Viterra Ltd would have responded to the breach was an entirely separate and independent question, the answer to which could not have been determinative of whether a preceding breach had occurred.

X.138.6.3 Youil and Argent

5255 Dealing with the submissions concerning the alleged uncertainty of the obligations imposed, they are rejected. Although there may be circumstances in which uncertainty might exist as to whether certain conduct was ethical or in the best interest of a corporation, the possibility of such uncertainty did not mean the clauses in question can have no meaningful operation.[4719]

5256 The Viterra Parties' claim that Youil and Argent failed to act ethically by making the Youil Representations and the Argent Representations respectively was premised on a submission that Youil and Argent acted inconsistently with the Viterra Code by failing to disclose the Viterra Practices. This premise cannot be accepted in relation to

4718 See par 5230 above.
4719 See par 5218 above.

either of them.

5257 With respect to Youil, his involvement was extremely limited. As explained in more detail above,[4720] Youil was not informed about what Cargill had been told with respect to the operations of the Joe White Business. Further, everything that was said in the Operations Call was either said by or in the presence of Hughes, Youil's immediate superior and someone far more involved in the sale process.[4721] In the circumstances of this limited forum, where Youil was instructed not to give any information other than that the subject of enquiry and did not do so, it has not been established that he acted unethically in conducting himself in the manner in which he did.

5258 In relation to disclosure to the Viterra Parties, there was no suggestion that Youil did anything other than fairly and accurately disclose the substance of what was said during the Operations Call. Further, in addition to Youil being entitled to proceed on the basis that Hughes was fully aware of the Viterra Practices and the way in which the Joe White Business was conducted generally (as was the fact), such that Hughes was in a position to properly disclose anything to the Viterra Parties that was required to be disclosed, there was no evidence to suggest that Youil had any grounds for suspecting that Hughes had withheld relevant information from others at Viterra (or from Glencore as part of the sale process) or that the Viterra Parties were not otherwise properly informed.[4722] Accordingly, to the extent it has been found that the Youil Representations were made, it has not been established that Youil acted unethically in making them.[4723]

5259 In relation to Argent, his involvement was far more extensive than Youil. However,

---

4720 See pars 4896-4907 above.

4721 This, of course, was in addition to Merrill Lynch managing the lead up to the Operations Call with Hughes (see pars 870, 872 above) and being present for the entirety of the Operations Call.

4722 See pars 4903-4905 above. In making this finding, the evidence at par 1293 has not been overlooked. The statement by Youil on 23 October 2013 that Mattiske was not aware of these issues was entirely consistent with Youil simply recounting what Mattiske had said the previous day: see par 1255 above. The remainder of Youil's statement that he had no idea why Mattiske was unaware in circumstances where the "[p]ractice" had been acceptable for years and that it was business as usual demonstrated he was not aware of any lack of disclosure within Viterra before that time.

4723 For completeness, it was not part of the Viterra Parties' case against the Third Party Individuals that, even if the Undisclosed Matters (or only the Viterra Practices) had been disclosed, then the making of the Joe White Executives' Representations would still have been in breach of contract.

in light of the fact that it has not been established that Argent had any knowledge of the Viterra Practices or Policies, or that anything that Argent disclosed by way of financial or other information did anything other than reflect what had actually been achieved by the Joe White Business (albeit improperly, but not to Argent's knowledge), to the extent that it has been found that the Argent Representations were made, it has not been established that Argent behaved unethically in making them.

5260 For much the same reasons, it has not been established that either Youil or Argent failed to act in the best interest of Viterra Ltd. There was no evidence either Youil or Argent preferred their own interest to that of Viterra Ltd, or that either wilfully obstructed the business of Viterra Ltd. Further, in circumstances where their conduct was not unethical (or dishonest) and they were not doing anything more (or less) than they had been instructed to do, there was simply no basis to find that either of them was acting other than in the best interest of Viterra Ltd in making the relevant representations.

X.139 Was Viterra Ltd deprived of the opportunity to avoid liability to Cargill Australia because:

(1) As a result of the breaches of the service contracts, Glencore and/or Viterra were not informed of the existence of any Undisclosed Matters or the inaccuracy of any Incorrect Warranties?

(2) As addressed in issue 131 above, if Glencore and/or Viterra had been informed of the existence of any "Undisclosed Matters found by the court" or the inaccuracy of any "Incorrect Warranties found by the court" prior to entry into the Acquisition Agreement, then Glencore and Viterra would have taken the Alleged Steps?

5261 The answer to the first question of this issue is straightforward. As it has been found that none of the Third Party Individuals made any representation that any of the Warranties were true and correct, no issue arose concerning any breach of any service contract concerning any of the Warranties being incorrect. However, it follows from

what is set out in addressing issues 137 and 138 above that Glencore and Viterra were not informed of the Undisclosed Matters, including the Viterra Practices, as a result of Hughes breaching the Hughes/Viterra Contract by making the Hughes Representations to the extent it has been found that he did.[4724]

5262 In contrast, the answer to the second question of this issue is far from straightforward. In most cases it would be expected that if an established corporate group were informed that a significant part of a group member's operations were being conducted in an improper manner by reason of practices of the kind encapsulated in the Viterra Practices, that group would take steps to properly investigate the practices and, in the context of an impending sale, obtain advice on how to appropriately disclose the product of such an investigation to prospective purchasers. However, for the reasons explained in issue 131 above, Mattiske's evidence on this subject did not establish that the Alleged Steps would have been taken by him,[4725] or that he would have recommended such a course to his superiors. Further, as already explained, Mattiske was not a decision-maker for the purposes of deciding whether or not the sale of Joe White would proceed. Arising from the fact that the Viterra Parties chose not to call any of the decision-makers,[4726] there was simply no probative evidence upon which the court could be satisfied that Glencore or Viterra would have taken the Alleged Steps in 2013 if Hughes had disclosed to the Viterra Parties the existence of the Undisclosed Matters (or of only the Viterra Practices).

5263 Accordingly, while for a period of time Viterra Ltd was undoubtedly deprived of the possibility to avoid liability to Cargill Australia by Hughes making the Hughes Representations (and not disclosing the Undisclosed Matters, or at least the Viterra Practices), on the limited evidence put before the court I cannot be satisfied it would have taken the Alleged Steps. Rather, the evidence available strongly pointed to a conclusion that an opportunity to avoid liability would not have been availed by

---

4724 See par 5048(1) above.

4725 Obviously, a level of investigation was carried out in October 2013, but the alleged step concerned with investigating the Undisclosed Matters (which formed part of the Alleged Steps) could only be sensibly understood as a reference to an investigation being conducted that was not totally inadequate: see par 5128(3) above.

4726 See par 1987 above.

Glencore or Viterra taking the Alleged Steps as Glencore was willing to take the risk that the benefits to be derived from securing a sale agreement and concluding the Acquisition Agreement would outweigh any detriment that might be suffered if Cargill Australia decided to take legal action as a result of the Viterra Practices and related matters. I so find.

5264 Accordingly, although Hughes' conduct in breach of the Hughes/Viterra Contract was a "necessary pre-condition" to Cargill being misled, such that but for his conduct the liability of the Viterra Parties to Cargill Australia could not have arisen, in circumstances where the Viterra Parties were informed extensively of matters related to the Viterra Practices and chose to take a calculated risk as described, Hughes' antecedent conduct cannot be properly characterised as the cause of the loss suffered.[4727]

X.140 Is Viterra Ltd vicariously liable for the conduct of Hughes and/or Stewart and required to indemnify them in respect of loss and damage arising from, caused by or otherwise attributable to their actions or conduct carried out in the course of their employment?

5265 In closing submissions, this issue was not pursued.

X.141 Is Hughes entitled to be indemnified by Viterra Ltd as its employee in respect of any loss and/or damage arising from, caused by or otherwise attributable to his actions or conduct carried out in the course of his employment and/or pursuant to the terms of the indemnity agreement between Viterra Inc and Hughes dated 8 August 2012?

5266 In closing submissions, this issue was not pursued.

X.142 Are Viterra Ltd's claims for breach of the service contracts apportionable claims within the meaning of section 24AE of the *Wrongs Act* and/or do they

---

4727 Cf *Mallesons Stephen Jaques v Trenworth* [1999] 1 VR 727, 736-737 [25]-[28] (Kenny JA, with whom Callaway and Buchanan JJA agreed); *Alexander v Cambridge Credit Corporation Ltd* (1987) 9 NSWLR 310, 315B (Glass JA, dissenting), 359B, 362A (McHugh JA).

give rise to an apportionable liability with the meaning of section 3(2) of the *Law Reform (Contributory Negligence and Apportionment of Liability) Act*? If so, are the Third Party Individuals, Fitzgerald, Rees, Mattiske, King, Glencore, Viterra Malt, Cargill, Inc, Joe White and/or Viterra Operations concurrent wrongdoers? If so, what proportion of the damage or loss claimed by Viterra Ltd does the court consider just for each party to bear?

5267 It was agreed that any submissions concerning the actual apportionment of Viterra Ltd's claims, if any, would be dealt with after these reasons were delivered, based on submissions made on the facts as found. In light of the findings made, it appears that there will be no need for the parties to avail themselves of this opportunity.

X.143 What, if any, damages or other relief is Viterra Ltd entitled to against the Third Party Individuals as a consequence?

5268 As a result of the findings made, this issue only arose in relation to Hughes. In these circumstances, it would seem to be appropriate that either judgment be awarded for nominal damages in favour of Viterra Ltd in relation to the breach of the Hughes/Viterra Contract or some other order be made reflecting the fact that a breach of contract has been found.[4728] The Viterra Parties and Hughes will be directed to make submissions on this issue upon these reasons being delivered.

X.144 Are clauses 8.3(a), 8.3(c), 10.2 and/or 10.3 of the Confidentiality Deed void and/or unenforceable, and is Cargill, Inc thereby entitled to a declaration to that effect?

X.144.1 Legal principles regarding declaratory relief

5269 The court has inherent and statutory power to grant declaratory relief.[4729] The power is discretionary. It is neither possible nor desirable to fetter the manner of its

---

4728 See *Brirek Industries Pty Ltd v McKenzie Group Consulting (Vic) Pty Ltd (No 2)* (2015) 48 VR 558, 624 [42], 625 [44] (Redlich, Whelan and Santamaria JJA); *Luna Park (NSW) Ltd v Tramways Advertising Pty Ltd* (1938) 61 CLR 286, 300.6-301.8, (Latham CJ), 311.3 (Dixon J), 312.6 (McTiernan J).

exercise.[4730] However, the power while wide is not unlimited. The exercise of the discretion is confined by considerations that mark out the boundaries of judicial power. Such considerations include:

(1) Declaratory relief must not be directed to answering abstract or hypothetical questions, but instead must be directed to the determination of legal controversies.[4731]

(2) A person seeking declaratory relief must have "a real interest" in seeking the relief.[4732]

(3) The power to make a declaration will not be exercised "when the court is called upon to answer a question that is purely hypothetical" or if relief is "claimed in relation to circumstances that had not occurred and might never happen".[4733]

(4) Declaratory relief may not be appropriate where the "declaration will produce no foreseeable consequences for the parties".[4734]

(5) Declaratory relief is generally inappropriate if it would leave unresolved issues likely to require further litigation.[4735]

(6) A declaration must be expressed in clear and precise terms, and be intelligible without reference to extrinsic material.[4736]

X.144.2 The Cargill Parties' submissions

5270 The Cargill Parties referred to their earlier submissions,[4737] contending that clauses which purported to prevent Cargill, Inc from pursuing a claim for fraud, deceit, or contravention of section 18 of the Australian Consumer Law were unenforceable because they went against public policy. This was put on the premise that a contract associated with or in furtherance of unlawful purposes, insofar as giving effect to the exclusion clauses, would cut down the statutory norm prohibiting misleading or deceptive conduct. On this basis, by a counterclaim to the Third Party Claim, Cargill, Inc sought a declaration that any obligation of Cargill, Inc under clauses 8.3(a), 8.3(c), 10.2 and 10.3 of the Confidentiality Deed[4738] was void or unenforceable. In their submissions, the Cargill Parties phrased the declaration sought in narrower terms, being that any obligation of Cargill, Inc under the relevant clauses was void or unenforceable insofar as those clauses purported to exclude the operation of section 18 or bar or prevent legal proceedings for contraventions of section 18 against Glencore or its related bodies corporate.

5271 The Cargill Parties submitted it was a nonsense for the Viterra Parties to accept (correctly) that the operation of section 18 of the Australian Consumer Law could not be excluded or modified but also to contend that Cargill, Inc could be held liable for a proceeding commenced under that provision by Cargill Australia. They submitted that the effect was to oust the statutory protection which existed as a matter of public policy and could not be excluded.

X.144.3 The Viterra Parties' submissions

5272 The Viterra Parties submitted that Cargill, Inc breached all or any of clauses 8.3(a), 8.3(c), 10.2 and 10.3 of the Confidentiality Deed in causing or permitting Cargill Australia to bring this proceeding,[4739] and that in respect of these breaches the Viterra

---

4737 See issue 100 generally. In respect of clauses 10.2 and 10.3 of the Confidentiality Deed specifically see issue 100 and in respect of clauses 8.3(a) and 8.3(c) of the Confidentiality Deed see issue 105.

4738 See par 590 above.

4739 The Viterra Parties referred to their submissions in issues 102, 105, 108 above.

Parties sought damages or alternatively that Cargill, Inc be ordered to procure that Cargill Australia not continue with this proceeding.[4740]

5273 The Viterra Parties submitted that the clauses were not void or unenforceable, and submitted that Cargill, Inc was not entitled to a declaration to that effect.

5274 The Viterra Parties accepted that parties to a contract cannot by agreement exclude liability for misleading or deceptive conduct.[4741] However, the Viterra Parties referred to the terms of clauses 8.3(a), 8.3(c), 10.2 and 10.3 of the Confidentiality Deed and submitted that these terms made no "direct" attempt to exclude or modify section 18 of the Australian Consumer Law and did not "expressly" do so, rather they formed the foundation for a separate claim by the Viterra Parties for breach of the provisions.

5275 The Viterra Parties submitted that if Cargill Australia had an entitlement to sue for the contravention of section 18 and was permitted by Cargill, Inc to do so, Cargill, Inc had caused the right of action to be commenced by not preventing the proceeding as required under the Confidentiality Deed. They submitted that Cargill, Inc did not have to promise to prevent someone else from suing, but having made a promise and having failed to stop Cargill Australia from commencing this proceeding, Cargill, Inc was liable. Further, it was submitted that this was not contrary to public policy as it did not prevent an action being successful under section 18.

5276 Further, the Viterra Parties submitted that non-reliance clauses have been found to be effective where they reflected the fact of non-reliance which was otherwise established by other evidence.[4742] In this regard it was submitted that the courts have been more willing to allow parties to rely on disclaimer clauses[4743] where the relevant transaction

involves 2 sophisticated commercial parties.[4744]

X.144.4 Analysis

X.144.4.1 Substantive issues

5277 As may be seen from the submissions, there was no real controversy that as a matter of public policy a contract will not be enforced by the court if the effect of doing so would be to prevent a person bringing a claim for loss suffered because of misleading or deceptive conduct in trade or commerce which was in contravention of section 18 of the Australian Consumer Law. Generally speaking, what has been contractually agreed between the parties, whether written or oral, must be considered as part of a determination of whether or not misleading or deceptive conduct has been engaged in. However, once it has been decided that such conduct has occurred, any loss that has been suffered because of that conduct is recoverable subject to the provisions of the statutory regime more generally.

5278 The Viterra Parties characterised this proceeding as a case which concerned the allocation of risk. In the opening paragraph to the Viterra Parties' written submissions, they stated that this case was about whether an experienced, highly sophisticated and expertly advised commercial party could succeed in claims which were precluded by the detailed contractual arrangements into which it willingly entered, and by doing so disturb the parties' agreed allocation of risk.[4745]

5279 Whatever might be agreed between properly advised commercial parties, no agreement can effectively permit a party to that agreement to engage in misleading or deceptive conduct in trade or commerce.[4746] In other words, even if the risk associated with the transaction has been contractually allocated to a purchaser rather than a seller before the sale is completed, that circumstance does not obviate or obscure the need for the court to determine whether there was any relevant conduct that was

---

4744 The Viterra Parties referred to *Orix Australia Corporation Ltd v Moody Kiddell & Partners Pty Ltd* [2006] NSWCA 257, [70]-[75] (Ipp JA, with whom Spigelman CJ and Basten JA agreed). The Viterra Parties submitted that Cargill purchased a large business after the Due Diligence and the Q&A Process, that it was part of an international group that was well versed in the industry and it was advised by appropriate professional advisors.

4745 See also pars 3005, 4683 above.

4746 See pars 3003, 3023, 3027, 4610-4614 above.

misleading or deceptive or likely to mislead or deceive. This determination requires the court to identify the conduct involved, and then to determine, in all the relevant circumstances (including the terms of any agreement before, at the time or after the conduct was engaged in), whether that conduct was misleading or deceptive. Having decided this, it is also necessary to determine whether the loss claimed to have been suffered was because of the impugned conduct.[4747]

5280 In short, the question of whether or not there has been a contravention of section 18 of the Australian Consumer Law is a question of fact. That question cannot be answered merely by consideration of what the parties agreed to contractually, albeit any such agreement may be highly relevant to the question of fact.

5281 Also on the question of the allocation of risk, the Viterra Parties contended that the position adopted by Cargill in this proceeding ignored the asymmetry of knowledge and experience between the parties concerning running a malting business, and the position the parties had agreed to adopt in this context.[4748] As part of this overarching submission, the Viterra Parties submitted that this case was analogous to the facts in *Osborne v Iris Diversified Property Pty Limited*,[4749] which Pembroke J described as a case about the "unwillingness of an investor to accept responsibility for his own actions".[4750] This submission cannot be accepted.

5282 The plaintiff in that case was found to have displayed a "cavalier attitude [that] was best explained by the probability that he was either wholly unconcerned or surprisingly careless" about the details of his investment, a property leased by a restaurant business.[4751] He "chose not to ask any questions or pursue any enquiries" about the profitability of the business of the long term lessee of the property he was acquiring or about the expansion plans of the group with which the business was associated,[4752] and rejected an invitation to be put in contact with the lessee's financial

4747 See issue 73.1 above.
4748 With respect to the contention about asymmetry of knowledge, see fn 2123 above.
4749 [2014] NSWSC 1488.
4750 Ibid, [1].
4751 Ibid, [20].
4752 Ibid, [37].

controller.[4753] Additionally, in that case it was found that there was no misleading or deceptive conduct on which the plaintiff could have relied, and indeed that "any reasonably astute investor who considered carefully the [i]nformation [m]emorandum would have recognised that the [lessee's] business plan was pregnant with uncertainty and risk".[4754]

5283 Further, although the information memorandum in that case required prospective purchasers to rely solely on their own enquiries and obtain their own independent advice in order to verify the information made available, and the sale contract contained various disclaimers concerning the ability to rely upon any representations,[4755] the case did not involve an elaborate and strict confidentiality regime that placed a limit upon the information to which a prospective purchaser could obtain access.[4756]

5284 Furthermore, to accept the submission that *Osborne v Iris Diversified Property Pty Limited* was analogous to this proceeding would be to ignore the steps taken by Cargill both before the Acquisition Agreement was entered into and shortly before Completion. It would also be inconsistent with the finding that the Cargill Parties did not fail to take reasonable care.[4757] The case was also readily distinguishable more fundamentally. Not only has substantial misleading or deceptive conduct been found to have occurred in this proceeding,[4758] but deceit on the part of the Viterra Parties has also been established.[4759]

5285 The Viterra Parties also referred to Pembroke J's comment that "[p]ersons who make allegations of misleading conduct, and contend that they relied on the allegedly misleading conduct, should not lightly be permitted to ignore the clear words of their own solemn disclaimer of reliance".[4760] Counsel for the Cargill Parties submitted that

---

4753 Ibid, [20].

4754 Ibid, [35]. The contents of the information memorandum in that case were referred to by Pembroke J as including "[e]xpansion plans", and suggested that such plans were often pregnant with uncertainty.

4755 Ibid, [13], [15], [21].

4756 See, for example, pars 468, 586-590, 643-644, 650-651, 746, 750, 827 above.

4757 See pars 4434-4452 above.

4758 See issues 15, 16, 25, 26, 48, 50, 54, 55 above.

4759 See issues 22, 23, 59, 60 above.

4760 [2014] NSWSC 1488, [31].

to the extent this comment carried with it the implication that a contractual disclaimer should be considered to have in and of itself some force or priority in the assessment of the factual circumstances governing reliance, that implication was inconsistent with the principles enunciated by the High Court. For the reasons set out above, including in issues 20, 95 to 99 and 123, it has been found that the Sale Process Disclaimers and the Acquisition Agreement Liability Terms were not determinative in this case of either the specific issue of reliance or the ultimate issue of which parties should bear the loss that was caused because the Viterra Parties engaged in misleading or deceptive conduct.

5286 Also related to the question of allocation of risk was the Viterra Parties' submission that Cargill, Inc did not have to agree to prevent its Representatives from suing. It was contended that in those circumstances claiming damages against Cargill, Inc to recover any loss arising out of Cargill Australia's claims for contravention of section 18 was permissible. For reasons already discussed,[4761] to allow the Viterra Parties to claim this loss would effectively create a mechanism by which the consequences that would otherwise flow from engaging in misleading or deceptive conduct in trade or commerce in Australia could be averted.[4762] Even if it was accurate to say that there had been no *direct* attempt to exclude or modify section 18, if the position contended for by the Viterra Parties were accepted it would be directly contrary to the public policy underlying the Australian Consumer Law.

5287 Accordingly, to the extent that the release pursuant to clause 10.3 or any other clause of the Confidentiality Deed may have given the Viterra Parties a cause of action to claim damages arising out of the loss to be suffered by the Viterra Parties because of the successful claims of Cargill Australia for the Viterra Parties' contravention of section 18 of the Australian Consumer Law, that cause of action will not be enforced by the court. For like reasons, any right of Viterra to seek an indemnity from Cargill, Inc for any non-compliance with the terms of the Acquisition Agreement by Cargill

4761 See issue 100.4 above.
4762 See also pars 3033, 4614 above.

Australia,[4763] which would have the effect of indemnifying Viterra for the amount that was awarded against it in this proceeding because of Cargill Australia successfully prosecuting its claim for contravention of section 18, will also not be enforced. Finally, the release could not give rise to a successful defence to a claim for misleading or deceptive conduct if, despite the existence of the release, the Viterra Parties in fact engaged in misleading or deceptive conduct.

X.144.4.2 Declaratory relief

5288 The declaration as sought in accordance with the pleadings was that any obligation of Cargill, Inc under clauses 8.3(a), 8.3(c), 10.2 and 10.3 of the Confidentiality Deed was void or unenforceable. A declaration that the clauses of this nature were void or unenforceable in their entirety would be significantly broader than justified by any substantive finding that the clauses were unenforceable to the extent they purported to exclude operation of section 18 of the Australian Consumer Law. As a result, the pleaded prayer for relief was inappropriate.[4764]

5289 In any case, the relief in the terms sought in submissions[4765] should be refused for the following reasons.

5290 *First*, where necessary to be decided, the question of whether the clauses in question were unenforceable as a result of purporting to exclude the operation of section 18 of the Australian Consumer Law has been resolved and the conclusions reached in this regard will be reflected in the final orders made in this proceeding. As a result, the declaration would not have any foreseeable consequence for the parties.[4766] The Cargill Parties made no submissions as to why declaratory relief was necessary in addition to the other relief sought.

5291 *Secondly*, as sought, the declaration simply restated the case law that establishes that contracts are unenforceable to the extent they purport to oust the operation of section

18 of the Australian Consumer Law. This was not seriously in issue between the parties.

5292 *Thirdly*, Cargill, Inc has not been found to have breached clause 8.3(a), 8.3(c) or 10.2 of the Confidentiality Deed. In the absence of a breach being established, the declaration sought in relation to these clauses was directed to a hypothetical question and not the determination of legal controversies.

5293 Accordingly, no declaratory relief will be granted.

X.145 What is the effect, if any, of clause 15.4(b) of the Acquisition Agreement on Cargill Australia's claims?

X.145.1 Introduction

5294 In November 2019, the Viterra Parties sought leave to re-open their case to raise new defences to Cargill Australia's claims in this proceeding.[4767] The parties were informed at the conclusion of argument that the ruling on whether or not leave would be granted would form part of this judgment. In circumstances where the events giving rise to the application only occurred shortly before the application was made and where, for the reasons stated below, there was real substance in the new defences sought to be raised, leave will be granted to the Viterra Parties to file the summons and amend their defence as sought.

5295 The Viterra Parties' application relied upon clause 15.4(b) of the Acquisition Agreement, which was enlivened after a change in Joe White's ownership. It is convenient to set out clause 15.4(b) again here:[4768]

> **15.4 Seller not liable**[4769]
>
> No Seller is liable to the Buyer (or any person deriving title from the Buyer) for any Claim under or in relation to or arising out of the Transaction Documents:
>
> …

4767 By way of summons dated 4 November 2019.
4768 To view cl 15.4(b) in context, see par 1030 above.
4769 Headings were for convenience and were not to affect the interpretation of the Acquisition Agreement: cl 1.5.

(b) if the Buyer Guarantor has ceased after Completion to Control the Company or the Business;

…

5296 Claim was defined in the Acquisition Agreement as follows:[4770]

> **Claim** means any allegation, debt, cause of action, Liability, claim, proceeding, suit or demand of any nature howsoever arising and whether present or future, fixed or unascertained, actual or contingent, whether at Law, in equity, under statute or otherwise.

5297 The Viterra Parties sought to raise a new defence to Cargill Australia's claims for:[4771] (1) breach of the Acquisition Agreement;[4772] (2) breach of the Australian Consumer Law;[4773] and (3) deceit.[4774]

X.145.2 Circumstances leading to the application for leave to re-open

5298 Shortly after this trial originally concluded,[4775] Cargill, Inc completed the sale of its entire malting business to Copagest NV; settlement occurred on 31 October 2019. The shares in Joe White and the entirety of the Joe White Business formed part of the assets sold.[4776]

5299 This was the factual basis for the Viterra Parties' application. The Cargill Parties conceded that the sale of Joe White and the Joe White Business triggered clause 15.4(b).

X.145.3 Construction of clause 15.4(b) of the Acquisition Agreement

5300 The issue to be considered was whether, once triggered, clause 15.4(b) operated to extinguish any liability Viterra may have had for Cargill Australia's claims in this proceeding. Answering this question was purely a matter of construction. Specifically, did clause 15.4(b) operate to extinguish liability for claims that existed before the change of control (the Viterra Parties' submission), consequently

---

4770 For the remaining defined terms in cl 15.4(b), see par 1022 above.

4771 There were also submissions made with respect to Cargill's claims for negligent misrepresentation, but as the Cargill Parties did not press these claims there is no need to consider them.

4772 The effect of cl 15.4(b) on the Acquisition Agreement claims is considered at pars 5324-5325 below.

4773 The effect of cl 15.4(b) on the Australian Consumer Law claims is considered at pars 5326-5331 below.

4774 The effect of cl 15.4(b) on the deceit claim is also considered at pars 5326-5331 below.

4775 Being 21 August 2019. Since then, there have been further hearing dates based on applications unrelated to this issue.

4776 See par 1846 above.

extinguishing any of Cargill Australia's claims within the scope of clause 15.4(b) of the Acquisition Agreement? Alternatively, did the operation of clause 15.4(b) only affect claims that arose after the change of control (the Cargill Parties' submission), thereby preserving Cargill Australia's claims in this proceeding?

5301 For the reasons that follow and subject to issues concerning enforceability, the Viterra Parties' construction of clause 15.4(b) of the Acquisition Agreement must be preferred. In short, clause 15.4(b) applied to all Claims within the scope of the provision, whether arising before or after Cargill, Inc ceased to control Joe White and the Joe White Business.

5302 As has been referred to above,[4777] interpretation of a commercial contract is an objective exercise.[4778] The court must consider the meaning of a term by reference to its text, context and purpose or objects, and consider what a reasonable business person would have understood the term to mean.[4779] The genesis of the transaction, the background, and the market must be understood to identify the commercial purpose or objects of the contract, to arrive at a business-like interpretation.[4780]

5303 Looking first to the text, the words of the provision were clear: "No Seller [Viterra] is liable to the Buyer [Cargill Australia] … for any Claim". Clause 15.4 applied to "any Claim" and there was nothing in the words of clause 15.4(b) which indicated that it was or might have been limited to certain types of Claims.

5304 Further, the word Claim was defined broadly and explicitly included Claims "whether present or future". Furthermore, when Claim was used elsewhere in the Acquisition Agreement, including within clause 15.4, it necessarily included any

Claim which had already arisen. For example, subclauses (e), (f) and (g) of clause 15.4[4781] referred to a Claim that "arises or is *increased*" (emphasis added) in certain circumstances. As such, in that context Claim must encompass claims that were already in existence and would have otherwise increased had the circumstances for the increase not fallen within the exceptions in clause 15.4(e), (f) or (g). Moreover, although clause 15.13 of the Acquisition Agreement required that each qualification and limitation be construed independently,[4782] clause 1.1 required a consistent meaning be applied for defined terms, unless a contrary intention appeared. Construing "Claim" consistently in the chapeau of clause 15.4 was the correct approach as a matter of contractual construction and in no way infringed clause 15.13.

5305 The Cargill Parties submitted that clause 15.4(b) was ambiguous and the correct construction was that the scope of clause 15.4(b) was limited to Claims arising after the change of control. However, their submissions failed to demonstrate why a subsequent point in time when a Claim might arise was the critical moment for the application of clause 15.4(b), as opposed to another point in the progress of a Claim (such as when notice of a Claim was given pursuant to clause 15.1 of the Acquisition Agreement or when a proceeding was commenced).

5306 Furthermore, it should be noted that the Cargill Parties' submissions were different in relation to when clause 15.4(b) would extinguish liability for the Seller. They identified both Claims arising "after the change in control" in their written submissions, and claims "not yet notified [pursuant to clause 15.1]" as at the change in control in their oral submissions.

5307 The Cargill Parties argued that the ambiguity stemmed from the phrase "No Seller [Viterra] is liable". Precisely how the construction contended for by the Cargill Parties hinged on these words specifically was not clear. The Viterra Parties conceded that the wording "is liable" may be "a little awkward". However, it was not so awkward to suggest the clause was ambiguous or unclear. Further, clause 15.4(b) may read less

4781 See par 1030 above.
4782 See further details at par 5309 below.

naturally than a complete sentence would have in order to accommodate the structure of the clause, split into the chapeau and numerous subclauses.

5308 For the reasons set out below, the context and purpose do not weigh against the meaning clause 15.4(b) has on its face: that there is no liability for Claims within the ambit of the provision, regardless of whether they arose prior to the change of control or subsequently. Nor do the context or purpose suggest that the parties did not intend the words to have their ordinary meaning.

5309 The Cargill Parties relied on the context of clause 15.4(b), which fell within a set of provisions in clause 15 prescribing notification requirements and time limits for claims made by Cargill Australia. The Cargill Parties submitted that this context suggested an alternative construction of clause 15.4(b): that it "comfortably" applied only to claims which had not yet been notified under clause 15.1 when the change of control occurred and clause 15.4(b) became operative.[4783] The difficulty with this argument was that clause 15.13 stated that "[e]ach qualification and limitation in this clause 15 is to be construed independently of the others and is not limited by any other qualification or limitation". The Cargill Parties' submission effectively disregarded clause 15.13 as it relied on other qualifications and limitations within clause 15 to assist in the construction of clause 15.4(b).

5310 Read independently of the qualifications or limitations in other parts of clause 15, there was no indication at all that clause 15.4(b) only applied to claims not notified under clause 15.1. As a result, the submission was inconsistent with the requirement in clause 15.13 and could not be accepted for this reason. That said, even absent clause 15.13, it would have been a stretch to contend that the existence of clause 15.1 would have meant it was appropriate to read down the clear wording of clause 15.4(b).

5311 Notwithstanding, clause 15.13 did not go so far as to require a departure from the basic principles of interpretation. Clause 15.13 did not have the consequence that the provisions within clause 15, including clause 15.4(b), were to be interpreted without

4783 But also see par 5305 above.

regard to their context within the Acquisition Agreement as a whole, or the context, purpose or objects of the agreement more broadly.

5312 In relation to purpose, there could be good commercial reasons in the sale of a business to include a clause in the contract that extinguishes liability for both existing and future claims if the buyer ceases to control the acquired business. In the context of a complex commercial transaction of significant value, it is clearly commercially advantageous for a seller to have finality after a sale. Although a provision like clause 15.4(b) may be disadvantageous to the buyer, it is perfectly plausible that it could be agreed to by a buyer according to its ordinary meaning as part of negotiating a wider commercial deal.

5313 That said, contrary to the Viterra Parties' submission, it did not follow that the purpose of clause 15.4(b) was to disincentivise Cargill from having 2 attempts at getting its money by selling the shares in Joe White and the Joe White Business and then suing, or by suing and then selling. It was submitted by the Viterra Parties that the purpose of such a disincentive would have been to prevent Cargill being over compensated. This submission cannot be accepted for 2 reasons.

5314 *First*, the second scenario referred to in this submission did not reflect how clause 15.4(b) operated. On neither construction contended for did clause 15.4(b) prevent the Buyer suing and, after receiving judgment, selling. Such a conclusion would be nonsensical as it would have the effect of imposing a permanent injunction upon Cargill Australia from selling the Joe White Business if it were to sue. As a result, it was not effective to prevent Cargill Australia, as the Buyer, having "2 goes at getting [its] money" returned for what it had acquired.

5315 *Secondly*, the Viterra Parties' argument on this point was predicated on any damages awarded being inaccurate and likely to significantly undervalue the Joe White Business prior to any subsequent sale for a higher price. The Viterra Parties did not provide a basis for this proposition. Therefore, while there were plausible commercial objects for the construction supported by the Viterra Parties, such objects did not

include the disincentive purpose for which the Viterra Parties contended.

5316 The Cargill Parties submitted that the "evident purpose of the clause [was] to ensure finality for any liability that may arise after the Buyer and the Seller have ceased to have any involvement in the [Joe White Business]". However, the preferred construction of clause 15.4(b) (as contended for by the Viterra Parties) would also ensure finality for liability of this type. As ensuring finality for Viterra was a plausible purpose for both of the alternative constructions in consideration, the submission based on finality alone did not lend particular support to either of the competing constructions.

5317 The Cargill Parties submitted that it would be commercially irrational for clause 15.4(b) to apply to Claims that arose prior to Cargill, Inc ceasing to control Joe White because this construction would have the following effects:

(1) Incentivise Viterra to delay the resolution of Claims.

(2) Create a disincentive to Cargill, Inc realising commercial opportunities.

(3) Result in the timing of court processes determining contractual obligations.

For the reasons set out below, the Cargill Parties' submission failed to establish that these effects were commercially irrational.

5318 In relation to the submission that clause 15.4(b) would incentivise Viterra to delay the resolution of claims, it is possible such an incentive might be created. However, the timing of any proceeding being instituted was always a matter for Cargill Australia. Further, a court has control of its processes once a proceeding is commenced. These processes include giving a speedy hearing and determination if the circumstances warrant it.[4784] Furthermore, parties in commercial disputes are often subject to numerous factual and legal circumstances which may incentivise them to delay, or

[4784] No application for expedition was made by the Cargill Parties; quite the contrary, the trial was delayed at the request of the Cargill Parties twice and ultimately the court insisted that the case commence when it did.

vigorously pursue, the resolution of claims. As the Viterra Parties submitted, these "submissions can be multiplied on both sides interminably". In short, such a commonplace possible factor did not suggest or favour any particular construction. Finally, although a provision which may incentivise a seller to delay the resolution of claims may be disadvantageous to the buyer, such a provision could plausibly be agreed to by a commercially rational party as part of a wider commercial deal.

5319 As to the second submission, a disincentive to realise commercial opportunities may have been created. However, this was not a commercially irrational or, in some contexts, even unusual effect of the terms of a commercial contract. Parties often assume obligations which diminish their incentive to pursue, or preclude, other commercial opportunities. In short, Cargill, Inc was given a simple choice after it commenced this proceeding: sell the Joe White Business or maintain its control over the operation until all Claims were resolved.

5320 There are 3 reasons the Cargill Parties' third submission, that it would be irrational for the timing of court processes to determine the existence, or extinguishment, of contractual rights and liabilities, cannot be accepted.

5321 *First*, this submission mischaracterised the trigger for clause 15.4(b). The real operative event was Cargill, Inc ceasing to control Joe White or the Joe White Business, rather than the timing of the court process. *Secondly*, it is open to, and not uncommon for, contracting parties to create contractual rights and liabilities which may be contingent on processes or events over which the parties have no, or only limited, control. *Thirdly*, the thrust of this argument appeared to have been that it would be irrational for the Cargill Parties' case to be impacted by the timing of the delivery of a judgment. However, again this was no more than a consequence of having decided to sell the Joe White Business before this proceeding was resolved; a matter entirely within Cargill's control.

5322 Although the consequences that have unfolded in these circumstances may appear harsh because, contractually, Cargill Australia is unable recover for what may be

significant claims, it is not an absurd result which should justify departing from the plain words of clause 15.4(b).[4785]

5323 The fact that the correct construction of clause 15.4(b) has the potential to have severe consequences for Cargill might, in some contexts, suggest that this was not the intended construction. However, in the context of this transaction, it was perfectly plausible that such a provision could be agreed to by large commercially rational parties. Other provisions within clause 15, although not to be relied upon to construe clause 15.4(b),[4786] serve to illustrate the significant limitations of liability Cargill Australia was willing to agree to. For example, clause 15.7 prevented Cargill Australia making a Claim if any Claim was less than $500,000 *and* unless and until the aggregate amount of all Claims properly made under the Transaction Documents exceeded $3.5 million.

X.145.4 Operation of clause 15.4(b) as a matter of contract

5324 Cargill Australia's contractual claims against Viterra for breaches of the Warranties and of clauses 13.1 and 13.8 of the Acquisition Agreement fall within the scope of clause 15.4(b). The definition of Claim covered a range of matters including, most relevantly, a "cause of action", "Liability", "claim" and "proceeding" and therefore squarely captured Cargill Australia's claims in this proceeding. Claims for breach of the Acquisition Agreement were clearly "under or in relation to or arising out of the Transaction Documents", given the Acquisition Agreement was expressly included in the definition of Transaction Documents.[4787]

5325 As a result, clause 15.4(b) applied to extinguish any contractual liability Viterra may otherwise have had to Cargill Australia for breaches of the Warranties and clauses 13.1 and 13.8 of the Acquisition Agreement. Consequently, the Viterra Parties' new

---

4785 There might have been circumstances in which cl 15.4(b) produced what might be considered an absurd result, such as a change of control as the result of insolvency of Joe White. However, such a circumstance is unlikely to have been in the contemplation of the parties when the Acquisition Agreement was entered into and was not raised by the parties in this proceeding as being something in contemplation on 4 August 2013.

4786 Clause 15.13.

4787 See par 1022 above.

defence has been made out in relation to those claims insofar as the claims are based on breach of contract against Viterra.

X.145.5 Effect of clause 15.4(b) on claims for misleading or deceptive conduct and deceit

5326 The Viterra Parties submitted that, in addition to operating as a defence for claims based on breach of the Acquisition Agreement, clause 15.4(b) operated as a defence to claims brought by Cargill Australia for breach of section 18 of the Australian Consumer Law, and to claims brought on the basis of deceit.

5327 The Cargill Parties submitted that clause 15.4(b) had no effect in respect of the claims for misleading or deceptive conduct or deceit on the basis that, had the conduct alleged in those claims not occurred, Cargill Australia would not have entered into the Acquisition Agreement.[4788]

5328 In making this submission, the Cargill Parties relied on a line of authority for the proposition that the terms of a contract cannot be relied upon if a person was induced to enter into the contract based on misleading or deceptive conduct in trade or commerce that was in contravention of section 18 of the Australian Consumer Law.[4789] They referred to a relatively recent case in this line of authority, *Brighton Australia Pty Ltd v Multiplex Constructions Pty Ltd*,[4790] in which there was an attempt in a subcontract to reduce the time in which any claim could be made based on the Australian Consumer Law to a period of 7 days.

5329 In that case, the plaintiff's allegations based on misleading or deceptive conduct were rejected by a referee, and those findings were affirmed by the court.[4791] However, the defendant also sought to rely on the time limitation for the claim as agreed in the

---

4788 The Cargill Parties also submitted that to allow clause 15.4(b) to act as a defence to claims for misleading and deceptive conduct would be contrary to public policy, as it would effectively allow the Viterra Parties to contract out of the operation of the Australian Consumer Law. Arguments of this nature were raised at various points throughout the proceeding, and are considered above, including in issue 144.

4789 See par 4326 above and the cases cited in fn 3616 above.

4790 (2018) 56 VR 557 (Riordan J). This decision was preceded by conflicting New South Wales authority on the issue of whether the statutorily prescribed time limit could be contractually reduced.

4791 Ibid, 561 [2]-[3], 577 [46]-[48], 590-591 [80]-[81], 593 [89]-[91].

subcontract in order to defeat the plaintiff's claim under section 18 of the Australian Consumer Law. Proceeding on the assumption (contrary to the findings made) that section 18 had been contravened and that absent misleading or deceptive conduct the plaintiff would not have entered into the contract, it was stated that the appropriate remedy would have been to put the plaintiff in the position it would have been in had any misleading conduct not occurred even though there had been no claim made within 7 days.[4792] Thus, in addition to public policy reasons, it was held that the terms of the subcontract could not be determinative of the ability to obtain relief for contravention of section 18 if a court were satisfied that the contract would not have been entered into had the misleading or deceptive conduct not occurred.[4793]

5330 Naturally, if the true counterfactual was that no transaction would ever have taken place, then, generally speaking, it would be inappropriate for the terms of a contract that would never have been entered into to determine the rights of the parties.

5331 Applying these principles, the Cargill Parties' submission must be accepted. It has been found that the Viterra Parties engaged in misleading or deceptive conduct and deceit in the events leading up to the Acquisition Agreement,[4794] and also at the moment the Acquisition Agreement was entered into.[4795] In the absence of this conduct Cargill Australia would not have entered into the Acquisition Agreement.[4796] Accordingly, with respect to their misleading or deceptive conduct and in relation to their deceit, the Viterra Parties are unable to rely on the terms of the Acquisition Agreement, including clause 15.4(b), as a defence to liability for such conduct.[4797]

4792 Ibid, 606 [139].

4793 Ibid, 606 [138].

4794 See issues 15-20, 22-23, 48-51 above.

4795 See issues 48-51 above.

4796 See issues 20, 33, 49 above.

4797 The Cargill Parties have also succeeded in claims for misleading or deceptive conduct and deceit in relation other conduct of Glencore and Viterra for which it was not claimed that, in the absence of the conduct, Cargill Australia would not have entered into the Acquisition Agreement: see issues 24-29 above (concerning the situation where the Acquisition Agreement had already been entered into), and 54-60 above (relating to the Other Bidders Representations which resulted in the purchase price being increased). Since the Cargill Parties have succeeded in claims where there was a direct causal link between misleading or deceptive or fraudulent conduct and entry into the Acquisition Agreement, it is not necessary to consider the application of cl 15.4(b) to these other claims.

Y. Conclusion

5332 Cargill Australia pressed its case on multiple fronts. It focused on representations made by the Viterra Parties at each stage of the sale process. In the conduct of this proceeding, the parties descended into the minutiae of the events connected with the transaction. No stone was left unturned.

5333 These reasons have set out how and where Cargill Australia has succeeded in making its case. To be clear, the success of any of the claims relating to the Warranty Representations, the Financial and Operational Performance Representations or the Pre-Completion Representations would have been sufficient to entitle Cargill Australia to damages on the basis that, had Viterra not engaged in the relevant conduct, Cargill Australia would not have acquired the shares in Joe White or the related assets.

5334 The most straightforward claim was the claim based on the Warranty Representations.[4798] The Warranty Representations were enshrined in the Acquisition Agreement; they were made in the same terms as expressed in the written contract[4799] and the contract contained an express acknowledgement of reliance. Further, the release given pursuant to clause 10.3 of the Confidentiality Deed (and if applicable to Cargill Australia's claims, contrary to what has been found, the operation of clause 10.2) did not apply to any representations made in the Acquisition Agreement.

5335 With the minor exception of a single Warranty,[4800] each of the Warranty Representations included in the claim was false or incorrect at the date of the Acquisition Agreement and also at Completion.[4801] Cargill Australia relied on the Warranty Representations and would not have entered into the Acquisition Agreement if the Warranty Representations were not agreed to be made in their terms as part of the Acquisition Agreement.[4802] Accordingly, Cargill Australia's claim for

---

4798 See issues 48-51 above.

4799 The Warranty Representations comprised Warranties 4.2, 6.1(e), 7.3, 9.2, 12, 13.4 and 17(a).

4800 The allegation that Warranty 6.1(e) was breached was not pursued in closing submissions: see issue 46 above.

4801 See issues 41-45, 48-51 above.

4802 See issue 49 above.

misleading or deceptive conduct based on the Warranty Representations succeeded. These findings were made notwithstanding that Cargill Australia's claim for breach of contract in relation to the Warranties ultimately could not be successful, as clause 15.4(b) of the Acquisition Agreement operated to extinguish any contractual liability that Viterra may otherwise have had for those breaches.[4803]

5336 The Financial and Operational Performance Representations represented a separate success in Cargill Australia's case. These were implied representations conveyed by conduct of the Viterra Parties during the sale process,[4804] making this aspect of the claim necessarily more complex than the claim based on the Warranty Representations. Nonetheless, Cargill Australia was successful in proving that the Financial and Operational Performance Representations constituted misleading or deceptive conduct, and that these representations were relied upon by Cargill Australia in entering into the Acquisition Agreement. A key element of this part of the case was establishing that the Viterra Practices existed and were not disclosed. There was a large body of evidence to demonstrate that they did and that they were concealed. Further, by virtue of the knowledge possessed by Hughes, as a senior employee of Viterra Ltd and acting as agent for Viterra (in addition to Glencore), Cargill Australia also established its claim for deceit.[4805]

5337 Misleading or deceptive conduct was again established in respect of the Pre-Completion Representations, which comprised various representations made by Glencore and Viterra in responding to Cargill Australia's serious concerns about aspects of Joe White's operations, shortly before Completion in October 2013.[4806] While Cargill Australia did not establish that it relied on these representations in proceeding to Completion, it did establish that because of the Pre-Completion Representations, Cargill Australia was denied a valuable opportunity to receive meaningful legal advice on whether it was entitled to terminate the Acquisition Agreement. Further, it has been found that if Cargill Australia had not been deprived

4803 See issue 145 above.
4804 See issues 1-4, 6-7, 15 above.
4805 See issues 22, 23 above.
4806 See issues 24, 25 above.

of that opportunity, it would have terminated the Acquisition Agreement instead of proceeding to Completion. However, due to the manner in which the claims regarding the Pre-Completion Representations were pleaded, Cargill Australia did not establish that Viterra knew the Pre-Completion Representations were false, and as a result its related claim in deceit failed.[4807]

5338 As a result of its success in the claims for misleading or deceptive conduct and deceit listed above, Cargill Australia is entitled to damages equal to the difference between the purchase price paid under the Acquisition Agreement and the true value of the Joe White Business as at 31 October 2013.[4808] The key factual findings have been made on the issues that were in dispute concerning any loss claimed.[4809] Further, Cargill Australia did not suffer this loss as a result of any failure on its part to take reasonable care, and so its entitlement to compensation will not be reduced.[4810] As the Viterra Parties have been found to have fraudulently caused Cargill Australia's loss, they are excluded from the operation of the apportionment regime in Part VIA of the *Competition and Consumer Act*. As such, it was not necessary to identify concurrent wrongdoers or to consider what lesser portion of Cargill Australia's loss (if any) it would have been just for the Viterra Parties to bear.[4811]

5339 Finally, and submerged in the claim for loss in the primary claims above, Cargill Australia was successful in establishing that the Other Bidders Representations that were made by the Viterra Parties, at the 11th hour after the formal bidding process was complete, constituted engaging in misleading or deceptive conduct and deceit. By that conduct, Cargill was misled to believe in a state of affairs that simply did not exist. Unlike the other claims, the loss derived from this conduct was the specific amount that Cargill was induced to add to the purchase price by those representations, being $15 million.[4812] This amount formed part of the loss suffered arising out of the primary

4812 See issues 54-60 above.

claims, but even if Cargill Australia had not been successful in making those claims, it would still have been entitled to compensation in the amount of $15 million.

5340 The Viterra Parties counterclaimed against Cargill Australia, and brought a third party claim against Cargill, Inc, seeking to set off any liability to Cargill Australia by demonstrating breach of, or misleading or deceptive conduct in relation to, the Confidentiality Deed entered into between Glencore and Cargill, Inc at the outset of the sale process. These claims were unsuccessful. Further, although the Viterra Parties were successful in establishing that Cargill Australia made the No Reliance Representations about their non-reliance on information provided by the Viterra Parties in the sale process, and that these representations were misleading or deceptive, they failed to establish any loss arising from this conduct.[4813]

5341 The Viterra Parties also brought third party claims against Joe White and the Third Party Individuals, being certain former employees of Joe White.[4814] The claims against Joe White, Youil, Wicks, Stewart and Argent have failed in their entirety and will be dismissed. Further, the Viterra Parties have failed in their claims against Hughes for misleading or deceptive conduct in trade or commerce, but have succeeded in proving that Hughes breached his employment contract by failing to act ethically, honestly and in the best interest of Viterra Ltd.[4815] However, despite proving Hughes breached the Hughes/Viterra Contract, Viterra Ltd has not established it suffered any loss by reason of those breaches. This was because the Viterra Parties have failed to prove that they would have taken certain identified steps which, if taken, would have given them the opportunity to ameliorate their liability to Cargill Australia.[4816]

5342 In so finding, particular regard has been paid to the fact that, when told of the existence of the Operational Practices and their significant level of implementation as part of Joe White's operations prior to Completion, Glencore and Viterra chose to proceed without properly investigating or disclosing the information available to

4813 See issues 95-99 above.

4816 See issue 139 above.

them. In doing so, they apparently believed that their actions would not give rise to any substantial claims against them.[4817] They were wrong.

5343 The parties will be given the opportunity to read these reasons before final orders are made. In addition to dealing with the question of costs, the orders of the court will include that there will be judgment for Cargill Australia against each of the Viterra Parties in a sum to be calculated in accordance with these reasons. The Viterra Parties' counterclaim against Cargill Australia will be dismissed.

5344 In relation to the Third Party Claim, there will judgment for the third parties to this proceeding, except Hughes. The parties will be directed to make further submissions on the orders to be made in relation to Hughes.[4818] The counterclaim of Cargill, Inc against the Viterra Parties will be dismissed.

Z. Further remarks

Z.1 Consideration of the evidence, pleadings and submissions

5345 In some authorities, concern has been expressed about the fact-finding role of a trial judge when there has been a substantial period of time between when witnesses have given evidence and the time at which judgment is delivered. There has been a considerable lapse of time from when the witnesses gave evidence in this case and the time of the publication of these reasons. Unfortunately, given the size of the case, this has been unavoidable. Further, during the trial the Cargill Parties challenged an interlocutory ruling on the basis that, because a matter had not been expressly referred to in the reasons for that ruling (or so they contended),[4819] an inference ought to have been drawn that something had been overlooked. Accordingly, although these reasons are already lengthy, to assist in understanding how the pleadings and submissions have been dealt with and how the evidence has been assessed, some further matters should be addressed.

4817 See issues 131, 139 above.
4818 See par 5268 above.
4819 But see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 17)* [2018] VSC 750, [61], [72]-[76].

5346 During the course of the trial, I made contemporaneous notes while witnesses were giving evidence. Further, given the number of witnesses, I directed my associates to ask each witness to agree to a photo being taken of her or him in order to assist me.[4820] Furthermore, I maintained a separate document to record my views at the completion of the evidence of each witness, including where appropriate on issues of credit. Naturally, at the completion of the lay evidence in 2018, this document was reviewed so that any views I had formed could be considered in light of the evidence as a whole. The document was reviewed again after all the evidence in the trial had been given.

5347 As to the documents referred to at trial, a running list of tendered documents was kept, which list was provided to the parties to confirm its accuracy on a frequent basis. The court book was compiled and maintained electronically,[4821] and its index was updated each hearing day to indicate which documents had been tendered. Further, the court maintained its own electronic court book. Whenever a witness referred to a document in the court book (either in a witness statement or during oral evidence), the document was marked in the court's own court book to record the relevant witness, together with either the paragraph number in the witness statement of the relevant witness or the date and time the witness was taken to the document in court.[4822]

5348 There were a large number of documents tendered in this case. In order to reconcile the documents referred to in the pleadings with those tendered at trial, with the assistance of my associates a table was compiled of each document referred to in the pleadings, together with a cross-reference to these reasons. If a document was referred to in the pleadings but not in these reasons, it was noted in the table that the document was not included. Upon substantially completing these reasons, I reviewed every document in the table that was not expressly referred to in these reasons to determine whether any further documents needed to be included. Thus, regardless of whether

---

4820 The parties were informed that it was my intention to obtain a photo of each witness.

4821 With some very minor exceptions, largely for reasons concerned with confidentiality.

4822 There were exceptions to this with some of the excel spreadsheets. For practical reasons, in relation to oral evidence for these documents I generally recorded the name of the witness without referring to the date and time.

a document is expressly referred to in these reasons, each of the documents referred to in the pleadings that was also tendered at trial has been considered.

5349 Also in relation to the pleadings, the parties were required to identify which allegations were relied upon with respect to each of the issues for determination. Another table was prepared listing every paragraph of the pleadings that had been so identified (together with the further paragraph numbers of pleadings referred to by the paragraphs referred to in the list of issues). That table was reviewed to ensure every allegation identified had been addressed in these reasons to the extent the allegations were maintained in closing submissions.[4823]

5350 In these reasons, a large number of footnotes consist of cross-references to other parts of the judgment. This has been done to assist the reader. However, given the length of these reasons the cross-referencing should not be taken as exhaustive. In other words, because reference is made to a particular paragraph or paragraphs, it should not be taken as excluding a reference to other paragraphs in these reasons or to the evidence more generally. Given the sheer volume of materials that needed to be addressed, it would not have been efficient to purport to exhaustively refer to every piece of evidence that was considered to support any observations or findings made in these reasons.

5351 Further, for anyone saddled with the task of reading these reasons in their entirety, undoubtedly some parts of them are repetitious. This has been sought to be avoided to the extent possible by cross-referencing, but for some issues it was decided it would assist the reader to summarise what was stated previously. Furthermore, there must be an inherent risk that the reader may perceive an inconsistency between a summary and the more detailed account of what preceded it. Naturally, if any such perception arises, then reliance should be placed upon the more detailed account of the matter being addressed.

4823 With respect to some of the pleadings, a practice was adopted of referring to and repeating earlier allegations of the party or parties on a repeated basis. Naturally, it was not practical or appropriate to refer to the same allegations repeatedly in these reasons, however each of them was addressed and checked off in the spreadsheet.

5352 Finally, with respect to the closing submissions, most of the written closing submissions were provided to the court before oral closing submissions. Those submissions were read by me in their entirety before oral closing submissions commenced. Further, after reserving judgment, I have read all those written submissions again carefully, together with the transcript of the oral closing submissions. Given the number of points raised, and the considerable length of these reasons in light of that, it was simply not practical or efficient to refer expressly to every single point raised in closing submissions. However, the fact that a point has not been expressly referred to does not mean it has been overlooked. Naturally, in a case of this size, some discretion must be exercised in identifying the real issues for determination in dealing with the substantive submissions. Absent such an approach, these already lengthy reasons would have been even longer and the time at which they could be delivered would have been commensurately delayed.

Z.2 Some parting words

5353 In *Bell Group Ltd (in liq) v Westpac Banking Corporation (No 9)*,[4824] Owen J concluded his judgment by observing that from time to time in the 5 years in which he had worked on that case he had felt like he was confined to an oubliette. Apart from saying that I am in a much better position to empathise than I was 3 or 4 years ago, I shall not be so pretentious as to compare this proceeding with what his Honour dealt with in that case. However, it must be observed that the 2 multinationals involved in this litigation have utilised an enormous amount of the court's resources since this proceeding was commenced in October 2014, and in particular since mid-2017 when repeated interlocutory disputes arose leading up to the trial finally commencing on 18 June 2018.[4825]

5354 In such circumstances, it is incumbent on all parties to this proceeding to ensure that the remaining matters that need to be attended to before final orders may be made in

---

4824 (2008) 39 WAR 1, 908-909 [9761].

4825 For the first 3 years this proceeding was on foot, the parties spent the time producing a large amount of documents by way of discovery, and also had a number of interlocutory disputes. For further details see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 25)* [2020] VSC 172, [14]-[22].

respect of liability, quantum and costs are dealt with as efficiently as reasonably possible.[4826]

CERTIFICATE

I certify that this and the 1809 preceding pages, together with annexures A to D, are a true copy of the reasons for judgment of Elliott J of the Supreme Court of Victoria delivered on 28 January 2022.

DATED this 28th day of January 2022.

.....
Associate

[4826] During closing submissions, I stated that I felt duty bound to say something about the manner in which the case had been conducted. This arose in circumstances where the Cargill Parties produced very detailed documents to be relied upon in closing submissions of which they had chosen to give the other parties no notice. This resulted in me expressing my dissatisfaction yet again about how the case was being conducted: see also, for example, par 1930 above. (To be clear, the criticism had been directed to the Cargill Parties and the Viterra Parties, but not the Third Party Individuals.) The parties addressed the court in due course on the pressures and difficulties in running a case of this size, particularly with overseas clients operating in different time zones. In light of the observations made subsequently in *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 25)* [2020] VSC 172, I have determined nothing more need be said on this topic as part of these reasons.

ANNEXURE A[4827]

LIST OF PARAMETERS TESTED BY THE MALT PROFICIENCY SCHEME WHERE THE VALUE OF THE "STANDARD DEVIATION" CHANGED AFTER 18 FEBRUARY 2011

Parameter/analyte	**Value at 3 Feb 2011 (Round 169(1))**[4828]	**Date when value of "standard deviation" first changed after 3 Feb 2011**	**Value at 13 July 2012 (Round 186(1))**[4829]	**Number of changes between 3 Feb 2011 and 15 Oct 2013**
Moisture	0.2	10 Nov 2011	0.15	1
Diastatic Power	8	10 Nov 2011	10.4	18

ANNEXURE B[4835]

A. Summary of historical financials

Pro forma normalised Profit & Loss	FY10A	FY11A	FY12A	YTD13A
Sales revenue ($ million)	306.2	253.9	268.2	65.7
Malt margin[4836]	105.0	101.7	107.6	26.0
$/tonne	220.5	231.4	234.2	230.6
Unadjusted Earnings (EBITDA) ($ million)	37.1	36.6	36.4	7.0
$/tonne	77.9	83.3	79.3	62.2
Unadjusted Earnings (EBIT) ($ million)	27.8	27.3	27.8	4.4
$/tonne	58.3	62.0	60.5	39.3
Production capacity (kilotonnes)[4837]	500.0	480.0	480.0	550.0
Production utilisation (%)[4838]	91.5%	93.5%	97.9%	95.2%
Production volumes (kilotonnes)	457.5	448.7	469.8	130.9
Sales rate (%)[4839]	104.1%	97.9%	97.8%	86.3%
Sales volumes (kilotonnes)	476.3	439.5	459.5	113.0

B. Summary of forecast financial information

Forecast Profit & Loss	FY12A	FY13F	FY14E	FY15E	FY16E
Sales revenue ($ million)	268.2	252.8	268.5	278.3	281.1
Malt margin[4840]	107.6	104.7	116.4	123.5	124.6
$/tonne	234.2	203.7	221.0	232.7	234.9
Unadjusted Earnings (EBITDA) ($ million)	36.4	25.1	34.3	43.3	43.7
$/tonne	79.3	48.9	65.2	81.7	82.3

4835 See pars 532, 534 above.
4836 Included Accumulation and Position Margin.
4837 Production capacity was said to have reflected closure of Brisbane (December 2012), and Minto start up (May 2012). Full production capacity post Minto start up at 550 kilotonnes.
4838 Production utilisation based on production volume/production capacity.
4839 Sales rate was based on sales volumes (including sale of inventories) production volumes.
4840 Included Accumulation and Position Margin.

Unadjusted Earnings (EBIT) ($ million)	27.8	14.9	23.9	32.8	33.5
$/tonne	60.5	29.0	45.4	61.8	63.2
Production capacity (kilotonnes)[4841]	480.0	550.0	550.0	550.0	550.0
Production utilisation (%)[4842]	97.9%	93.1%	96.3%	97.0%	97.0%
Production volumes (kilotonnes)	469.8	512.1	529.6	533.5	533.5
Sales rate (%)[4843]	97.8%	100.3%	99.5%	99.5%	99.5%
Sales volumes (kilotonnes)	459.5	513.8	526.7	530.6	530.6

4841 The 2013 to 2016 financial years excluded costs of shared services then currently provided to the business by Glencore, which management estimated would be approximately $2 million per annum if required to be performed on a standalone basis. However, it was stated management believed that this cost would reduce if undertaken as part of a larger shared services function.

4842 Production utilisation was based on production volume/production capacity.

4843 Sales rate was based on sales volumes (including sale of inventories)/production volumes.

ANNEXURE C[4844]

1 Summary of statements recorded in Lindner's notes on 23 October 2013 that were not accurately reflected in the talking points utilised by Mattiske or the Reply Letters.[4845] The statements are organised into the following:

A. Customer specifications.

B. Certificates of Analysis.

C. Risks.

D. Joe White's approach.

E. Barley varieties.

F. Gibberellic acid.

2 The following statements were recorded in Lindner's notes but not reflected in the Mattiske talking points:

A. Customer specifications

Youil

3 It was not a plant capability issue but a barley variety issue and that Joe White was *always struggling to meet specifications*.

4 Joe White *lost contact with the procurement team*.

5 The *requirements placed by brewers on malt companies were "almost impossible to achieve"*.

6 When asked *whether Cargill had purchased something (a business) that could not deliver, Youil stated that he could not answer that*, but stated that if Cargill's theoretical blend model was adopted, it was "probably ok".

7 The cost savings of using lesser grade barley was between $10 and $20 per tonne.

4844 See par 1373 above.

4845 See pars 1276-1311, 1355-1360, 1373 above. See also pars 1319-1322, 1368-1372, 1376-1378, 1380, 1442-1444, 1447-1450, 1503-1509, 1514-1522 in relation to the discussions between Purser and Mattiske from 23 to 30 October 2013.

Wicks

8 *Specifications were often outside of contract*.

Stewart

9 Customers have said that their specifications were a target.

B. Certificates of Analysis

Hughes

10 In response to the question *"Why issue wrong certificate?" Hughes stated that it was to tell the customers how they could expect the malt to behave*.

11 *There were some open communications with customers regarding the practices*.

12 Joe White issued Certificates of Analysis "all the time – every plant, for all customers".[4846]

Youil

13 *Joe White has sent out-of-specification malt to customers in the past*.[4847]

14 Joe White was told to reduce the quality of production.

Wicks

15 Wicks did not know whether Joe White communicated with customers about the Viterra Certificate of Analysis Procedure, but was recorded as stating "sometimes".

16 Cargill was the exception in the way that it operated and that the industry operated the way Joe White operated.

Stewart

17 Stewart was of the view Cargill ran its business very differently.

18 *Stewart had no idea of the legal implications of a Certificate of Analysis saying 12 when the*

4846 The significance of this being that inappropriate practices concerning Certificates of Analysis potentially affected all customers.

4847 To the limited extent the Reply Letters referred to instances where the incorrect barley variety was used and to non-compliance with prohibitions concerning gibberellic acid, this matter as articulated above was disclosed in those letters: see pars 1405, 1512, 1524 above.

result was a 10.

19 Joe White ensured the customer was always right by changing the result.

C. Risks

Hughes

20 When asked about what Joe White could do to comply, Hughes stated that there would be a financial impact on the Joe White Business and that Stewart was pulling the numbers together; and the issues raised *a reputational risk*.

Youil

21 The *breaches of contract were a reputational risk*.

Wicks

22 If from completion Joe White had to supply in accordance with the contract it would result in *"commercial suicide"* and that the *"brand will be decimated"*.

D. Joe White's approach

Hughes

23 *Mattiske was not aware* of the use of unauthorised barley varieties.[4848]

Youil

24 Youil had no idea why Mattiske was not aware of these issues. He stated that the practice had been acceptable for years and that it was "business as usual".

Wicks

25 The Cargill 22 October Letter was a fair statement of what was said.

26 Joe White had done this to make as much profit as possible whilst keeping customers

[4848] See par 1234 above for Mattiske's position when the matter was first raised by Purser.

happy.

Stewart

27 The Cargill 22 October Letter reflected what was discussed, but did not capture De Samblanx saying "completely what expected" and that Viers was "surprised but doesn't know industry".

28 The *exposure on legal day 1 was that the wrong varieties could not be used*.

29 Cargill had huge storage so it was able to achieve blends in specification. *Applying the Cargill model to Joe White would be difficult*. In Sydney, there was limited storage whereas everywhere else had better storage.

30 *Joe White was trying to make malt as cheap as possible*.

31 The practices were not raised with Mattiske because an expectation to make margins was still there.

E. Barley varieties

Hughes

32 *Cargill knew of the industry practice*, and that Cargill wanted to know how Joe White approached the issue.

33 If Joe White had been using the correct barley the cost base would be about $1.5 million higher per year.

34 Joe White was *required to source cheaper barley*, and from the present time until March 2014; Joe White *did not always have the barley available, which could be "big $"*.

Youil

35 Youil did not know if customers were aware of Joe White's laboratory testing and reporting.

36 "Heineken – very surprised doing it".[4849]

37 *If Joe White were required to source the correct barley varieties overnight, Joe White would possibly need to pay more or fail to satisfy obligations under the contracts*.

Wicks

38 *Joe White did not "communicate [the substitution of a] different variety [of barley] knowingly"*.

39 There was a balance between Joe White's obligation to communicate with its customers concerning the use of the different barley variety and Joe White guessing about meeting their wants.

40 *Joe White was trying to guess what the customer wanted and acted accordingly rather than just telling them*.

41 It was *difficult to get the barley required*. For example, the 2 varieties approved by Heineken (Gardiner and Stirling) were both hard to get.[4850]

42 If Joe White had to buy barley in April 2014 it would cost more and Joe White would need to evaluate the contractual arrangements in place with the farmers to mitigate the costs.

Stewart

43 *Glencore did not supply Joe White with the required varieties*, instead, Joe White had been *"getting bad barley from Glencore"*, which *eroded its ability to meet specifications*.

44 From October 2013 until April 2014, if Joe White was required to use varieties specified in the contracts, *Joe White may have to push back shipments*.

45 *Joe White did not communicate with customers around contracts*, but Gordon instructed

---

4849 It was far from clear what this note was conveying. In the context where the evidence was that customers were not told of incorrect varieties being used, it would appear to record Youil expressing surprise.

4850 It is noted that in the 30 October Reply Letter it was stated that there was a short term shortage of certain barley varieties: see pars 1512, 1524 above.

them to do so in around October or November 2011.

46 Joe White had been breaching contracts, by using barley inconsistent with the contract, and not telling the customer.

47 When asked why customers were not informed when Joe White was going outside customer contracts, Stewart replied because it was industry standard and brewers knew about it; but he was not sure of the decision-making process.

F. Gibberellic acid

Hughes

48 Sometimes Joe White used gibberellic acid when it should not have and that there were probably customer contracts that said not to use it, but Joe White did – *Gibberellic acid was used routinely when it should not be at all plants*.[4851]

49 Gibberellic acid *was used to drive capacity* and not using it would reduce production capacity by 20 percent.

Hughes and Youil

50 Both stated that not using gibberellic acid would result in an extra day of production (from 4 days to 5 days of germination).[4852]

Wicks

51 *Gibberellic acid was used about 20 percent of the time when it should not be and that specifications were often outside of contractual specifications*.[4853]

4851 It is noted that the Reply Letters made reference to non-compliance with gibberellic acid prohibitions, but nothing was stated about the prevalence across Joe White's plants or the frequency: see pars 1405, 1512, 1524 above. Similarly, Mattiske referred to the use of gibberellic acid when prohibited in his discussions with Purser, but failed to communicate the extent of the issue: see pars 1368, 1376, 1378(6) above.

4852 Mattiske told Purser that ceasing to use gibberellic acid would have the effect of increasing the germination time from 4 days to 5 days, but incorrectly communicated that the issue was confined to 1 contract with Asia Pacific Breweries: see pars 1505, 1519 above. He further stated it was not a long-term issue: ibid.

4853 This is referred to at par 8 above of annexure C, but is included here as well as the statement was noted in the section of Lindner's notes dealing with gibberellic acid.

52 *Whilst Heineken and Sapporo conducted audits, they would not know about gibberellic acid.*

Stewart

53 *The use of gibberellic acid was a reputational risk which was twice as big of an issue when the customer required its malt to be additive free*.

54 Without gibberellic acid, it added another day to production, resulting in loss of production and electricity costs (Stewart gave brief calculations of those losses).

ANNEXURE D[4854]

DEFINED TERM[4855]	**MEANING**
Adjustment	A difference between the Recorded Analytical Test Result and the Reported Analytical Result.
Customer Required Barley Varieties	The barley varieties which Ryan was instructed were the customer's required barley varieties for each of the orders recorded in the Barley Data, being the spreadsheet prepared by Gilbert + Tobin titled "Schedule E data" (page 38346).
Malt Blend Components	The individual batches of malt used in a particular order, as recorded in the Barley Data.
Production Issue Quantity	The quantity in tonnes of the individual batches of malt used in a blend, as described in the third statement of Abbot at [26].
Recorded Analytical Test Result	The value that was recorded in the Parameters Data as being the test result recorded (ie achieved from testing) internally by Joe White for a particular parameter.
Relevant Period	The period commencing on 18 February 2011 and ending on 31 October 2013, being the period in respect of which Ryan was instructed to undertake his analysis in the Deviation Analysis.
Reported Analytical Result	The value that was recorded in the Parameters Data as being the analytical value reported by Joe White to the customer in the Certificate of Analysis for a particular parameter.
Reported Variety	A barley variety that was recorded in the Barley Data as being a variety that was reported by Joe White to the customer in the Certificate of Analysis for a particular order.
Specification	The value that was recorded in the Parameters Data as being the specification recorded by Joe White in the Laboratory Information System for a particular customer for a particular parameter.
Standard Deviation	In respect of each parameter, the value inputted by Ryan in his Deviation Analysis at column B of the tab entitled "Standard Deviation" on instructions from Gilbert + Tobin at page 60291.

4854 See par 2323 above.

4855 For the purposes of this annexure D.

Facts drawn from the Parameters Analysis page 38347_H

Item	Fact	Methodology/calculation	Transcript reference/Source
1.	Of the 4,359 Certificates of Analysis[4856] included in the Parameters Data, 98.88% of those Certificates of Analysis (or 4,310) had one or more parameters the subject of an Adjustment (ie the Recorded Analytical Test Result and Reported Analytical Result did not match).	This is set out in the summary page of the Parameters Analysis.	Page 38347_H, tab "Summary", cells B9 and C9
2.	The 98.88% (or 4,310) Certificates of Analysis which had one or more parameters the subject of an Adjustment equate to 1,347,372 tonnes or 99.16% of the total tonnage for the 4,359 orders.	This is set out in the summary page of the Parameters Analysis.	Page 38347_H, tab "Summary", cells D9 and E9
3.	Of the 4,359 Certificates of Analysis included in the Parameters Data, 88.05% of those Certificates of Analysis (or 3,838 orders) had one or more parameter results Reported that was the subject of an Adjustment that brought a Recorded Analytical Test Result that was outside Specification to a Reported Analytical Result that was within Specification.	This is set out in the summary page of the Parameters Analysis.	Page 38347_H, tab "Summary", cells B16 and C16

[4856] All references to "Certificates of Analysis" in Items 1–4 in this table are a reference to customer order data appearing in the "Reported" column (column J) of the "Data" sheet in page 38347_H, which Ryan was instructed, pursuant to item J of the table on page 2 of the letter of instruction dated 26 September 2018 (page 38303_0001), records the result for each parameter reported to the customer in the Certificate of Analysis.

Item	Fact	Methodology/calculation	Transcript reference/Source
4.	The 88.05% of those Certificates of Analysis (or 3,838 orders) which had one or more parameter result Reported that was the subject of an Adjustment to bring a Recorded Analytical Test Result that was outside Specification to a Reported Analytical Result that was within Specification equate to 1,210,608 tonnes or 89.10% of the total tonnes for the 4,359 orders.	This is set out in the summary page of the Parameters Analysis.	Page 38347_H, tab "Summary", cells D16 and E16
5.	87.2% of all individual Recorded Analytical Test Results contained in the Parameters Data are recorded as being within Specification or otherwise had a blank entry in the Recorded Analytical Test Result column (Column I).	Page 38347_H ("Data" Sheet) **A. Total Recorded Analytical Test Results**: Highlight all of the data in column U by clicking on the top of the column. The total number of Recorded Analytical Test Results is **87,351**, being the "Count" value less 1 to account for the heading. **B. Number of Recorded Analytical Test Results within Specification:** Apply the filter to column U to show only the rows which have a "0" in that column. Highlight all of the data in the column by clicking on the top of the column. The number of Recorded Analytical Test Results that are within Specification is **76,202**, being the "Count" value less 1 to account for the heading. **C. Number of Recorded Analytical Test Results with a blank result in the Parameters Data:** Highlight all of the data in column I and apply the filter to select only "blanks". This will show only those rows which are blank for Recorded data, that is for which no Recorded result was extracted. The number of Recorded Analytical Test Results that are blank are	T6626.6-29

Item	Fact	Methodology/calculation	Transcript reference/Source
		6,716. Ryan's analysis allocated those a "0" in column U.[4857] **Percentage of Recorded Analytical Test Results within Specification:** (B/A)*100 = **87.2%** **Percentage of Recorded Analytical Test Results within Specification (not counting blanks):** ((B – C)/A)*100 = **79.6%.**	
6.	12.6% of all individual Recorded Analytical Test Results contained in the Parameters Data are recorded as being outside Specification and being the subject of Adjustment such that the Reported Analytical Result is within Specification.	Page 38347_H ("Data" Sheet) **A. Total Recorded Analytical Test Results**: Highlight all of the data in column W by clicking on the top of the column. The total number of Recorded Analytical Test Results is **87,351**, being the "Count" value less 1 to account for the heading. **B. Number of rows where the Recorded Analytical Test Result is outside Specification but the Reported Analytical Result is within Specification:** Apply the filter to column W to show only the rows which have a "1" in that column. Highlight all of the data in the column by clicking on the top of the column. The number of rows where the Recorded Analytical Test Result is outside Specification but the Reported Analytical Specification is within Specification is **10,971**, being the "Count" value less 1 to account for the heading. **Percentage of rows with Recorded Analytical Test Result outside Specification and Reported Analytical Result within Specification**	T6627:1-18

[4857] By reason of assumption F in the letter of instruction to Ryan dated 26 September 2018 (page 38303_0001): see par 2322 above.

Item	Fact	Methodology/calculation	Transcript reference/Source
		(B/A)*100 = **12.6**% The 10,971 parameters with Recorded Analytical Test Results outside Specification and Reported Analytical Results within Specification: • are found in 3,838 separate orders (as referenced at 3 above); and • have estimated times for departure (column C) ranging from 3 January 2010 to 31 October 2013; and • cover 53 customers (being the list of individual customer names from the filtered results in column D). The 53 customers are identified in schedule A to this document.	
7.	87.4% of all individual Recorded Analytical Test Results contained in the Parameters Data are not recorded as being outside Specification and being the subject of Adjustment such that the Reported Analytical Result is within Specification or otherwise had a blank entry in the Recorded Analytical Test Result column (Column I).	Page 38347_H ("Data" sheet) **A. Total Recorded Analytical Test Results**: Highlight all of the data in column W by clicking on the top of the column. The total number of Recorded Analytical Test Results is **87,351**, being the "Count" value less 1 to account for the heading. **B. Number of rows other than where the Recorded Analytical Test Result is outside Specification and the Reported Analytical Result is within Specification**: Apply the filter to column W to show only the rows which have a "0" in that column. Highlight all of the data in the column by clicking on the top of the column. The number of rows other than where the Recorded Analytical Test Result is outside Specification and the Reported Analytical Specification is within Specification is **76,380**, being	T6627.26-6628.5

Item	Fact	Methodology/calculation	Transcript reference/Source
		the "Count" value less 1 to account for the heading. **C. Number of the 76,380 rows in Column W coded with a "0" but for which there is a blank in the Recorded Analytical Test Result column I**: Once you have applied the filter in Column W to click only those with a "0" (per step B above), without clearing that filter move to Column I and using the arrow, filter these by selecting only "blanks". The number of rows that have blank in Recorded and a "0" in Column W is 6,716. **Percentage of rows other than where the Recorded Analytical Test Result is outside Specification and the Reported Analytical Result is within Specification** (B/A)*100 = **87.4%** **Percentage excluding rows with a blank Recorded Analytical Test Result** ((B-C)/A)*100 = **79.8%.**	
8.	37.1% of all Adjustments recorded in the Parameters Data were such that the Recorded Analytical Test Result was outside Specification but the Reported Analytical Result was within Specification.	Page 38347_H ("Order Summary" sheet) **A. Total number of Adjustments**: The figure in cell E4364 (29,372). This total is drawn from "Column E" in the "OrderSummary" sheet, which is the total of all rows in column Q ("LR Recorded and Reported Rounded Excluding Duplicates") of the "Data" sheet which contain a "1", being the total number of parameter results in the Parameters Data where the Recorded Analytical Test Result and the Reported Analytical Result do not match (after Ryan has applied various instructions and assumptions).	T6628.6-6630.12

Item	Fact	Methodology/calculation	Transcript reference/Source
		This total includes 5,811 results that do not match because the Recorded Analytical Result is blank, but the Reported Analytical Result is not blank. This figure is calculated by filtering column Q to show only rows containing "1" and then filtering column I (or K) to show only "blanks"). **B** **Total number of Adjustments where the Recorded Analytical Test Result is outside Specification but the Reported Analytical Result is within Specification:** The figure in cell H4364 (10,900) This total is drawn from "Column H" in the "OrderSummary" sheet, which is the total of all rows in column X ("LR Recorded Out Reported In Excluding Duplicates") of the "Data" sheet which contain a "1". For the purpose of this figure, Ryan was instructed to exclude (and did exclude) the 5,811 rows that were treated as non-matching in column Q because the Recorded Analytical Test Result was blank. **Calculation:** (B/A)*100 = **37.1%.** **C. Total number of Adjustments (column E of the "OrderSummary" sheet) excluding blank Recorded Analytical Test Results** **Calculation:** A (29,372) – 5,811 = 23,561. **Percentage excluding rows with a blank Recorded Analytical Test Results:** (B/C)*100 = **46.26%**	

Item	Fact	Methodology/calculation	Transcript reference/Source
9.	There were 261 individual Recorded Analytical Test Results for the Beer Thai, Beer Thip Brewery 1991 Co Ltd and Cosmos Brewery Thailand Co Ltd customers in the Parameters Data that were recorded as being outside Specification.	Page 38347_H ("Data" sheet) Apply the filter to column D to select only the customers beginning with the names "Beer Thai", "Beer Thip" and "Cosmos Brewery". Apply the filter to column U to select only the rows that have a "1" in the column. Highlight all of the data in the column by clicking on the top of the column. The number of Recorded Analytical Test Results outside Specification is 261, being the "Count" value less 1 to account for the heading.	T6632.13-6633.29

Facts drawn from the Barley Analysis Page 38345

10.	Of the 2,753 unique orders with at least one Reported Variety in the Certificate of Analysis[4858] and at least one Customer Required Barley Variety, there were 2,695 (97.89%) orders where all Reported Varieties on a Certificate of Analysis were a Customer Required Barley Variety.	This is set out in the "Results" page of the Barley Analysis. The figure of 2,753 is obtained by adding the figures in cells B15 and B16 (2,695+58).	Page 38345, tab "Results", cells B15 and C15
11.	Of the 4,171 unique orders with at least one barley variety used in the blend and at least one Customer Required Barley Variety, 3,236 or 77.58% of those orders, were orders where not all the barley varieties used in the blend were Customer Required Barley Varieties.	This is set out in the "Results" page of the Barley Analysis. The figure of 4,171 is obtained by adding the figures in cells B21 and B22 (935+3,236).	Page 38345, tab "Results", cells B22 and C22

[4858] All references to "Certificates of Analysis" in items 10, 12 and 13 in this table are a reference to customer order data appearing in the "Reported Materials" column (column P) of the "Barley Data" sheet in page 38345, which Ryan was instructed, pursuant to item P of the table on page 3 of the letter of instruction dated 5 October 2018 (page 38303_0008), identifies the barley variety or varieties reported in the Certificate of Analysis for each order.

Item	Fact	Methodology/calculation	Transcript reference/Source
12.	Of the 2,788 unique orders with at least one barley variety used in the blend and at least one Reported Variety in the Certificate of Analysis, there were 2,457 (88.13%) orders where not all barley varieties used on the blend were Reported Varieties in the Certificate of Analysis.	This is set out in the "Results" page of the Barley Analysis. The figure of 2,788 is obtained by adding the figures in cells B27 and B28 (331+2,457).	Page 38345, tab "Results", cells B28 and C28
13.	Of the 2,753 unique orders with: • at least one barley variety used in the blend, • at least one Reported Variety in the Certificate of Analysis; and • at least one Customer Required Barley Variety, there were 2,429 (88.23%) unique orders which had: • at least one barley variety used in the blend that did not match any Reported Variety in the Certificate of Analysis; and/or • at least one barley variety used in the blend that did not match any of that Customer's Required Barley Varieties.	This is set out in the "Results" page of the Barley Analysis. The figure of 2,753 is obtained by adding the figures in cells B40 and B41 (2,429+324).	Page 38345, tab "Results", cells B40 and C40
14.	0.93% of the Malt Blend Components recorded in the Barley Data have a Production Issue Quantity of "0".	<u>Page 38345 ("Barley Data" sheet)</u> The total number of rows of data in the sheet is 52,970, being the "Count" value less 1 to account for the heading. Sort the data in column K by smallest to largest. All data in that column up to row 493 (row 492 excluding the heading) contains a "0". (492/52,970)*100 = **0.93%.**	T6647.5-15
15.	1.53% of the Malt Blend Components recorded in the Barley Data have a	<u>Page 38345 ("Barley Data" sheet)</u> As per the	T6647.16-23

Item	Fact	Methodology/calculation	Transcript reference/Source
	Production Issue Quantity of "0.0001" tonnes or less.	methodology in 14. All data in that column up to row 809 (row 808 excluding the heading) contains a value of "0.0001" or less (808/52,970)*100 = **1.53**%.	
16.	2.48% of the Malt Blend Components recorded in the Barley Data have a Production Issue Quantity of "0.0005" tonnes or less.	Page 38345 ("Barley Data" sheet) As per the methodology in 14. All data in that column up to row 1,315 (row 1,314 excluding the heading) contains a value of "0.0005" or less (1,314/52,970)*100 = **2.48**%.	T6647.24-29
17.	7.54% of the Malt Blend Components recorded in the Barley Data have a Production Issue Quantity of "0.01" tonnes or less.	Page 38345 ("Barley Data" sheet) As per the methodology in 14. All data in that column up to row 3,995 (row 3,994 excluding the heading) contains a value of "0.01" or less (3,994/52,970)*100 = **7.54**%.	T6647.30-6648.4
18.	16.1% of the Malt Blend Components recorded in the Barley Data have a Production Issue Quantity of "0.1" tonnes or less.	Page 38345 ("Barley Data" sheet) As per the methodology in 14. All data in that column up to row 8,531 (row 8,530 excluding the heading) contains a value of "0.1" or less (8,530/52,970)*100 = **16.1**%.	T6648.5-10
19.	28.4% of the Malt Blend Components recorded in the Barley Data have a Production Issue Quantity of "1" tonne or less.	Page 38345 ("Barley Data" sheet) As per the methodology in 14. All data in that column up to row 15,046 (row 15,045 excluding the heading) contains a value of "1" or less (15,045/52,970)*100 = **28.4**%.	T6648.11-15
20.	45.2% of the Malt Blend Components recorded in the Barley Data have a Production Issue Quantity of "5" tonnes or less.	Page 38345 ("Barley Data" sheet) As per the methodology in 14. All data in that column up to row 23,942 (row 23,941 excluding the heading) contains a value of "5" or less (23,941/52,970)*100 = **45.2**%.	T6648.16-20

Item	Fact	Methodology/calculation	Transcript reference/Source
21.	56.34% of the Malt Blend Components recorded in the Barley Data have a Production Issue Quantity of "10" tonnes or less.	Page 38345 ("Barley Data" sheet) As per the methodology in 14. All data in that column up to row 29,844 (row 29,843 excluding the heading) contains a value of "10" or less (29,843/52,970)*100 = **56.34**%.	T6648.21-25
22.	The majority of orders recorded in the Barley Data contain more than one Malt Blend Component (ie, more than one row in Production Issue Quantity).	Page 38345 ("Barley Data" sheet) Per column K For example, select the drop-down menu for "Order Number" in Column A and select only order number 10001846. With respect to order number 10001846, Column K (being "Production Issue Quantity") shows the seven Malt Blend Components comprising this order.	
23.	10.8% of the orders recorded in the Parameters Data are for malt supplies of less than 100 tonnes.	Page 38347_H ("Order summary" sheet) Sort column C by smallest to largest There are 4,362 rows of order details (4,359 excluding headings) All data in column C up to row 474 (471 excluding headings) contains a value less than 100 tonnes. 471/4,359 = 10.8%.	T6648.26-6649.25
24.	50% of the orders recorded in the Parameters Data are for malt supplies of less than 225 tonnes, and 50% are for malt supplies of more than 225 tonnes	As per the methodology in 23. All data in column C up to row 2,179 (2176 excluding headings) contains a value of 225 tonnes or less 2,176/4,359 = 49.99%.	
25.	1.04% of the total quantity of Malt Blend Components recorded in the Barley Data are recorded to have been produced from Hindmarsh barley.	Page 38345 ("Barley Data" sheet) Select all of the data in column K. The "Sum" figure is **1,356,674.71** Apply the filter to column M to select only the rows that have a "Hindmarsh" in the column (being Hindmarsh Pale Malt and Hindmarsh Trial Pale Malt). Select all of the data in column K. The "Sum" figure is **14,118**.	T6655.17-6657.2

Item	Fact	Methodology/calculation	Transcript reference/Source
		(14,118/1,356,674.71)*100 = **1.04**%.	
26.	The "Sum" figure for "Hindmarsh" referred to at 25 above (14,118 tonnes) contained Hindmarsh Malt Blend Components across 188 unique orders. These 188 unique orders have an estimated date of departure (ETD) range of 7 June 2010 to 31 October 2013.	Page 38345 ("Barley Data" sheet) Per 25 above, apply the filter to column M to select only the rows that have a "Hindmarsh" in the column (being Hindmarsh Pale Malt and Hindmarsh Trial Pale Malt). *Unique orders*: This figure is obtained by removing duplicate Order Numbers from Column A (ie applying the "Remove Duplicates" feature in Excel). *ETD*: Select Column D, "ETD" and filter by "Oldest to Newest."	
27.	Hindmarsh Pale Malt and Hindmarsh Trial Pale Malt were recorded as Malt Blend Components in the orders of 32 customers in this period.	Page 38345 ("Barley Data" sheet) Per 25 above, apply the filter to column M to select only the rows that have a "Hindmarsh" in the column (being Hindmarsh Pale Malt and Hindmarsh Trial Pale Malt). Select the drop down menu in Column B, "Customer Name". The number of individual customers recorded in the drop-down menu in Column C is 32. The 32 customers are identified in schedule B to this document.	

Item	Fact	Methodology/calculation	Transcript reference/Source
28.	384 issue batches of Hindmarsh containing at least 5 Tonnes of Hindmarsh were recorded as Malt Blend Components in the Barley Data. 593 issue batches of Hindmarsh containing less than 5 tonnes of Hindmarsh were recorded as Malt Blend Components in the Barley Data.	Page 38345 ("Barley Data" sheet) Per 25 above, apply the filter to column M to select only the rows that have a "Hindmarsh" in the column (being Hindmarsh Pale Malt and Hindmarsh Trial Pale Malt). Apply the filter to Column K to select values that are greater than or equal to 5 and the figure for those orders that use at least 5 tonnes is 384 issue batches. Apply the filter to Column K to select values that are less than 5 and the figure for those orders that use less than 5 tonnes is 593 issue batches.	

Facts drawn from the Deviation Analysis Page 60297

29.	Of the 3,070 Certificates of Analysis[4859] included in the Parameters Data during the Relevant Period, 42.90% of those Certificates of Analysis (or 1,317) had one or more Affected Results (ie the Recorded Analytical Test Result was outside Specification by more than two Standard Deviations and the Reported Analytical Result was within Specification)	This is set out in the summary page of the Deviation Analysis.	Page 60297, tab "Summary", cells B23, B25 and C23
30.	The 1,317 Certificates of Analysis included in the Parameters Data during the Relevant Period which had one or more Affected Results equate to 508,338 tonnes or 52.01% of the total tonnage for the 3,070 orders during the Relevant Period	This is set out in the summary page of the Deviation Analysis.	Page 60297, tab "Summary", cells D23 and E23

[4859] See fn 4856 above, for items 29-31 of this table of annexure D.

Item	Fact	Methodology/calculation	Transcript reference/Source
31.	The 3,070 Certificates of Analysis included in the Parameters Data during the Relevant Period comprise 70.43% of the 4,359 Certificates of Analysis included in the Parameters Data	This is set out in the summary page of the Deviation Analysis.	Page 60297, tab "Summary", cells B18, B25 and B26
32.	The 3,070 Certificates of Analysis included in the Parameters Data during the Relevant Period comprise 71.94% of the total tonnage included in the Parameters Data.	Page 60297 ("Summary Sheet") **A. Total tonnage in the Deviation Analysis**: This figure can be found at cell D11. The total tonnage of the 4,359 orders originally analysed is **1,358,770**. **B. Total tonnage in the Relevant Period:** This figure can be found at cell D25. The total tonnage of the 3,070 orders in the Relevant Period is **977,445**. **Percentage of total tonnage in the Deviation Analysis that is within the Relevant Period:** (B/A)*100 = **71.94**%.	Page 60297, tab "Summary", cells D11 and D25.

Item	Fact	Methodology/calculation	Transcript reference/Source
33.	The Deviation Analysis for the Relevant Period (18 February 2011 to 31 October 2013) contains orders for 46 individual customers and records that of those individual customers, 93.48% (43 out of 46) were shipped an order with a Certificate of Analysis that contained an Affected Result.	Page 60297 ("Data" Sheet) **A. Customers in the Relevant Period:** Filter column C to show only results after 17 February 2011. Copy the "Customer Name" column into a new sheet. Press "Remove Duplicates". There are 52 unique values. Then manually remove the following remaining duplicates from this list: • Beer Thip Brewery (1991) Co Ltd; • Beer Thai; • Marubeni Australia Ltd; • Kirin Brewery Co Ltd; • Beer Thai 1991 Public Co Ltd; • Beer Thip Brewery 1991 Co Ltd. Once these have been removed there are **46** individual customers. **B. Number of customers with Affected Results:** Go back to the "Data" Sheet. Filter Column AI for "1". This will show all parameters with an Affected Result in the Relevant Period. Copy the "Customer Name" column into a new sheet. Press "Remove Duplicates". There are 46 unique values. Then manually remove the following remaining duplicates from this list: • Beer Thip Brewery 1991 Co Ltd; • Marubeni Australia Ltd; • Kirin Brewery Co Ltd. Once these have been removed there are **43** individual customers. **Percentage of customers:** B/A*100 = 93.48%.	

Item	Fact	Methodology/calculation	Transcript reference/Source
34.	3.52% (or 2,132) of the 60,645 individual entries contained in the Parameters Data during the Relevant Period were Affected Results (including parameters that Ryan was instructed to exclude[4860])	Page 60297 ("Data" Sheet) **A. Relevant Period:** Filter column C to show only results after 17 February 2011. **B. Total entries during the Relevant Period without excluding excluded parameters:** At column AI, the number of entries during the Relevant Period is **60,645**, being the "Count" value less 1 to account for the heading. **C. Number of Affected Results during the Relevant Period:** At column AI, the number of Affected Results is **2,132**, being the "Sum" value. **Percentage of total entries during the Relevant Period (without excluding excluded parameters) which were Affected Results:** C/B*100 = 3.52%.	T8578.30-8582.11
35.	4.01% (or 2,132) of the 53,162 entries contained in the Parameters Data during the Relevant Period were Affected Results (excluding parameters that Ryan was instructed to exclude)	Page 60297 ("Data" Sheet) **A. Relevant Period:** Filter column C to show only results after 17 February 2011. **B. Total entries during the Relevant Period after excluding excluded parameters:** Filter column AH to show only the "1"s,[4861] then at column AI, the number of entries during the Relevant Period is **53,162**, being the "Count" value less 1 to account for the heading. **C. Number of Affected Results during the Relevant Period:** At column AI, the number of Affected Results is **2,132**, being the "Sum" value. **Percentage of entries during the Relevant Period (after excluding excluded parameters) which were Affected Results:**	T8582.12-8583.24

4860 See next item including fn 4861 below.

4861 This excludes parameters that Ryan was instructed to exclude by reason of the letters of instruction to Ryan dated 18 June 2019 and 21 June 2019.

Number of Affected Results for this parameter during the Relevant Period:** At column AI, the number of Affected Results is **493**, being the "Sum" value.	T8584.26-8585.1
39.	The sum of the number of entries in Items 36-38 above, being the total number of Affected Results for those three parameters during the Relevant Period, is 894, comprising 41.93% of the total number of Affected Results during the Relevant Period at Items 34 and 35	**The sum of the number of Affected Results during the Relevant Period for the three parameters at Items 36-38:** 197+204+493 = 894 **Percentage of total number of Affected Results during the Relevant Period for those parameters:** 894/2,132*100 = 41.93%.	T8585.2-27

Item	Fact	Methodology/calculation	Transcript reference/Source
40.	34 of the 3,095 entries for the parameter "Moisture %" during the Relevant Period were Affected Results, being 1.10% of the total number of entries for that parameter during the Relevant Period	Page 60297 ("Data" Sheet) **A. Relevant Period:** Filter column C to show only results after 17 February 2011. **B. Total entries for this parameter during the Relevant Period:** Filter column G to show only results for "Moisture %", then at column AI, the number of entries during the Relevant Period for this parameter is **3,095**, being the "Count" value less 1 to account for the heading. **C. Number of Affected Results for this parameter during the Relevant Period:** At column AI, the number of Affected Results is **34**, being the "Sum" value. **Percentage of entries for this parameter during the Relevant Period which were Affected Results:** 34/3,095 = 1.10%.	T8586.19-8587.7
41.	For Certificates of Analysis that contained one or more Affected Results, there was an average of 1.62 Affected Results per Certificate of Analysis[4862] during the Relevant Period (ie excluding Certificates of Analysis which had no Affected Results)	This is calculated by taking the total number of Affected Results during the Relevant Period per Items 34 and 35 above, and dividing it by the total number of Certificates of Analysis during the Relevant Period which had one or more Affected Results per Item 29 above: 2,132/1,317 = 1.62.	T8589.11-8590.13
42.	There was an average of 0.69 Affected Results per Certificate of Analysis during the Relevant Period (ie including Certificates of Analysis which had no Affected Results)	This is calculated by taking the total number of Affected Results during the Relevant Period per Items 34 and 35 above, and dividing it by the total number of Certificates of Analysis during the Relevant Period per Item 29 above: 2,132/3,070 = 0.69.	T8590.14-8590.29

[4862] See fn 4856 above, for items 41-42 of this table.

Item	Fact	Methodology/calculation	Transcript reference/Source
43.	For each included parameter with a Standard Deviation of zero,[4863] the total number of Adjustments and the total number of Affected Results is the same	This was demonstrated by the example of the parameter "1,000 Corn Weight g, Dry Basis" as follows. Page 60297 ("Data" Sheet) **A. Relevant Period:** Filter column C to show only results after 17 February 2011. **B. Number of Affected Results for this parameter during the Relevant Period:** Filter column G to show only results for "1,000 Corn Weight g, Dry Basis", then at column AI, the number of Affected Results is **197**, being the "Sum" value. **C. Number of Adjustments for this parameter during the Relevant Period:** At column X, the number of Adjustments is **197**, being the "Sum" value.	T8594.6-8598.21

Facts drawn from the edited copy of the Deviation Analysis page 60297_0001

Note: Page 60297_0001 is a copy of page 60297 with figures changed by the court book operator, on the basis of instructions given by senior counsel for the Viterra Parties, Mr Parmenter QC. Entries in Column D of the "StandardDeviation" sheet were changed from 1s to 0s for the parameters at rows 51-88 (being the parameters at items 50-87 of page 60291 for which Ryan was instructed to assume a Standard Deviation of zero and include in his analysis). The calculations in the spreadsheet were then recalculated. As a result, page 60297_0001 shows the Deviation Analysis with those parameters excluded. Refer T8602.7-26.

[4863] Being the parameters at items 50-87 of the table at page 60291 which comprised Ryan's instructions as to Standard Deviation values. These are the parameters at numbers 50-87 of column C of the "Standard Deviation" Sheet of page 60297 (note that they appear in rows 51-88).

Item	Fact	Methodology/calculation	Transcript reference/Source
44.	With the parameters at items 50- 87 excluded, 25.31% of Certificates of Analysis[4864] included in the Parameters Data during the Relevant Period had one or more Affected Results (ie the Recorded Analytical Test Result was outside Specification by more than two Standard Deviations and the Reported Analytical Result was within Specification)	This is set out in the summary page of the edited copy of the Deviation Analysis.	Page 60297_0001, tab "Summary", cell C23 T8602.27-8603.4
45.	With the parameters at items 50- 87 excluded, 1.66% (or 1,007) of the 60,645 individual entries contained in the Parameters Data during the Relevant Period were Affected Results (including parameters that Ryan was instructed to exclude[4865] and the parameters at items 50-87 of page 60291 that the court book operator was instructed to exclude by senior counsel for the Viterra Parties)	Page 60297_0001 ("Data" sheet) **A. Relevant Period:** Filter column C to show only results after 17 February 2011. **B. Total entries during the Relevant Period without excluding excluded parameters:** At column AI, the number of entries during the Relevant Period is **60,645**, being the "Count" value less 1 to account for the heading. **C. Number of Affected Results during the Relevant Period:** At column AI, the number of Affected Results is **1,007**, being the "Sum" value. **Percentage of total entries during the Relevant Period (without excluding excluded parameters) which were Affected Results:** C/B*100 = **1.66**%.	T8603.19-8604.24

4864 See fn 4856 above for this item.

4865 See next item including fn 4866 below.

Item	Fact	Methodology/calculation	Transcript reference/Source
46.	With the parameters at items 50- 87 excluded, 2.57% (or 1,007) of the 39,148 individual entries contained in the Parameters Data during the Relevant Period were Affected Results (excluding individual parameters that Ryan was instructed to exclude and the parameters at items 50- 87 of page 60291 that the court book operator was instructed to exclude by senior counsel for the Viterra Parties)	Page 60297_0001 ("Data" Sheet) **A. Relevant Period:** Filter column C to show only results after 17 February 2011. **B. Total entries during the Relevant Period after excluding excluded parameters:** Filter column AH to show only the "1"s,[4866] then at column AI, the number of entries during the Relevant Period is **39,148**, being the "Count" value less 1 to account for the heading. **C. Number of Affected Results during the Relevant Period:** At column AI, the number of Affected Results is **1,007**, being the "Sum" value. **Percentage of total entries during the Relevant Period (after excluding excluded parameters) which were Affected Results:** C/B*100 = **2.57%**.	T8604.25-8605.15

[4866] This excluded parameters that Ryan was instructed to exclude by reason of the letters of instruction to Ryan dated 18 June 2019 and 21 June 2019 and parameters that were excluded by the court book operator at the instructions of senior counsel for the Viterra Parties.

Schedule A - Fact 6

List of individual customers

	Customer Name
1	An Loc Phuong Company Ltd
2	Asia Pacific Breweries Singapore PL
3	Asia Pacific Brewery Hanoi Ltd
4	Beer Thai 1991 Public Co Ltd
5	Beer Thip Brewery 1991 Co Ltd
6	Brasserie De Tahiti
7	Cambodia Brewery Limited
8	Cargill Japan Ltd
9	Chen Tai Foods Co Ltd
10	Cosmos Brewery Thailand Co Ltd
11	Dakao Trading and Service Co Ltd
12	DB Breweries Limited
13	EMM LLC
14	Guinness Anchor Berhad
15	Hanoi Beer
16	Hite Brewery Co Ltd
17	Hitejinro Co Ltd
18	Hue Brewery Limited
19	Khon Kaen Brewery Co Ltd
20	Kirin Brewery Company Limited
21	Lao Asia Pacific Breweries Limited
22	Lion Breweries South
23	Long Fong Import Export Co Ltd
24	Lotte Chilsung Beverage Co Ltd
25	Louisiane One Member Company Limite
26	Marubeni Australia Limited
27	Meidiya Company Ltd
28	Millac Foods PVT Ltd
29	Millers Brewery Limited
30	Myawaddy Trading Limited
31	Nestlé Singapore Pte Ltd
32	Nouvelle Brasserie de Madagascar
33	Oriental Brewery Co Ltd
34	Pathumthani Brewery Co Ltd
35	Phoenix Beverages Limited
36	Pt Multi Bintang Indonesia
37	Saigon Beer Alcohol and Beverages

38	San Miguel Beer Thailand Ltd
39	San Miguel Brewery Inc
40	San Miguel Brewery Vietnam Ltd
41	Singha Beverage Co Ltd
42	Solomon Breweries Ltd
43	South Pacific Brewery Limited
44	Sumitomo Corporation Asahi
45	Sumitomo Corporation Kirin
46	Tan Hiep Phat Co Ltd
47	Thai Asia Pacific Brewery Co Ltd
48	Thai Duyen Trading And Transpo
49	Thai Tan Trading and Transport
50	The South Africa Breweries Ltd
51	United Thai Distillers Co Ltd
52	Vanuatu Brewing Limited
53	Vietnam Brewery Limited
