CARGILL AUSTRALIA LIMITED (ACN 004 684 173) Plaintiff

v

VITERRA MALT PTY LTD (ACN 096 519 658) AND OTHERS Defendants

and

CARGILL, INCORPORATED AND OTHERS Third parties

JUDGE:	Elliott J
WHERE HELD:	Melbourne
DATES OF HEARING:	18-21, 25-28 June, 2-5, 9, 10, 16-19, 23-26, 30, 31 July, 1, 2, 6-9, 13-16, 20-23, 27-30 August, 3-7, 10-14, 19-20, 24-27 September, 1, 8-11, 15, 23, 24 October, 19, 21, 22 November, 4, 6, 12, 20 December 2018; 1, 11, February, 15, 18, 21, 29 March, 2, 5, 23 April, 1-3, 6-9, 20, 21, 27, 31 May, 5, 14, 27 June, 15, 16 July, 5-9, 12-16, 19-21 August, 8, 22 November 2019; 26 March, 16 April 2020; 4 March, 14 April, 6, 11 May, 4 June 2021
DATE OF JUDGMENT:	28 January 2022
CASE MAY BE CITED AS:	Cargill Australia Ltd v Viterra Malt Pty Ltd (No 28)
MEDIUM NEUTRAL CITATION:	[2022] VSC 13

MISLEADING OR DECEPTIVE CONDUCT – Sale of malt business – Whether business engaged in inappropriate operational practices before sale agreement and completion of sale – Laboratory analyses of malt sold – Misreporting results – Company policies – Procedures concealed from customers and auditors – Undisclosed misreporting of barley varieties used in malting – Undisclosed use of gibberellic acid in malt production when prohibited by customers – Whether practices engaged in routinely – Statistical analyses – Whether practices underpinned financial and operational performance – Whether practices standard within malting industry – Whether practices not disclosed to buyer – Blind auction sale process – 2 stage process established to create competitive tension between bidders – Confidentiality deed – Information memorandum – Imposed requirements of phase 1 – Indicative bid – Preferred bidders selected for phase 2 – Management presentation – Due diligence – Information provided in data room – Question and answer process – Whether representations made relating to financial and operational information – Whether misleading – Representations after phase 2 concerning bids from competing prospective buyers – Whether misleading – Whether conduct in trade or commerce within Australia or between Australia and places outside Australia – Increase in bid – Acquisition agreement – Whether representations made in same terms as warranties given – Whether misleading – Further representations made after agreement and before completion – Whether misleading.

MISLEADING OR DECEPTIVE CONDUCT – Causation – Representations calculated to induce entry into contract – Counterfactual based on absence of misleading or deceptive conduct – Whether buyer would have entered into contract – Whether buyer would have increased bid – Whether buyer would have completed sale – Whether buyer deprived of opportunity to obtain properly informed legal advice on right to terminate acquisition agreement – Whether buyer would have terminated.

MISLEADING OR DECEPTIVE CONDUCT – Whether conduct deemed to be conduct of corporation – Conduct on behalf of a corporation – Actual or apparent authority – Scope of authority – Whether certain persons acted on behalf of sellers during sale process – Attribution of knowledge – *Competition and Consumer Act 2010* (Cth), s 139B(2).

MISLEADING OR DECEPTIVE CONDUCT – Engaging in conduct – Refraining from doing an act – Whether intention required where conduct constituted by silence – Conduct engaged in – *Competition and Consumer Act 2010* (Cth), s 4(2).

MISLEADING OR DECEPTIVE CONDUCT – Release given before substantive dealings commenced – Effect of disclaimers – Disclaimers including as to accuracy and reliance – Sophisticated, well-advised commercial parties – Large commercial transaction – Freedom of contract – Consideration of English authorities – Whether terms of contract contrary to public policy – Australian Consumer Law – Deceit.

CONTRACT – Breach of warranties – Contractually agreed deemed knowledge – Reasonable enquiries – Effect of limitation clause – Whether warranties to be read down or qualified – Whether records as warranted – Whether data room documentation as warranted – Whether defaults under material contracts – Whether facts capable of giving rise to a claim – Whether business conducted in the ordinary course in a proper and efficient manner – Whether compliance with laws.

CONTRACT – Clauses limiting liability – Sellers not liable for claims if business sold – Proper construction – Effect of clause on contractual claims for breach of warranty – Effect of clause on claims for misleading conduct and deceit.

DECEIT – Whether corporations knew representations untrue, did not genuinely believe representations true, or reckless as to whether representations true or false – Knowledge of a corporation – Attribution of knowledge – Whether knowledge of individual could be attributed to corporation – Aggregation of knowledge.

DECEIT – Further misrepresentations before completion – Whether corporations knew representations untrue, did not genuinely believe representations true, or reckless as to whether representations true or false – Knowledge of a corporation – Attribution of knowledge – Whether knowledge of individual could be attributed to corporation – Whether knowledge of representations made by person with relevant knowledge – Aggregation of knowledge.

LOSS – Applicable principles – Assessment of loss suffered by misleading or deceptive conduct inducing a transaction – Buyer would not have entered into transaction absent misleading or deceptive conduct – Difference between purchase price and "true value" – "Left in hands" approach – Expert evidence – Hypothetical purchaser – Discounted cash flow – Capitalisation of future maintainable earnings – Reasonableness of assumptions underpinning experts' valuation – Relevance of events after sale completed – Australian Consumer Law, s 236.

LOSS – Whether failure to take reasonable care – *Competition and Consumer Act 2010* (Cth), s 137B – Applicability – Whether failure to mitigate loss – Concurrent wrongdoers – Whether loss apportionable – Whether defendants excluded concurrent wrongdoers – *Competition and Consumer Act 2010* (Cth), ss 87CB(1), 87CC(1) – Applicability.

MISLEADING OR DECEPTIVE CONDUCT – Counterclaim – Third party claim – Whether buyer or buyer's parent company made representations by entering into confidentiality deed – Whether buyer made no reliance representations by entering into acquisition agreement – Whether representations relied on by sellers – Whether misleading – Whether loss suffered – Whether sellers to be indemnified by buyer's parent company pursuant to acquisition agreement.

CONTRACT – Enforceability of confidentiality deed – By whom – Against whom.

CONTRACT – Counterclaim – Third party claim – Confidentiality deed – Whether bringing or instituting proceeding in breach – Whether proceeding caused or permitted by buyer's parent company – Whether buyer's reliance on representations in breach – Proper construction of deed of release – Interaction between deed of release and confidentiality deed – Accrued rights, obligations, claims or liabilities – Effect of liability terms in acquisition agreement – Whether certain clauses void or unenforceable as contrary to public policy – Australian Consumer Law – Deceit.

MISLEADING OR DECEPTIVE CONDUCT – Third party claim by sellers against company the subject of the sale – Whether company engaged in relevant conduct – Third party claim by sellers against employees comprising senior management of business sold – Whether representations made by employees to sellers – Whether conduct in trade or commerce – Warranty verification process – Adequacy – Reliance – Whether if informed of existence of certain matters sellers would have taken steps to prevent or mitigate loss.

CONTRACT – Whether employees breached contractual obligations to act ethically and in best interest of employer – Proper construction – Relevance of code of conduct – Whether senior executive breached contractual obligation to act honestly – Causation – Whether loss suffered.

DECLARATORY RELIEF – Whether relief sought beyond issues raised in the proceeding – Whether ought to be granted.

EVIDENCE – Whether failure to call witnesses – Inferences – Plaintiff's employees – Former and current employees engaged in business sold some of whom also third parties to the proceeding – Customers of business sold – Defendants' employees.

EXPERT EVIDENCE – Laboratory analysis of organic product – Limitations of analytical methods – Variability and uncertainty in laboratory analysis – Error – Whether procedure scientifically justifiable decision rule – Whether procedures for reporting results ought to be transparent.

EXPERT EVIDENCE – Whether certain practices standard in malt industry – Expert's misstatement of expertise – Whether opinions expressed based on specialised knowledge – Whether grounds for opinions properly disclosed – *Evidence Act 2008* (Vic), s 79(1).

PRACTICE AND PROCEDURE – Application for parts of statement of claim to be struck out – Whether interference with due administration of justice – *Supreme Court (General Civil Procedure) Rules 2015* (Vic), r 23.02 – *Civil Procedure Act 2010* (Vic), ss 16, 19 – Court's inherent jurisdiction.

TABLE OF CONTENTS

effects of error and uncertainty including by the application of the subjective experience or expertise of the laboratory professionals conducting the measurements?

(5) Recognising the matters set out in (3) and (4) above, a supplier/producer's process for determining whether or not a product complied with contractual specifications such that it can be released to its customer, can include a set of decision-making rules or policies ("a decision rule")?

(6) Uncertainty in laboratory test measurement can be addressed by the application of subjective experience/expertise of a suitably qualified person?

(7) A decision rule can take into account:

(a) inherent limitations on the precision of testing equipment and testing procedures; and

(b) random effects, including natural variability of the material, by reference to industry accepted objective quantification of the magnitude of such uncertainty?

(8) One such objective quantification accepted within the commercial malting industry and the brewing industry is that derived from continuing (corroborative) programs such as the American Society of Brewing Chemists Laboratory Proficiency Testing Scheme and the Maltsters of Great Britain Malt Analytes Proficiency Testing Scheme to incorporate a tolerance of 2 standard deviations to the measurement of measurands in respect of malt?

(9) The Viterra Certificate of Analysis Procedure is an example of a decision rule?

.....715

X.10 Was it the fact that:

(1) Joe White routinely, and without informing customers:

(a) supplied malt to customers that did not comply with contractual requirements and specifications;

(b) supplied Certificates of Analysis to customers that misstated the results of analytical testing on the malt, so that the Certificates of Analysis reported that the malt complied with contractual requirements and specifications when it did not?

(2) The Viterra Practices were partly recorded in and endorsed by the Viterra Policies (being the Viterra Certificate of Analysis Procedure and the Malt Blend Parameters Procedure)?

(3) Joe White's financial and operational performance for the financial year 2010 to part of the financial year 2013 was substantially underpinned by Joe White's practice of supplying malt to customers pursuant to the Viterra Practices and the Viterra Policies that did not comply with the relevant contracts?

(4) But for the Viterra Practices, Joe White could not produce and sell malt in the volumes and to the specifications required by customers and in the volumes and for the returns reflected in the Financial and Operational Information disclosed in the Information Memorandum and during the

DEFINITIONS[1]

DEFINED TERM[2]	**MEANING**[3]	**PAR (OR FN) DEFINED**[4]
15 October Meeting	Meeting held on 15 October 2013	1102
25 October Reply Letter	Letter from Mattiske to Purser dated 25 October 2013	1405
30 October Reply Letter	Letter from Mattiske to Savona dated 30 October 2013	1524
ABB Grain	ABB Grain Ltd	88
Abbot*	Nicholas Abbot, information technology manager at Cargill	2312
Accumulation and Position Margin	Estimated margin available to Joe White if it undertook all barley procurement functions	526
Acquisition	Acquisition under the Acquisition Agreement completed on 31 October 2013	8
Acquisition Agreement	The acquisition agreement between Viterra Malt, Viterra Operations, and Viterra Ltd as Sellers and Cargill Australia as Buyer and Cargill, Inc as Buyer Guarantor	5
Acquisition Agreement Liability Terms	Clauses of the Acquisition Agreement relied upon by the Viterra Parties on questions of liability	2829
Acquisition Integration Review	Document entitled "[Joe White] Acquisition Integration Review" and dated 30 May 2014	1750
Action	Defined in the Acquisition Agreement	1022
Adelaide Malting	Adelaide Malting Co Pty Ltd	87
Administration System	Joe White's accounting software package, which connected with the Laboratory Information System	260
Allan	Max Allan, senior associate, Mallesons	923
Alleged Industry Practices	Practices the Viterra Parties alleged were engaged in by commercial malthouses throughout the world	1860
Alleged Steps	Steps the Viterra Parties alleged they would have taken if they had known of the Viterra Practices	5128
Allens Letter of Advice	Letter of advice from Clark and O'Donahoo dated 17 October 2013	1170
Approved Purpose	Defined in the Confidentiality Deed	586

1 An asterisk after a person's name indicates that person was a witness at the trial.

2 There were also various defined terms in agreements and other documents referred to in these reasons that are not set out here. Further, there are a small number of defined terms that appear in some headings of the issues for determination that are not included in this table as the issues in question were ultimately not raised for adjudication.

3 With respect to individuals, the parties provided an agreed list of persons and descriptions of their positions.

4 If a term is used before it is defined, on the first occasion this occurs a reference to the definition is given, but not otherwise.

Argent	Scott Argent, seventh third party in the proceeding; financial controller, Viterra Feed New Zealand and Joe White; and controller – processing (Australia and New Zealand), Viterra	51
Argent Representations	Representations alleged to have been made by Argent prior to entry into the Acquisition Agreement	4792
Arndt	Brenda Arndt, senior attorney – mergers and acquisitions, Cargill, Inc	471
Asahi	Sumitomo Corporation Asahi	150
Asia Pacific Breweries	Asia Pacific Breweries Group	150
Assumption	Cargill, Inc's assumption that it was entitled to rely upon the accuracy of the financial and operation performance information of the Joe White Business provided by Glencore or Viterra, or both, in the sale process and the Other Bidders Representations	4692
Aubertin*	Jacques Aubertin, partner of Stibbe law firm, called as expert on Belgian law	2030
AusBulk	AusBulk Ltd	87
Australian Consumer Law	*Competition and Consumer Act 2010* (Cth), Schedule 2	1849
Barley Analysis	Analysis of Barley Data undertaken by Ryan	2317
Barley Data	Data extracted from the Laboratory Information System by Abbot relating to barley varieties used by Joe White	2316
Barley Inventory Call	Telephone call on 23 July 2013 between Argent, Viers, Merrill Lynch, Goldman Sachs and others	925
Beer Thai	Beer Thai 1991 Public Co Ltd	1675
Beer Thip	Beer Thip Brewery 1991 Co Ltd	3635
Bias Correction Standard	A standard requiring bias correction to be made uniformly	2211
Bickmore*	Alicia Bickmore, legal counsel, Viterra Ltd	157
Boon Rawd	Boon Rawd Brewery Co Ltd	789
Bowe*	Patrick Bowe Jr, summer associate, strategy & business development, Cargill, Inc	554
Breszee*	Aimee Breszee, Cargill, Inc's technical accounting director	Fn 494
Buyer	Cargill Australia under the Acquisition Agreement	5
Buyer Guarantor	Cargill, Inc under the Acquisition Agreement	5
Cargill	Cargill Australia and Cargill, Inc	5
Cargill 22 October Letter	Letter from Cargill Australia to Viterra dated 22 October 2013	1236
Cargill 29 October Letter	Letter from Cargill Australia to Mattiske dated 29 October 2013	1451

Cargill Australia	Cargill Australia Ltd, the plaintiff and defendant by counterclaim	5[5]
Cargill Blending and Certificate of Analysis Procedure	Cargill, Inc's combined malt blending and certificate of analysis procedure	302
Cargill Code	Cargill, Inc's code of conduct	56
Cargill Covenant	Covenant in Hughes Letter	1868
Cargill, Inc	Cargill, Incorporated, the first third party	5
Cargill Indicative Bid	7 June 2013 non-binding indicative bid of $330–$360 million to acquire Joe White	622
Cargill Japan	Cargill Japan Ltd	2493
Cargill Malt	Cargill, Inc's malt business unit	297
Cargill Parties	Collectively, Cargill Australia, Cargill, Inc and Joe White	5
Certificates of Analysis	Certificates stating the results of analytical testing accompanying malt	24
Christianson	Joseph Christianson, global merchandising & risk manager, Cargill Malt	563
Chubb	Vern Chubb, property services manager, Viterra	4964
Claim	Defined in the Acquisition Agreement and the Deed of Release (see context for relevant meaning)	1022, 1553
Clark*	(Matthew) Marcus Clark, partner – mergers and acquisitions, Allens	952
Commercial Call	Telephone call on 19 July 2013 between Hughes, Eden, Merrill Lynch, Goldman Sachs and others	910
Commercial Call Statements	Statements made by Glencore and Viterra during the Commercial Call	2165
Common Synergies	Synergies available to all market participants	4165
Competitiveness Representation	Representation to Cargill that there were other bids close to the First Final Bid	3777
Complete	Defined in the Acquisition Agreement	1022
Completion	Defined in the Acquisition Agreement	1022
Completion Date	Defined in the Acquisition Agreement	1022
Confidential Information	Defined in the Confidentiality Deed	586
Confidentiality Deed	Deed of confidentiality between Cargill, Inc and Glencore	459, 462, 585, 1022
Confidentiality Deed Representations	The alleged representations by Cargill to Glencore and Viterra that Cargill would rely solely on its own investigations and analysis and not rely on Confidential Information in evaluating a possible Joe White acquisition	4730
Confidentiality Deed Terms	Various terms contained in the Confidentiality Deed alleged by the Viterra	2187

5 But see also par 1880 below.

	Parties to form part of the Sale Process Disclaimers	
Confidentiality Obligations	The obligations of confidentiality set out in the Hughes/Cargill Agreement in clauses 5 and 6	1890
Conformity Assessment Criteria	The 4 criteria, as set out by Hibbert, outlining best practice when applying a Decision Rule	2227
Control	Defined in the Acquisition Agreement	1022
Conway*	Paul Conway, corporate vice president, Cargill, Inc; and member of Cargill leadership team	300
Co-Operative Bulk	Co-Operative Bulk Handling Pty Ltd	89
Co-Operative Bulk Agreement	The agreement between Joe White and Co-Operative Bulk for grain storage and handling services in Western Australia	89
Coopers	Coopers Brewery Ltd	50
Customer Review Spreadsheet	The spreadsheet detailing Joe White's ability to fully meet all customer requirements prepared by Stewart	1211
Data Books	Financial data books containing historical information concerning the Joe White Business	678
Data Room	Virtual data room created for the sale of the Joe White Business	465
Data Room Documentation	Defined in the Acquisition Agreement	1022
Data Room Protocol	Protocol for access to the Data Room	650
Data Room Protocol Terms	Various terms contained in the Data Room Protocol alleged by the Viterra Parties to form part of the Sale Process Disclaimers	2198
Data Room Statements	Statements identified in the Statement of Claim, to the general effect that Joe White's historical and forecast future operational and financial performance was as set out in the Information Memorandum, and that Joe White's earnings platform was supported by its long-term customer contracts	3577
Decision Rule	A tool used in assessing whether or not a product or material complied with specifications	2208
Deed of Release	Deed of release relating to the Confidentiality Deed	1552
Defence	The Viterra Parties' defence and further amended counterclaim	1850
De Gelder	Ronald de Gelder, trader, Glencore	363
Deloitte	Deloitte Financial Advisory Services LLP	367
De Samblanx*	Steven De Samblanx, head of malt operations manager Europe, Cargill Malt; and Project Hawk team member	302

Deviation Analysis	Further analysis undertaken by Ryan to ascertain the extent to which the adjustments identified in the Parameter Analysis were within or beyond 2 standard deviations of the customer's specification	2360
Dickie	Robert Dickie, marketing manager, Joe White	1210
Discloser	Defined in the Confidentiality Deed (but also defined in the Information Memorandum and the Management Presentation Memorandum)	585 (475, 711)
Disclosure Material	Defined in the Acquisition Agreement	1022
Disputed Issues	Issues raised with Independent Experts	3908
Doderer	Dr Albert Doderer, Heineken's principal scientist	1585
Dom Box Seller	Viterra Ltd under the Acquisition Agreement	1020
Dom Boxes	Defined in the Acquisition Agreement	1022
Due Diligence	Defined in the Acquisition Agreement	1022
Eden*	Doug Eden, president, business unit leader, malt, Cargill, Inc; and Prairie Malt Ltd board member	212
Engle*	Ryan Engle, assistant vice president, strategy & business development, Cargill, Inc; and Project Hawk team member	471
Equal to or Better Bids Representation	Representation that bids had been received equal to or higher than the First Final Bid	3777
Eurachem/International Guide	A document referred to and endorsed by Hibbert, outlining measurement uncertainty practices in the field of chemistry	2226
Eurachem/International Standards	The 4 recommendations endorsed by Hibbert in respect of measurement uncertainty as set out in the Eurachem/International Guide	2226
Evans*	Jonathon Evans, barley trader, Glencore Grain	377
Evers*	Matthew Evers, reliability excellence leader, Cargill, Inc	1611
Existing Deed	Confidentiality Deed as defined in the Deed of Release	1553
Financial and Operational Information	Information regarding Joe White's financial and operations performance for the financial year 2010 to 2013 as disclosed in the Information Memorandum and during the Due Diligence	1851
Financial and Operational Performance Representations	Representations made about the financial and operational performance of Joe White	2826
First Confidentiality Deed Representation	Alleged representation that Cargill, Inc and Cargill Australia would rely solely on their own investigations and analysis in evaluating a possible Joe White acquisition	4730(1)

First Final Bid	Cargill's bid for Joe White of $405 million dated 29 July 2013	976
First Further Bid Call	Phone call between Mahoney and Koenig on 2 August 2013	1004
Fitzgerald	Damian Fitzgerald, director legal (Australia and New Zealand), Viterra and Glencore Grain; secretary, Glencore Grain Holdings Australia Pty Ltd (now Glencore Agriculture Pty Ltd), Glencore Grain Pty Ltd, Viterra Ltd, Viterra Malt, Viterra Operations, former company secretary of Viterra and Joe White	114
Forsythe	Matthew Forsythe, safety, health and environment business partner, processing malt division, Viterra and Joe White	669
French*	Bruce French, witness called as malting industry expert	2748
Further Bid Calls	Collectively, the First Further Bid Call and the Second Further Bid Call	3778
Further Payment	A further payment under the Hughes/Cargill Agreement	1885
Gibberellic Acid Practice	The practice of using gibberellic acid in the production of malt despite it being prohibited by a customer, and not disclosing the fact to the customer	42
Glasenberg	Ivan Glasenberg, Glencore's chief executive officer	766
Glencore	Glencore International AG, the fourth defendant	9
Glencore Agriculture	Glencore Agriculture BV	100
Glencore Grain	Glencore Grain Pty Ltd	97
Gordon	Robert Gordon, president for Southeast Asia and senior vice president, Viterra Ltd; managing director, Viterra Ltd; chief executive officer, Viterra Ltd; and former director, Viterra Ltd and Viterra Operations	108
HABECO	Hanoi Beer Alcohol and Beverage Joint Stock Corporation	1681
Hannon*	Andrew Hannon, country operations manager of storage and handling, Viterra Ltd	125
Hawthorne*	Peter Hawthorne, vice president, corporate strategy & development, Cargill, Inc; and Project Hawk team member	431
Hermus	Ruud Hermus, quality manager, Cargill, Inc	302
Hertrich*	Joseph Hertrich, witness called as an expert brewer	2135
Hibbert*	Professor David Brynn Hibbert, emeritus professor in analytical chemistry called as an expert on analytical chemistry	2201

Hibbert Report	Expert report produced by Hibbert, dated 3 May 2019, and relied upon by the Viterra Parties	2201
Hite	Hite Brewery Co Ltd	1676
Hughes	Gary Hughes, third third party in the proceeding; executive manager, Viterra Malt; and director and executive manager, Joe White; and former director, Viterra Ltd, Viterra Malt, Viterra Operations, Joe White	47
Hughes/Cargill Agreement	The agreement entitled "Separation and Release" between Cargill Australia and Hughes on 25 June 2014	1867
Hughes Letter	Letter sent by Eden, on behalf of Cargill Australia, to Hughes on 9 July 2014	1868
Hughes Representations	Representations alleged to have been made by Hughes prior to entry into the Acquisition Agreement	4792
Hughes/Viterra Contract	The contract of service between Viterra Ltd and Hughes effective from 1 November 2009	188
Independent Expert	Expert appointed to determine Disputed Issues	3908
Independent Expert's Determination	Determination of Disputed Issues	3908

Information Memorandum	The document entitled "Joe White Maltings Information Presentation May 2013"	470
Information Memorandum Disclaimers	Disclaimers made by Glencore and Viterra in the Information Memorandum alleged by the Viterra Parties to form part of the Sale Process Disclaimers	2147
Information Memorandum Statements	Statements made by Glencore and Viterra in the Information Memorandum	2146
ISO Standards	Defined in the Acquisition Agreement	1034
Jewison*	Lisa Jewison, business unit controller, malt, Cargill, Inc; and Project Hawk team member	441
Joe White	Joe White Maltings Pty Ltd[6]	4
Joe White Business	The business conducted by Joe White	8
Joe White Executives' Representations	The Hughes Representations, the Youil Representations, the Wicks Representations, the Stewart Representations and the Argent Representations collectively	4792
Jones*	Lucas Jones, production plant & barley manager, Joe White	129
Key Recommendations Memorandum	Memorandum dated 21 October 2013 from Stewart	1210
King*	Ian King, corporate finance director, business analyst, Glencore	109

6 But see also fn 13 below.

Kirin	Kirin Brewery Company Ltd	1224
Klaeijsen	Bram Klaeijsen, regional director, corporate centre, Cargill	710
Klein*	Gordon Klein, 1 of the 2 loss experts called by Cargill Australia	3946
Koenig*	Emery Koenig, chief risk officer and board member, Cargill, Inc; member of the Cargill leadership team	343
Laboratory Information System	Joe White's laboratory information and management system	255
Land Seller	Viterra Operations under the Acquisition Agreement	1020
Last Balance Sheet Date	Defined in the Acquisition Agreement	1022
Law	Defined in the Acquisition Agreement	1022
Le Binh*	Khai Le Binh, project team leader, strategy & business development, Cargill, Inc; and Project Hawk team member	472
Leave Payment	Hughes' entitlement to payment under the Hughes/Cargill Agreement	1885
Liabilities	Defined in the Acquisition Agreement	1022
Liability	Defined in the Acquisition Agreement	1022
Lindner*	Kate Lindner, senior associate, Mallesons	616
Loss	Defined in the Confidentiality Deed and the Acquisition Agreement (see context for relevant meaning)	588, 1022
Lotte	Lotte Chilsung Beverage Co Ltd	1811
MacLennan	David MacLennan, chairman and chief executive officer, Cargill, Inc; member of the Cargill leadership team	963
Mahoney	Chris Mahoney, chief executive officer, Glencore Agriculture, director of agricultural products division, Glencore	100
Malecha	Fran Malecha, Viterra's chief operating officer	142
Mallesons	King & Wood Mallesons	367
Malt Assets	Defined in the Acquisition Agreement	1022
Malt Blend Parameters Procedure	Procedure developed by Joe White in around 2006, updated from time to time and formed part of Viterra's records	90, 227, 229, 249, 277
Malt Cost Reduction Transformation Project	The formalised business plan for the transformation project recorded in the Viterra presentation dated 5 August 2010 and entitled "[Australia New Zealand] Transformation Project – Malt Cost Reduction"	136
Malt Operations Update Presentation	The presentation prepared by Youil and delivered to Van Lierde on or around 22 May 2014	1722

Malt Proficiency Scheme	The malt analysis proficiency testing scheme to assess proficiency of laboratories	175
Management Presentation	Oral presentation delivered on 26 June 2013	708
Management Presentation Memorandum	Written presentation entitled "Joe White Maltings Management Presentation" delivered on 26 June 2013	711
Management Presentation Memorandum Disclaimers	Disclaimers made by Glencore and Viterra in the Management Presentation Memorandum alleged by the Viterra Parties to form part of the Sale Process Disclaimers	2186
Management Presentation Statements	Statements made by Glencore and Viterra during the Management Presentation	2168
Mann	Matthew Mann, general manager of safety, health and the environment, Viterra and Glencore Grain	942
MaPPS	Cargill's malt plant production system	304
Material Contract	Defined in the Acquisition Agreement	1022
Mattiske*	David Mattiske, regional director, Glencore Agriculture; former managing director (Australia and New Zealand), Glencore Grain; and former director, Viterra Ltd, Viterra Malt, Viterra Operations and Joe White	97
Maw	James Maw, head of the grain trading business, Glencore; and managing director, Glencore Agriculture UK Ltd	375
McIntyre*	Laura McIntyre, customer service administrator, Joe White	74
McMeekin	Peter McMeekin, Viterra barley trader	Fn 115
Meredith*	Greg Meredith, 1 of the 2 loss experts called by Cargill Australia	3946
Merrill Lynch	Bank of America Merrill Lynch	103
Moller	Naomi Moller, technical centre chemist, Viterra Ltd (and Joe White)	160
Mostert	Ernest Mostert, chief financial officer, Glencore Agriculture; director, Glencore Grain Holdings Australia Pty Ltd, Glencore Grain, Viterra Ltd, Viterra Malt, Viterra Operations; and former director, Glencore Australia Holdings Pty Ltd and Joe White	363
Necessity Representation	Representation Cargill needed to pay extra $15 million	3777
Nestlé	Nestlé Singapore Pte Ltd	252
No Discretion Standard	Standard involving acceptance and rejection zones with no discretion	2218
Non-Disparagement Obligation	The non-disparagement obligation set out in clause 7 of the Hughes/Cargill Agreement	1895

Norman	Benjamin Norman, director of human resources Australia and New Zealand, Glencore Grain and Viterra	359
October 2013 Responses	Responses to Cargill's queries concerning the Operational Practices	3283
O'Donahoo	Peter O'Donahoo, partner, Allens	1170
Okoroegbe	Chris Okoroegbe, senior lawyer, Cargill, Inc	1170
Operational Practices	Collectively, the Reporting Practice, the Varieties Practice, and the Gibberellic Acid Practice	43
Operations Call	Telephone call on 18 July 2013 between Hughes, Youil, De Samblanx, Merrill Lynch and Goldman Sachs	865
Operations Call Statements	Statements made by Glencore and Viterra during the Operations Call	2149
Operations Spreadsheet	Spreadsheet created by De Samblanx as part of the Due Diligence	771
Oriental Brewery	Oriental Brewery Co Ltd	79
Other Bidders Representations	Collectively, the Equal to or Better Bids Representation, the Competitiveness Representation and the Necessity Representation	3777

Thai Duyen	Thai Duyen Trading and Transpo	2522
Third Party Claim	Third party statement of claim filed by the Viterra Parties	1850
Third Party Individuals	Executives of Joe White at the time of the Acquisition against whom the Viterra Parties have issued third party claims	46
Tilleman*	Filip Tilleman, partner of Tilleman van Hoogenbemt, called as expert on Belgian law	2014
Tracking Sheet	The spreadsheet entitled "Project Hawk … Due Diligence Tracking Sheet: Questions and Issues (cannot be solved by additional questions)" used for logging Cargill's queries during the Due Diligence	931
Transaction	Defined in the Confidentiality Deed	588
Transaction Documents	Defined in the Acquisition Agreement	1022
Turnbull	Trevor Turnbull, general manager – engineering, Joe White	789
Unadjusted Earnings	Earnings before interest, tax, depreciation and amortisation (unless stated to be earnings before interest and tax only)	492
Undisclosed Matters	Matters that Cargill Australia alleged were not disclosed in the Information Memorandum or during the Due Diligence	1851
Unique Synergies	Synergies available to a specific or only some market participants	4165
Van Lierde*	Frank Van Lierde, executive vice president, Cargill, Inc	300
Varieties Practice	The practice of using barley varieties other than the required barley varieties without disclosing the fact to the customer	39
Viers*	Marc Viers, enterprise risk manager (food ingredient and bio-industrial enterprise), Cargill, Inc; global commercial manager, Cargill Malt; Project Hawk team member; Prairie Malt Ltd board member; and former integration manager, Joe White	332

Vinken*	Steven Vinken, Cargill, Inc's human resources market leader for Belgium and France	2014
Viterra	Collectively, Viterra Malt, Viterra Operations and Viterra Ltd	9
Viterra Certificate of Analysis Procedure	Certificate of Analysis procedure which formed part of Viterra's records	199, 280
Viterra Code	Viterra Inc's code of business conduct	58
Viterra Ltd	Viterra Ltd, the third defendant	5
Viterra Malt	Viterra Malt Pty Ltd, the first defendant	5
Viterra Operations	Viterra Operations Ltd, the second defendant	5
Viterra Parties	Collectively, Viterra Malt, Viterra Operations, Viterra Ltd and Glencore	9
Viterra Policies	The Viterra Certificate of Analysis Procedure and the Malt Blend Parameters Procedure	1851
Viterra Practices	Practices of routinely, and without informing customers, supplying: malt to customers, which was not compliant with contractual requirements and specifications; and Certificates of Analysis to customers that misstated results of analytical testing on malt such that the certificates reported incorrectly that the malt was compliant with contractual requirements and specifications	1851
Walt	Markus Walt, head of business development, Glencore; and former corporate finance team member, Glencore	112
Warranties	Defined in the Acquisition Agreement	1022
Warranty	Defined in the Acquisition Agreement	1022
Warranty Representations	Representations made and forming part of the Warranties (as defined)	3739
Wicks	Robert Wicks, fifth third party in the proceeding; and general manager – commercial, Viterra Malt	49
Wicks Representations	Representations alleged to have been made by Wicks prior to entry into the Acquisition Agreement	4792
Wilson*	Jonathan Wilson, general manager – logistics and commercial relations, Viterra Operations; and manager of barley and oilseeds, Viterra Merchandising	118
Wilson-Smith*	Joshua Wilson-Smith, legal counsel, Viterra Ltd	615
Woodburn	Kim Woodburn, general plant operations lead, grain and oilseeds supply chain Australia	744

Youil	Peter Youil, fourth third party in the proceeding; and general manager operations, malt, Viterra Ltd and Joe White	48
Youil Representations	Representations alleged to have been made by Youil prior to entry into the Acquisition Agreement	4792
Zampin	Cheryl Zampin, client human resource manager, Cargill Australia	1903

HIS HONOUR:

A. Introduction

A.1 A precious stone?

1 A popular song of the early 1990s referred to fields of barley as fields of gold. This case concerned a business producing malt from Australian barley fields. The business was acquired by a well-established malting industry participant. Based on its assessment of the value of the business and its ability to perform, it was anticipated ownership of the business would result in substantial benefits being reaped, including as part of an existing global operation. Indeed, leading up to the purchase of the business, it was referred to prospectively as the crown jewel in a string of pearls.

2 Very broadly, this litigation arose because the business fell short of the purchaser's assessment of its value and capacity. It claimed it was misled in making the assessment that it did. The misleading conduct was denied by the defendants, who alleged that their conduct was not causative of any loss in any event. It has been found they were wrong on both counts.

3 Further, shortly before completing the sale, the defendants were invited to disclose the true state of affairs concerning the business. In response, they chose to take the risk of not providing relevant information, fully appreciating that such an approach may give rise to claims against them. In essence, these reasons address the consequences of that approach.[8]

A.2 The main transaction and the main parties

4 The second third party, Joe White Maltings Pty Ltd ("Joe White"),[9] was founded in Ballarat, Victoria, in 1858. Its operations expanded over time until it became the largest maltster in the Asia-Pacific region. In 2013, Joe White's head office was in Adelaide.

---

8 For a more detailed summary, see pars 5332-5342 below.

9 Joe White subsequently became known as Cargill Malt Asia Pacific Pty Ltd.

5 On 4 August 2013, the plaintiff, Cargill Australia Ltd ("Cargill Australia"), agreed to purchase all the shares in Joe White and some additional assets used by Joe White for the sum of $420 million.[10] This was done pursuant to an agreement ("the Acquisition Agreement") between 3 of the defendants, Viterra Malt Pty Ltd ("Viterra Malt"), Viterra Operations Ltd ("Viterra Operations") and Viterra Ltd[11] (as "Sellers"), and Cargill Australia (as "Buyer") and the first third party, Cargill, Incorporated ("Cargill, Inc") (as "Buyer Guarantor").

6 Cargill, Inc is the ultimate holding company of Cargill Australia. It was established in 1865. Cargill, Inc is based in Minneapolis, Minnesota. It is a global supplier of food products. As at 31 August 2012, it had approximately 142,000 employees located in 65 countries.

7 In this judgment, Cargill Australia, Cargill, Inc and Joe White are referred to collectively as "the Cargill Parties". Cargill Australia and Cargill, Inc are referred to collectively as "Cargill".[12]

8 The Acquisition Agreement was completed on 31 October 2013 ("the Acquisition"), and Cargill Australia purchased all the issued shares in Joe White from Viterra Malt, together with assets used by Joe White from Viterra Operations and Viterra Ltd. The following day it took over control of the operations of the malt business ("the Joe White Business").[13]

9 The defendants (collectively, "the Viterra Parties") are related companies. Viterra Malt is wholly owned by Viterra Operations, which is wholly owned by Viterra Ltd

---

10 All references to dollar amounts in these reasons by means of the symbol "$" are references to Australian dollars unless expressly indicated otherwise.

11 Viterra Ltd is now known as Viterra Pty Ltd.

12 In some documents as referred to below, "Cargill" is used, and may have a different meaning depending on the context. Further, "Cargill" is used in these reasons where it was unclear as to whether the evidence was referring to Cargill Australia or Cargill, Inc, or both.

13 For the avoidance of doubt, the use of the term "the Joe White Business" encompasses the malt business that was also referred to as "Viterra Malt" while owned by Viterra. Equally, when "Joe White" is used to describe matters related to the Joe White Business (such as Joe White executives or Joe White general manager), the use of "Joe White" encompasses "Viterra Malt" to the extent the evidence reflected both descriptions were applicable (which was almost invariably the position from late 2009 to 31 October 2013).

(collectively, "Viterra" or "the Sellers"). Viterra Ltd is wholly owned by the fourth defendant, Glencore International AG ("Glencore"). Glencore acquired the "Viterra Group", and thereby each of the Sellers and Joe White, on 17 December 2012.[14] Viterra's core business in Australia was the logistics of the storage and handling of grain, including a trading division. Broadly, Viterra in Australia and New Zealand consisted of 4 business units: operations; agriproducts; malt, being the Joe White Business; and "New Zealand". Each business unit had an executive manager and a financial controller.[15]

10 There are many issues for determination. Most of them stem from conduct engaged in before 1 November 2013, in relation to the manner in which the Joe White Business produced and sold malt.

A.3 The production of malt from barley

11 Malt is germinated grain. It is necessary to understand a little about barley and the production of malt to comprehend the nature of some of the key issues in this proceeding.

12 Essentially there are 3 steps to be taken in producing malt: steeping, germination and kilning.[16] Steeping involves introducing moisture to cleaned barley over the period of approximately 1 day to get the hydration up from its natural level (in Australia around 11 percent) to around 40 to 45 percent.[17] This allows the barley to germinate. Germination occurs much as it would naturally, giving rise to a biochemical transformation and allowing enzymes to develop.[18] Kilning introduces heat to stop

---

14 To be clear, Glencore holds the shares in Viterra Ltd, which holds the shares in Viterra Operations, which holds the shares in Viterra Malt. Viterra Malt held the shares in Joe White immediately before the Acquisition.

15 Viterra and Joe White shared the same address in Adelaide, though they operated out of separate adjacent buildings.

16 A Cargill document referred more extensively to the steps involved in the following terms: barley origination, receiving, steeping, germination, kilning, blending and shipping. With respect to receiving, this usually involved inspecting and testing the barley, including for levels of protein, moisture, foreign matter, chemical odours and fungal infections.

17 Barley is submerged in water under aeration, air-rested, and then resubmerged.

18 There are 3 types of modifications in this transformation, proteolytical modification (concerned with modification of proteins), cytolytic modification (concerned with the physical modification of the cell

the germination process from continuing. By this process, the malt is dried, further modification of the grain ceases and a stable product is created.[19] By the means of germination and kilning, enzymes are developed and proteins are broken down to the desired levels. These steps may involve constant adjustments according to the natural variations in each batch of barley and the prevailing conditions. During the kilning stage, moisture content is reduced to about 5 percent, resulting in the development of malt flavour and colour. The malt is then cleaned and stored.

13 Purchasers of malt often stipulate that malt supplied have certain characteristics, which may be rigid and mandatory, or have a level of tolerance (depending on the terms of the particular supply contract). The characteristics stipulated, usually referred to as specifications, may refer to various attributes of the malt, and may or may not include the variety or varieties of barley to be used, or whether particular additives are permitted.[20] If required to meet a customer's specifications, the malt is blended with other batches to produce the product as ordered.[21] In order to successfully blend 2 or more batches, the batches must not be too divergent in characteristics, otherwise problems can arise subsequently in the customer's process.

14 Barley is not homogenous, and is subject to variation from year to year and also within the same crop. Further, there are numerous varieties of barley, possessing different qualities and characteristics. For some brewers a particular barley variety or specific blend of barley varieties is important.

15 The approval regime for accreditation of barley as malting barley is overseen by Barley Australia. Barley Australia is an industry body, being an association of member companies. Industry accreditation of new malting varieties may take up to 2 years.

---

walls in the grain) and amylolytical modification (which relates to starch). Beyond referring to a model that was tendered setting out the relationship between these modifications and how customer specifications are sought to be achieved, it is unnecessary to go into further detail.

19 Relative to its previous state; malt will deteriorate after an extended period of time. See further pars 21, 34 below.

20 This is discussed in more detail below: see pars 14-24 below.

21 This is usually required, as it is rare that a particular batch will meet a customer's specifications without some blending.

Securing customer specifications for any approved new varieties may take even longer.[22] In contrast to malting barley, feed barley is generally considered less suitable for malt production, and it is usually used to feed livestock. It is ordinarily stored differently by grain traders; in bunkers on the ground covered by tarpaulins instead of the vertical silos used for malting barley. However, feed barley can, of itself, or in combination with malt grade barley, be used to produce malt.[23] Further, feed barley is cheaper than malt grade barley; how much cheaper varies from time to time, depending on market forces.

16 Furthermore, malting barley is classified into grades, from malt 1, being the highest grade, to malt 2 and malt 3. These grades are considered superior to feed grade barley.[24] Each of the malt 1, 2 and 3 grades of barley are approved as being of a quality appropriate for producing malt. When compared with malt 1, producing malt using malt 2 barley usually results in greater processing time and loss of end volume.[25]

17 There are at least 20 varieties of barley grown in Australia,[26] and more elsewhere. With very limited exceptions,[27] barley varieties are specific to location and varieties grown differ between geographical locations. Australian barley varieties are unique to Australia. Common varieties in Australia in 2013 included Gairdner, Buloke and Commander. Further varieties are developed on an ongoing basis, with the varieties grown determined by individual growers. The differing characteristics of barley varieties include growing strengths, harvest volumes, grain size, germination vigour, and protein and enzyme levels. Each barley variety has unique attributes after

---

22 Growers may choose to adopt new varieties before or after accreditation, which may affect the supply and prices of older accredited varieties.

23 Indeed, the evidence of Douglas Stewart (see par 50 below) was that around 2.5 million tonnes of feed grade barley was exported from Australia every year to China (the biggest beer producing nation in the world) to make beer. The evidence suggested any barley was capable of producing malt as long as it was "alive".

24 Grain Trade Australia publishes a set of standards that are used as guidelines to determine how a particular load of barley is graded. Grain traders have developed their own classifications and names, which are in addition to the Grain Trade Australia classifications and do not replace them.

25 As a matter of practice, Viterra generally graded barley as malt 1 or malt 2, and if the barley did not achieve those standards it was segregated as feed barley.

26 There was some evidence that, in 2013, there were around a dozen varieties. Some barley varieties had different names depending on which State they were grown in, even though they were the same variety.

27 These related to Europe and North America and were not relevant.

malting. Further, most barley varieties accredited for malting are highly fermentable.

18 This is particularly important for overseas brewers, who generally prefer malt with high enzyme levels and fermentability, because they use rice or maize in the brewing process (both of which have their own starch that needs to be broken down into sugars for fermenting). In contrast, domestic brewers prefer malt from barley with low enzyme levels and fermentability (because they use cane sugar in the brewing process). In any event, the barley variety or blends of barley varieties chosen by a brewer are generally considered important to the brewer.[28] Further, some brewers select barley varieties for reasons not always obvious to the malt supplier, including flavour. That said, there are some brewers who place a higher value on specification compliance than on the precise barley variety used.

19 Parcels of barley are graded according to quality. Grading is undertaken at the time a grower delivers grain. Some barley may be accorded a lower grade while still having desirable performance characteristics. Lower grades attract lower prices. Further, not only will higher grades command higher prices, but premium varieties may also attract higher prices.

20 The terms "off-grade" and "off-spec" are commonly used in the barley industry. Any malt that is not malt 1 is generally referred to as off-grade. The term off-spec may include off-grade barley and the terms are sometimes used interchangeably.[29] However, the terms are not synonyms. Barley may be off-grade but still within specification. Further, barley may be malt 1 (that is, not off-grade), but be out of specification.[30] The terms off-grade or off-spec are not used to refer to feed barley.

21 As for malt, it is an organic substance that is in a constant state of flux. Testing the various characteristics of the same malt at different times, or even different samples

---

28 This was 1 of a number of propositions agreed to by the industry experts called to give evidence. Most brewers "test brew" barley varieties prior to adding to a specification for a malt supply contract.

29 In the grain trade, it seems they are often used interchangeably. According to 1 witness, in grain trading both terms are used to describe barley that is not malt 1. But this use of the terms did not reflect how those terms were used by other witnesses.

30 See further par 23 below.

of the same malt at the same time and within the same batch, can produce different test results. When tested, each characteristic or substance the subject of such testing is referred to as an analyte.[31]

22 Purchasers usually require the specifications of the malt supplied to be reported by the producer. In identifying the specifications they require to be met, customers may stipulate a specific figure for a specific result, or may impose their requirements by means of figures which identify the range within which the result must be achieved.

23 The specifications identified by any given customer may be numerous. Specifications may include both analytical parameters and processing details. They may include the type of barley to be used or even the crop year of the barley. However, the evidence suggested that usually a customer's specifications do not include the particular grade of barley to be used.[32] In other words, ordinarily the obligation on Joe White was to meet the specifications regardless of whether malt 1 grade barley was used or some lesser grade. That said, the lower the grade of barley used in producing the malt, the more difficult it may be to achieve the required specifications. Equally, the mere fact that malt 1 barley is used does not ensure the particular specifications in question may be met.

24 The specifications of the malt are recorded on a certificate ("Certificate of Analysis"), which is provided to the customer around the time the malt is supplied. Joe White's customers typically identified specifications for around 15 to 25 parameters.[33] In

---

31 Throughout the trial the words analyte and parameter were used interchangeably.

32 But see par 156 below, and the reference to Joe White inaccurately reporting that malt-grade barley was being used.

33 The parameters that Joe White's customers overall required to be reported included the following: moisture; colour; protein (both soluble and total protein); extract percentage (being the percentage of fermentable sugars that are available in the malt); viscosity; diastatic power (being the enzymatic power of the malt reflecting its ability to break down starches into simpler fermentable sugars); wort betaglucan (being enzymes available to break down the cell walls); friability; speed of filtration; fermentability; alpha and beta amylase; clarity; Carlsberg plate (involving using a fluorescent light to review a cross-section of the malt to determine the extent to which enzymes have broken down); free amino nitrogen; assortment of size; dimethyl sulphide; broken and burnt kernels percentage; dust percentage; foreign seeds; hectolitre weight; insects; mould; acrospire length (being the root of the barley, which germinates and increases in length during the malting process); nitrosodimethylamine (which is a carcinogen); pH; saccharification time (being the time it took starch to be converted to simple sugars); and betaglucanase.

addition to some customers having specifications which identified a specific numerical result to be met and others including a range,[34] others still would have schemes for tolerances and compensation for non-compliance with some parameters. That said, many of Joe White's customers took the more strict approach.[35] Further, customers often specified the variety to be used, or more typically several acceptable varieties. Some Joe White customers analysed malt upon its receipt; many did not.[36]

B. The difference between theoretical blend analysis and actual analysis

25 There are different means of testing and reporting the malt delivered. Much was made in this case of the contrast between 2 different approaches adopted.

26 Cargill, Inc and its subsidiaries often, but not always,[37] used a principal method of analysis known as theoretical blend. It was the results from this analysis that were generally reported to Cargill, Inc's customers. Up to 31 October 2013, Joe White tested for the actual results of the malt specifications, as well as using the theoretical blend method.

27 To elaborate, the theoretical blend approach involves analysis of the constituent batches used in the blending of different batches of malt. As each separate batch is produced, it is sampled when transferred to a silo. The representative sample is fully analysed for all analytical specifications.[38] When malt is delivered to a customer from 2 or more batches, the weighted average for the analytical parameters is calculated.

28 By way of simple example, if a delivery consists of a blend of 2 batches of malt in equal amounts, the first with a moisture content of 4.1 and the second with a moisture content of 4.5, the weighted average of the moisture would be 4.3; this would then be reported in the Certificate of Analysis as the moisture content. In other words, what is reported in the Certificate of Analysis is the result of a mathematical calculation

---

34 Thereby incorporating tolerance levels, rather than requiring a single specified result.

35 The Cargill Parties tendered 178 customer contracts for export customers for the period from 1 January 2010 to 31 October 2013. Only Thai Beverages made provision in some of its contracts permitting tolerances for specifications.

36 This is discussed in more detail at pars 150-153 below.

37 See par 313 below.

38 But see par 261 below with respect to Joe White's process before 1 November 2013.

from the previous separate analyses, rather than the actual result from a test of the batch as delivered.

29 A theoretical blend may include not only the blend of individual production batches, but also the blending of malt that has already been blended, effectively producing a blend upon a blend.

30 Further, as part of Cargill's theoretical blend process, adjustments could be made to reported results in accordance with any deviation between a customer's laboratory and Cargill's laboratory,[39] but "only in transparency with the customer". If this arrangement was agreed to, then it was a requirement that such adjustments for the relevant parameter or parameters should take place for all theoretical blends made for that particular customer.

31 If there was a single component of a blend to be delivered to a customer where the analytical parameter was unknown, then it could not be used as part of the theoretical blend process.[40]

32 Cargill considered the theoretical blend approach to be satisfactory. A contrary view was expressed by a witness (who was a former Joe White employee) who described it as a very inaccurate approach.[41] Expert evidence was led on the issue of its efficacy.

33 Broadly speaking, the alternative approach to theoretical blend is to test the malt actually produced (sometimes referred to as "wet chemistry") to ascertain the specifications after production, but before delivery to the customer. In adopting this approach, a sample or samples are taken from the malt, analysed in a laboratory promptly and then the results of those tests are available to be recorded on a Certificate of Analysis.[42] This approach is not mutually exclusive of the theoretical

---

39 In other words, if the customer indicated it was reporting a different result to Cargill, Cargill might then agree with the customer to adjust its recording of results to accord with the customer's readings.

40 See further pars 302-309 below.

41 But also see par 1587 below.

42 Joe White had laboratories at each of its plants, except Devonport in Tasmania and Cavan in South Australia. In addition, Joe White had a central laboratory in Adelaide, which was also used for research and development as well as more complicated testing. For a more detailed discussion of the testing

blend approach.[43] On the contrary, in seeking to arrive at the correct specifications, a theoretical blend calculation may precede any actual analysis after production.[44]

34 This method is also not without difficulty. The analysis involved testing the malt itself, rather than seeking to identify the specifications based on a mathematical calculation from earlier batches. Therefore it would seem more likely to produce results that would reflect a truer position of the characteristic as represented by the analyte when compared to the results ascertained from the theoretical blend analysis.[45] However, there could be real issues about the analyte's composition when compared with the rest of the batch.[46] Results could differ, depending on the parameter being tested and from where in the malt a sample was taken. Further, taking multiple representative samples did not eradicate the inherent uncertainty in this method as the results of samples may vary.[47] Furthermore, the results may not be static, in the sense that the qualities of the malt could vary with time. Moreover, some parameters were able to be tested with more certainty than others. Naturally, the aim of a reliable testing regime was to establish processes that enabled repeatability and reproducibility of tests. In other words, enabling the same test to be undertaken numerous times, by the same or a different laboratory, and to produce the same result each time.

35 The Viterra Parties' position was that the wet chemistry approach was far superior to the theoretical blend approach. There was evidence that supported this. However, there was also evidence that the theoretical blend approach was better, and that this could be established statistically.[48] For the purpose of determining the issues in this

---

process, see pars 257-264 below.

43 A hybrid of the 2 approaches may be used.

44 See further fn 710 below.

45 This observation does not take into account the various levels of reliability in the testing procedures and equipment used at the plants and the laboratories.

46 Stewart gave evidence that a sample of 200 grams, representing a handful, was used for batches as large as 300 tonnes (which would fill 17 shipping containers).

47 Stewart gave evidence of the use of an "auto-sampler" taking small samples from a batch or a shipment on a regular basis. He suggested that this resulted in a combined sample being very representative. However, there remains a level of uncertainty, which Stewart and other witnesses acknowledged.

48 See par 1139 below.

case, it is not necessary to make a finding in this regard.

C. The key allegations and the remaining parties to the proceeding

36 In this case, the impugned conduct included Joe White's manner of reporting the results of analytical testing in Certificates of Analysis provided to its customers. This was done by physically altering the printed results of the analysis by hand on a sign-out report ("Sign-Out Report");[49] a practice known at Joe White, and in the industry more generally, as "pencilling". If pencilling had occurred with respect to a particular batch of malt, the results recorded in the Certificates of Analysis were the pencilled "results", rather than the original test results as recorded on the printed Sign-Out Report.

37 By this conduct, generally speaking, Joe White represented that malt was being supplied in accordance, or substantially in accordance, with all required specifications ("the Reporting Practice").[50] The nature and extent of and the reasons underlying this conduct are matters for determination.

38 The Certificate of Analysis as issued by Joe White was a relatively straightforward document. The top of the document contained Joe White's name, the heading "Certificate of Analysis", the customer name and the estimated time of dispatch. Next, there were a series of items, including the laboratory number with respect to the laboratory that conducted the tests. Under this, there were 2 columns headed "PARAMETER" and "RESULT", with the various parameters listed and the "result" reported with respect to each parameter. Most of the "results" reported were numerical. Underneath the parameters and the reported results additional information was provided, which sometimes, but not always, listed the barley variety or varieties that were said to have been used. There was nothing on the face of the Certificates of Analysis to indicate whether there had been any analysis performed beyond that of the laboratory in producing the test results.

---

49 These were not provided to Joe White's customers.

50 Usually Joe White's customers set out the required specifications in their contracts, but sometimes they would also be identified in emails or as a result of discussions. See further par 257 below.

39 Further, with respect to some customers who specified that particular varieties of barley were required to be used in producing the malt, on occasions Joe White represented the required barley varieties had been used when they had not ("the Varieties Practice"). The fact that the Varieties Practice was engaged in from time to time up to 31 October 2013 was not in controversy. Broadly, the issues between the parties were the nature and extent of such conduct; and whether the evidence of such conduct gave rise to misleading or deceptive conduct in the sale of Joe White.

40 In addition, some of Joe White's customers expressly prohibited the use of gibberellic acid in the production of the malt to be supplied to them. Gibberellic acid is a naturally occurring hormone found in barley. Additional gibberellic acid speeds up the process of germination of malt. Its use is common in the Australian malting industry, and it is routinely used either when approved by a customer or when a supply contract is silent on its use. The addition of exogenous gibberellic acid is relatively inexpensive and may reduce total germination time by as much as a day, thereby reducing production and storage costs. Its common use was well-known by Cargill long before it started considering acquiring Joe White.

41 Some brewers prohibit exogenous gibberellic acid in order to be able to market their beer as a natural product. For example, some beers are marketed as being made only with malt, yeast, hops and water with no additives.[51] With respect to Joe White, there was uncontroverted evidence that a number of its customers usually had supply contracts which provided for malt not to include exogenous gibberellic acid.[52]

42 On occasion, contrary to this contractual obligation or instruction, Joe White used gibberellic acid as part of the germination process, to accelerate the malt production time or to assist in purporting to meet specifications, and failed to disclose that fact

---

51 For example, in Germany, longstanding laws regulating such beer are referred to as Reinheitsgebot, which translates to "purity order".

52 These customers were Asahi, Asia Pacific Breweries (Heineken), Kirin, SAB Miller and Sapporo: see par 150 below. There were disputed allegations with respect to San Miguel and the Viterra Parties also made submissions with respect to Sapporo despite the uncontroverted evidence: see pars 272, 281-282, 888, 1215, 1224, 1308, 1564, 1689 below.

("the Gibberellic Acid Practice").

43 The Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice, and related conduct, are referred to collectively as "the Operational Practices".[53]

44 Essentially, Cargill Australia claims that if it had known of the existence of the Operational Practices, it would not have entered into the Acquisition Agreement. Further, Cargill Australia claims that when, belatedly in mid October 2013, there was some disclosure of the Operational Practices, if it had learnt of the extent to which Joe White engaged in the Operational Practices, it would have terminated the Acquisition Agreement and would not have completed the Acquisition. Alternatively, claims are made for breach of Warranties[54] contained in the Acquisition Agreement, and by way of deceit. There are some other not insignificant claims.

45 The Viterra Parties, being represented by the same counsel and solicitors, took a united approach to their defence. They did so notwithstanding their different, or potentially different, positions with respect to some of the key events.[55] Broadly speaking, for much of the duration of the proceeding, both before and during the trial, the Viterra Parties did not admit the Operational Practices (despite much of them being documented, including in formal policies and practices). Further, despite extensive evidence referred to during openings and the early stages of the trial, the Viterra Parties expressly refused to concede the Operational Practices had occurred before the Acquisition.[56] Belatedly, the Viterra Parties amended their defence to make

---

53 See also par 1852 below.

54 See the definition in par 1022 below.

55 This matter was raised with the Viterra Parties' senior counsel, who informed the court this approach had been taken advisedly. As each of the Sellers were wholly owned by the ultimate holding company, Glencore, the court permitted the Viterra Parties to proceed on this basis.

56 During the course of the trial, on an interlocutory application, 1 of the Viterra Parties' senior counsel conceded the Operational Practices had been engaged in prior to the Acquisition Agreement on a "not insignificant" basis: *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 12)* [2018] VSC 454, [16]. I observed at the time that the adoption of this position on the evidence was quite properly taken: ibid. For completeness, the precise position adopted was: "The core which is common ground at this stage is that the [Operational Practices] were occurring to a not insignificant extent". However, lead senior counsel for the Viterra Parties soon after stated that if such a statement by his fellow senior counsel amounted to a concession, it was withdrawn: *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 15)* [2018] VSC 523, fn 7. After the concession was withdrawn, the following exchange took place with lead senior counsel for the Viterra Parties: "You will recall my comments yesterday about narrowing the issues

certain limited admissions.[57]

46 Further, the Viterra Parties claimed, perhaps somewhat paradoxically, that even if the Operational Practices occurred prior to the Acquisition, Cargill Australia and Cargill, Inc were on notice of their existence. Furthermore, they alleged that any such conduct was the conduct of Joe White and its executives, but not of the Viterra Parties. Consistent with this approach, the Viterra Parties issued third party claims against a number of persons who were executives of Joe White at the time of the Acquisition ("the Third Party Individuals"). The Viterra Parties sought to be indemnified by the Third Party Individuals in the event they were held to be liable to Cargill Australia.

47 The third third party was Gary Hughes ("Hughes"). He worked at Joe White for many years. At the time Glencore purchased Viterra, Hughes held the titles of director and executive manager – malt at Joe White and executive manager for Viterra Malt. He was also a director of each of the Sellers and Joe White, but resigned from those directorships on 17 December 2012; he was reappointed as a director of Joe White on 2 November 2013 and resigned again on 23 June 2014. In addition, while Viterra owned Joe White, and owned some of the assets used by the Joe White Business, Hughes was a member of Viterra's Australian and New Zealand executive. In this position, Hughes was included in the affairs of Viterra beyond those concerned with Joe White.[58] Hughes was described as very hands-on in his managerial approach. He

---

and having the real issues to be determined. Some of the cross-examination by you and your other senior counsel … has proceeded on the basis that there were Viterra Practices (as to which see par 1851 below). So I want to emphasise the obligations - and I say this with the greatest of respect of course - under the *Civil Procedure Act* requiring counsel and solicitors to only put before the court the real issues. I understand the extent to which [the Operational Practices were engaged in] is very, very much a live issue. But the existence of, based on the evidence I have heard, I am not going to say anything absolute of course, my mind is still open, but ---". Mr Myers: "Of course, your Honour. If I may say this. I hear what your Honour says. I don't want to debate it. I put it as exactly and carefully as I was constrained to put it and have done so …". After I referred to the documents that were already in evidence, I enquired as to the extent to which the concession was withdrawn, and was told in response that it was "withdrawn wholly" on the basis that: "That's my instruction". However, see pars 1854, 3425 below.

57 See par 1854 below.

58 For example, on 14 May 2010 Hughes was sent an email along with other members of Viterra's Australia and New Zealand executive attaching the April 2010 monthly management report for Australia and New Zealand. That email sent by Viterra's corporate controller invited the recipients to consider and review the report in preparation "for the Executive meeting" the following week. See further par 52 below.

maintained a detailed familiarity with all aspects of the Joe White Business. Following the Acquisition, Hughes was employed by Cargill Australia as regional general manager, Asia Pacific until June 2014.[59]

48 The fourth third party, Peter Youil ("Youil"), was an employee of Joe White at the time of the trial.[60] Youil was the strategic project manager, a position he had held since October 2016. Youil had been an employee of Joe White for over 3 decades, having commenced employment at Joe White in 1988. In 2013, Youil was the general manager operations – malt at Joe White and reported directly to Hughes.

49 The fifth third party, Robert Wicks ("Wicks"), was also a long-term employee. He commenced work at Joe White in 1983. In 2009, Wicks was appointed general manager, commercial, for Viterra Malt. In 2013, Wicks undertook Joe White's procurement of barley, in consultation with Hughes, to whom he reported. He was also in charge of customer sales. Wicks remained employed as the general manager, commercial, at Joe White until late January 2016.

50 The sixth third party, Douglas Stewart ("Stewart"), is a biochemist who has worked in the malting industry since January 2000 and reported to Hughes from that time.[61] As a result of acquisitions of Joe White in 2002 and 2003, Stewart then worked for Joe White. In around March 2010, he was appointed by Viterra Ltd as general manager technical – malt.[62] In that role, Stewart was responsible for the quality of malt produced by Joe White.[63] Although he dealt with customers directly, he did not deal

---

59 For further details concerning Hughes, see pars 1870-1878 below.

60 This was the position at the time the trial concluded. There was no evidence as to what has occurred after the further sale of Joe White in more recent times: see par 1845 below.

61 Stewart obtained a PhD in bio-chemistry from the University of Sydney, having already majored in food and environmental science as part of a bachelor of agriculture degree. Stewart has also engaged in post-doctoral research, including regarding the effect of malt quality on brewing performance at Michigan State University and then at the University of Adelaide. He gave evidence that he has expertise to offer others in the barley industry, and that he holds himself out as a technical expert in fields associated with the connection between barley and malt.

62 In this capacity, Stewart was the person most concerned with the execution of procedures relating to Certificates of Analysis that were issued by Joe White up to 31 October 2013.

63 Stewart's primary responsibility was described in his Viterra position description as being: thorough input into the sale process; barley acquisition; every step of the malt manufacturing process and customer relationship management; and overall responsibility to ensure that the quality of malt met the expectations of customers.

with commercial matters. Stewart also reported to Hughes. Stewart remained with Joe White until September 2014. At the time he gave his evidence he was employed by Coopers Brewery Ltd ("Coopers"). Amongst other industry positions, at this time Stewart was chairperson of the Malting and Brewing Industry Barley Technical Committee, which is a subcommittee of the board of Barley Australia.

51 The seventh third party, Scott Argent ("Argent"), at the time of trial was the financial controller of Joe White.[64] Argent commenced employment with Joe White in February 2003 as an accountant. In February 2012, Argent was appointed to the position of controller, processing, for Joe White and Viterra's New Zealand feed business. He reported directly to the finance director of Viterra for Australia and New Zealand (who told Argent the parameters in which he needed to operate), as well as to Hughes.[65]

52 Evidence was led by the Viterra Parties that each of these executives' duties were limited to the functions related to Joe White, and that they had no other function within the business of Viterra or Glencore.[66] However, there were many aspects of the Joe White Business that were run or assisted by Viterra. In addition to all persons involved in conducting the Joe White Business being employees of Viterra,[67] in Viterra's desire to be different and achieve synergies some things were done at a group level. These included use of the same computer and information systems, and the same legal and human relations departments. Further, Viterra owned some land, intellectual property and certain tangible assets used by the Joe White Business. Furthermore, Hughes was on the Australia and New Zealand executive committee and attended regular meetings in that capacity. Although he resigned from his directorships of Viterra on 17 December 2012, he continued on as a member of this executive committee until completion of the Acquisition.[68] Moreover, he was the

64 See fn 60 above.

65 This was the substance of David Mattiske's evidence (see par 97 below), but also see fn 4387 below.

66 This was the position generally, but, as set out below (see esp par 2655), there were some notable exceptions, particularly in relation to the sale of the Joe White Business.

67 The evidence suggested they were all employees of Viterra Ltd: see fn 71 below.

68 Mattiske gave evidence that towards the completion (no date was given), Hughes only attended the meetings to deal with the malt division and the safety section: see further par 359 below.

director of a company in which Viterra was engaged with Cargill in a joint venture in Canada.[69]

53 The Viterra Parties claimed that the Third Party Individuals made certain representations concerning the accuracy of information and certain Warranties provided to Cargill Australia. The Viterra Parties sought to "pass through" any liability to which they might be exposed by reason of the existence of the Operational Practices. The Viterra Parties further alleged that the Third Party Individuals have not acted in the best interest of Viterra or have not acted ethically, contrary to their contracts of service with Viterra Ltd.

54 With respect to the "pass through" approach, the Viterra Parties contended that Glencore acquired Viterra with no intention of retaining Joe White, a subsidiary that it necessarily acquired as part of a larger transaction. It was alleged that Joe White was "passed" to Cargill Australia prior to Glencore having any real involvement in, or understanding of, the business conducted by Joe White. Broadly, the Viterra Parties, therefore, sought to pass through any liability for a number of the claims made by Cargill Australia against them to the Third Party Individuals. The Viterra Parties were substantially unsuccessful in this aspect of the case.

D. Overview of the key parties' stated approach to business conduct

D.1 Cargill

55 Numerous issues in this case concerned allegations and counter-allegations of unethical conduct. Further, extensive evidence was given about the manner in which business was conducted in the malting industry, and why certain approaches were or were not adopted. Accordingly, it is necessary to identify the codes of conduct that were said to underlie the approaches to certain operations and decisions.

56 Cargill, Inc had a code of conduct ("the Cargill Code") which was provided to every Cargill employee. The Cargill Code contained what were referred to as "Cargill's

---

69 See further par 345 below.

Guiding Principles", which were as follows:

1 We obey the law.
2 We conduct our business with integrity.
3 We keep accurate and honest records.
4 We honour our business obligations.
5 We treat people with dignity and respect.
6 We protect Cargill's information, assets and interests.
7 We are committed to being a responsible global citizen.

In a 30 page document, each of these 7 principles was further explained, and was the subject of examples as to how they ought to be applied. With respect to the third principle, it was stated that all business records Cargill, Inc created, in whatever form, were required to reflect the true nature of the transactions and events in question. In that regard, the following was stated:

> Never deliberately falsify a record or try to disguise what really happened and avoid exaggeration, colourful language and legal conclusions in your communications.

57 A number of witnesses called by the Cargill Parties gave evidence about the Cargill Code. The evidence was to the effect that it was something that was "drilled into" all employees and had to be strictly adhered to. The Cargill Code was applied without flexibility. Relevantly, the applicability of the Cargill Code meant that Cargill, Inc would not acquire a business unless it could conduct the business successfully in a manner consistent with the Cargill Code. Evidence was given to the effect that this position would prevail no matter how strategically advantageous the proposed purchase might be. Naturally, such a position did not require any business the subject of a proposed purchase to comply with the Cargill Code before it was purchased. Rather, it would need to be able to be conducted profitably in such a manner after purchase if it were to be capable of efficaciously being incorporated into Cargill, Inc's global enterprise.

D.2 Viterra

58 Viterra Inc, the parent company of Viterra Ltd up until December 2012, also had a

code of business conduct ("the Viterra Code"), which was in place from at least 2008. The Viterra Code applied to Viterra and its subsidiaries, including sometime after to Joe White up until the Acquisition.

59 The Viterra Code, as issued on 2 September 2008, and revised on 22 September 2010[70] and again in or around November 2011, required all subsidiaries to conduct their business with integrity in accordance with high ethical standards and in compliance with all applicable laws, rules and regulations. To this end, the Viterra Code provided that employees were to strive to provide a high level of customer-oriented service, including maintaining superior standards of honesty, fairness and integrity in business relationships. Further, the Viterra Code required fostering high standards of ethical conduct among employees, including rejecting any improper or illegal business practices. Furthermore, employees were encouraged to speak out when they observed unethical behaviour or activity.

60 The Viterra Code addressed the provision of products and services. It required all employees to be accurate and truthful in all dealings, including accurately representing the quality, features and availability of Viterra's products and services.

61 With respect to books and records, the Viterra Code required that no director or employee create, or condone the creation of, a false record. Employees were expected to record and report financial and operating information "fully, accurately and honestly". In that regard, it was stated:

> That means no relevant information should be omitted or concealed, and no secret or unrecorded funds or assets should be created for any purpose. Making false or fictitious entries in Viterra Inc's books or records is prohibited.

---

70 On 9 July 2010, all Australian and New Zealand Viterra employees were sent an email introducing a "new Global Code of Conduct" which was said to be updated and "now includes all Viterra employees". The email's attachments were entitled "Global Code of Business Conduct – June 2010" and "Disclosure Policy – June 2010 FINAL". An email sent to all staff in November 2011 confirmed the Viterra Code had been updated again, and continued to form part of the mandatory online training. It further stated that an online version of the annual certification form had been created and would be automatically assigned to all new employees. In addition, existing employees were required to complete the form by 15 January 2012, except for operations employees who had until February 2012 "due to Harvest constraints".

62 A form was annexed to, and formed part of, the Viterra Code. All new employees were required to complete this form at the time their employment commenced. Further, the form was required to be completed annually by, amongst others, all Joe White employees during their performance review.[71]

63 The form required each employee to state that she or he had read and understood the Viterra Code. In addition, a Joe White employee was required to acknowledge:

> I do not know of any unreported violations or possible violations of the [Viterra] Code. I agree to abide by the [Viterra] Code in my dealings with or on behalf of Viterra, and agree to disclose any violations or possible violations of the [Viterra] Code as soon as I become aware of them.

64 The introduction of this regime to Joe White's employees gave rise to resistance in light of the Operational Practices. In short, some disquiet was expressed about the tension between what was stated in the form and the manner in which Joe White was conducting its business.[72] Despite this, the practice of requiring the form to be signed was implemented on an ongoing basis.[73]

D.3 Glencore

65 Glencore had its own ethical code of conduct. The document containing it was tendered, but it was otherwise not the subject of evidence.

E. Joe White before September 2009

E.1 Operations and reporting

66 In order to conduct the Joe White Business of producing malt, Joe White was required

---

71 In these reasons, a reference to "Joe White employees" is a reference to Viterra employees up to 31 October 2013 who were employees specifically engaged in the Joe White Business. Although the evidence was not entirely clear, it appeared all such employees were, in fact, Viterra Ltd employees from around September 2009 until 31 October 2013 and Cargill Australia employees thereafter (until more recently). Cargill was informed by the Viterra Parties on 9 July 2013 that all staff within Joe White were employed by Viterra Ltd, and that had been the position since July 2009.

72 See further par 156 below.

73 As late as 28 May 2013, all employees were emailed by Viterra's legal department, stipulating that the Viterra Code form was required to be signed by each of them by 28 June 2013. The email expressly noted each employee was required to acknowledge that she or he had no knowledge of any unreported violations or suspected violations of the Viterra Code. The email was sent by Damian Fitzgerald as "Director Legal": see par 114 below. This email followed immediately after the Viterra Code had been reissued on 27 May 2013.

to engage in various steps. These included acquiring different varieties and grades of barley, segregating and storing barley, operating plants that could perform the malting process, blending batches of malt, laboratory testing samples of barley and malt at numerous stages during the process, and then delivering malt to its customers.

67 To perform the testing and technical aspects of the Joe White Business, a chief chemist, a technical centre chemist, a research and development chemist, a quality assurance and business improvement manager and a customer services administrator were employed. Each of these roles was performed under the supervision and coordination of Stewart. In addition, Hughes, Wicks and Youil had scientific training and experience in the technical production aspects of the Joe White Business.

68 In Australia, barley crops are usually planted in May or June, and harvested around November or December. Joe White's production operated on the basis of "harvest years" for the 12 months from April. In the northern hemisphere, barley is generally harvested in August. European suppliers may compete with Australia, and may affect the timing of Australian supply contracts, as well as pricing. Accordingly, Australian malt supply contracts to international customers are often struck in around August.[74] Ordinarily, barley procurement contracts would then follow.

69 Malting barley is stored in silos or stacks for up to 15 months. As time passes, its vigour peaks then reduces. Grain from each new harvest was delivered to Joe White around March each year, and then was supplemented as the barley was used. If Joe White was required to use external storage facilities,[75] the barley was delivered to its plants as required. Naturally, in these circumstances operating costs were increased.

70 After malt was produced, it could also be stored awaiting blending. Malt is usable for around 2 years, but Joe White would only store malt for shorter periods of time.

71 Historically, Joe White's storage facilities were generally adequate for both barley and

---

74 Contracts to supply malt were usually for a year or longer. Ordinarily, they would provide for a total volume of malt which would be shipped over the duration of the contract.

75 Grain storage facilities are predominantly owned by large grain trading companies, including Glencore (and formerly Viterra).

malt at most of its plant sites. However, some sites did not have substantial storage. Sydney, which was constructed in 2012, and Cavan operated on a just-in-time production basis because of this. Further, Port Adelaide's malt storage became strained at times because the plant did not have good process control, which resulted in a need for greater segregation of batches.

72 In a poor harvest year, when there were lower volumes of malt 1 barley, storage providers tended to open segregations for malt 2 barley, and, more rarely, malt 3 barley, which was also referred to as "malt industrial" barley. These inferior grades were "discreetly" captured into the barley production process without being relegated into feed.

73 Precisely when Joe White first engaged in pencilling or other conduct forming part of the Operational Practices was not clear on the evidence. Stewart said at the time he commenced working with Hughes, he was informed by Hughes that it was necessary to engage in pencilling for Joe White to operate in the malting industry. In around 2000, when producing some of his first malt shipments that could not be brought within the customer's specifications, Hughes told Stewart that it was difficult to get malt perfectly within specification. Hughes said it was acceptable to despatch the out-of-specification malt because the malt would be suitable for the customer. Hughes also said to do so was common practice in the malting industry.[76]

74 Laura McIntyre ("McIntyre"), from the technical department of Joe White,[77] deposed that pencilling was in place when she commenced her employment at Joe White in 2005 and, although the practice was not formally recorded, it was standard practice. Her evidence was that actual results of the analysis of both the blended and the packed

---

76 Stewart gave evidence that he was troubled by this approach after spending years in academic research. He said he came to learn from working with others that "this was how it worked in the industry". (This evidence was admitted on the limited basis that it reflected Stewart's state of mind, pursuant to s 136 of the *Evidence Act 2008* (Vic).)

77 McIntyre commenced working at Joe White in 2005, when she was 23 years old. She had completed high school, but had no tertiary qualifications when first employed at Joe White. She obtained a diploma of business with Technical and Further Education in South Australia in 2011, but never obtained any qualifications as a maltster. Her employment with Joe White ceased on 30 June 2018. She was employed in the technical department as a laboratory information management system administrator. See further pars 255-260 below.

malt frequently differed from customers' specifications.

75 As the person generally responsible for the preparation of Certificates of Analysis, McIntyre changed results for most Certificates of Analysis as almost every Sign-Out Report was the subject of amendment. The Sign-Out Report recorded the original result and the changes, but was for internal use only and was not shown to customers.[78]

76 McIntyre was originally informed when she started at Joe White that it was part of her role to ensure that all of the reported results in Certificates of Analysis were within customer specifications. McIntyre explained that she would sit down with hard copies of the Sign-Out Reports and go through them line by line. McIntyre said that if any results were out of specification "we" would strike through them and mark them within specification. She further said that if any of the things that had been changed affected other parameters "we" would ensure that the calculations were correct as some parameters interlinked with others.[79] McIntyre gave evidence that, generally, if results were within specification, no pencilling would occur. However, she said that there were not many Certificates of Analysis that fell into this category. That said, McIntyre was unable to state or even estimate how often the pencilling would only involve 1 or 2 parameters, or a greater number of parameters.

77 McIntyre further explained that when pencilling results to bring them within specification, the alterations were usually towards the outer limits of a customer's specification or at a value close enough to the specification that it would pass as legitimate. Sometimes pencilling was engaged in even if the result was within specification. Some customers had targets which were higher than the specifications and alterations were made to make the result look closer to the target than what it was.[80] Her evidence was that "we" did not usually amend the results to be right on

---

78 For further details on Sign-Out Reports, see par 2248(1) below.

79 In her witness statement, McIntyre used "we" to identify the staff at the technical centre who were performing the pencilling. McIntyre was unable to quantify how many Certificates of Analysis she saw the other members of the technical centre change.

80 This was also explained on the basis that it was done, for example, to more likely accord with what the customer tests would result in or to match a pre-shipment Certificate of Analysis if 1 had been sent.

the specification as such reporting would look suspicious. Some results were the product of calculations from other test results. Therefore, if an alteration was made to these results, the results for other parameters would also have to be changed so the calculated result was consistent with the other relevant reported results.

78 Paradoxically, sometimes the pencilling occurred to make the results worse than they actually were. McIntyre's evidence was that this was done so as to not heighten expectations that Joe White could consistently achieve the results in question. In addition, McIntyre attested that she inserted "results" when, in fact, there had been no testing for the particular parameter. McIntyre said this happened frequently and that the results reported were fabricated, but not with respect to key parameters.

79 Examples of pencilled Sign-Out Reports were tendered. It is unnecessary to go through them. To illustrate the extent to which pencilling occurred on occasion, reference to a Sign-Out Report in February 2013 to Oriental Brewery Co Ltd ("Oriental Brewery") will suffice. That Sign-Out Report showed pencilled changes to 22 of the 36 parameters tested. McIntyre made these changes herself in order to achieve consistency with a pre-shipment report that had already been forwarded to the customer. Once amended, a hard copy of the pencilled Sign-Out Report was given to Stewart for his approval.

80 Stewart also had a role in dealing with any fallout from the quality of malt delivered. McIntyre was the person initially responsible for dealing with customers' technical complaints.[81] However, Stewart took responsibility for responding to more complex complaints that it was thought might expose the procedures in place. There was a considerable volume of correspondence between Stewart and Joe White's customers, examples of which were tendered. In that correspondence Stewart referred to things such as typical variations, analytical and laboratory variations, results being at the bottom or top end of a specification and the focus on seeking to provide malt that allowed the breweries to meet their specifications for the beer they produced.

[81] As already noted, McIntyre had no technical qualifications or training in relation to the production of malt.

However, no mention was made of pencilling.[82]

81 On occasion when Stewart was not available, McIntyre or another member of the technical centre was given authority to proceed without Stewart signing off on the Certificate of Analysis. Ordinarily, 60 to 80 Sign-Out Reports would be generated in a month, but some months more than 100 were created. When it was suggested to McIntyre that on average 110 Sign-Out Reports were issued a month between January 2010 and October 2013 she could not be certain but she did not take issue with it.

82 Also with respect to altered Certificates of Analysis, McIntyre gave evidence that, before the generation of Certificates of Analysis was formalised,[83] at times "we" inserted the names of barley varieties used in the malt production by specifying the variety stated in the customer's contract regardless of whether or not that was the variety used to create the malt.[84] Her evidence was that a lot of the time the plant and production managers would not report the barley variety used and the name of the barley variety or varieties requested in the customer's contract would simply be inserted. But even if the relevant information was provided, it was "standard practice" to record whatever was in the customer's contract.

83 Finally on the issue of altering Certificates of Analysis, McIntyre swore that the practices referred to above continued after the formalisation of procedures for the generation of Certificates of Analysis at Joe White.

84 Under cross-examination, McIntyre agreed with the proposition that she changed Certificates of Analysis because she understood that the changes were made because of certain factors, including differences in analytical accuracy of, or variability as between, Joe White test results and customer test results. She also agreed with the proposition that, when she changed results, she considered there were legitimate

---

82 In the Viterra Parties' closing submissions, they focused on McIntyre's evidence having only referred to 8 individual enquiries from customers (that is, if a particular customer was excluded from the spreadsheets), over a period from April 2010 to August 2013.

83 See par 199 below.

84 McIntyre obtained a certificate pursuant to s 128 of the *Evidence Act* with respect to her evidence that related to the Operational Practices. Some other witnesses did likewise: see pars 178-180 below.

reasons for doing so. It was not immediately apparent how McIntyre's agreement with these propositions sat comfortably with the position she adopted in 2010 when she took some exception to having to sign the Viterra Code if the practices referred to above were to continue.[85]

85 Further, McIntyre's witness statement contained the following:

> The standard response for dealing with complaints regarding inaccurate Certificates of Analysis was to put discrepancies down to analytical variation, acceptable variation or an unrepresentative sample. In some cases apparent inaccuracies in Certificates of Analysis may have been legitimately attributable to those factors, but those reasons were given regardless of whether they in fact applied to the particular case.

When taken to this passage in cross-examination, McIntyre agreed that "often apparent inaccuracies" were legitimately attributable to the factors she identified in the passage. McIntyre further referred to other reasons given to customers,[86] which she said were frequently legitimate reasons for variation.

86 Also when dealing with complaints, sometimes Joe White customers would be told that Joe White would re-analyse the malt batch. McIntyre explained that on some occasions this would occur and re-analysed results would be produced. However, on other occasions no re-analysis would take place, but the customer was told different results which were simply the subject of pencilling.

E.2 Ownership changes and other arrangements

87 Joe White has been the subject of a number of mergers and acquisitions. A company engaged in grain marketing and trading, AusBulk Ltd ("AusBulk"), acquired Joe White in 2003. AusBulk had previously acquired Adelaide Malting Co Pty Ltd ("Adelaide Malting") in 2002. These malting businesses were amalgamated, and

---

85 See par 160 below. Further, under cross-examination, when it was put to McIntyre that the Malt Proficiency Scheme (see par 175 below) provided a scientific rationale for what was occurring, McIntyre appeared very uncomfortable in giving her answers and although she accepted some scientific rationale existed, she said she did not necessarily agree with the fact that Joe White should be applying the Malt Proficiency Scheme altogether to change the results.

86 For example, that the customer received a "small sample that was not necessarily representative of the whole shipment".

conducted by Joe White from that time.

88 In September 2004, an Australian company, ABB Grain Ltd ("ABB Grain"), purchased AusBulk and its subsidiaries, including Joe White. Up until 24 September 2009, ABB Grain was a listed public company.[87]

89 On 2 May 2005, Joe White entered into an agreement with Co-Operative Bulk Handling Pty Ltd ("Co-Operative Bulk"), a grain collective in Western Australia, for the provision of grain storage and handling in Western Australia ("the Co-Operative Bulk Agreement"). During the trial, there was an issue as to whether the Co-Operative Bulk Agreement remained on foot leading up to, and at the time of, the Acquisition Agreement being executed.[88]

90 In either 2005 or 2006,[89] a document was created within Joe White concerning malt blending procedure. The document created at this time was not in evidence. The evidence before the court from a number of witnesses suggested that the form of procedure created was substantially the same as subsequent versions (together "the Malt Blend Parameters Procedure").[90] The Malt Blend Parameters Procedure established an approved guideline to proceed with the supply of malt outside customer specifications. It was reviewed 2 or 3 times a year by Stewart, in consultation with others at Joe White, based on information obtained from customers. Hughes instructed that the Malt Blend Parameters Procedure be stored separately from Joe White's quality procedure manuals and that it not be accessible by the International Organisation for Standardisation auditors or the auditors of Joe White's customers.

91 The Malt Blend Parameters Procedure was not exhaustive in setting out the procedure

---

87 For clarity, ABB Grain changed its name to Viterra Ltd on 12 February 2010, but it is convenient to define ABB Grain separately to signify the company's existence before being acquired in September 2009: see par 121 below.

88 During closing submissions, Cargill Australia abandoned a claim for damages arising from this issue, however the Co-Operative Bulk Agreement remains relevant to some other matters that require determination.

89 Stewart suggested 2005 as the relevant year. The Viterra records note the date of issue as 11 December 2006: see fn 235 below.

90 See further pars 228-249, 277-278 below.

for malt production and customer specifications. In short, it said nothing about pencilling or the suitability or otherwise of altering Sign-Out Reports or Certificates of Analysis.

92 Regular meetings were held, generally on a quarterly or half yearly basis, to discuss customers' parameters. Ordinarily, these meetings were attended by McIntyre, Julie Testi ("Testi"),[91] formerly Joe White's national quality systems coordinator, Wicks and Stewart, and occasionally by Hughes and Youil. No minutes were ever kept of these meetings.

93 Stewart gave evidence that, up until Viterra's acquisition of it, Joe White generally used malt 1 barley in the production of malt. The times when lower grades were used were largely as a reaction to exceptional circumstances, such as droughts or floods, which resulted in insufficient malt 1 barley being available.

94 Domestically, Joe White was Viterra's biggest purchaser of barley. Joe White purchased hundreds of thousands of tonnes of barley per annum. Further, every year, prior to the Australian harvest, Stewart sent Wicks and Viterra grain traders details of the barley varieties required to meet Joe White's supply contracts.

95 For example, on 9 September 2008, Stewart emailed Joe White's barley requirements for the 2009/2010 year to Wicks, copied to Hughes and others including a Viterra grain trader, and asked for regular updates on the purchases of the listed varieties. Each year, Stewart personally met with brewers so he could properly understand and agree upon what malt Joe White could supply. During these visits, Stewart was informed of brewers' technical needs, and would occasionally negotiate variations or tolerances

---

91 Testi holds a bachelor of applied science in chemistry and microbiology from the University of South Australia. Having spent approximately 9 years working in the wine industry, she commenced at Joe White in May 2009 as a plant chemist at the Port Adelaide plant. In September 2010, she was appointed to the position of national quality systems coordinator. In February 2013, she was made business improvement manager and no longer had direct responsibility for food safety and quality at the Port Adelaide and Cavan plants. In this role she managed food safety and quality for all Joe White's plants nationally. She continued at Joe White after 1 November 2013. In February 2018, Cargill appointed her to the position of global food safety quality and regulatory adviser, which required her to manage this area for Cargill's 4 regions, namely, North America, South America, Asia Pacific and Europe.

with respect to customer specifications. Stewart's evidence was that usually Joe White did not receive all barley varieties listed so that, over time, his specified requirements became known as a "wish list".[92] Ultimately, it was Viterra that made the decision as to what barley varieties would be delivered to Joe White, though Joe White was not confined to purchasing all of its barley from Viterra.[93]

F. Some key persons of the Viterra Parties

96 It is convenient to introduce some persons at this point.

97 David Mattiske ("Mattiske") wore several hats. Relevantly, he was managing director of Glencore Grain Pty Ltd ("Glencore Grain"), a subsidiary of Glencore,[94] for Australia and New Zealand from August 2010 to August 2014. He was appointed a director of Viterra Malt, Viterra Operations, Viterra Ltd and Joe White on 17 December 2012. He ceased his directorship with Joe White on 31 October 2013, being the date of the Acquisition. He continued as a director of the other 3 companies until 2014.

98 Mattiske gave evidence that, upon becoming a director of Viterra Malt and Joe White, Hughes was required to report directly to him. He said nothing changed in relation to the operation of these companies, and that he fulfilled his duties as a director by relying on Hughes. Mattiske's evidence was that Hughes reported that Joe White's customers were happy, that he had a good relationship with them, and that Joe White had an excellent reputation.

99 Hughes worked independently and did not receive any instructions from Mattiske. Mattiske believed Hughes had the ability to run the Joe White Business autonomously. As a result, Mattiske only spent a small amount of his time attending to Joe White's affairs. Mattiske accepted that, in his role as a director, it was his responsibility to be

---

92 This position was confirmed by a witness called on behalf of the Viterra Parties (see par 118 below), who gave evidence that a list dated 2 November 2011 stating "Barley Variety Requirements 2011/2012" was a wish list of what he considered Joe White "desired", but was "not necessarily what they need[ed]". Another witness referred to it as Stewart's "shopping list".

93 After Viterra acquired Joe White, an arrangement was in place whereby Joe White was required to report to Viterra if it purchased more than 5,000 tonnes of barley from another supplier. But also see fn 287 below. There was also further evidence about how Joe White and Viterra interacted with respect to barley trading before 2013, but it is unnecessary to go into the detail.

94 Glencore Grain became known as Glencore Agriculture Pty Ltd.

informed of any routine practice of supplying malt in breach of customers' contracts. Further, Mattiske considered that Hughes was required to report to him any material issues within the Viterra Malt division.

100 In August 2014, Mattiske was appointed regional director of Glencore Agriculture BV ("Glencore Agriculture") for all regions other than North and South America, a role held at the time he gave evidence. He reported to Chris Mahoney ("Mahoney"), Glencore Agriculture's chief executive officer.[95] Glencore Agriculture is owned as to 50 percent by Glencore plc.[96] Glencore Agriculture has its own management and, as at September 2018, earned profits in the range of 5 percent or less of Glencore's total profitability. Glencore Agriculture operates in approximately 35 countries.

101 Before being employed by Glencore Grain, Mattiske's background was in accounting and finance, including in grain marketing and trading. After spending approximately 3 years at an accounting firm in its audit division,[97] Mattiske was employed by AusBulk from January 2002 as its financial controller. He was not involved in AusBulk's acquisition of Adelaide Malting or Joe White. Upon ABB Grain's acquisition of AusBulk in September 2004, Mattiske was the financial manager for the trading division of ABB Grain, based in Adelaide.[98]

102 In January 2006, Mattiske was appointed chief financial officer of Glencore Grain, a position he held until his elevation to managing director in August 2010. From Mattiske's time at Glencore Grain up until Glencore's acquisition of Viterra, he had limited experience with malting barley. In 2006, Glencore Grain's core business was wheat, feed barley and canola. Glencore Grain also supplied malting barley to 1 domestic customer and, from around 2008, in small amounts to Asian customers. Mattiske's experience was that new varieties of barley were introduced every year or 2. Further, he was aware Glencore Grain supplied a variety of barley known as

---

95 Mahoney offered Mattiske the position of regional director in early 2014.

96 The other shareholders are Canadian Pension Plan Investment Management Corporation and British Columbia Investment Management Corporation.

97 Mattiske has a bachelor of commerce degree, and became a chartered accountant in 2000.

98 This division did not trade in barley.

Hindmarsh to maltsters. Thus, he assumed Hindmarsh was a malting barley.[99] In none of Mattiske's roles did he have any involvement with malting barley contracts or contracts with maltsters.

103 Mattiske started working on the acquisition of Viterra in early 2010. Those working on the transaction were largely based in Switzerland and the Netherlands. As managing director of Glencore Grain's Australian operations, Mattiske had primary responsibility for the part of the transaction concerned with Australia and New Zealand. Bank of America Merrill Lynch ("Merrill Lynch") was retained by Glencore as its investment adviser.[100]

104 As part of his role in this acquisition, Mattiske was involved in valuing Viterra's business in Australia and New Zealand, and assisting in the negotiation of the proposed back-to-back sale of some of the businesses to be acquired. He was also partly responsible for considering what parts of the Australia and New Zealand operations should or could be sold following completion of the acquisition.

105 About 2 or 3 days before Glencore's final bid was accepted, Mattiske was given access to the data room created for that transaction. Mattiske said his access was particularly limited, and more confined than others at Glencore because Viterra did not want to disclose commercially confidential information to a competitor's managing director. Although Mattiske did not go into any detail, he said that he did not believe he saw anything which changed his views about acquiring Viterra Inc.

106 From the time Mattiske started looking at Viterra's operations in Australia and New Zealand, he thought Joe White should be sold. The information available to him suggested Joe White appeared to be a straightforward business. In Mattiske's view, malting did not fit well with Glencore Grain's operations and he expressed this view to others at Glencore. Accordingly, there were no steps taken to restructure or integrate the Joe White Business into Glencore's grain business as was done with other

---

99 In fact, Hindmarsh was not a variety of barley approved for malting: see further par 126 below.

100 Merrill Lynch was engaged for approximately $7 million to coordinate the sale process.

parts of Viterra's business in Australia and New Zealand.

107 Mattiske was a key witness for the Viterra Parties.

108 Robert Gordon ("Gordon") was previously the managing director and chief executive officer of Viterra Ltd. He was a director of both Viterra Ltd and Viterra Operations from 1 March 2010 to 8 November 2011.[101] Gordon was responsible for the management of Viterra's operations in Southeast Asia, including Joe White. Hughes reported to Gordon. Mattiske had never spoken to him.

109 Ian King ("King") was called to give evidence by the Viterra Parties. King was employed by Glencore as a business analyst from September 2011 to December 2016.[102] King's primary role was to assist in evaluating and implementing corporate transactions.

110 King described himself as a fastidious and meticulous individual, who, when involved in a transaction, took detailed notes of meetings and calls.[103] King considered himself an expert in mergers and acquisitions. He said, with his background as an investment banker, he was very familiar with how to run a sale process to maximise competitive tension, and considered it part of his role to do so. He also saw it as part of his role to challenge assumptions behind financial projections provided by management "in order to ensure" the financial projections would adequately withstand a potential buyer's scrutiny. He acknowledged that the financial model was the "foundation or the cornerstone … [o]f the rest of the transaction".

111 In 2013, King understood the difference between malting barley and feed barley.

---

101 Gordon's replacement, Karl Gerrand, did not feature in the evidence at trial in any significant manner.

102 Before this, King worked for an independent investment bank in London for approximately 3 years, having worked the previous 3 years at Deutsche Bank AG, London. He holds a bachelor's degree in economics. At the time of giving his evidence, he held the position of transaction execution lead for Anglo American plc.

103 When King left Glencore, he did not take his notes. He had no knowledge of their whereabouts, and could not say whether they were shredded. He proffered the opinion that they were probably left in his files, but he clearly did not know. The notes were not discovered.

However, before the sale of Joe White, King had had no experience in the malting industry.[104] Further, this was his first experience as "the client" seller, rather than as the adviser. Furthermore, he had had no previous experience as an adviser where a client involved in a sale did not already have an understanding of the business being sold.

112 Throughout his time at Glencore, King's direct supervisor was the head of corporate development, Markus Walt ("Walt"), and King only reported to him. Walt was also involved in Glencore's sale of the Joe White Business.

113 King communicated with various persons in order to put together the sale information, including speaking with Mattiske approximately twice a week during the sale process.

114 Damian Fitzgerald ("Fitzgerald") is a lawyer who held numerous positions within Viterra. Fitzgerald was appointed secretary to Viterra Ltd on 27 September 2004, and to Viterra Operations and Viterra Malt on 10 March 2010; positions he continued to hold at the time of the trial. He was also appointed secretary of Joe White on 10 March 2010, and resigned from this position on 31 October 2013.

115 At the time of trial, he held the title of director legal for Viterra and Glencore Grain in Australia and New Zealand. In his position as general counsel, along with Mattiske he usually attended monthly meetings of the Australian and New Zealand executive team of Viterra.

116 Mattiske saw it as part of Fitzgerald's role to advise on legal aspects of transactions and provide legal advice on regulatory, governance and compliance matters, including with respect to internal corporate policies. In order to fulfil his role, Fitzgerald needed to be aware of the corporate policies within Viterra.[105]

---

104 King had a more minor role in Glencore's acquisition of Viterra Inc, principally concerned with developing a financial model and a valuation of what was to be purchased, assessing various divisions of the business largely based on publicly disclosed information.

105 See further pars 192, 199, 203, 278 below. King gave evidence that Fitzgerald was in charge of corporate documentation and policy issues for Joe White as part of the sale process.

117 Although a witness statement was filed on his behalf,[106] Fitzgerald was not called as a witness.

118 Jonathan Wilson ("Wilson"), general manager – logistics and commercial relations from January 2013 until January 2018, was employed by Viterra Ltd and then Viterra Operations.[107] From October 2010 to January 2013, Wilson was Viterra's manager for barley and oilseeds.

119 Wilson arranged for Viterra to purchase barley directly from growers or from the trade. As to the latter, purchases were made from trading houses such as Louis Dreyfus, Co-Operative Bulk and Cargill. As for sales, the largest markets were Saudi Arabia and China. Wilson was also involved in contacting all end users to sell barley, including maltsters.

120 Wilson, along with other Viterra barley traders, met from time to time with representatives of Joe White to discuss Joe White's barley requirements. Wilson also regularly had such discussions with Wicks, often on a daily basis. Occasionally, during these discussions, Wilson was informed that particular customers of Joe White wanted a certain variety or varieties of barley, or had a preference for such varieties. From time to time, Wilson was informed which barley varieties were performing well. However, there was no evidence to suggest he was ever told the details of Joe White's customers' contract terms or the specific requirements of individual customers.

G. Viterra acquires Joe White and formalises aspects of the Joe White Business relevant to some of the Operational Practices

121 In September 2009, Viterra acquired ABB Grain, including Joe White.[108] From around

106 As part of preparation for trial, the court ordered witness statements be filed and served. This order was made after the parties submitted that in a case of this size, witness statements were the most appropriate manner in which to lead evidence in chief. Despite expressing considerable reservations in doing so, I made the order for witness statements on the basis that any controversial evidence would be required to be given orally.

107 Wilson completed a bachelor degree in social sciences (honours) at Queens University, Belfast, in 1999, a diploma of financial services from the Australian Financial Management Association in Sydney in 2004 and a masters of agribusiness at the University of Melbourne in 2008.

108 Viterra Malt acquired the shares. Viterra Operations acquired certain land that was used for the Joe White Business. Viterra Ltd had an interest in property associated with the Joe White Business. Accordingly, it is convenient to refer to "Viterra" as the purchaser of Joe White.

this time, the employees who operated Joe White, including Hughes, Youil, Wicks, Stewart and Argent, became employees of Viterra Ltd.

122 In early 2010, Gordon announced a number of transformation projects to be undertaken across Viterra's businesses, including Joe White.

123 At this time, conduct in the nature of the Operational Practices was already well established. The business records of Viterra demonstrate that the existence of, at the very least, some of the conduct comprising or underlying the Operational Practices was included in Viterra's records not long after the acquisition in September 2009.[109] Further, by July 2010, the historical use of grades of barley other than malt 1 barley[110] was recorded in a "Viterra" business record entitled "Historical Off-Spec Volumes, Spreads and Benefit".[111] The document explained that the baseline had been defined using the data it contained.

124 To elaborate on the second of these matters first, up until this time Joe White purchased some off-grade barley, but only because the volume of malt 1 barley available was insufficient to meet Joe White's demand.[112] However, in or around early to mid-2010, a formal practice of strategically utilising non-malt 1 barley was developed and pursued within Viterra, as part of the "transformation project for barley". Gordon had stated to Hughes that the quality of Joe White's malt was too high and that Joe White could do the same job at less cost. The "Viterra" business plan was formulated to increase use of off-grade barley from an average of 11 percent up to 30 percent in 2 phases over the 2011/2012 and 2012/2013 financial years. The implementation of the plan was not confined to Joe White employees, but required "co-operation from the grain group to develop 6 action plans".

---

109 There was no evidence to suggest any such disclosure occurred before Viterra agreed to purchase Joe White.

110 See par 72 above.

111 This and other Viterra business records of this nature bore the "Viterra" logo.

112 The Viterra Parties submitted the purchasing of off-grade barley was not a new practice. So much is correct, but the fundamental change in approach was to entrench the purchase of off-grade barley as part of general operations, as opposed to resorting to this measure where the circumstances necessitated it.

125 A transformation project for barley was introduced to various persons, including Stewart, in May 2010. Stewart prepared a memorandum to the project team referring to the strategy for South Australia. The memorandum (which was addressed to a number of Viterra employees, including Andrew Hannon ("Hannon"), Viterra Ltd's country operations manager of storage and handling),[113] suggested there would be opportunities around Hindmarsh, before its malting status was due to be determined in March 2011. He stated that Viterra Malt would have good data and a feel for Hindmarsh's ability to make malt by the end of August 2010.

126 Stewart gave evidence that Hindmarsh was a feed barley that was introduced as part of the transformation project, and that it clearly fell into the category of off-spec barley. Hindmarsh was never approved as a malting barley.[114] Despite this, Hindmarsh was used to produce malt that was sent to some of Joe White's customers. Stewart gave evidence that he corresponded with Hannon concerning storage options and availability of Hindmarsh and other off-spec barley varieties. Hannon never queried off-spec barley being used. It was well known within Viterra that Joe White was using off-spec barley.[115]

127 Wilson was aware during 2009 or 2010 that Joe White was testing batches of Hindmarsh barley to see whether that barley could meet malting barley specifications. He also spoke directly with Joe White employees about Hindmarsh in late 2010 or early 2011. Based on these discussions, Wilson understood that Hindmarsh was "water-hungry" and did not go through malting machinery well because of the levels of betaglucan. Despite this and the non-accreditation, Wilson did not consider that the use of Hindmarsh for malting was inappropriate. His evidence was that

---

113 Hannon gave evidence for the Viterra Parties. At the time he gave evidence he was group commercial manager for Viterra Operations.

114 On 11 November 2010, Barley Australia issued a media release noting Hindmarsh was released in 2007 and that it had failed to receive malt accreditation. It was considered that Hindmarsh did not have the required malting quality characteristics to warrant accreditation. The media release included a statement that there was no reason why grain companies could not market specially segregated varieties to any customer for any purpose if a demand existed for those varieties irrespective of their malting accreditation status.

115 Stewart also had ongoing dealings during the transformation with Peter McMeekin ("McMeekin"), a Viterra Ltd barley trader, concerning the requirement to procure off-spec barley. Stewart gave evidence that McMeekin had very good knowledge of these circumstances.

Hindmarsh remained a desired variety for many international maltsters. He also referred to a level of domestic demand.

128 Wilson gave evidence that when he was trading barley, the majority of Viterra's sales of Hindmarsh were to overseas customers, particularly Chinese maltsters. He said that some Hindmarsh was sold to domestic maltsters, including Joe White, but he had no knowledge of which customers, if any, were supplied malt produced from Hindmarsh barley.

129 Lucas Jones ("Jones")[116] explained that before the accreditation issue was determined, Hindmarsh showed a lot of promise. He gave evidence that Joe White invested a lot of time and effort in the lead up to the expected approval of Hindmarsh. To that end, Joe White purchased commercial quantities of Hindmarsh so that it could be tested and Joe White could become familiar with processing Hindmarsh into malt on a commercial scale.

130 Jones said that once Hindmarsh had been processed into malt, Joe White had to do something with it. He gave evidence that, rather than dump it, Joe White used it gradually by blending it with other malt that was then packed and shipped to Joe White's customers. Jones also referred to the cost benefits of using Hindmarsh. Because Hindmarsh was not a malting variety of barley, it was cheaper than malting varieties.

131 In late May 2010, a document was produced for Viterra Australia and New Zealand entitled "Ingredients for success".[117] The front page also contained the heading "Malt Cost Review – Steering Committee 1".[118] The document recorded that the current situation involved multiple barley varieties at each site, which was said to limit

---

116 Jones was employed at Joe White for approximately 16 years, having previously worked for Adelaide Malting in its laboratory. From 2009 to 2013, Jones managed Joe White's barley supply. He holds a bachelor of science (chemistry) from the University of Adelaide. After the Acquisition he was production plant and barley manager until June 2018.

117 The document came 10 days after another document also entitled "Ingredients for success" which was prepared for the monthly executive meeting, which set out details of the transformation program, including referring to Hughes' role in the malt cost review.

118 The "Malt Cost Review" was 1 of 3 projects forming part of the transformation project in which Joe White was involved. The Malt Cost Review had 2 workstreams, being barley acquisition reduction and administration cost reduction.

segregation opportunities. It stated that off-grades were typically segregated on a "need to basis", such as drought. It further noted that such barley historically produced poor quality malt and provided limited blending opportunities because the bulk of the barley was also high in protein. Another document produced entitled "Transformation Project – Malt Cost Review" recorded that the objective was to reduce the cost of barley by using "off-specification grades". Under a proposal for the future state of some sites, an example was given of using 75 percent off-grade barley. This was compared with the "historical situation" of using multiple barley varieties with limited off-grade segregations. An example was given in the historical situation of using 25 percent off-grade barley with the proviso that "in reality could be more or less, depending on the season". At the conclusion of the section on reducing barley acquisition costs, it was stated that it was still a requirement to maintain quality to meet customer "expectation".

132 In relation to this document, Hannon gave evidence he understood that poor quality malt would mean it would be more difficult for Joe White to meet its customers' specifications. It was observed, in cross-examination, that historically when drought had given rise to an increase in the amount of off-grade barley, brewers had agreed to a higher proportion of such barley being used in malt supplied to them. In contrast, there was no suggestion that the transformation project would involve seeking the agreement of Joe White's customers to the increased use of off-grade barley regardless of the quality of the season.

133 This "Ingredients for success" document also stated that there were a number of challenges with the transformation project. These included that, even if the malt quality impacts were reduced by "[t]argeting premium varieties" of barley, if the volume of off-grades became too high quality would suffer. Hannon accepted that a concern was that if Joe White received insufficient amounts of quality barley, then it would have problems meeting customer specifications. He further acknowledged that a key risk of the transformation project was that Joe White would not receive enough quality barley. In late May 2010, an email commencing with "Dear

Executives" was sent to a large number of Viterra executives, including Hughes, Fitzgerald and Gordon, concerning a project charter for the "indirect procurement review project (an integration project)".[119]

134 In around June 2010, another "Ingredients for success" document was produced by Viterra, concerned with barley acquisition. It spoke in terms of the maximum amount of off-spec barley that "Viterra" could purchase under the strategy to increase its use. It also referred to reducing the cost of barley by using off-specification grades through taking advantage of segregation and storage and handling opportunities from Viterra's ownership of the South Australian supply chain and opportunities in other States that were expected to yield a net benefit of $3 million per year.

135 On 23 July 2010, Jones sent an email addressing the "Barley acquisition-transformation project". It was addressed to numerous Viterra employees, and copied to others including Hughes and Stewart. After referring to recent meetings, Jones said "Malt" had determined that the majority of "their plants" could use up to 30 percent "off-specification grain". He also expressed his keenness to take advantage of the cost savings this would allow. He said he was looking for the "Grain Group's assistance in working out how to achieve the 30% target".

136 The business plan for the transformation project was further formalised and recorded in a "Viterra" presentation dated 5 August 2010, entitled "[Australia New Zealand] Transformation Project – Malt Cost Reduction" ("the Malt Cost Reduction Transformation Project").[120] The first slide of the presentation set out the agenda and objectives, the first of which was to "[c]onfirm the baseline". Under this heading, the slide stated:

- Historical use of off specification barley
- Spreads between Malt 1 and Malt grades

---

119 Similar documents were produced for the steering committee in early July and August 2010, the detail of which it is unnecessary to refer to.

120 See further par 375 below. Stewart gave evidence that there was another transformation project directed at operating costs. This was a separate workstream known as "Operating, General and Administrative Costs Project".

Mattiske suggested that "off-specification barley" in this context was barley that "doesn't quite" meet the specification, however he was not involved at the time.

137 The other objectives of the presentation were to "[a]rticulate the targets", which were specified as "wave 1 – year 1, in time for harvest 10/11" and "wave 2 – year 2 and beyond", and to "[r]eview the implementation plans" for South Australia, the East Coast and the West Coast.

138 The second slide stated:

> The Barley Acquisition strategy aims to lower the average unit cost of barley by *increasing the off-grade purchases*. This will deliver cost savings over and above the $1.3m currently realised.[121]
>
> The Malt business has already been realising savings through off-grade purchases. …
>
> - Traditionally, off-grade was taken largely as a necessity through seasonal conditions and elements outside Viterra control.[122]
> - The proposed strategy aims to make *these purchases more strategic* and less reactionary.
> - This strategy should serve to minimise the risk of seasonal impact and *maximise purchasing discounts*.
>
> (Emphasis added.)

139 A table entitled "Barley Acquisition off-spec savings $A, historical" detailed savings from 2006 to 2010 from the use of off-grade barley. A spreadsheet in existence on 24 June 2010 showed that, for the financial years 2006 to 2010, on average, Joe White had used 75,103 tonnes of non-malt 1 barley, at an average saving of $17.66 per tonne, amounting to an average annual saving of $1,326,520. Historical purchases of non-malt 1 barley by region and the seasonal influence on the return achieved through use of off-grade barley were recorded.

---

121 Just how successful the project ultimately was in delivering savings was not entirely clear. In June 2011, Hughes reported total savings to date at only $170,000. Further, Mattiske's evidence was that he did not see any positive financial results from any aspect of the project.

122 As Stewart explained in giving evidence on this topic, the use of off-grade barley by Joe White up to 2009 was essentially reactive to exceptional circumstances. Up until that time Joe White generally purchased malt 1 grade barley.

140 A slide in the presentation was headed:

> [Viterra] Malt believes it can increases (sic) its use of off grade barley from an average of 11% to 24%. With the co-operation of the Grain group it plans to reach this target over 2 phases.

141 Further slides set out detailed action plans to increase the use of off-grade barley for each of Joe White's plants in Western Australia, South Australia, and on the East Coast. The Viterra executives not only approved the Malt Cost Reduction Transformation Project, but various Viterra representatives were appointed to a barley acquisition project team to deal with storage, marketing and acquisition.

142 On 27 September 2010, an update on the malt cost review was provided to Viterra's chief operating officer, Fran Malecha ("Malecha") who was then also a director of Joe White, albeit for only 1 more day.[123] The key points included that the project had been completed with internal resources and assistance from the "transformation team". The key challenges were stated to be the segregation and acquisition of off-grade barley, and maintaining the quality of malt shipments to meet customer expectations while using off-grade barley.[124]

143 On 30 September 2010, Stewart circulated minutes of a transformation project meeting held 2 days earlier. The recipients included Viterra employees, such as Hannon and McMeekin, who had attended the meeting. The minutes referred to a focus on reducing the amount of Hindmarsh segregations because it was likely Hindmarsh would not receive accreditation. The barley varieties identified as targets for off-grade purchases were Flagship and Buloke.[125] The minutes also listed a number of strategies to maximise off-grade segregation in the then current environment.

144 The segregations plans produced in October 2010 showed reduced segregations for Hindmarsh. Hannon's evidence was that he did not know what Joe White intended

---

123 Malecha was a director of Joe White from 23 September 2009 to 28 September 2010. He was also a director of Viterra Ltd for the same period, as well as being a director of Viterra Malt from 30 October 2009 to 28 September 2010 and of Viterra Operations from 23 September 2009 to 25 September 2010.

124 This review had been preceded by the presentation of the "Malt Strategic Plan" by Hughes on 18 August 2010, which was provided to the Viterra Australian and New Zealand executive, including Gordon and Fitzgerald.

125 It was noted Commander tonnages were not large enough to warrant separate off-grades.

to do with the Hindmarsh barley if it did not receive accreditation. Further, he was unaware of the extent to which Joe White's customers were willing to accept malt which included barley that was not accredited.

145 Stewart gave evidence that he was unhappy with the introduction of the Malt Cost Reduction Transformation Project, and had objected to the project. He thought that using off-grade and off-spec barley would potentially decrease the quality of the malt being sent to Joe White's customers. However, an email from Stewart towards the end of the transformation meetings stated the next phase included "[m]aking quality malt from the off-grade barley" but did not suggest this could not be done. The email was copied to Accenture Consulting.[126] A representative of Accenture Consulting responded, stating that Stewart had provided a very eloquent summary and that he was fully appreciative of the challenges of making quality malt from off-grade barley.[127] Stewart forwarded the email chain to Hughes. Further, he told Hughes of his concerns. He said to Hughes that whilst Joe White had occasionally needed to use lower grade barley in the past due to seasonal volatility, the adoption of using off-grade barley as a targeted strategy might limit Joe White's ability to meet customer quality requirements. Hughes told Stewart he agreed with Stewart's concerns but said the position was not negotiable. Stewart's evidence under cross-examination was that the role the project team from Viterra Malt (which included Jones and him) were given was to try to determine what savings could be made without compromising the quality of the malt. Hughes said that Jones was going to take the lead and asked Stewart to support Jones. Jones reported to Hughes.

146 Stewart was of the opinion at the time that Joe White would need to be pencilling results more often if it was required to use substandard barley. He said this followed logically.[128] Jones gave evidence that on occasion Viterra supplied off-grade barley to

---

126 Accenture Consulting was engaged by Viterra to work on the Malt Cost Reduction Transformation Project.

127 Though there was nothing in the email to suggest this could not be done.

128 As a matter of fact, in the subsequent period, Stewart said he did not really see any noticeable difference in the quality of malt that was coming through, though he acknowledged there may have been some subtle effects. However, he also acknowledged that "certainly in time and in certain seasons there would have been a much higher probability of having problems".

Joe White in breach of contract. He said at times Joe White was required to accept "off-grade barley", which had to be used rather than dumped. The poor quality malt was used in small quantities in blends, which meant it could take a long time to use it up.

147 Mattiske gave evidence that he could not recall a transformation project for malt. He had reviewed Viterra's transformation projects and formed the view that they had generated no value or positive financial results. Mattiske said that by the time Glencore acquired Viterra, all transformation projects were completed or dormant and that none was re-enlivened by Glencore. Contrastingly, Stewart's evidence was that the Malt Cost Reduction Transformation Project's initiatives were continued after Glencore's acquisition of Viterra. In light of Mattiske's self-professed ignorance of much of how the Joe White Business was conducted, Stewart's evidence must be preferred in this regard.[129]

148 During his time working at AusBulk, Mattiske was told by AusBulk traders that Joe White blended off-grade barley. He gave evidence that he believed it was quite common in the grain industry to segregate barley into different grades to allow batches to be blended consistent with customers' specifications.

149 During Mattiske's cross-examination, he volunteered that there was "absolutely nothing wrong with using off-grade barley". When asked whether he understood if customers were aware of off-grade barley being used, he stated, somewhat non-responsively, that he could not see why it would ever be an issue because "they were still getting exactly what they want[ed]". He further "imagine[d]" that customers would know about it because "[e]verybody knows". During his evidence, Mattiske made the sweeping statement that off-grade barley "can easily meet customer specifications".[130] He continued by stating, correctly, that off-grade barley is not "off-variety". A little later in his evidence, Mattiske asserted that he presumed all Joe

---

129 See further par 731 below and the reference in contemporaneous documentation to a transformation project being in place in mid 2013.

130 Cf pars 23, 131, 145-146 above.

White customers tested the malt supplied, but then acknowledged he did not know whether or not this was the case.[131] In fact, not all of Joe White's customers did their own testing. Stewart's evidence was that many did not. Further, if a customer conducted its own tests of a sample of malt, it was usually after the batch had been used in the brewing process and a performance problem had been revealed.[132]

150 McIntyre's evidence on whether Joe White's customers tested the malt supplied was addressed by a general statement that many of them did not analyse the malt they received from Joe White. She also gave evidence on this topic concerning some customers specifically. Her witness statement referred to Asia Pacific Breweries Group (Heineken)[133] ("Asia Pacific Breweries") and Thai Beverage Public Company Limited ("Thai Beverages") conducting their own testing when they received malt from Joe White. Even though McIntyre believed this testing was occurring, she persisted with her "practice" of pencilling Sign-Out Reports for these customers. She said Joe White received a number of complaints from these 2 customers between 2010 and October 2013, which were handled by her or Stewart.[134] In dealing with those complaints, McIntyre would say that the retained sample of the malt delivered had been retested with the further results being just inside or just outside the customer's specification, or that the inconsistency in results was due to normal laboratory variation. During her cross-examination, McIntyre was taken to this part of her witness statement. She was asked whether she was aware of other customers that did their own testing. After referring to Sapporo Breweries Ltd ("Sapporo"), she was unable to name any other customer and explained she was having a mental blank. When she was then asked whether there were any Japanese companies in this

---

131 At 1 stage in his evidence, Mattiske said he believed he was told Joe White's customers undertook their own testing and analysis of malt delivered, but soon after acknowledged it was not based on anything he was told, but rather it was an assumption he made partly because of his association with the grains business.

132 In Stewart's closing submissions, it was contended the evidence indicated most of Joe White's customers conducted their own tests. However, the sole source identified for this contention was Stewart's own witness statement. The evidence referred to was subject to a ruling under s 136 of the *Evidence Act* that it was confined to his state of mind. In short, it was not evidence of the fact. In any event, the evidence concerning his state of mind did not include a statement that most brewers conducted their own tests.

133 Asia Pacific Breweries was a 50 percent Heineken owned enterprise.

134 See par 80 above.

category, she referred to Sumitomo Corporation Asahi ("Asahi"). She then stated that the other customers who did their own testing were all part of the Heineken group. Further, she noted that she believed Heineken's individual operators would send a random shipment sample to its technical centre for testing, but she could not recall the frequency. When prompted about customers in Vietnam, McIntyre said that "Thai Tan did. Saigon did. Hanoi and Thai Duyen did, but I'm not sure of the frequency of that either. It seemed to be somewhat inconsistent." After again confirming she was unsure how often malt was tested by these customers, she recalled that Oriental Brewery also did its own testing. It was in this context that she gave evidence that it was her "understanding" that most if not all of the larger customers did their own testing and that if the malt did not comply with the required specifications, the customers' testing would show this. She then agreed with the proposition that the reason she did pencilling for the customers that did their own testing was "primarily" because of the analytical variability between Joe White results and those of the customers in their own laboratories.[135]

151 In summary, McIntyre identified a significant number of customers with respect to whom she knew or believed conducted their own testing. However, she was unaware how often this was done.

152 In addition to this evidence concerning Joe White's customers, an expert called by the Cargill Parties gave evidence that, in over 40 years of working for brewers (28 of those years in senior positions),[136] he had never tested malt upon its delivery to see whether it complied with specifications. Further, he was not aware of any other brewers having done so.

153 Whatever the level of testing conducted by Joe White's customers, it was plainly not adequate to detect the various measures Joe White took to conceal that it was

---

135 See also par 84 above. The last question in this chain of cross-examination was, "Is it fair to say there would have been no point in recording results for other reasons because the customers [who did their own testing] would detect it when they did their own testing at the end; is that your understanding at the time?". Interestingly, when McIntyre asked if the question could be repeated, the question was withdrawn.

136 See fn 1961 below.

supplying malt that did not meet the specifications required.[137] A critical piece of evidence on this topic was Stewart's evidence that Joe White was relying on the fact that it was understood that many customers did not test the malt.[138]

154 Consistent with Mattiske's evidence,[139] the Viterra Parties' position at trial was that there was nothing improper in adopting the approach of using greater quantities of non-malt 1 grade barley.[140]

155 Internal emails from this period (using Viterra email addresses) also demonstrated that Joe White employees were engaging in both pencilling and the use of off-grade barley. An email from Stewart to other Joe White employees on 11 August 2010, discussing a discrepancy raised by a customer between the Certificate of Analysis provided by Joe White and the results of the customer's own laboratory analysis, stated "I think we have been caught out fair and square on this one". Under cross-examination, Stewart acknowledged that there was no problem with the customer's analysis on this occasion.[141]

156 Another internal email, also sent on 11 August 2010, noted that some Joe White employees were refusing to sign the Viterra Code.[142] The email stated this had come about because the employees were being asked to certify they were using exclusively malt-grade barley when they were not in fact doing so. Gordon stated this was

---

137 The matter of whether Joe White met its customers' specifications is discussed at length: see issue 10 below.

138 See also par 1045 below.

139 In this context, "assertions" is not used in a pejorative sense. Rather it is to acknowledge, as Mattiske did, that his understanding with respect to barley and malt production was somewhat limited. In his witness statement, Mattiske gave extensive evidence of his understanding of malting based on his dealings in the grain industry while also recording that he had never been directly involved in the malting industry before Glencore's acquisition of Viterra.

140 Cargill Australia made no allegations in the Statement of Claim (see par 1849 below) specifically based on this historical approach, however relied on evidence concerning this approach as it made it more difficult for Joe White to ensure that customer specifications would be met: see, for example, pars 145-146 above.

141 The Viterra Parties sought to downplay the significance of this email by pointing out that Stewart was not asked what he meant by "caught out". However, there could be no ambiguity about the meaning, not only because of the reference to "fair and square", but also because Stewart's evidence that there was no concern about the customer's analysis made it plain the fault was with Joe White. As to the precise reason for the fault, the Viterra Parties correctly submitted this was not explored with respect to this particular transaction.

142 See pars 58-64 above.

occurring "even though the malt is in spec".[143] The email referred to Fitzgerald "helping to assess legal requirements that were missed from the global agreement". It is also apparent from the email chain that a Viterra Code "hotline" was set up, though it appears there were technical problems with it.

157 The email chain was ultimately forwarded to Fitzgerald on 12 August 2010, with a request from the director of human resources, Karen Ross ("Ross"), to coordinate a response.[144] Alicia Bickmore ("Bickmore"), legal counsel at Viterra from April 2010,[145] gave evidence that Fitzgerald instructed her to review that "global code of conduct" so that it accorded with Australian requirements,[146] but that she was not aware of this email chain. Although Bickmore's recollection was vague on a number of matters, she gave evidence that her instructions concerning the Viterra Code was the annual review, and that she recalled no particular issues being raised at that time.

158 One of the employees who was uncomfortable at the prospect of signing the Viterra Code was Stewart. Upon being confronted with the requirement to acknowledge that he would be accurate and truthful in all dealings with customers, and accurately represent the quality, features and availability of Viterra products and services, Stewart perceived an issue. He was also concerned with the requirement not to create or condone the creation of a false record.

159 Stewart gave extensive evidence on this point. He said his concern arose from Joe White supplying malt that did not meet customer specifications, the use of the Malt Blend Parameters Procedure and the pencilling of Sign-Out Reports.[147] Further, he said that with the adoption of the Malt Cost Reduction Transformation Project and its imperative to use more off-grade barley, this was likely to exacerbate the occasions

---

143 The basis upon which Gordon expressed this position with respect to compliance with specifications was not apparent on the evidence: see further pars 162-163 below.

144 The correspondence showed that as early as June 2010 Ross consulted with Gordon and Fitzgerald to seek clarification on the Viterra Code. Ross noted that the "old ABB [Grain] Code of Conduct was much broader than the Viterra Code".

145 Bickmore reported to Fitzgerald.

146 At 1 stage, she said it was likely it was Fitzgerald, but that it might have been Benjamin Norman (see par 359 below) who gave the instruction. Later she said she actually recalled Fitzgerald gave her the instruction.

147 See par 2248(1) below.

upon which the issues that were concerning him would arise.

160 He said that Dr Megan Sheehy ("Sheehy"), the technical services manager at Joe White, McIntyre and Jones all approached him with concerns about Joe White's practices regarding Certificates of Analysis and having to sign the Viterra Code. McIntyre also gave evidence of her uneasiness. She said that she was not comfortable signing a statement referring to always being accurate and truthful in dealings with customers and in representing the quality, features and availability of Viterra products and services. She explained her discomfort came from her daily duties including altering results on Sign-Out Reports for Certificates of Analysis. McIntyre discussed her concerns at the time with Sheehy and Naomi Moller ("Moller"), technical centre chemist. She said they raised their concerns with Stewart and Hughes, both of whom said that they considered their concerns were fair and would do something about it. McIntyre also gave evidence of discussions with Stewart in which she told him that she did not think the pencilling policy was the right thing to do. McIntyre was not cross-examined on her evidence concerning the Viterra Code.

161 Under cross-examination, Stewart readily agreed that the introduction of the Viterra Code threw into sharp relief the practices that were occurring at the time concerning pencilling and Certificates of Analysis. Stewart said he discussed the concerns that had been raised with Hughes and queried how the Viterra Code could be complied with when the Malt Cost Reduction Transformation Project also had to be satisfied. Stewart said the personal discomfort he felt in signing the Viterra Code because of the conduct in which Joe White was engaged was particularly because of pencilling. Hughes told Stewart that he had already relayed some concerns to Gordon and Malecha. Hughes stated that Malecha had said "my spider senses are tingling" in response to Hughes' issue.[148] Stewart gave evidence it was important to him that

148 The Viterra Parties submitted that in the absence of any evidence from Hughes or anything else to corroborate Stewart's evidence, the court should infer that Hughes would not have given evidence that he discussed the issue with Malecha. In making this submission, reliance was placed upon the evidence given by Mattiske that in October 2013 Hughes stated he had not previously raised the matter of the Operational Practices with persons at Glencore or Viterra. However, this overstated the effect of Mattiske's evidence, which was confined to Hughes acknowledging he had not told "Glencore or Viterra people at that time": see par 1255 below. Further, Hughes had clearly told Gordon (a person at

Gordon and those advising Gordon agreed with the manner in which to proceed. However, Stewart was not specific with respect to Hughes providing Gordon's response.

162 An email sent by Hughes to Gordon on 10 August 2010 squarely raised that there were concerns held at the time. Hughes referred to a discussion with Gordon the previous week by "a couple of the malt staff" concerning the Viterra Code possibly being in conflict with decisions being made regarding the "accepted practice of buying off-grade barley". Hughes stated that, most notably, the practice involved blending off-grade barley with first grade barley and documenting the entire lot as being first grade "along with other minor changes on the Certificate of Analysis".[149] He noted the final lot fell within "the acceptable range of analysis for the customer". Hughes referred to the fact that the practice had been in place for many years and stated that it was "well accepted in every malt business" he had visited.

163 However, in the same email, Hughes said the Malt Cost Reduction Transformation Project had brought the practice into the spotlight with the consequence that some personnel felt uncomfortable rationalising the practice with a statement in the Viterra Code, namely, "be accurate and truthful in all dealings with customers and accurately represent the quality, features and availability of Viterra Inc products and services". Hughes concluded the email by asking for Gordon's advice. The following evening, Gordon forwarded Hughes' email to Ross, with the message, "As per previous email".

164 The Viterra Parties submitted that an inference should be drawn that if Hughes had been called as a witness he would not have given evidence that he believed, or

---

Viterra) something about his concerns and the concerns of others, and therefore to construe this evidence in the manner suggested would only be on the basis that Hughes was expressing an untruth. Either way, it did not lend support to a finding that Hughes had not raised the matter in 2010. Furthermore, the evidence of Stewart concerning Malecha was given in his witness statement, and was not challenged by Hughes' counsel or raised by any other party despite Stewart confirming this evidence during cross-examination. In the circumstances, this submission of the Viterra Parties cannot be accepted. That said, it is quite a different matter as to what Hughes actually said to Malecha (or Gordon).

149 The Cargill Parties submitted this description of "minor changes" made on a routine basis did not accurately capture what was actually occurring.

informed any person whose knowledge might be attributable to the Viterra Parties, that there were any actual inconsistencies between the Viterra Code and the Operational Practices. In making this submission, the Viterra Parties referred to Hughes informing Gordon that the practice of changing Certificates of Analysis was well accepted in every other malt business he had visited, and that the final lot of malt fell within an acceptable range of analysis for the customer.[150] They also referred to Gordon positively stating that malt supplied by Joe White was "in spec".[151]

165 In my view, there was no basis to assume, in August 2010, when the practice of pencilling was not the subject of any formal procedure and was arbitrarily conducted without the knowledge of Joe White's customers,[152] that Hughes would have given evidence that such dealings were "accurate and truthful … and accurately represent[ed] the quality, features and availability" of the malt supplied. Further, on no basis could conduct giving rise to the Varieties Practice or the Gibberellic Acid Practice be considered to be anything other than misleading and false.[153] Indeed, on the assumption Hughes would have been a truthful witness, it is difficult to envisage evidence being given by him which would have been different to the substance of the evidence given by Stewart on this point.[154] Moreover, it would be difficult for Hughes to have explained in any compelling way why he expressly instructed Joe White employees not to inform the customers of the true position.[155]

166 In relation to what Hughes informed Gordon about (or any other person whose knowledge might be attributable to the Viterra Parties), it is not possible to draw any relevant inference with any confidence. Certainly, Hughes was defending the conduct in which Joe White was engaged. That said, he was not suggesting that the conduct was accurate and truthful; on the contrary, it is implicit in him seeking advice that he

---

150 See par 162 above.
151 See par 156 above.
152 See par 197 below.
153 Though, notably, the contemporaneous emails did not refer to the provision of unauthorised barley varieties or the use of gibberellic acid when prohibited.
154 See, for example, pars 167, 174 below.
155 See par 90 above and par 172 below. Further, more generally, in relation to the issue of Hughes not being called as a witness, see pars 1970, 2126 below.

had, at the very least, concerns in this regard. However, it is not possible to objectively form any view as to what Gordon,[156] or for that matter, Malecha, Ross or Fitzgerald, understood to be the true position when there was no communication before the court to demonstrate that, at that time, any of them fully appreciated the nature and extent of the conduct being engaged in.

167 Based on his discussions with Hughes, Stewart believed the issue had been addressed at the executive level of Viterra for Australia and New Zealand. He gave evidence that he "remained uncomfortable with the practice of documentation provided to customers not reproducing Joe White's analysis". However, as there had been no suggestion from Hughes or anyone else that the practices would change, and Viterra pressed staff to sign the Viterra Code, he believed he had no "real" choice but to continue his function of implementing the practices in place and to sign the Viterra Code if he wanted to retain his job. In any event, a directive was given by Viterra, through Ross,[157] in August 2010 to the effect that employees who refused to sign up to the Viterra Code would still be bound by it.

168 By way of observation, when in the witness box Stewart struggled with a patent tension in his evidence. While seeking to justify his conduct in overseeing and implementing a policy,[158] which allowed for testing results to be misrepresented (in the context of what he had been told initially by Hughes about the necessity of such conduct and the implementation of some "rigour" to the process),[159] he also had to grapple with his obvious discomfort both back in 2010 and while giving evidence of his full appreciation that false statements were being made to Joe White's customers about the composition of malt delivered.

169 As part of Stewart's evidence to justify his conduct, he said he was repeatedly told by

---

156 See further fn 793 below.

157 Gordon was forwarded the email by Ross, with the attachment, entitled "Code of Conduct Refusal". In an email sent 17 August 2010, Ross had made an enquiry as to what would occur if "people refuse to sign the paperwork".

158 Stewart was the person responsible for implementing the Viterra Certificate of Analysis Procedure on a day-to-day basis.

159 See par 197 below. Stewart said he did not necessarily regard it as a dishonest practice as it was an industry practice that "we" aimed to improve by using more scientific rigour.

brewers that they understood it was difficult to meet every customer specification in every shipment and that malt did not always meet specifications. Stewart said he was informed by customers when malt provided by Joe White did not perform satisfactorily in the brewing process. He also gave evidence of his understanding that brewers were not overly concerned with the correctness of Certificates of Analysis and were primarily concerned with whether the malt performed well in making beer. However, despite this suggested lack of concern for correctness, Stewart also gave evidence that customers would expect the Certificates of Analysis "would turn up correct from a quality assurance perspective".[160]

170 In relation to barley varieties, Stewart fully understood that some customers specified a particular variety or particular varieties, but that Joe White was not always supplying as specified. He further understood that the customers were not only not being told, but it was also being reported the correct variety or varieties were being used. When confronted with these somewhat startling facts, Stewart gave evidence that he did not know how significant these circumstances may have been for the customers. Stewart also knew gibberellic acid was being added to malt contrary to some customers' specification, and that they were not being informed. He accepted the unauthorised additive should have been disclosed.

171 Stewart said that Joe White enjoyed an excellent reputation for delivering high performing malt. He said that Lion Nathan and Sapporo recognised Joe White as supplier of the year on several occasions.

172 Stewart acknowledged that an alternative commercial approach to supplying malt out of specification would have been to contact the customer to communicate the true position and to negotiate with respect to the dispatch of the shipment. While his evidence was that he was under instruction from Hughes not to discuss the position with customers,[161] Stewart also gave evidence, although no specifics were provided,

---

160 See further par 411 below.

161 At another point, Stewart deposed that there did not need to be any decision about disclosing the Operational Practices to Joe White's customers because that was the way Joe White had always done business and Stewart was just documenting it.

that Joe White occasionally adopted the approach of raising the matter with customers.[162] However, Stewart suggested that to do this in every instance would not be an efficient way to conduct a malting business. Indeed, Stewart stated further that, in his experience, customers, and in particular brewers, did not appreciate the imposition of addressing minor variations and the consequent shipment delays if malt would nonetheless perform satisfactorily.

173 Stewart said, for these reasons, Joe White's decision was usually to proceed with delivering malt, even if out of specification, if Joe White was confident the malt would perform in accordance with the "customer's needs".

174 As somewhat of a catch-all for his participation in what had gone on in the past at Joe White, Stewart gave evidence that he was troubled but, at the same time, comforted by the fact the malt performed well and "if [he] was, you know, to participate in the malting industry, [he] really had little choice but to follow those procedures". However, Stewart said he understood that a Certificate of Analysis sent to a customer amounted to a representation and an assurance that the facts concerning the malt supplied were as stated. When it was put to Stewart that he must have appreciated that supplying malt and representing it possessed certain attributes when it was fully known, with documented internal processes, that in fact it did not, was a serious deception of the customer, Stewart agreed. He lamented, "but unfortunately this was part of my job".[163]

175 After struggling with the patent tension referred to above for much of his cross-examination by the Cargill Parties' senior counsel, Stewart was given the opportunity to uninhibitedly state his position. Given the answers he gave in seeking to justify some aspects of the procedures adopted with respect to Certificates of Analysis and some of the other issues in this case, it is instructive for the relevant evidence to be set

---

162 Based on the evidence before the court, it is likely that such occasions were rare.

163 The Viterra Parties submitted the question put during cross-examination that elicited this answer was premised on the assumption that Certificates of Analysis did misrepresent the qualities of malt and that Stewart's answer was confined to a specific Certificate of Analysis. In fact, the question put was on a far more general level, which was plainly understood by Stewart as it was reflected in his answer which was broad in compass and contrite in substance (as was his demeanour at the time he gave his answer).

out in full. After Stewart was attempting to justify "as a by-product" the use of 2 standard deviations derived from the malt analytes proficiency testing scheme, referred to as MAPS ("the Malt Proficiency Scheme"),[164] being simply applied in the practice of pencilling Sign-Out Reports and the consequential details recorded in Certificates of Analysis, the relevant exchange was as follows:

> I would like to give you the opportunity, Dr Stewart, before we go further to clarify your position in relation to the use of the 2 standard deviation leeway, if I can call it that, that you say is supported by [the Malt Proficiency Scheme] because I detect in your statement an ambivalence on your part about whether you want to embrace the [Certificate of Analysis] policy and defend it on the one hand or distance yourself from it and blame the commercial people on the other. So which is it to be here and now, Dr Stewart? Are you going to say to his Honour now that you regard the adoption of a 2 standard deviation as a legitimate approach having regard that you are applying it to a certificate that states facts without disclosing to the customer that's what you have done?---In the context of Viterra Malt I thought that that was a good compromise, and in my personal opinion and the way that - I'm not sure if this is relevant, but in the way that Coopers Malt currently operates we don't do any of those practices. So we have in effect adopted the Cargill practice, if you like. For me being in the industry, we were under pressure to continue to send the malt out and the 2 standard deviation or the … [C]ertificate of [A]nalysis [P]rocedure appeared to be a more robust way of doing it rather than the arbitrary way. So that's why I say that the 2 standard deviations is better than an arbitrary approach. But, you know, the approach that I favour and the approach that Coopers currently use is to state exactly what was analysed on the [C]ertificate of [A]nalysis, and that is certainly my preference.
>
> So really what you are saying in the last answer, if I am understanding you correctly, is that a system of pencilling and thereby altering the measured results unconstrained by any parameters as to value is worse than a system which is at least constrained by 2 standard deviations; is that right?---Correct, yes.
>
> *Do you accept that whether you vary or report falsely, I should say, the results of the analysis obtained in the lab by 2 standard deviations or more you are, irrespective of the range of deviation, making a false statement to the customer?---Yes, those are – correct, yes.*
>
> *And that is what is wrong with it, isn't it?---Yes.*
>
> *And that's why you were uncomfortable with it?---Yes, correct.*
>
> *And that's why you don't want to own it; is that right?---Correct, yes.*
>
> *And you are embarrassed by this policy, are you not?---It certainly was a source of unease for people at Joe White's (sic); yes, most definitely, yes.*
>
> And you wouldn't dream of suggesting at Coopers that they undertake that

---

164 See further pars 207-211 below.

> kind of practice, would you?---No. Mind you, nor do we base it on a blend analysis. We analyse the actual malt going in that container.
>
> That's a different debate, isn't it, about which minds amongst reasonable maltsters may differ; do you agree?---Yes.
>
> So we are concerned with the [Certificate of Analysis] policy?---Yes.
>
> Can his Honour then take it that you no longer seek to defend as a legitimate practice the alterations of [C]ertificates of [A]nalysis by up to 2 standard deviations?---*I have always only ever said that it was a more robust procedure and based on some good science. So I don't defend sending a [Certificate of Analysis] that is incorrect to customers, no. I was always uncomfortable with that*.[165]
>
> (Emphasis added.)

176 Having given this clear and unequivocal evidence as to the unacceptable nature of altering Certificates of Analysis in the manner in which Joe White did, the following day Stewart seemed to suggest there was nothing about which to be uncomfortable. He expressed his belief that most brewers knew about altering Certificates of Analysis because of the general knowledge in the industry. When it was put to Stewart during cross-examination that he was very keen to assert the concept of industry practice, Stewart agreed. Stewart said he was aware of the industry practice not only from Hughes,[166] but from other colleagues and some direct information. When asked whether there was any scientific analysis or any sort of survey done of customers to support the existence of a common industry practice, Stewart said there was not. However, he said he had had conversations with individuals from the industry who had verified its existence.

177 While on the whole Stewart was a satisfactory witness, this topic is not complete without referring to the fact that at times, because of the difficult line Stewart was attempting to walk, his evidence was less than satisfactory. By way of example only, Stewart was asked about why it was that he failed to disclose to Joe White customers the practice of pencilling. Rather than answering the question, Stewart took the

---

165 In his re-examination, Stewart gave evidence that Coopers simply analysed what was placed in a container for delivery and faithfully put the test results of that malt on a Certificate of Analysis. This applied to both malt to be used internally (for Coopers to use to make beer) and for external customers. He said if there were any parameters out of specification, a sensible discussion would be held with the external brewer about whether or not the brewer would accept the malt. He further said that that was the way he enjoyed doing business.

166 See par 73 above.

opportunity to attack the manner in which Cargill operated Joe White after 1 November 2013, referring to brewers being "asked every 5 minutes" for a derogation when something was slightly out of specification. He then went on to give his opinion as to what he thought brewers understood about the conduct of maltsters. When it was put to Stewart that he had not answered the question as put, Stewart accepted this and also acknowledged he was conscious his answer was non-responsive at the time he gave it.

178 This consideration of Stewart's evidence would also not be complete without referring to the fact that, before he gave evidence, a certificate under section 128 of the *Evidence Act 2008* (Vic) was sought and given.[167] Stewart availed himself of the protection available under this provision by way of privilege against self-incrimination in other proceedings in relation to a number of matters about which he gave evidence.[168] These matters included evidence of: the development and implementation of the Reporting Practice, including the Malt Blend Parameters Procedure (and its concealment), pencilling and the Viterra Certificate of Analysis Procedure (and its concealment); the Varieties Practice, including the increased use of barley varieties not approved by customers because of the Malt Cost Reduction Transformation Project; the Gibberellic Acid Practice, including him being directly involved in approving a shipment despite a customer expressly stipulating additives were not to be used; and the signing of the Viterra Code.

179 Section 128 includes the following:

> (1) This section applies if a witness objects to giving particular evidence, or evidence on a particular matter, on the ground that the evidence may tend to prove that the witness—
>
> (a) has committed an offence against or arising under an Australian law or a law of a foreign country; or
>
> (b) is liable to a civil penalty.
>
> (2) The court must determine whether or not there are reasonable grounds

---

167 Stewart was subpoenaed to give evidence by the Viterra Parties.

168 A certificate was issued in relation to evidence contained in a total of 19 paragraphs of Stewart's witness statement, together with evidence Stewart gave orally on the same topics.

for the objection.

180 Despite Stewart's application for a certificate (which was made by experienced senior counsel on his behalf), and despite the court determining there were reasonable grounds for each of the objections made before giving the certificate,[169] the Viterra Parties submitted that to the extent there was evidence to the effect that "some of Joe White's staff had personal/subjective concerns" regarding the practice of adjusting test results, such concerns were mistaken and unwarranted. The reference to some staff was because Testi and McIntyre also sought and obtained certificates under section 128 with respect to their evidence, broadly on the same subject matters as those identified by Stewart in obtaining his certificate.[170]

181 Finally on this issue, it must be observed that the Viterra Parties' submission on this issue failed to grapple with the evidence of McIntyre to the effect that frequently results were fabricated because no testing had been done.[171] Further, no such submission could have been made by the Viterra Parties with respect to the Varieties Practice or the Gibberellic Acid Practice as both involved deliberate deception.

182 Furthermore, before returning to the chronology, and although far from determinative, findings made with respect to the legitimacy or otherwise of the Operational Practices are supported by the fact that each of the 3 persons critically involved in their implementation had been, and remained, conscious that they were engaged in inappropriate behaviour.[172]

183 In the ensuing months of 2010, it appeared to Stewart that the approach of getting more malt from off-grade barley in accordance with Viterra's directive under the Malt

---

169 No submissions were made by the Viterra Parties that there were not reasonable grounds for giving the certificates.

170 To be fair, Stewart, Testi, McIntyre and others who worked at Joe White engaged in conduct that more senior management not only sanctioned, but encouraged and required. Leaving aside the question of the appropriateness of the Operational Practices more generally, there was no evidence to suggest anything other than that there was a reasonable basis for them to believe that their conduct concerning the Operational Practices was consistent with what had been approved by senior management. Unlike Hughes, they were offered ongoing employment with Cargill on a long-term basis.

171 See par 78 above.

172 This observation remains valid despite some of the concessions made during cross-examination of these 3 witnesses concerning the legitimacy, or possible legitimacy, of some of the conduct referred to in the evidence the subject of the s 128 certificates.

Cost Reduction Transformation Project became standard process for Joe White. Stewart gave evidence that Joe White's staff became used to operating in such a manner. However, he said concerns continued with respect to the manner in which Certificates of Analysis were being generated.

184 As a result, in around September 2010, Stewart discussed with Hughes whether Joe White should report a theoretical blend value or equivalent, rather than the purported actual results (after pencilling). Stewart suggested this would allow Joe White employees to comply with the Viterra Code.

185 In September and October 2010, meetings were held at which it was acknowledged that the Viterra Code raised questions of how to handle customer information in Certificates of Analysis.

186 Stewart gave evidence that he decided with Hughes against the use of a theoretical blend approach because it did not address the contents of the shipment itself. Stewart further gave evidence that "Joe White" wanted to maintain confidence in the quality of the malt that it shipped.

187 The Operational Practices continued against a backdrop of business transformation pursued by Viterra via a project titled "Business Excellence through Strategic Transformation", of which the Malt Cost Reduction Transformation Project formed a part. An email sent to all Viterra employees in February 2011 detailed progress on the project. It stated that during 2010, the Australian Malt division worked on 2 "transformation projects" within the business, designed to reduce cost and increase revenue in the Southeast Asian region. These projects included a "review of the process by which we acquire malt barley", resulting in an anticipated benefit of $1.3 million overall, and a review of "operating expenses and processes", resulting in an anticipated saving of $2.3 million in the 2011 fiscal year and a possible saving of $1.5 million in the 2012 fiscal year.

188 While dealing with the events of 2010, it is convenient to refer to the renewal of Hughes' employment contract. In around mid-2010, a contract was agreed to between

Hughes and Viterra Ltd ("the Hughes/Viterra Contract").[173] Because of some of the issues raised in this proceeding, it is necessary to spend a moment referring to the lead up to the Hughes/Viterra Contract, as well as some of its terms (which terms in most instances were also reflected in, or similar to, the terms of the contracts of service of the other Third Party Individuals).[174]

189 A letter dated 11 June 2010 addressed to Hughes entitled "CONFIRMATION OF EMPLOYMENT" and purportedly signed off by Gordon,[175] confirmed Hughes' full-time position "with Viterra". After setting out Hughes' total fixed remuneration package of $300,000, it was noted that the additional components of his employment conditions were as detailed in an attached contract of service.

190 Under cover of a letter dated 23 June 2010, Gordon forwarded a further draft of the Hughes/Viterra Contract. The letter stated that Viterra, being a reference to Viterra Ltd, recognised the contributions and achievements of staff in pursuit of achieving Viterra's corporate objectives. Hughes' position with Viterra Ltd was again confirmed. The covering letter recorded that Hughes was eligible for the "Viterra Short Term Incentive" and the "Viterra Mid Term Incentive" schemes, together with annual awards based upon his performance "as well as that of Viterra". Also on 23 June 2010, emails were exchanged with the subject, "Code of Conduct Roll Out". In the second of those emails, Ross stated she had spoken to Gordon and Fitzgerald to seek clarification concerning the Viterra Code. She noted that it had been approved by the board, that it was the first time she had seen the disclosure policy and that she thought it could potentially cause some questions from employees.

191 Returning to the Hughes/Viterra Contract, it had a number of terms which linked Hughes' remuneration and performance inextricably to that of Viterra. The terms and conditions of employment required Hughes to perform all duties to the satisfaction of

---

173 See further par 1873 and issues 135, 136 below.

174 In relation to each of Youil and Stewart, the written contract was entered into between the respective executive as the employee, and was signed by Hughes on behalf of Viterra Ltd as the employer. With respect to Wicks, the service contract was countersigned by Norman on behalf of Viterra Ltd. On the face of the document, it was unclear who signed Argent's service contract on behalf of Viterra Ltd.

175 The first page of the document contained Gordon's name and his position as president for South East Asia, although it did not actually bear his signature in the place provided for it.

Viterra Ltd. To this end, Hughes was required to comply with all Viterra Ltd's operational practices, procedures, policies and directions, which were subject to the right of Viterra Ltd to amend them from time to time or to introduce new ones. Further, it was recorded that all policies and procedures were held by the office of Viterra Ltd, on the intranet "Pulse" and were available from Viterra's human resources department.[176] Pulse enabled documents to be retrieved from Viterra's wider "Total Records and Information Management" system (referred to by Viterra employees as "TRIM") ("the Records System").[177]

192 Mattiske gave evidence that Pulse contained Viterra's policies. He believed there were approximately 50 policies uploaded. Mattiske had access to Pulse and had reviewed some of the uploaded policies. However, he could not recall whether Joe White's policies were on Pulse. He further said that he had never reviewed the Malt Blend Parameters Procedure or the Viterra Certificate of Analysis Procedure. Pulse had a search engine. If someone wanted to find the Viterra Certificate of Analysis Procedure on Pulse, a search for "certificate of analysis" would have brought it up.[178] Stewart's unchallenged evidence was that anyone internally in Viterra could see documents uploaded on Pulse.

193 The Hughes/Viterra Contract made no distinction between the head office of Viterra Ltd and the head office of Joe White. In short, Hughes was required to perform his

---

176 The effect of a document being put on Pulse was that it then formed part of Viterra's records, and was available to those with access who searched for such a document. There was no evidence to suggest there was any form of publication of the fact that a document had been uploaded to Pulse. Testi gave evidence that access to Pulse was available to staff of Viterra Malt, as it was determined by information technology staff. Joshua Wilson-Smith (see par 615 below) gave evidence that Pulse was "Viterra-wide" and was the operational intranet for everyone that worked for Viterra. In closing submissions, Stewart's senior counsel sought to distinguish Pulse from the Records System. In so doing, it was submitted Pulse was the means by which information was disseminated and promulgated "throughout the organisation". On the evidence before the court, it was not possible to form such a sweeping conclusion such that it could be presumed that documents on Pulse would have been brought to the attention of everyone who worked at Viterra.

177 The Records System used letters to indicate the relevant area (for example, CF for Corporate Folder), a number to show the year (for example, 04 to identify 2004) and a further number which demonstrated the sequential number of the folder that was raised at the time: for example, par 288 below. Every document was assigned a number and was traceable.

178 Stewart gave this evidence somewhat tentatively, but it was not the subject of any challenge. Moreover, it would be highly surprising if the intranet did not have a search engine.

duties at the "Head Office, Adelaide",[179] subject to the right of Viterra Ltd to require Hughes to make a reasonable relocation as determined by Viterra Ltd.

194 It was a condition of employment that Hughes was to be the subject of performance development reviews, to be conducted throughout the year. Further, Viterra Ltd agreed to endeavour to improve the performance of Hughes and that of Viterra Ltd, with Hughes to be provided feedback on his performance on an ongoing basis as well as through formal interviews.

195 As part of a termination clause, if Hughes were terminated he was required to deliver up to Viterra Ltd "all correspondence, including documents and other papers and all other property belonging to [Viterra Ltd] or its Associated Companies …". Further, if Hughes were made redundant, a redundancy payment would be made in accordance with the "Viterra Policy". Furthermore, Viterra Ltd was entitled to make deductions from Hughes' pay for various stipulated reasons.

196 As referred to in the covering letter, the Hughes/Viterra Contract provided that Hughes was eligible for certain incentives. In relation to his short-term incentive, this was part of the "Viterra Short Term Incentive scheme" and was to be based not only on Hughes' performance, but also on the performance of *Viterra*. As for his mid-term incentive, described as the "Viterra Mid Term Incentive scheme", that was to be provided separately by Viterra. The Hughes/Viterra Contract required Hughes to work 38 hours per week. However, his daily hours were to be set by Viterra Ltd's management to meet the operational requirements of Viterra Ltd. Further, in setting out a restraint of trade and other matters dealing with conflicts of interest, it was recorded that Hughes was a key link between Viterra Ltd and *its* customers. In that regard it was recorded that Viterra necessarily entrusted Hughes with Viterra Ltd's customer relationships, which were "an element of its business". And, "[i]n order to protect that business", a 3 month restraint period was imposed if his employment with

---

179 It was clear from other parts of the Hughes/Viterra Contract, that this was a reference to Viterra's head office; for example all policies and procedures of the employer were to be stored at that office.

Viterra Ltd were to cease.

197 Despite the matters set out above,[180] as at 2011, pencilling had not been formalised within Joe White to any significant extent. Stewart gave evidence that, up to this time, Certificates of Analysis had been the subject of arbitrary "correction". Stewart explained that, with the imposition of the Viterra Code, change was necessary as the arbitrary pencilling was not entirely truthful. This was addressed in early 2011, when Viterra Malt decided to introduce a procedure to provide some structure and, according to Stewart's evidence, more scientific rigour and a more rigorous procedure.

198 The genesis of the new procedure appeared to include an email from Sheehy to Stewart and another which discussed a first draft of the guidelines for Certificates of Analysis. After stipulating various things that could no longer be done, Sheehy also referred to working "out what [to] put exactly" for the parameters that did not have any stipulated standard deviations for test results recorded in any recognised testing scheme.

199 Accordingly, with respect to the Reporting Practice being reflected in Viterra's business records, on 18 February 2011, the first version of the "Viterra Malt Certificate of Analysis Generation – Export Customers Procedure" ("the Viterra Certificate of Analysis Procedure") was created and circulated.[181] As the title suggested, its applicability at that time was confined to export customers.[182] It provided that:

> All Production Managers, the Technical Centre Chemist, Customer Service Administrator, the Chief Chemist, General Manager Technical and all Managers responsible for signing off Certificates of Analysis *are required to adhere to the guidelines* outlined in this document.
>
> (Emphasis added.)

The procedure was outlined as follows:

> All results must be present on the Certificate of Analysis prior to approval being signed off in [the laboratory information and management system ("the

180 See pars 157-163 above.
181 A draft had been circulated in November 2010.
182 Most of Joe White's customers from 2010 to 2013 were international brewers.

Laboratory Information System")][183] by the Production Manager, or their representative.

- In the event that all results are not available at the time of shipment, *expected blend results can be used as a substitute for all parameters*,[184] with the following exclusions:
  - Actual NDMA[185] and DMS[186] results must be available for all Carlsberg Asia, Heineken and Japanese Customer groups unless otherwise approved by the General Manager Technical.
- The Certificate of Analysis cannot proceed for final sign-off and forwarding to the Shipping Department until all data is present. Failure of results to be available may cause delays in Shipping Documentation.

Results that *appear out of specification* on the Certificate of Analysis *may be adjusted by the Technical Centre Chemist (or their nominated proxy)*[187] *based on the associated analytical error defined for that test parameter as defined in the* [*Malt Proficiency Scheme*] *program, by up to two Standard Deviations where required. These changes will be approved by the Chief Chemist and General Manager Technical when signing off the Certificates of Analysis.*

- These changes *are not to be made by the Production Managers in* [*the [Laboratory Information System]*.
- All out of specification results should be repeated if possible, particularly where the results are significantly different from the expected value.
- The final shipment results *must be within two standard deviations* of the pre-shipment result, highlighting the importance of accurate pre-shipment data.
- Results that still remain *out of specification after a maximum two standard deviation adjustment can only be altered further and signed off for progressing of the shipment by the consensus of two or more General Managers [and] the Market Manager*, or the shipment may be recalled.

(Emphasis added.)

200 Thus, changes could be made "where required", so as to report compliance with the relevant specification, both with respect to non-complying results up to 2 standard deviations (as identified in the Malt Proficiency Scheme) or non-complying results beyond 2 standard deviations from the customers' specifications; the only difference

183 The Laboratory Information System is described in par 255 below.
184 This was a reference to the theoretical blend approach: see pars 25-29 above.
185 NDMA stands for nitrosodimethylamine.
186 DMS stands for dimethylsulphide.
187 Compare par 75 above. Although there was no record of McIntyre ever being the technical centre chemist's nominated proxy, she addressed most of the test results when they were out of specification. See also fn 238 below.

being the required process to be taken before any such adjustments were able to be made.

201 Stewart gave evidence that when he was involved in approving out-of-specification malt, he considered the test results overall, the customer's needs and whether the malt would nonetheless perform well for the customer. He further said that when he took out-of-specification malt results to Wicks or Youil, or if neither of them were available, Hughes, for co-approval he explained the technical aspects of the malt. Then, the commercial issues would be addressed (including the costs and production implications of withholding the shipment). Stewart said if he was satisfied as to the malt's quality, its despatch would always be approved. Further, he said even if he was not so satisfied, the despatch would be approved by Wicks, Youil or Hughes. In substance, the perceived commercial imperatives of Joe White drove the decision as to whether malt which did not comply with customer specifications would be despatched to the customer in any event.[188]

202 Returning to the Viterra Certificate of Analysis Procedure, under the heading "Records" the following was stated:

> All results relevant to a given shipment must be recorded in [the Laboratory Information System] and will automatically be transferred into [a Laboratory Information System] based Certificate of Analysis … Certain Customers such as Lion Nathan, Kirin and Sapporo require the information to be presented in their own Certificate of Analysis format or with other supporting document (sic) in a pre-defined format.
>
> Non-Conforming Shipment release form to be completed where required and attached with [Certificate of Analysis] documentation.

203 Under the heading "References", 3 items were identified, namely: "Internal Viterra Malt Procedure"; the "[Malt Proficiency Scheme] Standard Deviation Values as determined by the [Malt Proficiency Scheme] Technical Advisory Group"; and a "Malt Blend Parameters Document" (being a reference to the Malt Blend Parameters Procedure), with the address on Viterra's J-drive. As to the last of these items, Testi gave evidence that this document was "on the server".

---

188 See further par 2238 below.

204 Finally, Sheehy was recorded as the author and Stewart as the person who approved the Viterra Certificate of Analysis Procedure. Sheehy worked under Stewart and Stewart considered she was very good at writing procedures. Stewart's evidence was that the document was tabled and approved at a monthly meeting of the "Viterra Malt executive".[189]

205 Stewart's evidence was that it was important that the technical team in head office saw the original results "warts and all", so that any decision about quality and performance leading to adjustment of documentation could be made on a proper basis. Further, he instructed plant managers not to make any adjustments outside the Viterra Certificate of Analysis Procedure.

206 Also on 18 February 2011, Testi sent an email to a large number of employees, including all Joe White executives, all Joe White plant managers and McIntyre.[190] The email referred to a phone conference that week and the fact that it had been discussed that the Viterra Certificate of Analysis Procedure would be confined to export customers at that point. Testi also noted that the Viterra Certificate of Analysis Procedure had been given an intranet document number and had been uploaded onto Viterra's intranet, Pulse.[191]

207 A moment needs to be spent discussing the Malt Proficiency Scheme and what was disclosed by providing information concerning its existence. Self-evidently, the Malt Proficiency Scheme was central to the intended operation of the Viterra Certificate of Analysis Procedure.[192]

208 This is apparent not only from the contents of the Viterra Certificate of Analysis Procedure, but also from an email sent by Stewart on the same day. In that email, Stewart referred to the Malt Proficiency Scheme standard deviation table, which was attached, and said it could be used for the trial Certificate of Analysis procedure.

---

189 Stewart could not recall who was at the meeting.

190 The email attached a "Non-Conforming Shipment Form". This was solely an internal document and, to the extent it was used, it was not sent to Joe White's customers when the malt did not conform.

191 Testi provided the intranet address and document number.

192 See par 199 above; but also see par 198 above.

Stewart directed that Joe White could operate within 2 standard deviations. The attachment set out a whole range of analytes, and the "standard deviations" applicable to them respectively.[193] The document recorded that these were the results as at 18 February 2011 based on round 169, which was a reference to the test that had occurred that month.

209 The Malt Proficiency Scheme is a form of inter-laboratory comparison or ring-testing, by which a participant laboratory may assess the calibration and quality of their testing.[194] The purpose of the Malt Proficiency Scheme was to enable laboratories undertaking the analysis of "malt and barley to monitor and improve the quality of their measurements for a range of analytes". The Malt Proficiency Scheme had over 100 participating laboratories worldwide.[195] It operated by sending a portion of the same single sample to the participating laboratories for analysis, and compiling an analysis of the laboratories' results, which were then distributed.[196] Naturally, the range of deviation is wider with respect to some components when compared to others.

210 By February 2011, Viterra already had within its records a document entitled "Malt Analytes Proficiency Testing Schemes Procedure", which had been created by Sheehy and approved by Moller in August 2008. The document was for distribution to all "Viterra Malt Laboratories", and stated that they were all bound by the relevant procedures outlined in it. In addition to the Malt Proficiency Scheme, reference was

---

193 In fact, the values attributed to each analyte were the standard deviation for proficiency assessment values: see further par 216 below.

194 Self-evidently, if laboratories calibrate testing equipment differently, then different results would occur in respect of the same sample. Stewart gave evidence that different results between Joe White's testing and customer testing sometimes occurred because of this. Further, McIntyre gave evidence some adjustments were made to results because Joe White was aware from the testing under the Malt Proficiency Scheme by some of Joe White's customers that their test results read differently to Joe White's results: see par 77 above. Stewart's evidence was that some laboratories "read 3 [or] 4 standard deviations off". Furthermore, by the Malt Proficiency Scheme utilising a single sample as the control sample it avoided the possibility for variance from variability within the malt itself if more than 1 sample was used in testing a batch of malt.

195 Testi gave evidence that she personally derived confidence from the fact that the Malt Proficiency Scheme was an industry scheme with a scientific and statistical basis.

196 Each result was reported as a "z score", which was a measure of the number of standard deviations from the mean of all reported results.

made to a Heineken analysis scheme[197] and a San Miguel analysis scheme. It was recorded that the primary aim of "the schemes" was to enable laboratories undertaking analysis of malt and barley to monitor and improve the quality of their measurements for a range of analytes.

211 The procedure outlined the manner in which the laboratories were to participate in the Malt Proficiency Scheme. There was also a procedure for "all participating laboratories" to participate in the Heineken scheme. In relation to the Malt Proficiency Scheme, the following was stated:[198]

> If a **z score** is **>2.00 or <-2.00** this result must be entered into AusCAR as a non-conformance. Non-conformances must also be raised for failure to enter results, and for assigned values where the original laboratory result for that plant falls in the category of **>2.00 or <-2.00**, as notified in the Internal Comparison Report.
>
> (Original emphasis.)

212 Cargill's malt business unit leader in 2013, Doug Eden ("Eden"), was taken to this passage during his cross-examination. Eden was a long-standing Cargill employee who, in 2013, had spent a number of years working in the malting industry.[199] He acknowledged he understood what "MAPS" was, but said that this was an area that was not his strength. He accepted that the passage in question would have alerted a reader to "this analytical approach that's being taken relating to 2 standard deviations".

213 This document, in discussing the proficiency schemes, made no reference, either expressly or implicitly, to the Malt Blend Parameters Procedure. Further, later iterations made no reference to the Viterra Certificate of Analysis Procedure after it had been introduced in February 2011. It also said nothing about changing the test results on Sign-Out Reports or in Certificates of Analysis. In short, the document did

---

197 See fn 554 below.

198 The language used did not precisely match the wording in the Malt Proficiency Scheme, but it is unnecessary to discuss this further.

199 Eden ceased his employment of 37 years with Cargill in 2015. During that 37 years he spent approximately 3 years in the mid 1990s working for Cargill Australia in Wagga Wagga, New South Wales. He has a bachelor of economics and business accounting from Coe College.

not give notice of these other procedures or the practice of pencilling. Further, Eden's acceptance of the reference to a 2 standard deviations approach in the document in no way amounted to an acknowledgement that the inclusion of this document in the Data Room put Cargill on notice of the Reporting Practice.[200]

214 Some of Joe White's customers also participated in the Malt Proficiency Scheme. McIntyre gave evidence that when a complaint came from a customer who was a participant, the customer would be told the test results were within the Malt Proficiency Scheme and the European Brewery Convention standard inter-laboratory variations. Sometimes customers would accept the explanation; sometimes not. During her cross-examination, the proposition was put, which she accepted, that if a customer accepted the explanation then the customer was also accepting malt that was out of specification. Thus, despite being within the "standard inter-laboratory variations", the evidence was that this was considered as not meeting the customer's specification.

215 Stewart gave a description of the Malt Proficiency Scheme as a widely-used quality assurance scheme. He gave evidence of Joe White's participation, and said that if a participant discovered that it was "repeatedly … an outlier, it might calibrate its equipment or processes to achieve results closer to the population average". (Testi took exception to "repeatedly" in this statement, and said an adjustment might be made after only a single outlier, depending on the result.) In his evidence in chief, Stewart said the Joe White technical team[201] described the Malt Proficiency Scheme as satisfactory, and 2 standard deviations for any particular parameter as scientifically

---

200 See par 465 below. In the Viterra Parties' closing submissions it was stated that Cargill was told Joe White used the "MAPS Policy" which *showed* that Joe White's analytical approach was to record a result as being non-conforming only if the result was plus or minus more than 2 standard deviations from the target parameter. When their senior counsel was asked how that submission was put, it was conceded that "showed" was not the best verb. It was then said that "accepted" or "assumed" might be a suitable replacement, but then it was acknowledged that it could not have been "assumed" that Joe White in particular took this approach. Finally, it was suggested "accepted" was the appropriate replacement. This exchange demonstrated the Viterra Parties' unsuccessful attempt to overstate the connection between the disclosure of the Malt Proficiency Scheme as a document relevant to Joe White's operations and the existence of the (undisclosed) Viterra Certificate of Analysis Procedure.

201 Which Stewart identified as primarily Sheehy, but also said "probably McIntyre may have been consulted".

robust and an appropriate principle to apply.[202]

216 Every month, the Malt Proficiency Scheme would prepare and distribute a report which set out for each parameter the range of results achieved by its participants. The information provided in the monthly reports included standard deviation values, "robust" standard deviation values, standard deviation for proficiency assessment values[203] and a satisfactory range. In relation to standard deviations reported, the deviation differed for each parameter, depending upon the results obtained. Naturally, standard deviations for each parameter change from time to time depending on the results of the monthly testing. The Malt Proficiency Scheme reported that a result within 2 standard deviations was a satisfactory result. Further, it was stated that a result of more than 2 standard deviations was a questionable result. Importantly, not all specifications or parameters on which Joe White reported formed part of the Malt Proficiency Scheme.[204]

217 Joe White prepared an internal document which summarised the results Joe White plants submitted as part of the Malt Proficiency Scheme program. Joe White also reported the results of its customers who took part in the Malt Proficiency Scheme.

218 A report emanating from the Malt Proficiency Scheme for September 2013 was tendered. Its aims were described as follows:

> The primary aim of the [Malt Proficiency Scheme] is to enable laboratories undertaking the analysis of malt and barley to monitor and improve the quality of their measurements for a range of analytes. [The Malt Proficiency Scheme] will also enable laboratories and regulatory bodies concerned with the analysis

---

202 But also see par 175 above.

203 The standard deviation for proficiency assessment was the expected standard deviation, which was different from a standard deviation that any particular participant would have calculated or a standard deviation calculated by some other means.

204 The fact that the Malt Proficiency Scheme did not cover all the parameters for which Joe White provided specifications was fully appreciated by those responsible for overseeing the reporting on malt at Joe White. An email in November 2010 from Sheehy to Stewart and Moller provided a first draft of "Certificate of Analysis Guidelines". After setting out certain assumptions that she had made (including that Joe White could no longer adjust final shipment results to match pre-shipment results and that Joe White could no longer adjust results bordering on the specification limits to make them "fit more comfortably!"), it was recorded that Sheehy had not worked out what to put for those parameters (of which she gave a number of examples) that did not have standard deviations specified in the Malt Proficiency Scheme.

> of malt and barley to gain information on the efficacy of methods and assist in the development of new methods.

219 Expert evidence was given that the Malt Proficiency Scheme was not intended to provide a basis to adjust test results that were being reported to customers.[205]

220 When Stewart was taken to this report during cross-examination, he accepted that what had been done at Joe White was to take a protocol about the way in which laboratories, participating in the Malt Proficiency Scheme, would do certain things and identify a standard deviation for each parameter from the working out of that protocol amongst its participants. Then Joe White took the value of 2 standard deviations from this protocol and simply transposed it to suggest a tolerance that should be allowed when testing malt in a Joe White laboratory.

221 In other words, Joe White used the "standard deviations" derived from the results of testing processes and equipment of all of the participants in the Malt Proficiency Scheme. Joe White then simply applied them to the processes adopted and equipment used by Joe White at each of its plants and laboratories in purporting to identify variances that were claimed to be within a satisfactory range and could be represented to comply with customer specifications if they came within those ranges.

222 Stewart acknowledged the Malt Proficiency Scheme did not provide a licence to a malt producer to misstate results on a Certificate of Analysis; it was not designed for that purpose; and its function did not include such a practice. He gave evidence that the Malt Proficiency Scheme provided a measure of the variation of each characteristic of the participating laboratories and that Joe White was "simply applying that variation in pencilling the [Certificates of Analysis] or the [S]ign-[O]ut [R]eport".

223 In summary, neither Stewart's evidence of what was involved nor the acceptance by Eden concerning the Malt Proficiency Scheme alerting Cargill of an analytical approach involving 2 standard deviations,[206] provided a basis for finding it gave notice of the existence of the Reporting Practice or some similar practice. The fact that

---

205 The expert was called by the Viterra Parties. See further par 2201 below.

206 See par 212 above.

an approach involving 2 standard deviations was used in the Malt Proficiency Scheme for the purpose of calibrating testing equipment said nothing about Joe White altering results by pencilling if results were within 2 standard deviations (or, for that matter, beyond 2 standard deviations), and only reporting the information that was covertly changed rather than the actual results.

224 Further, there was no illusion with respect to the fact that Joe White would be continuing to ship malt that did not comply with its customers' specifications. On 22 February 2011 (being only 4 days after the Viterra Certificate of Analysis Procedure was circulated), Testi sent an email to all plant managers, and others including Stewart, attaching a spreadsheet to be completed with respect to all shipments which required "out of specification approval". The email suggested the spreadsheet would be forwarded to Testi at the end of each month for benchmarking. Testi's evidence was that this spreadsheet was only used for a very short period of time.[207] Her evidence was that Sheehy took over the responsibility for benchmarking compliance and reported figures to Testi each month, but she was unsure when it started.[208]

225 Following this formalisation of pencilling in the Viterra Certificate of Analysis Procedure, the Operational Practices within Joe White with respect to the Reporting Practice continued. The Operational Practices relating to domestic customers, and to all customers regarding the Varieties Practice and the Gibberellic Acid Practice were unaffected by the introduction of the Viterra Certificate of Analysis Procedure.

226 Stewart gave unchallenged evidence that Hughes gave instructions that the Viterra Certificate of Analysis Procedure was not to be included in the quality procedure manual (which was made available to the auditors of the International Organisation for Standardisation and of Joe White's customers).

227 Stewart gave evidence that the Viterra Certificate of Analysis Procedure complemented the Malt Blend Parameters Procedure. According to Stewart, the 2

---

207 See further pars 235, 245-248 below.

208 Testi's evidence was that "benchmarking" did not mean anything more than reporting, because Joe White was only benchmarking amongst its own performance.

procedures were intended to work hand in hand, with the Malt Blend Parameters Procedure addressing "tolerance" in packing malt from available batches on a calculated theoretical blend, and the Viterra Certificate of Analysis Procedure addressing "tolerance" in the results obtained from testing packed malt.

228 On 25 February 2011, Jones sent an email recording that a barley discount had been agreed to with Viterra on non-malt grades of barley, being $23.26 per tonne. It applied to all deliveries from 1 March 2010. Jones' evidence was this was part of the implementation of the Malt Cost Reduction Transformation Project, though he also acknowledged that there had been a discount in the previous year; the difference being that the implementation meant Joe White was increasing its use of non-malt grade barley in order to meet the project's objectives.

229 On 2 March 2011, the Malt Blend Parameters Procedure was updated. Testi circulated version 28,[209] under cover of an email sent to a large number of persons, including Hughes, Youil, Wicks, Stewart, Jones and McIntyre (but not Argent). The email observed the update had occurred to "reflect monitoring of non-conformance of malt blending parameters in benchmarking instead of customer specification as was previously listed".

230 The attached document bore no numbers or other indicia to suggest it formed part of Viterra's management systems. However, it clearly did. For example, Stewart's performance and development reviews for the year ending 1 November 2010[210] both expressly identified "Malt Blending Procedure" as something with which Stewart was required to comply in order to effectively manage profitability.[211] Both reviews referred to the Malt Cost Reduction Transformation Project 3 times, the first in time noting Stewart was currently working on it, that it was to be implemented in achieving

---

209 A memorandum dated 22 March 2010 from Stewart referred to revisions 23 and 24 of the Malt Blend Parameters Procedure, stating it had been updated to reflect new customer specifications, barley performance and the requirement of a particular brewery.

210 Joe White's financial year was from 1 November to 31 October. There were 2 reviews for Stewart for the year ending 1 November 2010, preceding dated 16 December 2009 and after dated 8 November 2010.

211 The review stated the Malt Blending Procedure was to be reviewed and updated every 6 months.

stated goals, and that the results would appear in future personal development reviews of Viterra.[212] The second review at the end of the relevant year recorded that Stewart had completed wave 1 of the Malt Cost Reduction Transformation Project and had shown good leadership, multi-functional ability and negotiation skills. Both reviews commented that Stewart was a high achiever who was focused on outcomes and who had learnt to balance this "with considering the journey on the way to achieving these outcomes and consequently has become a better manager". In both of the reviews, Hughes was recorded as Stewart's leader.

231 Some further observations should be made about the performance and development reviews. It was recorded that Stewart's leader was Hughes, in Hughes' role as the executive manager of malt. It was stated that the human resources department, which was a department of Viterra, had redesigned the personal development review process, and that this process was an essential tool for managers and employees. The process was part of, amongst other things, identifying "the Company's corporate objectives" and providing an opportunity to understand career aspirations and how they could grow within "Viterra". In relation to the objectives, the following was stated:

> Each year the company's objectives are identified. These objectives are filtered down to teams across the organisation to establish how they can contribute to the successful achievement of company objectives.
>
> These goals should also reference [individuals'] Job Descriptions, to ensure that we continue to grow the company's culture and values.
>
> As this is a continual individual consultation process [personal development reviews] open up a formal "performance specific" communication line between the manager and the team member.

Plainly, the performance, development and review of Stewart were seen as being part of Viterra's operations on an ongoing basis.

232 In relation to the specific objectives identified for Stewart, some were directed specifically to Joe White's operations. However, the objectives Stewart was required

---

212 Similar requirements were imposed upon Stewart by his performance and development review for the year ending 1 November 2011.

to satisfy included: working cooperatively with Viterra's Australia and New Zealand sustainability department to set up initiatives that would improve both energy and environmental performance of laboratories; and ensuring Viterra Malt exceeded an 85 percent compliance to the Viterra safety health and environment strategic plan. Further, with respect to "Key Behaviours" it was stated that Stewart was required to seek new and innovative opportunities to develop and grow "Viterra". Furthermore, the development plan identified for Stewart required him to be more active in his participation within the general Viterra research and development program in Australia, New Zealand and North America. In so doing, Stewart was directed to interact with 2 individuals who were not part of Joe White's operations.

233 Stewart's evidence was that personal development reviews were conducted regularly and would include key performance indicators and key areas for attention. He said he was reviewed on how successful he was in meeting the objectives set for him, which included the Malt Cost Reduction Transformation Project.

234 Further, Viterra issued budgets for Joe White which incorporated cost savings of the transformation. On 24 November 2010, Stewart received a budget report which set out the revised targets in forecasting the malt margin. As a consequence, Joe White procured greater quantities of cheaper barley varieties not approved by its customers, especially Vlamingh and Hindmarsh. Further, although Stewart gave evidence that a "decent" quality of malt was maintained, he said there was an increase in the extent to which adjustments to Sign-Out Reports were made for the purpose of preparing Certificates of Analysis. Furthermore, the change resulted in an increase in the use of varieties not approved by Joe White's customers. Despite all this, Stewart's evidence was that Joe White was still able to "meet the quality *expectations* of its customers" (emphasis added).

235 The stated purpose of the Malt Blend Parameters Procedure, valid from 1 March 2011, was as follows:

Customer's Malt Specification

Regardless of the Malt Blending Procedure, every effort should be made to pack malt that is within a Customer's Specification, and at no time should a malt blend *that is likely to result in a customer complaint* be packed. *In some cases the blend parameters listed are to be used in place of the customer specification* where these will be marked on the table below. Compliance to the Malt Blending Parameters is monitored via the Viterra Malt Benchmarking Report.[213]

(Emphasis in original.)

Self-evidently, it was contemplated that malt could be sent that was out of specification unless it was likely that the customer would complain.

236 The procedure stated that a production manager had authority to pack a malt shipment if the *parameters for a theoretical blend* were within the malt blending parameters (which were to be used "in place of the customer specification"). However, if a malt blend had 1 or more parameters that lay outside the malt blending parameters, the following procedure was to be followed:

a. The Plant Manager is to set up local procedures to ensure appropriate review, should a parameter fall outside the Malt Blending Parameters or an analysis value for a parameter in the Malt Blending Parameters is not available.

b. The Plant Manager *may authorise* the packing of the theoretical blend *where appropriate*.

    i. To determine appropriateness, the Plant Manager should assess at all times the potential impact of an approved blend on customer shipment quality, including the impact of all parameters, not just those documented in the Malt Blending Parameters.

    ii. A record is to be kept for all theoretical blends that are approved for packing using the Blend Approval Form.

    iii. Blend Approvals are required to be reviewed as part of the Management Review process. Corrective actions are to be developed to address *the need to pack shipments that are outside of Customer Specification or the Malt Blending Parameters*.

    iv. The National Quality Systems Coordinator will audit the review of Blend Approvals and the corrective action that follows annually.

---

213 Benchmarking reports were to have been prepared every 1 to 2 months. There was also a quarterly review of the benchmarking data: but see also par 224 above.

(Emphasis added.)

237 Thus, malt that was outside customer specification and outside the non-disclosed malt blending parameters could still be packed for shipment "where appropriate".

238 Under the heading "Actual Shipment Analysis", the procedure stated:

> It is the Plant Manager's responsibility to ensure the actual analysis for all shipments is reviewed once analysis becomes available. The Plant Manager is responsible for instigating a recall of a shipment based on actual laboratory analysis should it be warranted. The General Manager Technical, General Manager Operations, General Manager Commercial or Marketing Manager are to be informed immediately if such a situation occurs, and prior to the recall being initiated.

239 Under the heading "Head Office Support", it was stated:

> The General Manager Technical is available for consultation to determine the appropriate course of action regarding the packing of a theoretical blend or the impact of actual shipment analysis, and should be regarded as the first point of contact should the need for consultation arise. The General Manger Technical may consult with the Executive Manager Malt, General Manager Operations & Commercial or the Marketing Manager.

240 Next, the document listed 16 separate malt blend parameters for 29 of Joe White's customers. Some customers did not have specified parameters for particular characteristics, whereas others did; but all customers had at least some parameters listed.[214]

241 Annexed was a "Blend Approval Form", which stated, "By signing the Blend Approval Form, the Plant Manager acknowledges that they have considered the potential effect of the theoretical blend on the quality of the shipment." The form required the attachment of both the theoretical blend analysis and the "actual" laboratory analysis of all batches in the blend. According to Testi's evidence, the function of the form was for the plant to seek the necessary approval from their plant manager if the blend was not within the malt blend parameters. She said that the Malt Blend Parameters Procedure was applied every day that plants were blending malt and that compliance with the malt blend parameters was critical to performance.

---

214 It is unnecessary to go into the detail.

242 Testi gave evidence that the Malt Blend Parameters Procedure was a means of dealing with differences or biases between results from Joe White's laboratories and customer laboratories. Her evidence was that the Malt Blend Parameters Procedure catered for such biases to reduce the risk that a customer would query a shipment as being out of specification in light of the results of the customer's own testing. She explained that, by this means, Joe White was able to ship malt that met a customer's perceptions of compliance with its specifications, rather than necessarily complying with the specifications.

243 Further, Testi contrasted the Malt Proficiency Scheme under which results could vary from month to month. Her evidence was that the parameters under the Malt Blend Parameters Procedure were built up over a long period of time to take into account particular ongoing issues with customers, as communicated by Stewart.[215]

244 McIntyre gave evidence about the purposes for which the Malt Blend Parameters Procedure was designed. After referring to the fact that many Joe White customers did not analyse the malt they received,[216] she stated that the Malt Blend Parameters Procedure was designed to accommodate circumstances in which it was difficult to produce a blend of malt that was 100 percent within specification for whatever reason. Further, it was designed to identify the specifications that Joe White assessed as being particularly important to each customer's process. She continued:

> The idea was that if the malt met the key specifications within the values identified in the malt blend parameters, the fact that those specifications differed from the contractual specification would not be likely, in Joe White's assessment, to matter in practice because the customer would still get a good result in the brewery. *The malt blend parameters indicated to the plant how far out of the contractual specification they could blend.*
>
> (Emphasis added.)

245 Testi prepared benchmarking reports from data supplied by Joe White's managers. A number were tendered. The report for February 2011 was circulated by Testi to a large number of addressees, including all Joe White executives and all Joe White plant

---

215 See also fn 194 above.

216 See par 150 above.

managers. In a worksheet entitled "Compliance to Malt Blend Param", that report stated the percentage of shipments in specification for the 8 plants then in operation on a monthly basis for the period from December 2009 to February 2011. Of the 120 entries,[217] only 5 entries recorded 100 percent of shipments were in specification. Further, most of them were significantly less than 100 percent, with many being 50 percent or lower, including materially lower.

246 Another worksheet in the report was entitled "C of A" and listed information on a monthly basis for Certificates of Analysis for the period from July 2010 to February 2011. This worksheet listed various parameters for 4 plants,[218] plus for the "Grain Technical Centre". Many of the entries recorded 100 percent. Many did not. Of those that did not, a large number were between 90 and 99 percent. But some were much lower; including lower than 50 percent and even zero.

247 Testi gave evidence that she completed benchmarking reports up until 1 November 2013, and a short time beyond this. Despite this, benchmarking reports for 2013 were not included in her witness statement and none of the parties sought to tender them. Testi's evidence was that the benchmarking reports in her witness statement did not tell the court anything about what was happening in 2013.

248 On 27 June 2011, Testi circulated the quarterly benchmarking review to all Joe White executives, all plant managers and others. With respect to compliance with malt blend parameters, it was stated most non-compliances related to low moistures for certain customers or low levels of free amino nitrogen. As for benchmarking of Certificates of Analysis, it was stated percentages for compliance had been reported as part of the quality objective review, which was released the previous day. Essentially, that review provided some percentages, but only in very broad terms. It was observed that:

---

217 A small number specified no amount and appeared to record an error in the spreadsheet cell.

218 The parameters included dimethyl sulphide, free amino nitrogen, and nitrosodimethylamine, but there was no consistency between the parameters recorded for each plant.

> Malt is being released in-line with the [Viterra Certificate of Analysis Procedure] however alignment between pre-shipment and shipment results is an area for improvement.

249 On 28 June 2011, version 30 of the Malt Blend Parameters Procedure was produced. The "Viterra" document was entitled "Malt Blend Parameters Procedure". There was very little change to the substance of the document issued on 2 March 2011,[219] though it contained more administrative details and some of the parameters had been altered. It recorded it was originally issued in December 2006, and bore a document number reflecting that, as well as a further number showing it had been entered into the Records System. Testi was recorded as its author, with approval from Stewart. However, this version was not placed on Viterra's intranet.[220]

250 The continued use of off-grade barley throughout 2011 and 2012 may be traced through a review of internal Viterra documents produced during this period. A "Viterra" presentation slide, dated 23 May 2011 and titled "[Australia New Zealand] BEST Projects April 2011", lists as a "project" increasing the use of off-grade barley to 30 percent. This same goal of 30 percent use of off-grade barley was detailed at length in a Viterra executive briefing on malt cost reduction dated 21 June 2011, which noted savings of $1.3 million had already been realised and repeated previous observations, namely:[221]

> The Malt business has already been realising savings through off-grade purchases. This project aims to make such savings more strategic and less reactionary.

251 It appears that "the Viterra board" was aware, and approved, of at least the policy of increasing Joe White's use of off-grade barley to reduce costs.[222] A document, dated 31 August 2011 and described as a "reference document" providing details of the "Processing – Malt Strategy to reality program and associated initiatives", stated that

---

219 See par 229 above.

220 See further par 278 below.

221 See par 138 above.

222 Stewart gave evidence under cross-examination that he understood it was approved by the board. Although the weight of this evidence was questionable (Stewart was not on the distribution list or on the board), the question that gave rise to the evidence was not objected to (no doubt, advisedly) given the contents of the document dated 31 August 2011 and that those on the distribution list included Fitzgerald, Ross, Hughes and Gordon. Accordingly, it was highly likely it had board approval, formal or otherwise.

the strategic plans associated with, amongst other things, the transformation were approved by the Viterra board in November 2010. Specifically with respect to malt sales and the underlying cost of barley, it was recorded that Viterra had "[a]lready targeted in Barley Acquisition (off-spec grain) project".

252 An internal Joe White email chain, dated 21 September 2011, provides an example of the manner in which substitution of barley varieties was pursued and condoned. The initial email in the chain was from a customer, Nestlé Singapore Pte Ltd ("Nestlé"). It sought an update on the delivery of 2 containers. Confirming the order of malt required by Nestlé was a blend of 2 different types of barley (60 percent "Gairdner" and 40 percent "Buloke" varieties), an employee stated internally "[p]lease note that it was 100% Buloke". Mont Stuart ("Stuart"), marketing manager at Joe White, responded with an email to McIntyre, copied to others including Stewart, stating: "I assume you will report 60 Ga/40 Bu as per their request". On the face of it, this correspondence demonstrated a conscious and deliberate decision to mislead Nestlé with respect to the malt being delivered on this occasion.

253 With respect to the email from Stuart referred to above concerning Nestlé's order, McIntyre gave evidence that she understood it to be an instruction that she should complete the report to the customer to make it appear as if the shipment matched the customer's requirements when in fact it did not.

254 The Certificate of Analysis sent to Nestlé, which was signed off by Moller, in fact recorded "60% Gairdner/40% Buloke". Further, the correspondence that accompanied this Certificate of Analysis was illuminating. On 16 September 2011, Nestlé emailed Joe White asking for an update on the "2 trial containers of 60% Gairdner/40% Buloke blend". Joe White responded on a Viterra branded email stating that the 2 trial containers had been loaded and that an updated Certificate of Analysis would be sent at a later date. A further response was sent on 23 September 2011, attaching amended Certificates of Analysis with the covering note that they were for the 2 containers of "60% Gairdner/40% Buloke blend". The same afternoon, Nestlé responded stating that the Certificates of Analysis referred to "60% Gairdner/40%

Stirling, and not Buloke blend". The email, which was copied to a number of people including Stuart, McIntyre and Stewart, enquired as to how Nestlé would identify the 2 containers of trial malt. In a final email on this issue, Joe White apologised for attaching the same Certificate of Analysis twice, and attached "the respective [Certificates of Analysis]". The email repeated, contrary to the fact, that the 2 containers of trial malt were a blend of 60% Gairdner and 40% Buloke. Again, numerous people were copied into this email, including Stuart, McIntyre and Stewart.

255 The Laboratory Information System was a centralised laboratory, production and stock management software system dealing with all aspects of malt quality, including testing results, correlating with customer contract specifications, analysis (including to identify any parameters out of specification) and generating Certificates of Analysis for malt supply to customers.[223] It also recorded details of customer orders and barley received from grain traders.[224] McIntyre was the Laboratory Information System administrator.[225]

256 The Laboratory Information System also tracked barley once it was delivered to Joe White by quantity, variety and location. Thus, it was always possible to determine which barley was used to create which batch of malt; perhaps, subject to funnelling.[226]

257 When Joe White obtained a new customer, or an existing customer requested a new malt variety, a profile was created in Joe White's finance software system and the customer's contractual specifications were entered into the Laboratory Information System. Although specifications were usually set out in a supply contract, sometimes changes would not be recorded so formally. McIntyre's evidence was that, as part of

---

223 The laboratory information management system was referred to by some witnesses as the laboratory inventory management system.

224 For completeness, the Laboratory Information System was the subject of a ransomware attack on 16 June 2017. Cargill was unable to access the server containing the data after this time as it was fully encrypted as part of the attack. However, after some dispute about the ability of Cargill to rely upon certain restored material, a copy of the data contained in the Laboratory Information System in 2013 was obtained from the Viterra Parties as they had kept a copy. It was the data from this source that was relied upon for the purposes of the trial.

225 She was appointed to this position in 2009, and her responsibilities were expanded to include dealing with malt quality issues and customer complaints.

226 See pars 265-269 below.

her role in maintaining the information in the Laboratory Information System, she entered specifications herself from customer contracts and, if they were altered, she always asked for a written record of any changes.[227] A direction to change specifications, which might have been permanent or temporary, would usually come from Stewart, and occasionally from Wicks or Stuart. She also received notification from customers directly, but would not make any change to the Laboratory Information System without first discussing the matter with Stewart. So far as any temporary changes were made, McIntyre gave evidence that she would note it in her own calendar as to when it was to be changed back. Although when cross-examined she accepted the possibility that she might have missed a note in her calendar, she rejected the suggestion that it was probable and could not recall an occasion when it had ever occurred.

258 Frequently, Joe White would have contracts to supply malt over an extended period, such as a year, pursuant to which customers placed orders for specific quantities at a specific time. Joe White rarely sold malt pursuant to one-off orders.

259 On a daily basis, McIntyre was responsible for inputting and maintaining customer specifications in the Laboratory Information System and generating and preparing Certificates of Analysis. Malt analysis results were entered into the Laboratory Information System by the laboratory chemist when the tests were completed.[228] Once these populated the relevant fields, a hard copy Sign-Out Report with the actual results was generated. Pencilled "results" were added to the data stored by McIntyre in a field called "reported". This remained her responsibility up until the Acquisition on 31 October 2013. McIntyre also assisted with basic laboratory work.[229]

260 Further, Joe White also used a software package, sometimes referred to as "SAP", standing for the Systems, Applications and Products ("the Administration System").

---

227 If a customer had targets in addition to specifications, McIntyre would enter the targets into the Laboratory Information System in the specification field but also note it was only a target.

228 If the malt was tested in the central laboratory rather than just a plant laboratory, the results from the central laboratory "took precedence" over the plant's laboratory results.

229 There was evidence of other functions performed by the Laboratory Information System. It is unnecessary to refer to the detail.

This also contained a record of the customer contracts. The Administration System was connected to the Laboratory Information System.

261 As for testing results, there were 2 main times when malt was tested at Joe White. Each batch of malt was processed from a single variety of barley and then stored in a silo at the plant. After a batch was produced, a sample was tested at the plant laboratory. The results of that testing were entered at the plant laboratory into the Laboratory Information System. From these results, a production manager was able to produce a theoretical blend of different batches of malt, the blend results being produced by algorithms in the Laboratory Information System. By this process, the properties of a proposed blend were ascertained. The theoretical blend produced within the Laboratory Information System was achieved by using a program called "Blend Manager". This program would identify when a blend would, or ought to, meet a customer's specifications. Malt was then physically blended in accordance with this calculated theoretical blend. Not all the parameters the subject of reporting to Joe White's customers were the subject of theoretical blend reporting.

262 The second testing of all parameters to be reported upon was done on the packed malt. The packed malt was the subject of standard tests at a plant's laboratory,[230] and more specialised testing at the central laboratory. The results of those tests were entered into the Laboratory Information System by laboratory personnel. Because this part of the process involved human input, Testi accepted during cross-examination that it was possible errors were made from time to time when entering results into the Laboratory Information System.

263 Some parameters were determined by visual inspection of the malt. However, most required conversion of the malt by "mashing" it into wort. This process is similar to a part of the brewing process; "a mash may be made by taking a sample of crushed malt, adding water and then heating the combination to particular temperatures for particular periods of time". The mash is then filtered and the resulting fluid is called wort. In preparing to make a mash, the malt may be crushed into different sizes. The

230 Except Devonport and Cavan: see fn 42 above.

2 main sizes are fine grind and coarse grind.

264 The primary method for making a mash is called Congress mash, which refers to the standardised process instituted by the European Brewery Convention. For all Joe White's international customers, Joe White tested on Congress mash. This process required 50 grams of either fine or coarse grind to be placed into a pot with 200 millilitres of water. This is heated to 45 degrees Celsius for half an hour, and then heated by an increment of a degree per minute until the temperature reaches 70 degrees Celsius. The temperature is then maintained for 1 hour, before the mash is cooled, weighed and filtered to produce the wort. Generally, it was the wort from this process that was then the subject of testing, and reporting subject to any adjustments that might be made.

265 The issue of funnelling has been touched upon.[231] When grain was released from a silo it would draw faster out of the centre of the silo and slower around the edges. Numerous batches could be stacked in a silo at a time, with the possible consequence that parts of a batch would be mixed with another higher batch because of the drawing from the centre. When this occurred, it was referred to as funnelling.

266 It was uncontroversial that funnelling occurred to some extent. The occurrence of funnelling was taken into account in the Laboratory Information System. However, there was a stark contrast in the evidence as to precisely how funnelling occurred.

267 McIntyre's evidence was that as 1 batch was nearing complete withdrawal from the bottom of a silo, parts of the batch above may form part of the drawdown. This evidence was given by way of agreeing with the precise proposition put to her by the Viterra Parties during her cross-examination, immediately after acknowledging it was not her area of expertise.

268 Stewart's position was quite different. His evidence, by which he referred to the phenomenon as rat-holing, was that it could result in the extraction of 80 percent from the top batch and 20 percent from the bottom batch, but the percentage would vary

231 See par 256 above.

depending upon the quantity that was released. He further explained that this could be exacerbated by "bridging out", which resulted from the accumulation of chaff and other materials on the side of silos, which might hinder or stop the flow.

269 Whatever be the precise manner in which funnelling occurred, McIntyre's evidence was that a blend produced could have had small traces from multiple batches recorded by the Laboratory Information System as forming part of a single shipment.[232]

270 From 2007 to 2011, McIntyre's line of reporting shifted from between Stewart, Wicks and Hughes, though these changes did not have any real impact on her duties.

271 An example of customers' malt parameters being adjusted was apparent in an email, dated 20 October 2011 with the subject "Malt Blend Parameters V31", sent by Testi to all Joe White executives, all plant managers and numerous other persons including McIntyre. On the face of the email, it was sent by Testi as "National Quality Systems Coordinator: Malt" with the email address julie.testi@viterra.com, the website address of www.viterra.com and the company on behalf of whom it was sent identified as "Viterra Ltd". In addition to attaching the updated malt blend parameters, Testi set out the changes for 5 different customers. Hughes responded to the email the same day, suggesting to Testi that when she sent out "performance critical information" the email should be tagged with a read-receipt, and that Testi should tick off each of the recipients once it had been read. Testi agreed that she would do it in the future. Under cross-examination, Testi said she understood that Hughes was referring to any changes to customers' malt blend parameters as performance critical information. She also agreed that malt blend parameters were discussed at management level and that compliance with them was critical to performance.

272 Joe White was also continuing to utilise gibberellic acid during this period, including in the production of malt for customers who did not approve its use. In an email from Stewart, sent on 25 November 2011 to a number of employees, including Wicks and

232 See also fn 1567 below.

McIntyre, he instructed a plant manager "don't put the GA away" (a reference to gibberellic acid) when preparing malt for Sapporo, a customer who had prohibited its use. Stewart gave evidence that, by this email, he was telling the recipients to continue using gibberellic acid despite Sapporo's position. He said he did so under instruction from Stuart to increase the soluble nitrogen levels. This is an example of a conscious and deliberate decision not to act in accordance with Sapporo's specific requirement concerning malt being delivered by Joe White. McIntyre understood from Stewart's email that the production team should continue to use gibberellic acid.[233]

273 The increased use of off-grade barley was having the desired result, at least in the early stages of the Malt Cost Reduction Transformation Project. A Viterra summary of malt transformation savings realised for the 2011 fiscal year, produced on 29 November 2011, showed the actual amount of "Barley Savings" as $2,375,464, which was $536,114 above the projected savings in the 2011 budget. The document recorded that, on average, the non-malt 1 barley was being used as to 40 percent of the total tonnage of barley, with Perth's usage being at 66 percent. Later, a "Transformation Pipeline Report" dated 20 March 2012 indicated that the Malt Cost Reduction Transformation Project was on track to benefit Viterra $10.4 million in the 2014 financial year.

274 However, customers were, in some instances, raising issues with respect to malt quality. On 30 December 2011, a customer informed Stewart that subsequent testing of delivered malt indicated that the malt was out of specification in many aspects, contrary to Joe White's Certificate of Analysis. The email sought feedback and corrective plans to prevent out of specification deliveries in the future. Stewart could not recall what action he took in response to this email. Further, in a completely non-responsive answer, Stewart stated under cross-examination that the differences highlighted the variable nature of malt analysis.

275 On 22 June 2012, a different customer refused to accept a delivery of malt with a lower

---

233 In 2012, a visit by Sapporo and the concealment of the use of gibberellic acid was referred to in correspondence. A Joe White chemist sent an email to Moller forwarding an "edited version" of the method used "with no reference to [gibberellic acid] for [Sapporo's] visit". Moller forwarded the email to Stewart noting she had stamped the document "copy" and enquired as to whether it was okay to be given to Sapporo's representative on the basis it could be kept.

colour than specified, despite being asked to do so by Stewart. This problem was openly brought to the customer's attention by means of Stewart's request. Obviously, a failure to meet a colour requirement may be more conspicuous than a failure to meet some of the other specifications. In any event, in refusing to accept any variation, the customer referred to its "strict quality standards".

276 Joe White had procedures in place for managing customer complaints. Viterra introduced a software system to provide a "root cause investigation system", which operated together with Joe White's existing system. Both were used to identify problems leading to customer complaints.[234] McIntyre processed customer complaints and Testi was required to close off each customer complaint. Testi's evidence was that some of the complaints she processed concerned shipments of malt that were out of specification. What proportion of complaints this represented and the frequency of such complaints was not the subject of evidence from Testi. McIntyre's evidence was that "occasionally" Joe White's customers would query whether the Certificates of Analysis were accurate.

277 Returning to the malt procedures, on 10 February 2012, a further version of the "Malt Blend Parameters Procedure" of "Viterra" was revised to create version number 32.[235] A calendar invitation sent by Stewart, on 2 February 2012, referred to a review of the procedure by the Joe White malt team occurring every 26 weeks, though Testi gave evidence such documents were reviewed annually. Testi, who was noted as the author of the document,[236] gave evidence at trial that this document contained a number indicating the document was stored in the Records System (being CF/04/398), but she said it was distributed only within Viterra's malt business and that it was openly discussed by management. On 13 February 2012, Testi emailed version 32 of the Malt Blend Parameters Procedure to a number of Joe White executives, including Hughes, Youil, Wicks and Stewart, all plant managers,

234 A document was tendered entitled "Viterra Customer Feedback Tracking Procedure", which set out the regime as at April 2013.

235 This version also indicated that the Malt Blend Parameters Procedure was first issued on 11 December 2006.

236 Stewart approved the document.

numerous production managers, members of the technical team and a marketing manager. The email required that a document revision notice be signed by the relevant personnel at each site and be included at the next monthly meeting for food, safety and quality.

278 On or around 29 March 2012, the Malt Blend Parameters Procedure was eventually uploaded to Viterra's intranet, Pulse. By email, Testi requested the procedure be uploaded under the folder "JWM – Procedures". She noted "the blend parameters [had] never been uploaded to the Pulse in the past". The document was version 33. Accordingly, from this time the Malt Blend Parameters Procedure was available for any Viterra employee who had access to Pulse. Further, Stewart's evidence was that the Viterra Certificate of Analysis Procedure was available to all Viterra employees as it was on Viterra's "control system TRIM and also on the Pulse", though he acknowledged his evidence was a bit speculative.

279 Testi gave evidence in chief of other issues in 2011 to 2012, including concerning testing and the lack of availability of results at the time shipments were sent to Joe White's customers. When that evidence is considered in conjunction with her evidence during cross-examination, it is unnecessary to descend to any real level of detail for the purpose of determining issues in this proceeding. Such issues existed on an ongoing basis.

280 By way of example, on 5 July 2012 Testi circulated a mid-year review. The review recorded the objective that all malt was to be released in accordance with the Viterra Certificate of Analysis Procedure. It gave some details in relation to redirection of shipments and customer complaints. The review contained a summary of the test results that were available at the time Certificates of Analysis were issued. It showed a significant number of Certificates of Analysis were issued at a time when all the results were not available. The end of year review for 2012, circulated by Testi in January 2013, showed that this problem persisted, albeit there had been some improvement.

281 Also around this time, there were decisions being made with respect to the prohibited use of gibberellic acid. The issues with respect to soluble nitrogen levels in malt supplied to Sapporo were ongoing.[237] A number of emails sent on behalf of Sapporo expressed concern about the levels being too low and described the situation as very critical. Emails were sent by Stewart in response suggesting various potential issues and solutions. None of them disclosed to the customer the use of gibberellic acid as a possible means of solving the problem.

282 Stewart forwarded the email chain to various persons at Joe White to keep them in the loop and to give them an idea of how critical an issue the low levels of soluble nitrogen had become for Sapporo. In response, Stewart was informed by a production manager that a measure taken to try and address the situation was to increase the amount of gibberellic acid being used. Stewart took no exception to this. On the contrary, in the following month with respect to malt for Sapporo he suggested to the production manager that more gibberellic acid might help.

283 In early September 2012, Sheehy circulated for review a draft procedure for Certificates of Analysis production and Sign-Out Reports. The main change was to incorporate Joe White's domestic customers into the procedures already in existence with respect to export customers under the Viterra Certificate of Analysis Procedure.[238] In a follow-up email, she asked for comments or, if there were no comments, to receive that advice so that she could "publish the procedures".[239]

284 In response, by email to Sheehy sent on 13 September 2012, Miroslav Prazak ("Prazak"), plant manager in Sydney, stated, in relation to the recent draft of the Viterra Certificate of Analysis Procedure, that "documenting that 'adjustments are authorised practice' is somewhat damning", before adding that he had no comment.

---

237 See par 272 above.

238 A further change was to require the involvement of the "Technical Services Manager" or her proxy in relation to pencilling for export customers up to 2 standard deviations. Both Moller (as technical centre chemist) and McIntyre (as customer service administrator) were formally appointed as Sheehy's proxies for this purpose on 26 September 2012. Previously, this could be authorised and performed by the "Technical Centre Chemist": see par 199 above.

239 Stewart gave evidence that if testing results were not available for domestic customers at the time of despatch, the theoretical blend analysis was issued upon delivery, with the results of the actual analysis forwarded later.

On the same date, Sheehy forwarded Prazak's email to Stewart, stating:

> A very good point from [Prazak] below. Should the [Viterra Certificate of Analysis Procedure] actually be an official TRIM procedure? We definitely need these guidelines *as this is what we do*, but we *don't necessarily want* and (sic) *auditor or customer to find this* in TRIM or a methods manual.
>
> (Emphasis added.)

285 Stewart agreed with Sheehy. During his cross-examination, Stewart acknowledged that he understood both Prazak and Sheehy were stating that it would not be desirable for customers or a quality auditor to discover the document.[240]

286 Also in September 2012, Sheehy emailed various people stating she had reviewed the Malt Proficiency Scheme to ensure there had been no changes in the last 18 months. She stated all the information was correct and attached an update as at 5 September 2012 "based on MAPS round 186". However, not all the proficiency assessment values in the attached document accorded with the Malt Proficiency Scheme values in round 186.[241] This was only the second table of values prepared for the Viterra Certificate of Analysis Procedure. After this time, it was not updated again, though changes continued to be made to the standard deviation for a large number of parameters from that time until October 2013.[242] Version 2 of the Viterra Certificate of Analysis Procedure was finalised on 26 September 2012, with Viterra filing folder number "CF/04/398".

287 On 11 October 2012, Sheehy sent an email to certain Joe White staff, copied to others including Stewart and McIntyre, attaching both the Viterra Certificate of Analysis Procedure and a "Document Revision Notice". The email, updating the "Certificate of Analysis Generation Procedure with Domestic Customers", was designated "high" importance and was concerned with how the proposed procedure might be viewed on the Records System. It stated:

> Following some excellent feedback from [Prazak], we have decided *to make this procedure obsolete in TRIM*, but we can still add new revisions into the folder when required. Hence it will live in TRIM still, *just unofficially*, and should not

240 Customers would send in quality auditors to Joe White periodically; usually once every 1 to 3 years.
241 See further pars 407, 2242 below.
242 See annexure A to these reasons.

> be stored in any official procedure folders at your site, as *we do not want customers or auditors to have access to this procedure*.
>
> (Emphasis added.)

The email referred to the applicability of the regime to both export and domestic customers, and noted a 3 month trial period of the procedure would commence on 1 November 2012. Stewart gave evidence that the document was marked "obsolete" so "it dropped below the radar, effectively". Later in his evidence he said its existence was disguised. Further, Stewart's uncontested evidence was that, just as Hughes had directed in relation to the Malt Blend Parameters Procedure,[243] Hughes instructed the executives that the Viterra Certificate of Analysis Procedure was not to be included in the quality procedure manual, which manual was made available to International Organisation for Standardisation and customer auditors. Similarly, Testi's evidence was that, by placing a document in an "obsolete folder", it was concealed on the system but could still be updated.

288 The "Viterra" Document Revision Notice, dated 26 September 2012,[244] stated that the Viterra Certificate of Analysis Procedure had been changed, and relevantly recorded:

> This document is for *internal use only*, and thus must not be kept in an official procedure folder, but filed separately *for private use only (i.e. not be available for audit or customer viewing)*.
>
> (Emphasis added.)

289 McIntyre gave evidence of this direction being given. Testi gave evidence that this direction was complied with, having checked the Records System as part of her document review for annual audits. In her role as national quality systems coordinator, Testi conducted annual audits of each of the Joe White plants to assess compliance with Joe White's quality systems.[245]

290 The effect of this was that neither Joe White's customers nor their auditors would be shown the "obsolete" folder. Stewart agreed under cross-examination that Sheehy

---

243 See par 90 above.

244 As part of Viterra's recording keeping system, the document was numbered revision 1, and contained the form number 12/14245.

245 See further par 513 below.

was taking the lead when it came to where the procedure was to be stored.

291 Sheehy followed up this email with another "high" importance email on 31 October 2012.[246] In this email, she requested that the Joe White employees that received the email note any "roadblocks" they had in complying with the new Viterra Certificate of Analysis Procedure, predicting that:

> The main sticking point will mostly (sic) likely be not approving the [Certificate of Analysis] until all analysis is present … Please be mindful that we do need to get the [Certificate of Analysis] to customer still without an excessive delay, so if an exception is required then please organise this and document accordingly.

292 Self-evidently, the above communications demonstrated that the employees involved had a consciousness about a customer or an auditor taking a dim view of the Viterra Certificate of Analysis Procedure if its existence were to become known more broadly.

293 Customers' audits of Joe White's malting process were focused on non-conformance with food safety processes. Audits variously involved inspections of plants and reviews of the quality procedures carried out in the production of malt, including the ability to trace parcels of barley to shipments of malt.[247] Ordinarily, customer audits did not involve examining other aspects of the Joe White Business.[248]

294 In November 2012, Heineken's Asia Pacific Breweries Singapore plant[249] informed Joe White that it required malt that was less fermentable. The malt being supplied at that time was apparently meeting Heineken's specifications.[250] The problem was solved by providing different proportions of barley varieties to those in the specifications. This instance was referred to by Stewart in an example of the need for malleability

---

246 Originally, the email was sent or copied to a significant number of employees, including McIntyre and Stewart. Sheehy forwarded this email on 1 August 2013 to Testi without comment.

247 For example, in 2010, Heineken determined not to accept malt from the Port Adelaide plant because it was using older drum technology and gave rise to food quality issues.

248 For completeness, Testi gave evidence of an audit conducted in June 2013 by a certification body for the ISO 22000: see fn 664 below. Her witness statement recorded the auditor being misinformed about the barley varieties used in relation to a shipment that had been randomly selected. However, after she had been cross-examined it was unclear whether the auditor had been deliberately misled or whether there was a plausible and legitimate explanation for the decision to provide information about barley varieties other than what had been recorded in the Laboratory Information System.

249 The entity in Singapore was Asia Pacific Breweries Singapore Pte Ltd, a subsidiary of Heineken NV.

250 This was the evidence given by Stewart. It was stated as a conclusion. The underlying evidence to support this conclusion was not before the court.

with respect to specifications. Stewart also gave evidence that occasionally a customer would agree to change a specification in response to changing harvesting conditions.

295 Also in 2012, another event occurred which had the potential to affect the Joe White Business. Co-Operative Bulk issued a termination notice under the Co-Operative Bulk Agreement. The notice stated Joe White had failed to pay monthly charges since December 2009, and demanded payment of $2,181,281.38. The demand was not the subject of any payment.

H. Cargill, Inc's malting business

296 In 2013, the global commercial malt market had approximately 30 major malting company groups.[251] At this time, Cargill, Inc and its subsidiaries, amongst other businesses, operated the third largest malt business in the world, with operations (in order of size) in the United States of America, Canada, Western Europe,[252] Argentina and Russia. Having entered the malting industry in 1979, Cargill, Inc had not yet secured a presence in Asia. Therefore, the incorporation of the Joe White Business into the global business was strategically a very attractive prospect. Not only would the purchase of Joe White increase Cargill, Inc's overall capacity to match or even slightly exceed the capacity of the 2 largest malt operations,[253] but it was anticipated that the benefit of millions of dollars in synergies would flow to Cargill, Inc's overall operations.[254] As a result, the firm view amongst a number of its executives was that Cargill, Inc would become a global leader if Joe White were to form part of its global malt business.

297 Cargill, Inc's malting business was organised as a business unit ("Cargill Malt"). Each

---

251 There were also maltsters who made malt as part of a larger in-house operation, and supplied the malt to breweries within the same business, in contrast to selling to third party brewers on an arm's length basis.

252 Again in order of size, Belgium, Spain, Germany, France and the Netherlands.

253 Being Malteurop Groupe and Malteries Soufflet, each with approximately 10.4 percent of the global market.

254 Synergies were described as factors in merging businesses that would mean 2 plus 2 equals 5, by reason that the merged entities give each other some previously missing element or rationalisations might occur because of overlap of functions. In this case, potential synergies for Cargill included both revenue synergies and cost savings.

business unit of Cargill, Inc had a business unit leader. A business unit leader had direct operational responsibility for the business unit. A business unit leader may have been responsible for a number of businesses. In turn, business unit leaders were "tagged" to platform leaders, whose role was to coach the business leaders rather than have a direct operational function. Sitting above the platform leaders was the Cargill leadership team;[255] and above this team was the board of directors.

298 Any transaction involving the outlay of US$50 million or more was required to go to the board for approval.[256] Before a proposal could be put to the board, certain steps were required to be taken. Any proposal needed to be investigated and recommended by the leader of the business unit. Approval then had to be obtained from the business unit's platform as a whole. Then it had to be submitted to, and approved by, the Cargill leadership team as a whole. Cargill also had an internal strategic and business development department. This department worked with business units to develop opportunities and proposals, as well as advise the business units in the manner of a mergers and acquisitions firm (including by providing specialist project management and financial expertise).

299 The fact that the board may have approved an investment did not mean the acquisition would necessarily go ahead. If any of the business unit leaders, the relevant platform leaders, or the Cargill leadership team subsequently decided the acquisition should not proceed, then that position would be adopted without any requirement to revert to the board. Equally, neither the relevant platform leader nor the Cargill leadership team would override the business unit leader if she or he decided, notwithstanding the previous recommendation and approvals, that the proposed transaction should not proceed.

300 Cargill Malt belonged to the food ingredients and systems platform. In 2013, based

---

255 The Cargill leadership team was described as a form of executive committee of the board. It was also referred to as a governance and management board. In 2013, its members (most of whom were members of the board) were Koenig (see par 343 below), Conway (see par 300 below), MacLennan (see par 963 below), Page (see par 963 below), Bill Buckner (who was tagged to the protein leadership team) and Marcel Smits, Cargill, Inc's chief financial officer.

256 The Cargill leadership team had authority to approve an indicative bid without board approval.

on earnings, Cargill Malt was the eighth largest business unit of the 26 business units in existence in the food ingredients and systems platform.[257] It had approximately 500 employees. Eden, as the malt business unit leader at the time, was "tagged" to Frank Van Lierde ("Van Lierde"), executive vice president of Cargill's food businesses division,[258] as platform leader, who was "tagged" to Paul Conway ("Conway"),[259] as part of the Cargill leadership team. Conway was also corporate vice president and vice chairperson of Cargill, Inc.[260]

301 As referred to above,[261] Cargill, Inc had a "string of pearls" strategy that a number of executives wanted to put together. This was to be achieved by combining the key regions of malt production throughout the world, including Australia. Moreover, it was considered that "made in Australia" had a reputation, around being "pure, clean, sustainable" and "green", and was expected to be a "sweetspot" if Joe White could be acquired.[262] In short, Cargill, Inc considered the sale of Joe White an important opportunity, and at least some of the executives involved in assessing the possible purchase were very keen for it to occur, and were mindful of what competitors might be capable and willing to pay.

302 As for its malt business already in existence, Cargill, Inc also had in place policies that governed the production of its malt and the provision of Certificates of Analysis to customers. These were recorded in a document that was approved by Steven De Samblanx ("De Samblanx"),[263] operations manager Europe, having been edited by

---

257 Eden's evidence referred to 26 units in this platform. Conway's evidence referred to 16 units out of 60 units overall.

258 In that role, he was leader of the food ingredients and systems platform. At the time of giving his evidence, Van Lierde was the enterprise leader of food ingredients and bio industrials at Cargill, Inc. In 2013, Van Lierde was based in Europe, but travelled to the United States from time to time.

259 In 2013, Conway was the leader of the food ingredients and systems platform and of the grain and oilseeds supply chain platform. He had executive supervision of the Asia Pacific region and of plant operations (including safety). Conway reported directly to the then chief executive officer, Page. He spent a short time at the bar in London before commencing at Cargill, Inc in September 1979. He retired after 36 years on 31 December 2015. He became a member of Cargill, Inc's board in 2008 and remained on the board until his retirement. He was also a member of the Cargill leadership team. He holds a bachelor of laws with honours from Bristol University.

260 The other vice chairperson in 2013 was Koenig.

261 See par 1 above.

262 At the time, the other "sweetspot" was Argentina.

263 At the time of giving his evidence, De Samblanx was Cargill's global process technology lead for malt

Cargill, Inc's quality manager, Ruud Hermus ("Hermus").[264] The document described "the methodology [of] how to perform malt blends before shipment to customers and how to communicate analyses results to customers" ("the Cargill Blending and Certificate of Analysis Procedure"). The sixth version, dated 7 July 2011, identified the objectives:

> The objective of this procedure is:
>
> – To provide to the Plant Operations *strict guidelines* for malt blending, assuring that the *delivered malt complies with the customer's requirements*.
>
> – To assure that the Certificate of Analysis (COA), which contains the analytical specifications that are mentioned in the malt sales contract, describes correctly the quality of a malt delivery and if applicable the related barley, based on reliable lab analyses values only.

(Emphasis added.)

303 Speaking generally, the reference to "customer's requirements" does not refer to the specifications of a customer. In his evidence, De Samblanx agreed with this proposition, stating, "[r]equirements is broad".

304 The Cargill Blending and Certificate of Analysis Procedure also referred to Cargill, Inc's malt plant production system, known as MaPPS, which was the software used globally to enter and store analytical data. This allowed Cargill to manage the quality globally "with very high visibility". For example, it enabled De Samblanx to see the quality of malt recorded for each plant globally. The document provided:

> **5.2 MaPPS Company Specifications**
>
> The Regional Quality Manager publishes and gets malt specs internally approved in MaPPS …
>
> The MaPPS Company Specifications do contain several kinds of Customer Specifications:

---

264 and the operations lead for Europe, the Middle East and Asia. He commenced at Cargill in around 1987, and has worked exclusively in malt for Cargill in France, Spain, China and Belgium (where he was based). He graduated from Leuven University as a biochemical engineer in 1985, before spending a year studying the food industry at École nationale supérieure de biologie appliquée in Dijon, France. It was also the subject of "Verification" by a Ms K. Churchill, who was responsible for regional quality control in North America. She is no longer employed by Cargill, Inc. For details of Hermus, see pars 1999-2010 below.

[Various details set out]

The "MaPPS Company Specifications" can also include "Target Specifications" for information only. Target Specifications, are specifications that are more strict (but not contradictory!) than the Customer Specifications, and thus describe more accurately the ideal malt quality for the customer. Plant Production Managers should try to deliver as close as possible to the target.

305 De Samblanx gave evidence that the target specifications were more conservative than the customer's actual specifications because the target specifications were providing more certainty for a better outcome than the customer specifications.[265]

306 In relation to blending, it was relevantly stated:

6. BLENDING PROCEDURE

In principle, the blending procedure has to assure that the delivered malt quality is complying with the customer's requirements, i.e. the Analytical AS WELL AS Non-Analytical Customer Specifications and Barley Specifications.[266]

Whenever a Customer Specification signed by both the customer and Cargill, conflicts with part of the blending procedure, the Customer Specification is valid and overrules that part of the blending procedure.

307 Section 6.1 dealt with "malt transfers". A malt transfer was defined to mean a quantity of malt consisting of a blend of 2 or more production batches not predestined for a customer (although De Samblanx gave evidence in some cases it may be predestined if it were convenient for silo management).

308 The document continued:

6.2 Blending Based on THEORETICAL BLEND AND ANALYSIS

The Theoretical Blend is the numeric combination of several Production Batches or Malt Transfer Bins. Each bin is part of the blend for x %. The sum of the % of each bin has to be 100 (eg Of theoretical blend of Bin A,B,C : Bin A : 20%, Bin B : 50%, Bin C : 30%).

The malt in the bins has to be analysed before used in a Theoretical Blend: the Standard Analyses mandatory and the Non-Standard Analyses optional. The Theoretical Analysis of the blend is the weighted average of the lab results for each parameter, according to the Theoretical Blend …

---

265 As already noted, in some cases, customer specifications provided for a range, rather than a precise specification.

266 It would appear that "requirements" in this context is being used in a narrower manner than its general meaning: see par 303 above.

Validity of the Theoretical Analysis

The Theoretical Analysis for a certain parameter can only be considered as valid if the analysis for that parameter is known for all Theoretical Blend components.

Lab Deviation for certain parameters between Cargill lab and customer lab

The Theoretical Analysis can be adjusted for certain parameters, if a structural deviation between the Cargill lab and Customer lab is *proved and documented*. Only [the Business Unit] Quality Manager, in agreement with Operations Mgmt., can approve such an adjustment.[267]

The *customer has to be aware of the adjustment* (non adjusted figure should be mentioned on the [Certificate of Analysis]: see further)

…

If customer specifications do include non analytical parameters, the following *cannot be averaged in the blend unless explicitly approved by the customer*:

- Ageing,
- Curing (kiln-on/kiln off temperatures and hours),
- Varietal purity,
- Total steep-time,[268]

Each of the malt batches in the blend shall comply with the requirement(s).

(Emphasis added in italics.)

309 The document contained a "[d]ecision tree for loading",[269] which was a flowchart that set out the steps that were required to be taken before a batch of malt could be loaded for delivery to the customer. The starting point queried "[i]s a valid Theoretical Analysis available for all Analytical Specifications?" (emphasis in original). If the answer was "no", employees were directed to query whether the missing theoretical analysis was controlled by the food safety program, and if not, either perform the theoretical analysis or make contact with the commercial department to agree on an action to be taken.

310 If a theoretical analysis was available, or the missing theoretical analysis was not

---

267 Eden acknowledged this approval part of the process did not involve notifying the customer, but plainly the customer was to be informed of the fact of the adjustment, as set out in the very next sentence. De Samblanx confirmed that such a step could only be taken "in transparency with the customer".

268 This is a reference to the steeping process used in transforming barley to malt: see par 12 above.

269 Loading in this context referred to the malt being loaded on the rail car, with the objective of it being delivered to the customer.

controlled by the food safety program, the flowchart stated "[i]s available Theoretical Analysis fully within Customer Specifications?" (emphasis in original). If the answer was yes, the malt could be loaded. If the answer was no, the flowchart directed the employee to make a mandatory request for customer derogation.[270] If a request for customer derogation was made, the flowchart required that the derogation be documented in the customer file and the regional quality manager notified. After this step, the plant was required to log the issue, and the regional quality manager was directed to participate in "problem solving and decision making".

311 The blending procedure went on to state:

> *No out of [specification] deliveries are allowed*, without informing Quality and the Commercial Department and *without "Derogation" of the customer*. The derogation, an approval to deliver the malt out of Analytical-, Non-Analytical – or Barley specifications, *has to be documented*.
>
> If a value for an analytical specification is not available at the time of blending, and the specification is not controlled by the Food Safety Program, it is recommended to make a sample, according to the Theoretical Blend, and to have it analysed in the laboratory for the missing parameter before loading. If that is not possible, the commercial department has to be asked if the loading can take place without the theoretical value. In that case, the analysis will be done on the delivery sample, which is not recommended (*If out of specifications, the customer has to be informed* by the Sales Department) …
>
> Each part of a delivery has to be conforming to the blending procedure (decision tree). If a delivery consists of more than one Theoretical Blend (e.g. A bin runs empty during loading and a new Theoretical Blend has to be made), each one of the single Theoretical Blends has to comply with the blending procedure.[271]
>
> **6.5 Accepted practices for derogation**
>
> The basic principle of customer derogation is that it *must be confirmed in writing*, either by Cargill or by the customer. *If not the derogation is not considered valid and delivery cannot take place*.

---

270 Derogation was the term used in the industry, including by Cargill, to encapsulate a process where a customer was asked to approve acceptance of a delivery of malt where the specifications, as analysed by the maltster, whether by theoretical blend or otherwise, did not match the specifications required by the customer. Derogations may have been given for specific orders or shipments, or they may have been given on a standing basis in relation to a defined set of circumstances, including possibly a fixed period of time, depending on the agreement with the customer. In relation to Cargill, if the malt was to be produced and reported entirely based on the theoretical blend, Cargill was able to seek a derogation if required before the malt was actually blended, and then blend only if the customer approved the malt being delivered outside specification.

271 De Samblanx said this could arise where a large vessel was required to be loaded and it was not possible to make the required malt out of 1 blend.

(Emphasis added in italics.)

312 An accuracy check of theoretical blends was required to be performed every 2 weeks. These checks were conducted in order to "obtain a good correlation between the Theoretical Analysis and the Delivery Sample Analysis". De Samblanx said the procedure involved taking a sample of a transfer, having the actual sample analysed and then comparing the result of that analysis with the theoretical blend analysis results. The results of this testing were never recorded on a Certificate of Analysis, because the testing was done separate to the delivery process.

313 The Cargill Blending and Certificate of Analysis Procedure went on to set out the rules applicable to a Certificate of Analysis, and relevantly stated:

> **8.2 [Certificate of Analysis] Editing (What should be filled in the [Certificate of Analysis]?)**
>
> *The Standard Analyses (see Appendix 1-3)*
>
> For the Standard Analyses, always THE THEORETICAL ANALYSIS WILL BE FILLED ON THE [CERTIFICATE OF ANALYSIS] unless the wet chemistry[272] on the shipment is known and then this will be filled on the [Certificate of Analysis]. This rule does not apply in the case of Accuracy Checks of the theoretical blend.
>
> Even if the theoretical analysis or shipment wet chemistry for a parameter is slightly out of specifications (see decision tree for loading;[273] [European Union] customers), *the value out of specification has to be reported on the [Certificate of Analysis]*.
>
> *The Non-Standard Analyses*
>
> - The parameter is controlled by the Food Safety program
>
> …
>
> Other Non-Standard Analyses
>
> - If all individual components of the Theoretical Blend are analysed, the Theoretical analysis for that parameter has to be reported (ideal case),
> - If the parameter is analysed on a sample, composed according to Theoretical Blend, this analysed value has to be reported (second best option),
> - If the parameter is analysed on a delivery sample, *this analysed value has to be reported, even when the value is out of specifications*. In this case the

272 "Wet chemistry" refers to the chemical analysis of the actual sample being delivered after the malting production process is completed: see pars 33-34 above.

273 See par 309 above.

> Sales Department has to contact the customer and *ask for derogation*. (least recommendable option).
>
> …
>
> Lab Deviation for certain parameters between Cargill lab and customer lab
>
> Only in the case that a structural deviation for a certain parameter is documented and approved by the [Business Unit] Quality Manager and Operations [Management]. …, the Theoretical Analysis (or real analysis for Non-Standard analyses) *can be adjusted by the structural deviation. This has to be done consistently for all malt deliveries for this customer*. **Also the non-adjusted Cargill value has to be displayed on the [Certificate of Analysis] in this case.**
>
> …
>
> **8.3 [Certificate of Analysis] Verification**
>
> Compliance will be checked with this [Cargill Blending and Certificate of Analysis Procedure]. If the [Certificate of Analysis] is found to be compliant, the [Certificate of Analysis] will be signed by the Production- or Quality Department. [Certificates of Analysis] that have not been signed cannot be sent to the customer.

(Emphasis added in italics, otherwise emphasis in original.)

314 Eden was cross-examined concerning the detail of the Cargill Blending and Certificate of Analysis Procedure. It was not his area of expertise as he is not a maltster. He accepted the contents suggested that wet chemistry analysis was more reliable than theoretical blend analysis, but could not say to what extent. He also said he did not know of any other maltster who used the theoretical blend approach, but on the basis that he simply did not know what other maltsters were doing. Eden gave evidence that Cargill may or may not use the theoretical blend method, but whatever the customer required was followed.

315 De Samblanx was far more qualified to give evidence concerning the Cargill Blending and Certificate of Analysis Procedure, not only because he had approved it, but also by reason of his qualifications and his role at Cargill. He said the procedure had been prepared for the malt businesses of Cargill, Inc globally, and that it instructed how to manage Certificates of Analysis in line with corporate policy.[274]

316 De Samblanx stated that Cargill's preferred method was to use the theoretical blend

---

274 The corporate policy referred to was also reflected in documents, both dated 22 October 2012, entitled "Certificate of Analysis … Policy" and "Certificate of Analysis … Questions and Answers".

analysis, and that it tried to get customers to accept that approach.[275] However, he gave evidence that theoretical blend results were only used with a customer's approval and if a customer required that the actual malt being delivered was to be tested, that approach was adopted. In those circumstances, a sample would be taken and the results of that test would be reported in the Certificate of Analysis.[276]

317 De Samblanx also gave evidence about the circumstances in which Cargill did not report the results of analyses to customers. He said this occurred if there was a belief the results were not reliable. In this regard, Cargill's laboratories ran "an internal standard", whereby samples were tested and compared with another sample with a "known analysis". If it was discovered that a certain value for the internal standard was not correct, then the values for the parameter in question would not be released. De Samblanx said this withholding of information was not a matter of changing the result, but rather it was denying the outcome. He said the analysis would have to be done again "the day after or the next run".

318 De Samblanx confirmed that, if a theoretical blend result of a single component was not available, then an actual, or wet chemistry, analysis would be conducted. This analysis only considered the analyte in issue, rather than all the parameters to be reported in the Certificate of Analysis.[277]

319 The details of the Cargill Blending and Certificate of Analysis Procedure have been reproduced at some length to demonstrate a number of points.

320 *First*, the preferred approach was to use the theoretical blend approach for the purpose of populating the Certificates of Analysis, rather than analysing a sample of the batch actually produced.

321 *Secondly*, in order to pursue the preferred approach, Cargill sought to avoid conducting any actual analysis of a sample of the malt to be delivered. In effect,

---

275 According to the Cargill Blending and Certificate of Analysis Procedure (cl 6.6), most malt deliveries globally were based on the theoretical blend approach.

276 The testing applied to 1 or more of the specifications, depending on the customer's directive.

277 See further par 313 above.

Cargill could not report what it did not know, but chose not to become aware of the actual details in circumstances where ascertaining the information was a step that could have been taken.

322 *Thirdly*, Cargill conducted regular checks to seek to make the theoretical blend analysis and reporting reliable (as that word is to be understood in the context of reporting based on theoretical blend).

323 *Fourthly*, if, for whatever reason, an actual analysis took place, then Cargill was required to record the result with respect to the particular analyte and report it to the customer, regardless of whether it was within or outside the customer's specification.

324 *Fifthly*, if an actual analysis was required to be conducted, it was kept to the bare minimum, by confining it to the specification or specifications that could not be satisfactorily reported under the theoretical blend procedure.

325 *Sixthly*, it was mandatory that, if malt to be delivered did not comply with the customer specifications in any way, that fact had to be reported to the customer.

326 *Seventhly*, non-compliant malt could not be delivered unless a derogation from the customer was obtained, which authorisation had to be recorded in writing.

327 *Eighthly*, any reporting of results, regardless of the method adopted, was to be based on reliable laboratory analyses values only. If it was considered that the values were not reliable for some reason then the results were not to be reported.

328 Before leaving the topic of reporting and reliability of laboratory analyses and their relevance to the Cargill Blending and Certificate of Analysis Procedure, it is convenient to refer to some exchanges within Cargill in August 2012. An email was sent to the Cargill Malt leadership team by an operations manager referring to the standards set by the International Organisation for Standardisation.[278] The email provided a link to the organisation's manual for blending and Certificate of Analysis procedure, and made reference to a requirement that no shipment was allowed to

[278] See further par 513 below.

occur for malt out of specifications "without a derogation from the customer side".

329 In a responding email, Eden suggested that the operations manager discuss modifying Cargill's process slightly for the defined analytical specifications. Eden referred to an alternative to a mandatory request for derogation, being to only request a derogation when the actual analysis was outside the standard deviation of the analytical equipment. Eden said this would mean Cargill would have to use the standard deviation from the vendor or use Cargill's own statistical analysis to determine each analytical parameter. Eden further suggested that the statistical analysis could be programmed into MaPPS with a procedure to re-evaluate the position annually.

330 Under cross-examination, Eden said his suggestion in this email was part of the story. Eden gave evidence that he was not entirely correct to say that he was suggesting there was no reason why Cargill should not treat results as valid if they were within the standard deviation of the analytical equipment. The other part of the story with respect to this proposal was addressing what the customers expected, and seeking to obtain an agreement that they would accept this suggestion.

331 When De Samblanx was taken to this email, he gave evidence that he was of the opinion that Eden did not know about the subject matter that he was discussing. De Samblanx said that it was apparent Eden did not know exactly what was meant by standard deviations in the way that standard deviations have to be applied in relation to analysing the quality or reliability of an analysis. De Samblanx stated such a standard deviation was not something that could be used to justify changes of analysis results. De Samblanx also stated that Eden did not understand that it was very clear at Cargill that no malt could be shipped out of specification without the agreement of the customer. (Of course, De Samblanx was not aware of Eden's evidence at trial, as referred to in the previous paragraph.)

332 The only other witness taken to this document was Marc Viers ("Viers"),[279] worldwide

[279] Viers was employed by Cargill from 1988, initially as a merchant trainee. In 2010, he was appointed global commercial manager for Cargill Malt. He was a board member of Prairie Malt Ltd. At the time he gave evidence, he was enterprise risk manager for the food and ingredients and bio-industrial

commercial manager, malt. Viers gave evidence that the group of individuals referred to in the email did not have authority to make a decision in line with Eden's suggestion, which was contrary to Cargill's corporate policy and Cargill would not allow such an approach. Viers said he recalled discussions in 2012 about different alternatives for reporting the results in Certificates of Analysis, but he could not remember the detail.

333 In summary, these 2 emails in August 2012 do not provide a basis for concluding that Cargill was considering making modifications to its reporting procedure which contemplated making changes if results were within the standard deviation of the analytical equipment without discussing the matter with its customers. Further, the person with responsibility for Cargill Malt's procedures in relation to analysis and reporting, De Samblanx, did not give Eden's suggestion any serious consideration (or, for that matter, credibility).

334 *Ninthly*, if an error in results amounted to a structural deviation for a parameter, which was documented and duly approved, the relevant results could be adjusted, but this had to be done consistently for all affected malt deliveries to the customer.

335 *Tenthly*, whilst undoubtedly encouraged to accept the theoretical blend method, it was the customer that ultimately dictated the method to be adopted, or, if the customer chose a particular approach or particular approaches within a specified method, then the customer's decision dictated the approach.

336 *Eleventhly*, the procedure for compliance included complying with the barley variety, or varieties, when this was specified by a customer.

337 *Twelfthly*, the method and process adopted was required to be transparent, so that visibility was available both to the customer, by the means of accurate reporting of results,[280] and to Cargill internally.

---

enterprise, being 1 of Cargill's 5 enterprises (previously known as platforms), having been appointed in September 2014. He holds a bachelor of science, majoring in agricultural economics from Purdue University.

280 With the exception of when results were determined to be unreliable.

338 *Thirteenthly*, although Cargill's commercial department's involvement would be invoked in some circumstances, it was no part of that department's role to override or change the reporting of the results of any particular analysis.

339 *Fourteenthly*, no part of the process of reporting to customers, as prescribed in the Cargill Blending and Certificate of Analysis Procedure, endorsed or provided for a general discretion for results to be changed, by pencilling or otherwise.

340 In summary, there was a markedly different approach between the Cargill Blending and Certificate of Analysis Procedure and the Viterra Certificate of Analysis Procedure. Leaving aside the underlying difference in the means of analysis most regularly used in the respective approaches, most strikingly Cargill's approach involved open disclosure to its customers of the process adopted, whereas the Viterra Certificate of Analysis Procedure was deliberately and mandatorily covert.

I. Cargill prepares for the possibility of purchasing Joe White

341 As early as September 2012, approval was given for Eden to explore the opportunity of purchasing Joe White sometime in the future. It was at this time that "Project Hawk" was instigated, with Eden as transaction leader.[281]

342 Even earlier, in March 2012, Cargill, Inc was monitoring Glencore's activities with respect to Viterra, with an awareness that Glencore was likely to become the ultimate owner of Joe White in the near future.[282] Van Lierde sent an email to the senior executives of Cargill, Inc providing significant detail about Joe White. The email referred to a recent malt strategy which acknowledged that Australia was "fundamentally attractive as a barley breadbasket and advantaged malt processing/export platform to serve growing markets of [Southeast] Asia and potentially [South] Asia". It was further stated that building a stronghold in Australia was amongst Cargill's top 3 prioritised strategic moves, with Joe White being the

281 Project Hawk was the name given to the project for Cargill to investigate and, if feasible, complete the purchase of Joe White.

282 Before Glencore's involvement, Joe White was being eyed by Cargill. Emails in September 2010 showed Cargill "of course" would be interested. Eden gave evidence that Joe White was on Cargill's "game board" before 2010.

better acquisition candidate of the 2 options available. A similar email was circulated by Eden. Van Lierde gave evidence that purchasing Joe White was amongst his top priorities from this time on, and remained so until the purchase was completed.

343 As a result of this strategy, Emery Koenig ("Koenig"), a board member of Cargill, Inc,[283] spoke to Mahoney in March 2012. Mahoney was already known to Koenig. Mahoney had previously worked at Cargill for a number of years.[284] From around 1992 to 1997, Koenig worked with Mahoney in Geneva, and sat on the same trading floor.

344 Koenig asked Mahoney if Glencore had any interest in selling anything on the grain handling or export side of Viterra's assets. Mahoney said that Glencore had no interest in selling those assets, but stated Glencore would like to have further discussions with Cargill at the appropriate time in relation to Glencore selling the entire malt business for both Canada and Australia.

345 The reference to a malt business in Canada concerned a 42 percent shareholding in Prairie Malt Ltd. This business was co-owned with Cargill, Inc. It was operated as a joint venture by Cargill, Inc on behalf of both shareholders, and was therefore largely a passive investment for Glencore.

346 Mahoney also told Koenig that Glencore had had a lot of interest from both Europe and Australia. However, he noted Glencore would not be interested in progressing such discussions until all regulatory approvals had been dealt with and Glencore had formally acquired these businesses of Viterra. Koenig recorded details of his discussion with Mahoney in an email, in which he said that he registered Cargill's interest in the entire malt business held or to be held by Glencore.

347 In July 2012, Koenig sent an email to Mahoney, following up from the March 2012 discussions. He confirmed Cargill's interest in Viterra's malt assets.

---

283 Koenig was a long-standing employee of Cargill. At the time of his retirement in February 2016, he was vice chairperson and chief risk officer of Cargill, Inc, and had been a board member for 6 years.

284 Koenig had been told quite some time before that Mahoney, together with Ivan Glasenberg (see par 766), were leading the acquisition by Glencore of Viterra.

348 In September 2012, Eden circulated within Cargill a report entitled " Viterra Malt Overview", stating in the covering email that he observed that purchasing Viterra's malt business might have been the "solo opportunity for Cargill to finally enter the remaining malting/malting barley region that we do not play in today". In the report, Eden set out the key considerations in relation to this possible acquisition. In addition to demonstrating that Cargill had the opportunity to become the largest maltster globally, as well as some negatives, on the whole the report was very positive. The report contained a preliminary valuation of the Joe White Business, which, using agriculture company trading multiples of between 9 and 13 times earnings, was in the range of $432 million and $624 million.

349 Shortly after this report, the green light was given to Eden.

350 In October 2012, a Cargill employee working in the grain and oilseeds supply chain in Australia sent an email to a number of recipients, none of whom gave evidence in this proceeding.[285] The email gave details of the distribution of barley crops for regions in Australia by volumes, variety and trends. It provided information concerning preferred varieties, though this information appears to have been obtained from the website of Barley Australia. The email also addressed margins, procurement and barley strategies as well as details of the barley export market. Further, it covered synergies and benefits for Cargill's grain and oilseeds supply chain in Australia and Joe White. A spreadsheet attached to the email contained information as to varieties of barley used by Joe White at certain locations ("malt production"). Other attachments provided details of challenges in barley breeding in Australia and a presentation concerning malt and barley supply and demand issues in Australia from a brewer's perspective.

351 The Viterra Parties submitted that this level of information demonstrated that by October 2012 Cargill was engaged in detailed investigations into matters including the characteristics, availability and demand for malting varieties of barley in Australia. No such proposition was put to any witness. This could readily have been done

285 Joseph Christianson was a recipient: see further par 563 below.

despite the absence of any of the addressees to this email. In any event, it is clear that enquiries concerning barley supply and demand, and other market issues, were being explored. How detailed the investigations were was not clear.

J. Glencore acquires Viterra, including Joe White

352 In December 2012, Glencore purchased "the Viterra Group" with its subsidiaries, including Joe White. As early as March 2012, Glencore gave a presentation to a rating agency foreshadowing this purchase. In that presentation it was stated that Glencore intended to sell some of the businesses that formed part of the Viterra Group within 12 months of the purchase in order to reduce Glencore's exposure to Canadian $2.6 billion.

353 Glencore valued the transaction at Canadian $6.16 billion dollars, with Joe White representing only a small fraction of this value.[286] Some of the assets acquired were concurrently disposed of to other entities within the consortium. There were significant opportunities available to Glencore in grain marketing synergies, grain trading being the "bread and butter" of Glencore's business. Accordingly, Glencore retained the grain side of the Viterra business.

354 After the agreement to purchase had been signed, but before completion, Mattiske received unprompted calls from persons interested in buying Joe White. Although Cargill did not approach Mattiske, it did contact Glencore in Switzerland expressing interest.

355 After completion, Mattiske had approximately 30 people reporting directly to him. He was responsible for integrating Viterra's trading division into Glencore Grain's trading division. He also managed the divestment of Viterra's agriproducts business, the sale of a feed milling business, the closure of a wood business and the sale of Joe White. In addition, Mattiske was responsible for restructuring the remaining aspects of Viterra's operations in Australia and New Zealand, including cutting

286 An indicative value of Canadian $400 million was attributed to Joe White. This was not an actual valuation, and King was not aware of any valuation of Joe White at the time of its acquisition by Glencore.

approximately 350 jobs.

356 Glencore and Viterra continued to operate as separate businesses and legal entities, subject to the restructuring that was occurring around that time. In order to avoid 2 parts of "the business bidding against each other", Glencore took over the barley procurement function for Joe White which was previously performed by Viterra. Viterra's traders were moved from Adelaide to Melbourne, and worked with Glencore's trading operations.

357 From the time Glencore took over, Glencore and Joe White worked together very closely with respect to Joe White's barley purchases. Mattiske described the relationship as involving Glencore having an implied right of first refusal, before acknowledging he did not actually know what had been agreed as to how the parties were to transact with each other. In fact, Joe White did not have the ability to purchase barley from any other supplier without Glencore's authority.[287] Further, Jones' evidence was that Glencore did not always provide Joe White clear information about barley varieties and grades that were available.

358 Viterra provided storage and logistics services to Glencore Grain, and there was a clear delineation as to which employees worked for which business.

359 Once completion had occurred, Mattiske held monthly meetings of "the local executive team" at Viterra's office in Adelaide. The executives that attended the Australia and New Zealand executive meetings included Fitzgerald, Jason Rees

---

287 This was confirmed in writing in annexure D to the Acquisition Agreement which recorded as a question and answer with respect to slide 13 to the Management Presentation Memorandum (see par 711 below): "Can you confirm that Joe White does not have the ability to purchase barley from a third party without Glencore's authority? Correct". Despite this, Mattiske initially gave evidence that, if Glencore could not procure a variety of barley, Joe White was free to source it from elsewhere. He later accepted the written position as being the correct situation and gave evidence that it did not surprise him. By way of further background, historically, Viterra had exercised some control before being taken over by Glencore. Jones gave evidence that when Viterra took over the barley procurement function from ABB Grain things changed significantly. He referred to a document from Viterra dated 4 May 2010 in support of this conclusion, which, amongst other things, prevented Joe White from purchasing more than 5,000 tonnes of barley or malt without prior notice to Viterra. However, Jones accepted during cross-examination that the arrangement loosened over time.

("Rees"), the chief financial officer of Viterra in Australia and New Zealand,[288] Benjamin Norman ("Norman"), director of human resources in Australia and New Zealand for Viterra and Glencore Grain,[289] and Wilson, as well as Hughes. Hughes continued to attend these monthly Viterra meetings until shortly before completion of the Acquisition, when Mattiske decided Hughes should only attend to report on "the Malt Division for which he was responsible and the safety section" because Mattiske did not think "it was appropriate for him to *continue to be involved* in the rest of Viterra's business" (emphasis added).

360 In addition to these monthly meetings, Mattiske spoke fortnightly with each individual executive, usually by telephone. Thus, from December 2012, Mattiske usually spoke to Hughes about 3 times a month. At no time during these discussions did Hughes ever raise any issues concerning customer contracts or compliance issues. On the contrary, in substance Hughes reported that he had a good relationship with customers and that they were happy. Hughes also said that Joe White had an excellent reputation. If it were otherwise, Mattiske would have expected Hughes to inform him of the position.

361 Around this time, Joe White supplied approximately 500,000 tonnes of malt per annum. It had a stable customer base of 30 to 40 brewers and food manufacturers,[290] with 80 percent of its malt exported.

K. Preparation for the sale of Joe White

362 Following Glencore's acquisition of Viterra, the decision was made within Glencore to proceed with the proposal to divest its Australian malt business, including Joe

---

288 Mattiske gave evidence that, if he wanted to know something about Joe White's financial affairs, he would speak to Rees from time to time. Up until December 2012, Rees was also a director of each of Viterra Malt, Viterra Operations and Viterra Ltd, as well as having the title of Viterra Ltd's corporate controller (Australia and New Zealand). Rees had previously been a director of Joe White from 7 December 2009 to 13 December 2011 and from 23 March 2012 to 17 December 2012.

289 Norman's role included overseeing corporate policies and, according to Mattiske, required him to be aware of Viterra's corporate policies.

290 Joe White did very little business with new customers.

White.[291] This decision followed Walt and Maarten Roelfs ("Roelfs") visiting Australia to review Joe White in January 2013. Roelfs was responsible for business development, finance and trade for Glencore Grain. Mattiske was involved in "organising the arrangements with Joe White" for the trip, and introduced Hughes and Argent to these Glencore executives. Mattiske's evidence was that he was otherwise not actively involved in the sale in any material way. On 14 January 2013, Mattiske sent an email to Hughes listing the matters "we would like to cover". The list included an explanation of the business case, production and other operational reports, management reports and clarification of "key drivers of valuation". Mattiske suggested to Hughes that it would be good to include Argent. As part of this introduction, Walt and Roelfs were provided with a number of documents relating to the Joe White Business.[292]

363 The decision to sell Joe White did not need Glencore board approval, as the proposed amount of the sale was below the threshold for sales requiring such approval.[293] However, discussions within Glencore both before and after 17 December 2012 about selling Joe White were held with a number of senior executives. Mattiske said he discussed the issue with Ronald de Gelder ("de Gelder"),[294] a trader at Glencore, Ernest Mostert ("Mostert"),[295] Roelfs and Mahoney. In this context, Mattiske gave evidence that Mahoney, as chief executive officer of Glencore Agriculture, had the most direct line of responsibility as the most senior person within that business. Mattiske was not responsible for the decision to sell, but regarded it as his job, as the executive based in Australia, to get Joe White sold. In relation to the proposed sale of Joe White, Mattiske's evidence was that if there had been any decision to suspend the

---

291 At the time of Glencore's acquisition, it was proposed to divest Canadian $925 million of assets, of which Canadian $400 million was represented by Joe White. Another sale in which King was involved in assisting Walt was the sale by Glencore of Prairie Malt Ltd, the business co-owned with Cargill, Inc. Viterra also sold off the agriproducts and New Zealand business units in around 2013.

292 These documents, which were also provided to Mattiske, included the "Malt Strategic Plan" for 2011 to 2015 (which referred to the "ability to buy off spec"), "malting for dummies" and a number of documents containing financial information.

293 King was not certain, but understood this threshold was US$500 million.

294 In 2013, de Gelder was a Glencore director of Australia and New Zealand, Asia and the Middle East, and was based in Rotterdam.

295 See par 366 below.

sale process before any contract was entered into, it would have been made by the "leadership of Glencore" based in the Netherlands and Switzerland.[296]

364 King acknowledged that 1 of the disadvantages of acquiring a conglomerate of assets is that, if you do not pre-sell the assets you do not wish to hold, then for some time as purchaser it is necessary to run the relevant business. He further acknowledged that this made the purchaser vulnerable to the management of the business, particularly when the purchaser had no independent expertise in relation to that particular business. He accepted, correctly, this might be a very significant risk.[297]

365 Furthermore, King accepted that prospective purchasers expect certain well-established processes to be followed if a vendor wants to be taken seriously. One of the "well-trodden practices" for the sale of a business is to provide an information memorandum about the business. In addition, King gave evidence that a prospective purchaser would expect to be able to conduct an assessment of the documentation and material relevant to the way in which the business operates and performs, as part of the prospective purchaser's due diligence.

366 In early January 2013, Walt sent an email to Roelfs, copied to King and Mostert. Mostert was a director of various companies in the Glencore group, including each of the Sellers and Joe White (having been appointed on 17 December 2012).[298] Mostert was also the chief financial officer for Glencore Agriculture. The email set out various matters Walt wanted addressed with respect to the proposed sale. As part of organising the sale process, Walt stated it was necessary to identify and nominate "the key Viterra people" to assist. These "Viterra people" included the "[m]alt biz people". He also referred to an incentive wage "of the key Viterra people in this process". Walt wanted a business plan, including the key performance indicators, to help Glencore

296 In this context, Mattiske identified Mahoney, Mostert, Walt and de Gelder.

297 See further pars 388-394 below.

298 His appointment as a director of Joe White coincided with the appointment of Mattiske (see par 97 above) and that of another senior executive, Andreas Hubmann. Andreas Hubmann was at the relevant times a director of Glencore Australia Pty Ltd, Glencore Australia Holdings Pty Ltd, Glencore Grain, Glencore Grain (NZ) Ltd, Glencore AG, Glencore and each of the 3 Viterra entities (amongst other companies).

better understand the Joe White Business.

367 An internal Glencore presentation delivered in January 2013, and entitled "Action plan for divestures", set out the planned first steps for the sale process. Merrill Lynch, Deloitte Financial Advisory Services LLP ("Deloitte"), and King & Wood Mallesons ("Mallesons") were to be engaged as advisers to the sale.[299] The document indicated that "management", specified as Hughes and Argent, would be involved and incentivised.[300] It then set out a number of steps to be undertaken in preparation for the sale, including populating a proposed data room and preparing and planning management meetings. The document specified, in relation to the management meetings, that "GH" (Hughes) and "SA" (Argent) were to be "well instructed"; the presence of Glencore and Merrill Lynch at these meetings was recorded as "required". The tasks that needed to be performed were set out in a table over 3 pages. In relation to many of the tasks, Mattiske was identified as being the person in charge, either on his own or in conjunction with others.

368 Before continuing, it is necessary to say something about the role of Hughes and Argent. Throughout the trial, the Viterra Parties sought to attribute much, if not all, of Hughes and Argent's conduct and knowledge to Joe White, to the exclusion of both

---

299 Any formal retainer of Mallesons was not in evidence. At 1 stage during closing submissions it was suggested on behalf of the Viterra Parties that Mallesons were only acting for Glencore, and not Viterra. In essence, it was put that Viterra, the Sellers, did not have solicitors acting for them right up to the time of the execution of the Acquisition Agreement. The suggestion made was without substance. It was in direct conflict with the Viterra Parties' written closing submissions which stated that, between 28 July 2013 and 4 August 2013, Cargill "and Glencore (on behalf of Viterra) negotiated the terms of the draft [a]cquisition [a]greement". Obviously, if Mallesons was acting for Glencore who was negotiating on behalf of Viterra, then Mallesons was necessarily acting also on behalf of Viterra. Lead senior counsel for the Viterra Parties subsequently clarified the position, acknowledging Mallesons must have acted for the Sellers in connection with the preparation of the Acquisition Agreement and its completion. (Mallesons was expressly referred to on the title page of the Acquisition Agreement and the drafts that preceded it when the terms were being negotiated. The first draft prepared by Mallesons and forwarded to Cargill was dated 14 July 2013, being 3 weeks before the Acquisition Agreement was entered into: see par 979 below. Mallesons was involved in assisting Viterra's legal officers well before this time: see, for example, pars 616, 940 below.) On this point, when Mattiske was asked whether Glencore was conducting the sale process, he said he was not sure which legal entity was doing so. He said Joe White was owned by Viterra, and it was his belief it was Viterra selling Joe White, albeit the decision-making was being made by his superiors at Glencore. For completeness, Lindner's evidence was that her instructions mainly came from King and Fitzgerald. There was no evidence to suggest that, in instructing Mallesons, Fitzgerald was somehow not acting in his designated position as the senior in-house counsel for Viterra; albeit he may have also been acting for or assisting Glencore.

300 See further par 1876 below.

Glencore and the Sellers. Whilst Hughes and Argent, as ongoing executives of Joe White, undoubtedly owed duties to, and generally speaking continued to act on behalf of, that company, from the time they were instructed by Glencore to be involved in the sale of Joe White, they were necessarily also acting on behalf of Glencore and the Sellers. As King readily acknowledged, Glencore needed these executives to assist it in the conduct of the sale, and their tasks and responsibilities in relation to that process (including preparing the Information Memorandum[301] and any due diligence) were tasks uniquely related to Glencore's and Viterra's interests in obtaining the best possible price. To adopt King's words:

> In any business you are selling you need the incumbent management to sell the business *for you*.
>
> (Emphasis added.)

369 Further, although Glencore enlisted Hughes and Argent to assist,[302] they were not privy to all the inner workings of the sale process. For example, it was agreed to have weekly update calls. King could not recall whether they were held weekly, but acknowledged Merrill Lynch representatives were spoken to frequently. In any event, a list of required attendees was prepared. The list included Fitzgerald, Mattiske and Nicholas Pappas ("Pappas"), a Mallesons' partner, as well as representatives of Merrill Lynch, but not Hughes or Argent. As King explained, this was because these 2 executives were not the people responsible "from a Glencore perspective", nor, as Mattiske effectively acknowledged,[303] were they the decision-makers for the sale.

370 The first of these update calls was scheduled for 4 March 2013. An action list was circulated by Merrill Lynch. Neither Hughes nor Argent was an addressee, but many senior Glencore personnel were.[304] Most of the action items were identified as being

---

301 See par 470 below.

302 Mattiske's evidence was that he told Hughes in around early February 2013 that Glencore had decided to sell Joe White, and asked both Hughes and Argent to assist with the sale process. Mattiske asked them to manage the Joe White Business well and to cooperate with the external advisers. He also alluded to the fact that they were required to actively assist because "we" did not have the expertise to do it "ourselves". Mattiske went so far as to give evidence that Hughes and Argent were crucial to the sale process "as they were the only ones that knew Joe White in detail".

303 Mattiske's evidence related to Hughes, but was equally applicable to Argent.

304 These included Walt, Mostert and Roelfs, as well as King, Mattiske and Fitzgerald (the last 2 being senior officers of Viterra and Joe White).

the responsibility of Merrill Lynch, Mallesons or Glencore, or in combination. Management (presumably a reference to Hughes and Argent) were not listed as being solely responsible for anything. Their proposed involvement was limited to: assisting with vendor assistance data packs, together with Deloitte and Glencore; assisting with a revised business plan, together with Glencore; identifying sensitive information, together with Glencore; and agreeing on a "clean room/black box" process for sensitive information, in conjunction with Glencore. With respect to finalising the Teaser,[305] the Information Memorandum, and circulating the draft outline of the Management Presentation Memorandum,[306] those matters were the responsibility of Merrill Lynch. Finally, sign-off of the Information Memorandum was listed as being the sole responsibility of Glencore.

371 Returning to the chronology, another document considered by Glencore in January 2013 was a document previously forwarded by Merrill Lynch in October 2012, entitled "Process Considerations on Asset Disposal". King did not discuss the contents of the document with Merrill Lynch. He described the document as fairly generic in covering all potential options for a proposed process involving a blind auction. It is unnecessary to discuss the document in detail, however it did provide some insight to the process involved.

372 The document set out the elements of a "Targeted 2-Stage Auction". In the first stage, the sale process would be launched by the dissemination of a number of documents to potential buyers,[307] all of which were issued by Glencore in due course. The second stage was scheduled to commence after indicative bids were received from potential buyers. Amongst other things, it would involve a presentation from the management of Joe White. Key action to be taken included to finalise and rehearse the proposed management presentation.

373 Additionally, it referred to clear communication on goals and appropriate

305 See par 457 below.
306 See par 711 below.
307 Namely, a non-disclosure agreement, a "teaser", a round 1 process letter, an information memorandum and a data pack.

incentivisation of management to support the sale process.[308] It set out what ought to be included in an information memorandum, including an overview of activities and products, as well as an operating model overview incorporating details on product sourcing, manufacturing, logistics, marketing and communication, amongst other things. With respect to financials, it was stated that at least 3 years of historical results should be provided.[309] It was also stated that the financial information should include "top-line growth, profitability, changing product mix, cash flow generation" and current financial performance as compared to the previous year. King agreed this was the sort of information that a purchaser would expect to find in an information memorandum. Merrill Lynch also set out the advantages of having a full vendor due diligence. King was cross-examined on these suggested advantages, agreeing with some but disagreeing with others.

374 Cargill was referred to in the document, along with other "Inbound Indications of Interest". Koenig was noted as the contact. As already touched upon,[310] Cargill, Inc's interest in Joe White had existed for some time. According to Eden and others, Joe White had a wonderful reputation and Eden believed it was a well-run business and a strong performer in Southeast Asia. Further, based on his previous experience of working in Australia, he considered Australian companies were strong on legal compliance and had a "fabulous" reputation for all agricultural and food exports.

375 On 16 January 2013, the Malt Cost Reduction Transformation Project and a number of other attachments were forwarded by Hughes, from his Viterra Ltd email,[311] as "Executive Manager Malt … Viterra Ltd", to James Maw ("Maw"), head of grain

---

308 King gave evidence of the incredibly important role management played in any divestment process, because they were the people who would present the business to any potential purchaser. He also said it was important to align management's incentives with the seller's incentives.

309 Subsequently, King expressed the view that the historical financial information should be confined to 3 years because the business modelling had fundamentally changed around 2010. King considered this was a sufficient level of disclosure.

310 See pars 341-348 above.

311 From this point of the judgment onwards, there are references to numerous emails that were sent and received in 2 or more time zones. Generally, the top of any email chain (being the last email in the chain) showed the date and time in the relevant time zone in Australia. Emails earlier in the chain show the date and time of the place where the email was received by the person who sent the following email (being the next higher email) in the chain. To the extent that times and dates of emails are referred to below, they will be the times and dates that appeared on the email being referred to without further explanation, unless an explanation is required because of the importance of the timing.

trading at Glencore (a person "very well known" to Mattiske), and copied to Mattiske and Argent. Mattiske gave evidence that it was likely that he skim read the covering email, but did not open the attachments. However, he also acknowledged that, at the time Glencore acquired Viterra, there was a procurement policy that involved using off-grade barley, and that he arranged for Glencore to replace Viterra as the supplier of the off-grade barley. Whether Mattiske read the attachments or not, Hughes was corresponding openly with Glencore about previous cost-cutting measures undertaken at the direction of Viterra.

376 On 21 January 2013, about a week after Walt and Roelfs' trip to Australia, a meeting was held between King, Walt, Mahoney, Mostert and Roelfs, and perhaps others, to discuss "kicking off" the sale.

377 During this period, it appears Glencore was provided with copies of at least some of Joe White's barley contracts. For example, on 25 January 2013, Jones forwarded to Jonathon Evans ("Evans")[312] at Glencore Grain copies of contracts for the provision of grain by GrainCorp Operations and CBH Grain Pty Ltd (a related company of Co-Operative Bulk) to Joe White. The reason why these particular contracts were sent at this time was not the subject of evidence. In any event, with Glencore being the supplier of barley to Joe White after December 2012,[313] it could be readily ascertained by Glencore as to what barley was being supplied to Joe White.

378 On 29 January 2013, Fitzgerald emailed Mattiske seeking a copy of the proposed information memorandum. He noted that Mallesons had also not seen a copy. Fitzgerald expressed the desire to read the document before it went out. Mattiske's response was that an information memorandum had not been created. Mattiske gave evidence that what followed was, amongst other things, the gathering of data and information, saying it all became very busy very quickly.

---

312 Evans was called to give evidence for the Viterra Parties. From March 2012, he has been a barley trader at Viterra, and then Glencore, initially under the supervision of Wilson. From December 2012, Evans took over from Wilson as the person most responsible for engaging with Joe White in relation to the supply of barley.

313 See par 356 above.

379 On 31 January 2013, King emailed Argent on the assumption that Mattiske had already told Argent he would be in contact. King explained his role to Argent, and on the face of the email, expressed a desire to help Argent develop a business plan and a discounted cash flow for Joe White. King attached a discounted cash flow that had been provided to him previously, probably by Walt. Under cross-examination, King accepted that, despite this wording, in fact he was intending to ask Argent to assist King in preparing a business plan and a discounted cash flow.

380 Argent responded, stating Mattiske had not foreshadowed the contact. He told King the discounted cash flow was slightly different, and forwarded the then current version to King. Also on 31 January 2013, King sent an email to Roelfs, Walt and Glencore's accountant stating Argent had provided a balance sheet to help with the business plan and model. King noted Deloitte would examine the document in more detail, and stated that it was important to understand provisions such as employee benefits, workers' compensation, "Other" and "Other Financial Assets" in more detail.[314] Glencore's accountant promptly responded. He identified a series of matters that he said Deloitte "should cover". These included very big swings month on month in working capital. He could not detect any real seasonal trend and noted it was important to get the right number for the average working capital. He also noted the balance sheet was very clean from a debt perspective and that he was keen to keep it that way. Further, by reference to some months showing negative inventory, he stated that needed to be "understood or cleaned up" as it suggested potential issues with bookkeeping unless there was a good reason. When taken to this email during cross-examination, King explained that it was part of Deloitte's role to review the information and try to explain the anomalies or movements to give a buyer a greater understanding of the financials. He said this process was also to assist Glencore.

381 Numerous other emails were exchanged from this time, with Argent promptly responding to King's ongoing queries. The emails demonstrated King made numerous changes to the model. This was reflected in an email sent on 6 February

---

314 King identified the relevant lines of the spreadsheet in doing so.

2013 by King to Argent, attaching an updated version of the model. King accepted he had done a fair amount of work, inputting matters and building it up to investment banking standard. With respect to the valuation as then prepared, King stated in the email that he had not had "a chance to play with this some more", but said he intended to refine it further.

382 Consistent with his evidence that valuing a business is an art, not a science, King said he "play[ed] with certain numbers", "tweak[ed] things" and "fiddle[d]" with various inputs to portray something "which [was] hopefully still accurate but present[ed] the business in the best possible light". King agreed what was sent on 6 February 2013 was an example of him taking ownership of the process of putting together the model.

383 By 7 February 2013, the model was sufficiently advanced for King to suggest the inputs and assumptions warranted finalisation with Rees and Hughes, before discussing the outputs with Mattiske.[315] Subsequent emails from Argent referred to Argent discussing the model with each of Hughes and Mattiske.

384 On 1 February 2013, Walt emailed Roelfs and Mattiske, copied to King and others at Glencore, attaching a first draft index of what he said should possibly go into the proposed data room. He said the list had been compiled by checking what "the Viterra data-room contained for our acquisition supplemented with other key material information a potential buyer would reasonably expect". He stated the others should feel free to add or amend, but suggested it be kept at a fairly high level. He further suggested Mattiske run the list "by [Fitzgerald] (and maybe [Argent])" to verify that the corresponding documents could be put together to see if anything else should be flagged or added. Mattiske responded saying he had checked locally and that there would be no issues in collecting this information.[316]

---

315 King gave evidence he wanted Argent and Hughes, as well as Mattiske, to regularly review and comment on the financial projections.

316 Mattiske's evidence was that he checked with Fitzgerald and Rees, who told him they had checked with others. Despite this evidence, the Viterra Parties suggested in their closing submissions that from early in 2013 "*Joe White* and Glencore began preparing to populate" a data room (emphasis added). This and subsequent events demonstrated it was Glencore and Viterra who took responsibility for what was to be included in "the Viterra data-room", not Joe White: see, for example, pars 615-621 below.

385 On the same day, King sent an email to Mattiske. He stated it would be useful for management to flag if any of the information was commercially sensitive, and therefore not something that they would want a competitor to see unless they were very serious about buying the Joe White Business. King stated that this would have then required a discussion at a later date, because he was sure management's initial reaction would be that most information was commercially sensitive. King stated that the commercially sensitive information could be withheld until "very late on in the process and potentially not provided until right at the end as a final confirmatory due diligence item prior to signing".

386 On 8 February 2013, Roelfs emailed Walt stating he understood that Walt had a "50% finished draft" information memorandum or at least a skeleton. He asked Walt to send it to "us" for "our inputs". The email was also copied to Mattiske and Mostert. Walt acted accordingly, stating the draft was a work in progress and inviting comments before the draft was handed over. In addition to other comments provided, on 10 February 2013, Mattiske made a number of suggestions. In the meantime, Argent continued to forward financial information as requested. This included Viterra monthly operational reports (which Argent described as management reports) for the 2011 and 2012 financial years, and part of the 2013 financial year, as well as a reconciliation of the consolidated audited accounts to the "Malt [Management] report" for the 2011 financial year.[317]

387 In preparation for the sale, Merrill Lynch advised Glencore in February 2013 to have a more traditional auction approach with a financial vendor due diligence report on Joe White. Merrill Lynch wrote to King, Walt and Roelfs on 22 February 2013, stating:

> … although we do recognise that management[318] have been part of prior processes, we have seen in other past processes that a [vendor due diligence] was a very good method to identify any unknown issues and allow them to be remedied/addressed before buyers undertake their due diligence in the second round; in particular where the seller has not owned the asset for a long time.

317 These were sent to Deloitte, copied to Rees.

318 King's evidence was that this was a reference to Joe White management.

388 Glencore elected to proceed with the sale process without undertaking a vendor due diligence. An internal Merrill Lynch email, also sent on 22 February 2013, records a conversation with King.[319] The email stated:

> [King] said they most definitely don't think we need a [vendor due diligence]. The head of Australia Agri *(David Mattiske) is very comfortable with the business* and they just don't see sponsors being interested in the business other than the hybrid ones that are already active in the space.
>
> (Emphasis added.)

389 In response, Kenneth McLaren from Merrill Lynch wrote that he felt there was a risk Glencore was "being very naïve" in proceeding without undertaking vendor due diligence. It was stated that those involved at Glencore had not done a lot of "these types of carve-out deals", referring to its experience being limited to Canadian transactions which were in a "US style". It was stated that Merrill Lynch could not just listen to Glencore and say it was okay as those at Glencore would say that they knew the answer. After it was stated that Glencore probably would not know the answers and would listen to argument, the email continued:

> I just think Glencore are taking a decent risk in launching if haven't had anyone look at it for them other than a light touch vendor assist and ceo[320] saying it is all fine.

390 King gave evidence confirming that a vendor due diligence report was deemed unnecessary, on the basis that the Joe White Business was most attractive to strategic buyers rather than private equity. King said the thinking was that strategic buyers already had an existing or strategic interest in malt, understood the marketplace and where the business would fit, and therefore would not need a report from a third party accountant. King acknowledged that, in not accepting Merrill Lynch's advice to conduct a vendor due diligence, this deprived Glencore of the opportunity to potentially discover the existence of the Operational Practices. In closing submissions, the Viterra Parties' senior counsel acknowledged that, given his expertise and

---

319 Although King could not recall the telephone call, he said the account of it given in this email seemed sensible.

320 King gave evidence this was most likely a reference to Mattiske.

background, King's opinion on this issue ought to be given some weight.

391 King said he further assumed that those running Glencore's agricultural business in Australia would have undertaken an element of due diligence.[321] In this regard, he identified Mattiske, Rees and Fitzgerald as the individuals likely to have done so. King suggested there was an element of self-interest in Merrill Lynch's advice, because if a vendor due diligence were conducted, it would mean less work for Merrill Lynch.[322]

392 Contrary to King's assumption, Mattiske gave no evidence to suggest that he had conducted, or been part of, a vendor due diligence process. Mattiske said he understood it was unnecessary to engage in any form of vendor due diligence because potential purchasers were likely to have a much better understanding of the malting industry and the Joe White Business.[323] Mattiske was very busy on other matters at the time, including the restructure of Viterra. In short, Mattiske's position was that his involvement in the sale process was very limited, although he had some responsibility to ensure it went smoothly, the sale process was being conducted and managed by "the Glencore team" in Switzerland, assisted by Merrill Lynch, Mallesons and Deloitte.

393 Mattiske's evidence was that, as a director of Viterra Malt and Joe White,[324] during the sale process he continued to rely on Hughes as the interface for information about the operation of the "Viterra Malt business". He said he also relied on Hughes and others to obtain all relevant information for prospective bidders, but then pointed out that he considered he was not involved in procuring all the information to be supplied. That said, Mattiske accepted he had ultimate responsibility for the information

---

321 King gave evidence of the distinction between a vendor producing a vendor due diligence report and a vendor due diligence. The former involved a report being produced by an external accountant upon which prospective purchasers could rely, whereas the latter involved the vendor performing the due diligence itself. He also gave evidence that in producing a vendor due diligence report, it would be expected that the accountant would make enquiries of management similar to the way enquiries were made during vendor assistance, but a bit more extensive on the operational side.

322 Merrill Lynch were to be paid a success fee based entirely on a successful sale, regardless of the amount of work that Merrill Lynch would be required to do.

323 See further par 398 below.

324 The question to which Mattiske responded in giving this evidence did not refer to his directorship of Viterra Ltd or Viterra Operations.

gathering conducted by others "in Viterra". However, Mattiske said he was unsure as to whom the "team of people tasked with gathering information" should have spoken, including whether it should have included Stewart. He said that decision was a matter for Fitzgerald, Rees, Hughes and Argent.

394 As to the risk of the existence of dishonest practices in the conduct of the Joe White Business, King accepted such a risk existed and that the risk was heightened by Glencore having not previously been involved. He acknowledged that the risk might have been managed and potentially eliminated by Glencore undertaking a vendor due diligence. He further acknowledged that, by a vendor without familiarity with the business deciding not to undertake due diligence, it took the risk that improper practices might later be discovered. However, in circumstances where the Joe White Business was being operated successfully, in 2013 he considered there was little risk of the existence of covert dishonest practices. Further, King said he did not expect that a vendor due diligence "would have uncovered the covert practices that were alluded to".

395 On 25 February 2013, Merrill Lynch emailed numerous Glencore executives, including King and Mattiske, with an agenda and various other documents. They included a draft information memorandum outline. King had not had any input into this document.

396 Also on 25 February 2013, Deloitte emailed a large number of persons at Glencore and Viterra, including Walt, Roelfs, King, Mattiske, Rees and Argent (but not Hughes), attaching versions of the draft workbooks, which had been updated to address previous comments. The amendments included changes to the pro forma normalised results. The following day, Rees sent an email to Deloitte, copied to Argent, addressing malt figures in statutory accounts. In that email, Rees provided responses to a number of queries and also confirmed that the Unadjusted Earnings[325] level for the "malt segment" was correct.

---

325 See par 492 below.

397 Also on 26 February 2013, Mattiske gave evidence that King and Walt travelled to Singapore to meet with "a number of Glencore, Viterra and Joe White executives and key advisers from Merrill Lynch to formally commence the sale of Joe White". Mattiske attended, together with Hughes and Argent. This was the first occasion King had met Hughes and Argent in person. The agenda for the "Kick-off Meeting" indicated that a number of topics concerned with process management were to be discussed. This included preparation for a sale, including a vendor due diligence, an information memorandum and a data room. King had no recollection of any discussion about vendor due diligence at this meeting, including whether it was raised at all.

398 Notes of the kick-off meeting expressly referred to management's preference not to do a vendor due diligence.[326] It was decided that a more descriptive commentary would be provided in the information memorandum instead. As part of this, it was resolved that Glencore should aim to identify key areas which might concern bidders and specifically address them. In addition, it was recorded that an information memorandum should include growth and potential upside. In relation to likely bidders, it was stated that management expected key interest from 3 entities including Cargill. Under a heading "Potential Investment Highlights" a number of items were listed, including that Joe White was number 1 in Australia, it had a dominant position in Southeast Asia and a trusted brand name with a premium product.

399 King was content with Merrill Lynch attending to the detailed drafting of the proposed information memorandum, and consulting with Deloitte for that purpose. However, in early March 2013, he directed Merrill Lynch that if information was to be included beyond that contained in the data packs,[327] then he required that Glencore

---

326 In his witness statement, Mattiske said he formed an understanding based on the discussion at the meeting that it was not necessary to go through the process of a vendor due diligence because potential purchasers were likely to have a much better understanding of the "malt industry and Joe White's business than us". However, under cross-examination, he stated that he thought vendor due diligence was discussed before the kick-off meeting and "we generally thought that this was an asset sale", that the bidders "would know a lot more about this business than we did, they could test the assets themselves [and] do their own due diligence". He also added that Glencore had never relied on vendor due diligence and never found it useful. Accordingly, the decision not to do a vendor due diligence was not something for which Hughes or Argent had any real responsibility.

327 See par 425 below.

be consulted before Deloitte was required to undertake any additional analysis. This direction was reflective of King's control over the compilation of information as part of the sale process. He referred to himself as the project manager, and believed he drove it "pretty well". Under cross-examination, King accepted the information memorandum he project-managed would not have seen the light of day unless he was personally satisfied with it.

400 Also in February 2013, Eden made contact with Glencore and enquired about the receptiveness of selling multiple businesses to Cargill directly rather than going through an auction process. Although Eden could not recall doing so, it appeared from contemporaneous documents that Eden informed Glencore that Cargill was most interested in the malt assets.

401 During March and April 2013, King gave detailed feedback on the various drafts of the proposed information memorandum. He described the iterations of the document as an evolving feast. King gave evidence that the "operational and corporate information came directly from Joe White management". King said he was involved in reviewing and settling the documents relevant to the sale process. This included the Information Memorandum, the contents with which he was personally satisfied.

402 An issue for King was how to address the poor financial performance for the 2013 financial year. Naturally, it was in Glencore's interests to advocate a business plan that predicted "a more normalised level in [financial year] 2014 and subsequent years". To this end, the 2013 financial year budget needed to be revised. With respect to the business plan, King disavowed that what was ultimately formulated was his business plan. He explained that management had to be comfortable with the plan as it was them who were going to have to present it at the management presentations. While this evidence was undoubtedly correct, it did not paint the entire picture. There could be no question that Glencore would not have allowed management to put together and present a business plan without its input. Further, it was in Glencore's interest to portray a business plan in the most positive light that could sensibly be advanced to obtain the best price for the Joe White Business. A desire to provide such

a portrayal was not something that unincentivised Joe White management would naturally share.[328]

403 In early 2013, this was the subject of discussion between King and Argent. King suggested it would be good to discuss whether Argent could reforecast in light of the year-to-date results. King stated that a step up in the 2014 financial year results was "going to require quite a bit of explanation to get buy in from any potential purchasers". Further, in his evidence, King candidly acknowledged that he was trying to make management push up the figures for the budget for the 2013 financial year to make the business more attractive to a prospective purchaser.

404 Consistent with this attitude, King emailed Mattiske, copied to Walt, on 4 March 2013 stating that management might need to push up the 2013 financial year budget to something that was a bit more normalised. Mattiske enquired in response:

> What do *we* need [it] to be? *We* will simply get [Mostert] to approve, as yet no budgets have been approved.
>
> (Emphasis added.)

Notably, there was no suggestion by Mattiske that Hughes or Argent needed to be involved. However, soon after Mattiske enlisted their services to assist in achieving the desired outcome.

405 In response to Mattiske's suggestion, Walt responded that the "million dollar question" was why the margins were so depressed in 2013 and, more importantly, how the 2014 financial year could be so much better. Somewhat emphatically, his email concluded, "[t]hat's what we need to answer!".

406 Mattiske sought to have the budget increased. Mattiske believed it was a common practice of Viterra business units to understate their budgets significantly in order to make it easier for executives to achieve their bonuses. He spoke to Hughes, Argent and Rees. He told them he was not going to pay a bonus on the proposed budget and

328 See, for example, par 406 below.

directed them to try harder.

407 Meanwhile, the Operational Practices within Joe White were continuing. In late February 2013, a production manager sent an email to Sheehy providing copies of forms setting out non-conformance with specifications for San Miguel. In a responding email, Sheehy noted that Joe White did not have a procedure for coloured malts as that parameter was not covered by the Malt Proficiency Scheme that Joe White "base[d] the [non-conformance] procedure on". Sheehy further noted that the Malt Proficiency Scheme was only for pale and pilsner malt. The email continued:

> Hence whilst we don't officially require a non conformance for coloured malt, it is still necessary of course *to check with [Stewart] on anything that is deviating significantly* from the customer specification to gain written or verbal approval to proceed.
>
> (Emphasis added.)

408 Implicit in this communication was the acceptance that if there was a deviation from the customer specification which the production manager did not consider to be significant then the malt could be shipped without checking with Stewart. The email was also sent to Stewart, along with McIntyre and Moller.

409 In March 2013, Testi emailed a revised "Non-Conforming Shipment Form" to Joe White employees including the managers, production managers and quality personnel at each of the 7 Australian plants. The email was copied to Stewart, Sheehy and Moller. The form stated that it was to be attached to any Certificate of Analysis that did not meet the criteria of the Viterra Certificate of Analysis Procedure. It included a section for recording the parameters that were out of specification, and required the signature of 2 general managers and the plant manager or plant manager's delegate. The "Viterra" document revision notice also attached to Testi's email indicated that the Non-Conforming Shipment Form was in its fourth version, had been the subject of 35 revisions and had been posted to Pulse on 5 March 2013 (the date it was revised).[329]

---

329 Like other Viterra document revision notices, this document had a specific document number.

410 On 6 March 2013, a "Viterra Non-Conforming Shipment Form" was completed and signed off with respect to a shipment for Oriental Brewery.[330] In signing off on this document, and the related Sign-Out Report, Stewart gave evidence that he was documenting a process where a specification was outside 2 standard deviations to, he "guess[ed]", give a level of accountability and traceability around why shipments were allowed to proceed even though they were outside 2 standard deviations. The Certificate of Analysis produced with respect to this delivery made no disclosure about any specification being adjusted. Further, it recorded the relevant specification, moisture (which Stewart acknowledged was a very important characteristic from a brewer's perspective), complied with Oriental Brewery's specification. Furthermore, this Certificate of Analysis recorded the required barley variety, namely Baudin, was supplied, but Stewart's evidence was that he could not be sure which variety was actually used. Stewart said he understood at the time that Joe White was representing to its customer the facts as set out in the Certificate of Analysis.

411 At 1 point, Stewart gave evidence that customers were happy with malt delivered provided it performed well in the brewery, and customers were not concerned about the accuracy of the Certificates of Analysis, but had an expectation they would "come in-spec from more of a quality assurance type perspective". This evidence seemed to suggest that all breweries Joe White supplied were in the know about the deception created by altered results recorded in Certificates of Analysis. Under cross-examination and arising from this evidence, in rejecting a proposition that Stewart wanted the court to understand that a Certificate of Analysis was a meaningless piece of paper, Stewart repeated that customers were happy if the malt performed well and that they had an expectation the Certificates of Analysis would be "correct from a quality assurance perspective".

---

330 For completeness, the Viterra Parties submitted that Oriental Brewery was a Heineken subsidiary, which was based on the tentative evidence of Viers: see par 332 above. No reference was made to further evidence given by Viers soon after that Oriental Brewery was a subsidiary of Anheuser-Busch InBev, by reference to a buyout in 2014, and the Viterra Parties' senior counsel's acknowledgement that he had been wrong in saying it was a Heineken business "now". Nor was reference made to Eden's evidence that Oriental Brewery was a Korean company. In short, there was no basis to conclude on the evidence that this company was a Heineken subsidiary. On the contrary, numerous times during the trial Oriental Brewery was referred to in distinction from Heineken.

412 When it was put to him again that his evidence still suggested the Certificates of Analysis were meaningless, Stewart then reverted to seeking to justify the procedure from a scientific point of view. His evidence was that the changes used were "done within the error of the tests. So as a scientist I need to look at facts and evidence, but I also need to consider the robustness of those measurements and the larger area associated with those tests and I believe justified moving some analysis back into specification". This apparent attempt to suggest that a scientific approach was taken across the board with respect to the pencilling engaged in to record results within specification was entirely unconvincing. The evidence demonstrated that many changes were made to bring results within specification without any consideration of particular errors of tests. Further, as the evidence also demonstrated,[331] if there were a particular error with results that needed to be taken into account, it needed to be accounted for consistently rather than on an ad hoc basis which simply allowed results to be brought within specification.

413 Not a single document was put before the court which clearly corroborated any suggestion that Joe White's customers (or quality assurance departments of Joe White's customers) knew of and were content with Certificates of Analysis being provided which recorded test results other than those produced from the laboratories and accurately recorded.[332] The tendered correspondence between Joe White and its customers indicated the opposite was the case.[333]

414 Also in March 2013, Stewart was raising issues with the quality of barley that Joe White was receiving from Glencore Grain and the ability of Joe White, utilising that barley, to meet its contractual obligations to customers. An email dated 8 March 2013 from Stewart to Peter Sidley ("Sidley") at Glencore Grain responded to Sidley's

---

331 See pars 2237-2239 below. For completeness, in March 2013 the stated quality objectives were changed. However, this did not alter the applicability of the Viterra Certificate of Analysis Procedure or the Malt Blend Parameters Procedure.

332 Cf pars 1664-1665 below.

333 In making this observation, it is not suggested that Stewart's evidence on this issue was a complete fabrication. It may be there was some covert arrangement between Joe White and some quality assurance department of a customer or customers, but there was no evidence beyond Stewart's very general statements to suggest any such arrangements were widespread.

notification of changes in barley supplied. Stewart noted that Glencore Grain had "taken away 2,000 mT"[334] of malt 1 barley and replaced it with "2,000 mT of Malt 2". Stewart stated:

> As you know Peter there is a substantial drop in quality from FL1Q[335] to FLNQ.[336] [Joe White] have already had 6,000 mT of the Sapporo CCFS[337] grain taken from our allocation, which will have a considerable impact on our ability to service Sapporo. Now this drop in barley quality with (sic) further compromise our ability to meet Sapporo's requirements.

415 Sidley responded[338] that he was not sure how much of the 2 different grades of barley were comingled in the same bins. He said the details of the tonnages previously provided were the best figures he had to advise. Stewart continued to push for the provision of higher quality grain from Glencore Grain. Later in the email chain, he repeated his request for a reinstatement of "the earlier allocation" and stated "Sapporo are an important customer to [Joe White] and it is essential that we maximise the amount of FL1Q to meet their very high standards". Regardless, Sidley later directed that Evans respond to Stewart stating that the tonnages and grades allocated to Joe White would not be altered because the barley sought by Joe White had been allocated to an accumulation for 1 of Viterra's customers.

416 On 6 March 2013, Deloitte emailed the current version of the data books to Glencore's accountant, copied to Argent. It was noted there were still a few items outstanding concerning intercompany loans and creditors. Glencore's accountant forwarded the data books to Walt, Roelfs and King, inviting them to make any final comments before the data books were sent to "the banks". Argent was not included in this invitation.

417 On 12 March 2013, Merrill Lynch emailed Argent, copied to King, Hughes and others, referring to a drafting session proposed to be held the following day. It invited Argent and Hughes to block away the majority of the day after 10am, but also expressed an

---

334 mT stands for metric tonnes.

335 FL1Q stands for "Flagship malt-1 grade malt".

336 FLNQ stands for "Flagship off-grade malt".

337 CCFS stands for "Collaborative Contracts Farming System". This system required barley to be traceable from the grower all the way through to its presence in the malt.

338 Five days later, after Stewart had followed up with a further email seeking an update.

understanding that they had other commitments. Presumably, the drafting session took place,[339] but no evidence was led as to whether it occurred, how long it took or what, if anything, Argent (or Hughes) drafted or assisted in drafting. King did not recall attending any meeting of this nature.

418 On 15 March 2013, King sent an email to Merrill Lynch, copied to Walt, which attached draft updated vendor assistance data books. King noted not all balance sheet schedules had been updated, however he stated they were not necessary for the draft of the information memorandum and would be finalised in the next version. King suggested that when the final version was available it would be useful for Merrill Lynch to cast a critical eye over it and consider some of the areas which Merrill Lynch might feel could cause a buyer to raise an eyebrow, so that the commentary could be improved if needed and so that management could be prepared for the inevitable questions. In relation to the "valuation presentation", King referred to a discussion with Walt and stated that they thought it would make most sense for that presentation to be distributed to the 2 of them as well as Mattiske and Roelfs. He also suggested that this distribution be followed by a call in which these Glencore representatives could be walked through the presentation.

419 In response, Merrill Lynch enquired as to whether King thought it was possible to show earnings going back further than the previous 3 years to support the "point on stability of business/through the cycle earnings". King pointed out this suggestion might have given rise to problems with the various normalisation adjustments that Deloitte had made to the financials. King continued:

> Given that we want potential purchasers to focus on the pro forma normalised [Unadjusted Earnings] rather than the Base [Unadjusted Earnings] it will be difficult to draw out the consistency of earnings by going back further especially given that [Joe White] has changed hands/merged a number of times (2001, 2002 & 2009) as well as significantly expanded production over that time. Having said that, suggest you guys in Australia have a chat with management when they meet with them on Tuesday and see what they think.

In an email sent 3 days later, Merrill Lynch stated that it had spoken with Hughes who

339 See par 423 below.

thought going beyond 3 years was doable and should provide a strong message in terms of stability of earnings. However, it was noted that it would take some time for Argent to pull together the information and then for Deloitte to review it and prepare adjustments. Merrill Lynch essentially asked King whether the matter should be pursued further. It was not.[340]

420 Also on 15 March 2013, Merrill Lynch sent an email to Hughes and Argent attaching an updated power point presentation concerning "Key Investment Highlights". The email noted that the updated presentation reflected comments that had been made by Hughes and Argent, but did not identify which comments were attributable to each of them individually. The email then set out suggestions by Merrill Lynch, before stating that Merrill Lynch would continue to work on other sections of the draft information memorandum.

421 On 20 March 2013, Merrill Lynch emailed Argent, Hughes and others, addressed "Dear all", and attached the latest draft on the financial section of the proposed information memorandum. The same observations made in the preceding paragraph concerning the extent of Argent's and Hughes' level of involvement in this iteration apply to the probative value of this evidence.

422 On 22 March 2013, Mattiske sent an email to Argent, copied to Hughes and Rees, asking for a management report for Joe White. Later that day, Argent emailed 2 reports, 1 being a group report prepared on a monthly basis.[341] Mattiske gave evidence he generally received and reviewed updated group reports on a monthly basis. He did not request or receive internal reports as he did not consider he needed that level of detail. Further, he gave evidence that he trusted Hughes and Argent and believed he had no reason not to accept what they told him about the Joe White Business.

423 Also on 22 March 2013, Merrill Lynch circulated the second draft of the proposed information memorandum. The covering email stated that the draft encapsulated

340 See fn 309 above.

341 This report was ultimately provided to Cargill as part of the due diligence process.

management feedback obtained over 2 separate sessions, together with some initial observations from King. The draft was provided to Walt, Mattiske, Roelfs, Hughes, Argent and a lawyer at Glencore. On 23 March 2013, King provided extensive comments in response. Those comments were directed to the business overview, the investment highlights, the key financial information, the sale process overview, and the investment highlights concerning general comments, Joe White being the largest Asia-Pacific maltster, the geographic footprint, the high-quality asset base, the proven business model, the financial profile and the management team. Amongst other things, King directed Merrill Lynch to add further text, delete text and to reword what Merrill Lynch had drafted. In response, Merrill Lynch said it would work through each of King's comments.

424 On 25 March 2013, King provided further comments with respect to the industry overview section. Again, the comments were extensive. On 28 March 2013, Merrill Lynch responded stating that the industry overview section had been revised and all of King's comments had been incorporated with only 3 exceptions. After explaining the relatively minor exceptions, Merrill Lynch invited King to provide any further comments.

425 Deloitte were duly instructed by Glencore to prepare "vendor assistance data packs", which were completed by 22 March 2013.[342] The data packs were the product of an investigation into the historical financials of Joe White, and were intended to make those financials more meaningful to the bidders by giving a better portrayal of the underlying profitability. King gave evidence that Glencore relied heavily on Argent to ensure the information provided to Deloitte was accurate. King said, as between Hughes and Argent, most of his conversations were with Argent.

426 King gave evidence that Argent had a "deep understanding of the Joe White Business,

---

342 During cross-examination, King expressed the opinion that a vendor assistance data pack was not "wildly different" from a vendor due diligence report, apart from the "reliance piece". However, he acknowledged that Deloitte having to take responsibility and be liable for the contents of a report would have meant it would have been very likely Deloitte would have been more thorough and careful in preparing a due diligence report than the care that was likely to have been taken in preparing the data packs.

especially from a financial perspective". Further, King found Argent very helpful and efficient. At no time did King believe Argent was withholding information from him. Indeed, King said Argent carried out his tasks with aplomb and considered he was quite exceptional at his job. However, he was not "an operational guy", nor a chemist. King did not recall ever discussing the malting process with Argent and was not aware of Argent ever being involved in negotiating customer contracts. Accordingly, King's evidence of reliance on Argent to ensure information was accurate was necessarily confined to the reporting of financial information.

427 On 24 March 2013, Merrill Lynch circulated a draft of the financial section of the proposed information memorandum. The next day, King emailed a response stating a huge amount of work still needed to be done. He said he had discussed it internally at Glencore, and considered there should have been a much more thorough review process before circulation. He complained of a distinct lack of detail, and said the document fell well short of providing the necessary information for a bidder to be able to properly understand the Joe White Business. King referred to 2 critical themes: (1) the need to address why the results for 2013 constituted a "blip"; and (2) the requirement for a fair adjustment of $15 per tonne with respect to the "blending and accumulation margin".[343]

428 Merrill Lynch emailed that it was agreed more work needed to be done, but said the financial section had been circulated to get further inputs from King and Mattiske, in addition to discussions with management.

429 On 28 March 2013, Merrill Lynch sent an email to Mattiske, Hughes and Argent stating that King was keen to advance the financial section of the information memorandum. A meeting was proposed on 2 April 2013 to address some of the key outstanding issues involving the fall in earnings for the 2013 financial year and the forecast uplift for the 2014 financial year, the key profit and loss movements (both historical and forecast), normalisation of the accounts for the 2012 and 2013 financial years, the

343 As to the latter, see fn 549 below. This margin was subsequently referred to as the Accumulation and Position Margin: see par 526 below.

malting margin, the Accumulation and Position Margin, and cash flows. Merrill Lynch also proposed liaising with another person on these topics. Each of Mattiske, Hughes and Argent said they would be available, Mattiske ultimately saying he would attend via video or telephone. Mattiske gave evidence that he could not specifically recall attending any meeting on 2 April 2013, but did recall more generally being involved in discussions in relation to the preparation of the financial information.

430 On 29 March 2013, Merrill Lynch circulated a further draft of the information memorandum (Hughes and Argent were not included), together with a draft teaser. The email stated Merrill Lynch intended to progress the financial section with management over the following week.

431 In around March 2013, Koenig received a telephone call from Mahoney. Mahoney told Koenig that Glencore was proposing to sell the Joe White Business and that it was undertaking a formal process to do so. Koenig told Mahoney that "his people" should contact Peter Hawthorne ("Hawthorne"),[344] Cargill, Inc's vice president of strategy & business development. Mahoney also told Koenig that Glencore was interested in selling the shareholding in Prairie Malt Ltd.

432 At around this time, Cargill retained external investment and financial advisers, namely, Goldman Sachs, KPMG and Ernst & Young.

433 In early April 2013, Argent sent an email to King, copied to Hughes and Merrill Lynch, attaching a spreadsheet. King was informed that Argent and Hughes had been working through the "sold volumes" for the 2014 financial year "to verify some of the data we are inserting into the [proposed information memorandum]". Certain details were provided in the covering email. The spreadsheet referred to the use of off-grade barley by Joe White to a level of 30 percent. It showed $3.60 per tonne was contributed

344 Hawthorne was based in Minneapolis. His role included corporate development for Cargill, Inc globally. At the time of giving evidence he had worked for Cargill, Inc for over 24 years. He was previously employed at the Chase Manhattan Bank (in petroleum finance), Bain and Company (in strategy consulting) and in other finance related positions. He has a bachelor of arts degree in economics from Brown University and a masters of business administration from Stanford University.

to the overall integrated margin (or gross margin) with respect to the 47 percent of malt sold to that time. The spreadsheet also referred to a saving of $10 per tonne. King did not ask for any source documentation underlying the spreadsheet, however he discussed it with Argent. In that discussion there was no suggestion Joe White's customers were being provided with malt that did not comply with the customers' specifications.

434 On 4 April 2013, Walt emailed a number of the senior executives in Europe, being Mahoney, Mostert, Roelfs, de Gelder and Ken Klassen,[345] as well as Mattiske and Rees. He observed that the formal launch of the sale process was close and said it was time for an internal poll concerning the final sales price for Joe White. He stated that Glencore's financial adviser's view was attached,[346] but encouraged everyone to form his own view on the value. He stated that the replies should only be provided to King and himself and that once the numbers had been received from everyone, the outcome would be circulated. Mattiske responded the same day by email copied to King. He stated that $360 million was a realistic value, however he still thought $400 million was achievable as Co-Operative Bulk and GrainCorp were extremely eager to buy Joe White and they were "looking at synergies that were not at all contemplated in [Merrill Lynch's information memorandum]". After discussing why he believed these entities were interested, as well as another potential buyer that Mattiske described as "a dark horse",[347] Mattiske settled on splitting the difference at $380 million, but noted if it were him as purchaser that he would only pay around $300 million.

435 On 6 April 2013, King sent an email to Merrill Lynch copied to numerous others, including Walt, Hughes, Argent and Deloitte, attaching a detailed mark-up of the financial section of the draft information memorandum. King stated that the attached document was from him and Glencore's accountant, which also incorporated thoughts from Walt. King invited Merrill Lynch to review the mark-ups and then call

345 Ken Klassen was legal counsel at Glencore at the time. Mattiske gave evidence that of these senior executives, in 2013 Mahoney was the most senior.

346 The document produced in evidence did not contain the financial adviser's view, but noted that the document containing that view had been deleted by Mattiske.

347 This other potential buyer was not Cargill.

him to discuss them to ensure that Merrill Lynch correctly interpreted the changes that were being suggested. The email acknowledged that "management" was yet to finalise the numbers for the 2014 financial year.

436 Every page of the attached document had suggested changes, with most pages containing numerous suggestions. On a page entitled "Cash Flow and Working Capital", it was stated that management believed $30 million was an appropriate level of net working capital for the Joe White Business. With respect to this, King's handwritten note stated that the comment was "value destructive to the tune of $3.5m!". Under cross-examination, King said he could not recall why he made this note. He accepted that it was important to convey to a prospective purchaser the particular level of working capital required to operate the Joe White Business. The statement about management's belief concerning the appropriate level of net working capital was ultimately removed and not replaced with anything which might have indicated the appropriate level of net working capital was $30 million or something similar.[348] On the same page of the draft a footnote recorded that management defined working capital as trade and other receivables, inventories less trade and other payables and provisions. It was also stated that management confirmed that "material changes" in working capital levels were primarily attributable to bulk shipments and timing of customer orders. King placed both a question mark and an exclamation mark next to this footnote. It did not appear in the final version of the document.

437 On 10 April 2013, Merrill Lynch circulated a further draft of the proposed information memorandum, together with an information request list. The covering email, which was addressed to King, Hughes and Argent, stated that upon completion of the request list and outside the financial section, the majority of the outstanding items would be resolved. King sent some comments back on the same day, stating that further comments would follow later. King also referred to a point to raise with Hughes and Argent, which was concerned with the details of the management team.

---

348 It should be noted that in another passage on the same page there was reference to management's expectation of low levels of stay-in-business capital expenditure and a "relatively low net working capital requirement". These words concerning the description of the net working capital requirement remained, without specifying any estimated amount.

King provided further comments later on 10 April 2013, and yet further comments on 11 April 2013. In the covering email to the last of these comments, King stated he would appreciate Hughes' and Argent's thoughts on 3 matters he identified.

438 During cross-examination, King was taken to some of his draft changes. Although King described some of his changes as semantics, it was clear that he was sharpening the representations to be conveyed. For example, the draft provided that Joe White developed a detailed understanding of customer requirements. King amended this to read: "Joe White *is focused on* develop*ing* a detailed understanding of *specific* customer requirements …" (emphasis added). Further, instead of a statement that Joe White devoted significant time and effort to understanding its customers' product requirements, King changed "product requirements" to "product specifications".[349] In addition, King provided the framework of the 3 year projections, assisted by Argent.[350]

439 On 12 April 2013, Merrill Lynch circulated within Glencore, copied to others including Fitzgerald, Hughes, Argent and Pappas, a further draft of the proposed information memorandum. The document contained some square brackets which Merrill Lynch indicated would be cleared up over the next couple of days with the assistance of management.

440 On 15 April 2013, Mattiske, amongst others, received an email from Merrill Lynch. Neither Hughes nor Argent were included as addressees. The email attached documents ahead of "our weekly update call", including an updated version of the working group list. Together with Walt, King, Fitzgerald,[351] Mostert and Roelfs, Mattiske was included as a Glencore representative. Hughes and Argent appeared in the working list under the heading "Joe White". However, Mattiske gave evidence that the list did not represent the decision-makers or leaders; the actual sale process was driven out of Glencore in Barr and Rotterdam. He further stated that, although

---

349 See further fn 390 below.

350 See par 492 below.

351 Although appearing within "Glencore, Corporate, Legal" with 2 other lawyers from Glencore, immediately under Fitzgerald's name appeared "(Viterra Legal)".

he helped to facilitate the sale, his main role was to run the businesses that were going to be kept.

441 On 17 April 2013, Lisa Jewison ("Jewison"), Cargill's business unit controller, malt,[352] sent an email to Hawthorne, Eden, Viers and the European malt general manager, Sabine Sagaert ("Sagaert"),[353] attaching assigned roles for Project Hawk that had been discussed the previous week. She confirmed that a kick-off meeting ought to be held for the team.

442 On 18 April 2013, King forwarded another draft of the proposed information memorandum to Mattiske, which was an updated version that had been distributed by Merrill Lynch earlier that day.[354] He asked Mattiske to read through it, ahead of it being finalised and to provide any thoughts or comments. In response, Mattiske said:

> I have now read the report, it is a very high quality document, I am sure your input has helped to achieve this.
>
> I am comfortable with the information you refer to below. [L]et's hope we can launch soon!

The reference to the information King had referred to lower in the email chain was concerned with the supply and demand dynamics of the barley price and its impact on the malt price; the Accumulation and Position Margin; and how the barley and malt price dynamics in 2012 had impacted on the forecasts for the 2013 and 2014 financial years. There was no suggestion by Mattiske in his email that any lack of

---

352 At the time she gave her evidence, Jewison had been employed at Cargill for 21 years and was regional controller for North America. From October 2011 to March 2016, she was employed as global controller of Cargill, Inc's malt business and reported to Eden (and then Sagaert). She holds a degree in accounting from Concordia College and a masters degree in administration (majoring in finance) from the University of St Thomas. She became a certified public accountant in 1996, but no longer practises as such.

353 Sagaert's role was general manager Europe, malt. At the time she gave her evidence, Sagaert was managing director of global edible oil solutions for Cargill, Inc in Europe, the Middle East and Africa. She joined the malt business of Cargill, Inc in Europe as its general manager in May 2011. In her role as general manager, Sagaert had full responsibility of safety, engagement, profitability, overall operations, people and strategy for the malt business in Europe. She was appointed commercial manager worldwide in 2013, and then, in 2015, upon Eden's departure, was global managing director of malt for Cargill, Inc. She holds a masters degree of applied economics (majoring in marketing) from Katholieke Universiteit Leuven, and a masters of business administration from the same institution.

354 Merrill Lynch sent the email to Hughes, Argent and Mallesons, copied to King. King was asked whether he wanted to be included on a call concerning the verification process. King responded by indicating that he would not be involved, but directed that Merrill Lynch confirm afterwards that everything had been suitably verified.

familiarity with the Joe White Business adversely affected his ability to meaningfully comment on the contents of the draft, including the specific matters raised by King. However, with the exception of the Accumulation and Position Margin, Mattiske's evidence was that he did not have sufficient knowledge of the Joe White Business to test the assumptions made in the financials beyond making a general assessment as to whether they seemed reasonable.

443 In addition to verifying the Accumulation and Position Margin, on 20 April 2013, Mattiske, together with Fitzgerald, Hughes and Argent, were required to verify page 50 of the draft information memorandum. This dealt with the impact of barley and malt prices on the 2013 financial year and 2014 financial year earnings estimates. Mattiske made enquiries of Glencore Grain's trading division to "ensure" the information was correct.

444 As to Mattiske's role in the draft information memorandum more generally, he gave evidence he reviewed it and gave some feedback as to whether it was reasonable, presented well or made sense. He said he did not feel as if there was much that he could contribute. Surprisingly, even though Mattiske read the document, when it was put to him that he knew it contained specific representations about Joe White complying with customer specifications, he replied, "[n]ot specifically". He then denied knowing about them. When it was pointed out that he had given evidence that he had read the document, he then said he had answered "not specifically" because he was not involved in further presentations that were being made outside the document. This evidence was plainly unsatisfactory.

445 On 20 April 2013, Merrill Lynch circulated within Glencore and Viterra, including to Hughes and Argent, what was said to be the final version of the information memorandum. The covering email stated that Merrill Lynch would be working with management over the coming days to verify its contents. Further, any additional comments were invited.

446 Just under an hour later, Merrill Lynch sent an email to Mattiske, Fitzgerald, Hughes

and Argent, copied to King and Mallesons, stating that the verification process was required. The email stated the primary aim of the exercise was to ensure all information contained in the information memorandum was factual and that, to the extent to which questions were raised by buyers, it had the relevant supporting data. The email attached the final version of the information memorandum, together with a verification table allocating each section "to a person within Joe White/Viterra". The email continued:

> Allocations: [Hughes] and [Argent] have primary responsibility for the general business and industry information, [Argent] for the financials, and where relevant we have also included [Mattiske] and [Fitzgerald] to provide their view (e.g. accumulation margin, legal information at the end of document).

447 In response to this email, the following day a solicitor from Mallesons said that, in elaborating on the earlier email, the information memorandum did not "require 'prospectus-type' verification" and stated that "we" were not dealing with "prospectus liability". The solicitor stated that they were trying to ensure that the information memorandum was accurate by having the relevant persons focus on allocated sections to verify the accuracy. However, the solicitor also suggested that the verification table "just" provided a record of that going forward. In short, there was no suggestion to either Hughes or Argent that there might be a personal exposure to liability if the contents of the draft information memorandum were inaccurate in any way.

448 On 23 April 2013, Argent emailed Merrill Lynch stating that he and Hughes had been through the information memorandum that morning, and attached a document which contained their marked up comments. The marked up document was headed "final version" on each substantive page and included the legal disclaimer on page 1 stating, amongst other things, in substance that there would be no responsibility for the contents of the document. There were handwritten amendments throughout the document, but, with 1 exception, they were relatively minor. The exception was on page 26 where, "The success of the Procurement function is driven by the close collaboration with Sales and Marketing to ensure the customer's information is shared and continually updated" was replaced with, "The barley procurement function is

driven by the sales and marketing team, together with Technical, identifying varieties best suited to meet customers malt specifications". This page was ultimately verified by Hughes, but not by Argent. There was no evidence to suggest Argent was involved in redrafting this aspect of the document. Indeed, although the handwritten amendments all appeared to have been made with the same hand, on the face of the document (and the covering email) there was no way of discerning whether Hughes or Argent, or both of them, were responsible for the suggested changes.

449 The day before, Merrill Lynch sent an email to Mattiske, copied to King, referring to a discussion with Mattiske that evening and attaching a further draft with marked up changes with respect to the Accumulation and Position Margin. Without going through the detail, the upshot was that each of King, Hughes and Argent all agreed with the revised wording.

450 On 24 April 2013, Merrill Lynch emailed a further verification table to Hughes and Argent, asking them to sign off on the documents based on the draft information memorandum circulated the previous day. The verification table ran for 6 pages and covered each of the substantive matters contained in the draft information memorandum. Each item was required to be verified by Hughes or Argent, or both. Many of the items were noted as requiring changes. Items concerned with the business model, sales and marketing, and the procurement process "focused on meeting customer specifications" were confined to Hughes. Many of the financial items were confined to Argent. Mattiske, together with Hughes and Argent, was referred to with respect to page 44[355] and matters concerned with the impact of barley and malt prices on the 2013 and 2014 financial years' prices. Further, in addition to Argent, Fitzgerald was required to verify "Other Relevant Information".[356] None of the pages allocated to Mattiske or Fitzgerald formed part of the pleaded allegations against the Viterra Parties based on the Information Memorandum.

451 Later on 24 April 2013, Argent sent an email to Merrill Lynch stating that a change to

355 See par 530 below.

356 Fitzgerald asked Bickmore to assist him in ensuring that this information was correct.

the draft information memorandum (which was minor and concerned employee numbers) had been missed. The attached verification table was initialled with respect to numerous pages of the draft information memorandum by Hughes and Argent.[357] On 26 April 2013, yet another draft of the information memorandum was emailed by Merrill Lynch. The covering email stated it was the verified version.

452 King gave evidence that in late April 2013, Mallesons undertook a verification process of the draft information memorandum, with the assistance of Merrill Lynch, Hughes and Argent. However, King said he could not remember much about this process.

L. The selling of Joe White commences

453 Against this backdrop, steps for the sale of Joe White began in earnest in May 2013.

454 On 2 May 2013, Hawthorne received a call from his "opposite at Glencore". Hawthorne was told that Glencore was completing another deal that day, which had caused delay in starting the process to market Viterra's malt business. Glencore's position was that it wanted to deal directly with Cargill in relation to the sale of the shareholding in Prairie Malt Ltd. Some arrangements were put in place. As for Joe White, Hawthorne was informed that Merrill Lynch would be running the sale process, which would be a two-stage auction. Some details were given.[358] These included the requirement to sign a non-disclosure agreement before obtaining access to an information memorandum.

455 On the same day, Hawthorne reported on the conversation by email to a large number of Cargill employees, including Koenig, Conway, Van Lierde, Eden and Viers. The email stated that a draft non-disclosure agreement had been provided to 2 Cargill in-house lawyers based in Minneapolis for review. It also referred to approval having been given to retain Goldman Sachs as Cargill's financial adviser. Hawthorne stated that the law firm Allens would be retained as outside Australian legal counsel to assist

357 In fact, Argent also signed off on some items that only required Hughes' verification. This matter was not explored at trial and there was no evidence to suggest Argent's role went beyond that of financial controller: see further issue 125 below.

358 Eden gave evidence that Cargill had been approaching Glencore up to this time to try and deal with Glencore directly.

with the possible acquisition of Joe White, noting that Allens had also advised Cargill on the Australian Wheat Board acquisition.

456 The email referred to some individuals who would assist the Project Hawk team. Koenig was not included in the team, but he was copied into many of the internal communications between the Project Hawk team that followed. The reason for keeping Koenig informed was that Koenig knew Mahoney and it was anticipated that Mahoney could possibly contact Koenig during the sale process, or Cargill might ask Koenig to contact Mahoney.

457 The first formal instrument which set the Acquisition in motion was the non-disclosure agreement in the form of a proposed confidentiality deed. It was provided to Cargill, Inc by Merrill Lynch on 1 May 2013, along with a document referred to as the "Joe White Maltings Teaser" ("the Teaser"). The Teaser was a 5 page document, entitled "Joe White Maltings Company Introduction May 2013 Glencore", which provided a high level summary of the Joe White Business.[359] All the information in the Teaser was taken from the Information Memorandum. "Glencore" was defined in the Teaser to mean "Glencore and its subsidiaries", and they were stated as the entities who had prepared the document.

458 On 7 May 2013, Hawthorne emailed Merrill Lynch Cargill's draft of the proposed confidentiality deed, copied to Mallesons and others. Both a marked-up version and a "clean" copy were sent which contained Cargill's suggested amendments to the document provided by Merrill Lynch on 1 May 2013.

459 On 13 May 2013, Hawthorne executed the confidentiality deed that had been proffered ("the Confidentiality Deed"). His evidence was that he read the Confidentiality Deed and understood the obligations it created. There was no evidence that anyone on

---

359 The material information contained in the Teaser spanned only 2 of the 5 pages of the document and was grouped into 3 topics: sales volume by geography, production capacity, and investment highlights. The information under the heading "Investment Highlights" was sub-categorised into 6 topics: largest Asia-Pacific maltster, geographic footprint well positioned for Asian growth, high quality asset base, proven effective business model, strong financial performance and highly experienced and stable management team. The third page contained a disclaimer. The Teaser was prepared by Merrill Lynch in conjunction with Glencore's business projects team in Europe.

behalf of Glencore signed this document. Events subsequent to 13 May 2013 and before 27 May 2013, and the fact that the Viterra Parties did not seek to tender any document executed by Glencore, demonstrated the document executed by Cargill, Inc on 13 May 2013 was not counter-signed by Glencore.

460 The Confidentiality Deed referred to Glencore as the "Discloser" and Cargill, Inc as the "Recipient".[360] For present purposes, it suffices to say that the recitals to the Confidentiality Deed recorded that Cargill, Inc wished to obtain access to information and Glencore had agreed to disclose or otherwise make available certain information on the terms and conditions set out in the Confidentiality Deed.[361]

461 On 14 May 2013, Merrill Lynch sent a letter to Hawthorne, entitled "Joe White – Phase 1 of the Proposed Transaction" ("the Phase 1 Process Letter").

462 The Phase 1 Process Letter began:

> Thank you for your interest in a possible acquisition of [Joe White] and the assets used exclusively in connection with the Joe White [B]usiness and for executing the Confidentiality Deed.[362] [Glencore] has appointed Merrill Lynch as its financial advisor and [Mallesons] as its legal advisor in relation to the potential sale of Joe White ("Proposed Transaction"). This letter is an invitation to submit a non-binding, indicative proposal ("Indicative Bid") for Joe White.
>
> Accompanying this letter is a copy of the Information Memorandum on Joe White. The Information Memorandum is being provided pursuant to the terms outlined in the Information Memorandum and represents Confidential Information as defined in the Confidentiality Deed.

463 With respect to the appointment of Merrill Lynch as Glencore's financial adviser, King gave evidence that a key role of an investment bank in this type of transaction was to act as an intermediary, and to run things. King was not involved in any negotiations

---

360 See par 585 below.

361 The terms of the Confidentiality Deed as subsequently executed are set out in pars 585-590 below. It was common ground that, for the purposes of the issues in this proceeding, there was no material difference between the terms of the Confidentiality Deed as executed by Cargill, Inc on 13 May 2013 and the subsequent version of the Confidentiality Deed.

362 This was a reference to the document signed by Cargill, Inc on 13 May 2013. The Confidentiality Deed as signed by both Cargill, Inc and Glencore was in fact executed after 14 May 2013 and dated 27 May 2013 (see par 585 below) and see the definition of Confidentiality Deed in the Acquisition Agreement: par 1022 below. It was a term of both versions that "a document (including this deed) includes any variation of replacement of it": cl 1.4(a). For convenience, "Confidentiality Deed" in these reasons refers to either of the 2 versions depending on the context in which it appears.

with bidders directly until the final negotiations. He said it was a deliberate strategic decision of Glencore to keep the Glencore executives "in the back room and out of sight".

464 Returning to the Phase 1 Process Letter, it went on to set out the phases of the proposed transaction. Phase 1 concerned the submission of indicative bids ("Phase 1"). Phase 2 involved the completion of due diligence and potentially the making of a final bid ("Phase 2"). Under the heading "Phase 1 – Indicative Bids", the following appeared:

> As a participant in Phase 1 of the Proposed Transaction, you are invited to submit an Indicative Bid to Merrill Lynch by 2:00pm Sydney time on Friday, 7 June 2013. Your Indicative Bid should address or confirm (at a minimum) the items set out in section 3 of this letter …

465 Under the heading "Phase 2 – Due Diligence", it was indicated that, on the basis of indicative bids received, Glencore would select a shortlist of interested parties who would be invited to participate in Phase 2. Participation in Phase 2 would involve access to a virtual data room to enable access to certain information as part of the sale process ("the Data Room") and discussions with Joe White management. Following Phase 2, shortlisted parties would be invited to submit a final, fully financed binding offer.

466 Section 3 of the Phase 1 Process Letter set out the required form of the indicative bids. It required an indication of the bidder's details, proposed transaction structure and "strategic rationale" for the purchase. Relevantly, it continued on to specify that the following details were required in the indicative bid:

> *(c) Indicative Bid*
>
> The total cash consideration at completion in Australian dollars offered for Joe White (as defined in section 1 of this letter) on a debt free and cash free basis, *based on the 31 January 2013 balance sheet in Section 5 of the Information Memorandum*.
>
> Glencore has a strong preference that your Indicative Bid be expressed as a single number. If a range of values is provided it will be assumed that your Indicative Bid is at the low end of that range. Glencore will assume that your Indicative Bid reflects your best proposal. Any reasons for a likely or potential variation between your Indicative Bid and Final Bid should be noted.

(d) Methodology and key assumptions

A description of the valuation methodologies you have adopted and key assumptions underpinning your Indicative Bid (including relevant commercial, financial, tax, legal and foreign exchange assumptions) and any value drivers or additional information that would allow you to improve your offer. In particular, *you should note where these assumptions vary from information disclosed in the Information Memorandum*.

(e) Synergies

Your assumptions regarding potential synergies, the value you apply to these synergies and details of how much of this value is included in your Indicative Bid.

(Emphasis added.)

467 A number of other elements were required, including details of any conditions precedent to which the indicative bid was subject, details of proposed sources of funding, confirmation that the bidder was acting alone, and a summary of intentions for the operation of Joe White. In relation to Phase 2, it was stated that the indicative bid must include the following:

(h) Due diligence

Details of the due diligence that you would expect to undertake in the next phase of the process if Glencore decides to allow you into Phase 2 of the Proposed Transaction. Please provide details of the expected timeframe necessary to complete such due diligence prior to submitting your Final Bid, bearing in mind Glencore's objective of minimising the extent and period of potential disruption to Joe White.

468 Section 4 of the Phase 1 Process Letter, entitled "Conduct of Process", set out a number of rights Glencore and Merrill Lynch reserved "in their absolute discretion". This included the right to "restrict any party's access to confidential information or management (particularly with regard to commercial sensitivities)". At the close of the section, it stated:

> You are required to make and rely on your own investigations and satisfy yourself in relation to all aspects of the Proposed Transaction.

469 Section 5 was entitled "Other Matters" and commenced with:

> The existence and contents of this letter and all discussions, communications and information relating to the Proposed Transaction is confidential information which is subject to the terms and conditions of the Confidentiality Deed entered into by you.

M. Distribution of the Information Memorandum and related matters

470 Enclosed with the Phase 1 Process Letter was a document entitled "Joe White Maltings Information Presentation May 2013" ("the Information Memorandum").[363] On the front page of the Information Memorandum, the names of Glencore and Merrill Lynch appeared. As noted above, Merrill Lynch had been entrusted with the task of the detailed drafting of the Information Memorandum. King gave his comments with respect to various, but not all, drafts.[364] To the extent information was provided by Hughes or Argent, it was done in consultation with Merrill Lynch.

471 Hawthorne distributed the Phase 1 Process Letter to various persons within Cargill (including in-house lawyers) and Goldman Sachs, as well as Cargill 's external lawyers, Allens. In the covering email, Hawthorne referred to the strict confidentiality provisions in the Confidentiality Deed. Hawthorne directed that the documents could not be distributed without first informing Ryan Engle ("Engle"),[365] an assistant vice president, strategy and business development,[366] or Brenda Arndt ("Arndt"), a senior attorney of Cargill, Inc working in mergers and acquisitions.

472 Engle read the Phase 1 Process Letter, including the passage set out in paragraph 468 above. He also gave evidence that he understood Cargill had been required to execute the Confidentiality Deed in order to receive the Information Memorandum, and that its receipt was subject to the terms of the Confidentiality Deed. Equally, Khai Le Binh ("Le Binh"),[367] project team leader in strategy and business development, gave evidence he believed he read the Phase 1 Process Letter. He said that he had

---

363 There had been some further minor changes by Deloitte made after 26 April 2013, but nothing of moment. As to the minor changes, on 9 May 2013 Argent said he had nothing to add.

364 King said he regarded the Information Memorandum as marketing material.

365 Engle had previously worked at Morgan Stanley and in private equity firms before joining Cargill, Inc on 29 April 2013. He holds a masters of business administration from the Columbia University Graduate School of Business and a bachelor degree in accounting from the University of Notre Dame. He is no longer employed at Cargill.

366 Strategy and business development was a standalone department which serviced Cargill's business units as required: see par 297 above.

367 Le Binh joined Cargill in 2009, and has worked in Europe and the United States of America. He holds a masters of business administration from the business school of Northwestern University in Chicago and a masters degree in telecommunications from Telecom Paris Tech in France.

understood that, regardless of what was contained in the Information Memorandum, Cargill was required to conduct its own investigations and satisfy itself in relation to all matters. He further understood that the material in the Information Memorandum was being provided on the terms contained in it.

473 The Information Memorandum contained details of the historical performance of Joe White, together with forecasts.[368] In relation to the reporting of past results, King expected them to be utilised by a purchaser, but did not accept it was critical information upon which a prospective purchaser would rely in light of the disclaimer contained in the Information Memorandum. He said such figures were provided to give an impression of the Joe White Business. He further stated that, as part of Phase 2, prospective purchasers could conduct due diligence to ascertain for themselves the historical financial performance.

474 Speaking more generally, King gave evidence that whilst prospective purchasers were dependent upon company accounts provided during the sale process, the financial information in an information memorandum was often adjusted to show the business in a more favourable light.[369] In the case of Joe White, he said it was also necessary to make adjustments to allow for the discontinuance of the relationship between Joe White and Viterra.

475 The first page of the Information Memorandum contained the "legal disclaimer". Disclaimers are customary in information memoranda.[370] In light of the issues raised in this case, it is necessary to set this disclaimer out in full:

> *This document* has been *prepared by Glencore and its subsidiaries (**Glencore**)* to provide background information to assist the recipient in deciding whether to further consider the possible acquisition of Glencore's interest in the malt business trading as "[Joe White]" (**Proposed Transaction**).
>
> This document is being *provided on a confidential basis to selected recipients*. In accepting this document, each recipient agrees for itself and its related bodies corporate and their respective directors, officers, employees, agents,

368 See further par 492 below.

369 King said this involved excluding "one-off non-reoccurring exceptional items" to get a better picture of the underlying profitability.

370 Evidence to this effect was given by a number of Cargill's witnesses, including that Cargill itself used disclaimers when acting as a seller.

representatives and advisers (together, the **Recipient**) that it is *provided on the terms and conditions of this disclaimer*.

Restrictions on Distribution of this Document

This document is provided to you by Glencore on a strictly private and confidential basis *to be used solely by the Recipient in connection with its assessment as to whether it will proceed with the Proposed Transaction*. It must not be made available to, or discussed with, any other person without Glencore's prior written consent. It is provided to the Recipient solely for its use in connection with providing background information in relation to the Proposed Transaction and it is not to be used for any other purpose. The distribution of this document in certain jurisdictions may be restricted by law and, accordingly, by accepting this document, Recipients represent that they are able to receive this document without contravention of any unfulfilled registration requirements or other legal or regulatory restrictions in the jurisdiction in which they reside or conduct business. *This document is being delivered subject to the terms of a confidentiality undertaking* and may only be used in accordance with the terms of such confidentiality undertaking.

Recipient to Conduct own Investigation and Analysis

This document is not to be considered as a recommendation or legal or financial advice by Glencore or any of its affiliates or subsidiaries (the "**Glencore Group**"), Merrill Lynch International or any person named in or involved in the preparation of this document or any of their respective directors, officers, employees, agents, contractors, advisers, shareholders, partners, related bodies corporate or affiliates (together, the **Discloser**) in relation to the Proposed Transaction. *The Recipient should conduct and rely upon its own investigations and analysis* of the information in this document and other matters that may be relevant to it in considering the Proposed Transaction.

A Recipient that is considering the Proposed Transaction must make, and will be taken to have made, its own independent investigation and analysis of the information in this document. Independent expert advice (including from a Recipient's accountant, lawyer or other professional adviser) should be sought before making a decision in connection with the Proposed Transaction.

No Offer or Invitation

Under no circumstances shall this document be deemed or construed to be a prospectus or an offer or invitation to sell or purchase or the solicitation of an offer (or an invitation to make an offer) for any shares, securities in, financial products or any other product or asset of any member of the Glencore Group in any jurisdiction and does not constitute any form of commitment on the part of any member of the Glencore Group or any other person.

This document is not a prospectus or other disclosure document required to be lodged with the Australian Securities and Investments Commission under Chapter 6D of the Corporations Act 2001 (Cth). Nor is it a product disclosure statement or similar document required under Chapter 7 of the Corporations Act 2001 (Cth). Accordingly, *this document does not purport to contain all the information that may be necessary or desirable to enable the Recipient*

to properly evaluate and consider the Proposed Transaction. This document has not been lodged with any regulatory authority in any jurisdiction.

No Responsibility for Contents of Document

To the maximum extent permitted by law, no representation, warranty or undertaking, express or implied, is made and, to the maximum extent permitted by law, no responsibility or liability is accepted by the Discloser or any other person as to the adequacy, accuracy, correctness, completeness or reasonableness of this document, including any statements or information provided by third parties and reproduced or referred to in this document, *or any other written or oral communications transmitted or made available* to a Recipient. *To the maximum extent permitted by law, no responsibility for any errors in or omissions from this document, whether arising out of negligence or otherwise, is accepted*. The information contained in this document has not been independently verified. This document contains various opinions, estimates, forward-looking statements and forecasts which are based upon assumptions which may not prove to be correct or appropriate. *No representation or warranty as to the fairness, adequacy, accuracy, validity, certainty or completeness of any of the assumptions, the information, opinions, estimates, forward-looking statements or forecasts* contained in this document or any written or oral information made available to any interested party made by the Discloser and *no liability whatsoever is accepted by any such Discloser in relation to any such information, opinion, estimates or forecasts*. The information or opinions contained in this document or any written or oral information made available to any interested party does not purport to be comprehensive and has not been independently verified. The Discloser is under no obligation to correct any errors or omissions in connection with the information contained in this document.

Acknowledgments

Each Recipient acknowledges that *no person has been authorised to give any information* concerning the business the subject of the Proposed Transaction or the Proposed Transaction itself *other than as contained in this document* and, *if given, that information cannot be relied upon as having been authorised by the Discloser*.

Accuracy of Financial Information

In particular, no representation or warranty is given as to the accuracy, completeness, likelihood of achievement or reasonableness of any forecasts, projections or forward-looking statements contained in the document. Forecasts, projections and forward-looking statements are by their nature subject to significant uncertainties and contingencies. You should make your own independent assessment of the information and seek your own independent professional advice in relation to the information and any action taken on the basis of the information.

Date of this Document

The information contained in this document has been prepared as at *1 May 2013. The Discloser makes no representation or warranty that the information contained in this document remains correct at, or at any time after, that date*. The Discloser is under no obligation to update this document or to correct any inaccuracies contained in this document at any time after that date. In addition, Glencore reserves the right, at its absolute discretion, at any time

> and in any respect, to amend or terminate the procedure for the potential transaction/purpose behind this document or to terminate negotiations with any prospective purchaser/Recipient of this document. *Merrill Lynch* International, which is [authorised] and regulated by the Financial Conduct Authority of the United Kingdom, *is acting for Glencore in connection with this document and no-one else* and, accordingly, will not be responsible to any other person for providing the protections afforded to their customers or for advising any person in relation to this document. Merrill Lynch International does not accept any responsibility for or in relation to this document or any of the information contained in it. Specifically, Merrill Lynch International has not verified or investigated or otherwise satisfied itself as to the fairness or accuracy or completeness of any information contained or referred to in this document or the document taken as a whole. No representation or warranty, express or implied, is made by Merrill Lynch International or any of its affiliates or any of such affiliates' directors, officers or employees as to the fairness, accuracy or completeness of the information or opinions contained in, or otherwise in relation to, this document or any written or oral information made available to any interested party, and no liability whatsoever is accepted by any such person in relation to any such information.
>
> (Emphasis added in italics.)

476 As is apparent from the first line of this extract, throughout the Information Memorandum "Glencore" was defined to be a reference not only to Glencore but also "its subsidiaries". This could not sensibly be understood to refer to all of Glencore's subsidiaries, as many of them had nothing to do with the proposed transaction. But each of Viterra Ltd, Viterra Operations and Viterra Malt were expressly referred to in the Information Memorandum and were subsidiaries with an "interest in the malt business trading as 'Joe White Maltings'". Thus "Glencore", as defined, expressly contemplated these subsidiaries.[371]

477 To the extent the Viterra Parties suggested "and its subsidiaries" in this definition was a reference to Joe White, and Joe White alone, this must be rejected for 3 reasons. *First*, the inclusive language was in the plural; there was no suggestion at trial that there

---

371 This meaning of Glencore may not have been universal throughout the Information Memorandum. For example, "Glencore or any of its affiliates or subsidiaries" might have contemplated a narrower meaning of Glencore was intended in this instance. However, nothing turned on this; unless the particular context required it, Glencore in the Information Memorandum had the broader meaning described above. (Glencore was also defined in the glossary as "Glencore International plc", but as acknowledged in closing, this was an error. The court was informed that a company by that name did not exist.) For completeness, it is noted that there was an overlap between the definitions of "Glencore" and "Glencore Group". However, Glencore Group was a wider definition and the extent to which it referred to Glencore's subsidiaries that did not detract from the definition of "Glencore" unambiguously including its subsidiaries.

had been a mistake by not making reference to subsidiaries in the singular. *Secondly*, Joe White did not have an "interest in" what was to be sold; it was the very subject matter of the sale. These first 2 points follow from the language itself, and of themselves make the position clear. But, for completeness, *thirdly*, Joe White was defined separately as part of the business overview as "Joe White".

478 Notwithstanding the difficulties with construing "Glencore" in the Information Memorandum to have a narrow meaning, the Viterra Parties submitted precisely which subsidiaries were involved in the preparation of the Information Memorandum was a question of fact, and that Joe White was the only relevant subsidiary. It was submitted the sale process was conducted by Merrill Lynch "primarily on behalf of Glencore". There are a number of responses to this.

479 *First*, the reference to "primarily" in this submission effectively conceded the sale process was conducted on behalf of persons beyond Glencore. This concession was unavoidable in light of the express statement in the Information Memorandum that Merrill Lynch was acting for Glencore on the same page and as part of the disclaimer that "Glencore" was defined to mean "Glencore and its subsidiaries".

480 *Secondly*, the question as to what was being represented was to be determined based on what was stated in the Information Memorandum, properly understood in the relevant context. As already stated, to confine the words "and its subsidiaries" to Joe White would be contrary to the express use of the plural. Further, it was the 3 Viterra entities (all of which were subsidiaries of Glencore) which were intended to be the "Sellers", and it was those companies who had been, collectively, the owners of what was to be sold. Furthermore, the Information Memorandum itself referred to various matters concerning Viterra's business, rather than being strictly confined to the Joe White Business;[372] another means by which it was confirmed information was being provided by Viterra as well as Glencore.

---

372 For example, references were made to "the Viterra barley procurement policy", employees of Viterra (amongst others) not being contacted, Viterra Malt being the proposed seller of the shares in Joe White, the removal of intercompany charges from both Glencore and Viterra, Viterra's merchandising business, Viterra's grain handling business, and so on.

481 In short, whatever might have been the history as to how the Information Memorandum was prepared and finalised, Cargill had no knowledge of such matters. It was not credible to suggest the definition should be read down because of some internal process of Glencore and Viterra, about which Cargill did not, and could not have objectively been expected to know anything (beyond what was stated in the Information Memorandum itself).

482 *Thirdly*, as a matter of fact, information was provided by Viterra. Even leaving aside that Hughes and Argent were Viterra Ltd's employees, Mattiske was provided drafts of the Information Memorandum, provided feedback (albeit he asserted it was not much)[373] and was involved in discussions concerning the financial section of the Information Memorandum. Mattiske also accepted he had ultimate responsibility for Viterra collating the required information, and relied on Hughes and others to perform this task.[374] Further, King gave evidence that the operational level of Joe White fell within Mattiske's remit and that, to the extent decisions needed to be made in relation to the Joe White Business in conjunction with the sale process, Mattiske would have made them. Furthermore, throughout this involvement, Mattiske was a director of each of the Sellers. Moreover, and in any event, Fitzgerald was directly involved in, and took responsibility for, the preparation of the Information Memorandum. As a senior officer of Viterra, he was plainly acting on behalf of those companies as the Sellers, in attending meetings and assisting with respect to the Information Memorandum (while acting for Glencore as well).[375]

483 No doubt, it was Glencore who was in control. It ultimately had the say in what was included in the Information Memorandum and was principally responsible for conducting the sale process. But, as was expressly stated in the Information Memorandum, this was not to the exclusion of Viterra.[376] Further, it is important to

---

373 Compare, for example, pars 113, 367, 378, 383-386, 388, 392-393, 396-397, 404, 406, 418, 429, 440, 442-444 449 above and 828 below.

374 See par 393 above.

375 See par 440 above.

376 Plainly at all times, through Mattiske and Fitzgerald amongst others, Viterra knew of, and assented to, the sale process being conducted. See also cl 2.1 of the Confidentiality Deed, which provided that Glencore would procure its Representatives (which included Viterra) to disclose information to Cargill: see par 590 below.

record that, notwithstanding the written submissions, in closing oral submissions senior counsel stated it was not the Viterra Parties' case that Joe White (as opposed to Hughes and Argent acting at the request of Glencore) had responsibility for the preparation of the Information Memorandum. The Viterra Parties' position was that overall it was Merrill Lynch who was responsible for the preparation.

484 The Viterra Parties submitted that the terms of the disclaimer did not give rise to Glencore approaching the task of preparing the Information Memorandum in a cavalier fashion. The Viterra Parties accepted it was understood that potential buyers were to be provided with accurate and complete information about matters material to the conduct of the Joe White Business. Indeed, Mattiske's evidence was that he considered Glencore was under an obligation to provide accurate and complete information.[377] Mattiske said the obligation was not subject to any qualifications.

485 Not surprisingly, those who received the Information Memorandum and related documents at Cargill chose to read the contents at varying levels of detail. For example, Hawthorne read the disclaimers, and took them seriously. Some also read the disclaimers or parts of them, or chose not to read them but proceeded on the assumption that the Information Memorandum was being provided on the basis that Cargill had to conduct a proper due diligence in respect of the material contained in it.[378] Further still, some chose not to read the disclaimers and left the detail and the legal consequences to the lawyers. Also not surprisingly, some could not recall whether or not they read them.

486 In response to a proposition put to him in cross-examination that the disclaimers meant that whatever was in the Information Memorandum could not be relied upon and that Cargill had to make its own investigations and verify the accuracy itself, Le Binh gave evidence that the document was provided by a very reputable investment bank, Merrill Lynch, and the proposed transaction was a "Wall Street deal", so he proceeded with a bias that the information contained in the Information

377 See also par 365 above and pars 494-498 below.
378 See, for example, par 643 below.

Memorandum was reliable. His evidence was that Cargill was looking at the Information Memorandum to understand the Joe White Business better and whether or not it was a strategic fit, and then assess whether or not Cargill wanted to proceed with a bid. He said in the Phase 1 stage, Cargill relied on the information provided to it. As for Phase 2, he said he knew Cargill had to investigate and verify for itself the truth and accuracy of the contents of the Information Memorandum.

487 In a similar vein, Eden gave evidence that he understood the Information Memorandum did not displace the requirement for a due diligence; that he read the Information Memorandum in order to decide whether Cargill was going to make an offer which would get it to Phase 2 and enable Cargill to conduct due diligence; and that the purpose of the Information Memorandum was to provide Cargill with information to decide whether to make a bid and at what level. He further understood that the due diligence process would enable Cargill to examine whether generalised statements about the proven effectiveness of Joe White's business model, other generalised statements and specific statements, were substantially true or not. Eden accepted that there was no intrinsic measure in the Information Memorandum that supported such statements. There was no dispute from any witness with whom the subject was raised that when reading the Information Memorandum it was understood that Cargill would be required to conduct a due diligence if it were part of Phase 2 in order to make an assessment for itself of the Joe White Business.

488 Returning to the contents of the Information Memorandum, the introduction contained a "Business Overview", which provided some details about the history and size of Joe White. It stated that Joe White had an annual production capacity of 550,000 tonnes and operated 7 malt plants in 5 states across Australia[379] and that the plants were strategically located in close proximity to Australia's premium barley growing regions, customers' breweries, and international ports and other transport. The plants were said to be modern, well capitalised, state-of-the-art facilities following an

379 The plants were: Cavan and Port Adelaide in South Australia (where the head office was also located); Tamworth and Minto (recently constructed) in New South Wales; Delacombe, Victoria; Devonport, Tasmania; and Perth, Western Australia.

investment of $200 million since 2006. It further stated that capacity utilisation over the previous 3 years had averaged 94 percent.

489 The introduction stated that 78 percent of Joe White's annual sales were into overseas markets. It was suggested Joe White was well positioned to service the growing demands of the Asian malt market, and that it had leading market positions in South Korea, Thailand, Vietnam and the Philippines.

490 The Information Memorandum stated that the Joe White Business model was focused upon developing relationships with key global and regional brewers "underpinned by Joe White's high quality product and tailored service offering". In emphasising the strong relationship Joe White had with its customers, it was stated that the average length of its relationship with its top 10 customers was over 25 years. Eden's evidence was that he had a pretty good idea at a certain level about the Joe White Business and that some of the information disclosed was very close to Cargill's pre-existing knowledge of the Joe White Business. He said it gave him a good deal of confidence in Cargill proceeding with the transaction.

491 Under the heading "Investment Highlights", the Information Memorandum then set out details about the Asia-Pacific market, and repeated that Joe White was well positioned to take advantage of the anticipated growth in this region. The other highlights included a high quality asset base, a proven effective business model (which was said to be underpinned by a commitment to quality and adhering to specific customer requirements), a track record of strong financial performance and a stable management team with deep industry experience. Again, Eden's evidence was that the information was consistent with what Cargill already knew.

492 The Information Memorandum contained "Key Financial Highlights", setting out the sales volumes and malt margins. It also recorded earnings before interest, tax, depreciation and amortisation ("Unadjusted Earnings") and capital expenditure, actual results for financial years 2010 to 2012, and forecasts for financial year 2013 to 2016. King gave evidence that the historical financial information was taken from a

"vendor assistance pack" created by Deloitte, whereas he personally had a hand in the budget for the 2013 financial year, and the annual future projections for the 2014 to 2016 financial years. King developed the framework for the financial model that was used. In this regard, he was assisted by "input" from Argent and Hughes. It was estimated that Joe White's Unadjusted Earnings for the 2013 financial year would be $25 million, down from actual Unadjusted Earnings in 2012 of $36 million (which earnings performance was said to have been achieved through an expansion of malt margins and a disciplined approach to cost reduction). The decline was explained by reason of Joe White being impacted by low malt margins attributable to a dislocation between Australian and European Union barley prices and the "Viterra barley procurement policy". It was stated that earnings were expected to recover from the 2014 financial year onwards to reach Unadjusted Earnings of $44 million by the 2016 financial year.[380]

493 In providing the projections, King said he intended to present the Joe White Business in the best possible light, describing the projections as realistic and achievable, but optimistic. As King himself described it, he exchanged numerous emails with Argent working on the financial projections with an intention of trying to achieve the highest price possible. In acknowledging his understanding that any purchaser would be focused on what it thought was reasonably achievable in the future, he stated that sophisticated purchasers always looked to historical financial performance as a benchmark for future performance. He, quite correctly, further accepted that, for this reason, it was "so important" to get the historical information right.

494 Under cross-examination, King was asked a series of questions concerning the role of a vendor during a sale process. On the question of what was being represented by the provision of historical financials, King understood a vendor was implicitly representing that, subject to market forces, and all other things being equal, the business was capable of repeating the reported results. Further, King acknowledged that when it came to valuing a business when using, for example, a discounted cash

380 See further par 563 below.

flow model, it was important the inputs were correct, as "100 percent … rubbish in, rubbish out applies".

495 King agreed that, if the financial performance, whether good or poor, for a particular year was "a one-off", it would be incumbent on the vendor to give an explanation and provide a proper picture of the business. Further, King accepted that if a practice existed within a business that had a material bearing on the profitability of the business on an ongoing basis, then that practice should be disclosed by a vendor, provided it did not need to be disclosed because it was standard industry practice.

496 When specifically asked about a practice of using gibberellic acid in the production of malt to effect an increase in capacity of 20 percent, King said he would expect the practice to be disclosed in the Information Memorandum if it was out of the ordinary. He also agreed that if customers prohibited the use of gibberellic acid and such a practice existed despite the prohibition, it should be disclosed.

497 Having given this evidence, King then distinguished between what he thought was required to be disclosed in an information memorandum, which he described as a stage gate to a narrowing field for a broader due diligence, and a more detailed due diligence process where a prospective purchaser has the opportunity to delve into, and understand in more detail, how the business operates. He agreed that, at the due diligence stage, it was very important that any practices of the nature referred to above be disclosed by a vendor if the vendor knew about them.

498 King was also cross-examined by Hughes' senior counsel about what a purchaser would be expected to do as part of a due diligence. He gave evidence that, if a purchaser were to discover something that was not in accordance with what was expected, it would ask a question with the expectation of an answer and, if necessary, supporting documentation. He agreed with the proposition that if a laboratory testing policy were relevant and different to the policy of a purchaser, the purchaser would call for the policy.

499 Returning to the Information Memorandum, the "Sales Process Overview" section

suggested Glencore had undertaken a strategic review of Viterra's global operations since acquiring Viterra in December 2012 and had decided to undertake the sale process referred to in the Information Memorandum.

500 Anyone interested in acquiring Joe White was directed to make enquiries through Merrill Lynch. In that regard the following was stated:

> Shareholders, officers, Management and employees of Glencore, Viterra, Joe White, its subsidiaries, suppliers, customers and other third party service providers *should not be contacted* about this opportunity *under any circumstances* without Merrill Lynch's prior consent. Glencore specifically reserves its right to cease all discussions and immediately demand the return of all confidential information and documentation from any party Glencore reasonably considers has breached *this directive*, or has breached the spirit of this requirement.
>
> (Emphasis added.)

As part of this overview, the corporate structure was set out indicating Glencore owned Viterra Malt, and Viterra Malt owned Joe White.[381] Next to the diagram of the corporate structure it was stated that the proposed transaction was the sale of 100 percent of the issued capital of Joe White, together with a transfer of any assets not owned by Joe White but which were used exclusively in connection with Joe White.

501 The next section of the Information Memorandum was entitled "Investment Highlights". The 6 pages of highlights spoke of Joe White in very positive terms. Under a heading "Largest Asia-Pacific Maltster" reference was made to Joe White having over 60 percent of Australia's malt capacity. After referring to domestic and export customers (the latter representing 78 percent of sales), various other details of Joe White's markets were provided. In identifying opportunities for the Joe White Business, the Information Memorandum referred to increased sales in the Japanese market following the recent emergence of new Australian barley varieties favoured by Japanese buyers.

502 Under a page entitled "High Quality Asset Base" various details were given about Joe White's assets and capital expenditure. Eden's evidence was that the details were

---

381 There was no reference to the intermediaries of Viterra Ltd and Viterra Operations between Glencore and Viterra Malt.

consistent with his "understanding, belief or knowledge".

503 In stating that Joe White had a high quality asset base, reference was made to modern, well-capitalised, state-of-the-art manufacturing facilities and a history of targeted maintenance and strategic capital expenditure programs across all production facilities, as well as a disciplined approach to capital investment. This was said to have resulted in low future capital needs in the short to medium-term, with approximately $5.5 million per annum required over the following 4 years.

504 As to Joe White's "Proven Effective Business Model", it stated that Joe White was:

> focused on *ensuring* its customers receive the *highest quality malt* to meet their *exact specifications and requirements*.
>
> (Emphasis added.)

In order to achieve this, it was stated that Joe White ensured that quality remained the key consideration across each of its key operational functions and procurement of barley was focused on the selection of "high quality barley that *best meets customers' specifications*" (emphasis added). It was stated that Joe White had access to all of Australia's key barley growing regions and that seed research and development provided customers with exclusive rights to premium barley varieties.

505 Under the same heading, Joe White's production was addressed. This was said to be underpinned by state-of-the-art manufacturing facilities consistently producing high quality malt. The Information Memorandum recorded that both "[t]echnical analysis and "strict quality control procedures *ensure* customer specifications are consistently met" (emphasis added).

506 On the same page some customer details were given, though individual customers were not identified.[382] The information included that for the previous 3 financial years

---

382 An internal analysis listed the top 10 customers (from largest to smallest) as: Asia Pacific Breweries Group (located in various places in Asia), Lion Nathan (Australia), Oriental Brewery (South Korea), SAB Miller (South Africa), Boon Rawd (Thailand), Hite (South Korea), San Miguel Corporation (Philippines), Beer Thai (Thailand), SABECO (Vietnam) and the Nestlé Group (Singapore). This document also contained the tonnes sold and the margins achieved. It was not provided to Cargill before Completion.

Joe White's top 5 customers represented between 60 to 68 percent of total revenue, and that the top 10 customers represented approximately 90 percent throughout that period. The average length of the relationship with the top 10 customers was stated to be 25 years.

507 King said he reviewed each of the statements dealing with the business model, but made no enquiries himself as to the source of the relevant information. He did not seek to verify them with Hughes. He gave evidence that the 2 charts on the page, concerned with revenue by customer and the length of time customers which had been supplied by Joe White, were enough to satisfy him as to the accuracy of the statements made. In short, King left the drafting of this information and any underlying factual verification to Merrill Lynch. Further he had Mattiske read its contents and provide feedback.[383]

508 Under the heading "Strong Financial Performance" appeared the actual and forecast margins for malt sales for the financial years from 2010 to 2016. In relation to the actuals, the malt margin was recorded as $221, $231 and $234 from 2010 to 2012. The forecast for 2013 had the margin dropping to $204, before increasing to $221, $233 and $235 for 2014 to 2016. It was stated that the margins and Unadjusted Earnings for 2012 were achieved despite challenging global economic conditions, variations in volumes sold to customers, a strong Australian dollar and significant cost pressures. The same reasons as previously stated were given for the decline in performance for 2013.[384]

509 Emphasis was also placed upon the highly experienced and stable management team. In particular, Hughes, Argent and Wicks were identified as persons with significant industry experience, and either all, or the majority, of their experience was at Joe White.[385]

510 The next section was concerned with an overview of the malting industry. It was observed that beer consumption was the primary driver of malt demand. The

383 See par 442 above.
384 See par 492 above.
385 At a later part of the Information Memorandum, reference was also made to the management structure and the "exceptional management team".

expectation of high growth in the Asian markets was referred to, as was Joe White's significant market share.

511 During the trial, there was no suggestion that Cargill, Inc was not already fully aware of the industry information contained in this section of the Information Memorandum.

512 In the "Business Overview" section, a full page was dedicated to "Quality and Technical Capability", which was said to underpin the Joe White Business model. In this regard, the following was stated:

> - Joe White has an *unrelenting focus on quality* across all areas of its business to *ensure it meets customers' requirements*
> - Knowledgeable technical sales staff manage each customer relationship through regular site visits and *transparent communication*
> - Co-operative technical projects with customers include comprehensive technical training and ongoing education
> - Co-ordination of Procurement and Production provide *traceability from malt delivery back to grain receipt*
> - *Stringent internal protocols and control procedures* are in place across the entire production cycle
> - Regular *compliance and audit* of all production facilities is undertaken
> - Each production facility is ISO9000 and ISO22000 compliant
>
> (Emphasis added.)

513 As to the reference to being "ISO 9000 and ISO 22000 compliant", this related to standards set by the International Organisation for Standardisation. The standards are concerned with quality management systems and food safety management systems.[386] Testi monitored Joe White's compliance with ISO 22000, which included systems for Certificates of Analysis. She also assisted with external and customer audits.[387] Eden's evidence was that ISO compliance and certification really meant something to him. He understood it meant that Joe White had documented quality

386 See further fn 664 below.

387 Customer audits included questionnaires. Testi consulted with Stewart, who reviewed the answers before they were sent to the customer.

processes and was following them. He also said it demonstrated management's commitment to quality, a strong customer focus and a systematic approach.[388] Eden's understanding of the contents of the Information Memorandum must be understood in the context that he gave evidence that he was aware Glencore had only relatively recently received regulatory approvals to deal with the Joe White Business and, apart from its involvement with Prairie Malt Ltd, was not involved in malting. Accordingly, he concluded that Glencore was relying on information supplied from within the Joe White Business.

514 Under a subheading referring to sales and marketing, it was stated that a "top-down approach" was adopted which included that:

> - Joe White is focused on developing a detailed understanding of *specific customer requirements* with respect to volume demand, consistency, certainty of supply and innovation[389]
> - Customer segmentation is undertaken based on this detailed understanding and specialist Sales and Marketing staff are deployed to *ensure customer requirements are met*
> - [Joe White]'s strong track record of contract renewal demonstrates the depth of customer relationships and quality of the service offering
>
> (Emphasis added.)

515 With respect to procurement, it was stated that Joe White focused on the selection of high quality barley that best met customer specifications. It was stated that "Glencore grain merchandising" was involved in managing the sourcing of barley on behalf of Joe White.

516 As for production, it was stated that the "[b]est-in-class manufacturing facilities consistently produce high quality malt". Under this, the following was stated:

> - Technical analysis and strict quality control procedures *ensure customer specifications are consistently met*
> - Efficient and automated production facilities to minimise manufacturing costs

---

388 See further fn 248 above.

389 An earlier draft stated "Joe White develops a detailed understanding of customer requirements …". King inserted the words "is focused on", and the word "specific" before "customer requirements".

- Strategically located manufacturing facilities minimise freight costs and delivery times
- Well maintained and capitalised assets with low future capital requirements

(Emphasis added.)

517 It was also stated that the sales and marketing of Joe White drove the business model, and that Joe White utilised a 3 stage process to "understand and satisfy each customer's unique requirements". It was further stated that Joe White's success was "based upon its strong commitment to consistently meet the product specifications of its customers". As part of this 3 stage process, Joe White was said to devote "significant time and effort to understand its customers' product specifications".[390]

518 A full page of the Information Memorandum was focused on Joe White's long-term relationship with key customers, with various customers being identified.[391] An equal amount of the document was dedicated to the procurement process. This page emphasised that the process resulted in customer specifications being met. It stated that the 3 components of the process were understanding customer specifications, sourcing barley from a wide range of growers and growing trading houses, and providing ongoing customer support and research and development. Eden accepted under cross-examination that the statements on this page were rather generalised observations.

519 In relation to customer specifications, it was stated that the sales and marketing function enabled Joe White to develop an in-depth understanding of the malt required by each customer to optimise the production process and ensure consistency of the final product. Further, it was stated based on Joe White's understanding of required specifications, barley varieties and appropriate sources could be identified. Finally, it

---

390 An earlier draft referred to understanding Joe White's "customer product requirements", but King changed "requirements" in this phrase to "specifications". King said he did this because specifications sounded a little more sophisticated: cf par 303 and fn 266 above.

391 The domestic customers identified expressly were Lion Nathan, Coopers, SAB Miller and Nestlé. The international customers identified expressly were SAB Miller, Sapporo, Oriental Brewery, Asahi, San Miguel Corporation, Carlsberg, Kirin and Thai Beverages. While Eden gave evidence that, as a result, Cargill had a pretty good idea who Joe White's customers were, he said Cargill was not able to confirm exactly who the customers were to know the length of the relationship.

was stated the barley procurement function was driven by the sales and marketing team, together with the technical team, resulting in identifying varieties best suited to meet customers' malt specifications.

520 As for barley sourcing, it was stated that Glencore Grain currently managed the sourcing of barley on behalf of Joe White. It was stated that after completion of the transaction, Joe White would have the ability to directly source barley from a wide range of barley growers and grain trading houses. As to the handling of barley once purchased, it was stated that each of the production facilities utilised on-site storage facilities to manage short-term inventory requirements, with any longer term storage provided by third parties.

521 In relation to the "Ongoing Customer Support and [Research]&[Development]" component, a specialist technical team of Joe White was referred to. Customers were said to be supported by regular site visits and discussions to ensure product specifications and other requirements were being met. Research and development activities were stated to include working collaboratively with customers and barley breeders to develop new barley varieties and provide opportunities for product differentiation.

522 On the issue of technology, later in the Information Memorandum it was stated there was an ongoing investment in technology to build a competitive advantage. While dealing with this topic, it was stated that Joe White's high-quality manufacturing assets had an outstanding reputation for product uniformity, consistency and an ability to produce to a customer's exact specifications. The reputation was said to have been built in part on the commitment to improve the malting process and enhance plant quality through technological investment. Joe White was said to have focused on a number of key areas, including ensuring that processes were in place to produce consistent and uniform end products, as well as creating state-of-the-art malt analytical laboratories to ensure the highest level of quality assurance.

523 In the financial section of the Information Memorandum entitled "Financial

Overview", the basis of the preparation of the financial information was identified. It was stated that the section comprised:

> – Pro Forma normalised profit and loss accounts for the three years ending 31 October 2012 (FY10A, FY11A and FY12A),[392] (the "**Historical Period**") and the first three months of actual trading for FY13 being November 2012 to January 2013 ("**YTD13A**").
>
> – Forecast profit and loss accounts ("**Forecast Financial Information**") for the first four years ending 31 October 2016 (the "**Forecast Period**").
>
> – Pro Forma balance sheet and cash flow statements for the Historical Period and YTD13A.

524 In further explaining the basis of preparation, it was stated that Joe White had not historically prepared standalone statutory financial statements. For this reason, information for the Historical Period had primarily been sourced from the general ledger and trial balance data extracted from the Administration System.

525 Furthermore, it was stated that the financial information in the Forecast Period had been prepared by Joe White management using "a bottom-up, plant-by-plant approach including consideration of [Joe White]'s historical operating performance, current market position, existing customer contracts for volumes to be delivered over the Forecast Period and [Joe White]'s future growth prospects".

526 Next, reference was made to a number of pro forma normalisation adjustments that had been made in order to "present the historical financial information on a comparable basis over time and to reflect the financial information of [Joe White] as a standalone business". It was stated that the adjustments that had been made would be "available in full in the second phase", and included:

> – Elimination of non-recurring items …
>
> …
>
> – Removal of intercompany charges from Glencore/Viterra for shared services provided to Joe White including … The financial information presented in this section excludes the impact of these costs on a

---

392 Although these abbreviations appear to refer to actuals, because it was a normalised reporting, the figures were not those actually contained in the profit and loss accounts for the respective years. King gave evidence that, by stripping out non-recurring items and presenting "clear historical financial numbers … a truer representation of the underlying profitability of the business" was provided.

standalone basis. Management estimates the cost of these services to be $2m per annum however, this cost could be reduced if undertaken as part of a larger shared services function.[393]

- Addition of incremental margin (referred to as the "**Accumulation and Position Margin**") which management estimates will be available to Joe White if it is free to undertake all barley procurement functions on its own account. This adjustment ensures the margin is applied historically on a consistent basis for the full allocation of profits to Joe White. Refer to page 44 for a more detailed explanation.

527 Adjacent to a pro forma "normalised" profit and loss summary for the 2010 to 2012 financial years, together with the actuals known for 2013, the following was stated:

> Management's primary focus during this period has been on increasing malt margins, rather than sales revenue, as malt pricing is principally driven by malting barley prices. Malt margin reflects the difference between the price at which malt is sold to customers and the cost of acquiring the volume of barley required to produce that malt.

528 Immediately below the profit and loss summary were details of production capacity, production utilisation (expressed as a percentage), production volumes, sales rates (expressed as a percentage) and sales volumes for each of the periods identified.

529 Eden gave evidence that Cargill had had a number of people studying this page carefully. Eden said it was confusing with the normalisations and the splitting of profits between "Viterra Grain" and Joe White,[394] and required a detailed look at the accounts "versus what was said" on this page. Eden said as a result of Cargill's detailed examination during the Due Diligence,[395] it was considered the margin of $15 per tonne for the Accumulation and Position Margin could be achieved, or perhaps sometimes be even better.[396]

530 On page 44 of the Information Memorandum, the Accumulation and Position Margin was discussed. Diagrammatically, it was illustrated that for each of the financial years 2010 to 2012 and the 2013 year to date, in excess of $15 per tonne had been "Earned by Viterra/Glencore". An explanation was given as to how a portion of the

---

393 The amount of $2 million was provided to King by Argent on 4 March 2013, after reviewing the position with Hughes.

394 Up until Glencore acquired Viterra, the barley supply contracts were between Viterra Ltd and Joe White.

395 See par 1022 below.

396 The Viterra Parties submitted that by this evidence Eden stated that Cargill did not rely upon what was contained on this page of the Information Memorandum. In fact, that was not what he said.

Accumulation and Position Margin had been received by Joe White. It was further explained those profits had been removed as part of the pro forma normalisation adjustments, coupled with a replacement to reflect the additional margin that would have been available to Joe White as a standalone business. On the basis that the actual margin for each of the reported periods had exceeded $15 per tonne, the Accumulation and Position Margin was stated to be a conservative assumption.[397]

531 As part of the summary of the historical financials, it was stated that Joe White had generated stable earnings despite challenging global economic conditions, variations in volumes sold to customers, a strong Australian dollar and significant costs pressures. The Unadjusted Earnings for the financial years 2010, 2011 and 2012 was recorded as $37.1 million, $36.6 million and $36.4 million respectively, with the earnings per tonne average at around $60 for each year. However, the earnings per tonne for the 2013 financial year to date were down markedly, at $39.30 per tonne.

532 Details were also provided about production capacity for each year, which was reported to be 91.5 percent, 93.5 percent, 97.9 percent and 95.2 percent respectively. For 2010 to 2012, it was stated that the percentage of malt produced that was sold was 104.1 percent, 97.9 percent and 97.8 percent. Before "normalisation", the year-to-date percentage for 2013 was 86.3 percent.[398]

533 It was recorded that management's primary focus had been on increasing malt margins rather than sales revenue, as malt pricing was principally driven by malting barley prices. It was stated that the malt margin reflected the difference between the price at which malt was sold to customers and the cost of acquiring the volume of barley required to produce the malt. The Information Memorandum went on to explain how the malt margin had increased per tonne despite lower sales volumes. The key drivers in the increased malt margin were said to include negotiation of improved contract terms with customers and reduced volume of lower margin bulk

397 See further par 816 below.

398 For the full details of the summary of the historical financial results as reported in the Information Memorandum, see annexure B to these reasons.

shipments.

534 The Information Memorandum contained a summary of forecast financial information. In addition to specific figures as forecasts for each of the financial years from 2013 to 2016,[399] a written explanation was provided as to why the financial performance was expected to improve in the upcoming years.

535 A whole page was dedicated to the malt margin contraction for the 2013 financial year to date. A $14 million loss in malt margins, resulting from a fall in malt margin per tonne from $234 to $204, was said to be the result of higher Australian barley prices relative to the European Union prices, coupled with Viterra's barley procurement policy resulting in Joe White entering into a number of contracts with materially lower malt margins, and resulting in the foregoing of volumes due to lack of price competitiveness. In addition, it was said there were higher barley prices in Western Australia and New South Wales, because of shipping related matters and unseasonably wet conditions respectively.

536 Also as part of the financial overview, cash flow and working capital were addressed. There was no reference to management's belief that $30 million was an appropriate level of net working capital.[400] On a page entitled "Capital Expenditure" both historical information and forecasts were given in relation to capital expenditure, including breakdowns concerning the works in Perth and Minto in previous years. It was forecast that $7.1 million would be spent in the 2013 financial year and $5.1 million in the 2014 financial year on maintenance. In addition, it was stated that a disciplined approach to capital investment and maintenance expenditure had created low future capital needs in the short to medium term. Further, it was recorded that management had forecast approximately $23 million of maintenance capital expenditure over the following 4 years, with an average of $5.2 million for the 2014 to 2016 financial years.

537 The last section of the Information Memorandum concerned management and

399 For full details of the summary of forecasts, also see annexure B to these reasons.

400 See par 436 above.

corporate information. After speaking of 7 members of senior management (including each of the Third Party Individuals) in positive terms, it was noted that all 147 employees (most of whom were full-time) were employees of Viterra Ltd. As for "head office functions", it was stated that they were currently being provided by Glencore. With respect to human resources, it was stated that a range of related functions were provided by Glencore, including recruitment, performance evaluation and management, employee relations and resource planning, and management of group policies and procedures. In relation to safety, health and environment, it was stated that core responsibility rested with the senior management of Joe White but that Joe White received support from Glencore on an ongoing basis to fulfil the relevant obligations. However, it was noted that the current manager of safety, health and environment sat with Glencore. As for the Administration System, it was noted that Joe White used the "SAP-based IT system" which was provided by Glencore, and it consolidated all of the financial information of each business unit. Legal services were stated to be provided by Glencore, whereas primary accounting and finance functions were recorded as being performed within Joe White. That said, it was stated the Glencore provided taxation, payroll and cash management functions for Joe White.

538 In summary, the Information Memorandum presented the Joe White Business in very positive terms despite its performance in the first few months of the 2013 financial year and its underlying issues. However, before leaving the Information Memorandum, it is instructive to note what it did not contain.

539 *First*, it said nothing about the Co-Operative Bulk Agreement being the subject of a termination notice. This was explained by King on the basis of his understanding in March 2013 that it was "not really a dispute".[401] In an email he sent at that time he said that there was only a single piece of outstanding litigation "of which there is a memo in the [Data Room] which bidders will get to see in the second phase".[402] He

401 Viterra maintained a litigation register, which was updated on the instructions of Viterra's legal counsel. Bickmore gave evidence she could not recall giving any instructions to update the register with respect to the dispute under the Co-Operative Bulk Agreement.

402 King said he was not involved in any decision not to include details of the dispute in the Data Room. In fact, he believed that it had been.

gave evidence that he believed he had spoken to Mattiske about it, and vaguely recalled agreeing the dispute was not material. In contrast, Mattiske said he did not know about any disagreement with Co-Operative Bulk before the Information Memorandum was circulated. In fact, Mattiske had been informed of the disagreement before the Information Memorandum was complete.[403]

540 *Secondly*, no mention was made of any of the Operational Practices, or the risks to the Joe White Business if they were disclosed to customers or to cease, or both. In this regard, there was no suggestion of any inability to meet customers' specifications or to procure the correct barley varieties; quite the contrary.

541 *Thirdly*, and further to the second point, no reference was made to the purchase of off-grade barley in explaining how margins in excess of $15 per tonne had been achieved historically or how an Accumulation and Position Margin of $15 per tonne would be achieved in the future.

542 *Fourthly*, in addition to the absence of any reference to the Operational Practices, there was also no reference to matters being withheld from auditors or that "compliance" did not include disclosing to Joe White's auditors or customers the actual procedures in place.

543 Returning to Project Hawk, various Cargill workstreams considered the Information Memorandum.

544 On 17 May 2013, Goldman Sachs sent an email to a large number of Cargill employees, as well as Allens. The email attached a working draft summary of information from the Information Memorandum,[404] together with a working group list. The email noted that the summary did not contain any of the industry or market information contained

---

403 He was sent an email by Merrill Lynch on 25 February 2013 which attached "a summary of potential items that have been identified during the course of our work which may be useful to discuss with [Merrill Lynch]" (which was a further email to the email referred to at par 395 above). The summary referred to the "Storage contract in Perth" and noted a dispute existed in relation to it. The summary also stated that consideration should be given as to how the existence of the dispute should be managed during the sale process.

404 The Viterra Parties' submissions recorded that the summary was not produced as part of the Cargill Parties' discovery as it was the subject of a claim for privilege.

in the Information Memorandum because Goldman Sachs assumed, presumably correctly, that Cargill would have better knowledge than Goldman Sachs of the industry, the malt market, and how the Joe White Business would interact with Cargill's existing operations and customer base.

545 Le Binh was cross-examined about Goldman Sachs' assessment. Le Binh gave evidence that Cargill had a good knowledge of the malting industry and market, but he did not know the extent of Cargill's knowledge at that time about how the Joe White Business would interact with Cargill's business. Engle understood Goldman Sachs to be referring to the expectation that Cargill would apply its knowledge of the malting industry, the malting market and how the Joe White Business would interact to better inform some of its projections.

546 On the same day, Engle circulated a preliminary work plan. The key areas of work leading up to the indicative bid included a review of the Information Memorandum. Responsibility for this task was given to both Cargill and Goldman Sachs. It involved identifying and analysing commercial arrangements, business viability, market situation and outlook as well as the business plan. Further, the focus was to identify key operational assumptions that underpinned the forecasts. In short, the Information Memorandum was used to underpin the initial preparation and work in ascertaining at what amount any indicative bid might be set. More specifically, the financial information in relation to "actuals" for the financial years reported upon was used as the base material in the deal model. As for the forecasts, Jewison's evidence was that they were examined, interrogated and discussed by various members of the Project Hawk team, depending on their expertise, and were ultimately changed as Cargill considered appropriate.

547 The covering email to the preliminary workplan listed the workstreams for Project Hawk. The 7 workstreams, being commercial and operations, accounting and financial, synergies, structuring/financing, valuation, legal, and regulatory aspects, each had persons allocated to them on a provisional basis. Engle invited suggestions with respect to the composition of these workstreams.

548 On 21 May 2013, a meeting was held between Goldman Sachs and Cargill representatives, including Le Binh, Engle, Hawthorne, Sagaert, Jewison, Eden and Viers. At this meeting, commercial and valuation workstreams were discussed. Although the list was described at trial as very preliminary and incomplete, as a result of the meeting Goldman Sachs listed various commercial issues that needed to be attended to in relation to the possible acquisition of Joe White. That list included needing to "diligence" Joe White's customer relationships and the nature of the contracts with respect to locked-in pricing, and to further examine the concentration of Joe White's customer list (it was noted that the top 5 customers comprised approximately 60 percent of revenue).

549 With respect to procurement, the incremental margin of $15 per tonne was recorded in the list as a key observation that needed to be "diligenced" in Phase 2. Further, it was observed that the Information Memorandum specified only 2 plants had been shut down since Minto was commissioned. Reference was made to rumours that 3 plants were supposed to be shut down and the need to test whether there were plans to close additional operations.

550 It was recorded that Cargill needed to consider areas in which it could reasonably extract productivity improvements.

551 In relation to valuation, it was stated that Cargill would look at analysing the Joe White Business on a project internal-rate-of-return basis. Cargill indicated during the meeting that it would like input from Goldman Sachs on how competitors would look at both the cost of capital and potential trading comparables.

552 In addition to some other matters Goldman Sachs was to contribute to, it was agreed that the Joe White Business was to be viewed as a business in Australian dollars with United States dollars in revenues. It was decided that Goldman Sachs and Cargill were to build separate valuation models based on this assumption.

553 It was agreed Viers would take the lead for the commercial and operations workstream. Previously, it had been contemplated that Sagaert would lead this

workstream. In any event, this workstream consisted of Viers, Eden, De Samblanx and Sagaert.

554 Pausing here, Engle gave evidence that as project manager for the deal, he saw his role as twofold. *First*, he had an overall project management role. *Secondly*, he was to work with all workstreams to provide financial analysis on the suitability and viability of Joe White as an acquisition. As part of this function, he was required to ensure Cargill had all necessary inputs into the valuation for the purposes of calculating an indicative bid and final bid for the purchase of Joe White. In particular, Engle was responsible for ensuring that the valuation model incorporated all relevant feedback from the operational people working on the deal. Engle oversaw and managed this process, assisted by Le Binh and Patrick Bowe Jr ("Bowe").[405] Engle also worked closely with Jewison. Jewison had read the Phase 1 Process Letter, including that Cargill was required to make and rely on its own investigations. Her evidence was that she understood Cargill was required to evaluate the information provided and make its own assumptions with respect to any projections.

555 Although Eden was primarily responsible for all material presented to the Cargill leadership team and the board, Engle led the valuation analysis and preparation of the model under the supervision of Hawthorne. In order to have the food ingredients and systems platform review a proposal, it required a sponsor. Van Lierde was appointed the project sponsor.

556 Hawthorne gave evidence that there were various elements that formed part of Cargill's risk assessment. For example, because Joe White was located in Australia it attracted a lower risk profile than if it had been in Argentina. The risk profile was reduced further by reason that Joe White was a mature business, rather than a start-up. Further, part of the process in preparing inputs for the deal model in any acquisition was to look at material provided in any information memorandum from a

405 At the time of giving his evidence, Bowe was an employee of Cargill, Inc as a business development manager, but was a summer intern in 2013 in the strategy business development group from 10 June 2013 to 23 August 2013. He has a masters of business administration from Northwestern University and a bachelor of arts from Stanford University.

vendor. This case was no exception.[406]

557 On the afternoon of 21 May 2013 (Minneapolis time), Engle and Le Binh met with Viers to introduce to him the first cut of the valuation model and to discuss the various assumptions and viewpoints contained within it. They also indicated to Viers the inputs they would need from the commercial and operations workstreams to populate the valuation model.

558 On 22 May 2013, a telephone meeting was held between Jewison, De Samblanx, Sagaert, Viers, Eden, Engle and Hawthorne to discuss preliminary views on the data contained in the Information Memorandum. At this meeting, potential areas for synergies were explored. In that regard, it was decided it was necessary to speak to Cargill's grain and oilseeds supply chain to discuss synergies around exporting malting barley, freight values and other relevant matters. Issues concerning workstreams and personnel within Cargill to fill various roles were also discussed. After this meeting, Jewison circulated notes of what had been discussed in a spreadsheet entitled "Project Hawk Review of Information Memorandum".[407] The spreadsheet identified the page of the Information Memorandum being referred to, whether the matter being raised was to be considered in Phase 1 or Phase 2, matters that related to synergies, potential "Flags" or issues, and questions to be raised. In referring to the page of the Information Memorandum concerning Joe White's relationship with its customers,[408] a query was raised about what Cargill could learn from Joe White about its approach to customer relationships and that there may have been the prospect of further synergies in this regard.

559 It was anticipated that if the acquisition of Joe White were to go ahead, Cargill's grain and oilseeds supply chain could supply barley to Joe White which could give rise to synergies. Philippa Purser ("Purser"),[409] at that time business unit leader of grain and

406 See issue 20 below.

407 The notes were emailed to Goldman Sachs with the subject "Project Hawk: Questions/Issues from [Information Memorandum]" for incorporation into Goldman Sachs' "consolidated document".

408 See par 518 above.

409 Purser commenced employment with Cargill in 1991. At the time she gave evidence she was group director of premix and nutrition. In contrast to other witness statements, her witness statement did not

oilseeds supply chain, as well as country representative for Cargill in Australia,[410] was involved in obtaining information on this issue.[411] The matters to be addressed included: identifying opportunities that could broaden the grain varieties and maintain quality for supply to Joe White; using Cargill's expertise in grain procurement (which it was presumed did not exist within Joe White itself) to create revenue; and assisting the Project Hawk team with questions and information about barley prices in the context where there had been large historical fluctuations in recent times.

560 Viers could not recall the specifics of the meeting, but gave evidence that he understood that Cargill was using the data from the Information Memorandum to consider whether there were any synergies Cargill could achieve which Joe White was not achieving. In particular, the focus was upon cost savings or other benefits which might have an impact on the performance of Joe White in the long-term and on the offer price Cargill was prepared to bid in the short term. Further, Viers' evidence was that the valuation model, and subsequent versions, were consistent with the sort of issues that were raised from the Information Memorandum.

561 Late on 22 May 2013, an email was circulated to a large number of Cargill employees by Goldman Sachs providing a summary of the "weekly call". These weekly meetings were facilitated by Goldman Sachs. That summary included initial feedback that had been provided by Merrill Lynch, which stated, amongst other things, that no vendor due diligence was to be expected in the Data Room. During Purser's cross-examination, it was put to her that by this weekly meeting and the subsequent email she had been informed that Glencore had not done any due diligence on Joe White as a vendor. Purser's evidence was that she did not take being advised that a vendor due diligence not being included in the Data Room carried with it that Glencore had, itself, decided not to do a vendor due diligence.[412] Further, she did not take the

---

give any details of any tertiary qualifications.

410 As Australian representative, Purser's responsibilities included understanding markets and competitors, together with staying across business opportunities and threats. Purser was not part of the core Project Hawk team.

411 Purser was not involved in putting together the deal model or valuation for Joe White.

412 See fn 321 above. But also see pars 973-974 below.

information as telling her that Glencore had no real idea about the details of the operations of Joe White. No other witness called on behalf of Cargill who was involved in this meeting was cross-examined on this email.

562 On 24 May 2013, Jewison sent an email concerning the review of the Information Memorandum. The attachment summarised proposed questions for Phase 1 and Phase 2 of the bidding process, various issues and actions, together with synergies that had been identified (although the list was not intended to be exhaustive).

563 The attachment noted that the Unadjusted Earnings forecast was a "hockey stick".[413] An action item was to review and adjust Unadjusted Earnings forecasts. Further action items included validating how growth projections compared to Cargill's internal growth projections; verifying freight rates; applying malt benchmarks to water and power detail and to benchmark capital expenditure with Cargill's internal business; understanding port storage and put-through arrangements; understanding seed research and development; requiring Joseph Christianson ("Christianson"), global merchandising and risk manager at Cargill Malt, and the Australian arm of the grain and oilseeds supply chain to validate and project barley earnings to test the incremental margin of $15 per tonne; validating what Cargill thought would happen to margins; assessing creating a single office in Australia; reviewing "all the team" and whether Cargill would retain them; assessing the impact on the Japanese market and how that would play out with 4 regions; requiring Christianson and the Australian arm of the grain and oilseeds supply chain to develop a 5-to-10 year plan on the outlook on barley; and numerous other matters.

564 With respect to synergies, a large number of matters were listed. These included matters with respect to barley varieties, barley exports, malt arbitrage, increasing volumes to Japan, freight, technology, energy, relocation of Joe White management to Melbourne, reducing the number of employees, centralising research and development and other matters. The estimated value of any synergies were listed as

413 See par 492 above. The reference to a hockey stick was a reference to actuals having recently declined only for the Unadjusted Earnings to be forecast to substantially increase in the immediately succeeding years.

"tbd", to be determined.

565 Also on 24 May 2013, Le Binh emailed a spreadsheet summarising synergies that had been discussed. He asked for the list of synergies to be reviewed with respect to both values and timing. As to the synergies that did not yet have a value, Le Binh asked for values to be inserted even if very conservatively.

566 The attached spreadsheet contained a significant amount of detail with respect to potential synergies. Le Binh gave evidence that in preparing this spreadsheet he was not questioning or seeking to verify the underlying information or data in the Information Memorandum. He rejected the proposition that all the synergies identified were based on Cargill's own assessment having independently verified the underlying facts. Rather, he said he was seeking to verify whether the synergies were likely to be true. When this topic was revisited later in his cross-examination, Le Binh said information was collected from the Information Memorandum and then an analysis was done on the potential synergies.

567 The spreadsheet listed 12 types of synergies, including new volume in Japan, additional volumes with existing Cargill customers in Asia and other regions, and additional volumes with existing Joe White customers who could not be served because of capacity limitations. When Engle was taken to this spreadsheet, he accepted that none of the 3 synergies referred to above could be found in the Information Memorandum. Le Binh was not quite as clear-cut. His evidence was that he was relying upon the information in the Information Memorandum to derive the synergies, although he accepted assumptions made with respect to additional sales were not contained in the Information Memorandum.

568 In any event, it appears much of the information concerning synergies was derived from an email sent by Viers earlier on 24 May 2013. In this email, Viers set out the rationale for a synergy value totalling $15.5 million annually. Viers also referred to the incremental margin of $15 per tonne "implied in the [Information Memorandum]" and stated that Christianson believed it was a "pretty healthy assumption".

Notwithstanding this, Viers identified the need to look at the margin further.

569 It is plain from the detail listed in the email that much of the information underlying the assumptions made with respect to potential synergies was information of Cargill and was not contained in the Information Memorandum. Le Binh gave evidence that in addition to using the information made available by "the seller", he was also relying on Cargill's own industry knowledge and experience in making assessments about forecasts. That said at this point in time, broadly speaking, Cargill must have been proceeding on the assumption that the Joe White Business was largely as represented in the Information Memorandum. Le Binh's evidence was to that effect.

570 In response to Viers' email, Engle suggested that the synergies that had been agreed upon earlier that day, totalling approximately $9 million, be kept. Engle stated that they could look at the further synergies that Viers had identified after further discussion early the following week or in Phase 2 of the bidding process. Engle suggested that presenting anticipated synergies close to 50 percent of the target Unadjusted Earnings could be seen as aggressive. Viers agreed with this suggestion. Some days later, Hawthorne concluded that Viers had presented a good list, and that going forward synergies might fall into the categories of "certain", "probable" and "potential". Feedback was provided by the deal team with respect to the synergies.

571 On 25 May 2013, Le Binh circulated the first draft of the valuation model to Viers, Eden, Sagaert and Jewison, copied to Engle and Hawthorne. That draft contained a base case model and a management case.[414] Le Binh said he discussed this iteration of the model with Engle and Hawthorne before emailing it. He directed that the documents should not be shared beyond the small group to whom it had been circulated. He invited feedback, suggested changes and questions. Engle and Le Binh had developed the valuation model from scratch.

572 Le Binh's evidence was that this draft valuation model relied upon data from the Information Memorandum. He said the estimates contained in it were very

414 Broadly, the management case was based on the information provided in the Information Memorandum without any substantial modification or independent assessment.

preliminary. It is plain on the face of the document that much of the information contained in it was derived from the Information Memorandum. That said, there were also some material differences. For example, although the net sales and malt margin figures were identical from 2010 to 2016, both the figures for Unadjusted Earnings[415] were different in and from 2014. Further, the projections in the Information Memorandum (and the Due Diligence subsequently conducted) ended in 2016, whereas the draft valuation model continued to 2023. Furthermore, Cargill utilised a discount rate it had chosen in consultation with Goldman Sachs without any reference to the Information Memorandum. Le Binh explained that the projections were based on Cargill's own assessment, based on its knowledge of the industry as well as its assessment of the information provided by the Sellers. When Le Binh was asked during cross-examination how Cargill's figure for Unadjusted Earnings for 2014 could be connected to any information provided by the Sellers, Le Binh stated there was a lot of information that was provided that was "not numbers" but that did translate into numbers.

573 In addition, the model contained significant assumptions that were to be extensively analysed and tested once the Due Diligence had properly started. Le Binh's evidence was that although the synergies of approximately $60 million were not derived from the Information Memorandum, the assessment "was based on the analysis that was based on the Information Memorandum". Further, Viers' evidence was that the synergies took into consideration that Joe White was a fully functional and legally compliant business, that complied with customer specifications and was appropriately run. Engle's evidence was that at this point in time Cargill had very limited information about Joe White. Essentially, Cargill had the data in the Information Memorandum and industry observations from Cargill's workstreams.

574 The draft deal model contained an income statement and a discounted cash flow. Engle explained why there was a discounted cash flow analysis both with and without synergies. His evidence was that, in acquisitions, buyers generally prefer not to pay

415 In relation to earnings before interest and tax, as well as earnings before interest, tax, depreciation and amortisation.

for synergies and seek to pay the price the asset is worth to the seller. The standalone base case value, without synergies, was estimated to be $243.4 million. However, he gave further evidence that, in a competitive auction process, it is probable that a buyer would have to pay for the synergies it is looking to extract. Because of this, the "with synergies" value was where much of the focus lay. At this point, the base case valuation of the Joe White Business with synergies was $302.3 million.

575 Hawthorne was cross-examined on the draft valuation. He accepted it was in "Cargill form", but bespoke for the transaction. He said it was a preliminary model, but the base case would hold through all the different models as the expected case, which he referred to as the budget case. He said as it was the first model, he believed the information embedded for the forecasts for 2014 to 2023 was available in the Information Memorandum. Had it not been available, Cargill would have extended the information that was in the Information Memorandum to cover a 10-year forecast. In this regard, he explained the base case involved variations, based upon Cargill's judgment.

576 Hawthorne was also taken to the management case, which had a standalone value calculated at $259.9 million. He explained it was different from the base case as in addition to relying on the Information Memorandum, information would be added from Joe White management presentations. However, he said it was the base case that ultimately would be presented for review and approval.[416]

577 Eden also agreed that the base case could be contrasted to the management case. However, he rejected the proposition that the base case was not built upon the information contained in the Information Memorandum. Rather, his evidence was that the base case was built from the Information Memorandum, and then other assumptions were added on to it.

578 A meeting of the food ingredients and systems platform was scheduled for 30 May 2013. With this in train, on 24 May 2013 Le Binh circulated a draft platform update for

---

416 But also see par 599 below. Eden gave evidence that the management case was the case presented by him on 30 May 2013.

review. This draft contained a significant amount of information extracted from the Information Memorandum. Although it contained some of the work that had been done with respect to synergies and dis-synergies, the document was still very much an early draft.

579 On 27 May 2013, Sagaert sent an email to Le Binh, copied to Hawthorne, Eden, Engle, Viers and Jewison. She provided some feedback with respect to synergies, valuation and integration. Sagaert queried whether Cargill had enough reasons to believe the hockey stick in terms of Unadjusted Earnings.[417] Sagaert agreed during cross-examination that she was sceptical of the Unadjusted Earnings figures and wanted them assessed by Cargill.

580 In response, amongst other things, Eden said it was necessary to have a better answer on the Unadjusted Earnings drop. He asked Viers to do some work on the Australian barley crop and pricing. Eden observed that until Cargill had further detail, it would not understand what the arrangement was between grain and malting operations.

581 Eden also enquired as to how Cargill would account for the "sales general and administrative" scale benefit to the broader malt business. Eden's evidence was that this was a reference to bringing businesses together and identifying any opportunities to consolidate areas of "sales general and administrative" expenses.

582 Further, Eden said he would like to address operational synergies concerning the existing malt business from Joe White's best practices. Eden gave evidence that he was pretty impressed with the Joe White Business and thought there would be opportunities to bring some of Joe White's technical knowledge into Cargill's business. Again, Eden observed the position would not be known until Cargill had the chance to see Joe White's books and business.

583 Finally, Eden raised the possibility of moving the Joe White office from Adelaide to Melbourne and considering what synergies would flow.

---

417 See pars 492, 563 above.

584 Notwithstanding that provision was made in the document for Glencore to execute the Confidentiality Deed, Glencore refrained from doing so until late May 2013. On 21 May 2013, Mallesons received final instructions from Switzerland concerning Glencore's execution of the Confidentiality Deed. As a result, an email from Mallesons to Cargill noted there had not been an exchange between the parties, and invited Cargill to re-execute the Confidentiality Deed if the proposed amendments were acceptable.[418] Cargill acted accordingly.[419]

585 The Confidentiality Deed between Glencore (as "Discloser") and Cargill, Inc (as "Recipient"), as contemplated in both the Phase 1 Process Letter[420] and the Information Memorandum,[421] in its final form was dated 27 May 2013.[422] The first page recorded certain details, including that the governing law was that of Victoria, Australia, and the recitals which stated:

> A [Cargill, Inc] wishes to obtain access to information for the Approved Purpose.
>
> B [Glencore] has agreed to disclose or otherwise make available certain information to [Cargill, Inc] on the terms and conditions set out in this deed.

586 The "Approved Purpose" was defined in the deed as "[Cargill, Inc]'s evaluation of whether to acquire [Glencore]'s Related Body Corporate's malt business". "Confidential Information" was defined as:[423]

> all Information disclosed or otherwise made available by [Glencore] or its Representative to [Cargill, Inc] or its Representative for or in connection with the Approved Purpose and all information created by [Cargill, Inc] or its Representatives in the course of carrying out the Approved Purpose including:

---

418 The amendments were minor. It is unnecessary to identify them as the Cargill Parties accepted nothing was to be made of any of the differences.

419 The Confidentiality Deed recorded Hawthorne, on behalf of Cargill, Inc, executing the further document on 22 May 2013 and Glencore executing it on 27 May 2013. Hawthorne's evidence was that he also read this version of the Confidentiality Deed and understood the obligations created by it.

420 See par 460 above.

421 See par 470 above.

422 It was sent under cover of an email of the same date "[f]or the purposes of exchange".

423 Excluded Information was defined to mean information which was or became part of the public domain otherwise than through a breach of the Confidentiality Deed, as well as information Cargill could prove it already knew and information developed independently or derived from a third party. Pursuant to cl 4.1, cll 3.1, 3.2, 3.5, 4.3 and 6 did not apply to Excluded Information.

(a) information which is the proprietary or confidential information of [Glencore] or any of its Representatives;

(b) proprietary or confidential information of a third party to whom [Glencore] or its Representative owes an obligation of confidentiality;

(c) information derived or produced partly or wholly from such information including any calculation, conclusion, summary or computer modelling; and

(d) trade secrets or information which is capable of protection at law or equity as confidential information or is otherwise confidential in nature,

whether the information was:

(a) disclosed orally, in writing or in electronic or machine readable form;

(b) disclosed or created before, on or after the date of this deed;

(c) disclosed as a result of discussions between the parties concerning or arising out of the Approved Purpose; or

(d) disclosed by [Glencore], any of its Representatives or by any third person.

Further, "Information" was defined to mean:

all information regardless of its Material Form, relating to or developed in connection with:

(a) the business, technology or other affairs of the Discloser or any of its Representatives;

(b) the Approved Purpose; or

(c) any systems, technology, ideas, concepts, know-how, techniques, designs, specifications, blueprints, tracings, diagrams, models, functions, capabilities, designs, (including computer software, manufacturing processes, other information embodied in drawings or specifications) or intellectual property owned or used by, licensed to the Discloser or a Representative of the Discloser.

587 By clause 1.3, the parties acknowledged that Confidential Information was not regarded as being in the public domain by reason only that some portion of it was public, or was publicly available, which together with other Confidential Information could be used to produce any Confidential Information.

588 The remaining definitions relevant to the issues in the case were:

Loss means any damage (whether forseeable or not), loss, cost or expense

(including legal fees on a full indemnity basis) and which may arise directly or indirectly.

…

Representative of a party includes:

(a) a Related Body Corporate of the party;[424] and

(b) an officer, employee, agent, auditor, adviser, partner, consultant, joint venturer, contractor or sub-contractor of the party or of a Related Body Corporate of that party.[425]

Transaction means any transaction, acquisition or investment contemplated in connection with the Approved Purpose.

589 The general terms of the Confidentiality Deed set out various obligations, including an obligation of confidence in respect of the Confidential Information, an obligation to return Confidential Information, and various privacy obligations. The Confidentiality Deed also set out a right of Glencore to obtain injunctive relief should Cargill, Inc breach or seek to breach its terms.

590 It is necessary to set out some of the clauses of the Confidentiality Deed in full:

2 Operation[426]

2.1 Consideration

The Recipient gives the undertakings in this deed on behalf of itself and its Representatives in consideration of the Discloser agreeing to disclose and disclosing and procuring its Representatives to disclose the Confidential Information in accordance with this deed.

2.2 Discretion

Nothing in this deed obliges the Discloser or its Representatives to:

(a) disclose any particular information to the Recipient or its Representatives; or

(b) negotiate with the person or enter into any Transaction.

---

424 "Related Body Corporate" had the same meaning as given to it in s 50 of the *Corporations Act 2001* (Cth), which included a holding company or a subsidiary of another body corporate.

425 Certain "Excluded Entities" were stated not to be a "Related Body Corporate", the detail of which is not material: cl 1.2.

426 Headings were for convenience and were not to effect the interpretation of the Confidentiality Deed: cl 1.7.

The Discloser and its Representatives have an absolute discretion as to the information they choose to disclose.

3 Obligation of confidence

3.1 Recipient to maintain confidence

[Cargill, Inc] agrees to:

(a) maintain the confidential nature of the Confidential Information;

(b) not disclose or otherwise provide any Confidential Information or the existence of or terms of this deed to any person except:

(i) in accordance with clause 3.2 ("Pre-disclosure obligations"); or

(ii) with the prior consent of the Discloser;

…

3.2 Pre-disclosure obligations

Before disclosing the terms of this deed or any Confidential Information for the Approved Purpose to any of its Representatives, the Recipient must:

(a) ensure that each Representative is made fully aware of the confidential nature of all Confidential Information and the terms of this deed; and

(b) only disclose the Confidential Information to its Representatives on a need to know basis.

3.3 Recipient's responsibility for Representatives' conduct

[Cargill, Inc] must procure that its Representatives do not do or omit to do anything which if done or omitted to be done by [Cargill, Inc], would be a breach of [Cargill, Inc]'s obligations under this deed or an obligation of confidence owed to [Glencore] or any of its Representatives.

…

6. Return of Confidential Information

6.1 Return, destruction or deletion of Confidential Information

[Cargill, Inc] must (at its own expense):

(a) return by delivery to [Glencore] … all documents and other materials … which contain or refer to any Confidential Information …; and

(b) delete any Confidential Information that has been entered into a computer, database or other electronic means of data or information storage …;

on the earlier of:

(c) written demand by [Glencore]; or

(d) the time the documents and other materials are no longer required for the Approved Purpose.

6.2 Exception

Clause 6.1 … does not apply to or require the return, deletion, alteration or destruction of any legal advice, internal working papers or legal opinions prepared for [Cargill, Inc] or Confidential Information retained to the extent required by law …

…

8 No Reliance

8.1 Acknowledgement

[Cargill, Inc] acknowledges and agrees that:

(a) most or all of the Confidential Information consists of data prepared in the ordinary course of business and has not been prepared with the intention that [Cargill, Inc] should rely on it in connection with the Approved Purpose or the Transaction;

(b) except where expressly identified as such, the Confidential Information has not been audited or independently verified;

(c) neither [Glencore] nor its Representatives gives any assurances as to the degree of care or diligence used in compiling or preparing the Confidential Information;

(d) [Glencore] or its Representatives may not have provided all information that may be required by the recipient to achieve the Approved Purpose or the Transaction;

(e) nothing contained in the Confidential Information constitutes an offer, recommendation or invitation by [Glencore] or its Representatives to any person;

(f) this deed does not grant to [Cargill, Inc] or its Representatives any licence or other right in relation to the Confidential Information except as expressly provided in this deed; and

(g) certain Confidential Information may have been disclosed with the consent of third parties and may be subject to conditions imposed by those parties.

8.2 No representations or warranties given

[Cargill, Inc] acknowledges that neither [Glencore] nor any of its Representatives:

(a) has made nor makes any representation or warranty, express or implied, as to the accuracy, content, legality or completeness of any Confidential Information;

(b) is under any obligation:

(i) to notify [Cargill, Inc] or its Representatives; or

(ii) to provide any further information to [Cargill, Inc] or its Representatives,

if [Glencore] or its Representatives become aware of any inaccuracy, incompleteness or change in the Confidential Information.

8.3 Recipient to make its own assessment

[Cargill, Inc] agrees and acknowledges that:

(a) it must make its own assessment of all Confidential Information and satisfy itself as to the accuracy, content, legality and completeness of the information;

(b) any forecasts or estimates in the Confidential Information may not prove to be correct or be achieved; and

(c) it will rely solely on its own investigations and analysis in evaluating the Transaction.

9 Transaction

9.1 No disclosure of discussions

The Recipient agrees not to disclose to any person without the prior consent of the Discloser or except as permitted by this deed or as it may be required to disclose by any law, order of any Government Agency or the rules of any stock exchange:

(a) the existence of the contents of this deed;

(b) the contents of any discussions between the parties relating to the Approved Purpose or the Transaction; or

(c) the fact that any discussions between the parties and their Representatives relating to the Approved Purpose or the Transaction have taken place or will or may take place.

…

9.3 Representations and warranties in relation to the Transaction

The Recipient agrees and acknowledges that unless and until there is a formal binding agreement between the Discloser and the Recipient to effect the Transaction:

(a) …

(b) the Discloser and its Representatives are not under any obligation of any kind to the Recipient or its Representatives (except for those set out in this deed) in relation to the Transaction.

10 Liability

10.1 Disclaimer by Discloser

Subject to clause 10.4 ("Representations") and any law to the contrary, and to the maximum extent permitted by law, [Glencore] and its Representatives disclaim all liability for any Loss suffered by any person using, disclosing or acting on any Confidential Information and whether the Loss arises in relation to, in connection with or as a result of any negligence, default or lack of care on the part of [Glencore] or any of its Representatives, or from any misrepresentation or any other cause.

10.2 No legal proceedings to be brought by Recipient

Subject to clause 10.4 ("Representations") and absent fraud or wilful misconduct by [Glencore], [Cargill, Inc] agrees to:

(a) not bring or institute any legal proceedings against [Glencore] or its Representatives in respect of any Confidential Information; and

(b) procure that its Representatives do not bring or institute any proceedings of the kind specified in clause 10.2(a) above.

10.3 Release by Recipient

Subject to clause 10.4 ("Representations") [Cargill, Inc] unconditionally and irrevocably releases [Glencore] and its Representatives from any liability which (notwithstanding the disclaimer in clause 10.1 ("Disclaimer by [Glencore]") may arise, whether directly or indirectly, in relation to, in connection with, or as a result of the provision of the Confidential Information or any reliance placed by any person on any Confidential Information or the non disclosure of any Information including any liability resulting from any negligence, default or lack of care on the part of [Glencore] or any of its Representatives or from any misrepresentation or any other cause.

10.4 Representations

[Glencore] and its Representatives shall be responsible for representations or obligations set forth in separate written agreements between the parties in accordance with the terms of those written agreements.

11 Benefit

[Cargill, Inc] agrees that the undertakings in this deed are given for the benefit of, and are enforceable by, [Glencore] and any of its current or future Representatives even though the Representative is not a party to this deed.

591 On 29 May 2013, Goldman Sachs provided a preliminary valuation pack to Cargill, which had been prepared separately from Cargill's valuations, and which had been updated to incorporate information received concerning synergies. The valuation

methodologies included a discounted cash flow based on forecasts in the Information Memorandum, trading multiples and transaction multiples. These last 2 methodologies were based upon an enterprise value by reference to sales and Unadjusted Earnings. The introduction noted that the forecasts in the Information Memorandum would need to be "diligenced and sensitised further" during Phase 2 of the sale process.

592 Two discounted cash flow valuations were provided. The first was based upon the forecast contained in the Information Memorandum; the second upon the same forecasts but with the benefit of information from Cargill concerning synergies. The valuations of the Joe White Business using this method were in the range of $227-347 million and $247-377 million respectively. Naturally, in ascertaining a value based on a discounted cash flow some input needed to be given by Goldman Sachs that could not be derived from the Information Memorandum, including with respect to synergies.

593 Also on 29 May 2013, Goldman Sachs sent an email to Engle providing a summary of the strategy for the bid. It was noted that Cargill intended to submit an indicative bid that would ensure participation in Phase 2, without being unnecessarily exuberant. Goldman Sachs stated that the information provided to date did not give a clear picture of Joe White's actual recent performance, in part because of pro formas being provided with respect to 3 different owners since 2009. It was further stated that pro forma normalisations made it difficult to accurately estimate the opportunity for synergies. As for the competitiveness of the bidding process, it was stated that it was expected to be highly competitive.

594 On 30 May 2013, Le Binh circulated supporting material for the food ingredients and systems platform review of the Joe White Business. Although Eden did not prepare the platform review document, he was the person who presented to the platform.[427] Engle also attended the presentation and supported Eden on the expected process

427 The document was circulated before the meeting. Eden only spoke to some of the slides during the course of the meeting, which slides were marked with a purple dot. He also had his own version on which he made notes in preparation for the meeting.

dynamics, on what Cargill could expect in the next stage, and concerning likely competitors and what they might bid. He was very enthusiastic in doing so. Eden's evidence was that it was about this time that he began to investigate on the basis that the purchase of Joe White was a real possibility.

595 The platform review stated that Cargill had decided to pursue the opportunity of acquiring Joe White as its acquisition would complete Cargill's global footprint in the key barley production areas, enabling Cargill to better serve the global brewers in the Southeast Asian market. In so doing, Cargill would create an original stronghold in the only major malting barley region and in Cargill's portfolio. It was recommended that a non-binding first round proposal be put at a price sufficient to secure participation in the second round so that due diligence could occur.

596 The first section of the platform review provided an overview of Joe White. The source of that information was identified as the Information Memorandum. In Eden's copy of the review with his handwritten notes made to assist him in his presentation, he noted that Cargill should accept the management case with reservation. Eden noted Cargill would have to peel apart the elements of value during the Due Diligence.[428] He gave evidence emphasising that the process being undertaken was just a step to get to a point where Cargill could undertake due diligence and test what had been said by management in the Information Memorandum.[429]

597 As part of the overview, it was stated that Joe White had explained its poor performance for the 2013 financial year in the Information Memorandum. In bold, it was noted this would be a key focus area in the Due Diligence. Later, and as a repetition of Goldman Sachs' observation, it was stated the Information Memorandum did not give a clear picture of recent performance.

598 The next section was concerned with the strategic fit. This section included Cargill's

---

428 Eden's handwritten notes made for the purposes of the presentation were reflective of someone who was very enthusiastic about the prospect of Joe White becoming part of Cargill. There is no need to set out the detail; many of them were also made subsequently when Eden was preparing to present to the board in early July 2013: see pars 844-847 below.

429 Eden's understanding was that the Information Memorandum was the work of Joe White's management.

aspiration to be recognised as the leading global malting company and the partner of choice with its targeted customers. The critical capabilities were said to include "[o]perational excellence" and "[c]ustomer relationship management".

599 Preliminary valuations were provided for a Joe White "Management Case", the highest of which (with synergies) was $369 million at a discount rate of 8 percent. The document also considered potential competing bidders, of which there were many.

600 Next, the platform review listed risks and opportunities. Although some risks and reservations were expressed in addition to those referred to above, none of the risks concerned the possibility that the Information Memorandum might contain material inaccuracies. In addition to setting out matters already referred to above, the opportunities included increasing malting barley exports, increasing Australia's grain and oilseeds supply chain origination, lower freight rates, growing Cargill's relationship with Nestlé and entering the food malt extract market.

601 Finally, the platform review repeated the recommendation to submit a first round bid.

602 The food ingredients and systems platform leaders approved the continuation of the project.

603 As the sale process was getting underway, Joe White was continuing to experience issues with the quality of barley provided to it. Emails exchanged, in May 2013, between Youil, Evans and others reveal that Joe White was still raising concerns about meeting customer specifications using the barley supplied by Glencore Grain. Evans emphasised that, although he appreciated that Joe White was required to meet quality specifications set by customers, from Glencore Grain's business perspective it was necessary to use all the stock "before the germination is lost" and to deliver the barley to Joe White despite the fact that the results for batches already malted were "patchy" and recent parcels had "shown sluggish germination". Further, as a result of the quality of the barley delivered by Glencore Grain, it had been necessary for Joe White to "blend away some of the stock on hand". In response, Youil stated:

> I have been observing the emails going back and forth and the trouble this is causing our plants to plan and meet customer specifications. All we are asking for is visibility of the stock allocations for [Joe White] with the appropriate quality information so that we can make an informed decision on our drawdown plans.

604 The Joe White production manager in Adelaide (who was part of the email chain) thanked Youil for "weighing in to the email debate". The manager informed Youil that he had asked Youil to be copied in as the situation had been "going on for a long time and very little seems to get through to these guys" (being a reference to Glencore Grain).

605 The problems persisted. On 5 June 2013, Glencore Grain sent an email to Joe White, providing a stock allocation sheet as requested. However, contrary to the certainty Youil had sought, the email stated the allocation might alter "for a range of reasons", which were not specified. In an incandescent response from Jones, copied to Wicks, Youil, Stewart and others, he told Evans that the situation was "getting ridiculous". The email referred to Joe White having sought an allocation for months, and "when it finally [came] (last night)" it was unsatisfactory. Jones complained that the barley provided included 10,000 tonnes of old crop that had not undergone recent germination testing, asking, "What do you expect us to do? Malt this on faith!". When taken to this email under cross-examination, Evans said he thought the allocation was in accordance with the stocks Glencore Grain had (rather than what had been ordered by Joe White), but he was unsure what had been supplied. There was no evidence of any response from Glencore Grain to Jones' email, nor anything to suggest Glencore Grain altered its position.

606 Also in early June 2013, Cargill, Inc was progressing its plans to submit a Phase 1 bid for Joe White. A presentation on Project Hawk, dated 3 June 2013 and delivered to the Cargill, Inc leadership team, sought guidance prior to the submission of Cargill, Inc's first round, non-binding bid for Joe White. The presentation was given by Eden, with Engle also in attendance.

607 This presentation's executive summary stated that Cargill Malt sought to pursue the purchase of Joe White as it would complete Cargill's global footprint in the key barley

production areas and enable Cargill to better serve the global brewers in the Southeast Asian market.

608 The presentation did not specifically identify the internal rate of return sought to be achieved. However, the document did set out the historical performance of Cargill Malt with respect to return on investment. The return on gross investment,[430] being a measure of Cargill's return on its total capital expressed as a percentage, was calculated in a similar way to the approach taken in ascertaining an internal rate of return for a new investment.

609 The presentation stated that Cargill's aspirational return for its malt business was 10.5 percent. A hurdle rate of plus 2 percent was also specified. Each business unit within Cargill had a different hurdle rate (also known as a minimum acceptable rate of return on investment). If the internal rate of return on investment was equal to or greater than the hurdle rate, a project was more likely to be approved. Cargill's hurdle rate for malt was 9 percent, but with an aspirational rate of 10.5 percent. None of this information was connected to the detail in the Information Memorandum.

610 The presentation itemised the assumptions made in providing the discounted cash flow for the Joe White management case valuation. It was put to Eden during cross-examination that none of this information came from the Information Memorandum. Eden gave 2 examples to demonstrate that proposition was incorrect referring to the sales volume and the malt margin. He then acknowledged he did not believe the barley cost was from this source. He then turned to manufacturing and distribution costs, but was unable to complete his answer as he was interrupted by the cross-examiner.

611 The presentation stated that Cargill, Inc's "team" recommended submitting a first round bid at a price sufficient to secure participation in the second round. In a slide setting out proposed bid tactics, the presentation read under the heading "Situation":

---

430 The acronym ROGI was used which was described to mean either return on gross investment or return on growth investment.

- Cargill should submit an Indicative Bid that ensures participation in the second (detailed) stage of the sale process, without being unnecessarily exuberant

- The information provided in stage one does not give a clear picture of [Joe White]'s actual recent performance:

  – Pro formas for the approaches of three different owners since 2009.[431]

612 The same slide recorded that the Cargill, Inc team expected the sale process to be highly competitive, and noted as a "challenge" that "[p]ro forma normalizations make it difficult to accurately estimate the synergies opportunity in Phase 1". Under the heading "Recommended Bid Tactics", the slide stated:

- Cargill should submit an Indicative bid containing a price Cargill is comfortable will reasonably secure second round participation, *expected to be >A$300M*

- *The value in the Expression of Interest will be stated as subject to confirmation via due diligence in the second stage*

- Second stage will also confirm that all key risks (e.g. regulatory, legal, [Environment, Health and Safety]) have been addressed via price adjustments or sale and purchase agreement mechanisms

(Emphasis added.)

613 The final slide before the appendix recommended a bid between US$320 million and US$350 million for the Joe White Business.[432]

614 The Cargill leadership team agreed with the recommendation. It was discussed whether the indicative bid should be higher, given that it was expected further synergies would be uncovered and Cargill wanted to submit a competitive bid to ensure progression to Phase 2. The Cargill leadership team decided to leave the decision as to the actual figure of the indicative bid to the core team.

615 Meanwhile, Glencore, Merrill Lynch and Mallesons were preparing the Data Room. A meeting was organised to be held on 5 June 2013 at Joe White's office in Adelaide to discuss the proposed contents. On 4 June 2013, Fitzgerald asked Joshua Wilson-

---

431 Presumably a reference to ABB Grain, Viterra and Glencore.

432 The recommendation also proffered that a bid of US$15 million to US$18 million was appropriate for Glencore's 42 percent share in Prairie Malt Ltd: see par 345 above.

Smith ("Wilson-Smith"), legal counsel for Viterra,[433] to attend, as Fitzgerald was not going to be available. Wilson-Smith duly attended, which was his first substantive involvement in the sale process.[434]

616 Also at the meeting were a senior associate from Mallesons, Kate Lindner ("Lindner"),[435] Hughes, Argent and representatives of Merrill Lynch. There was very little evidence about what was actually discussed. The following day, Merrill Lynch sent an email to Fitzgerald, Wilson-Smith, Argent and Lindner, copied to Hughes, King and others, attaching a proposed index for the Data Room. The email suggested the steps for "each document and responsibility" had been discussed the previous day. Further, it stated that the exercise should be finalised in a meeting early the following week to have "*Glencore* sign-off by … 12 June" (emphasis added).

617 The attached draft index, entitled "Data Room Information Log", contained a table with the following columns: "Document", "Redaction (Y/N)", "Include in Black Box?", "Comment", "Responsibility", and "Uploaded/Finalised". Various types of documents were listed, with varying degrees of specificity.

618 The table indicated that Mallesons was to follow up with Glencore on the level of disclosure of key customer contracts (which attracted "Y" in the "Include in Black Box?" column) and that "Viterra Legal"[436] was to follow up on disclosure of "Company Policies" (which, according to the table, were not to be redacted or included in the black box).[437] As at that date, the table indicated that none of those documents had been uploaded or finalised.[438]

---

433 Wilson-Smith reported to Fitzgerald.

434 Around this time, Wilson-Smith was expecting a child and had a limited involvement in matters relevant to this proceeding for approximately a month.

435 In 2013, Lindner had approximately 6 to 7 years post-admission experience working in mergers and acquisitions (and another 5 years of experience in this field when she gave her evidence).

436 Specifically Fitzgerald and Wilson-Smith.

437 Company policies fell into 2 categories, being safety, health and environment, and "Other".

438 Hughes was not allocated any responsibility in relation to the classes of documents identified. Argent was referred to on 11 occasions, including in relation to "Viterra Malt Strategy Documents". Wicks was referred to once, in conjunction with Argent, concerning the standard terms and conditions of customer contracts. However, the vast majority of documents were allocated to Lindner.

619 According to King's evidence, in a transaction of this nature the provision of a data room to prospective purchasers was standard practice.[439] He agreed that a data room should contain all information that would be material to the way in which the business being sold was conducted. According to an action plan prepared in January 2013,[440] Roelfs, Walt and Mattiske were "in charge" of populating the Data Room.[441] However, King said this document was produced before the process really got underway, and the responsibility for overall oversight of what went in the Data Room "was a fluid thing".

620 Further, from early on it was agreed that Hughes and Argent would review what was to be included in the Data Room. That said, King made it clear that it was "up to us how much information we provide[d] to the buyers".[442] It was plain from the context in which this statement was made, that King was keen to ensure as much information as reasonably possible could be disclosed, consistent with confidentiality obligations and sensitivities. Further, King acknowledged that, as a former investment banker, he was effectively "schooling" Argent on the process. Although he did not witness it happening himself, he understood that Merrill Lynch, Mallesons and Fitzgerald uploaded documents to the Data Room.

621 Lindner gave evidence that the majority of the Data Room had been prepared when she became involved. She said she took her instructions from King, who was the most senior person instructing her, but did not know from whom he was taking his instructions. During cross-examination, she rejected the proposition that King had the final call on the documents to be included in the Data Room. In doing so, she gave evidence that documents came straight from "Viterra legal" and that King was not involved in deciding whether or not all those documents were included. On the issue of redaction, Lindner gave evidence that it was a very common practice to redact

---

439 This evidence was supported by other evidence given during the trial.

440 See par 367 above.

441 King did not recall having discussions with anyone from Joe White about what documents were to be placed in the Data Room, and did not know who made contributions as to the content of the Data Room.

442 King said the reference to "us" was not a reference to Glencore itself, but to the "collective on the email exchange", however it was ultimately Glencore's decision: see par 616 above.

customer names in "stage 1" of a data room.

N. Cargill's indicative bid

622 On 7 June 2013, Cargill, Inc submitted a non-binding indicative bid of $330 to $360 million to acquire Joe White ("the Cargill Indicative Bid"),[443] with the acquiring entity to be "via a wholly-owned Australian subsidiary".[444] Hawthorne sent the covering email to Merrill Lynch, stating Cargill was enthused to consider the potential acquisition of Joe White. Hawthorne stated that Cargill believed Joe White had a strong strategic fit with Cargill and its global malt, grains, and broader food ingredients businesses. In seeking to demonstrate Cargill, Inc was a serious contender, Hawthorne stated that for the 2012 fiscal year, Cargill, Inc had realised revenues that exceeded US$133 billion. Further, he informed Merrill Lynch that Joe White had previously impressed Cargill in interactions and by reputation in the marketplace. Hawthorne said Cargill would be keen to welcome the Joe White leadership team into Cargill, and offered extended career opportunities that Cargill's global malt business and other businesses were able to provide. Needless to say, Cargill was not shy about its enthusiasm in securing the Joe White Business.

623 Save for the amount specified as a range, the Cargill Indicative Bid was in the form requested by the Phase 1 Process Letter. It stated that Cargill, Inc's strategy was to continue to grow its global presence and customer relationships. Further, it stated the opportunity to combine Joe White's "footprint" was highly complementary to Cargill, Inc's existing global malt business. It continued:

> **(c) Indicative Bid price**
>
> *Based on our review of the information* contained within the [Information Memorandum] and [the Phase 1 Process Letter], our Indicative Bid comprises total cash consideration of A$330 – A$360 million, assuming that the Proposed Transaction Structure is effected. Our Indicative Bid is provided in the form of a range in part due to the challenges of estimating potential synergies based on the limited information provided to date. *We intend to refine our valuation with*

---

443 According to the Phase 1 Process Letter, it was to be assumed the Cargill Indicative Bid was $330 million: see par 466 above.

444 Beyond this description, Cargill Australia was not expressly identified.

an expectation that we could enhance our value based on more detailed information provided in Phase 2.

This Indicative Bid consideration is proposed on the assumption that [Joe White] and the other assets used in the Joe White [B]usiness are transferred to Cargill on a debt free and cash free basis at completion, along with adequate working capital to operate the business in the current market environment.

(d) Methodology and key assumptions

Cargill has *based its Indicative Bid on the information and forecasts* contained within the [Information Memorandum] and the [Phase 1 Process Letter]. In submitting this Indicative Bid, *Cargill assumes that the information provided by Glencore, Joe White and Merrill Lynch is true and accurate and supported by due diligence findings*. Furthermore, *we assume* that Joe White is being acquired on a going concern, steady-state basis *without issues* such as contingent liabilities, unusual terms and conditions in key contracts, outstanding litigation, *or any other matters that could result in a material adverse change to Joe White's business or significantly affect the value of Joe White*. Cargill has assumed that "the assets used exclusively in connection with the Joe White [B]usiness" comprise all of the material assets used in the conduct of the business and/or included as assets in the summary pro forma balance sheet.

Our Indicative Bid reflects our preliminary view of the value of Joe White using various methodologies, including discounted cashflow analysis, precedent transactions and trading comparables. For the purposes of our Valuation, *we have based our analysis on the pro forma [Normalised Unadjusted Earnings] provided in the [Information Memorandum]*.

(Emphasis added.)

Cargill concluded this section of the letter by reserving its right to vary its valuation assumptions in making any final offer.

624 Under the heading "Due diligence", the Cargill Indicative Bid read as follows:

In Phase 2 of the sale process, if selected, we would expect to undertake a level of due diligence customary for a transaction of the nature and scale of Joe White. This would include due diligence on the operations and business of Joe White, as well as due diligence in respect of Joe White's financial, tax, legal, [human relations], [information technology], environmental and [occupational health and safety] matters.

As is usual, *we would expect to have access to all material information related to Joe White*, and to be able to submit questions and receive answers from Glencore and its advisers. We would also expect to undertake site inspections and to receive a presentation from Joe White's management.

Cargill anticipates that, subject to information being reasonably available, it will need 5-6 weeks to complete its Phase 2 due diligence and prepare a Final Bid.

(Emphasis added.)

625 The Cargill Indicative Bid was signed by Hawthorne for and on behalf of Cargill, Inc.

626 Merrill Lynch received a total of 9 bids. Co-Operative Bulk was the highest of these at $350 million.[445] In emailing the details of all the bids to Glencore, Merrill Lynch stated it went without saying that the information had to be treated as confidential "in order to play the parties selected for round 2 off one another". Consistent with King's expectations,[446] most of the bids were from potential strategic buyers. Only 1 bidder was a financial bidder from a private equity firm, which firm made an offer of $160 million to $180 million.

627 Shortly after the Cargill Indicative Bid was submitted, Goldman Sachs contacted Merrill Lynch. Goldman Sachs stated to Merrill Lynch that Cargill had already committed significant resources to the transaction and was keen to progress the opportunity. It was indicated that Cargill was ready to commence Phase 2 immediately. An explanation was given as to why Cargill provided a range rather than a specific figure, namely because many of the synergies Cargill saw as available were unable to be quantified precisely from the information contained in the Information Memorandum.

628 Goldman Sachs informed Merrill Lynch that Cargill was still very keen to have a better understanding of a number of matters, including the type and extent of information available for the Due Diligence (especially with respect to environmental issues and financial reporting), the form any redacted information would take, and the "other assets" and employees to be transferred to Joe White and the possible liabilities associated with such transfers. This detail was conveyed in an email from Goldman Sachs to Hawthorne, and further circulated within Cargill including to Conway, Van Lierde, Eden and Engle. No exception was taken to the enthusiastic approach taken by Goldman Sachs.

629 When taken to the email from Goldman Sachs during cross-examination, Engle rejected the suggestion that the matters listed by Goldman Sachs concerning what

445 See par 622 above.
446 See par 390 above.

Cargill wanted to know represented Cargill's priorities for Phase 2. He said they only represented a portion of the priorities.

630 No doubt anticipating Cargill would be invited to participate in Phase 2, on 10 June 2013, Goldman Sachs emailed Engle attaching a draft due diligence question list which had been discussed the previous week. The email stated that the list included questions provided by Cargill, in addition to others Goldman Sachs believed were relevant. Goldman Sachs asked Cargill to prioritise the questions, noting that they were mindful that there might be a question limit as part of the Due Diligence.[447]

631 The next day, Engle forwarded the draft question list to members of the Project Hawk team and suggested everyone in the team review the list and assemble additional questions depending on the individual's speciality. Engle stated that Merrill Lynch might limit the number of questions, and accordingly Cargill should prioritise its requests.

632 On 11 June 2013, an email was sent by the operations lead for North and South America to Eden, Jewison and Viers concerning Certificates of Analysis, in which he stated that he had received some feedback from Hermus. The operations manager stated that he would keep working on the plan that had been agreed to try and sell a batch of malt as a generic blend to a particular Brazilian brewer or others. Eden's evidence was that, although he could not remember the actual circumstances, the reference to a generic blend indicated to him that Cargill had a mixed-up blend, so the varieties that had been used were unknown. He further explained that, at times, Cargill would have malt that was "off-spec" and would be looking for a customer who would accept it. Based on the contents of the email, Eden suggested that 1 region was trying to sell the malt to another region.

633 The email chain commenced with an email from Hermus, in which it was recorded that a Cargill malting plant in Argentina had problems with a "rounding rule"[448] as

447 In fact, a right to limit questions was part of the process: see par 652 below. However, there was no evidence that any limit was imposed.

448 This was referred to in the email as a rule by which results were rounded to whole figures. In this

the plant blended up to 5 percent of old crop malt which was not mentioned in the Certificates of Analysis.[449] It was suggested by Hermus that such a practice needed to be discussed at the level of the malt leadership team because the guiding principles in the Cargill Code might have been compromised. Hermus' email referred to Cargill Malt having started automated printing of Certificates of Analysis from Cargill's malt plant production system, MaPPS. He stated that it had been decided to print some disclaimers at the bottom of the Certificates of Analysis to indicate which parameters were calculated and which were the result of laboratory analyses.

634 Further, in relation to bills of material (which indicated varietal composition by way of percentage, as well as the crop year), Hermus noted the percentage was also the result of a calculation in MaPPS and there was a need to add a disclaimer to the effect that varietal composition was calculated and not physically analysed on each delivery. When Viers was taken to this part of the email chain during his cross-examination, he explained that physically analysing for barley varieties was a very complex and long process of deep chemistry that was not practical in the industry. In relation to reporting varietal composition, Viers gave evidence that it was necessary to secure the right varieties, maintain them through the system and to use them to produce the malt to the customer's requirements, rather than physically analyse for varieties at the end of the process.[450]

635 The penultimate email in the chain, sent 10 days later and directed to an employee of "Cargill Malt Commercial", was from Viers, who simply stated "[anything] new here". In response to Viers, a conference call was suggested to set the next steps. Viers was asked what he meant by his comment on the email chain. He rejected the

---

particular instance, it had the consequence that totals did not then amount to 100 percent which created issues for a specific customer.

449 When Eden was taken to this part of the email during cross-examination, it was put to him that it was within Cargill's guidelines not to mention 5 percent of old-crop malt being used. His response was that it would have been within customer guidelines. However, this was clearly speculation on his part as he could not remember the detail or it being discussed by the malt leadership team (of which he was in charge). Further, he accepted that Cargill's guidelines would not be compromised if the customer had agreed to the use of old-crop malt.

450 To avoid any confusion, there was no suggestion in this email chain that the individual specifications were being misreported or that the barley being used was anything other than the variety required by the customer. The issue raised was confined to the use of old crop barley in combination with the then current crop, without disclosing the fact.

suggestion that using 5 percent of old-crop barley without disclosing it was something done within the Cargill organisation. Further, his evidence was that, in making this comment, he was enquiring as to whether or not there was anything new around the discussion of this topic.

O. The sale process progresses, including due diligence

636 On 12 June 2013, Hawthorne, Eden, Engle and Viers had dinner with Glencore executives in Minneapolis, to discuss the sale of the Prairie Malt Ltd shareholding. A meeting was held the following day on the same issue.

637 On 14 June 2013, representatives of Cargill and Glencore met again to discuss the possible purchase of Glencore's 42 percent shareholding in Prairie Malt Ltd. This was the first time that Engle met Walt.

638 At the end of the meeting, Walt stated that Merrill Lynch would be contacting Goldman Sachs to inform it that Cargill would be invited to be part of Phase 2 of the bidding process for the Joe White Business. Walt stated he thought Cargill, Inc was a very logical buyer. He also foreshadowed various aspects of Phase 2, including a proposed management presentation to take place in Sydney and the ability to visit a Joe White plant.

639 Also on 14 June 2013, Merrill Lynch confirmed by letter that Cargill, Inc would be invited to participate in Phase 2 of the Proposed Transaction ("the Phase 2 Process Letter"). The Phase 2 Process Letter set out an overview of Phase 2, which was to include access to the Data Room, a question and answer process, a management presentation, tours of Joe White sites in Sydney, Adelaide and Perth, and the provision of a draft share purchase agreement. It was stated that Phase 2 included each of these processes in order to assist Cargill in making its final bid. The Phase 2 Process Letter stated that all Phase 2 information was also subject to the Confidentiality Deed.

640 Under the heading "Due Diligence Information", the Phase 2 Process Letter stated:

(a) Virtual Data Room and Q&A Process

> You will be provided access to commercial, financial and legal information for Joe White through [the Data Room].
>
> Please provide the relevant details of each person you would like to have access to the [D]ata [R]oom by completing and returning by e-mail the table attached as Appendix A to this letter. We have asked you to identify a "Nominated Representative" who will be the primary point of contact for any issues regarding the [D]ata [R]oom and the only person who can approve submission and prioritisation of questions for the due diligence Q&A process. Once we have received the completed table, you will be provided with login details and Q&A and [D]ata [R]oom protocols. The [D]ata [R]oom will be accessible from Monday, 17 June.

641 The Phase 2 Process Letter went on to set out arrangements for the management presentation, which was scheduled on 26 June 2013 at Mallesons' office in Sydney, and the site visits of Joe White's Sydney, Adelaide and Perth malt plants, which were scheduled for 26, 27 and 28 June 2013 respectively. In respect of both the management presentation and the site visits, the letter stated that in order to "avoid any misunderstanding on the day", audio or visual recordings would not be permitted.

642 The Phase 2 Process Letter requested that the final bid be submitted to Merrill Lynch by 2:00pm on 29 July 2013 and be expressed as a single number. It was stated that a draft share purchase agreement would be provided to Cargill approximately 3 weeks before the final bid was due. Cargill was told that its final bid should include its proposed share purchase agreement based on the draft provided in a form that Cargill was prepared to sign (with mark-ups of any amendments). It was stated that if there were proposed amendments, these would be factored into the assessment of Cargill's final bid. The bid was expected to be unconditional and capable of acceptance. However, the following was also stated:

> To the extent that there are any outstanding due diligence items for which you require final confirmation, these should be identified in your Final Bid, however, unresolved areas of due diligence may place you at a competitive disadvantage to other bidders. Confirmatory due diligence in relation to any documents that have been withheld or redacted will be provided only to a preferred bidder following the submission of Final Bids.

643 The Phase 2 Process Letter recorded that Glencore and Merrill Lynch reserved the

rights previously reserved in section 4 of the Phase 1 Process Letter,[451] and then stated:

> …
>
> You are required to make and rely on your own investigations and satisfy yourself in relation to all aspects of the Proposed Transaction.[452]
>
> **6. Other Matters**
>
> You are reminded of *your obligations under the Confidentiality Deed*. The existence and terms of this letter are "Confidential Information" for the purposes of that Confidentiality Deed. You should not speak with the media or any other person, *including another potential Counterparty*, under any circumstances regarding the Process or your participation in it.
>
> *No contact is permitted with any of Glencore or its related bodies corporate (including Joe White), or any of their respective officers, employees, customers or suppliers regarding the Proposed Transaction without the prior written consent of Merrill Lynch*, which may be withheld in its absolute discretion.
>
> (Emphasis added.)

644 The Phase 2 Process Letter required that any further information concerning Phase 2 was only to be obtained by enquiries to Merrill Lynch. Further, it set out the next steps to be taken, being the proposed management presentation and site visits, and included an appendix dealing with site visits. It identified prohibited conduct for the site visits as follows:

> No communication is permitted with anyone outside of the designated guide or Merrill Lynch chaperone, and similarly, you will not be permitted to take any photographs or recordings on the site visit.
>
> You will not be permitted to ask any questions that are not strictly related to the technical aspects of the plant, including but not limited to the following:
>
> - Transaction process-related questions
> - Other bidders that have visited the site
> - Finance/cost related questions (eg [Unadjusted Earnings] per tonne, manufacturing cost per tonne)
> - Specific plant customers
>
> We remind you that all information provided during the site visits are (sic)

---

451 See par 468 above.

452 Evidence was given by each of Hawthorne, Engle and Jewison that they read the requirement for Cargill to make and rely on its own investigations. Hawthorne's evidence was that this requirement was not unusual in this kind of letter. Van Lierde could not recall reading the Phase 2 Process Letter, but acknowledged he probably did.

subject to the Confidentiality Deed that you have signed.

645 In closing submissions, the Viterra Parties emphasised the fact that reference was made to Glencore and not Viterra throughout the Phase 2 Process Letter. Indeed, it was submitted that Viterra was not referred to at all, despite the Phase 2 Process Letter referring to "Glencore or any of its related bodies corporate (including Joe White), or any of their respective officers, employees, customers or suppliers …". Plainly, such language included Viterra and the employees of Viterra Ltd.[453] In any event, the point is of little moment. For reasons discussed elsewhere,[454] Viterra was plainly part of the sale process even if the process was being conducted at the direction of Glencore.

646 After receipt of the Phase 2 Process Letter, Cargill began conducting due diligence, both formally and informally. Cargill was not informed about the number of other bidders who had been invited to participate in Phase 2.

647 In response to the Phase 2 Process Letter, Engle sent an email to a large number of Cargill employees involved in Project Hawk. Having referred to various details with respect to Phase 2, it was stated that after "functional leads" had had access to the Data Room a plan would be coordinated to work through the information available. Engle also referred to the ability to ask questions of "the seller", and directed the addressees to keep that in mind when reviewing the materials.

648 Engle attached the team chart for Project Hawk. Team leaders were listed in bold type. De Samblanx was listed as the lead for manufacturing and technology.[455] Purser was listed as the supply chain lead with Christianson. Hermus was listed as the lead for food safety, quality and regulation with Jean-Philippe Tournoy, the operations manager for malt in the "Americas".[456]

---

453 There was no evidence of the existence of any employees of Viterra Operations or Viterra Malt.

454 See, for example, pars 457, 475-482 above and par 711 below.

455 De Samblanx gave evidence that as manufacturing technology lead he was required to look at the operational side of the Joe White Business. That did not involve considering the commercial side of any bid. At the time of this appointment, he knew very little about Joe White. Although he was aware of its existence, he did not know any specifics about the Joe White Business. Further, he had had no experience with the Australian malt market and did not possess any knowledge of Australian barley varieties.

456 Of these 2 names, only Hermus' appeared in bold.

649 On 15 June 2013, Engle emailed Goldman Sachs a revised question list that incorporated comments received up to then from the Project Hawk team. Engle noted that he had been through the list and classified Cargill's "top 40'ish High Priority questions" in a new sheet in the spreadsheet. Engle suggested that they continue to build out that new sheet so that it would contain the questions that would actually be sent. Plainly, it was contemplated that it was not intended to forward all questions formulated by all the Project Hawk members.

650 Meanwhile, Glencore was finalising matters to enable the Due Diligence to occur. On 17 June 2013, a protocol for the Data Room was put in place ("the Data Room Protocol"), which was required to be followed by Cargill and those who were authorised to access the Data Room.[457] It provided the Data Room was to be open from 17 June 2013 until 29 July 2013. It prescribed the first and last dates for the question and answer process was to be 17 June 2013 and 26 July 2013, though Glencore[458] reserved the right not to provide any answers to questions put after the proposed management presentation had been completed.

651 According to the Data Room Protocol, by accessing the Data Room, the Authorised User[459] acknowledged and agreed that she or he had read the Confidentiality Deed and agreed to its terms.[460] The Data Room Protocol expressly prohibited any contact with Glencore and its Related Bodies Corporate, its employees, customers or financiers other than in accordance with the Data Room Protocol.[461] Glencore was permitted to vary any of the processes, procedures and timing set out in the Data Room Protocol at any time without notice and without giving reasons.[462] As to confidentiality, the following was provided:[463]

> All Material is confidential and provided subject to:

457 Clause 1.
458 Defined as "Glencore International AG [that is, Glencore] and its Related Bodies Corporate".
459 Authorised User was defined to mean an individual nominated by a prospective purchaser who had been granted access to the Data Room by Glencore: cl 9.3.
460 Clause 2.1(a).
461 Clause 2.2.
462 Clause 2.7.
463 Clause 3.

(a) the Confidentiality Deed and any arrangements entered into pursuant to the Confidentiality Deed;

(b) the terms set out in the [Phase 1] Process Letter;

(c) the terms of this protocol and any disclosures displayed in the Data Room; and

(d) the terms set out in the Information Memorandum and all disclaimers and acknowledgements in the Information Memorandum.

Only persons who are permitted to receive confidential information under the Confidentiality Deed may access the Data Room and the Material. The Invitee must ensure that all of its Authorised Users are familiar with the confidentiality obligations under the Confidentiality Deed.

652 The Data Room Protocol reserved to Glencore various rights in relation to questions submitted by Nominated Representatives of Cargill.[464] The rights reserved included not responding to any question or request for documentation; limiting the number of questions that may be submitted; and requiring questions to be prioritised into "high", "medium" and "low".

653 Further, Cargill and its Authorised Users were required to avoid loss, theft or unauthorised use of their credentials permitting access to the Data Room.[465]

654 In addition to reliance upon the disclaimers contained in the Information Memorandum, the Data Room Protocol also contained its own disclaimer,[466] as follows:

> To the maximum extent permitted by law, [Glencore], [Merrill Lynch], [Mallesons] and each of their respective related bodies corporate and associated entities and each of their respective officers, employees, associates, agents, contractors and advisers (together "**associates**"):
>
> (a) do not make any representation, guarantee or warranty, express or implied, of any Material or any other information (including by (sic) not limited to any forecast, projections or forward-looking statements made available to the Invitee or any Authorised User or to any person as part of or in connection with the Proposed Transaction) made available in whatever form to the Invitee or the Authorised Users during or in connection with the Proposed Transaction;
>
> (b) do not accept any responsibility for any liability incurred in connection with any Invitee's or Authorised User's physical use of the Data Room

464 Clause 6.
465 Clause 7(a).
466 Clause 8.1.

> and, (sic) to the maximum extent. This includes, but is not limited to, the transmission of any computer virus.

655 Liability for "Non-excludable warranties" was limited to resupplying, or the cost of resupplying, the relevant service.[467] The Data Room Protocol contained an acknowledgement that any Invitee or Authorised User would rely on their own independent assessment of any information, statements or representations contained in the Material. It was a further requirement to acknowledge that there would be no reliance upon any representation, guarantee or warranty (express or implied) by any of Glencore, Merrill Lynch, Mallesons or any of the respective associates.[468]

656 The Data Room Protocol also set out a number of procedures with respect to the Data Room.[469] These included that only Authorised Users were able to access the Data Room, who were required to acknowledge their access was subject to the Data Room Protocol when logging into the Data Room.[470] It was stated that a breach of the Data Room Protocol was a serious matter and that an Authorised User could be excluded if a breach occurred.[471] Further, it was a matter for Glencore and its Related Bodies Corporate, at their discretion, as to which documents were made available in the Data Room. It was expressly provided that nothing obliged Glencore to disclose any particular information. Indeed, Glencore had an absolute discretion as to the information it chose to disclose, and to whom,[472] as well as the use to which the information could be put.[473]

657 The Data Room Protocol also contained the procedures for the question and answer process ("the Q&A Process").[474] An administrator was appointed to conduct this process.[475] It was stipulated that all questions relating to the Data Room or any

---

467 Clause 8.2.

468 Clause 8.3.

469 Schedule 2. Glencore and its Related Bodies Corporate, Merrill Lynch and Mallesons (and their respective associates) had the right at any time to vary the terms of the Data Room Protocol, together with the procedures and processes for accessing the Data Room: schedule 2, cl 9.

470 Schedule 2, cl 1.1.

471 Schedule 2, cl 1.5.

472 Schedule 2, cl 2.

473 Schedule 2, cl 5.

474 See also the definition in the Acquisition Agreement: par 1022 below.

475 Ken Iwata of Mallesons was specified as the Data Room Administrator.

Material had to be made in accordance with the Q&A Process set out in the protocol.[476]

658 The Q&A Process provided that all questions relating to the Data Room or any Material were required to be made online. It was provided that if communication through this process "would be inappropriate (for example, in relation to Blackbox Material)",[477] then a nominated representative would be able to direct the communication to the "Q&A Administrator(s)", and only that person or persons.[478] It was further provided that Glencore and its Related Bodies Corporate would determine in their absolute discretion whether or not to answer any questions and that any questions were required to meet a reasonable threshold of materiality.[479]

659 Under cross-examination, King readily acknowledged that, in addition to the provision of a data room, it is common practice in transactions involving mergers and acquisitions for there to be a question and answer process. By this customary process, a prospective purchaser is able to put questions and have them answered, with the substance of the questions and answers being recorded in writing.

660 Van Lierde's evidence was that he understood that typically documents contained in a data room for a transaction such as this carried with them that although Cargill was welcome to look at the documents included it was up to Cargill to conduct its own investigations, due diligence and analysis before relying upon the documents.

661 Merrill Lynch prepared a proposed Data Room index.[480] The final form of this index ultimately became annexure B to the Acquisition Agreement. King gave evidence that he provided comments on the proposed index, though he had minimal involvement in the specific preparation of the Data Room.

662 By the time access to the Data Room was given to prospective purchasers, for reasons

---

476 Schedule 3, cl 1.

477 Blackbox Material was defined to mean "Material which [Glencore and its Related Bodies Corporate] determines is subject to additional restrictions on access (such as where particularly commercially sensitive or subject to legal professional privilege)": cl 9.3.

478 Schedule 3, cl 1(c). Q&A Administrator was defined to mean the person or persons identified as such in "the Details". In fact, the Details page did not identify a Q&A Administrator, but did name a Data Room Administrator: see fn 475 above.

479 Schedule 3, cl 4.

480 See par 616 above.

not explained by the Viterra Parties, some key documents were not included. Putting aside events in late October 2013, there is no basis to find that this was a deliberate act of consciously withholding material information; rather it seems some documents fell through the cracks when assembling the relevant materials.

663 To elaborate, Bickmore had been asked by Fitzgerald on 1 March 2013 to set up the Data Room and was provided with the categories of documents to be included.[481] In relation to any discussions she had with Joe White executives, she spoke primarily with Argent about what should be included as Argent was more available than Hughes.[482] Bickmore also spoke with staff of Viterra Ltd from the human resources, property, and safety and environment departments "amongst others in Viterra". In her discussions with Argent, documents relating to how the Joe White Business was conducted at an operational level were raised, including "sales contracts and other relevant documentation that were listed in the categories". But Bickmore did not recall discussing policy documents with Argent. Further, Argent was not involved in the creation or implementation of any operational policies. Furthermore, responsibility for inclusion of "Company Policies" was ultimately allocated to Fitzgerald and Wilson-Smith.[483]

664 Bickmore also responded to specific requests from Mallesons for additional documents and checked with the relevant persons within the Joe White Business for the documents that were responsive to the requests. From late March 2013, her

---

481 Bickmore said she used a template from an earlier transaction in 2010, which she updated, somewhat spasmodically, for a period (but not up to 2013), as well as relying on external advisers for the "types of categories and the nature of the documents that we had to find". It seems this identification of categories was superseded in early June 2013.

482 Bickmore gave evidence that she first met with Argent with respect to the Data Room on 1 March 2013. She said in her discussions with Argent (without stating when these occurred) that Argent indicated he had discussed the issue of the Data Room with Hughes, but precisely what Argent had apparently raised with Hughes was not the subject of evidence. There was no probative evidence that Bickmore ever raised with Argent if Argent had made any enquiries of Stewart as to what should go in the Data Room. When she was asked during cross-examination if she did, she said she would have. When asked for any response she received, she said she could not recall. She also could not recall speaking to Stewart directly on the issue. Later in her evidence, she said she did not recall talking to Stewart about producing documents relating to technical aspects of malt production and could not recall ever considering such technical aspects. See also par 670 below.

483 See par 618 above.

involvement in this process largely ceased.

665 Bickmore gave evidence that what was to be included in the Data Room was essentially driven by Merrill Lynch and Mallesons. She said it did not occur to her that Joe White might have policies in place relating to its operations or business practices.[484] Further, Bickmore had no recollection of Argent adding any document to the index of documents that was provided; it was not Argent's call as to what went in the Data Room.[485] In short, generally speaking the role Argent fulfilled was to assist Bickmore and Wilson-Smith in obtaining the documents the subject of the initial index.[486]

666 Curiously, despite having been told by Fitzgerald in October 2013 about Cargill's allegations concerning the Operational Practices and being shocked to hear about them, Bickmore gave evidence that she was satisfied with the manner in which the Data Room had been populated because a warranty verification process had been undertaken properly.[487] Indeed, Bickmore gave evidence of her belief that the Warranty[488] verification process was very thorough. Bickmore herself was not directly involved; it seems she based her evidence on some emails she received during the process. When it was put to her that her satisfaction with the Data Room process was based on another process in which she had very minimal involvement, Bickmore responded that she guessed she was trying to say Viterra had a process, a lot of information and documents were collected and "then at the end certain warranties were made that we had produced those documents". Contrary to Bickmore's evidence, the Warranty verification process provided no basis to support the adequacy of the Data Room process.

---

484 Upon learning of the matters raised by Cargill in late October 2013 relating to the Operational Practices, Bickmore gave evidence that she was shocked. Curiously, she said this did not cause her to question how the Operational Practices might have been missed as part of the creation of the Data Room.

485 Before making this concession, Bickmore asserted in her evidence that it was Argent's role to decide what financial documents went into the Data Room. On what basis this assertion was made was far from clear. Although Argent participated in obtaining documents as directed, it was clearly not the fact that he was the decision-maker or even a decision-maker.

486 See also par 958 below.

487 For a detailed account of the Warranty verification process, see pars 996-998 and issue 125.6 below.

488 See par 1022 below.

667 Further, when told about Cargill's allegations in October 2013, Bickmore "probably would have reflected on the Data Room process", but she added to her answer that this process was reliant upon subject-matter experts from Joe White. When it was then put to her that she did not speak to any of the subject-matter experts, she responded that she may have had discussions with them from time to time. There was no evidence of any probative value that she did. On the contrary, in her witness statement she gave evidence that she felt confident about the completeness of the documents because she trusted Argent. While there was no reason to question her evidence about trusting Argent, it did not follow that because of such trust somehow Argent took on the responsibility of determining what should go into the Data Room. At its highest, Argent may have had some discretion about which documents fell within categories of documents requested by Bickmore,[489] but it was Bickmore (and later Wilson-Smith) at the direction of Mallesons (and others at Viterra) who was giving the instructions.

668 With respect to the finalisation of Data Room documents in June 2013, Fitzgerald left much of the collation of those materials to Wilson-Smith (who had had no material involvement before this time). Wilson-Smith was unable to recall the precise discussions he had, beyond stating he spoke with various persons, including Argent, Youil, Wicks and Hughes, and that he asked them for certain documents. Wilson-Smith said he proceeded on the assumption that he received all the documents and information relevant to the requests.

669 As for Joe White's policies, Wilson-Smith said he was aware they existed, but did not know what they were. He conducted a search of Pulse and obtained some policies. Having done so, he spoke with Matthew Forsythe ("Forsythe")[490] and Stewart. He could not recall what was discussed. He then forwarded to Mallesons the Joe White

---

489 Bickmore gave evidence that she maintained a working list of the Data Room documents and "shared versions of it" with Argent, who provided "comments on it". This vague evidence did not establish that Argent assumed responsibility or made significant decisions about what ultimately was included in the Data Room.

490 Forsythe's title was safety, health and environment issues business partner, processing malt division of Viterra (including Joe White).

policies of which he was aware as a result of this process. Neither the Viterra Certificate of Analysis Procedure nor the Malt Blend Parameters Procedure were amongst them.[491] Wilson-Smith spoke with Lindner about what policies ought to be produced. She said not to worry about corporate-wide policies across the whole business.

670 On the question of what Wilson-Smith discussed with Stewart concerning policies for the Data Room, there is no basis for drawing any inference that the relevant policies were raised with Stewart. Stewart gave uncontradicted evidence that nobody asked him whether it would be desirable to disclose the Viterra Certificate of Analysis Procedure. Further, Wilson-Smith's evidence was that he did not ask anyone for a complete list of policies that related to the Joe White Business or for policies with respect to its operations.

671 At Cargill on 17 June 2013, Le Binh circulated a due diligence template to various workstreams. The attachment did not contain any information beyond identifying the various categories to be addressed. The covering email suggested the template could facilitate the sharing of questions and issues and assist with weekly progress. Le Binh stated he wanted each lead to populate the "question" sheet every day by no later than 5.00pm and then forward it to Engle, Bowe and himself. Le Binh also requested that each lead provide their update on the progress report sheet every Tuesday by no later than 6.00pm.

672 On 18 June 2013, an email from Viers to Eden, Engle, Le Binh and Sagaert, and copied to others including De Samblanx addressed the approach that Cargill, Inc intended to take to due diligence in Phase 2. The email stated:

> It is still not clear how we are going to walk thru (sic) the [D]ata [R]oom in a methodical way… In the very short term you should get familiar with the [D]ata [R]oom and what is contained. This may change but from my

---

491 The policies that were included in the Data Room totalled at least 22 in number. (It is not possible to be definitive as there were other documents listed that may have been policies but the word "policy" did not appear in the description of the document.) They included the "Viterra Malt Risk Management Policy May 2013", the "Viterra Malt Chemical Handling Policy" and the "Working on Grain in Malt Policy". The documents also included the "Viterra Malt Laboratory Standard" and the "Viterra Malt Reference Procedure".

> perspective *we need to begin to develop an understanding of what information exists and what information is missing from the [D]ata [R]oom that would be required to answer the questions around the value of this company as it stands today and what synergies can we drive to enhance the value. Secondly what info exists or is missing to assess the risk/obstacle/costs to assure we run this business by all of Cargill standards*. Again this is initially an information assessment so please catalog same, not necessarily looking for specific answers to the actual questions. Think we do this for our respective areas. Until we have further clarity.
>
> (Emphasis added.)

673 Engle's evidence was that Viers' email did not fully summarise the approach that was to be taken to the Due Diligence. Viers gave evidence that Le Binh provided guidance and direction for a methodical way to work through the Data Room.

674 As to the contents of the email, Viers accepted that the Cargill standards he referred to concerned a wide variety of matters affecting the operation of the Joe White Business. These included the way in which the malting process was actually undertaken, whether customer specifications were adhered to and whether Certificates of Analysis were provided in a manner that was conformable with those standards.

675 On 19 June 2013, Viers sent an email to a large number of Project Hawk related employees, stating he wanted to get an update out to everyone.[492] The email attached Le Binh's email of 17 June 2013, and asked that it be reviewed. Viers stated "data gaps/questions/requests/issues" would be sent each day to Merrill Lynch via Goldman Sachs.

676 As an aside, De Samblanx was recorded as being the lead for operations, and for environment, health and safety. When it was put to him in cross-examination that Hermus had responsibility for environment, health and safety, De Samblanx said this was incorrect. His evidence was that Hermus was confined to quality. De Samblanx said this involved matters such as processing conditions and gibberellic acid. Although Hermus identified a large inventory of gibberellic acid and asked questions

492 "Everyone" did not include Hermus, who was not included as an addressee.

about its use, no concerns were expressed by Hermus to De Samblanx on this issue.

677 On or around 20 June 2013, Cargill was given access to the Data Room.[493] Access was obtained by a number of Cargill employees. Exactly who gained access to which documents and when was all electronically recorded.[494] Further documents were added to the Data Room throughout the remainder of June and July 2013.

678 In her role as lead for the accounting and financial workstream, Jewison reviewed information in the Data Room regarding financial matters. She also reviewed the documents in conjunction with Cargill's financial information in order to identify questions that could possibly be put and answered.[495] In relation to the "financial data books" in the Data Room that formed part of this financial information ("the Data Books"), it was stated that the data had been prepared from "Company information", and that the primary sources had been the general ledger and the trial balance information extracted from the Administration System. It was recorded that the Administration System represented the aggregation of the "malt entities". These included Joe White, described as the main operating entity, and Ausmalt, described as the legal entity name of Viterra Malt. It was further stated that the income statements agreed with those presented in the Information Memorandum, with the pro forma and normalised adjustments summarised in the "Adjustments (summary)" worksheet ("Basis of preparation"). The cover pages of both volumes 1 and 2 of the

493 The pleadings suggested access to the Data Room was given from around 14 June 2013, but the evidence indicated it was later than this. Nothing turns on whether it was 14 or 20 June 2013 that access was given.

494 On 25 October 2018, the parties provided an agreed summary recording details of access by Cargill to the Data Room. The electronic record indicated 71 representatives of Cargill were given permission to view certain documents in the Data Room; 56 actually accessed documents, of which there were 466 in total. Those who accessed documents included Bowe, Aimee Breszee ("Breszee"), Christianson, De Samblanx, Eden, Engle, Hawthorne, Hermus, Le Binh, Purser, Sagaert and Viers, in addition to lawyers from Allens.

495 With respect to Jewison's role, she prepared the due diligence report for the accounting and finance, and insurance workstreams; reviewed and commented on proposed amendments to the draft acquisition agreement insofar as they related to accounting matters; considered the terms of the draft acquisition agreement more generally; considered responses and lack of responses to identify potential risks; attended various meetings to talk through assumptions; dealt with exchange rates; sought to validate financial information that was in the Information Memorandum and consider whether it aligned with what occurred in malt business units already; and sought to understand normalisations made concerning the Joe White Business together with what further questions needed to be asked from a finance perspective.

Data Books were headed "Viterra Malt".

679 On the same day, De Samblanx emailed some preliminary questions he had identified concerning operational matters. These supplemented questions that had already been suggested from others. Engle's position was not to engage in consideration of questions pertaining to operations as these were to be dealt with by the operations workstream.

680 A spreadsheet had been created which contained 2 worksheets: an external due diligence list; and an internal due diligence list. The external list included requests and questions concerning forecast financial information, malt margins, production volumes and capacity, barley procurement and plant and facilities.

681 De Samblanx was given access to the Data Room. In reviewing documents, De Samblanx focused on operational aspects and production capabilities of Joe White's plants. His review assisted him in preparing questions to be put to Joe White.

682 De Samblanx noticed the apparent limited barley and malt storage capacity at some of Joe White's plants when reviewing the Data Room. He observed that they were below levels of storage that Cargill generally required at its own malt plants. Cargill generally had 30 to 40 days' of storage capacity at its plants. Some of Joe White's plants had considerably less, including Minto which only had approximately 10 days' worth of storage. The only plant that appeared to have storage in line with Cargill's plants was Joe White's Tamworth plant.

683 De Samblanx appreciated that storage capacity was relevant to the production and supply of malt affecting both barley and malt production. The production input requires sufficient barley storage. Malt storage is also required to store batches separately, which can later be blended to meet different customer specifications. However, arrangements may be made for both barley and malt to be stored off-site in third-party silos or terminals. It is generally more economical to do this with barley rather than malt.

684 Further, the amount of storage required is affected by the complexity of the customer book. The greater the complexity (for example by reason of the number of customers and differing product requirements), the more storage is required to manage production and supply. Further, some customers have processes that require additional storage capacity, such as a requirement to store malt to allow it to age.

685 As a result of these matters, De Samblanx wanted to learn more about the customer book of Joe White, together with its process and product requirements. He gave evidence that he had these matters in mind when he drafted the questions for Joe White to answer. He also prepared a summary of the information from the Data Room in a spreadsheet which he was to use when visiting the Joe White plants later that month.

686 De Samblanx gave evidence that he understood Joe White exported around 80 percent of its malt. He also knew the overseas customers included Heineken, San Miguel, Nestlé and South African Breweries,[496] as well as Japanese customers. Further, at that time, De Samblanx had an understanding of Heineken's requirements. However, De Samblanx's evidence was that although he had picked up the names of some of Joe White's customers during the Due Diligence, he did not know enough to establish a customer book. That lack of knowledge included not knowing the precise customer book at a certain time at a certain plant, which De Samblanx explained was important. He gave evidence that being aware of such matters was very different to knowledge of malt volumes spread over the period of a year.

687 On 21 June 2013, Le Binh concluded his work with Christianson concerning synergies and leveraging the grain and oilseeds supply chain in Australia for barley origination. The estimated synergies in this regard were for the period from 2014 to 2023.

688 Further, on or around 21 June 2013, employees of Cargill, Inc including Eden, Viers, Jeral D'Souza, Engle and Le Binh, participated in a call with Joe DiLeo and Ian Wilton (described in the minutes of the call as 2 "senior members of Cargill's Allied Mills

496 It was unclear on the evidence whether this was a reference to SAB Miller or South African Breweries Ltd, but see also par 874 below.

Flour Milling Joint Venture"). Essentially, the views of these 2 experienced individuals were sought.[497] The minutes included:

> Management case
>
> - *The forecast combination of high margins and high asset utilization are "pie in the sky"*. There are opportunities to do better than an implied $15/tonne trading margin, but it *will be volatile*.
>
> - Quite likely that a new government (opposition today, election in September) would repeal today's 10-15% carbon tax.
>
> Opportunities
>
> - *Increased penetration of the domestic market should be possible* – there is no reason why [Joe White] could not *go after and win a greater share of SAB*, particularly if Cargill has global relations. Margins with SAB historically higher than with Lion Nathan.
>
> - There should be an *opportunity with "grain innovation"*. Australia tends to have a "straight view" of grain, and doubtful that [Joe White] has ever looked at least cost supply chain practices. Cargill would have an opportunity to broaden varieties and maintain quality.
>
> - [Joe White] has historically relied on 3rd parties for storage, port and fobbing. They don't own or control any ports, and Cargill will need to find better ways to operate at the ports.
>
> - Plant closure candidates are at Tamworth (domestic only) and in Victoria (specialised malts). Tasmania serves James Bogue (sic) (Kirin).
>
> (Emphasis added.)

689 The minutes listed a number of risks identified, including the possible impact of major droughts or floods, exchange rate concerns and pressure from European producers in the Asian market. Under the heading "Synergy sources", the minutes stated:

> - The key to value addition will be grain procurement. [Joe White] does not have the capacity to acquire grain. They simply do not have the people to do it.
>
> - The top 4 opportunities for Cargill, based on the Allied Mills experience, are: (a) inbound and outbound supply chain, (b) barley procurement, (c) raw material procurement, and (d) people.
>
> - Size and feasibility of revenue synergies likely to be driven by Cargill's global relationships. This is one reason why Glencore probably seeking to exit.

---

497 One of them had "competed with Joe White over the years", and both of them had worked in the GrainCorp business.

690 Eden rejected the suggestion that it was his view that the forecast margins and utilisation were "pie in the sky"; he said it reflected the view of 1 of these senior members. Eden said he accepted each of the responses as their opinions and took them into consideration. Engle did not recall the discussion or the use of the term "pie in the sky", but accepted that he understood the representations in the Information Memorandum presented an optimistic scenario and more of a "seller's case", as was customary in his experience. Viers gave evidence that he recalled receiving the minutes in June 2013. He said he accepted the advice that the opportunities were volatile concerning doing better than $15 per tonne as a margin, on the basis that earnings were always volatile in grain trading.

691 Upon receipt of the minutes, Eden circulated an email saying he had obtained further insights after speaking with a very senior ex-Viterra employee who was deeply involved in the "Australia business". That person was Malecha, who had had dealings with Eden as part of Cargill's involvement with Prairie Malt Ltd.[498] Eden recorded the substance of the "insights", which included that the 3 main assets of Joe White in Perth, Adelaide and Minto were good, competitive assets. Underlying details were given. Eden was informed that domestic margins had been much higher than those for export customers, but it would not be in Cargill's best interest to aggressively pursue more domestic business. Eden was further told that export customers were very demanding and he thought that Cargill could do better in this area. He said that, contrary to what the malt team itself believed, he did not feel that the name Joe White carried much value and maybe even held the business back. He suggested that a change of name to "Cargill Malt" would be a good thing.

692 Eden was also told that Malecha thought current management were "stuck in the past". Eden was told that Hughes was smart with a great background in the malting business. Malecha said that Hughes presented himself well, but he was a technical person who did not have overall leadership "stretch" to be the chief executive officer and should not be running the Joe White Business. Eden was told that Wicks was a

498 See par 345 above.

smart guy who was really nice, though not a commercial person. He said that Wicks was not too good at selling or challenging the status quo.

693 Eden was told that if Cargill wanted to drive change in a fast way, the current management were "not the team".

694 Eden's note of the conversation concluded with the following:

> Overall, he felt the acquisition underperformed [on the] basis [of Viterra's] expectations. [Viterra] totally underestimated the complexities of running the malt business and feels that others not in the malt business would do the same. [Co-Operative Bulk] would be in this camp and he feels they will be the most aggressive. He believes the natural parent for [the Joe White Business] is [a] global maltster.
>
> Quick and brief but does give another perspective.

695 Under cross-examination, Eden said he thought the summary provided by Malecha was interesting because it was not consistent with Cargill's summary of what Cargill was perceiving. Further, Eden said that Cargill's interest in Joe White was known by Malecha because there had been previous discussions with Viterra about a strategic partnership involving Joe White, but Viterra was not interested.

696 Before any management presentation to possible purchasers could take place, Glencore considered it necessary to prepare a document and have rehearsals.[499] Merrill Lynch was instructed to attend to the detailed drafting. King gave evidence that Merrill Lynch drafted slides, which were "talked through". He said it was done the same way as the Information Memorandum was done. When it was suggested to King during cross-examination that many hands were going over the draft management presentation slides, after seeking clarification of what was meant by the question,[500] King stated that a draft was prepared by Merrill Lynch with input predominantly from himself and probably Mattiske on the operational side, and many people were given a chance to review it "in a final sort of review, as it were".

697 A draft was forwarded by Merrill Lynch to Glencore, including Walt, Roelfs, King and

---

499 As planned from the outset: see par 367 above.

500 The question was also directed towards the Information Memorandum.

Mattiske, copied to Hughes, Argent and others, with the comment that Merrill Lynch welcomed any feedback. King accepted this was done to see if the type of message being conveyed was what was wanted from a Glencore perspective. He also accepted he had a significant role in drafting the presentation, and fastidiously reviewed it until he was satisfied with the final product.

698 King described the information to be provided by the management presentation as an expansion of the Information Memorandum, with a greater level of granularity and explanation. King said management presented to him and Merrill Lynch to make sure they were "familiar with the key messages to deliver on the relevant pages". He said the key messages were determined by a combination of "management themselves and Merrill Lynch who drafted the presentation".

699 King had travelled to Australia from Switzerland to attend the preparatory meetings, and accepted he gave advice to Hughes about how Hughes might modify his presentation to improve the message. Although he could not recall the specifics, he acknowledged that he involved himself at a very close level of detail with the messages that were to be conveyed. He said he did this personally, principally with Hughes and also with Argent, in conjunction with Merrill Lynch. King said he wanted to make sure the messages delivered were positive and were messages Glencore wanted to convey to prospective purchasers. Mattiske also attended a rehearsal.

700 By way of example, King said Hughes and Argent were allowed to present the slides, which, as noted above, were drafted in the same way as the Information Memorandum was drafted. King's evidence was that if there was a key message "we felt they should perhaps make a bigger point of we'd perhaps say, … 'This is a good slide to talk about the following'". All that said, King gave evidence that, so far as he was concerned, he was there to make sure Hughes and Argent were on message to an extent, but management were left to present the Joe White Business in their own light and to answer any difficult questions. Nonetheless, King accepted that the extent to which management were "more forthcoming" was certainly subject to a level of

control by King.[501]

701 King was not the only person from Glencore taking a keen interest in the contents of the message to be delivered. In an email from King to Merrill Lynch sent on 21 June 2013, by which King provided some "final thoughts/comments",[502] he included a suggestion from Walt with respect to page 39 of the draft document. The level of attention being paid was reflected in Walt's comment that the page was perhaps better structured with 2 boxes rather than its then layout, with "Risk/Exposures" being moved to the right-hand side of the page and another box with the heading "Mitigating Actions" being placed on the left side, with the intention of highlighting the approach taken to mitigate the various risks identified. King stated that if these changes were made it would mean talking through the foreign exchange hedging in the same way it was intended to discuss the other mitigating actions.

702 Cargill was also doing its own preparation for the upcoming management presentation. On 24 June 2013, several Cargill executives met with Goldman Sachs in Sydney to formulate some questions to be put. These questions had been the subject of input from the various workstreams. The fact that a number of the formulated questions were asked and answered was not in issue. However, it needs to be noted that a question was prepared in the following terms:

> How does [Joe White] manage malt quality and grades of barley for its customers with such limited storage capacity?[503]

703 On 25 June 2013, Goldman Sachs emailed Merrill Lynch a single page of key questions Cargill had prepared for the upcoming presentation. Merrill Lynch forwarded them

---

501 For example, in an email from King concerning Co-Operative Bulk, sent on 21 June 2013 to Merrill Lynch, copied to Mattiske (who did not recall reading it), Lindner, Pappas and others, King directed that a copy of the Management Presentation Memorandum (see par 711 below) was not to be provided before the scheduled meeting, as it would be likely to result in the preparation of "numerous questions which will turn the management presentation into a 3 hr Q&A session which management will be unable [to] control and will therefore not deliver the key messages". King stated the provision of additional customer information in "our view" was still too sensitive, but Glencore would "propose *to allow* management to be more forthcoming in the management presentation" (emphasis added).

502 The email was also sent to Fitzgerald, Mattiske, Lindner, Roelfs, Walt, Pappas, Hughes and Argent, amongst others at Glencore, Merrill Lynch and Mallesons.

503 The Viterra Parties correctly submitted there was no record that this question was actually asked at the Management Presentation. However, nothing really turns on this: see esp par 875 below.

to King, Hughes and Argent. King read them and expressed the view that Hughes and Argent were well prepared for the majority of the questions and topics that had been raised. In addition, a document was prepared for Eden to present on behalf of Cargill at the upcoming management presentation. It identified the Project Hawk team as Eden, Viers, Sagaert, De Samblanx and Jewison. The document also identified Cargill's vision and values. It included the statement that Cargill did the right thing "regardless of the consequences". Cargill's objectives up to 2015 were listed, and included increased scale and portfolio of malt products, as well as being recognised as the global leader in meeting customer needs and providing brewing solutions. It was also stated that an acquisition of the Joe White Business fitted squarely within Cargill's strategy and would create a footprint in the only major malting barley region not in Cargill's portfolio.

704 Le Binh and Engle travelled to Australia together to assist in the preparation for the management presentation. While they both assisted in the preparation and attended the presentation, Le Binh did not visit any plants. However, while he was in Australia, he met with Goldman Sachs to discuss the analysis and preliminary valuations Goldman Sachs had prepared to that time. Further, Engle stayed in Australia for about a week and attended workshops with Joe White employees with the intention of understanding how Joe White could fit within Cargill's business. Also during this period, Le Binh and Engle both reviewed documents in the Data Room of a financial or commercial nature, rather than technical or operational documents.

705 Further, both of them assisted Eden, Viers, Jewison and Sagaert in preparing slides and a pre-read summary for an upcoming Cargill, Inc board meeting due to be held on 9 July 2013. Without going into too much detail, the slides included figures concerning sales volumes, capacity, malt margin and Unadjusted Earnings that were taken directly from the Information Memorandum. It also spoke in terms of Joe White having well-maintained and strategically-positioned assets as well as a good financial track record.

706 While these events were happening in Australia, others within Cargill were also

considering the desirability of purchasing Joe White. The Cargill leadership team reviewed the "Cargill Corporate Game Board" from time to time in order to assess and grade potential acquisitions. By way of background, in November 2012 an independent board member of the Cargill board requested a list of "must have acquisitions that would be damaging if [Cargill] missed them or if competition bought them".

707 On 26 June 2013, an annual operating review was conducted by a meeting of the leadership team. During that meeting, the possible acquisition of Joe White was considered. The Cargill leadership team downgraded the status of this acquisition from "pivotal" to "desirable". This reclassification was reported to the board.[504]

P. The Management Presentation and related events

708 As anticipated, the Joe White management presentation took place on 26 June 2013 and lasted about 4½ hours ("the Management Presentation"). At the outset, Eden gave a presentation on behalf of Cargill broadly in the terms of the document that had been prepared.[505]

709 Merrill Lynch attended and, according to Eden, was heavily involved in the presentation of the Joe White Business. The Management Presentation itself was delivered by Hughes and Argent. Argent presented the financial section and Hughes presented the rest.[506] When asked the direct question during cross-examination about the role of Hughes and Argent, King gave evidence that they represented Joe White when giving this presentation. However, King then acknowledged that he had been concerned to ensure the messages conveyed by Hughes in particular at the Management Presentation were messages Glencore wanted to convey to prospective purchasers. He further acknowledged that, in addition to Hughes and Argent having the respective duties as executives of Joe White, Glencore needed them for a further

504 Conway explained during his cross-examination that the downgrade had something to do with the size of the Joe White Business, which was not big enough to have a strategic effect on Cargill or the relevant platform, although it would have been pivotal to the business unit.

505 See par 703 above.

506 "Financials" represented 1 of 7 topics listed in the table of contents.

purpose which was to assist Glencore in the conduct of the sale. King accepted that the tasks and responsibilities of Hughes and Argent in relation to the sale process were tasks uniquely related to Glencore's interests in obtaining the best possible price for the sale of Joe White.

710 A large number of people attended the presentation. These included, from Cargill, Eden, Viers, Engle, Sagaert, De Samblanx, Le Binh, Bram Klaeijsen ("Klaeijsen"),[507] regional director, corporate centre, Jewison and Purser. In addition, 2 executive directors of Goldman Sachs attended.

711 The written presentation was entitled "Joe White Maltings Management Presentation" ("the Management Presentation Memorandum").[508] The first slide was entitled "Legal Disclaimer". As before,[509] "Glencore" was defined as "Glencore and its subsidiaries" and it was expressly stated the document had been prepared by these entities. Again, for reasons already stated,[510] such a definition included the Sellers. The disclaimer set out in that slide was almost identical in terms to the disclaimer included in the Information Memorandum set out above,[511] aside from 2 key differences.

712 *First*, the legal disclaimer contained in the Management Presentation Memorandum set out additional language regarding the presentation itself, for example:

> A Recipient that is considering the Proposed Transaction must make, and will be taken to have made, its own independent investigation and analysis of the information in this document *and the information provided during the presentation of this document*.
>
> (Emphasis added.)

713 The obvious intention of this language was to incorporate the giving of the oral presentation into the legal disclaimer, in addition to the disclaimer's application to the

---

507 Klaeijsen was based in Singapore.

508 Like the Information Memorandum, King regarded the Management Presentation Memorandum as marketing material. For further details on the cover page of the Management Presentation Memorandum, see par 2176 below.

509 See pars 457, 475-476 above.

510 See pars 476-482 above.

511 See par 475 above.

document itself.

714 *Secondly*, under the heading "Date of Document", the slide read "[t]he information in this document has been prepared as at *21 June 2013*" (emphasis added). This was in contrast with the legal disclaimer in the Information Memorandum, which gave 1 May 2013 as the date of preparation of the information in that document.[512]

715 The Management Presentation Memorandum consisted of 5 substantive sections, comprising an overview of industry highlights, an overview of the Joe White Business model, capital investment, financials, and growth opportunities. The substance of what was set out in writing was also presented orally.

716 Under "Industry Highlights", it was stated that "Asia is a Key Driver of Global Malt Demand", and "Joe White is uniquely positioned to service the Asian market". The presentation noted that Australian maltsters had been facing significant margin pressure during 2013, because of "a dislocation of Australian and EU malting barley prices" driven by "a large EU crop" but a poor Australian crop. As in the Information Memorandum,[513] with respect to the business model, it was stated:

> Joe White's business model is focused on ensuring customers receive the *highest quality malt* to meet their *exact specifications and requirements*.
>
> (Emphasis added.)

717 Eden gave evidence that these sort of assurances stood out in his mind at the time. He said they were consistent with the general impression he had about the industry reputation of Australian malt, and of Joe White in particular. Eden was very impressed throughout the presentation that Hughes and Argent were so well prepared and ready to answer Cargill's questions.

718 The business model was depicted in diagrammatic form, and prefaced with a statement about Joe White's business model ensuring customers received the highest quality malt to meet their exact specifications and requirements. At the top of the

---

512 Consistent with his approach to the Information Memorandum (see par 485 above), Eden's evidence was that he did not read the disclaimer forming part of the Management Presentation Memorandum.

513 See par 504 above.

diagram was "Sales and Marketing", described as a "Top-down approach to understand each customer's unique requirement". Two arrows led diagonally downwards from "Sales and Marketing", making a pyramid shape. The first arrow led to "Procurement", under which was stated "[S]election of and access to high quality barley that best meets customer specifications". The second arrow led to "Production", described as "[B]est-in-class manufacturing facilities producing consistently high quality malt". In the centre of this pyramid was "Quality & Technical", which stated "[Q]uality and technical capabilities underpin each operating function".

719 During his cross-examination, Eden was taken to the business model diagram. When he was asked what he made of the statement under "Procurement", Eden said it impressed him. It was then put to Eden that he knew the statement was not correct. He rejected this whilst acknowledging he knew Viterra did the procurement for Joe White. Under "Production", Eden accepted the "best-in-class manufacturing facilities" needed to be looked at and checked. As to the statement under "Sales and Marketing" concerning the top-down approach, Eden's evidence was that it was also a very impressive statement but was harder to verify. Eden said Cargill's position was that it would attempt to verify it by asking questions, but rejected the suggestion that if it could not be verified the statement could not be relied upon. Eden said that during the Due Diligence Cargill attempted to understand the individual components of the business model and how they collectively came together. He explained that Cargill wanted to understand how Joe White was transferring the technical requirements from the customer back down through the barley supply chain and the genetic work Joe White was doing. His evidence was that procurement, sales and marketing, and quality and technical were connected. He said there was an interplay that Cargill wanted to better understand.

720 Subsequent slides gave an overview of customer segmentation, contract types (between long term agreements and "spot sales"), and pricing and contracting. A slide entitled "Sales and Marketing – Pricing and Contracting" set out 6 potential challenges

that could arise during Joe White's price and contract negotiations with customers, and the strategies Joe White had in place to mitigate them. Relevantly, the slide stated the following:

> **Barley Prices**
>
> **Barley prices impacted by Australian weather**
>
> - ✓ Diversified access to different growing regions across Australia
> - ✓ [Long term agreements] Cost Plus arrangements
>
> **…**
>
> **Volume**
>
> **Ability to service volume requirements with uncontracted capacity**
>
> - ✓ Broad manufacturing footprint
> - ✓ Flexibility in production planning
>
> **Customer Relationship**
>
> **Ability to retain customers**
>
> - ✓ Established, long-term relationships
> - ✓ Brand recognition, high quality product
> - ✓ Focused customer relationship management teams
>
> **Product Requirements**
>
> **Increasingly specialised malt demands from customers**
>
> - ✓ Access to all key Australian varieties
> - ✓ Unrivalled seed [Research and Development] program
> - ✓ Grain support and process control

721 Further slides set out select key accounts, possible barley sourcing and procurement models following acquisition, and an overview of Joe White's production facilities in Perth, Adelaide,[514] Minto, Tamworth, Devonport and Delacombe.

722 The twentieth slide of the Management Presentation Memorandum was entitled "Competitive Advantage Through Specialty Malts and R&D". This slide listed several specialty malt products. It identified some opportunities, suggesting increasing global brewer demand. In this context, it was stated that Joe White had the ability to offer

514 At the 2 sites, Port Adelaide and Cavan.

specialty malts and that Joe White had a competitive advantage over other maltsters.

723 Under the heading "Research and Development Capabilities" it was stated:

- Active program in place with University of Adelaide
- Close collaboration with customers, barley breeders and researchers to enhance R&D effort
- Product differentiation and advanced market competitiveness
  - Customers provided with exclusive rights to premium barley varieties

…

724 De Samblanx gave evidence that Hughes explained the good relationship with the University of Adelaide and they were in the process of developing new barley varieties that would modify more easily. De Samblanx said he was left with the impression that Joe White was more advanced than Cargill and the rest of the world.[515]

725 On this topic, Eden said he did not know which barley varieties were public and which were proprietary,[516] but he understood that Joe White made particular varieties available for particular customers, promising more efficient production processes. Eden said he was impressed with the long-time collaboration between Joe White and the University of Adelaide on malting barley genetic development, as it was much more than he had seen in other parts of the world.

726 The next several slides addressed capital investment. A slide entitled "Capital Expenditure" repeated the account of Joe White having invested approximately $200 million across its whole manufacturing footprint since 2006, coupled with the forecast of low future capital needs in the short to medium-term.

---

515 The Viterra Parties submitted it was unreasonable and unlikely for any attendee, including De Samblanx, to believe that Joe White had proprietary barley varieties which assisted its processing performance. However, neither De Samblanx, nor any other witness who attended the Management Presentation, gave evidence to this effect. The position was subsequently clarified in the agreed summary of the questions and answers on 26 June 2013, where it was expressly recorded that Joe White did not have proprietary barley varieties. De Samblanx was not taken to this record when giving his evidence. Whatever be the position, it did not detract from De Samblanx's evidence about his impression.

516 See further fn 520 below

727 A slide entitled "Key Technologies" read:

> Reputation for production uniformity, consistency and *ability to meet exact specifications* built upon continuous commitment to improve the malting process and enhance plant quality through technological investment.
>
> (Emphasis added.)

728 The Management Presentation Memorandum moved next to cover Joe White's financial situation. This section, which Argent presented, contained a financial summary, on a "[pro forma] normalised basis", details of the normalisation adjustments for the 2011 and 2012 financial years, and pro forma normalised forecasts for the 2013 and 2014 to 2016 financial years. It also referred to Unadjusted Earnings performance "Through-The-Cycle" from 2005 to 2016, the Accumulation and Position Margin, gross margin, a costs analysis, issues concerning a carbon tax, details of head office costs, as well as net working capital and the ability of the Joe White Business to generate cash, and finally risk management issues. As part of the financial summary it was stated that Joe White had a track record of strong and stable earnings. The details for sales volumes, malt margin, gross margin and Unadjusted Earnings, actuals and forecasts were set out which largely reflected what had been stated in the Information Memorandum. Further, the pro forma normalisation adjustments for the 2011 and 2012 financial years were broadly explained.

729 Next in the financials section was a slide entitled "Budgeting Accuracy", which set out Joe White's malt margin, gross margin and Unadjusted Earnings before sale of assets. The malt margin was said to have been improved in the first half of the 2013 financial year by delay of bulk shipments. It was predicted that there would be a malt margin recovery in the 2014 financial year, driven by an increase in malt margins to $221 per tonne.[517]

730 Several slides were dedicated to setting out the Accumulation and Position Margin. The Management Presentation Memorandum stated that "additional margin can be achieved by Joe White through barley accumulation and sourcing flexibility and

---

517 Noting that 59 percent of sales volume sold for the 2014 financial year was "sold at a normalised malt margin of $207/t".

optimisation", which Joe White "conservatively estimated" at $15 per tonne over the course of a year. This margin earned by "Viterra/Glencore" was said to be underpinned by a number of features (including blending and arbitrage), which would be available for Joe White in the future, including blending and barley origin.

731 It was stated that Joe White had a "[t]ransformation project in place to drive efficiency gains", said to be part of a disciplined approach to cost reduction. Specific details of the Malt Cost Reduction Transformation Project were not provided. King gave evidence that it was available for anyone who said they wanted to read it. King's evidence on this point was addressed in cross-examination by Hughes' senior counsel, but no document was shown to King as this occurred. It is clear King's answer was made on the assumption that what was stated in the Management Presentation Memorandum was correct, rather than from his actual knowledge. Earlier in his evidence he said he had no recollection of being told anything about a transformation project.[518]

732 After surveying the potential impact of either the abolition or retention of the carbon tax, head office costs and net working capital and cash conversion, the Management Presentation Memorandum moved to risk management:

> Joe White maintains a disciplined approach to minimising operational, business and financial risks *whilst securing quality malting barley* to allow full plant operation over the medium term. Joe White's approach to risk management is encapsulated within its Risk Management Policy.
>
> (Emphasis added.)

733 The slide identified as an operational risk the ability to source barley of the correct quality, variety and specification. Joe White's "Risk Management Discipline" was said to involve barley sampling on delivery and in storage, "[s]elf insurance", and "[c]ontract terms".

734 Finally, the last substantive section of the Management Presentation Memorandum identified organic and inorganic growth opportunities. Joe White was described as

---

518 Cf Mattiske's evidence to the effect that all transformation projects were completed or dormant, as well as Stewart's evidence: see par 147 above.

already pursuing inorganic growth opportunities by enhancing its customer service offering, penetrating new markets, and delivering "margin benefits".

735 Questions were asked, some in line with those forwarded on 25 June 2013.[519] Very little oral evidence was led on the actual questions asked, perhaps explicable by the formal summary that became the agreed record of the questions and answers (which ultimately became annexure D to the Acquisition Agreement). Further, the following day, Engle gave a brief summary of the meeting, attaching the Management Presentation Memorandum and a summary by Goldman Sachs which summarised "information provided by [Hughes] and [Argent]".[520] In his covering email, Engle observed that "everyone" had noted that the contents of the Data Room had been sparse up to that time. He suggested the primary method of further understanding things would be through the Q&A Process. Engle also reminded the large number of recipients of his email[521] that the primary goals of the Due Diligence were to assess potential risks to Cargill, to make sure the "core team" was aware of any gaps in compliance for any given area, and to raise important issues or opportunities that would have directly impacted Cargill's views on the valuation of the Joe White Business.

---

519 See pars 702-703 above.

520 Goldman Sachs' summary, about which there was no dispute as to accuracy, included that: there had been 6 owners in 10 years, where malt had been the periphery business, with this transaction being the first time malt had been the focus for the potential purchaser; until 2000 or so quality was the main issue but after that the market changed and cost reduction became more important; Joe White's sales plan and review identified best value customers and to ensure quality service, whereas value buyers received less service; in relation to proprietary varieties, the University of Adelaide and Joe White conducted public breeding, but this was dissolved and Joe White developed varieties - when Viterra purchased Joe White the research and development was centralised and sold, and accordingly a question arose over the commercialisation rights for the "Admiral" variety which was a niche variety - the expectation was that "Admiral" would be a public variety and not proprietary and the reference in the Information Memorandum was incorrect; Joe White's ability to service select key accounts was limited "again by Viterra transaction" and Joe White could not at that time obtain the desired varieties out of New South Wales; Joe White's long-term contracts with Lion Nathan were usually for 5 to 10 years, with the latest renewal coming up in 2014/2015, and there was an expectation that the margin would be maintained but with some difficulty; Joe White's relationship with SAB Miller and "BBM" was strained with the pricing and margin currently over the odds and up for renewal; Joe White operated on a turnover basis - especially on the "barley side" because of historical statutory government bodies providing storage and, therefore, there was limited storage at the plants with most "facilities 1 x (cf Canada 5 or 6 x)"; and on malt Joe White must manage distribution to customers - Joe White met quality and there were few complaints so the system worked.

521 These included Van Lierde, Koenig, De Samblanx, Eden, Hawthorne, Le Binh, Purser, Viers, Jewison, Bowe and many more.

736 That said, Eden gave evidence of questions being directed towards Joe White's key customers and contracts during the Management Presentation. Under cross-examination, he said that he believed a question was asked as to how Joe White managed malt quality and grades of barley for its customers with such limited storage capacity. He answered affirmatively when asked whether he was satisfied with the answer given to this question. Whilst Eden accepted the malt storage capacity looked very, very tight, he said at that time Cargill still did not know enough and still had questions. He also pointed out it was not his area of expertise, and it was De Samblanx who would "have an idea".

737 Viers said he asked most of the questions, however he was unable to recall much about the detail. His overall impression from the Management Presentation was very positive. De Samblanx recalled asking a question about low silo capacity. He said the response from Hughes was that Joe White was managing its customers well and that there were no real quality issues. De Samblanx said he captured this issue as a point of attention for the upcoming site visits.

738 Many of the questions and answers recorded in the Acquisition Agreement were relatively perfunctory and not material to the issues at hand. The objective of the list in annexure D was to summarise the key themes and concepts that were articulated "by Joe White Management" in response to questions raised by Cargill and its advisers during the Management Presentation.[522]

739 A number of questions were asked about how sales were achieved. Cargill was told that all Joe White's sales people were based in Adelaide, with the consolidated team consisting of Hughes, Wicks, a marketing manager, 2 contract administrators and a market analyst. It was stated that this team was responsible for the co-ordination of the sales plan, delivery into the market and volume quality. In relation to competing with Chinese maltsters, Cargill was told Joe White did not match them on price. After identifying quality and supply issues that were said to be problems Chinese maltsters

522 The list identified the page number of the Management Presentation Memorandum to which each question and answer was referable.

experienced, Cargill was told that Joe White's customers recognised Joe White's quality and security of supply and were willing to pay a premium for it.

740 As to other material questions, Cargill enquired as to why Joe White's exports were at the level they were when Japan was the largest importer of malt in Asia. Various reasons were given, but there was no reference to the use of gibberellic acid. A number of questions were asked about the Accumulation and Position Margin, the detail of which is not necessary to record beyond the general observation that the questions were directed to Cargill better understanding that margin. On Cargill enquiring where barley could be stored, the answers were directed towards the position in Western Australia.[523] On the issue of malt storage, queries were raised concerning the facilities at Port Adelaide and Cavan in South Australia. In addition to informing Cargill that the facilities were owned by Joe White, it was stated that further storage was available at a Viterra facility in Port Adelaide. There was no suggestion that the storage was inadequate.

741 Upon Cargill enquiring about Joe White customer data and contracts coming up for renewal, it was said this would be provided in the Data Room. Finally, as to the question of whether or not Joe White had experienced any audit rejections, it was stated that Joe White had a very high audit compliance and that there had been no rejections to date.

742 Although not recorded in annexure D, Eden gave evidence that Hughes raised the topic of barley varieties. Eden recalled Hughes stating in essence that certain barley varieties had been developed to process and modify faster as part of the "in-malt processing". This statement was made in the context of Cargill having been informed that Joe White had access to all key Australian varieties and an unrivalled seed research and development program.[524]

743 Engle gave evidence that he appreciated that Cargill was required to conduct its own independent analysis, especially as it related to his area around the financial valuation

523 The reason for this was not explored in evidence.
524 See par 720 above.

model, to independently come up with the Joe White Business forecasts that would eventually lead to a valuation, and to factor in any key risks.[525]

744 The site visits proceeded between 26 and 28 June 2013. Each visit lasted about 2 hours.[526] Cargill, Inc attendees at the Sydney (Minto) site were Eden, Viers, Klaeijsen, Sagaert, Jewison, and De Samblanx. For the site visits at Cavan, Port Adelaide, and Perth, only Eden, De Samblanx and Kim Woodburn ("Woodburn"),[527] general plant operations manager of grain and oilseeds supply chain Australia, attended on Cargill, Inc's behalf.

745 De Samblanx gave evidence that the purpose of the visits from his perspective was to see the plants and assess their quality. He wanted to be able to determine whether the plants were in line with what he had learnt from the Data Room. Although he had been told they were not permitted to ask questions about Joe White's customers, consumables performance or processing conditions, he understood that he would be permitted to ask questions about the design of the equipment and about the people who worked at the plants, including how many. De Samblanx anticipated that by seeing each plant, he would get an idea of the production process, the length of the process and how the kilning was working.

746 Minto was the first plant visited. De Samblanx decided to ask a question early on to see whether he would get a response. He asked the plant manager about power consumption. The plant manager asked Merrill Lynch if he was able to answer. Permission was not forthcoming. Rather, De Samblanx was informed by Merrill Lynch that the question could be asked through the Data Room. De Samblanx formed

---

525 Engle gave evidence of the manner in which Cargill conducted its own independent analysis, including by: (1) building Cargill's own projection around what barley earnings would be; (2) validating what Cargill thought would happen in relation to margins; (3) assessing what Cargill expected from the Australian beer market, including looking at the production capabilities of the entire ecosystem of malting assets to determine whether new capacity would be required in the future; (4) analysing Cargill's financial model, including forecasts for the Joe White Business; (5) factoring in any key risks; (6) forecasting Unadjusted Earnings for financial years from 2014 onwards, which were not taken directly from the Information Memorandum, but were based on certain assumptions provided by the Sellers; and (7) creating Cargill's own valuation of the Joe White Business.

526 The schedule for the site visits allocated only 2 hours per visit, De Samblanx said in this timeframe they had to keep moving fairly quickly to see everything.

527 De Samblanx gave evidence that Woodburn possessed technical expertise in plant operations, but did not have a background in malt.

the view that Merrill Lynch was serious about the conditions of the site visits and that his questions were unlikely to be answered.

747 While De Samblanx walked through each of the plants, he made notes. Later, on the same day of each visit, he entered those notes into the spreadsheet he had created in draft before arriving in Australia.

748 A Viterra document distributed to plant employees in advance of the site visits set out a "Site Tour Protocol", specifying that questions "should be focused *only* on the technical aspects of the plant" (emphasis in original) and listing the following "Prohibited Conduct":

> - No communication permitted with anyone outside of the designated guide/plant manager/[Merrill Lynch] chaperone
> - No photography or recording devices
> - No questions that are not related to technical aspects of the specific plant and including, but not limited to the following:
>   - Other potential buyers that have visited the site
>   - Number of times site visits have been conducted
>   - Finance/Costs related questions (eg [Unadjusted Earnings] per tonne, manufacturing cost per tonne)
>   - Specific customers of the plant
>   - Transaction process-related questions
>
> **If you are unsure of any question or conduct of a particular bidder please revert to the [Merrill Lynch] chaperone. To the extent you require clarification on any of the items above please contact Saurabh Thaper …**
>
> (Emphasis in original.)

749 Eden participated in all of the site visits. On each occasion, representatives of Merrill Lynch were present. As arranged, they directed the protocol for each of the visits.

750 Eden gave evidence that while visiting a plant in Adelaide, he and others were looking at control screens in the processing room.[528] A question was asked about for whom the lot was being made. Merrill Lynch directed that the question not be answered.

---

528 Some information was captured from what was observed in control rooms: see pars 788-789 below.

Further, there were numerous occasions when questions were asked about customers and recipes for malt. Again, Merrill Lynch instructed those in attendance that the questions were not to be answered. In short, the site visits did not give Cargill the opportunity to speak about customer details or customer specifications and how they were met.

751 Eden gave evidence that after the Management Presentation and the site visits, he remained impressed with Joe White's professionalism. He believed that Joe White was achieving well beyond what Cargill was capable of at the time. He thought Joe White had a very strong technical leadership team who really understood the science of barley and malting. He gave evidence that he was in awe of what Joe White was doing and was excited about what it might mean in terms of reverse synergies that could be introduced to Cargill.[529] He concluded that Joe White was doing something that made its varieties "hot", which he said was a term used in the industry to describe barley that modifies quickly and has a high degree of enzymatic activity. He concluded that this had been achieved as a result of the research and development that had been undertaken.

752 Viers attended the first site visit at Minto. He gave evidence that he did not have the technical knowledge or expertise to assess whether the plant was efficient. The impression he gained was that it was sanitary and well-kept. He was impressed by the computer system being operated at the plant. Viers left Australia on the evening of 26 June 2013. He was provided with regular updates by others as to the remaining site visits.

753 Viers considered the primary method of Cargill furthering its understanding was through the Q&A Process. Viers gave evidence that Cargill submitted a significant number of questions, but Glencore was very slow to answer and in some cases he had the impression that the responses were defective.

754 While the site visits were occurring, on 27 June 2013 Le Binh sent an email to

529 This matter was reflected in contemporaneous communications: see pars 754, #3; 755(3) below.

De Samblanx, copied to Eden and others, which was concerned with the Due Diligence with respect to operational matters and synergies. That email referred to a discussion earlier that day concerning synergies and invited De Samblanx to express his opinion on a number of points, as follows:

> #1 Additional volumes by expanding capacity without capital.
>
> #2 Decrease in gas, power and water costs (using) operational benchmarks.
>
> #3 Decrease in production costs by applying [Joe White]'s expertise to Cargill's operations.
>
> #4 Decrease in production costs by applying Cargill's expertise to [Joe White]'s operations.
>
> #5 Reduction in # of plant employees.

Le Binh also asked at which plant it would be possible to decrease production costs and to what extent.

755 Later on 27 June 2013, Eden provided a response to Le Binh's email, which was also sent to De Samblanx and copied to others. Eden said it was probably too early to comment but the general feeling was that the assets of Joe White were in good shape. As to the questions raised by Le Binh, Eden set out his "[q]uick thoughts" as follows:

> 1. We think there is *limited/if any to expand (sic) capacity without capital*.
>
> 2. Yes on gas we think there is opportunity – with some minor investments. Without investments [De Samblanx] thinks $3.00/mt. On power we are a bit confused. There is opportunity to better use frequency drives but *we would spend more money on cooling to be compliant with customer requirements*.
>
> 3. It might be related to barley varieties, but [Joe White is] only on 5 days steeping/germination where we are at 6/7. They definitely have solid processing expertise and utilise just in time better than us. We *have to be honest we are questioning how they can do this given ageing/process requirements*.
>
> 4. Re: reducing employees ––– There (sic) structure is very much similar to our European approach. They share plant manager in Adelaide and collaborate well and use one shift. They are using Viterra origin weights which we would have to staff up if we wanted to use our own weights. We don't see a major opportunity on processing/plant people. We still do not know the overall structure. For our purposes of money, I think we *should be thinking of $1.0 million in people synergies*. This does not address moving the headquarters.

(Emphasis added.)

The email was signed off "Doug & Steven", being Eden and De Samblanx. Both had input into the contents.

756 The enquiries of Le Binh with respect to capacity were directly related to the question of synergies. In short, if synergies were able to potentially achieve additional volumes, it was necessary to have extra storage capacity within Joe White in order for the additional volumes to be realised.

757 When Engle read this email exchange, he considered the views expressed by Eden and De Samblanx to be preliminary. In summary, Engle said that these concerns were raised at that point in time, but after then they were no longer raised. Engle understood this to mean that Eden and De Samblanx had received satisfactory answers to their queries. Engle said he did not have any expertise in malting. He gave evidence that both Eden and De Samblanx were experienced and that he trusted their judgment. Sagaert gave evidence that Eden and De Samblanx were alerting others there was a risk that Joe White was achieving a shorter germination and steeping period because it was using chemical additives such as gibberellic acid. She said it was an important matter that should have been investigated, but she did not investigate it herself.

758 Also on 27 June 2013, the final version of the pre-read summary for the board was circulated. The covering email stated the summary would be provided to the board the same day.

759 The summary stated that the base case standalone valuation of Joe White was $254 million (using a discount rate of 10 percent[530] and assuming no growth in the perpetuity terminal value calculation), and the valuation with "very limited preliminary net synergies" was $296 million. The summary stated that Cargill had bid above this because it believed there was a possibility to enhance the valuation by

530 The general policy at Cargill for business units with certain characteristics was that a recommended discount rate be applied. In 2013 for investments in Australia, the recommended discount rate was 10 percent.

learning more in Phase 2, especially with respect to available synergies.

760 The summary gave some background with respect to Joe White, which largely reflected what was contained in the Information Memorandum. The poor performance for the 2013 financial year was referred to. It was said it had been explained, and that the drop in performance and the potential for a rebound would be a key focus of the Due Diligence. As to the perceived strategic fit, the following was stated:

> The acquisition of Joe White represents an *opportunity for Cargill to extend its global platform*, by: (i) creating a regional footprint in the only major malting barley region not in Cargill's portfolio, (ii) gaining the ability to serve the highest growth regions, including Southeast Asia, for both barley and malt from a stable and mature country (57% of Cargill's asset portfolio would serve emerging markets), and (iii) *capturing high margins* from Australia which trails only Argentina globally from an attractive margin perspective.
>
> In addition, the acquisition is aligned with Cargill's vision of being a global commercial maltster. Malt customers are mainly large multinational brewers operating globally. By having a *high quality production* capability in Australia, Cargill would strengthen its relevance to global brewers as they are looking to deal with maltsters able to supply globally and guarantee supply assurance.
>
> (Emphasis added.)

761 The summary referred to some "Critical Assumptions", which had not been verified. It was stated these would be verified in Phase 2. It was noted that the assumptions relied on Joe White's management projections for the 2014 to 2016 financial years and corresponding trends from 2017 onwards. These assumptions included growth in sales volume to reach 96.5 percent utilisation by the 2015 financial year, and then remain flat.

762 The summary expressed various preliminary views with respect to synergies and dis-synergies. It was noted that, at that stage, there was an inability to accurately comment on the value of synergies.

763 There were 4 matters identified as the top risks. These were: increased susceptibility in Australia to crop failure because of "weather risk"; significant downturn in the Asia-Pacific economy; potential changes in government policy, including tax

legislation; and appreciation of the Australian dollar.

764 The summary stated it was expected a level of due diligence customary for a transaction of the nature and scale of Joe White would be undertaken. Such a due diligence was foreshadowed to include the operations and business of Joe White, as well as Joe White's financial, tax, legal, human resources, information technology, guiding principles, environment, health and safety matters. Further, it was expressly stated that there was an expectation Cargill would have access to all material information related to Joe White and to be able to submit questions and receive answers from Glencore.

765 At around the same time that this summary was provided, a more formal board paper was also provided to the directors. It stated that the paper had been prepared by Eden, Viers, Sagaert, Jewison, Engle and Le Binh. The contents of this paper were very similar to what had been presented to the Cargill leadership team. The paper suggested that strategic buyers of Joe White were likely to bid between $300 million and $450 million.

766 While Cargill was conducting its investigations and analyses, Glencore was also considering its position. On 28 June 2013, Mahoney emailed the chief executive officer, Ivan Glasenberg ("Glasenberg") and Walt to inform them that Cargill and Co-Operative Bulk were the 2 highest bidders for Phase 1. In response to a query from Glasenberg about whether "we" could push the bidders higher in Phase 2, Mahoney stated he expected to be able to do so, to $380 million plus. Walt then emailed Glasenberg and Mahoney, telling Glasenberg that "[w]e are obviously pushing as much as we can". After referring to the industry currently going through tough times, he noted that the Unadjusted Earnings had been normalised to get from $25 million to $35 million and that Glencore was "steering investors to buy in" at a $40 million-plus level. Walt stated that a sale price at $380 million would be a very good outcome. Glasenberg responded, stating that companies did not buy assets based on 1 or 2 years' earnings, and that many did an analysis of net present value to take into account future years. Glasenberg directed that "we" should be creating massive tension and

pushing sellers to the US$400 million mark. In relation to Cargill, Glasenberg said he did not understand Walt's statement that Cargill could not stretch its bid. He suggested the fact that they were private with a large balance sheet did not result in an inability to do so. Glasenberg stated a massive tension should be created between Cargill and Co-Operative Bulk. Emphatically, Glasenberg rejected Walt's suggestion that $380 million would be a good outcome. He asked why a price higher than US$380 million[531] could not be achieved, suggesting Walt had already miscalculated what would be a good outcome in relation to another sale occurring around that time. In the final email on this issue, sent by Walt to Glasenberg and copied to Mahoney and King, Walt stated that they had "lined up a ton of arguments and [were] pushing as hard as [they could]". He also stated they had maximised value through competitive tension. He said they were actively engaged, and managed and drove the process "way beyond a typical sale process given the contracting margins and flat to negative industry outlook". Walt informed Glasenberg that "we" were not purely relying on "the banks at all …".

767 During his cross-examination, King was taken to this email chain. In response to a question as to whether he was aware Glasenberg was taking a direct interest in the sale of Joe White, King stated that Glasenberg took a cursory interest in everything that went on at "the company". King referred to the publicly listed company and said that Glasenberg owned 8 percent of it. He then stated that not only was Glasenberg the chief executive officer, but he was also an incredibly important shareholder.

768 On 1 July 2013, Engle emailed a large number of Cargill employees setting out how it was envisioned the various due diligence teams would process through the additional documents provided in the Data Room. With respect to accounts, (within the accounting, financial valuation and synergies workstream), Jewison was specified as the primary reader and Le Binh as the secondary reader. In relation to production facilities (within the commercial, operations, human resources, information technology, and environment health and safety workstream), De Samblanx was listed

531 Although Walt appeared to be referring to Australian dollars in his earlier email, it appeared that Glasenberg took the amount to be referring to United States dollars.

as the primary reader, with the secondary reader yet to be determined.

769 Engle's email also attached an overview of the workstreams. This attachment identified the core deal team. Relevantly, Van Lierde was the platform leader; Hawthorne was the strategy and business development group leader; Eden was the malt business unit president; Viers was the malt business unit commercial lead; Jewison was the malt business unit controller; Sagaert was a malt business unit European representative; De Samblanx was also a malt business unit European representative; and Engle was the strategy and business development group lead, with 3 other persons listed as being part of the strategy and business development group including Le Binh and Bowe. Neither Hermus nor Christianson were listed as being part of the core deal team.

770 The attachment also identified members of each key Cargill workstream. With respect to commercial operations, in addition to Viers, Sagaert, De Samblanx and others, Christianson was to be responsible for "supply chain" and Hermus was to be responsible for "quality".

771 After attending the Joe White plants, De Samblanx prepared a summary of site visits in early July 2013. On 2 July 2013, De Samblanx emailed an excel spreadsheet ("the Operations Spreadsheet") to Eden, Le Binh, Sagaert, Viers, Jewison, Engle and others. In that email, De Samblanx said that the Operations Spreadsheet probably did not capture all that was seen at the Joe White plants. Otherwise, the email gave a very general overview of the contents of the spreadsheet. The Operations Spreadsheet contained "tabs" dedicated to the Joe White plants at Minto, Cavan, Port Adelaide, Perth and Tamworth, as well as tabs entitled "RECAP-&-opportunities", "consumables", "JWplantcosts", "CARGILLplantcosts", "PlantsOverview", "KIMWOODBURN" and "addresses".

772 In the first sheet entitled "RECAP-&-opportunities" (which De Samblanx's email said reflected the main conclusions and areas of opportunities), and under the heading "Executive Summary", De Samblanx recorded that Joe White's plants were generally

"very well maintained, clean and properly managed". He also compared the newer, state-of-the-art plants of Minto and Perth (which he said had capabilities to be very efficient), with the older plants of Cavan, Port Adelaide and Tamworth (which he considered could not be very efficient on heating). De Samblanx continued by observing that, with its 7 plants and 11 production lines, Joe White did very well on full-time employees at the plants. However, highlighted in red,[532] De Samblanx noted:

> The limited storage capacity for malt in combination with the local "non independant" (sic) laboratories is the biggest concern related to integrity (COA).[533]
>
> If [Joe White] would not follow the COA rules as Cargill does, additional storage costs are to be expected.

773 De Samblanx gave evidence that, at the time he prepared the Operations Spreadsheet,[534] he had doubts about the integrity of Joe White's Certificates of Analysis and about how they were issued. Before this time, he had been made aware of a Cargill malthouse in Belgium producing malt in 2001 where an employee had wrongfully adjusted results to record them as being within specification. He was also aware of Eden's previous experience in the United States.[535] But at this stage De Samblanx did not know what approach Joe White took to analysis and reporting and did not know what to expect.

774 As to the first paragraph quoted, Eden gave evidence that he remembered it as a broader topic rather than a specific topic. In relation to the second paragraph, Eden understood it to be a reference to the broader topic of segregation and how many there were going to be on the malt. His evidence was that more segregation required more storage and that Cargill's theoretical blend approach could require many segregations to be made.

775 Also in relation to the second paragraph, at the time of giving his evidence Engle

---

532 Eden understood the matters in red were highlighted to catch the attention of those higher up, including him, because they were important.

533 COA being a reference to Certificate of Analysis.

534 There were a number of iterations over a number of days.

535 See par 1091 below.

understood it to mean that if Joe White did not follow the same Certificate of Analysis rules as Cargill, then additional storage costs were to be expected. However, Engle was unsure whether he read this document and further stated that he only subsequently learned what "COA" meant.[536] Accordingly, it is unlikely that he formed such an understanding in July 2013.

776 Under the heading "Objective" and next to a column entitled "Central laboratory", De Samblanx wrote in red and bold text:

> ensure there is no conflict of interest between plant and QC[537]
>
> ensure [Certificate of Analysis] is reflecting reality
>
> ensure high level of quality of analysis
>
> reduce outside analysis like PYF[538] and gushing.[539]

777 De Samblanx gave evidence that these notes also related to concerns he had at the time about Joe White's operations. At Cargill, there was a clear segregation between operations and analysis, with the effect that results produced by the central laboratory could not be the subject of any influence from personnel in operations. The reference to "conflict of interest between plant and [quality control]" related to a concern that the same persons were involved at Joe White in laboratory operations and plant operations. De Samblanx had observed on the site visits that Joe White had laboratories at Perth, Tamworth, Minto and Port Adelaide, as well as a laboratory at the head office in Adelaide. De Samblanx was unclear as to the proportion of samples that were analysed at local laboratories. He held the view that, to the extent that analyses were conducted where plant management were physically present and there was not a clear segregation, there was a risk that plant staff could be exerting influence on laboratory staff to produce results within specification.

778 Eden said he understood the issue referred to in the preceding paragraph had been

---

536 In the worksheet "Certificate of Analysis" did not appear at all, and only the acronym "COA" was used.
537 QC stands for Quality Control.
538 PYF stands for premature yeast flocculation.
539 Gushing is an uncontrolled and sudden escape of foam and beer when opening a beer bottle.

printed in red because De Samblanx was identifying it as a problem.

779 As still part of the executive summary, and under the heading "Process", the following was stated:

> All the plants are steeping < 24 [hours] which is thanks to the Australian barley and gives an energy saving vs Cargill Malt.
>
> Germination time is 4 days equal to some of Cargill Malt plans (sic) (Cargill applies 5 days in 6 out of the 11 plants).
>
> Applying the requested 5 days for [Heineken] would mean loss of capacity of 20%. This would happen in Perth.
>
> In general we have seen high temperatures in steeping and germination. This can compensate the short process time but is not in line with processing parameters of global customers like Heineken.
>
> In no plant we have seen kilning programs that guarantee 2 á 3 hours on top of the kilning bed, which again is a requirement of several global customers.
>
> Applying strictly processing conditions for global customers as we know them would imply higher energy usage.

The last of these points was in red and bold text.

780 With respect to a 4 day germination period, De Samblanx's evidence was that he was not really surprised by it. He believed the shorter period could have been related to the growing and harvesting conditions of the barley. He understood Australia generally had healthier weather conditions during the harvesting period when compared to the northern hemisphere. That said, De Samblanx was aware of Heineken's requirement for 5 day germination for its "A Malt". Accordingly, at that time he expected a loss of capacity of 20 percent at the Perth plant if the 5 day requirement was applied.

781 Viers' evidence was that he was concerned about the possible practices engaged in by Joe White after reading De Samblanx's executive summary.

782 Sagaert read the executive summary and understood it to be saying that existing volumes might not be able to be produced if Joe White did not follow the same Certificate of Analysis rules as Cargill, which might have given rise to additional

capital expenditure. She also understood that De Samblanx was concerned as to whether Certificates of Analysis were reflecting the truth. She said she did not conduct any investigations herself with respect to these matters as she was not part of that deal team and her involvement was very low.

783 The second sheet was entitled "consumables". De Samblanx made a comparison between the operations of Joe White and those of Cargill in Europe.[540] Some of the entries were in green and others were in red. De Samblanx gave evidence that green indicated Cargill could improve the performance, and red indicated the factor was "against performance". By way of illustration, De Samblanx said that if the weather was warmer in Australia, then it was anticipated Cargill would be able to save on energy costs. Tellingly, De Samblanx indicated that Joe White had a shorter production process "thanks to barley" when compared with Cargill's "longer process due to barley". This indicated an acceptance of shorter steeping and germination times because of Australian barley varieties. It is unnecessary to set out further detail.[541]

784 The next 3 sheets were concerned with plant costs of Joe White, plant costs of Cargill and an overview of each of the Joe White plants. With respect to the last of these tabs, De Samblanx had prepared this before travelling to Australia. The information he compiled was from the Data Room, together with searches of Google Earth.

785 The next sheet was entitled "Minto". It recorded that the visit to that site only lasted between 1 and 1¼ hours, and was attended by various persons, including Hughes, Argent and the plant manager. De Samblanx's notes recorded it had been in operation from 31 May 2012 and had a capacity of 100,000 tonnes per year.

---

540 De Samblanx gave evidence that he formed the view that Joe White and Europe were very similar and that was why he made the comparison.

541 The Viterra Parties submitted it should be inferred from evidence given in chief by De Samblanx concerning his observations of temperatures used by Joe White in the malting process that were not consistent with processing conditions required by customers of Cargill Malt that De Samblanx formed the view that there was a risk that Joe White was not complying with its customers' processing specifications. In light of the evidence in chief given by De Samblanx that this matter did no more than raise a query for him, coupled with the fact that this proposition was not put to De Samblanx during his cross-examination, no such inference will be drawn and no conclusion will be made beyond what was stated in De Samblanx's evidence in chief.

786 The "Cavan" sheet recorded Youil being in attendance for that site inspection. Again, a considerable amount of detail was set out. De Samblanx noted some questions with respect to specifications, including those required by local customers in contrast to export customers. De Samblanx's evidence was that he wanted to keep this in mind when considering the setup of this plant because it mainly serviced local customers about which he had no knowledge. He also made notes with respect to local breweries and export breweries, recording that there were no ageing specifications for local customers and export customers included transit as part of ageing time. This reflected what he had been told, and was relevant to the question of storage.

787 De Samblanx was cross-examined on the contents of the Cavan sheet. When asked why he had made some of the notes, he stated that he recorded all that he could capture. Without descending to the detail, scrutiny of De Samblanx's notes on Cavan demonstrated that he was largely positive about the operations at that plant.

788 The "Port Adelaide" worksheet commenced with a heading "Talk in the office", under which De Samblanx noted he had seen Heineken ring samples[542] and a list of customers' names "with several Asian destinations like [Burma], did see also APB".[543] The worksheet also recorded Youil in attendance during the Port Adelaide inspection. Included in the many rows of information concerning plant and production processes were details arising out of observations from the control room. De Samblanx included the observation that gibberellic acid could be added, noting that the "dosing equipment on screen (were not used when not allowed)". In explaining this note, De Samblanx gave unchallenged evidence that he was told very firmly by Youil that Joe White did not use gibberellic acid when it was not allowed.[544] Further, Eden's

---

542 See par 819 below for details of Heineken's ring test.

543 APB was a reference to Asia Pacific Breweries.

544 In the Viterra Parties' closing submissions, it was stated that De Samblanx knew he was in breach of the conditions of the Due Diligence by asking this question of Youil. Leaving aside whether that is correct or not (the issue was not explored in evidence, so it was not raised as to whether or not the question and answer were authorised by Merrill Lynch as part of the process), it did not detract from the fact that Youil made the unequivocal statement that he did. Further, contrary to the Viterra Parties' submissions, the fact that De Samblanx included information on this topic in his later report (see par 819 below) did not indicate that De Samblanx did not rely upon what Youil told him. On the contrary, the fact that De Samblanx did not raise the topic again, despite having every opportunity to do so (see

evidence was that the note about being able to add gibberellic acid was brought to his attention, and that, based on this, he accepted Joe White would only use gibberellic acid when it was allowed.[545]

789 The sheet of the Operations Spreadsheet arising out of the visit to Perth recorded that Trevor Turnbull ("Turnbull"), the general manager for engineering,[546] was in attendance on behalf of Joe White. It was recorded that Perth's sales were mainly to 5 customers, which included Nestlé, San Miguel, Boon Rawd Brewery Co Ltd ("Boon Rawd") and Heineken (row 13). Under the heading "control room", De Samblanx noted there were 4 "impressive screens" and that data was stored for 4 years. It was further noted that Joe White could do Heineken malt "with 2 [hours] 80^0C at the top" to deliver Heineken A Malt. The note continued:

> [F]or [Heineken], they do 5 days germination per 4 batches
>
> Would do [Heineken] only in the winter

De Samblanx gave evidence that Heineken A Malt was a type of malt with particular customer specifications, including in relation to processing. The details recorded were what was told to him when he asked whether Joe White supplied malt to Heineken and under what processing conditions. In De Samblanx's experience, 1 of Heineken's conditions for this malt was a germination time of 5 days. There was no suggestion of any non-compliance with specifications in this regard. On the contrary, a comment from Turnbull recorded by De Samblanx actually referred to a parameter being out of specification, and the issue of compliance was addressed in that context. De Samblanx

---

par 865 below) strongly supported the conclusion that he relied on what Youil told him up until around the time things started to unravel in October 2013: see, for example, pars 1102, 1129, 1140, 1145-1146 below.

545 It was submitted by Youil that Cargill should not be able to rely on this evidence because the representation was not pleaded in the Statement of Claim. The evidence (being both the contemporaneous document and the details of the oral statement) was contained in De Samblanx's witness statement, which was filed approximately 7 months before the trial commenced. That evidence was plainly material to the allegations made in the Statement of Claim, and no objection was made to the evidence being led. If Youil's counsel decided not to challenge De Samblanx's oral evidence (which was corroborated by contemporaneous documentary evidence) because the matter was not pleaded (as suggested in Youil's closing submissions, that is a matter for them. However, it provided no basis for this evidence not to be taken into account.

546 Turnbull formed part of the Joe White executive.

gave evidence that he understood from what he was told that if 1 parameter was out of specification, the malt could be taken back to the plant where it may or may not be reused, but De Samblanx understood that the malt would typically be re-blended with other malt to get it into specification.

790 This worksheet concerning Perth also referred to the Minto plant. The note arose out of a conversation between De Samblanx and Turnbull where De Samblanx asked Turnbull how Joe White managed at Minto in light of the limited storage capacity.[547] Turnbull replied that Joe White had 20,000 container units of storage available at port side, which meant that malt would come off the production line at the Minto facility, then be blended, packed and transported to off-site storage pending export. De Samblanx considered that 1 of the issues with this form of storage was that if the laboratory analysis revealed that malt tested out of specification, then the malt would have to be unloaded and transported back to the plant. Further, if malt were to be stored in this way, De Samblanx considered it preferable to analyse the specifications of the malt as soon as possible so as to minimise the risk of recall. When he raised these matters with Turnbull, Turnbull stated that it was possible to re-empty the containers and that the Minto samples received priority at the Joe White central laboratory.

791 Also during this discussion, Turnbull told De Samblanx that he believed that Joe White could bring benefits to Cargill. In this context, he referred to a number of matters including Joe White's research on barley varieties and its work with the local university.

792 Based on these notes concerning Heineken, the Viterra Parties submitted that effectively De Samblanx was told that Joe White's facilities in Perth were limited in the extent to which they could comply with Heineken's specifications. There was no basis to draw such a conclusion. On the contrary, there was nothing to suggest that

547 This conversation took place at the Perth airport following the site visit.

De Samblanx was told of any inability to comply.[548]

793 With respect to the "Tamworth" sheet, De Samblanx recorded that the Joe White representative there had previously worked in Adelaide, but still had a lot to learn, as there were many times where he did not know the answer to questions.

794 The sheet entitled "KIMWOODBURN" reflected some work done by Woodburn. He had been asked to participate in order to look at the plants from a legal perspective, concerning electrical equipment and the like. With respect to synergies with Cargill's grain and oilseeds supply chain in Australia, Woodburn observed that the "main ones" would be procurement of gas and power and the sharing of functional type roles. In other words, the synergies Woodburn was suggesting were those that could be derived from sharing with other parts of Cargill's existing organisation in Australia. De Samblanx agreed with this observation.

795 A final note before continuing, the Operations Spreadsheet demonstrated that, in early July 2013, De Samblanx had a number of significant concerns about the operations of Joe White.

Q. The sale process continues and final bids are made

796 On 1 July 2013, King received an email from Merrill Lynch, copied to Hughes, Argent and others, attaching an analysis of Joe White's sales volumes. The email stated only some of the information would be disclosed to bidders. It was recorded that the weighted malt margin for the top 10 customers was about $200 per tonne, which was lower than the $207 per tonne stated in the Management Presentation Memorandum. However, it was noted that the lower margin did not take into account certain things, including by-product and blending margin.

797 The following day, King responded to Merrill Lynch, copied to Hughes, Argent and others, including by referring to his memory that there was a $6 per tonne and a $3.60 per tonne uplift to "the contracted malt margins based on blending, etc". He

548 Moreover, the suggestion that the notes recorded the position as submitted was not put to De Samblanx.

continued:

> Need to think of a way to explain these so as to bridge the difference between the $200/t and the $207/t otherwise bidders could well further discount their projections.

798 Argent then joined in, by email to Merrill Lynch and King, copied to Hughes and another. He said he had added "the $9.60", which related to $6 for by-products and $3.60 for barley off-grades.

799 King responded to Argent's email saying he wanted to reflect the $9.60 per tonne "somewhere", but was conscious that if bidders cross-checked the customer contracts, "[would] they not notice a disparity between the margin in the contracts and what we have in this file?". King gave evidence that, at the time he wrote this, he did not know the customer contracts included in the black box of the Data Room did not contain any specifications in relation to malt. He believed that if prospective purchasers were not confident about what was being said about the margin, they would discount it.

800 In a further response to the email chain, Argent said it was "easy to strip out" and attached a version in which the $9.60 margin was not included.

801 King was still concerned. He emailed Argent, copied to Hughes and others, stating that if the $9.60 margin was not included, the bidders were likely to discount future malt margins by the differential. In response, Argent said he was happy to support either approach, stating the $6 was "real" as it happened every year, and that the $3.60 was seasonally based.

802 King sent a short email suggesting a footnote could be included, outlining the position and providing the necessary context.

803 Hughes then sent an email on the topic with his own suggestions,[549] and Argent shortly followed with his email suggesting a footnote be included stating that margins

---

549 King interpreted Hughes' comments to express a concern that the $3.60 would be seen to be part of the Accumulation and Position Margin of $15 per tonne, which was the margin derived by Viterra, and then Glencore upon acquiring Viterra, for selling the barley. This margin could possibly be available to Joe White if it were to source its own barley directly from farmers (see par 526 above), and was a fact that King had been keen to explore and verify.

did not include revenue associated from the sale of by-products.

804 Merrill Lynch then entered the discussion, agreeing that using a footnote was probably the best way to go. With respect to the $3.60 component of the margin and the fact that it was seasonal, an enquiry was made as to whether this could be referred to as a "potential upside".

805 Argent's response, sent to others including Hughes, was direct. His email also sent on 2 July 2013, stated:

> Difficult to describe the $3.60 given that it refers to the use of off-grades which *isn't a topic generally disclosed to customers*.
>
> I suggest concentrating on the $6.
>
> (Emphasis added.)

806 King gave evidence that when he read this he did not think anything was untoward. He said he had already discussed this issue with Argent, though he could not recall Argent having said previously that the use of off-grades was not disclosed to customers. In short, King's understanding was that the "output" was compliant with customers' malt specifications and, accordingly, this non-disclosure of off-grades did not give rise to any concern. When pressed on this issue, King responded:

> If something was being done as an illegal practice, why on earth would you put it in an email?

That said, King accepted he faced a dilemma, because, in order to reveal the margin, it would involve revealing a practice not known to customers.

807 King then enquired as to whether that would still mean there was a shortfall relative to what had been shown in the Management Presentation Memorandum and the Information Memorandum. Argent responded that it would not.

808 The discourse continued. In a further email, King stated to Argent, copied to Hughes and others, that if $207 per tonne could be achieved "without having to go into details" about the $3.60 margin from off-grades, then King thought it was a workable solution. However, King continued that, given that there was a bidder who had no experience

of the malt business, it might be advisable to include an explanation of the $3.60 margin as well as the $6 margin.

809 Argent responded yet again, noting that the weighted average of the "contracts/margins" that had been disclosed was $200, excluding the impact of either the $6 margin or the $3.60 margin. He suggested that in those circumstances "we get there without having to disclose $3.60".

810 King agreed with Argent's most recent suggestion "with the addition of a suitable footnote". He continued:

> I would have thought it is preferable to leave the note slightly open in terms of the actual amount we have assigned [to] the sale of by-products so that they can follow up for a more specific answer via the Q&A and we could then share details with them of the $3.6/t as well. This would also mean that we could share the same file in due course with Cargill as I know this is something they are keen to get visibility of.

811 Argent accepted King's suggestion. Argent further suggested that a footnote be included with respect to values being for a contract year. Wording was then provided by Merrill Lynch with respect to that footnote. The footnote referred to both the Accumulation and Position Margin and "other revenue available to Joe White from the production and sale of malt (eg sale of by-products, off-take (sic))".

812 Argent put forward the next iteration of the footnote, which referred to the same subject matter but did not identify what the other revenue available to Joe White might be. He suggested it be left to the bidder to ask further questions on this issue.

813 The email discussion continued, focussing on the Accumulation and Position Margin, without any reference to the separate margin for the sale of off-grade barley. However, in a subsequent email King expressly suggested that he would include a footnote detailing what information was not included in relation to the Accumulation and Position Margin as detailed in the Management Presentation.

814 King could not recall what was ultimately included by way of detail of the separate margin for off-grade barley, but rejected any suggestion that the email chain referred

to above reflected any intention not to disclose any part of the components that made up the margin available to Joe White. Further, he accepted that it was not Argent's decision as to what comprised the wording as finalised.

815 Document 20.1 in the Data Room was entitled "Customer Sales Volume Analysis".[550] No customer was identified, with the "key customer contracts" being identified as "Customer A" through to "Customer J". The contracts' start and end dates respectively were listed as well as whether the type of contract was long-term or "spot". This document set out the tonnage and margin per tonne for each of the 10 key customer contracts (ranging from $226 to $145) and contained 3 footnotes. None of the footnotes explained or referred to the margin of $3.60 per tonne arising from the use of off-grade barley. Further, nowhere was there any mention of the fact that the use of off-grades was not disclosed to Joe White's customers. King acknowledged these matters. Further, the document contained no detail about customer specifications or required barley varieties.

816 Finally, on the estimation of the Accumulation and Position Margin, while King accepted there was an element of challenge in forecasting the correct number, he said the estimate of $15 per tonne was incredibly conservative in light of the actual numbers that had been achieved.[551] Further, King accepted the decision was his, Mattiske's and that of "the powers that be at Glencore" to settle on the amount of $15 per tonne. Mattiske's evidence was that he also wanted to take a conservative approach. Despite being told a substantially higher number by the "Viterra Group Operations" chief financial officer, Mattiske decided to adopt the figure of $15 per tonne.

817 On 2 July 2013, De Samblanx circulated the most recent version of the Operations Spreadsheet.[552] The covering email stated the attachment provided a "resume coming from the plant visits". De Samblanx highlighted various matters, including his

550 Recorded as part of annexure B to the Acquisition Agreement.

551 King referred to the Accumulation and Position Margin section of the Information Memorandum: see par 530 above.

552 It was sent to Eden, Le Binh, Sagaert, Viers, Jewison, Engle and Bowe, copied to Woodburn and Hermus.

conclusion that Joe White's plants were comparable with Cargill's European plants in relation to efficiency.

818 On 8 July 2013, De Samblanx recirculated the Operations Spreadsheet to the same persons. He noted that he had updated the "FSQA" sheet.[553]

819 The food safety quality assurance sheet included the following:

> Large spectrum of in-house (Technical Centre) analyses fitting most of global customers [specifications] …
>
> Labs are participating in several Ring Tests ([Malt Proficiency Scheme], Heineken and San Miguel ring tests). *With current information it cannot be concluded how well [Joe White] is positioned in the haram test*.[554]
>
> All plants to have ISO 22000 certification which implies high degree of control program implementation in the area of [hazard analysis critical control points] and regulatory compliance. The sanitary condition of the plants is one of the evidences that [hazard analysis critical control points] is taken seriously in [Joe White] operations. The *[D]ata [R]oom did not provide any information on the details per location of Major and Minor NonConformities* or [hazard analysis critical control points] plans.
>
> According chemical (sic) register gibberellic acid and beta-glucanase are stored and used in production. These processing aids/additives are normally not allowed by most of international brewers. Here is *some potential risk that Cargill Guiding Principles are compromised*.[555] The chemical register also includes 'Multifect Neutral' which is an enzyme normally used in protein processing. Not clear what exactly this product is used for. Same question related to Laminex Super G and Laminex BG2.
>
> …
>
> Some clients like [Heineken] do require 5 days of germination. Site visits proved that most plants do have 4 days of germination. This *might mean a process non-conformance that can be addressed either by waiver or by reducing plant capacity*.

---

553 FSQA stands for food safety quality assurance.

554 HARAM stands for Heineken analytical ring analysis malt, and is the test used by Heineken which Stewart understood was very similar to the Malt Proficiency Scheme, but gave no evidence of having any direct knowledge of the details. De Samblanx was taken to a document recording details of a test using HARAM. This document contained a legend for a graph depicting a summary of results. The legend had a traffic light system, with green signifying results less than 2 standard deviations from the specification, amber for results greater than 2 but less than 3 standard deviations, and red for results greater than 3 standard deviations. De Samblanx's evidence was that under HARAM, results within 2 standard deviations were regarded as satisfactory. He further confirmed that both the Malt Proficiency Scheme and HARAM were 2 external ring schemes that tested controlled samples, which were used to test the accuracy of the results of certain *equipment* in comparison to the same type of equipment in different laboratories throughout the world.

555 But see par 788 above.

> Delta T over the malt bed in at least the location of Minto was largely exceeding state of art the (sic) plant design. *Customers like Heineken do not allow* such [Delta] T's.[556]
>
> (Emphasis added.)

820 In the same sheet, De Samblanx posed a number of questions. These included:

> What are the result (sic) of the last HARAM proficiency test from [Joe White] technical [centre]?
>
> What are the ISO 22000 findings of last round of Bureau Veritas audits for each of the locations (E.g. Executive summary)?
>
> …
>
> What is the scale of use of gibberellic acid, betaglucanase and Multifect during production expressed in % of total volume [produced] per type of processing aid/additive?
>
> How does [Joe White] compensate if minimum germination time is required by customers of more than 4 days?
>
> How does [Joe White] assure that if delta T requirements are not met for certain customers, that malt is not used in blends for these customers?
>
> …
>
> For what is Laminex Super G and Laminex BG2 used …
>
> Do employees in [Joe White] have to annually sign a Company Ethics Charter similar to Cargill Guiding Principles?

821 De Samblanx gave evidence that the updated food safety quality assurance worksheet included input from Hermus. His evidence was that this was the only piece of information that Hermus provided to him in writing. De Samblanx discussed the detail with Hermus before it was sent. De Samblanx was cross-examined extensively on the details contained in this worksheet. In essence, his evidence was that he had a number of queries and matters about which he was uncertain at this point in time. However, he had not formed any final view about whether the matters raised were material. De Samblanx's intention was to make further enquiries to ascertain the significance of the questions then in his mind.

---

556 Delta T is a measure of temperature. Put simply, it is the difference between the ingoing temperature at which a batch is germinating and the temperature coming out of the batch. Some customers specify a maximum Delta T, which will result in higher energy costs if the batch needs to be subjected to airflow to keep the temperature down. Accordingly, some plants may not be capable of producing malt that meets the Delta T specification if those plants do not have the capacity to provide the required airflow.

822 Eden gave evidence that he did not recall receiving this document. He said he might have read it on or around 8 July 2013. Whether he read it or not, Eden gave evidence that he did not do anything about the issues raised because questions were still being asked at that time.

823 On 3 July 2013, responding to an email from Viers, Eden stated that there was something missing from the proposed board presentation about the strategic rationale for purchasing Joe White. To explain, Eden stated that if it did not get the Joe White Business, Cargill would be locked out of Southeast Asia for a very long time. Eden acknowledged Cargill could "greenfield our way into the market", but suggested this would be more expensive, slower and would not result in Cargill being the market leader. He asked Engle and Hawthorne to deliver that message more powerfully than had been done to date.

824 Engle responded, saying he had discussed the matter with Viers and that both of them thought Eden had raised good points. Engle then suggested some wording to be presented orally at the upcoming board meeting, namely:

> 1. To be relevant in the malt business you need a global footprint. This plays to how the global brewers want to align, as well the regional players place value on same (ability to serve from multiple origins for supply assurance and quality).
>
> 2. It's about growth, given per capita consumption rates and perceived economic growth potential is clear that SE Asia is the most critical geography in our industry and this is the opportunity to step in as the market leader.
>
> 3. Scarcity value to the Joe White asset - opportunities such as this come up every 5-7 years.

825 Later that day, Eden sent an email to De Samblanx and others referring to the then current version of the Operations Spreadsheet as outstanding work in a very short period of time. Eden queried whether, for valuation purposes, Cargill could use a "pickup" on the Joe White malt volumes. Further, he asked De Samblanx for his opinion on whether he had seen any best practices that Cargill could apply to its existing malt business that would have synergy value.

826 De Samblanx responded to Eden's queries stating he believed Joe White managed things well, sometimes better than Cargill, but that there was no real difference that had been observed that could bring a synergy. De Samblanx further observed that, with respect to plant design, Joe White did things differently. He informed Eden that Joe White opted for a horizontal design and for grouping malt and barley cleaning equipment in a building separated from the silos.

827 Also on 3 July 2013, Goldman Sachs sent an email to Merrill Lynch concerning the Due Diligence. That email stated that Cargill was very focused on putting its best efforts into making a strong bid, but some aspects of the Due Diligence were preventing this from being achievable. A number of issues were raised in respect of some of the responses Cargill received during the Q&A Process. Complaint was made that the response given to some of Cargill's queries was that the information had been "black boxed". An explanation was sought as to what Glencore and Merrill Lynch intended with respect to the black box information given the Phase 2 Process Letter was silent on the issue. Another response, the subject of complaint, was that the question had previously been answered in the Management Presentation. Goldman Sachs expressed a strong preference for answers to be given to questions as part of the Q&A Process. The last point raised was as follows:

> The contractual details of many of the inputs to the business and sales commitments have not been provided or are said to be "black boxed". Amongst other things, this prevents an accurate assessment of the synergies available for combining the business …, the timing of when the synergies can begin to be [realised] …, the benefit of the potential repeal of carbon tax … and the risks of acquiring the business …

The email concluded by expressing understanding about confidentiality obligations that could prevent some information from being disclosed. However it was stated that, as the matters raised related directly to the value of the Joe White Business, absent such details being provided, a more conservative estimate would be undertaken. Further, a draft of the proposed acquisition agreement was sought.

828 The email from Goldman Sachs gave rise to a series of emails over the next week or so, including a follow-up email from Goldman Sachs a week later. King was informed

of Cargill's various requests for information, and agreed that some information should not be offered "in the first instance". King arranged with Merrill Lynch for a telephone call to discuss the issues raised. Soon after this, he sent a further email to Merrill Lynch directing it to ensure that Mattiske was on the call.

829 On 4 July 2013, Engle emailed a draft addendum for the board presentation. Engle referred to a discussion Conway had had with Hawthorne and confirmed that permission was being sought from the board to pursue the purchase of Joe White up to a certain price "subject to Cargill management's review and discretion".

830 Also on 4 July 2013, customer data on volume and margin was added to the Data Room.[557] Viers sent an email to Eden, Engle and others giving a summary of some of that data on 7 July 2013. Viers said he suspected that whatever was provided was as much detail as Cargill would see.

831 One of the matters noted in Viers' email was that Joe White did not have many customer commitments beyond March 2014. Eden viewed this as positive. He believed with growing malt demand, Cargill could renegotiate to obtain higher margins in the next round of contracts.

832 On 5 July 2013, a meeting was held concerning finance and accounting matters. On behalf of Cargill, Jewison attended with another employee, a representative of Goldman Sachs, and representatives of KPMG. Those in attendance otherwise were Argent, representatives of Merrill Lynch and representatives of Deloitte. Questions had been prepared by Cargill in consultation with Goldman Sachs and KPMG. The details of that discussion were ultimately recorded in the Acquisition Agreement.[558]

833 On 7 and 8 July 2013, internal discussions were held with respect to updating Cargill's draft valuation model. As a result, a new model was circulated. This model contained a "waterfall chart slide" sheet which commenced with the midpoint of the indicative bid valuation, being $298 million. Adjustments were then made to take account of the

557 See par 815 above.
558 See par 1037 below.

net present value of additional items, including Cargill Malt synergies of $2 million, grain and oilseeds supply chain synergies in Australia of $5 million, and "incremental volume, other benefits" of $40 million. After some negative factors were taken into account, totalling $33.5 million, the midpoint of the then current valuation of $360.5 million was given.

834 Another sheet was dedicated to synergies. Consistent with the earlier model, new or additional volumes were anticipated. These increases in volumes were premised on the existing capacity of Joe White's plants without the addition of further storage facilities. The major changes from the earlier model were as a result of changes made with respect to the possible synergies.

835 Also on 8 July 2013, Goldman Sachs circulated a progress valuation. It was expressly noted that the financial forecasts it contained were based on the Information Memorandum, the Management Presentation Memorandum, the Data Room documents, and the questions and answers provided to that time. The Goldman Sachs draft valuation presented a midpoint value of $397 million (with a range from $327 million to $501 million), based on a discounted cash flow analysis with the discount rate of 10 percent.

836 Cargill and Goldman Sachs continued to work on their respective valuations separately, but exchanged information and asked questions of each other from time to time. As Engle explained, having Goldman Sachs work independently of Cargill allowed Cargill to test its own assumptions. Further, Goldman Sachs was able to provide input with respect to potential competitive bids by utilising its industry knowledge and specialist financial experience.

837 Again on 8 July 2013, De Samblanx sent an email to Engle, Bowe and Le Binh, copied to Viers and Hermus, attaching a series of questions concerning operational performance, quality, and food safety highlighted in red in a spreadsheet containing other questions. The added questions had been authored by either De Samblanx or Hermus. Some of these questions were never put forward during the Due Diligence.

At the end of the email, De Samblanx asked for an update of the list with all questions.

838 Early on 9 July 2013, Engle provided a further draft of the addendum for completion ahead of the board meeting later that day. A few hours later, the addendum was finalised. The purpose of the addendum was to provide an update since the board papers had been finalised.

839 The addendum provided feedback from the Management Presentation and identified some key learnings. It was stated that the Joe White management team was as expected, with the general manager (presumably a reference to Hughes) regarded as important at least for a transition period. The conditions of Joe White's plant were said to be better than expected. The same evaluation was given with respect to commercial and operating synergies, and the ability of Cargill to leverage the Australian footprint. As to the sustainability of the malt margin, it was noted that there was a structural advantage in Australia, with a protective marketplace and a niche brewer customer book that helped to sustain margins. The only negative observations were with respect to costs associated with integration and upfront costs. Further, it was stated a key focus area, amongst others, was further analysis of Joe White's malt margin outlook including evidence provided by management in support of sustaining margins.

840 The addendum also provided a revised financial summary. Using a discount rate of 10 percent, the base case valued Joe White at US$353 million. On the best case, using the same discount rate, the valuation given was US$469 million. Further details contained in the financial summary are discussed below.[559]

841 The last page of the addendum was a request for board approval of the Joe White acquisition. Using 3 bullet points, it was stated that Cargill was refining its valuation views and completing confirmatory due diligence in preparation for a final bid on 29 July 2013. It was further stated that the Cargill leadership team and the food ingredients and systems platform would be kept informed of the progress made.

---

559 See par 850 below.

Finally, board approval was sought "subject to Cargill management's review and discretion" to submit a final bid for Joe White.

842 The addendum was finalised by Le Binh and Bowe. Eden was not involved in the preparation of the addendum, but gave evidence that the figure of US$400 million had been arrived at because Cargill knew that it was probable it would have to pay more than $400 million for the Joe White Business to beat Cargill's competitors. Eden's evidence was that the addendum had been approved by either Conway or 1 of the other executives for whom the secretary who circulated the addendum worked.

843 Later on 9 July 2013, Eden gave his presentation to the Cargill, Inc board,[560] including by reference to a document entitled "Joe White Maltings, Australian Maltster Acquisition – … ADDENDUM".[561] The purpose of the presentation was to secure board approval to submit a cash free and debt free final bid of up to US$400 million to acquire Joe White (equating to $440 million).[562]

844 Eden had made extensive handwritten notes on the addendum, which he intended to be his speaking notes. However, Eden's evidence was that most of the document was not able to be presented. Although Eden could not remember specifically, he said he probably would have just summarised the position without going into the detail he listed in the document.

845 Eden's notes at the start of the addendum recorded that he intended to give a brief recap of the bidding process, including the dates for Phase 1 and Phase 2, including when bidding was anticipated to close. Next, Eden wrote:

> 2. Been waiting to make this presentation for 13 years. Aussie dream. *Australia our dream for 13 years*
>
> Today Cargill Malt is #3 in global production ~ 1.6 million MT. #1 & #2 (Malteurop & Souflet (sic)) both have ~ 2.1MM MT

560 This had been prepared by Eden, Viers, Sagaert, Jewison, Engle and Le Binh.

561 See par 838 above.

562 Eden initially said he could not recall whether this was the first or last of the 2 occasions he presented to the board. Later he said there was only 1 presentation in person.

4. [Joe White] acquisition would make Cargill Malt the largest malt company in the world.

   Strategically [Joe White's] business is much more than growth opportunity or to be #1 globally! Biggest and most profitably malt biz in world. – Advantaged

5. Globally, malt has 2 regional "sweet spots" – barley and advantaged access to fastest growing/highest profit markets

   1. Argentina – Cargill Malt leader with our 3 Greenfield investments 2000

   2. *Australia – 2nd sweet spot* – cheap & broad range of barley & advantaged access to SE Asia. Cargill has no presence in this "sweet spot"

   More importantly, [Joe White] is Crown Jewel of Australian Malting

   - *Best/most efficient assets*
   - 60% Australian market share – largest in Asia
   - Best locations

** Once in career opportunity stoked is understatement Aussie/Malt [long term].

(Original emphasis underlined; emphasis added in italics).

846 In the body of the addendum, Eden stated that they liked and were encouraged by what they were learning. In relation to the plant conditions, Eden noted that they were outstanding assets.

847 Eden's handwritten notes on the final page of the addendum stated:

> We have been waiting for this opportunity for a long time and it is finally in front of us. We need to act boldly to not miss opportunity. Once in a lifetime opportunity.
>
> The addition of [Joe White] to Cargill would make us the unprecedented leader in global malt.

848 Under the heading "Update since Board package [finalised]", the presentation slide recorded the Cargill, Inc malt team's expectations. With respect to each of them (Joe White's management team, plant conditions, commercial and operating synergies, the ability to leverage Cargill's Australia footprint, sustainability of the malt margin, and likely integration and upfront costs), Eden made extensive handwritten notes. Eden said he recalled reporting the information in this slide to the board.

849 The next slide contained a handwritten note that there was still a lot of work to do over the next 2 to 3 weeks. Eden said that was certainly how he felt, but could not recall whether he said it to the board. The page was entitled "Key focus areas of further diligence" and included an intended analysis of the "malt margin outlook", as well as consideration of integration timing, foreign exchange considerations, and information technology integration. "Confirmatory financial, tax and legal diligence" was described as "[o]ngoing". Another note of Eden's on this page recorded that various workstreams had to be completed in the next 3 weeks, and that over 50 people were involved. Eden wrote that the goal was to win this auction.

850 The next slide provided a revised financial summary. Eden gave evidence that he thought he would have had a chance to present this summary. Eden gave evidence that notwithstanding a base case valuation of US$353 million, approval was given at US$400 million. After setting out a range of possible present values for the Joe White Business, total enterprise values of US$350 million, US$375 million and US$400 million were listed, together with the forecast internal rate of return based on the best case, the base case and the downside case for each of these amounts. With regard to the amount of US$400 million (equating to $440 million), an internal rate of return ranging between 11.5 percent (as the best case), 9 percent (as the base case) and 5.5 percent (as the downside case) was provided.

851 Eden said he could recall being directed to the final slide of the addendum, which contained a request for board approval up to US$400 million.[563] Eden explained that it was intended the final bid recommendation was to be made to the food ingredients and systems platform (rather than the board) on the basis that the board would have already approved the purchase for an amount up to US$400 million.

852 Based on the updated information, the US$400 million represented a 9 percent internal rate of return (which was reflected in Eden's adjacent handwritten note), rather than the previously required 10 percent.

---

563 See par 842 above.

853 The last page of the document that Eden had when he presented to the board had a fourth bullet point, which recorded that Cargill management would require a minimum internal rate of return of 10 percent in the base case. This point was not included in the addendum that had been provided to the board earlier that day. On Eden's copy, the point was struck through. However, despite this, Eden said his understanding at the time was that there were 2 pre-conditions of approval: an amount up to US$400 million and an internal rate of return of 10 percent. This understanding was reflected in an email from Hawthorne to Van Lierde and others, copied to Eden, sent 10 July 2013 stating that the board had agreed to support the request up to US$400 million, with a minimum internal rate of return of 10 percent. Eden was unsure as to how the internal rate of return had been agreed upon. Although he did not attend the board meeting in question, Van Lierde gave evidence that both pre-conditions applied to the approval.

854 After Eden had completed his presentation (which was short), he was excused so that the board could consider the matter; although Eden's evidence was that the board stated in his presence that it agreed to support the request. The Cargill, Inc board minutes for 9 July 2013 show the resolution passed was confined to the making of a bid not to exceed US$400 million, and were silent with respect to any internal rate of return.

855 The board approval authorised Cargill's management to negotiate with Glencore on the basis that, if the final price was within board approval, there would be no need to revert to the board again.

856 Koenig attended the board meeting. He gave evidence that the Cargill board met 5 to 6 times a year. His recollection of this particular board meeting was of Eden presenting and being very enthusiastic, though noting it would be an exception if Eden were otherwise. Koenig said he read the board papers before the meeting and there was nothing that troubled him about the investment.

857 Conway also attended. Equally, his memory was confined to Eden giving a very

enthusiastic presentation about the acquisition of Joe White, and was not able to recall specific details of the presentation. Conway gave evidence that approval was given and that it was duly minuted.

858 Meanwhile, De Samblanx was raising concerns within Cargill, Inc and with Joe White management regarding the storage capability he had observed at Joe White's plants. On 9 July 2013, De Samblanx nominated silo capacity as an "item for investment" in an email to Viers, Eden and Engle. De Samblanx stated that "in view of the minimal storage at sites", it was possible that Cargill, Inc would have to invest in further storage capacity to ensure that operation of the plant was aligned with the Cargill Blending and Certificate of Analysis Procedure.[564] This comment demonstrated that De Samblanx contemplated that Cargill's procedures and processes might have been more onerous or at least might have required some additional storage capacity.

859 On 12 July 2013, Le Binh sent an email to De Samblanx, Eden, Viers, Jewison and Christianson referring to a planned meeting expected to last 3 to 4 hours to review all assumptions as a team. The email referred to De Samblanx travelling to the United States to attend the meeting.

860 On 13 July 2013, Engle requested De Samblanx incorporate his observations into a pro forma due diligence memorandum. De Samblanx did not do so. In addition to the Operations Spreadsheet he prepared to stand as his due diligence report,[565] he said he conveyed his views in which he validated synergies on around 16 July 2013, in Minneapolis in a meeting with Bowe and Engle. He also told Eden that he did not think Joe White's management could tell Cargill anything about efficiencies in operation, or anything that would be a "game changer".

861 Also on 13 July 2013, each due diligence memorandum was consolidated into a single document by Goldman Sachs. Engle went through the consolidated document and said it provided a helpful guide to valuation and document discussions. However, he

564 See par 302 above.

565 In De Samblanx's opinion, all the information that was needed to be known by others was contained in the spreadsheet.

noted the consolidated document did not include a report from De Samblanx, as De Samblanx had not prepared such a document. Engle said he would follow this up, and did so by email shortly after. No response was forthcoming by way of the preferred format for reporting, but rather the Operations Spreadsheet was relied upon as circulated on 8 July 2013.[566]

862 Shortly before 16 July 2013, De Samblanx travelled to Minneapolis to attend a meeting of Cargill representatives to discuss the possible acquisition of Joe White. De Samblanx described the Project Hawk meeting held on 17 or 18 July 2013 as the most important meeting that he attended in the whole Due Diligence. According to De Samblanx, the meeting lasted approximately half an hour to an hour.

863 De Samblanx said there were approximately 10 or more people around the table. He could not recall who they were, beyond stating that he thought Engle chaired the meeting and that he was certain that Hermus was not there. De Samblanx said he was the only person representing his workstream and the only person from Europe.[567]

864 De Samblanx recalled each person being asked whether there was agreement "to go further, looking at your responsibility". In substance, he said the question was directed to each person responsible for a certain area, which person would respond on behalf of that workstream. De Samblanx said that his response to the question was that he was okay to go forward. He said he was not required to give an explanation for his position.

865 On 18 July 2013, De Samblanx (in Minneapolis), Youil and Hughes had a phone call to further discuss the operation of Joe White's plants ("the Operations Call"). Representatives of Goldman Sachs and Merrill Lynch dialled in. Although De Samblanx had expressed that from his point of view Cargill should proceed, he said he wanted to speak with Youil to "double-check to be 100 percent sure". As he

---

566 Engle was unsure whether the Operations Spreadsheet was updated after 8 July 2013.

567 As a general observation, De Samblanx's memory of this meeting was not strong. He made no reference to it in his witness statement and only recalled the meeting over a weekend after he had commenced giving evidence. Others also gave evidence of De Samblanx attending meetings in Minneapolis in mid July 2013, but the evidence of what was or was not said was very limited: see also par 2080 below.

explained to Engle at the time, during the Due Diligence De Samblanx had considered the ability of Joe White to deliver quality malt in accordance with customer specifications given that there was such limited storage space. On this matter, he had expressed surprise to Engle that Joe White was able to do so.

866 Engle gave evidence that, prior to the Operations Call, there had been internal discussion between Eden, De Samblanx and him concerning operational features of the Joe White Business that had been ascertained during the Due Diligence up to that time. Engle said there were a couple of remaining questions relating to malt quality and storage, and how Joe White was able to deliver malt in accordance with specifications given the limited storage. It was decided that an agenda would be formulated (which Engle prepared), which deliberately did not include questions relating to malt quality as these would be raised on the Operations Call.

867 De Samblanx created a worksheet (as part of the Operations Spreadsheet) in which he prepared some draft questions after being asked to prepare an official agenda for the call with Youil. De Samblanx gave evidence that the questions he prepared in this worksheet were only draft questions and the exercise was a type of brainstorming. He said the questions which were in fact asked were only those questions set out in a later document.[568]

868 The draft contained some introductory words, which noted that the Minto and Perth plants were well designed and efficient. As for the older plants, it was noted that they were well-maintained, clean and well-managed. The worksheet contained questions with respect to "inventory capacity - quality management", being "processing requirements, blending requirements - limits, analytical requirements - high number of parameters, internal tolerance on [specifications] – vs [analytical] standard deviation". As to the last of these points, De Samblanx gave evidence that it concerned whether a laboratory was systematically deviating for any of the parameters. Such a question was in line with participation in the Malt Proficiency Scheme. He explained that the question was linked to the HARAM ring test, but he could not recall whether

568 See par 870 below.

in fact a question was asked in that regard.

869 There were also questions under the heading "limited inventory at site". Under that heading appeared "most of the site[s] do have only something like a week malt storage capacity, in case of out of specification, how do you manage? Reprocessed at site or outside? what is a quality issue?".

870 Also in preparation for the Operations Call, Goldman Sachs contacted Merrill Lynch. The email stipulated approval was sought for the call between De Samblanx and Youil, but also invited Merrill Lynch to determine whether anyone else needed to be on the call.[569] An agenda was requested and provided. It was confirmed De Samblanx would be the only Cargill employee on the call. A short list of questions, drafted with the assistance of De Samblanx, was forwarded to Merrill Lynch before the meeting entitled "Questions/Topics for Conversation with Peter Youil".

871 Included in the questions De Samblanx wanted to ask were questions concerning the reporting policy for Certificates of Analysis. At the time, he thought Joe White would have a policy, but he did not know whether any such policy would be written or unwritten. He also intended to ask questions about germination times for Heineken and any implications they may have had for plant capacity. De Samblanx had arranged the call while in Minneapolis, and for this to be with his counterpart, Youil, (and their separate advisers) for the purposes of addressing malt quality questions that were not included in the agenda prepared for the meeting. It was thought that the individuals involved in malt quality might be more forthright if there was a smaller audience because of the more limited issues. De Samblanx gave evidence that he was taken aback by Hughes' presence and active participation in the call, regarding it as strange.

872 The Viterra Parties were also preparing for the Operations Call. As early as 12 July

---

569 Presumably, this was done based on an acknowledgement of the terms that had been agreed concerning the sale process and Phase 2. De Samblanx's evidence was that he wanted to speak to Youil by having a call with him, but said that obviously was not possible through the Due Diligence and the Q&A Process.

2013, Merrill Lynch emailed Hughes stating that Cargill had requested a call to discuss some commercial issues.[570] In response, Hughes asked for an agenda, stating it would be helpful preparation. After Merrill Lynch informed Hughes that an agenda had been promised and that they would pass it on, Hughes responded that he would like the agenda so he could "align" anyone else needed. In the next email in this chain, on 17 July 2013 Merrill Lynch emailed Hughes referring to a couple of requests that had come from Cargill overnight. One of those requests related to arranging a telephone call between Youil and De Samblanx to discuss operational issues. Merrill Lynch told Hughes that it had asked for more specifics and enquired of Hughes whether he could also attend the call. Merrill Lynch stated that Hughes might have also wanted to be on the call to ensure consistent messaging with whatever was said in the Management Presentation. On the same day, in response to this suggestion, Hughes stated that he would also participate for continuity purposes and to ensure that "we don't stray". Merrill Lynch agreed with this, stating it was important that Hughes was on the call.

873 Returning to the Operations Call, De Samblanx said that Hughes answered most of the questions and estimated that Youil spoke only 5 to 10 percent of the time. De Samblanx made notes of the Operations Call and recorded that he asked questions, amongst others, relating to quality problems, storage limitations on site, and the viability of Joe White's Tamworth plant. In relation to the quality of malt produced, De Samblanx's notes recorded that he asked the following question as "question 1":[571]

> How often does [Joe White] experience quality problems? How does [Joe White] reprocess product that is not within specifications? What are the internal tolerances around specifications?

874 The answers given, as recorded by De Samblanx, related more to the specific requirements of Heineken, rather than Joe White's general policies and conduct regarding quality control and production of in-specification product. In his oral evidence, De Samblanx said he was told in response to "question 1" that Joe White

---

570 This related to another call that also took place: see par 910 below.

571 It is unclear whether these precise questions were asked as De Samblanx's memory of the questions actually put during the call was limited. In his evidence in chief, a question was put to De Samblanx without objection which was premised on the basis that "question 1" was asked.

was not having any real quality issues, and then the discussion came very fast to a discussion about Heineken. De Samblanx said it was important to him to receive information about "Japanese Heineken", Japanese customers and SAB Miller Plc ("SAB Miller"). He said, from that moment on, he "got really the comfort that [his] doubts about silo capacity and in relation with Certificates of Analysis were satisfactorily answered".

875 De Samblanx's notes record the second set of questions he asked as:

> In looking at the system and current storage limitations, what sorts of challenges does this present? Do you have outside storage or outside blending capabilities? How does [Joe White] manage malt quality and grades of barley for its customers?

In response, De Samblanx's notes recorded he was told of various measures Joe White was taking in its Perth and Sydney plants. These included building 2 more silos with a capacity of 3000 tonnes in Sydney, packing on the weekend and limiting the number of customers per plant in Perth. It was stated that Joe White's Korean and Japanese customers were similar and could be grouped, which was said to ameliorate storage issues. In giving his evidence, De Samblanx made the general observation that, in responding to this question, Hughes did not answer in terms of having challenges, but rather what the solutions were with respect to limited storage.

876 Although there was no evidence of precisely what solutions Hughes outlined, there could be little doubt that satisfactory solutions were given. Mattiske's evidence was that there was an enormous amount of storage capacity in Australia. In his experience in managing "these types of businesses", Mattiske gave evidence that storage capacity was the last idea to consider after looking at appropriate logistical plans to deliver the malt barley to the silo because there was ample barley storage in Australia, and more than was needed.[572]

877 De Samblanx said that, for him, the information provided was a very important point

---

572 It was unclear from this evidence whether Mattiske was confining his answer with respect to storage capacity to barley storage, or whether it also applied to malt storage. The evidence was given in response to questions about the suggestion in the Customer Review Spreadsheet (see pars 1211, 1228-1229 below) increased silo capacity was a potential solution to meeting supply issues.

of reference. The reason it was important was because, up until that time, De Samblanx was not clear as to which customers were being supplied by Joe White. He said that when he got this reference, including with respect to Heineken, to whom Cargill delivered throughout other regions in the world, he knew that to supply Heineken an audit needed to be passed. That audit process involved a very long list of questions, together with Heineken visiting the relevant plant and carrying out tests as to the design and capability of the plant. He said the audit also involved checks on traceability. De Samblanx gave further evidence that Heineken, being maltsters, knew how a malting plant was operated. From the discussion, including referring to the relevant person from Heineken involved, De Samblanx understood Heineken was doing audits in the same way as Europe and drew comfort from knowing that Joe White had been approved by Heineken.

878 In further response to his questions, De Samblanx said he was told that Joe White had very good "upcountry" storage and could rely on this in terms of segregating varieties of barley. Also with respect to malt storage in Perth, De Samblanx was told that Joe White was able to work with Co-Operative Bulk, which provided access to extra storage, and could be extended by contract if needed in the future.

879 In relation to Joe White's Sydney plant, De Samblanx recorded that either Youil or Hughes stated that there was no outside storage, which was "challenging". They said that there was a lot of emphasis on barley, but also on analysing barley on the weekend in Sydney and Perth. De Samblanx was told that the customer group was aligned to the Sydney (Minto) plant's capabilities, and that there were a number of varieties that had to be managed at the same time. The response also included details about the Cavan plant in Adelaide. However, De Samblanx could not recall anything being said about malt quality and grades of barley.

880 Finally, in relation to barley, De Samblanx's notes record that it was said that there was "[v]ery comprehensive … storage in the country" and "[u]pcountry storage is very reliable". De Samblanx was told that Joe White had an ability to "change from 1 silo to another".

881 De Samblanx asked, and Youil or Hughes answered, additional questions in relation to malt yield, quality issues Joe White had been having with "dom boxes"[573] and a consequent legal dispute, and the rationale for keeping Joe White's Tamworth plant operational.

882 De Samblanx's evidence was that he accepted what he was told during the Operations Call. However, he subsequently expressed his disappointment to Eden that he did not get to speak to Youil alone. He also told Eden he thought Joe White had been tactical in its responses.

883 Shortly after the call with Hughes and Youil, Goldman Sachs emailed its notes of the discussion "this morning" to De Samblanx.[574] De Samblanx did not forward the notes to anyone else, nor did he provide any feedback to Goldman Sachs. Engle gave evidence that he read these notes, but there was no email demonstrating they had been forwarded to him.[575]

884 An agreed account of the Operations Call formed part of the Acquisition Agreement. It included:

> **1. How often does [Joe White] experience quality problems? How does [Joe White] reprocess product that is not within specifications? What are the internal tolerances around specifications?**
>
> - Joe White's malt plants supply to a customer base with a wide range of specifications. This *enables malt to be reassigned to another customer in the*

---

573 Dom boxes are containers for freighting malt, that are higher than the standard rail-based containers: see also par 1022 below.

574 The meeting was scheduled for 10.30am Australian eastern standard time, which was 7.30pm on Wednesday 17 July 2013 in Minneapolis. The notes were received around midday on 18 July 2013 Australian time: see fn 311 above. De Samblanx's evidence was that he arrived back in Belgium on the morning of 19 July 2013. Accordingly, he was still in Minneapolis when the summary was emailed to him.

575 In his witness statement, Engle originally gave evidence that he reviewed notes of the discussion prepared by Merrill Lynch (which were amended by Youil and ultimately became part of annexure E to the Acquisition Agreement as a document included in the Data Room) and gained the impression that De Samblanx had received detailed answers to his questions. When it was pointed out to him during cross-examination that Merrill Lynch's notes were not prepared until 24 July 2013, were not placed in the Data Room until 2 August 2013, and were not reviewed by him until 3 August 2013 (Engle was the only Cargill employee to access this document in the Data Room), he then gave evidence that his reference to the Merrill Lynch notes was incorrect and he should have referred to the notes prepared by Goldman Sachs. Whether Engle's evidence as he ultimately gave it was correct or not (there was little doubt that Engle was doing the best he could to recall the relevant circumstances), it was clear on the evidence that nothing was said to Engle to suggest anything other than De Samblanx had been satisfied with the answers he had received.

event the malt did not meet the specification it was originally targeted towards. Blending is further able to produce malt to a wide variety of specifications.

  - Each individual plant varies in terms of what malt specifications it is able to produce. This is directly related to the barley varieties available rather than a fundamental deficiency of the plant. This will change from season to season depending on barley quality. Some customers only want malt from an approved plant, which will also determine the malt specification being made at the plant.

  - Perth and Minto are the most flexible in terms of meeting differing malt requirements. The Adelaide plants would have similar flexibility as the aforementioned.

- Heineken A Spec Malt is typically has (sic) one of the most onerous malt quality requirements

  - Joe [W]hite does not currently supply this type of malt to Heineken

  - Joe White is in the process of obtaining certification (first trials have been sent)

  - A Spec market not seen as key to business going forward

- *Range of other malts supplied to Heineken which have specific requirements* (e.g. D-Malt)

  - Joe White is *able to produce these malts* at several of its plants

  - Historically, Heineken have been happy with Joe White's processes following *plant audits*

2. In looking at the system and current storage limitations, what sorts of challenges does this present? Do you have outside storage or outside blending capabilities? How does [Joe White] manage malt quality and grades of barley for its customers?

<u>Malt Storage</u>

- *Other than Sydney*, all malt plants have *malt storage that is more than sufficient for its requirements*

- High turnover sales program sees packing most days, so the finished malt product tends to move out quickly, meaning *no issues with insufficient malt storage space*

- Perth – The majority of blending will occur on [Joe White]'s side. The malt will then be transfer (sic) to [Co-Operative Bulk] ready to pack. There may be the occasion whereby further blending may be requested by [Joe White] for [Co-Operative Bulk] to perform

- Sydney – currently in the process of building two additional storage silos. Current storage at Minto is 3600 metric tonnes of malt. This includes 4 analysis bins. The two additional silos will add a further 1200

tonnes to the total malt storage on site. Therefore the total malt storage capacity in Minto will be 4,800 tonnes

- Sydney designed to operate with fast turnaround times
- Additional storage available through dom boxes
- Lower levels of storage capacity (relative to other sites) has meant greater focus on incoming barley processes

Barley Storage

- *Barley storage at Australian malt facilities differs significantly from malt facilities around the world*
  - Significant proportion of storage is done upcountry
  - Sampling opportunities available throughout year
  - Barley is well segregated upon receival
- Sydney – relatively lower level of barley storage compared to other sites
  - Offset by greater controls around customer base and upcountry barley storage facilities
- Adelaide
  - Port Adelaide – more than sufficient barley storage, ability to store 4 different barley varieties
  - Cavan – less storage than Port Adelaide, but only utilises 2 barley varieties
- Perth – storage predominantly with [Co-Operative Bulk] (with facility located adjacent to plant)

…

(Emphasis in italics.)

885 Pausing here, in light of the above, it was not surprising De Samblanx took comfort from what he was told with respect to Heineken (and, by extension, SAB Miller).

886 A document distributed by Heineken and dated 28 May 2013 was in evidence at trial, (although it was unclear exactly when this document was received by Joe White).[576] This document, entitled "Supplier Performance Management (SPM) – Supplier Communication Pack", provided details of Heineken's program and was designed to

576 The document was part of the Cargill Parties' discovery. Questions put to Stewart during cross-examination were premised on the basis that he had seen this document.

improve the business that Heineken had with its key suppliers. The document set out several "key performance indicators" for suppliers, the second of which was entitled "Quality" and was described as "[d]eliveries according [to] the agreed specifications including follow up on non-conformities". The specific "performance indicator" was described as "Specification compliance".

887 Stewart said he may have seen this document at some point, but he had no recollection of it. However, regardless of whether Stewart had previously seen the document, on being taken to the details referred to above, he gave evidence that it did not surprise him that a customer like Heineken, or any customer, would insist on strict compliance with its specifications. This evidence was markedly different to some of the other evidence Stewart gave about customer expectations and industry practice,[577] but was entirely consistent with the expert evidence that brewers impose specifications to ensure they receive the malt quality they require.

888 Stewart also gave evidence that, generally speaking, brewers were "jealous" to protect their recipes and that they were not easily persuaded to adjust them. Further, his evidence was that brewers like Heineken, Sapporo, SAB Miller and Asahi were clear and detailed in the specifications they required to be satisfied.

889 Also not surprisingly, De Samblanx gained comfort from having learned that Viterra had an ethical code of conduct, being the Viterra Code, that was required to be signed by all Joe White employees. He said this was another factor that, in combination with the other matters he was told, gave the satisfactory answer to his doubts.

890 Further, on the question of storage capacity, De Samblanx was asked directly under cross-examination whether he made any assessment as to whether the storage was sufficient to enable Joe White to produce malt in accordance with Cargill's practices. De Samblanx said he did so as "part of the puzzle", before giving the "green light" for his component of the Due Diligence. Furthermore, his evidence was that the level of storage capacity was sufficient to allow Joe White to produce malt at the time he was

577 See pars 168-173 above. Stewart agreed during cross-examination that Heineken took its malt specifications very seriously: see par 1709 below.

giving his evidence. Moreover, De Samblanx did some work with Youil on this issue in March 2014 to bear this out. His evidence was that the capital expenditure for increased storage was contemplated in March 2014 on the basis that Joe White would extend the customer book for different plants.

891 After the Operations Call, De Samblanx told Eden that it had been satisfactory, but that he found it a little strange that Hughes was part of the call and that he felt the discussion was a little anecdotal by reason that he had asked to call the operations manager and also found someone else there. He said it would be the same as if someone asked to call him to discuss operational matters and he asked Eden to be part of the discussion.

892 In their closing submissions, the Viterra Parties focused upon the difference between the questions asked (as set out in the agreed account),[578] and the draft questions De Samblanx originally prepared.[579] It was submitted that there were significant differences between the concerns originally raised by De Samblanx and the matters that were actually discussed. After submitting that the reason for the failure to directly address the subject matter of his original questions was unclear, it was further contended that the substance of what was discussed could not have addressed De Samblanx's concerns. Moreover, it was submitted that the court should reject De Samblanx's evidence that he got comfort with respect to his doubts as a result of the call on the basis that it was inherently implausible.

893 To elaborate, the Viterra Parties referred to the fact that Heineken required malt to be germinated for 5 days, whereas "Joe White's facilities were built for four-day germination periods".[580] Further, attention was given to his evidence that it was not clear to him until this call to which customers Joe White delivered. It was submitted this evidence was incorrect because of the details contained in the Information Memorandum and what was seen on the site visits. When asked during oral closing submissions why such information made De Samblanx's evidence incorrect, the court

578 See par 884 above.
579 See pars 867-869 above.
580 On this issue, see also pars 779, 789 above and par 1035(2) below.

was informed that it may not make it incorrect. Further, the information that was available before this call was far more general than the specifics provided by Hughes during the course of the discussion, particularly with respect to Heineken.

894 Furthermore, the Viterra Parties submitted De Samblanx acknowledged during his evidence that he knew that if Joe White was supplying malt to Heineken then Heineken would have certified Joe White, and that also he knew from the site visits that Heineken was a customer of Joe White. In fact, De Samblanx's evidence was that normally a supplier to Heineken would be certified. In addition, when it was put to him that "if" Joe White was dealing with Heineken he would have been confident that Heineken would have certified Joe White, his answer was, "If that was true that they were dealing with Heineken, yes". When he was then asked whether he had any doubt Joe White was dealing with Heineken, he responded, "No, but the information was not very, how would you say, there was not too much information. The only information I got was in the plant of Perth where they were quite specific on, if I remember well, the, how do you say, the kilning temperatures."[581]

895 In short, the evidence was equivocal as to the state of De Samblanx's knowledge at the time of the site visits. In closing oral submissions, the Viterra Parties' senior counsel acknowledged that De Samblanx's evidence was not accurately recorded in this submission.

896 Next, the Viterra Parties submitted that De Samblanx giving evidence of taking comfort from Hughes mentioning Heineken audits because he already knew of audits Heineken had performed on Cargill plants in other regions of the world ought not be accepted because there was no evidence Heineken performed the same kind of audit in respect of all of its malt suppliers. Reference was also made to SAB Miller because of his belief that SAB Miller also conducted audits similar to Heineken. In particular, the Viterra Parties focused upon the express reference to SAB Miller in the Information Memorandum (in contrast to Heineken which had not been expressly referred to).

581 For the avoidance of any doubt, English was not De Samblanx's first language. In making this observation, no disrespect is intended, but rather it is made in order to explain the choice of words made by De Samblanx at times.

This submission seems to run logically counter to the submission made with respect to Heineken certification. In any event, whether or not Heineken, or for that matter SAB Miller, conducted audits differently with respect to different regions in the world was not raised with De Samblanx.

897 In summary, none of the points raised by the Viterra Parties provide a compelling basis to reject De Samblanx's evidence on this issue. Further, De Samblanx was a credible witness. Furthermore, immediately after the Operations Call he reported to Eden that the conversation had been satisfactory. In the circumstances, it was simply not plausible that De Samblanx would have misled Eden as to the outcome of the call if De Samblanx's concerns, such as they were, had not been allayed. Moreover, no concerns were raised by De Samblanx with Engle, who had arranged the meeting, or, for that matter, anyone else. Prior to this time, De Samblanx had not been reticent to express the concerns that he had previously held. There was no sensible basis to conclude that his approach changed at this point such that he would have decided to keep any material ongoing concerns to himself. On the contrary, his decision after the meeting in Minneapolis to speak to Youil to double-check and make 100 percent sure, and in the process to openly discuss the position with Engle, demonstrated that his approach had not changed.

898 The last piece of material evidence on the outcome of the Operations Call concerned Viers. He gave evidence that he recalled being told of this call specifically because an item that was discussed gave him comfort; namely, how Joe White dealt with out-of-specification malt. Viers recalled being told Joe White had a broad range of customers and that any out-of-specification malt produced could be redirected. He said it was a very poignant comment at the time.

899 When asked under cross-examination if he had a good memory of being told this, he said that he did. When he was then asked whether he had refreshed his memory shortly before giving evidence on this issue, Viers stated he remembered very vividly the time that it happened. Viers gave further evidence that following the Operations Call he read the answers to the questions asked during the Operations Call, though he

could not recall the details of how he was provided with the document or whether it was "recapped" with him. Further, he rejected the suggestion put to him that he had read the document when preparing to give his evidence, repeating that he vividly remembered the comment because it was something that shifted him and gave him comfort relative to what was going on.

900 After a weekend adjournment, Viers' cross-examination continued and this topic was revisited. Viers confirmed that he could not recall how he was informed of this particular answer. Further, he stated that the only document he could recall seeing was a "recap of that call" when preparing his witness statement in November 2017 (which was approximately 8 months before he gave evidence). He said he could not recall seeing that particular document either before or after this time.

901 When the evidence Viers had given the previous week was recounted to him, he was then asked in relation to what he was shifted. Viers' answer was that the reason he remembered the statements clearly was that it was the straw that broke the camel's back, and was the point from which he was no longer concerned, including in light of everything else he was told. As already noted, Viers acknowledged that up until this time he had concerns primarily because of what De Samblanx had put in his executive summary.[582] Furthermore, when pressed during cross-examination, Viers stated that he could specifically remember a comment about Joe White having a broad range of customers and having the ability, if Joe White produced off-grade malt, to be able to shuffle the malt to different customers. When pressed further, Viers gave evidence that he was shifted by the answer because he considered it a very reasonable response and would expect it to be the case. No doubt Viers' last comment referring to his expectation was to be understood in the context of all of the information that had been provided to him to that date. At another point in his evidence, Viers stated that there were 2 reasons that gave him comfort that the Certificates of Analysis were not being manipulated, this matter being 1 of them and the other being that he was told that Joe White's processes were "ISO 9000 certified".

582 See pars 772-781 above.

902 The Viterra Parties submitted that this evidence of Viers ought to be rejected. They did so by pointing out that there was no supporting evidence of any such statement being made to Viers. They referred to Viers' lack of operational expertise in malting and contended that his lack of knowledge would make it unlikely he would take any comfort in such a statement. They further submitted that De Samblanx placed no importance at all on Viers' "'poignant' and 'vividly' remembered statement".

903 There are several reasons why Viers' evidence ought to be accepted. *First,* there were a number of sources that could have informed Viers of the substance of the Operations Call, regardless of whether or not a document was shown to him. *Secondly,* there was no dispute that, in substance, in response to a question as to how Joe White reprocessed product that was not within specification, De Samblanx was told that Joe White was able to reassign it to other customers.[583] *Thirdly*, it is not out of ordinary human experience, when seeking to recount events from a number of years before, for a person to recall specifically being told something, but also to be unable to recall by whom or under what particular circumstances. *Fourthly,* Viers was a credible witness who, on numerous occasions, was willing to concede he could not recall matters if that was the fact. He was adamant about his recollection in this regard, and there was no proper basis to reject that evidence.

904 Sometime after his discussions with Hughes and Youil, De Samblanx met with the strategic business and development department to discuss synergies that had to be confirmed or not in the deal model.[584] Although he could not be certain, De Samblanx's best recollection was that he met with Engle and Bowe. During this meeting, issues concerning energy, the possibility of a carbon tax, capital expenditure and additional capabilities were discussed. During the meeting, he was asked for a forecast about capital expenditure for the future. He gave such a forecast, but did not express any view to the effect that there was a need for capital expenditure.

---

583 See the first answer to question 1 in par 884 above.

584 De Samblanx had a specific recollection of this meeting because he was annoyed at how long he had to wait before he was able to meet with the strategic business development department, as it delayed his return to Belgium.

905 De Samblanx gave evidence that during this meeting about synergies he was not asked anything about the concerns he had previously identified. When he was asked why he thought that was so during his cross-examination, he gave evidence that there was no reason to because the Project Hawk team trusted his opinion, De Samblanx having already given his approval for the transaction to go forward.[585] De Samblanx's evidence as to his state of satisfaction with his assessment of the Joe White Business was clear and unequivocal, namely, if he had any ongoing doubts about such matters he would have expressed them.

906 Specifically, he gave evidence that if he had been told about the Varieties Practice during the Due Diligence, he would have contacted Eden and Viers within minutes of discovering it and would have told them to restart the Due Diligence for the points that would not have been confirmed or were not in line with what had been discovered. His evidence was that it would have also raised doubt on all other aspects of the Due Diligence because the Varieties Practice was "not right" and would have had a financial impact as well. De Samblanx gave evidence as to what his response would have been if he had been informed of the Reporting Practice or the Gibberellic Acid Practice. With respect to each of the Operational Practices, in substance De Samblanx's evidence was that he considered their implementation showed no respect for contractual rules and were "of the same order" in terms of reprehensibility.

907 There was evidence from other Cargill witnesses about the meetings that occurred in Minneapolis on 17 and 18 July 2013. It is unnecessary to recite the individual accounts of what occurred at this time.

908 The Viterra Parties' closing submissions addressed this evidence. They invited the court to conclude that Cargill chose to ignore the "clear risks of which it had become aware" concerning Certificate of Analysis practices and procedures, including, it was asserted, that Certificates of Analysis did not reflect the actual results of the malt testing and that Joe White was obtaining its low steeping and germination times by

585 See par 864 above.

the use of chemicals such as gibberellic acid.

909 The evidence referred to above demonstrated that Cargill did quite the opposite and De Samblanx obtained the reassurances he required to be satisfied that operationally Joe White was being conducted satisfactorily. Further, although Cargill had not ascertained the manner in which Joe White adopted practices and procedures with respect to its Certificates of Analysis, there was no basis on the evidence to conclude that Cargill knew or ought to have known in mid July 2013 that Joe White's Certificates of Analysis did not reflect actual results (as that term was understood in the context of either the theoretical blend approach or otherwise) or that barley varieties and chemicals were being used by Joe White directly contrary to its customers' specifications.

910 In the following days, the exchanges continued. On 19 July 2013, a phone call took place between Hughes, Eden, Viers and representatives from both Merrill Lynch and Goldman Sachs ("the Commercial Call").[586] An agreed record of the Commercial Call was also annexed to the Acquisition Agreement and entitled "Joe White Maltings – Commercial Discussion Questions & Answers – Cargill 19-July-2013".[587] At the top of the document was stated:

> **Objective:**
>
> This document intends to summarise Questions & Answers ("Q&A") from the Commercial Discussion held with Joe White Management on 19 July 2013. The summary contains the key themes / concepts that were articulated by Joe White Management in response to questions raised by Cargill and its advisors.

---

586 The agreed record of the Commercial Call recorded that Hawthorne was also in attendance. Hawthorne's evidence was that he had no recollection of ever attending on the Commercial Call or any call attended by Joe White management. Further, Engle gave evidence that he believed it was likely he attended, but he had no specific recollection. He also said he had no recollection of Hawthorne attending.

587 As an aside, in the lead-up to the Commercial Call, Viers prepared a list of issues he considered should be raised with "Joe White". A meeting with Hughes was sought in relation to some of these matters (some of them related to issues raised in the Operations Call), and questions were forwarded for Hughes' consideration. In these circumstances, the Viterra Parties submitted, Cargill sought information from Joe White and not the Viterra Parties. Whatever might have been Viers' intention, Hughes was not contacted directly to address the issues in question. The approach was made through Merrill Lynch in order to get access to Hughes and the meeting was managed as part of the Due Diligence.

> We request that you review this document and confirm that the messages conveyed are consistent with your understanding of the meeting.

911 The parties discussed the attainability of Joe White's forecast for the 2015 financial year and beyond, given the shortfall Joe White had experienced in profits in the 2014 financial year[588] to that time and the maintainability of margins. Broadly, positive statements were made in this regard. The notes included:

> - A number of factors occurred in FY13 which have impacted the results when compared to historical figures:
>
> - Significant dislocation/inversion of Australian and European malting barley prices
>
> - New malt house construction by GrainCorp which resulted in temporary pricing pressure in some markets
>
> - Joe White now seeing a correction in malting prices
>
> - Joe White is currently seeing conditions return to normal and has recently completed malt sales in excess of $200/t (excluding the Barley Accumulation and Position Margin). This is attributable to the following factors:
>
> - Good Australian crop
>
> - Reduction in Australian barley prices
>
> - Lower AUD/USD exchange rate.

912 The notes recorded a series of other questions and answers, including:

> Are there other key factors that distinguish Australian malt that allow it to command such a premium? If customer mix is the key driver, what makes you believe it is sustainable?
>
> - *Efficiencies in Australian Malt production* allow for margin premiums
>
> - Joe White can sustain their premium as its export customers are located in growth markets
>
> - Asian breweries are currently unable to produce enough beer to meet demand
>
> - New breweries are under construction in Thailand and Korea

---

588 The summary referred to "the FY2014 shortfall on profits" and "the shortfall in FY2014". In fact, given Joe White's financial year was from 1 November to 31 October each year, the "2014 financial year" had not commenced in July 2013. The answers make it plain the information provided concerning shortfalls related to the 2013 financial year ending 31 October 2013.

- Aggressive growth in demand is taking place in Myanmar, Cambodia and Laos

- Other factors supporting Joe White's premium include:

  - Service model
  - Short turnaround time
  - Supply risk profile
  - Free trade agreement with Thailand (Australian government currently working on an agreement with Korea)
  - *High quality malt*

(Emphasis added.)

Further, in response to a question as to when customers pushed back and which competitors they turned to, it was stated that they pushed back when Australian barley prices inflated malt prices so that they were significantly above prices offered by European maltsters. To a further question as to at what price customers pushed back, it was stated that Joe White normally received margins between $180 to $230 per tonne. It was further stated that during the bidding process it had been indicated that Joe White's margins were generally $25 per tonne higher than its competitors would normally receive.

913 Viers gave evidence that he recalled the issue of key factors distinguishing Australian malt being raised and the general response. He said the response gave him a strong impression of a premium product and an excellent brand reputation. Further, he said it reassured him that there were factors that distinguished Joe White's Australian malt and that Joe White could sustain its premiums thanks to factors such as a short turnaround time and its high-quality malt.

914 In relation to a question as to Joe White's prospects in Japan when its share of the Japanese market was not large, the response given was that historically Joe White's ability to compete in Japan was significantly limited "due to sourcing of quality barley (vs Canadian competitors)". After recording that the barley variety "Baudin" was approved by 2 of the 4 major breweries, the notes of the Commercial Call continued:

Other

Describe how Australian extreme weather patterns impact the business and how do you manage through periods of floods and droughts? How do you think about best/worst/most likely cases?

- *Joe White has always managed to secure the required amount of barley* and has never operated at a loss in a drought
- Drought events tend to not hit the whole country at the same time
- Should a drought occur, Joe White will look at how best to relocate barley
  - Drought affecting the East coast often affects NSW to a greater degree than SA and Victoria
  - West Coast of Australia does not experience much drought as the barley growing areas tend to be wet
- *During times of drought, Joe White may buy off-grades and work with grain handlers to capture higher volumes*
- *Joe White also has had a good record with communicating with customers.*

(Emphasis added in italics.)

915 The issue of weather patterns had been built into Cargill's model.

916 After the Commercial Call, Cargill did not ask that further due diligence be undertaken in relation to the use of off-grade barley. Viers' position was that he thought the answers given during this discussion were clear and that Cargill could be comfortable moving forward.

917 In closing submissions, the Viterra Parties referred to draft questions for the purposes of the Commercial Call which were not in fact asked. In particular, reference was made to questions concerning how Joe White met customer-stated specifications on ageing without sufficient storage; how Joe White handled product that might be slightly out of specification with very limited storage; whether there was any capability or asset limitations that prevented Joe White from meeting customer specifications; whether Joe White had written derogations; and how Joe White managed malt quality and grades of barley for its customers with such limited storage

capacity.[589]

918 Although the Viterra Parties suggested there was some significance in these questions not being raised as part of the Commercial Call, in fact very little, if anything, turned on this. Questions concerning storage capacity and the ability to meet customer specifications had been expressly asked and answered the previous day during the Operations Call. Given Hughes also participated in that call, it is not surprising that Cargill chose not to ask the same or similar questions again (even if the Cargill representatives were different in each call).

919 The Viterra Parties' submissions also focused on Cargill being told about the situation in Japan arising out of issues concerning barley quality and the fact that Joe White might have purchased off-grade barley at times. Contrary to these submissions suggesting Cargill was put on notice or at least on alert about barley quality issues, what Hughes told Cargill about the use of off-grade barley implicitly represented that its use was more acute during times of drought. Moreover, by referring to Joe White having a good record communicating with its customers, immediately after indicating that Joe White might have to use off-grade barley in certain circumstances, it implicitly represented that customers were being kept informed about the quality of barley that was being used in the malt being supplied to them. In any event, neither of these matters being conveyed in any way indicated to Cargill that Joe White was then having issues with barley quality or that Joe White might be failing to meet customer specifications.

920 The Viterra Parties made the further observation that despite Eden being told that Joe White purchased off-grade barley, neither he nor anyone else made any further enquiries in relation to issues concerning barley quality during the Due Diligence. Given the manner in which Hughes discussed the use of off-grade barley and the fact that he did not suggest there were any issues in this regard, it is hardly surprising that

589 The last of these questions was to be found in an "internal list" circulated on 18 July 2013 by Engle to Eden, Viers, Jewison, De Samblanx and Le Binh.

this issue did not ring any warning bells so far as Cargill was concerned.[590]

921 A like observation can be made with respect to the absence of any further enquiries in relation to barley varieties. In short, there was simply no suggestion that Joe White was supplying grades or varieties of barley contrary to customer specifications.

922 On 19 and 20 July 2013 a call dedicated to barley inventory was arranged for the near future.[591]

923 In the meantime, Viterra continued uploading documents to the Data Room and received questions about them. An email from Merrill Lynch on 17 July 2013 to Fitzgerald and Max Allan ("Allan"), a senior associate at Mallesons, copied to Lindner and another, relayed a question from the Q&A Process submitted by a potential bidder:[592]

> Can you please provide an explanation for the large (87 [kilotonnes]) purchase in [South Australia] in FY12/13 season, commenting on the large volume (relative to other contracts) and low price[?]

The email further stated that 2 attachments had already been sent in response and requested these be uploaded to the Data Room. When shown this document during her evidence, Lindner said she could not recall this topic being discussed, or any discussion about disclosing barley margins or prices.

924 On 18 July 2013, Merrill Lynch asked Mattiske about redacting the prices contained in contracts. Merrill Lynch noted that it had previously provided prices to Co-Operative Bulk in an attachment which summarised the barley purchasing contracts. Merrill Lynch asked Mattiske whether the information was particularly sensitive for Cargill and, if so, whether he would like Merrill Lynch to delete the column of the summary

---

590 The topic of use of off-grade barley was addressed again some 4 days later: see par 926 below.

591 See par 925 below. On 19 July 2013, Le Binh sent an email to Goldman Sachs, copied to Engle, Jewison, Christianson and Bowe entitled "Hawk/Barley inventory: Critical Questions". In that email, he noted that Cargill's calculations showed a significantly bigger amount of days of inventory than what had been reported by Joe White. He observed that Cargill suspected Glencore or another third party was carrying the inventory for Joe White at a cost and stated it was critical that Cargill understood this point for the purposes of Cargill's valuation. The email then set out a short list of questions on the topic. The following day, Engle asked Goldman Sachs to arrange a 30-minute call with Argent to discuss the issues which had been raised.

592 Part of this email and the response to its request was the subject of a claim for legal privilege.

which contained the price as Cargill had requested this information in addition to seeing the physical contracts. In an email the following day, Merrill Lynch reported that Mattiske had confirmed Merrill Lynch could send Cargill the barley-purchasing data that had been prepared for Co-Operative Bulk, including the pricing data. Merrill Lynch stated it also intended to upload a representative sample of approximately 15 physical contracts, which would support the barley-purchasing data. It was noted that Argent was collating the contracts and that once he had completed that task the contracts would be forwarded to Fitzgerald and Mallesons for their review and final confirmation. Upon this occurring, Merrill Lynch said it would then upload the information to the Cargill Data Room only. Next in the email chain, Argent produced 15 contracts for review. In response to Argent's email, Lindner emailed Argent and Fitzgerald, copying Merrill Lynch, stating that she would wait for Fitzgerald to confirm that he was comfortable with the contracts being provided to bidders. She said once this confirmation had been received Mallesons would review "for confidentiality issues, etc" and then redact supplier names and pricing information. Lindner asked Fitzgerald whether any further information should be redacted. Merrill Lynch then expressed the view that there would not be any need to redact pricing information as it was already contained in the document that Merrill Lynch was providing as approved by Mattiske. In response to Merrill Lynch's email, Argent noted that there was presently no connection from price to vendor as no vendor names were disclosed in the purchasing sheet. Finally in this email chain, Fitzgerald stated that he was comfortable with the contracts being provided in the redacted form. Hughes was included in only 1 of the emails in this chain, being the first email sent on 19 July 2013. Further, nothing in the email chain suggested that Argent's participation went beyond an administrative role.

925 A further phone call between the parties was held on 23 July 2013 ("the Barley Inventory Call"). Again, notes were annexed to the Acquisition Agreement.[593] These notes were entitled "Joe White Maltings – Barley Inventory Discussion Questions & Answers – Cargill 23-July-2013". The document recorded the same objective as the

593 These formed part of annexure E to the Acquisition Agreement.

notes to the Commercial Call and recorded the participants as including Argent, Viers, Engle, Le Binh, Jewison, Purser and Christianson. According to Engle's evidence, the primary purpose of the Barley Inventory Call was to provide Christianson with the opportunity to leverage his expertise and to better understand Joe White's barley procurement process. Evidence was given that the Cargill representatives in attendance were satisfied with the answers they received.

926 The notes of the Barley Inventory Call record a discussion concerning barley sourcing. In response to a question whether Viterra positioned barley in anticipation of Joe White's need, it was stated that Joe White was required to provide suppliers sufficient notice of its barley requirements. There was no suggestion that Viterra ever declined to supply barley ordered, in times of drought or otherwise.[594] These questions and answers also included:

> Is there potential to achieve additional margin on the barley?
>
> - Malt blending with lower and higher grade barley – up to 30% of non-malt 1 varieties can be utilised
> - Potential margin which Joe White can earn is dependent on the spread
>   - Spread can be range (sic) from $5/t to $30/t
>   - On average, an additional $10/t could be earned.

927 A number of the Cargill Parties' witnesses were cross-examined about this note. It was suggested that "lower" grade barley indicated to them that Joe White was supplying barley that did not comply with specifications. This was either directly rejected or met with a response that the witness had no recollection of any discussion about barley not complying with customer specifications.

928 Although "off-grade" and "off-spec" were sometimes used interchangeably during the trial, and are often used in the industry in such manner,[595] the attempt by the Viterra Parties to suggest that referring to "lower grade barley" or "non-malt 1 varieties" was giving notice of providing malt out of specification was without

---

594 But see pars 93, 131-132, 914 above.

595 See par 20 above.

substance. Such a suggestion ran directly contrary to the evidence of a key witness called by the Viterra Parties, Mattiske.[596] In any event, neither "lower grade barley" nor "non-malt 1 varieties", either expressly or implicitly suggested malt was being supplied contrary to customer specifications. Further, no witness the subject of this puttage recalled any discussion about "off-spec" barley. Furthermore, the use of such language must be understood in the context where Cargill had been told more than once, in writing, that Joe White provided malt that met its customers' exact specifications and requirements.[597]

929 Notes of the Barley Inventory Call were also taken by Goldman Sachs. No witness was taken to these notes, but they indicated that Argent referred to the barley margin being available because of the price difference between malt 1 grade barley and non-malt 1 grade barley, and blending. It was submitted by the Viterra Parties that what was contained in the 2 sets of notes of the Barley Inventory Call demonstrated that Argent clearly informed Cargill that Joe White considered it was acceptable to use up to 30 percent of non-malt 1 grade barley. Further, the Viterra Parties submitted that Christianson (who was not called) appeared to have been the person most likely to have understood "the implications of this information".

930 During oral closing submissions, the Viterra Parties' senior counsel was asked what those implications were. None were proffered in response, beyond referring to the general proposition that it was easier for the court to draw inferences in the manner explained in *Jones v Dunkel*.[598] The mere fact that Cargill was told Joe White could use up to 30 percent of non-malt 1 grade barley did not in any way indicate that Joe White was engaged in any of the Operational Practices, or for that matter any conduct which meant Joe White was not complying with its contractual obligations with its customers.[599]

---

596 See par 149 above.

597 See pars 504-505, 515-519, 521-522, 716, 718, 727 above.

598 (1959) 101 CLR 298: see further pars 1988-1989 below.

599 For completeness, such information did not sit entirely comfortably with a representation that Joe White's customers received the "highest quality malt" (see pars 504, 716, 718 above), but that did not detract from the position repeatedly put that Joe White met its customers' specifications.

931 Cargill, Inc's queries regarding Joe White's operations were also logged in a spreadsheet entitled "Project Hawk … Due Diligence Tracking Sheet: Questions and Issues (cannot be solved by additional questions)", which was updated on 26 July 2013 ("the Tracking Sheet"). An email from Goldman Sachs noted the colour coding in the Tracking Sheet, indicating whether or not a question had been asked.

932 The Tracking Sheet contained several columns. One of these columns, "Category", sorted the queries into categories (including "malt", "barley", or "operations"). Adjacent to this column, the queries were designated a "sub-category". For example, the category "malt" had sub-categories including "[o]ff-spec malt/barley", "yield", "[s]pecialty [m]alt" and "craft". Another column designated numeric values for priority, with the value "1" described as "[c]ritical", "2" described as "[i]mportant", and "3" described as "[n]ice to [h]ave". Other columns included "Dataroom Location", "Question or Issue", "Request/Question/Issue", "Author", "Date raised", "Answer/Comment/Next Steps", "Date Answered", "Status" and "Date Submitted".

933 Many of the rows in the Tracking Sheet were shaded yellow to indicate the questions were submitted as part of the Due Diligence, with the relevant answer recorded in the same row. The remaining unshaded rows were not submitted and accordingly did not have an answer recorded.

934 The first query in the Tracking Sheet, under the category "malt", sub-category "[o]ff-spec malt/barley" and designated priority "2 ([i]mportant)", stated "[w]hat is the history of off-spec malt and the cost of selling to alternative markets?". There was no "Author" or "Date raised" designated for the question. Consistent with it being unshaded, in the column "Answer/Comment/Next Steps" there was no entry.

935 The eighth query, unshaded, recorded under the category "plant" and sub-category "[m]alting requirements" stated "[w]hy 5 day malting – at least at Perth?". It was designated the priority "1 ([c]ritical)". The spreadsheet did not record an answer, author, date raised, date answered, status, or date submitted.

936 The thirtieth query, unshaded, recorded under the category "Operations" and the sub-

category "Inventory", asked "[a]s malt/barley storage capacity is low, is there frequent use of third party silo/terminals[?]". It was designated at level "2 (Important)". The question's author was recorded as De Samblanx. However, all other values in the spreadsheet were blank.

937 Question 112, unshaded, was as follows: "[w]hat is the scale of use of gibberellic acid, betaglucanase and Multifect during production expressed in % of total volume produced per type of processing aid/additive?". It was recorded that Hermus raised this question on 8 July 2013. It was given the priority "3 ([n]ice to [h]ave)". This, and numerous other questions of which Hermus was the author were unshaded and therefore not submitted or answered.

938 No witness called on behalf of the Cargill Parties was able to explain precisely how it was that the questions referred to above were not put during the Due Diligence, though Engle surmised that some of the questions may have been covered during discussions with Joe White's management. Eden said that he was not part of this process and that he trusted that all questions in all workstreams were being asked and addressed before each workstream gave its final report.

939 Questions were fielded not only from Cargill but also from other potential bidders. Bickmore gave evidence that a process was put in place by which answers were provided. She said that the Viterra legal team explained the importance of the process to those involved. Employees from various departments were engaged, including malt, tax, workplace health and safety, and human resources.

940 A daily timeline was created for the purpose of providing responses. At 8.30am, "filtered" questions were provided by Merrill Lynch and Mallesons to Viterra's legal department. Around 9.00am, a daily meeting was held between Fitzgerald, Rees, Argent, Bickmore and Julie Faehrmann, a project manager who worked for Viterra and assisted in the sale of Joe White, who were responsible for reviewing and allocating questions to the appropriate "Viterra personnel". Such questions were to be distributed to the relevant personnel by 10.30am, on the basis they were to provide

answers by 3.00pm. The answers were forwarded to Mallesons around 3.30 and 4.00pm. A second meeting was held around 8.00pm, attended by Bickmore, Fitzgerald, Mallesons and Merrill Lynch, was held for the purposes of running through new answers, and checking for issues such as confidentiality and relevance before the information was uploaded to the Data Room.

941 Bickmore gave evidence that this second daily meeting did not seek to check the substance of the answers provided. She said the attendees "did not have the knowledge to check responses". Rather, responsibility for the accuracy of the answers was said to lie with the relevant person who was allocated the relevant question or questions and also ordinarily had responsibility for the matters the subject of the question.

942 Each area of responsibility was given a lead. Norman was responsible for human relations; Matthew Mann ("Mann"), the general manager of safety, health and the environment for Viterra and Glencore Grain, was allocated safety, health and the environment; Rees was allocated finance; Argent was recorded as the malt controller; Hughes was recorded as the malt executive; Youil was recorded as being responsible for malt operations; and Wicks was allocated "MALT Commercial Barley/Sales". There was no contemporaneous evidence to suggest that Stewart was part of this process.[600]

943 The instructions to each person responsible for answering the questions included requiring them to consider carefully each question and to ensure that responses were clear, concise and did not involve ambiguity. In addition to being advised not to use abbreviations or acronyms, each person was told expressly not to provide information that had not been requested. King gave evidence that this approach was standard practice in this type of transaction.

944 Throughout the second half of July 2013, Le Binh continued to work on the valuation

---

600 Bickmore gave evidence that she believed Stewart attended a meeting as part of this process, though under cross-examination she acknowledged she did not actually have any recollection of Stewart being there.

model. He refined it on a daily basis. To this end he had discussions with Engle, Eden, Viers and others to test assumptions and refine estimates.

945 On 23 July 2013, Le Binh circulated a valuation pack from Goldman Sachs, which included a valuation model and a competitive analysis, together with an updated version of Cargill's valuation model. Again, the Goldman Sachs valuation stated it was based upon the Information Memorandum, the Management Presentation Memorandum, the Data Room documents, and the questions and answers provided to date. The Goldman Sachs valuation was revised to provide a midpoint value with synergies of $439 million, using a discount rate of 10 percent. The Cargill valuation remained below Goldman Sachs, at an amount of $421 million with synergies on the base case at the same discount rate.[601] In the draft, Goldman Sachs referred to its understanding that the field of bidders remained fully intact, without stating the basis of that understanding.

946 The Cargill valuation model was ultimately the basis for Cargill's final bid for the Joe White Business.

947 The Cargill valuation model contained an income statement, which covered the years from 2010 to 2033. In relation to the actuals for 2010 to 2012, and the estimates for 2013, these figures were taken directly from information provided in the Data Room. For subsequent years, the forecasts were produced by Cargill and Goldman Sachs, using as a starting point the data that had been provided by the Viterra Parties. The forecasts of Cargill were not the same as those provided in the Management Presentation Memorandum. For example, Cargill factored in an assumption that drought or flood conditions would negatively impact the Joe White Business every 7 years, starting from 2016. This assumption was based on Cargill's experience in Australia.

948 In his witness statement, Engle provided further explanations with respect to various aspects of the income statement and the discounted cash flow. It is unnecessary to go

601 The best case was $567 million and the downside case was $258 million.

through this in detail. Suffice to say, there were many assumptions made by Cargill in producing the valuation which were not derived from the Information Memorandum or the Management Presentation Memorandum.

949 In preparation for an upcoming Cargill leadership team meeting, Engle prepared some talking points. Engle had discussed the key points with Eden and Viers, and forwarded the talking points to them, as well as Hawthorne. Hawthorne responded, stating it was a good outline.[602]

950 Amongst other things, the talking points expressed uncertainty about how the bidding process might be concluded. It was stated there was a chance a bidder might be selected as the "winner" or, more likely, 2 or 3 parties would be given the opportunity to "sharpen [their] pencils" and refine valuation views or agreement terms or both. With respect to the bidding strategy, it was stated that Cargill understood there were 5 other parties who remained focused on Joe White. Further, on the bidding price, 3 observations were made: *first*, to truly differentiate and reach the potential for exclusive discussions, it was likely there was a need for a $20 million gap from other bidders; *secondly,* a bid of $400 million plus offered the chance to differentiate the other bidders if they remained in the "$380's" (which presumed Co-Operative Bulk did not bid as aggressively as possible); and *thirdly*, a bid of $400 million plus made it unlikely Cargill would not get a call back, noting that if there was another bidder at $420 million plus then Cargill would have reached the extent of its capabilities given the target internal rate of return of 10 percent.

951 Eden gave evidence that the part of the presentation dealing with the bid strategy was important because it emphasised who might be Cargill's competitors, together with the competitors' capacity to pay which was an important consideration.

952 Also on 23 July 2013, Viers accessed the Data Room. A spreadsheet he reviewed set out details of Joe White's barley purchasing contracts for the years 2010 to 2011, 2011

602 For completeness, during Hawthorne's cross-examination he said that Eden told him that Eden was concerned about the limited time available for the Due Diligence. Hawthorne did not consider that the Due Diligence was being hurried. See also par 959 below.

to 2012 and 2012 to 2013. During the Due Diligence, this spreadsheet was accessed by Christianson, Engle, Hermus, Jewison and Viers. It was also accessed by Cargill's external Australian lawyer, Matthew Marcus Clark ("Clark"),[603] then a partner at Allens.

953 Under cross-examination, Viers could not recall why he viewed the spreadsheet. Viers did recall learning that Joe White had the ability to blend less than malt 1 grade barley, though his recollection was also that this was put forward as an opportunity rather than a practice.

954 The spreadsheet recorded purchases of significant tonnage of Hindmarsh barley, including in the 2012 to 2013 year. Viers gave evidence that if he read the spreadsheet (which he did), he would have seen this, but in 2013 he did not know that Hindmarsh was not a malting grade barley. Further, he could not recall asking any questions about Hindmarsh at the time.

955 Purser also gave evidence concerning the spreadsheet. She could not recall ever seeing the spreadsheet before it was shown to her in preparation for giving evidence.[604] Purser's evidence was that if she had seen the spreadsheet in 2013 and observed the entries concerning Joe White purchasing Hindmarsh, it would not have raised any issue or reason for concern. Although Purser was aware in 2013 that accreditation for Hindmarsh had been declined,[605] she gave evidence that Hindmarsh purchases might be explained by foreign customers having approved the use of Hindmarsh, or, given that Hindmarsh was, at that time, anticipated to pass tests for malt accreditation, Joe White may have been conducting its own internal trials using Hindmarsh. Purser explained that, as she was not in the malting business, she would not have known the size of any possible trials. In short, Purser's evidence was that, with the knowledge she had from grain trading, the spreadsheet would not have

603 Clark (who goes by the name Marcus) was admitted to practice in Queensland in 1998 (and in other jurisdictions subsequently) and became a partner at Allens in 2007. He has worked in mergers and acquisitions since 2009. He moved to another law firm in 2015.

604 The records indicated she did not access it in July or August 2013. She gave evidence she did not need to look at this information because it was not part of her workstream.

605 Her evidence was that she was unaware as to why the accreditation had been declined, and she recalled discussions about the possibility of changes with Hindmarsh, and that it might be reassigned.

"raised a flag".

956 Purser was cross-examined about her ability or otherwise to assess synergies with respect to barley purchases when she did not ascertain what barley varieties were held by Joe White. Her evidence was that this information was not necessary in order to identify the synergies. She said there were many varieties of barley and that volumes were important, but at that point varieties were not considered important. Further, she accepted that because of the existing relationships the grain and oilseeds supply chain had with barley suppliers in Australia, it was assumed Cargill would be able to manage whatever varieties Joe White required. In circumstances where there was no suggestion at all that there would be any difficulty in Joe White obtaining the required barley varieties (indeed, the exact opposite had been represented in the Information Memorandum and subsequently up to 4 August 2013), this appeared to be a reasonable assumption to make.

957 De Samblanx gave evidence that he did not look at any information in the Data Room to determine what varieties were held by Joe White. He disagreed that such a step was elementary. He accepted that if he had reviewed the information available and found an inventory of non-malting barleys, that would have constituted a risk to him. He explained that he did not attempt to ascertain details of the barley varieties because he did not know Australian varieties and would not have known which of them were non-malting varieties. Further, his evidence was that he did not know which varieties Joe White's customers had approved. Finally, on this point, De Samblanx gave evidence that it never crossed his mind that Joe White would not respect the correct barley varieties.[606]

958 Late on 23 July 2013, Wilson-Smith sent an email to a large number of Joe White

606 In their closing submissions, the Viterra Parties submitted that Cargill knew a significant number of Joe White's customers, which breweries provided its maltsters with specifications that applied internationally. On this basis, it was submitted that Cargill must have had knowledge of barley varieties specified by a number of Joe White's customers. Assuming this to be accurate (which seemed unlikely given Australian barley varieties are different to those in other parts of the world), it did not advance the position very far in circumstances where Cargill had not been provided with the breakdown of sales to each of these customers, and further it would not have explained the barley variety requirements of Joe White's other customers, including whether any of them had approved Hindmarsh.

executives, including the Third Party Individuals, copied to Fitzgerald and Bickmore. Wilson-Smith noted that questions had arisen as to whether Joe White had any ongoing liabilities in respect of past contracts. Specifically, Wilson-Smith asked whether any of them was aware of any contracts with liabilities that continued despite having come to an end, "or the site being sold (please disregard the Redbank site in this answer)". Further, Wilson-Smith said he wanted to know whether all material contracts relating to "your aspect of the Malt Business" had been included in the Data Room as far as each of them was aware. That night, Argent responded to Wilson-Smith, copied to all others. He stated "No" to the first question. In relation to the second question, he answered "Yes" and continued, "A sample of barley contracts rather than the entirety has been included for selected bidders. Otherwise all material contracts made available."[607]

959 On 24 July 2013, a meeting of the Cargill leadership team was held. For this meeting, a written presentation was prepared and circulated. The executive summary stated that the Due Diligence had not raised any major issues and had helped identify additional synergies. It noted that the board had provided support for a bid up to US$400 million or $435 million. The leadership team was informed that the base case valuation with synergies was US$387 million or $421 million. So, competitive bids were estimated to be between $350 million and $450 million. A bid of $405 million was recommended, which was said to deliver an internal rate of return of 10.3 percent.

960 The Due Diligence summary identified the commercial risks as low. It was stated that malt customer margins in barley merchandising earnings were in line with the levels Cargill had calculated based on comparative pricing from Europe. As for operations, it was stated that Joe White's plants were modern and reflected extensive investment. However, it was stated that there were environmental issues that had been discovered with potential remediation costs between $2 and $5 million, which was said to be

607 In closing submissions, Argent's counsel submitted that there was no evidence Wilson-Smith followed up his questions with any other Joe White executive. It was submitted this was a failure on the part of Wilson-Smith. As all the other recipients to the email from Wilson-Smith were copied into Argent's response, any criticism of Wilson-Smith in this regard was taking a very stringent approach to what might have been reasonably expected of someone in Wilson-Smith's position. As this correspondence was not raised with Wilson-Smith at trial, it is not appropriate that any finding be made in this regard.

factored into the valuation model. This area had a higher risk level, being graded as closer to high than low. Further, minor issues relating to newly constructed plant were referred to; the issue being confined to rail containers and penalties related to not reaching minimum levels of use. It was suggested these issues could be dealt with in the terms of any acquisition agreement.

961 The document also dealt with the underlying assumptions for the base case valuation, estimated synergies and dis-synergies, integration costs and the proposed integration team, shared services costs, a competitive analysis, key issues for any acquisition agreement, and a considerable amount of data underlying the Cargill valuation at that point in time.

962 With respect to the integration personnel, Viers was listed as integration manager. De Samblanx was to be the plant operations lead; Christianson was to be the trading and risk management lead; and Viers was to be the sales lead. There were also a number of other positions to which it is unnecessary to refer.

963 Eden was again the presenter at this meeting, which was held over the telephone. Eden gave evidence that Gregory Page ("Page"), the chief executive and chairperson of the board of Cargill, Inc at that time,[608] Conway and Koenig were on the call. Although he could not recall, he believed that David MacLennan ("MacLennan"), the chief operating officer of Cargill, Inc and a member of the Cargill leadership team,[609] also participated.

964 Eden made notes for the purposes of his presentation. Those notes included that a tremendous amount of work had gone into the valuation model and the evaluation of Cargill's competitors. Consistent with Engle's talking points, Eden recorded that he felt it was likely that 2 to 3 parties would be given the opportunity by Glencore to "sharpen pencils and work on cleaning up contract terms".

965 Eden noted the proposed purchase price of $405 million indicated a strong intent, and

608 Page no longer worked for Cargill, Inc at the time the trial commenced.
609 MacLennan later became the chief executive officer of Cargill, Inc.

expressed the belief that it was sufficient to "leave some room" and that Cargill would get a call back and be "in the game".

966 The Cargill leadership team approved a bid being made for $405 million. Conway did not have a specific recollection of this meeting, but recalled noting Viers had been given the role of integration leader, which he considered to be positive both in terms of his experience and because the position had been filled well in advance.

967 A further version of this presentation to the Cargill leadership team containing notes made by Engle was the subject of evidence. Engle noted that a bid of $400 million would be a strong bid and a bid of $410 million would be a really strong bid. Although Engle accepted during cross-examination that a bid of $410 million was on the radar, he rejected the suggestion that he considered the amount of $405 million, which he was seeking to have approved, was an opening amount. However, he also accepted that there was room left to potentially negotiate if necessary.

968 On 25 July 2013, KPMG provided a financial due diligence report to Cargill. Although it was marked draft, it was the final report before Cargill proceeded with the Acquisition.

969 The KPMG report set out the scope of work, which was to provide Cargill with financial due diligence assistance in connection with the proposed acquisition. The report stated it had been prepared on the basis of fieldwork commencing on 20 June 2013 and carried out up to 25 July 2013.

970 In relation to the reliability of Joe White's financial statements, KPMG reported that they were not prepared as standalone financial statements for Joe White. Rather, the statements were audited to a "Viterra Australian Group materiality threshold". It followed that the audits of the underlying trial balances had been performed at a materiality level appropriate for the Australian group, which KPMG reported would be significantly higher than the materiality level that would be applied to Joe White as a standalone business. As Joe White represented approximately 20 percent of the assets and revenues of the Australian group, KPMG reported less comfort could be

placed on the fact the financial information had been audited when compared to a business which had been audited to an appropriate materiality level.

971 In addition, KPMG stated that the "vendor" and Deloitte (whose retainer included an engagement to verify and reconcile the financial data books to ensure their accuracy confirmed that there were no audit management letters issued in relation to Joe White's financial statements for the 2011 and 2012 financial years, that there were no audit issues identified, that there were no material unadjusted audit differences and that there were no adjustments made to the trial balance of Joe White when preparing the Australian group financial statements. KPMG recommended that warranties be sought to the effect that the Joe White financial statements were a materially accurate representation of the Joe White Business.

972 A key finding of the report was that the financial information was largely prepared on a pro forma basis, with a limited audit trail back to source documents. Observations concerning this key finding included the following:

> Whilst the pro forma adjustments appear logical, there is limited information or detailed supporting calculations to provide comfort over the accuracy or completeness of the adjustments made, particularly in relation to the adjustments to restate malt margins on a commercial arms-length supply arrangement.
>
> In addition, the management accounts provided in the [D]ata [R]oom are brief and heavily redacted, and provided limited insights into significant business events, trading and financial results.

973 Certain implications were said to arise from these observations. It was noted that bidders would ordinarily be provided with greater detail of the source information for pro forma adjustments or have the comfort of being able to rely on the work undertaken through a vendor due diligence exercise. It was further noted that no such due diligence was undertaken by Glencore on Joe White. By reason of these matters, it was stated that Cargill was reliant upon vendor warranties that the information had been presented accurately and was a true reflection of the Joe White Business. Accordingly, it was again recommended that appropriate vendor warranties be obtained, including that the pro forma financial information accurately represented

the Joe White Business. Furthermore, it was recommended that Cargill should consider whether the standalone malt margin presented was in line with its expectation and experience in Cargill's global malt business.

974 If Cargill was unaware of the fact already,[610] it was now plainly on notice before agreeing to purchase the Joe White Business that no vendor due diligence had been conducted by Glencore.

975 On 29 July 2013, a meeting of the Cargill leadership team was held. At that meeting, a presentation was given of the deals Cargill was involved in. The likely "close date" for "Viterra Malt (Joe White Maltings)" was recorded as the second quarter of the 2014 financial year. Under a summary of the current deals "Viterra Malt" was recorded as active.

976 Further, on 29 July 2013, Cargill, Inc submitted what, under the agreed regime, was to be a final bid for Joe White of $405 million ("the First Final Bid"). The First Final Bid was emailed and addressed to Merrill Lynch and was in the form required by the Phase 2 Process Letter.[611] Cargill, Inc stated that it proposed to undertake the acquisition of Joe White "via its Australian indirect subsidiary, Cargill Australia" and confirmed it was making the First Final Bid on behalf of Cargill Australia. The First Final Bid commenced by referring to the fact that Cargill, Inc had committed substantial resources and effort in evaluating Joe White, and continued:

> *Based on the due diligence that we have undertaken and discussions with Joe White management*, we have confirmed our view that Joe White is an impressive business with a portfolio of top-tier assets and a strong strategic fit with Cargill, our global malt business, and Australian grain and food ingredients activities. We are also impressed with the quality and depth of the management team …
>
> (Emphasis added.)

977 Under the heading "Due diligence requirements", the First Final Bid stated:

---

610 See pars 561, 623 (at par (d) of the Cargill Indicative Bid referring to the assumption that the information was supported by due diligence findings) above. Further, the Viterra Parties submitted that if a vendor due diligence had been done by Glencore it would be inferred that Glencore would have disclosed it. It was contended that this was "an important fact": see par 4435 below.

611 See par 639 above. The First Final Bid was signed by Hawthorne for and on behalf of Cargill, Inc.

> Cargill confirms that it *has conducted its due diligence based on the information provided to date in the process*. This includes a review of the information provided in the *Information Memorandum, management presentations, site visits, the [Data Room] (including responses provided through Q&A)* and some public registers.
>
> *Subject to the Acquisition Agreement*, Cargill confirms that this Offer is *not conditional upon completion of any further due diligence, except confirmatory due diligence in relation to information that has been withheld or redacted in the [Data Room]*.
>
> (Emphasis added.)

978 At the close of the First Final Bid was written:

> We would like to thank you for giving us the opportunity to participate in this process. We believe that our Offer represents a compelling proposition in terms of value, certainty of execution and timing. Cargill stands ready to move forward on an expedited basis towards completion of the Proposed Transaction.

979 The covering email referred to attached documents which included a draft acquisition agreement tracked with Cargill's proposed amendments. In the draft acquisition agreement,[612] various suggested amendments were proffered.[613] With respect to the "Knowledge and belief" clause (which ultimately became clause 31.15), in addition to each Seller's knowledge being deemed to be the actual knowledge of various specified persons (which were then yet to be inserted), such knowledge was provided to include facts, matters or circumstances on the date of the Warranty if the specified persons had made reasonable enquiries before that date of Joe White's executives or if disclosed within certain items of the Disclosure Material.[614] In addition, amongst the numerous suggestions made to amend the definitions of the Warranties set out in schedule 4, Cargill had deleted reference to material defaults in relation to Material Contracts,[615] so that the proposed Warranty with respect to default by Joe White was expanded to knowledge of any default of any Material Contract.

---

612 The document recorded that it was the "Allens mark-up" dated 29 July 2013, replacing the draft provided by Mallesons dated 14 July 2013.

613 These included significant proposed amendments to cl 13 of the draft concerning "Warranties and representations": see par 1029 below for the final form of the clause in the Acquisition Agreement. However, the draft cl 13.4 expressly stated that Cargill Australia acknowledged and agreed that in entering into the Transaction Documents it did not rely on any statement, representation, warranty, condition, promise, forecast or other conduct which may have been made by a Seller, except the Warranties.

614 See the definition in par 1022 below.

615 Ibid.

980 In relation to acknowledgements intended to be made by Cargill Australia, it was suggested that there was a significant overlap between 2 proposed clauses, and that Cargill had consolidated those acknowledgements which were acceptable to Cargill. The consolidation was by way of tracked changes which deleted a clause and combined the acceptable acknowledgements in another clause (which ultimately became clause 13.4).

981 Eden continued to be very excited about the prospect of Cargill purchasing Joe White. In an email to various persons, including Sagaert, Viers, De Samblanx and Jewison, he stated he had an expectation that Glencore would keep at least 1 other bidder "on hold 'warm' as we work through the details" and that Merrill Lynch would involve "our competitor" if contractual terms could not be agreed. Eden suggested the prospect of purchasing Joe White was "really exciting" and a breakthrough event for Cargill Malt, although he acknowledged there were many potential risks and that the deal might not happen.

982 Following receipt of the First Final Bid, Viterra was working to finalise the terms of the anticipated contract. Further, Glencore wanted to have the executives of Joe White, including the Third Party Individuals, verify the warranties it was proposed that Viterra Malt, as the Share Seller,[616] would give as part of any sale agreement. Wilson-Smith was directed to attend to this.[617]

983 Also on 29 July 2013, Merrill Lynch summarised the Phase 2 bids, of which there were only 3. In addition to Cargill's bid, Co-Operative Bulk offered $335 million and Malteurop offered $320 million. The key conditions of each bid were also set out, none of which were conditional on financing. With respect to due diligence, Cargill had the least onerous conditions. In short, not only was Cargill's bid substantially more than the competing bids, it was also the most straightforward with respect to other matters.[618]

---

616 See par 1020 below.

617 See further issue 125.6 below.

618 While, in contrast to Cargill's bid, the bid by Co-Operative Bulk did not require approval from the

984 On 31 July 2013, Cargill was informed that it would be able to continue to negotiate the terms of a sale.

985 Late on 31 July 2013, Merrill Lynch emailed Goldman Sachs stating that Glencore had agreed to provide Cargill with access to certain additional black box information on terms previously agreed with respect to access to supply and transportation agreements. The terms included that access was only to be given to Cargill's nominated external lawyers on the basis they were not to disclose the contents of any of the documents other than amongst themselves. The external lawyers were only able to access the information on a read-only basis, with saving, printing, copying or photographing of the information being prohibited. The external lawyers were permitted to provide Cargill with a written summary of certain stipulated matters. With respect to Joe White's customer contracts, a summary was permitted of any material differences between the terms of those contracts and the summary of terms previously provided as document 20.1, being the "Customer Sales Volume Analysis" that was contained in the visible section of the Data Room.[619] This email was then forwarded to Cargill.

986 During the Due Diligence, Cargill had sought access to Joe White's customer contracts. Cargill was told that it could not have access to these documents, including because of competition rules in Australia. It was agreed that access would be given at the appropriate time to Cargill's external lawyers.

987 Upon Viers viewing the 31 July 2013 email, he suggested the email was "a bit fuzzy" and wanted to know whether or not Cargill was "good to go in". Engle responded to Viers' enquiry, stating that what had been proposed was the same procedure as had been applied for access to the supply and utility contracts contained in the black box, where someone had been given access and then provided a summary for the group.

Foreign Investment Review Board, there was nothing to suggest that anyone anticipated there would be any difficulty with this approval. Further, Cargill also required approval from the South Korean competition regulator, but again there was no suggestion that this would give rise to any difficulties. As to the key conditions of the Co-Operative Bulk bid, they were exclusivity, review of the black-box documents, no material adverse changes and the transfer and continuity of key Joe White management.

619 This information did not disclose customer specifications: see par 815 above.

Engle suggested the process was fine as it had worked well the last time, and Cargill's external lawyers, Allens, would be able to summarise and circulate the relevant information quickly.

988 On learning of this development, Hawthorne sent an email to a large number of Cargill employees noting that the parties were in final contract negotiations and might well reach an agreement in the following 48 to 72 hours. He expressed the belief that the process remained competitive and the position still remained uncertain.

989 In the early hours of the morning on 1 August 2013, Lindner sent a response rejecting Cargill's suggested amendments to the draft acquisition agreement.[620] However, the covering email indicated that what had been sent was subject to any further comment from Glencore and a further review by Mallesons. Further, Mallesons suggested only the knowledge of Rees and Fitzgerald ought to be the subject of the "Knowledge and belief" clause and that there be no deemed knowledge based on what they would have known if they had conducted reasonable enquiries. In other words, not only was Cargill's suggestion that reasonable enquiries would include enquiries of the Joe White executives rejected, but there was a complete removal of the provision that any reasonable enquiries would be part of the consideration of what would be deemed to be Viterra's knowledge for the purpose of the relevant proposed warranties. Furthermore, the reference to knowledge of defaults of Material Contracts by Joe White was reinstated to refer to material defaults.

990 Throughout 1 and early 2 August 2013, representatives of Cargill, including Engle and Le Binh, worked with their external advisers in seeking to reach agreement with Glencore on the terms of the proposed acquisition agreement. Engle was involved throughout. He had many regular telephone calls with Walt, his counterpart, during these negotiations.[621] Engle gave evidence that he discussed various issues in detail with Walt.

---

620 See par 979 above.

621 Engle had also had dealings with Walt in relation to the sale of Prairie Malt Ltd.

991 The parties negotiated throughout the day and most of the night. At approximately 9.00am on 2 August 2013 United States' time,[622] agreement had been reached on nearly all the terms, with about 5 or 6 issues outstanding.

992 After 4pm on the afternoon of 2 August 2013, Lindner circulated a further revised draft of the proposed acquisition agreement. Subject to receiving instructions from Glencore, Lindner proposed that Mann and Mattiske be added as specified persons for the purposes of the "Knowledge and belief" clause, on the basis that each Seller would be deemed to know matters the subject of the actual knowledge of each of Rees, Fitzgerald, Mann or Mattiske on the date the Warranty was to be given. Significantly, the previous attempt by Mallesons to confine Viterra's deemed knowledge, so that it did not include what the named individuals would have known had they made reasonable enquiries, was unsuccessful. Thus, after the addition of the names of Mann and Mattiske, together with the reference to the date that the Warranty was given,[623] the words "or would have been aware had they made reasonable enquiries" were reinstated. However, in contrast to what Cargill had suggested, there was no reference as to whether or not such enquiries would include enquiries of the Joe White executives as there was simply no specification to whom such possible reasonable enquiries were to be directed. Further, the reference in schedule 4 to material defaults of Material Contracts was maintained. At the end of the trial, the Viterra Parties made various submissions based upon their refusal to adopt all of the amendments put forward by Cargill ("the Refusal of Certain Terms").

993 Early in the afternoon of 3 August 2013, Cargill was provided with additional information by Allens from the black box of the Data Room, including with respect to customer contracts. The document provided included a section entitled "Material differences between summary of customer contracts and terms of those contracts". It is unnecessary to set out all the significant amount of detail provided. During King's cross-examination, he said that customer contracts were the most sensitive documents

622 The time zone was not identified.

623 As a result of Cargill's insistence upon the requirement that the Warranties were to be given at the date of Completion as well as at the time of the Acquisition Agreement.

in the entire transaction. He explained that margins achieved were the most sensitive piece of information because another malt company could undercut Joe White if it knew what Joe White was charging. He suggested access to such information could result in Joe White losing its business. He said this was the reason access was given so late.

994 Nothing disclosed in Allens' summary suggested that customers' specifications were not being met, incorrect barley varieties were being supplied, or gibberellic acid was being used when it was prohibited.[624]

995 What was or was not summarised by Allens was not something that the Viterra Parties sought to control.[625] However, there was no evidence to suggest that, even if the entirety of the contract terms had been the subject of the summary (leaving out the names of the customers), such an exhaustive summary would have revealed the existence or extent of the Operational Practices at that time. Although Clark gave evidence that what was prepared by Allens was on the instructions of Cargill, there was no basis to conclude that Cargill sought to curtail a fair and accurate summary of the customer contracts by way of this process or that it ought to have revealed the true nature and extent of the Operational Practices.

996 On the afternoon of Saturday, 3 August 2013, Wilson-Smith sent an email with the subject line "Ballarat – Warranty Verification Process" to Mattiske, Fitzgerald, Rees and Mann.[626] The email stated:

> As you are aware, as part of the [Joe White] divestment, we are required to give certain warranties to the successful bidder about the current state of the [Joe White] [B]usiness. Some of these warranties are qualified by knowledge which, under the final document, is the knowledge of each of you having made

---

624 With respect to "Customer C" (none of the customers were identified by name), reference was made to the possibility of a rebate payable by Joe White in the event that the malt supplied failed to meet specifications. However, there was nothing to suggest that that rebate clause had been acted upon or that specifications in this regard were not being met.

625 Clark could recall a restriction being imposed with respect to the names of Joe White's customers, though he could not recall whether or not they were in fact disclosed to Allens. The summary prepared by Merrill Lynch was on a no-names basis.

626 Project Ballarat was the name Glencore gave to the sale of the Joe White Business.

reasonable enquiries. *We therefore need to ensure that you are comfortable that you have undertaken reasonable enquiries.*[627]

To assist you, over the last few days Legal has conducted a process to verify the warranties in the [Acquisition Agreement].

This process involved

1. Discussing each warranty (*to the extent relevant to their portion of the business*)[628] with: Legal, Gary Hughes (Exec), Scott Argent (Finance), Peter Youil (Operations), Rob Wicks (Commercial), Doug Stewart (Technical), Trevor Turnbull (Engineering), Shilo Wyatt (Environmental), Ben Norman (HR), Matt Forsythe (Safety) and Vern Chubb (Property).

2. Asking each person to confirm whether the warranty is true and correct and, if not, whether the incorrect nature of the warranty has been disclosed in the [Data Room]. *It was reiterated that this process was not a time to hide anything.*

(Emphasis added in italics.)

997 The email attached a copy of Wilson-Smith's typed notes of the warranty verification process. Wilson-Smith noted that "[y]ou will see" that as at that date there were a few issues raised in the verification process, and suggested they would be finalised before signing, including with disclosure made in the Data Room. At the end of the email, Wilson-Smith wrote in bold, red font:

> Please note that you will not be in any way personally responsible for the accuracy of the warranties or personally liable for any claim arising from an incorrect warranty.
>
> (Emphasis in original.)

998 As to the last paragraph of the email, Wilson-Smith said he included it because he recalled such a clause being in the draft acquisition agreement.[629] The position adopted was in stark contrast to the approach taken with the Joe White executives

---

627 But also see par 1000 below.

628 Precisely how Wilson-Smith determined the extent to which a Warranty was relevant to a particular person's "portion of the [Joe White Business]" was not explained. There was no evidence to suggest Wilson-Smith discussed this issue with each Third Party Individual to see if Wilson-Smith's determination accorded with the executive's view. However, the fact that Wilson-Smith adopted this approach was recognition of the fact that all the Third Party Individuals were not in a position to verify all the Warranties that required verification. Even with his lack of knowledge of the Joe White Business, Wilson-Smith's evidence was that he understood that, for example, Argent was not someone he approached to verify Warranties concerned with operational, contractual or technical matters.

629 It was in clause 31.15.

referred to in paragraph 1 of the email. Those executives were given no such assurance about personal responsibility or liability.[630] Further, Wilson-Smith gave evidence consistent with his email that he did not go through all the Warranties with each relevant individual Joe White executive, but discussed them "to the extent they were relevant" to each of them. Furthermore, he accepted under cross-examination that he did not state to Wicks that the process was not a time to hide anything.[631]

999 On the morning of 3 August 2013, Mattiske was with his family at a swimming pool. He received a call from Pappas. Pappas told him Cargill was insisting on Mattiske being added to the contract as a "knowledge individual" for the purpose of the Warranties. Mattiske had not been involved in the negotiations concerning this aspect of the proposed agreement previously.

1000 Mattiske gave evidence that he was told by both Mallesons and Fitzgerald that he could rely on what had been done and would not have to make his own independent investigations with respect to the Warranties. This appears to be contrary to what was stated by Wilson-Smith in an email sent later that day, copied to Fitzgerald.[632] In any event, Mattiske gave evidence that he read the Warranties and was not aware of anything untoward or incorrect. However, there was nothing to suggest that he personally verified any of the matters relating to the Warranties.

1001 In the afternoon, Mann responded to Wilson-Smith's email. Mann stated he was comfortable with his oversight of the safety, health and environment related responses. He confirmed he had made reasonable enquiries concerning the Data Room documents relating to safety, health and environment. No such responses were provided by Mattiske, Rees or Fitzgerald with respect to other aspects of the Joe White Business.

1002 Also on 3 August 2013, after Mallesons received instructions from Walt on that Saturday morning to finalise the transaction document, Lindner was involved in

630 See par 4992 below.
631 See par 5025 below.
632 See par 996 above.

discussions about the finalisation of the Warranties and the Data Room to ensure that full disclosure had been made.[633]

1003 The contents of the Data Room were progressively supplemented as new material came to light. In the lead up to the Acquisition Agreement being entered into, the documents in the Data Room included: the Data Books; a spreadsheet of Joe White's barley purchases for the financial years from 2010 to 2013 (the last of which was naturally incomplete), which included information about Joe White purchase contracts which did not specify the particular malting varieties to be acquired (which was said to be about half),[634] and the quantities of barley purchased which was not malt 1 grade, including Hindmarsh purchases;[635] a breakdown of customer sales volumes in summary form for Joe White's top 10 customers (the specific customers' contracts were black-boxed); the Management Presentation Memorandum; the minutes of the Operations Call and the Commercial Call; dossiers of information relating to various Joe White facilities, including malt storage capacities; Joe White's chemical register, including details of gibberellic acid quantities; and the Malt Proficiency Scheme.

R. Cargill induced to increase its final bid

1004 Returning to 2 August 2013, a phone call took place between Mahoney and Koenig ("the First Further Bid Call"). According to King's understanding, Mahoney was the Glencore executive in charge of the sale of the Joe White Business. It was common ground between the Cargill Parties and the Viterra Parties that this phone call was

633 But see pars 662 above and 1324 below. Further, Lindner gave some very vague evidence that as the completion of the sale documentation was approaching there was a process of ensuring the Data Room was fully populated; in which process she suspected she participated. After saying she could not specifically recall, she referred to her understanding that Wilson-Smith was co-ordinating the process. She could not recall any specific communications on the subject.

634 The worksheets included a column headed "Variety". Some of the contracts listed simply stated, for example, "Malt 1", without indicating the variety required. Others were specific as to the variety or varieties to be purchased. However, some were unclear as to whether or not a variety was specified. This was not explored at trial. The Viterra Parties submitted "around half" of Joe White's contracts did not specify a barley variety without saying how they arrived at that approximation. Given the lack of clarity in the spreadsheet, it has not been possible to check the accuracy of the submission. However, in circumstances where the Cargill Parties did not quibble with this submission the approximation has been accepted as it appeared that at least 40 percent fell into this category.

635 See pars 952-955 above.

made by Mahoney to Koenig and that during the call Mahoney asked Koenig if Cargill, Inc would increase the value of its bid for Joe White from the First Final Bid of $405 million to a bid of $420 million.

1005 Within approximately 2 hours, Koenig had discussed the substance of the First Further Bid Call with others in Cargill, received a direction to increase Cargill's offer to $420 million (subject to certain conditions), and telephoned Mahoney to inform him of Cargill's position ("the Second Further Bid Call"). A far more detailed account of these events and their significance is set out below.[636] In short, the unsolicited First Further Bid Call caused Cargill to increase its First Final Bid by $15 million, subject to certain conditions, which was still within the amount of US$400 million approved by the Cargill, Inc board on 9 July 2013.

1006 Shortly after the Second Further Bid Call, Koenig informed his fellow Cargill executives, by email, that the deal was "done".[637] Van Lierde replied to the email chain at 2.39am on 3 August 2013, stating:

> [I]t doesnt (sic) come cheap, but it's an excellent fit for our biz and we will deliver on the promises made.

1007 As a result of the increased purchase price and additional conditions, Engle called Walt to progress the finalisation of the contract terms as soon as possible. Walt already knew about the discussions between Mahoney and Koenig. During this discussion, Engle explained all the conditions Cargill required. Walt asked Engle to email the conditions, which Engle did. The email stated that Engle would instruct Allens to reflect the further conditions in an updated version of the proposed acquisition agreement.

1008 In an email in response, Walt stated that documents were still being posted to the Data Room and a few hours were needed before the giving of Warranties. However he stated further that he could not see anything preventing the execution of the proposed acquisition agreement during the course of Saturday, Australia time. Further

636 See pars 3777-3859 below.
637 See par 3803 below.

telephone discussions occurred between Walt and Engle every couple of hours for the next 24 to 36 hours.

1009 Others within Cargill were also very positive about the finalisation of the offer. On 3 August 2013, Eden sent an email to Jewison and Viers thanking them for their work on Cargill's bid and continuing:

> We all know it is not perfect and I am sure we will many (sic) more challenges along the way. The good news is we bought this business at a fair price *given the intense competition*. I know of at least 2 other companies that will not be happy as of our announcement. Thank God it is not us on the other end.
>
> I will say again. It is hard to put a price on the value of being the leader in an industry.[638]
>
> (Emphasis added.)

1010 Also in response to the increased purchase price, Le Binh provided an updated valuation model. In so doing, he varied the exchange rate input and decreased the synergies by $1 million. With a base case value of $427 million with synergies, Le Binh reported an internal rate of return of 10.1 percent with a bid of $420 million. The base case still contained as its foundation financial and operational information as stated in the Information Memorandum.[639]

1011 As for those on the other side of the transaction, on 2 August 2013 Merrill Lynch emailed Goldman Sachs attaching a "package" that Glencore proposed as a compromise to address the outstanding issues in the proposed acquisition agreement.[640] This was followed by an email from Mallesons, attaching a revised draft acquisition agreement.

1012 Lindner gave evidence that there was a discussion on the afternoon of 2 August 2013 after which there were still a number of issues unresolved. During the course of this meeting, Pappas said that Glencore was not conceding any of the outstanding issues. However, very properly, Lindner clarified that the "outstanding issues" that existed

---

638 As for the perceived competitiveness, see also pars 593, 950 above and par 1083 below.

639 The financial and operational figures for the base case for the financial years from 2010 to 2012 replicated those contained in the Information Memorandum. The 2013 figures were different as they were more up to date, but were still recorded as estimates.

640 See also pars 3800-3801 below.

at the time Pappas made this statement were different to the outstanding issues referred to in the "package" emailed from Merrill Lynch.

1013 Lindner said she took part in a conference call the following morning with King and Walt and some others. She was informed by Walt that he had spoken to Cargill and, in return for Glencore not pressing a handful of outstanding points, Cargill had agreed to increase its purchase price by $15 million.

1014 A response to this "package" was sent by email from Allens to Mallesons late in the afternoon on 3 August 2013, attaching a mark-up to a revised draft acquisition agreement circulated by Mallesons.

1015 At no time before Cargill agreed to purchase the Joe White Business did any representative of Cargill ask for a copy of any policy Joe White may have had with respect to the analysis and reporting of test results for malt delivered to its customers. During his cross-examination, De Samblanx acknowledged he did not ask for any policy, and gave evidence that in 2013 he had no idea what policies other maltsters may have had with respect to Certificates of Analysis. Eden also acknowledged he made no such request, but said he believed some documents were available to Cargill (presumably, a reference to the Malt Proficiency Scheme which was contained in the Data Room).[641]

1016 Equally, Viers accepted he did not ask for any policy, nor direct anyone else to do so. When it was then put to him that the reason he did not do so was because he did not care what Joe White's policy was, Viers said that proposition was absolutely false. In response to a question as to whether Viers was telling the court that he did care, his evidence was that given the assurances that Cargill had received he was not concerned

---

641 The Viterra Parties referred to Eden's evidence on this issue and the fact that he could not explain why he did not ask for a policy. Eden's evidence was that it was not part of his workstream and he relied on De Samblanx to ask questions about policies concerning Certificates of Analysis. When giving his evidence, Eden did not know if a policy had ever been requested. Eden rejected the suggestion put to him that he did not ask for policies on malt production and reporting because he did not regard them as sufficiently important. Further, although later in time, discussion of this topic is not compete without referring to the misleading statement made by the Viterra Parties before Completion to the effect that the relevant policy was reflected in the Malt Proficiency Scheme included in the Data Room: see par 1378(2) below.

about a possibility that there was a broad-based issue around practices concerned with Certificates of Analysis. He said it had not crossed his mind. In light of the assurances given, including those contained in the Information Memorandum and Management Presentation Memorandum, it was understandable why Viers had this state of mind.

1017 Despite the fact that Cargill intended to adopt its own approach to analysis and reporting upon any purchase of Joe White, the Viterra Parties' contention that the reason no one from Cargill sought a copy of any policy relating to Certificates of Analysis was because Cargill did not care what approach had been taken by Joe White cannot be accepted.

1018 With the benefit of hindsight, undoubtedly requesting a copy of any written policy would have been a simple means by which Cargill could have discovered many things about which it subsequently complained.[642] However, I do not accept that there was a conscious decision not to ask for a policy, nor a wanton disregard for how Joe White operated with respect to analysis and reporting concerning malt delivered to its customers (which was reflected in the absence of a request), because of any future intentions of Cargill in relation to the operation of the Joe White Business or because of an overriding keenness to acquire the Joe White Business.

1019 Although as things have turned out it was perhaps unfortunate that no such request was made, the absence of a request for any policy was explicable in large part by the manner in which the Joe White Business was presented to Cargill. Further, as King in effect readily acknowledged, if Joe White had a policy that was material to its operations, Cargill could have reasonably expected for it to be disclosed in the Data Room.[643] Furthermore, what was disclosed was a copy of the Malt Proficiency

---

642 Lindner's evidence, as a solicitor with significant experience in mergers and acquisitions, was that it would have been prudent for a prospective purchaser to ask about a process if it became aware of a "process germane to the business" which was causing it concern. She said in that situation she would advise a client to do so. She also accepted a proposition that if there was a policy in respect of the process, there would be nothing stopping a purchaser from asking for it. The evidence did not establish that Cargill had a material concern in this regard.

643 See par 619 above. This position concerning a reasonable expectation of disclosure pertaining to a transaction of this nature was given by King who was aware of the terms contained in the documents relevant to disclosure, including the Information Memorandum, the Management Presentation Memorandum and the Data Room Protocol.

Scheme. This would have provided some comfort to Cargill that the equipment being used by Joe White was properly checked and calibrated in accordance with a well renowned scheme. Moreover, disclosure of the Malt Proficiency Scheme in the Data Room in no way put Cargill on notice that Joe White was engaged in pencilling or reporting results of malt analysis other than as they appeared, or engaging in any practice that was consciously concealed from its customers and auditors.

S. The Acquisition Agreement

1020 The Acquisition Agreement was executed in the early hours of Sunday, 4 August 2013. It named the following parties, each of whom executed the document:[644]

Viterra Malt, defined as the "Share Seller".[645]

Viterra Operations, defined as the "Land Seller".[646]

Viterra Ltd, defined as the "Dom Box Seller"[647] (together, the "Sellers").[648]

Cargill Australia, defined as the "Buyer".

Cargill, Inc, defined as the "Buyer Guarantor"[649] (together, the "Buyers").

Glencore was not a party to the Acquisition Agreement. Joe White was referred to as the "Company".

---

644 The Acquisition Agreement was executed by Mattiske and Fitzgerald on behalf of Viterra Malt, Viterra Operations and Viterra Ltd; Philippa Tinton, director and Jason Price, director on behalf of Cargill Australia; and Daryl Wikstrom, president and Lesley Ann Doehr, assistant regional treasurer, on behalf of Cargill, Inc.

645 As the sole registered holder and beneficial owner of all the shares of Joe White.

646 Viterra Operations was the sole legal owner and, with Joe White, the beneficial owner of land and buildings utilised at the Minto plant.

647 Viterra Ltd was the sole legal and beneficial owner of the Dom Boxes used in the conduct of the Joe White Business.

648 Any obligation or liability imposed on any of the Sellers was an obligation or a liability imposed upon them jointly and severally: cl 1.6.

649 Cargill, Inc agreed to guarantee the obligations of Cargill Australia as "Buyer" and acknowledged incurring obligations and giving rights under the Acquisition Agreement for valuable consideration received from the Seller.

1021 The document was lengthy. Including annexures, it ran to 301 pages.[650]

1022 The Acquisition Agreement contained a large number of definitions which were to have the meanings described in the Transaction Documents unless the contrary intention appeared, including the following:[651]

> **Action** means an action, dispute, claim, demand, investigation, enquiry, prosecution, litigation, proceeding, arbitration, mediation or dispute resolution.
>
> …
>
> **Assets** means the assets from time to time which are exclusively used in connection with the Business and includes the Business Premises but does not include the Malt Assets, the Former Business Premises or the Dom Boxes.
>
> …
>
> **Business** means the malt business trading as "Joe White Maltings" conducted by [Joe White] using the Assets, the Malt Assets and the Dom Boxes.
>
> **…**
>
> **Claim** means any allegation, debt, cause of action, Liability, claim, proceeding, suit or demand of any nature howsoever arising and whether present or future, fixed or unascertained, actual or contingent, whether at Law, in equity, under statute or otherwise.
>
> …
>
> **Completion** means completion of the sale and purchase of the Shares, the Minto Land and Buildings and the Dom Boxes pursuant to this agreement and **Complete** has a corresponding meaning.
>
> …
>
> **Completion Date** means:
>
> (a) the date that is 5 Business Days after all of the Conditions Precedent are satisfied or waived; or
>
> (b) where the date in paragraph (a) falls on a date less than 5 Business Days before the end of a month, the first business Day of the following month; or
>
> (c) any other date agreed by the Seller and the Buyer.
>
> …
>
> **Confidentiality Deed** means the confidentiality deed dated on or about 22 (sic) May 2013 between [Glencore] and [Cargill, Inc].[652]

---

650 In the recitals, the governing law was defined as the law of New South Wales.

651 There are some further definitions that are relevant, but it is unnecessary to include them as the meaning of the defined term is apparent from its use elsewhere in these reasons.

652 Despite "Confidentiality Deed" being defined as a deed being dated on or about 22 May 2013, it was common ground that the operative Confidentiality Deed at the time the Acquisition Agreement was signed was dated 27 May 2013.

…

Control of a corporation includes the direct or indirect power to directly or indirectly:

(a) direct the management or policies of the corporation; or

(b) control the membership of the board of directors,

whether or not the power has statutory, legal or equitable force or is based on statutory, legal or equitable rights, and whether or not it arises by means of trusts, agreements, arrangements, understandings, practices, the ownership of any interest in shares or stock of that corporation or otherwise.

…

Data Room Documentation means:

(a) all documentation contained in the Data Room[653] or referred to in this agreement or listed in the data room index provided to the Buyer or its Representatives (including the information listed in the index in Annexure B) and any supplementary data room indexes provided to the Buyer or its Representatives up to and including the day before the date of this agreement; and

(b) all written responses and other information provided to the Buyer or its Representatives as part of the Q&A Process up to and including the day before the date of this agreement, including the responses set out in Annexure C.

…

Disclosure Material means the information set out or referred to in Schedule 8.[654]

…

Dom Boxes means the 350 containers supplied to the Dom Box Seller under the Container Purchase Agreement.[655]

…

Due Diligence means the enquiries and investigations into the Company and the Business carried out by the Buyer and its Representatives before the date of this agreement, including but not limited to enquiries and investigations of the Data Room Documentation and materials provided in the management presentations conducted in relation to the sale of the Shares by the Share Seller

---

653 "Data Room" was defined as the virtual data room established for the purpose of the transaction.

654 This included the Data Room Documentation and all information disclosed from various identified sources, and "all other information and data provided or communicated in writing to the Buyer, its Related Bodies Corporate or any of their respective Representatives by the Seller, its Related Bodies Corporate or their respective Representatives before the date of this agreement in connection with the transactions contemplated by the Transaction Documents, including all written information and data provided or communicated as part of or during: (i) management presentations ...; (ii) visits by the Buyer … to the sites …; (iii) any formal or informal information request process conducted by or on behalf of the Seller in conjunction with the review by the Buyer of the Data Room Documentation including the information set out in Annexure E".

655 See also fn 573 above.

or the sale of the Malt Assets by the Land Seller or the sale of the Dom Boxes by the Dom Box Seller.

…

Last Balance Sheet Date means 31 October 2012.

Law includes:

(a) any law (including common law and principles of equity), regulation, authorisation, ruling, judgment, order or decree of any Government Agency; and

(b) any statute, regulation, proclamation, ordinance or by-law in:

(i) Australia; or

(ii) any other jurisdiction.

Liability means any liability or obligation (whether actual, contingent or prospective), including for any Loss irrespective of when the acts, events or things giving rise to the liability occurred and **Liabilities** has a corresponding meaning.

…

Loss means all damage, loss, cost and expense (including reasonable legal costs and expenses of whatever nature or description).

Malt Assets means:

(a) the Minto Land and Buildings; and

(b) the [Joe White] Intellectual Property.[656]

…

Material Contract means:

(a) the Qube Agreement;

(b) the Silo Agreement;

(c) the Storage and Supply Agreement;

(d) any lease to the Company of the Business Premises;

(e) any trade waste agreement relating to a Business Premises;

(f) any contract entered into by the Company pursuant to which at least 20,000 tonnes of malt is supplied by the Company over the term of that contract;

(g) any contract to which the Company is a party which, at the date of this agreement, is reasonably expected to require gross expenditure by the Company exceeding $3 million over the remaining term of that contract

656 The intellectual property in question was identified in schedule 3. Schedule 3 referred to "Trade mark number 957998 in relation to the word (sic) 'Joe White Maltings' in clauses 31, 35, 39, 42 and 44 held by the Land Seller".

or has a remaining term of more than 12 months (with "term" in each case to include any options if exercisable by the counterparty); and

(h) any contract to which [Joe White] is a party and is critical to the effective conduct of the Business and the absence of which would be likely to have a material adverse effect on the Business.

…

Q&A Process means both:

(a) the online process by which the Buyer and its Representatives submitted certain questions regarding the transactions contemplated by this agreement and the Business, the responses to which were posted to a secure internet site and accessible to the Buyer before the date of this agreement, and includes any documents which were separately provided to the Buyer or its Representatives before the date of this agreement in response to a question asked as part of that process; and

(b) (if applicable) any process by which the Buyer and its Representatives submitted questions regarding the transactions contemplated by this agreement and the Business directly to a Seller or its Representatives via email, the responses to which were received by the Buyer or a Representative before the date of this agreement, and includes any documents which were separately provided to the Buyer or its Representatives before the date of this agreement in response to a question asked as part of that process.

…

Records means originals and copies, in any Material Form, of all books, files, reports, contracts, records, correspondence, data, documents and other material of the Company or exclusively or predominantly relating to the Company or the Business and includes:

(a) minute books, statutory books and registers, certificates of registration, books of account and copies of taxation returns for the Company;

(b) certificates of title or registration or other documents evidencing title;

(c) reports, plans, surveys and drawings;

(d) Licences and Licence applications;

(e) manuals and policies;

(f) Employee records;

(g) sales literature, market research reports, brochures and other promotional material (including printing blocks, negatives, sound tracks and associated material);

(h) all sales and purchasing records, contracts, designs and working papers;

(i) all trading and financial records; and

(j) lists of all regular suppliers and customers.

…

Representative of a party includes an employee, agent, officer, director, auditor, adviser, consultant or sub-contractor of that party or of a Related Body Corporate of that party.

…

Seller means either the Share Seller or the Land Seller or the Dom Box Seller, and **Sellers** means all of them.

…

Shares means all of the issued shares in the capital of the Company …

…

Transaction Documents means:

(a) this agreement;

(b) the Employees Offer Deed;

(c) the Intellectual Property Assignment Deed; and

(d) the Transition Services Agreement.

…

Warranties means the warranties and representations set out in Schedule 4 and **Warranty** has a corresponding meaning.

1023 The Acquisition Agreement went on to set out substantive clauses. Clause 2 was entitled "Sale and Purchase".[657] Clause 2.1 specified that Viterra agreed to sell, and Cargill Australia agreed to buy, effectively the Shares, the Malt Assets and the Dom Boxes on Completion.

1024 Clause 3 was entitled "Payment of Purchase Price", and specified that the total price to be paid was $420 million excluding goods and services tax. Clause 3.3 was entitled "Adjustment Amount Interest" and stated:

(a) Interest is payable on the Adjustment Amount at the Interest Rate.

(b) Interest at the Interest Rate on the Adjustment Amount accrues daily from (and including) the Completion Date to (but excluding) the date of actual payment and is calculated on actual days elapsed and a year of 365 days.

1025 Clause 4 set out the conditions precedent to the sale, which included foreign

657 Headings were for convenience only and did not affect the interpretation of the Acquisition Agreement: cl 1.5.

investment clearance in Australia and competition clearance in South Korea, and imposed an obligation of reasonable endeavours by the parties to ensure that the conditions precedent were met.

1026 Clause 5 was entitled "Completion" and set out details of the parties' obligation to complete the transaction and related documents.

1027 Clauses 6 and 7 were entitled "Adjustments to Adjusted Share Purchase Price" and "Completion Accounts" respectively.[658]

1028 Clause 9 was entitled "Pre-Completion Matters". It included:

> **9.1 Conduct of business pending Completion**
>
> From the date of this agreement until the Completion Date, other than:
>
> (a) as expressly permitted by the Transaction Documents;
>
> …
>
> the Share Seller will ensure that:
>
> (d) (**ordinary course of Business**) the Business is carried on in the ordinary course (but subject to the restrictions in this clause 9.1) and at arm's length, on its usual commercial terms and in compliance with all applicable Laws;
>
> …
>
> **9.4 Access prior to Completion**
>
> Prior to Completion, the Share Seller and the Land Seller must procure that appropriate Representatives of the Buyer have reasonable access, at the risk of the Buyer, to:
>
> (a) the Business Premises and the Malt Land and Buildings during normal operating hours for the purposes of:
>
> (i) observing the manner in which the Business is conducted, inspecting the physical assets of the Business and integration planning; and
>
> (ii) briefing Employees about the Cargill Group and the offers of employment contemplated by the Employees

---

658 Clause 7.2(d) provided that in certain circumstances, Cargill Australia and Viterra Malt were required to confer in good faith with a view to resolving any disputed item. If disputed items remained unresolved, they were required to be the subject of a review by the Independent Expert in accordance with cl 8 of the Acquisition Agreement: cl 7.2(f)(iii). Clause 8.1(d) required the Independent Expert to act in that capacity and not as an arbitrator with any decision being final and binding in the absence of manifest error.

Offer Deed and negotiating such offers with the Employees; and

(b) appropriate Employees and Representatives of the Sellers for the purposes of discussing the conduct of the Business and integration planning including in respect of information technology systems; and

(c) the Records,

…

1029 Clause 13 dealt with the Warranties, which were set out in schedule 4. Relevantly, clause 13 read:

13 Warranties and representations

13.1 Accuracy

The Sellers represent and warrant to the Buyer that each Warranty is correct and not misleading on the date of this agreement and will be correct and not misleading on the Completion Date as if made on and as at each of those dates except where otherwise provided in the Warranty.

13.2 Independent Warranties

Notwithstanding any other provision in the Transaction Documents, each Warranty is to be construed independently of the others and is not limited by reference to any other Warranty.

13.3 Matters disclosed

(a) Subject to paragraph (b), each Warranty is to be read down and qualified by any information:

(i) fairly disclosed in the Disclosure Material;

(ii) fairly disclosed in the Transaction Documents;

(iii) which is otherwise within the actual knowledge of the Buyer on the day before the date of this agreement; or

(iv) disclosed in writing to the Buyer during the course of the Due Diligence;

which is inconsistent with that Warranty and, to the extent that any Warranty is incorrect or misleading having regard to any such information, that Warranty is deemed to be modified to account for such information. No amount will be recoverable by the Buyer in respect of any breach of Warranty to the extent that the breach arises by reason of or in relation to any such information.

(b) Paragraph (a) does not apply in respect of Warranty 15.14(e) or (f).

(c) A reference to the actual knowledge of the Buyer in this agreement is to the actual knowledge of all individual Representatives of the Buyer who have participated in the Due Diligence except that, in the case of any individual Representative who is not an employee, officer or director of the Buyer or a Related Body Corporate of the Buyer, it excludes any information which that individual is not permitted to disclose (and has not disclosed) to the Buyer because of a duty of confidence it or its employer owes to another person or any information barrier it or its employer has an obligation to maintain.

13.4 Buyer's acknowledgements

The Buyer acknowledges and agrees that:

(a) in entering into the Transaction Documents and in proceeding to Completion, the Buyer does not rely on any statement, representation, warranty, condition, promise, forecast or other conduct which may have been made by or on behalf of a Seller, except the Warranties;

(b) without limiting clause 13.4(a), no representation, no advice, no warranty, no undertaking, no promise and no forecast is given in relation to:

(i) any economic, fiscal or other similar interpretations or evaluations by a Seller or any person acting on behalf of or associated with that Seller or any other person;

(ii) future matters, including future or forecast costs, prices, revenues or profits;

(iii) the principles to be applied by any Government Agency with respect to the regulation of the malt or barley industry or any part of it and, in particular, matters affecting revenue, prices, charges and service levels; or

(iv) the regulation of the malt or barley industry (including any act or omission by any Government Agency);

(c) it has had the opportunity to conduct Due Diligence and to review the Disclosure Material;

(d) irrespective of whether or not the Due Diligence was as full or exhaustive as the Buyer would have wished, it has nevertheless independently and without the benefit of any inducement, representations or warranty (other than the Warranties) from any Seller or any Representatives of a Seller, determined to enter into the Transaction Documents;

(e) no Seller or any of its Representatives has made or makes any representation or warranty as to the accuracy or completeness of those disclosures regarding the Company, the Employees, the Shares, the Malt Assets and the Business (including the information, forecasts and statements of intent contained in

material provided to the Buyer and made in management presentations) other than the Warranties;

(f) no Seller or any of its Representatives:

(i) accepts any duty of care in relation to the Buyer, the Buyer's Related Bodies Corporate or a Representative of the Buyer in respect of any disclosure or the provision of any information (including, the information, forecasts and statements of intent contained in material provided to the Buyer and made in management presentations); or

(ii) in the absence of fraud, is to be liable (except under the Warranties) to the Buyer, the Buyer's Related Bodies Corporate or a Representative of the Buyer if, for whatever reason, any such information is or becomes inaccurate, incomplete or misleading in any particular way;

(g) subject to any Law to the contrary and except as provided in the Warranties, all terms, conditions, warranties and statements, whether express, implied, written, oral, collateral, statutory or otherwise, are excluded, and the Sellers disclaim all Liability in relation to them, to the maximum extent permitted by Law;

…

13.5 Opinions, estimates and forecasts

The parties acknowledge that no Seller has provided and that no Seller is under any obligation to provide the Buyer or a Related Body Corporate or Representative of the Buyer with any information on the future financial performance or prospects of the Company. If the Buyer or a Related Body Corporate or Representative of the Buyer have received opinions, estimates, projections, future business plans, future budget information or other forecasts in respect of the Company, the Buyer acknowledges and agrees that:

(a) there are uncertainties inherent in attempting to make these estimates, projections, future business plans, future budgets and forecasts and the Buyer is familiar with these uncertainties; and

(b) no Seller is liable (except under the Warranties) under any Claim arising out of or relating to any opinions, estimates, projections, future business plans, future budgets or forecasts in respect of the Company.

…

13.7 Sellers' acknowledgments

Each Seller acknowledges that:

(a) the Buyer has entered into this agreement and will Complete in reliance on the Warranties as they are given on the terms of this agreement; and

(b) the matters agreed by the Buyer in clause 13.4 do not give that Seller a cause of Action against the Buyer and may only be raised by that Seller as a defence to any Claim by the Buyer.

13.8 Disclosure

(a) In the period from the date of this agreement until Completion, the Sellers must as soon as reasonably practicable disclose to the Buyer in writing any fact, matter or circumstance of which it becomes aware and which in its reasonable opinion would result or would be likely to result in any Warranty not being correct or being misleading in any material respect and for the purpose only of this clause 13.8 any reference in a Warranty to the term 'as at the date of this agreement' shall be disregarded.

(b) Subject to clause 13.8(c), the Seller must use all reasonable endeavours to remedy (if capable of remedy) the relevant fact, matter or circumstance before Completion.

(c) Nothing in clause 13.8(b) will require the Sellers or a Related Body Corporate of a Seller to pay any money or provide other valuable consideration to or for the benefit of any person or otherwise take any action which, in that Seller's reasonable opinion, would or may impact adversely on or otherwise be contrary to its interests or the interests of a Related Body Corporate of the party.

1030 Clause 15 was entitled "Limitations of Liability". Clause 15.1 set out the procedure for the Buyer to give notice to the Seller of "any matter or circumstance" that it considered may give rise to a legal claim, including a breach of Warranty. Clause 15.2 dealt with third party claims. If circumstances arose which did give, or might have given, rise to a Claim "against the Seller",[659] Cargill Australia was required to give prompt notice of the Claim or potential Claim[660] and, amongst other things, was not permitted to settle or make any admission with respect to any Claim without prior written consent.[661] Clause 15 also included:

15.4 Seller not liable

No Seller is liable to the Buyer (or any person deriving title from the Buyer) for any Claim under or in relation to or arising out of the Transaction Documents:

---

659 The particular Seller was not specified.

660 Clause 15.2(a).

661 Clause 15.2(d).

(a) to the extent the Claim is increased as a result of a failure by the Buyer to comply strictly with clause 15.1 or clause 15.2 as the case may be;

(b) If the Buyer Guarantor has ceased after Completion to Control the Company or the Business;

…

(e) to the extent that the Claim arises or is increased as a result only of an increase in the rates, method of calculation or scope of taxation after Completion unless the increase is announced before the date of this agreement and enacted in accordance with that announcement;

(f) to the extent that the Claim arises or is increased as a result of any change in Accounting Standards after Completion unless the increase is announced before the date of this agreement and enacted in accordance with that announcement;

(g) to the extent that the Claim arises or is increased as a result of action taken or not taken by the Seller after consultation with and the prior written approval of the Buyer;

…

15.5 Reduction in Purchase Price

If payment is made for a breach of any Warranty or otherwise in respect of a Claim under this agreement:

(a) to the extent that it relates to the Shares or the Share Seller, the payment is to be treated as a reduction in the Share Purchase Price;

(b) to the extent it relates to the Malt Assets or the Land Seller, the payment is to be treated as a reduction in the Malt Assets Purchase Price; or

(c) to the extent that it relates to the Dom Boxes or the Dom Box Seller, the payment is to be treated as a reduction in the Dom Box Purchase Price,

but in no case will the relevant purchase price be reduced below A$1.00.

…

15.7 Minimum amount of Claim

(a) The Buyer may not make any Claim under the Transaction Documents including for a breach of Warranty:

(i) if the amount of the Claim is less than $500,000; and

(ii) unless and until the aggregate amount of all Claims properly made under the Transaction Documents exceeds $3.5 million.

…

15.8 Maximum Liability

Notwithstanding any provision in the Transaction Documents, in the absence of fraud, the total aggregate liability of the Sellers for all Claims made by the Buyer or a Related Body Corporate or Representative of the Buyer shall be capped at:

(a) the Purchase Price (before any reduction pursuant to clause 15.5 or otherwise under this agreement) for all Claims arising from any breach of any of the Share Seller Title Warranties, Land Seller Title Warranties or Dom Box Seller Title Warranties; and

(b) $100 million for all other Claims.

15.9 Exclusion of consequential liability

Notwithstanding any other provision of this agreement, no party will be liable for any indirect Loss arising in connection with this agreement or its subject matter. The parties agree that "indirect Loss" includes:

(a) loss of income, profits or business;

(b) any failure to achieve any anticipated savings;

(c) damage to goodwill or reputation; and

(d) punitive or exemplary damages that may otherwise be awarded against it.

15.11 Obligation to mitigate

Nothing in this clause 14 (sic) in any way restricts or limits the general obligation at Law of the Buyer to mitigate any Loss which it may incur in consequence of any breach by the Seller of the terms of the Transaction Documents including a breach of a Warranty.

…

15.13 Independence

Each qualification and limitation in this clause 15 is to be construed independently of the others and is not limited by any other qualification or limitation.

1031 Clause 17 provided for the transfer of assets upon Completion, including the Assets, the Malt Assets and the Dom Boxes as follows:

17.1 Completion

The Sellers must procure that, in addition to the Malt Assets and the Dom Boxes, any Asset owned by the Share Seller or a Related Body Corporate (other than the Company) which is used exclusively to conduct the Business is transferred, at no cost, to the Buyer at Completion free from any Encumbrance.

1032 Clause 19 covered default and termination of the Acquisition Agreement. Clause 20,

entitled "Guarantee and indemnity", contained the following:

> **20.1 Consideration**
>
> The Buyer Guarantor acknowledges that the Sellers are acting in reliance on the Buyer Guarantor incurring obligations and giving rights under this Guarantee.
>
> …
>
> **20.3 Indemnity**
>
> (a) The Buyer Guarantor indemnifies the Sellers against any Liability or Loss arising from, and any reasonable Costs it incurs, if:
>
> (i) the Buyer does not, or is unable to, comply with an obligation it has (including any obligation to pay money) in connection with the Transaction Documents;
>
> (ii) an obligation the Buyer would otherwise have under the Transaction Documents (including an obligation to pay money) is found to be void, voidable or unenforceable; or
>
> (iii) an obligation the Buyer Guarantor would otherwise have under clause 20.2 is found to be void or unenforceable;[662] or
>
> (iv) a representation or warranty by the Buyer in the Transaction Documents is found to have been incorrect or misleading when made or taken to be made.
>
> …
>
> **20.7 No merger**
>
> This Guarantee does not merge with or adversely affect, and is not adversely affected by, any of the following:
>
> (a) any other guarantee, indemnity, mortgage, charge or other encumbrance, or other right or remedy to which the Seller is entitled; or
>
> …
>
> The Seller may still exercise its rights under this Guarantee as well as under the judgment, mortgage, charge or other encumbrance or the right or remedy.
>
> …

1033 Clause 21 imposed various confidentiality obligations on the parties. Under clause 31, entitled "General", the following appeared:

---

662 Clause 20.2 set out Cargill, Inc's guarantee of Cargill Australia's compliance with the Acquisition Agreement.

31.12 Entire agreement

The Transaction Documents constitute the entire agreement of the parties about its subject matter and supersedes all previous agreements, understandings and negotiations on that subject matter.

…

31.15 Knowledge and belief

Where a Warranty is given to a Seller's awareness or knowledge, including to the best of its knowledge or awareness or so far as the Seller is aware, the Seller will be deemed to know or be aware of a particular fact, matter or circumstance only if one or more of [Rees], [Fitzgerald], [Mann] or [Mattiske] are actually aware of that fact, matter or circumstance *on the date the Warranty is given* or would have been aware had they made reasonable enquiries on the date the Warranty is given. The individuals referred to in this clause 31.15 are not in any way personally responsible for the accuracy of the Warranties and will not be personally liable for any Claim.

(Emphasis added.)

Pursuant to clause 13.1, each Warranty was given on the date of the Acquisition Agreement and on the date of Completion.[663] This part of the Acquisition Agreement also contained a severability clause: clause 31.14.

1034 The Acquisition Agreement contained 14 schedules. Schedule 4 contained the Warranties. Under the heading "Part 1 – Share Seller Warranties" appeared the following:

4 Documents and Records

…

4.2 Records

The Records:

(a) have been compiled and maintained in good faith;

(b) to the best of the Share Seller's knowledge and awareness, do not contravene any Law; and

(c) are complete and up-to-date in all material respects.

…

663 See par 1029 above.

6 Assets and Licences

6.1 Assets

The Assets:

(a) are legally and beneficially owned by the Company;

(b) are free from Encumbrances;

(c) on the Completion Date will be in the possession of the Company;

(d) are not the subject of any lease or hire purchase agreement or contract for purchase on deferred terms; and

(e) along with the Malt Assets and the Dom Boxes, sufficient to enable the effective conduct of the Business after Completion as it is carried on at the date of this agreement, and as it has been carried on since the Last Balance Sheet Date.

…

7 Contracts

…

7.3 No default by the Company

To the Share Seller's knowledge and awareness, the Company is not in material default of any Material Contract, nor has anything occurred or been omitted which would be a material default but for the requirement of notice or the lapse of time or both.

…

9 Litigation

…

9.2 No claims or disputes

At the date of this agreement, there are no Claims or disputes relating to the Business and, to the best of the Share Seller's knowledge and awareness, there are no facts or circumstances which may give rise to a Claim or to any legal, administrative or government proceedings.

…

12 Data Room Documentation

(a) The Data Room Documentation has been collated and disclosed in good faith and with reasonable care.

(b) To the Share Seller's knowledge and awareness, no material information has been omitted from the Data Room Documentation.

(c) To the Share Seller's knowledge and awareness, the Data Room Documentation is true and accurate in all material respects.

…

13 Position since the Last Balance Sheet Date

…

13.4 Business carried on

Since the Last Balance Sheet Date, the Business has been conducted in the ordinary course in a proper and efficient manner, without any interruption or alteration in its nature, scope and manner.

…

17 Compliance with Laws

(a) The Business has been conducted in accordance with applicable Laws and ISO Standards in all material respects.[664]

1035 In addition to the schedules, the Acquisition Agreement contained 5 annexures. Annexure A contained the "Last Accounts" of Joe White. Annexure B contained a Data Room document index, which recorded the documents uploaded to the Data Room, their file names, file type and folder path (including those located in the black box). Annexure C was entitled "Q&A". It contained a table of a large number of questions submitted to the Data Room and the answers, including the date submitted, the date answered, the category of question, and the user of the Data Room that had submitted the question and answered it. Relevantly, the table recorded the following exchanges:

(1) On 9 July 2013, a question was submitted, the response to which was that Viterra Ltd employed all staff within the Joe White Business and had done so since 2009.

(2) On 9 July 2013, the question "How does [Joe White] compensate if minimum germination time is required by customers of more than 4 days?" was submitted. On 15 July 2013, the answer "This rarely occurs" was submitted.

(3) On 9 July 2013, the question "How does [Joe White] assure that if delta T requirements are not met for certain customers, that malt is not used

664 ISO Standard was defined to mean "a management system that complies with the requirements of ISO 22000:2005 (Food Safety Management Systems), incorporating the quality elements of ISO 9001:2008 (Quality Management Systems)". According to Stewart's evidence, the International Organisation for Standardisation certification was not an overall audit or qualitative assessment of the entire Joe White Business, but rather ascertained the existence of various processes.

in blends for these customers?" was submitted. On 15 July 2013, the answer "Not relevant to value" was submitted.

(4) On 9 July 2013, the question "Do employees in (sic) [Joe White] have to annually sign a Company Ethics Charter?" was submitted. On 12 July 2013, the answer "Employees in (sic) [Joe White] are required to read and acknowledge that they understand and comply with the Business Code of Conduct on an annual basis" was submitted.

1036 Annexure D contained a document with the title "Joe White Maltings – Management Presentation Questions & Answers – Cargill 26-June-2013". The document recorded the same "objective" as the notes to the Commercial Call[665] and the Barley Inventory Call.

1037 Annexure E was the final annexure. It was entitled "Any Additional Q&A from Subsequent Management Meetings". It contained 5 documents. The first was a record of a "finance and accounting discussion" held on 5 July 2013.

1038 The second document was entitled "Joe White Maltings Operations Call – Cargill 18 July-2013".[666]

1039 Notes to the Commercial Call and the Barley Inventory Call were the third and fourth documents contained in this annexure.[667] The final document was a record of a phone call in relation to environmental issues, held on 26 July 2013.

T. Post-Acquisition Agreement to Completion

1040 On 5 August 2013, Purser spoke with Mattiske. Mattiske told Purser that the Joe White executives were delighted at the outcome. Purser passed this on by email to Eden, Viers and Sagaert. Eden responded that he sensed as much. He said that when they got away from Merrill Lynch and the legal team, the Joe White group seemed genuinely eager to help Cargill better understand the business. Eden said they were

665 See par 910 above.
666 See par 884 above.
667 See pars 910-912, 924-929 above.

professional and willing to help. He concluded the email by stating, "I could not say as much for the rest of the mob".

1041 Following the execution of the Acquisition Agreement and prior to the Completion Date of 31 October 2013, a period of business integration between Joe White and Cargill Australia commenced. But before it commenced in earnest, Van Lierde queried with Eden whether Jody Scaife ("Scaife")[668] would be more appropriate for the position of integration manager than Viers.[669] In response, Eden stated he would not feel comfortable not having a senior member of the malt team in that position. Eden noted that this was not the first time Viers was involved in integration work, and set out his previous experience. Further, Eden stated that Viers had been intimately involved in the strategy behind the purchase of Joe White and had done incredible work through the Acquisition to that time. Eden suggested that Viers was already on the line for the promised synergies and he could not think of a better way to make the connection than to have Viers in the role of integration manager.

1042 As part of his response to Van Lierde, Eden also made some observations about his views concerning Joe White management. He said that they had been "through this from Adelaide Malting, to Ausbulk, to ABB, and then Viterra". Eden stated that through all they had been loyal and agile. After referring to their extensive experience, Eden stated that the feedback he had "from the Viterra team" was that Joe White was great operationally but not very commercial. Viers' previous experience was on the commercial side of malt, rather than operational. Plainly, at this point, Eden did not

---

668 Scaife was the national sales leader for Cargill's "Ag Horizons" business in 2013 and was located in Minnesota. Scaife had commenced full time employment with Cargill in January 1995 as a graduate chemical engineer, and for her first 5½ years worked at various Cargill plants around Australia. She then moved into various business development roles and was involved in Cargill's acquisition of the Australian Wheat Board in 2011, and its subsequent integration into Cargill's business in Australia. In that role she was involved in due diligence, private acquisition and then the subsequent integration. At the time she gave evidence, she was no longer employed by Cargill. She has a bachelor of chemical engineering degree (with honours) from Royal Melbourne Institute of Technology.

669 During cross-examination, it was put to Van Lierde that he was expressing concerns in his email about Viers' abilities. This was rejected. When Van Lierde sought to explain what his concerns were more specifically, he was cut off by the Viterra Parties' senior counsel on the basis that the question as put had been answered. Contrary to the Viterra Parties' submission, in these circumstances, his evidence ought to be accepted. Van Lierde was a credible witness.

have any material concerns about operations at Joe White.

1043 During this period, Joe White received complaints from customers regarding malt quality. On 26 August 2013, Stewart received an email from a representative of Oriental Brewery in Korea,[670] complaining that Joe White's malt was "overmodified" and causing some "high [colour] malt problems". Stewart responded by offering to modify the Kolbach Index[671] of the malt Joe White was providing, but noted that there would be "flow on effects of such a change". In response, the customer wrote that "[o]ur conclusion is your malt has too high (sic) [Kolbach Index] and low total protein", to which Stewart responded on 28 August 2013:

> Our malt is within the current specification for Kolbach Index, total protein, FAN[672] and colour and so I am confused by your comments that our malt is out of specification.

1044 In response, in a demonstration of the importance of malt specifications to it, and the repeated problems which it had experienced, the customer wrote to Stewart on 30 August 2013:

> I think you have some misunderstand (sic) about our malt specifications.
>
> The Kolbach index specification was changed in June 2011 and from 40 ~ 45 to 40 ~ 48 temporarily for 2010/2011 crop.
>
> From 2011/2012 crop the KI returned to 40 ~ 45 and [colour] was changed from 3.6 ~ 4.2 to 3.8 ~ 4.4 in April 2012.
>
> We did not changed (sic) KI specification from that time during DP change in September 2012 and Total protein change in January 2013.

---

670 Stewart's evidence was that Oriental Brewery's laboratory was notorious for having difficulties. He referred to this in responding to earlier complaints from Oriental Brewery in December 2010. At that time, Oriental Brewery emailed Joe White stating that the test results from its laboratory were very different to Joe White's Certificate of Analysis in most fields. In Joe White's responding email, Wicks said he would have the sample re-analysed. With respect to the extract result, Wicks suggested that Oriental Brewery's result was so low as to be unbelievable. However, he did not comment on the other parameters that were also inconsistent. Stewart gave similar evidence when taken to an email sent by Oriental Brewery in November 2010, when a complaint about colour was made. In this email, Oriental Brewery stated the view that the error was made by Joe White because test results produced by a third party were exactly the same as Oriental Brewery's results. In any event, any attempt to blame all discrepancies or inaccuracies with results for malt shipped to Oriental Brewery on that customer's laboratory performance would be to put an artificial gloss on what was occurring: see par 79 above.

671 The Kolbach Index is a measure of the extent of protein modification of barley, calculated by dividing soluble nitrogen by total nitrogen. The Kolbach Index is important because it is the best indicator of malt modification, being the degree to which germination proceeded during the malting process.

672 FAN stands for "free amino nitrogen".

> For your understand (sic) I attach our Malt specification files.
>
> And the *problem is your [Certificate of Analysis] is in specification*, but our warehoused malt analysis data is *out of specification* in [colour].
>
> Our plants *complaint* (*sic*) *about this many times*. Why you permit (sic) this kind of malt? They said they *cannot have confidence in your [Certificate of Analysis]*.
>
> (If your data and our data are both correct, then we have to check if there is some malt change from the process of containerizing, shipping and sailing period, especially in your summer season.)

The email then set out specific details with respect to colour and the Kolbach Index for 10 separate lots of malt which were nearly all out of specification, and continued:

> We checked other brewing parameters thoroughly at first but there were no negative changes and in some cases positive changes.
>
> But your malt has negative changes such as high KI, high FAN, high soluble protein and low total protein as I [summarised] [in the] below e-mail.
>
> The *batches of high [Joe White] malt ratio have severe foam problems*.
>
> In the case of we (sic) use other supplier malt there was no foam problem.
>
> *If you cannot supply malt in our specification, we have to change the malt supplier*.
>
> If we need more discussion I think it will be better you may (sic) visit Korea.
>
> (Emphasis added.)
>
> …

This email chain was copied to Wicks on 30 August 2013.

1045 When Stewart was taken to this email chain, he gave evidence that it was not uncommon for customers to identify discrepancies between the malt supplied that was represented as being in specification and what they were able to detect themselves. However, Stewart's evidence was that the instances of this occurring were reasonably infrequent when the volume of malt Joe White shipped was taken into account. Further, Stewart swore that he was relying on the fact that many customers of Joe White did not test the malt delivered and that they had no problem with the malt.

1046 While Stewart accepted that, on the face of it, it was possibly damaging to Joe White's reputation to have discrepancies between what was represented as being supplied

and in fact what had been supplied, he also stated that Joe White had an excellent reputation in the industry. He further suggested that the email chain showed a large variation in analysis and stated that it was a perfect example of how malt analysis was quite variable. Having given this evidence, Stewart acknowledged the customer was venting "a bit of frustration" and that the threat of changing malt supplier was not surprising, although he did not think they in fact made the change.

1047 By way of observation, although there was evidence of some Joe White customers detecting differences between the results reported in Certificates of Analysis and the parameters as subsequently tested or observed, there was also a substantial body of evidence which demonstrated that Joe White customers did not detect such differences.

1048 The practice of recording incorrect barley varieties continued during the integration period. At least in some circumstances, there was still a deliberate intention to deceive. For example, on 1 September 2013, a plant manager emailed Moller, Sheehy and McIntyre referring to a shipment about to take place for Sapporo. The plant manager stated that he was not sure which of them was looking after the 2 pre-shipment spreadsheets the following day, so he had sent the information to all of them. He stated that both were "way out of spec". The email continued:

> We mixed some non-CCFS[673] Gairdner into the blends which I can't reflect on the [pre-shipments] so they *will need a bit of a creative touch*. Give me a call if you want to discuss.

(Emphasis added.)

There was nothing in the email to suggest the request was out of the ordinary or out of line. Further, the pre-shipment report that was sent (and was signed off by Sheehy) stated that CCFS Gairdner (and not anything else) had been used.

1049 On 4 September 2013, Mattiske sent an email to Engle, copied to various others. That email confirmed Glencore's project team leads for the transition. Team lead was Mattiske himself. Hughes was in charge of malt operations; Rees was in charge of

673 CCFS stands for collaborative contract farming system.

finance; Norman was in charge of human relations; and Fitzgerald was in charge of legal. Mattiske asked that all of the team members be kept up-to-date with respect to requests.

1050 On 7 September 2013, Viers emailed a large number of Cargill employees with the subject "Integration planning and kick-off". After welcoming everybody to the integration team, Viers noted the point had been reached where Cargill was nearly set to commence the integration. Viers attached legal advice concerning anti-trust guidelines for integration. That advice stated that until Completion, Cargill and Joe White had to continue to operate as independent companies and to compete against each other. The integration team was advised that they were not allowed to "jump the gun" by starting to act other than on an arms-length basis before obtaining regulatory approval and Completion. The advice stated that, without the approval of counsel, the integration team were not to discuss with Joe White or Glencore the following matters:

- Specific customer or supplier relationships or negotiations.
- Prices (present or future), pricing policies or patterns, price changes, or other terms and conditions of sales to customers.
- Bids, contracts or requests for proposals for particular products or services.
- Territorial restrictions, allocations of customers, restrictions on types of products, or any other kind of market division.
- Costs (including freight and production), market conditions, capacity, industry production policies or patterns, inventory or sales, or plans regarding the design, production, distribution or marketing specific products.

1051 Accordingly, although the integration was about to commence, the amount of information that Cargill could seek, and equally the amount of information that Glencore, Viterra or Joe White could provide, was limited by the necessity of all the parties to avoid breaching Australian competition laws.

1052 On 9 September 2013, Deloitte agreed to prepare an estimate of the fair market value of the assets Cargill Australia acquired pursuant to the Acquisition Agreement.[674]

---

674 Ultimately, Deloitte was instructed that the valuation date was 31 October 2013, being the Completion Date. The valuation was not completed until late 2014. Further, Breszee, Cargill, Inc's technical accounting director, instructed Deloitte not to take into account the Operational Practices or the

1053 On 13 September 2013, Mattiske emailed Viers stating he would be away the following week and directing Viers to co-ordinate all details and requests through Rees. Two days later, Mattiske emailed Viers confirming Completion would occur on 31 October 2013, which was agreed to by all parties the following day.

1054 Also on 13 September 2013, a draft project charter was being prepared by Cargill with respect to the Acquisition. Jewison gave evidence that much of the document was compiled by her based on information she received from others.

1055 The draft charter noted that the Acquisition would complete Cargill's global footprint and enable it to better serve global and regional brewers in the growing Southeast Asian market. The internal rate of return was recorded as 9.7 percent, with the payback on the total investment expected to be 10.7 years. The charter covered topics including the strategic fit of Joe White, an industry overview and the competitive advantage Cargill would gain from becoming the largest maltster in the world.

1056 As for the "critical assumptions" that had been made, the charter stated there was a desire to enter into long-term agreements with Joe White's customers in circumstances where, since Glencore's purchase of Viterra, contracts had only been rolled over from year to year. Further, the issue of limited storage capacity was addressed on the basis that Cargill would need to retain key production management and maintain production volume "with a product that meets customer specifications based on Cargill standards".

1057 When it was put to Jewison that by this comment she was linking it to the ability to produce malt in accordance with customer specifications based on Cargill standards and acknowledging the risk that this might not be able to be achieved because of the limited storage, she rejected the proposition. In essence, she said that the comment

---

performance of Joe White after 1 November 2013. Accordingly, the valuation was not relied upon by Cargill as the basis for determining Cargill Australia's loss for the purposes of this proceeding, albeit some assumptions contained in it were used as part of the expert evidence concerning loss. That said, Deloitte's valuation, dated 18 December 2014, was tendered. It recorded a fair market value for: Land and buildings of $63.2 million; and plant and equipment of $174.8 million on a depreciated replacement cost method. Thus, based on a purchase price of $420 million, the residual goodwill was estimated to be $104.4 million (after taking into account the value of customer relationships at $38.8 million and a backlog of customer contracts at negative $3.8 million).

was there to identify that the Joe White production team became key in understanding how to manage limited storage.

1058 Under cross-examination, De Samblanx was asked whether he knew from where the assumption with respect to limited capacity had come. While he acknowledged that he saw the charter at the time, he was unable to state from where it came, other than to say that he had previously stated there was limited storage capacity.

1059 When it was put to him that if he had been asked in September 2013 whether the assumption concerning limited storage capacity as set out in the charter should have been made and that he would have responded that it involved a considerable risk, he did not accept this. De Samblanx gave evidence that at the time, based on the information with which he had been provided, he considered that storage capacity was manageable. When it was put to him that he was giving untruthful evidence, De Samblanx stated that he had gotten answers to all these questions and it was important to approach the issue end to end, which made it possible to deliver with the storage capacity available (which he suggested Cargill was doing at the time he gave his evidence). He acknowledged that in order to make a proper assessment he would need to know the details of customer contracts, what barley varieties Joe White had, the ability to group customers and to switch from 1 plant to another if needed.

1060 Further, when asked whether anyone ever asked him if the assumption with respect to limited storage capacity could be satisfied, De Samblanx gave evidence that he was asked the question when he was in Minneapolis (on 17 and 18 July 2013). Self-evidently from the evidence that is set out above in relation to the events on those 2 days,[675] he must have answered the question in the affirmative. Not surprisingly, he also readily acknowledged that there was always a risk in delivering malt that complied with customer specifications.

1061 Van Lierde was also taken to the comments concerning limited storage capacity during his cross-examination. It was put to him that he knew Joe White was running

675 See pars 862-909 above.

its operations with inadequate storage in comparison to how Cargill would run the operations. He rejected the proposition.

1062 Returning to the contents of the charter, after referring to "critical value drivers", and listing various risks which were all rated either medium or low, except for "crop failure/weather risk" which was rated high, the charter then discussed significant financial issues. Some risk was identified around supplying malt within customer specifications without the large amount of storage at the Joe White facilities. As for barley supply, it was stated that there was no significant risk because of the grain and oilseeds supply chain in Australia and Cargill's knowledge of the market.

1063 When De Samblanx was taken to the significant financial issues identified in the charter, he gave evidence that he was also not the author of these comments but readily acknowledged the risk in relation to customer specifications and barley supply existed all the time.

1064 In relation to the significant financial issues, Van Lierde gave evidence that he did not read the comments as stating that there was a risk that Joe White would not be able to produce malt to customer specifications because of the lack of storage. He also rejected the suggestion that that was his understanding at that time.

1065 The Viterra Parties referred to Jewison's evidence that this draft charter reflected the views of Cargill's management, and submitted that it should be found that, both in September 2013 and at the time the Acquisition Agreement was entered into, Cargill knew there was a real risk that Joe White might not be able to supply malt within customers' specifications due to lack of storage at Joe White's plants. Leaving aside the obvious fact (as acknowledged by De Samblanx)[676] that there would always have been some level of risk in being able to produce malt within customers' specifications, the charter did not reflect any knowledge on the part of Cargill of some significant and appreciable risk of complying with customers' specifications because of the amount of storage capacity of Joe White. Consistent with what had been repeatedly

676 See par 1063 above.

stated to Cargill up to that time, the relevant employees of Cargill believed that the operations of Joe White, including taking into account its storage capacity, were capable of producing malt in accordance with customers' specifications.[677]

1066 Just before mid-September 2013, Eden and Viers travelled to Australia as part of the integration. On 17 and 18 September 2013, Eden and Viers met with management of Joe White, described by Viers as the leadership team with some key "number-twos". On the first of these days, Cargill gave a presentation to introduce Joe White management to Cargill. According to an email Viers sent later that week, the presentation was well received, though questions were asked on numerous topics, including in relation to Cargill's intention with respect to the Joe White brand. The meeting on the second day was used to get "a better sense of [Joe White's] culture", as well as discussing Cargill's thoughts on synergy and the integration process. A facilitator engaged by Cargill was also present.[678] Viers formed the opinion that, as Joe White's management had worked under Viterra for several years, they understood how to work inside a large organisation.

1067 Further, Viers recorded that the sessions held exceeded Cargill's expectations. He said it was clear that the team had very good talent, and that they knew their business and the market quite well. Viers' email included the following:

> They also seem strong on execution and have a very good orientation towards the customer. We noted some best practice on barley/malt/production [optimisation] that we can bring back into our business. Overall this is a group we can work well with and I believe will assimilate into Cargill and malt quite well.

1068 At the time, it was anticipated that verbal approval from the Foreign Investment Review Board would be given prior to mid-October and, from that point in time, Viers anticipated Cargill would then be able to fully engage with Joe White management.

1069 The presentation given by Eden and Viers to Joe White management was reflected in a series of slides that was shown. These slides set out Cargill's background more

677 See further pars 1078-1083 below.

678 Eden said he did not it find helpful, and excused the facilitator early.

generally, and also specifically with respect to malt and plans for the future. One of the slides was concerned with values, and stated that the Cargill values included integrity, which involved, "Doing what is right, no matter what the consequences".

1070 Another slide stated that the Acquisition would fit squarely with Cargill Malt's strategy. It stated that the Acquisition created a footprint in the only major malting barley region not already in Cargill's portfolio, offered the ability to serve competitively in high growth regions including Southeast Asia, strengthened Cargill Malt's global leadership and relevance to global brewers, provided leverage opportunities with Cargill's Australian grain business, and also brought in experienced employees.

1071 After these 2 days with Joe White management, Eden returned to the United States. He had no inkling that anything was untoward or amiss; his impressions suggested quite the opposite. Consistent with Viers' contemporaneous appraisal, his evidence was that both he and Viers left Adelaide feeling really excited about the opportunity Joe White presented. He also had the impression the Joe White executives with whom they had met were excited that Cargill, Inc was a company that cared about malt and that they were very open to working with Cargill. Eden did not visit Australia again before 31 October 2013.

1072 On 24 September 2013, Eden sent an email to Conway and Engle, copied to others. That email referred to many elements that Eden was trying to manage to make the investment deliver what had been promised to Cargill. He informed Conway that the information to date and all the normalisations that were in the Data Room had made it really difficult to draw comparisons with certainty. Eden reported that, up to that time, Cargill had not been able to engage with the Joe White team to learn their perspective on the numbers and Cargill's assumptions.

1073 Eden made a number of observations about his recent visit to Adelaide. These included that he was really impressed with Joe White's technical understanding concerning barley genetics, plant operations, sales segmentation and overall

engagement with customers. Eden said the Joe White team was lean and often wore many hats, which gave them a good understanding of the Joe White Business. He repeated his earlier understanding that Joe White was engaged in plant best practices that Cargill could bring to its existing malting operations.

1074 Eden said he had raised Cargill's projection about revenue synergies with the Joe White team, only to get the response that Glencore had instructed them not to comment in detail. He said that Joe White had come up with its own list of synergies and all they were willing to say was that Joe White's list was higher than Cargill's. The email concluded with the following:

> Bottom line, the individual elements will no doubt fluctuate from our assumptions, but I am more confident today that this will be a great investment for Cargill than when we did the deal. [Viers] and the Integration Team will soon get into the finer details and we are committed not [to] disappoint. We will make it happen.

1075 However, Eden's views of Joe White were about to change within a matter of 3 or so weeks.

1076 On 1 October 2013, a commitment request that Jewison had reviewed and approved was circulated. The projections in this document were taken from Cargill's deal model. Despite the approval of the board and the Cargill leadership team, this request was necessary for the payment of funds upon Completion.[679]

1077 The final form of the commitment model produced an internal rate of return of 9.6 percent. The reason for the drop in the internal rate of return from 10.1 percent as calculated in early July 2013 was the appreciation of the Australian dollar between then and when the commitment report was completed. The commitment model forecast a net operating profit after tax each year from years 2 to 10 of between approximately US$17.9 million and US$29 million.

---

679 A commitment request was required in relation to any investment by Cargill over US$1 million. The purpose of a commitment request was to keep track of where Cargill was spending its capital in a standardised format so the Cargill leadership team could monitor whether promises made when funds were sought were kept over the period of time of the investment.

1078 On 3 October 2013, Jewison completed a document entitled "Project Charter", which was based upon documents presented to the board and the Cargill leadership team before the Acquisition Agreement was entered into.[680] A project charter was something Cargill would customarily prepare for its internal purposes. One of its purposes is to state why a transaction was entered into. Another is to allow the Cargill treasury department to track the investment over a 5 year period.

1079 The project charter summary referred to Joe White's capacity of 550,000 tonnes and stated that the Acquisition would complete Cargill's global footprint in the key barley production areas and enable Cargill to serve better the global and regional brewers in the growing Southeast Asian market. After referring to the strategy of being recognised as a leading global malting company, it was stated that the Acquisition fitted within the strategy for the following reasons:

- Offers the ability to serve the highest growth regions, including Southeast Asia with malting barley and malt from a stable and mature country,
- Would result in 57% of Cargill's asset portfolio serving emerging markets,
- Creates a regional presence in the only major malting barley region not in Cargill's portfolio,
- Strengthens Cargill Malt's global leadership and relevance to global brewers,
- Provides a favourable position and share in Australia, which has second highest margins behind Argentina globally,
- Includes roasting technology that serves the super premium and craft segment,
- Aligns with our approach of collaborating with [grain and oilseeds supply chain] on origination and creating mutual value.

1080 After referring to the competitive advantage that would flow from the Acquisition, synergies of US$3.7 million referable to the grain and oilseeds supply chain in Australia were discussed. Some critical assumptions were listed, including avoiding

680 The project charter had a footer indicating it was updated on 4 October 2013. The project charter was updated again on 23 October 2013. The matters set out are taken from the later document. See also pars 1054-1065 above.

disruptions to malting operations. On this issue it was noted that Joe White production facilities operated with limited storage capacity. Accordingly, it was stated that Cargill would need to retain key production management and maintain the production volume with a product that met customer specifications based on Cargill standards. Later in the document, it was noted there was some risk around suppling malt within customer specifications given the amount of storage. When Engle was taken to this in cross-examination, he said he understood that, when he ceased any material involvement in the transaction around 4 August 2013, there was some limited storage capacity at some of Joe White's plants, but he did not believe there was any problem about being able to produce malt in accordance with customer specifications because of this issue. Jewison also gave evidence that she recalled being told by De Samblanx that he thought the Minto plant had low storage, as well as reading his executive summary concerning storage in July 2013.[681]

1081 The project charter identified "Assumptions, Critical Value Drivers, Risks and Mitigating Actions, and Significant Financial Issues". A critical assumption referred to was avoiding disruption to malting operations. In this regard, it was noted again that Joe White's production facilities operated with limited storage capacity. As a result it was stated that upon Completion, Cargill would need to retain key production management and "maintain the production volume with a product that [met] customer specifications based on Cargill standards". When taken to this during his cross-examination, Viers stated that he was not familiar with the document or Cargill's project charters more generally. Viers denied there was any particular concern as at 3 October 2013 about meeting customers' specifications based on Cargill's standards. Viers' evidence was the concern at that time was Joe White was running a high velocity process which was different to what Cargill did and that Cargill would need to make sure it retained "their people", including Hughes. When asked about what Cargill was going to do about limited storage capacity, Viers said Cargill's intention was to retain the people who knew how to manage a high velocity system according to Cargill's standards. However, he acknowledged that on 3 October 2013 he did not

681 See pars 771-772 above.

know whether Joe White's standards accorded with Cargill's standards. Viers also accepted he knew De Samblanx had identified a risk in relation to the amount of storage and that, as at 3 October 2013, Cargill had no idea how significant and prevalent the issue was.

1082 Returning to the project charter, the critical value drivers included synergies. The range of malt synergies was said to be US$5.5 million in the first year to US$12 million average per year from then on. The total synergies were projected at US$7.1 million in the first year "ramping up" to US$15.9 million in year 3 and beyond. The synergies referred to in the project charter had been calculated internally by Cargill.

1083 The project charter also had a section dedicated to potential bidders and what it had been estimated they would have been willing or capable to pay. Those included Co-Operative Bulk at $293 million to $439 million and Sumitomo/Emerald Grain at $290 million to $437 million.

1084 It appeared that Cargill's representatives were first put on notice of the Operational Practices in October 2013. Notwithstanding some doubts expressed in the first half of July 2013 by De Samblanx, these doubts had been allayed and no one had informed Cargill that it ought to have any concerns about the Joe White Business practices and procedures. Quite the contrary.

1085 In early October 2013, De Samblanx travelled to Australia as he had been given the responsibility for "malt operations" as part of the integration process. He spent his first week in Melbourne at Cargill's office, and the remainder of his 4 week-or-so stay in Adelaide.

1086 On the evening of 9 October 2013, De Samblanx and Viers met with Youil and perhaps Stewart at a beer garden in Melbourne. On that occasion, the Cargill Code was discussed between De Samblanx and Youil. Although De Samblanx could not recall the specifics, his evidence was that he told Youil that Cargill was very strict on the Cargill Code, and its application included the production of Certificates of Analysis. Otherwise, De Samblanx said the discussion was at a very general level.

1087 The Viterra Parties submitted that the court should infer that De Samblanx raised the issue with respect to Certificates of Analysis on this occasion because he was concerned that Joe White's processes for the production of Certificates of Analysis were not consistent with the Cargill Blending and Certificate of Analysis Procedure. Further, it was submitted that he held this concern because, amongst other matters, he was aware that Joe White had significantly less storage than that with which Cargill usually operated. There were 2 difficulties with these submissions. *First*, the propositions underlying the submissions were not put to De Samblanx.[682] *Secondly*, despite his initial position, from around 18 July 2013 De Samblanx had expressed no such concerns.

1088 The following morning, Youil told De Samblanx that there was a rule within Joe White that "corrections" could be made to Certificates of Analysis for results within 2 standard deviations of customer specifications. De Samblanx said he was not previously aware of any such rule, and that the information shocked him as he considered 2 standard deviations "big". De Samblanx also said it confirmed some of his doubts from the Due Diligence.

1089 On 10 October 2013, De Samblanx sent an email to Eden and Viers with the subject line "RE: [Certificate of Analysis] compliance [Joe White]". The email stated:

> This morning I had the first opportunity to speak more openly [to Youil].
>
> When speaking about the limited malt storage capacity specifically in Minto and Perth, the discussion turned into [Joe White] policy related to [Certificates of Analysis]. It was said by [Youil] that [Joe White] applies the rule that *values may be corrected within a 2 x standard deviation of a specific parameter*.
>
> This is *clearly not aligned with our [Certificate of Analysis] policy*.
>
> From a technical point of view, the challenge will be to find a solution outside the plant as the [Joe White] silo capacity at site does not allow holding many batches to reach specifications by blending.
>
> From a commercial perspective, we need to look how to manage the issue and how to approach customers.

---

682 During closing submissions, the Viterra Parties were invited to provide the court with any references which might indicate that such matters were put during cross-examination. None was forthcoming.

> *If customers would be as rigid as they are with us, the [Certificate of Analysis] issue can have a big negative impact on the business* already on short term (and can have an impact on the fair value of the business?).
>
> Would appreciate your thoughts on how to take this further.
>
> (Emphasis added.)

1090 Viers responded. In an email to both De Samblanx and Eden, he said that he and De Samblanx had discussed how they might quantify how much product produced by Joe White was out of specification. He suggested that Youil be asked to quantify the amount of product being produced that was "not directly usable". However, he stated that "[w]e just don't know how far we can go in questioning or asking him to quantify". Viers' evidence was that he was unsure how far Cargill could go in questioning Youil because Completion had not occurred and, as such, Cargill was still constrained as to what it could discuss with Joe White. He said it was being considered from the perspective of how Cargill would manage the situation following Completion, but they did not know how prevalent the issue was.

1091 Eden gave evidence that this was the first occasion when he learnt of Certificates of Analysis being "corrected" if the results were within 2 standard deviations.[683] Eden responded by reference to past experiences. He stated:

> Maybe a solution would be to talk about [Cargill's guiding principles] and use the example we have found *in all of the businesses we have acquired – "smoothing"*.[684] I think I would try to listen, learn and investigate before we accused (sic). This is really dangerous ground for so many reasons. I will never forget when we stopped smoothing in the U.S. It was right when I took over the [business unit] in 2000. When we stopped our perceived quality went to hell and the customers blamed the new leadership. *We never told them we were cheating in the past and now we are honest. From an employee engagement standpoint, they also hated me as now they had to deal with all of the off spec. So for me, this would be a risk to manage as I see lots of similarities*.
>
> (Emphasis added.)

---

683 Eden said he had been aware earlier about maltsters with a plus or minus 2 standard deviation policy or something like that, but where the policy involved the actual results being reported, 1044.20). Eden also accepted that if there were a 2 standard deviation policy, then reporting a result within 2 standard deviations would be reporting an actual result.

684 Eden was not involved in the acquisition process of the businesses referred to in this email. He gave evidence that at the time he had not previously been involved in the acquisition of any malting business.

1092 "Smoothing" is another term for pencilling.[685] In the context of answering questions about this email chain, Eden referred to cheating. When queried about this, he said smoothing was a form of cheating. He said "the businesses" he referred to in this email were related to 2 acquisitions and the facilities for those businesses were in Canada, the United States and China.

1093 The Viterra Parties relied on this evidence to submit that Cargill knew in 2013 that pencilling was prevalent throughout the malting industry. Reliance was also placed upon other evidence, including evidence of Viers to the effect that he had been told of an acquisition, he believed in the 1990s, where a business or businesses had engaged in a similar practice.[686] Viers also gave evidence of his suspicion from time to time that a competitor might be changing results because of its apparent performance, though he said coming across that sort of activity in the malting business would be very rare. No doubt this evidence shows that some at Cargill were fully aware that pencilling occurred or had occurred in some businesses, but, of itself, it did not establish any awareness of some general, or even significant, prevalence of a practice of pencilling by maltsters throughout the industry, especially reputable maltsters.[687]

1094 Eden gave evidence of having to explain the existence of smoothing, after 1 of these acquisitions, to a business conduct committee within Cargill. He said he was threatened with termination, before he explained that he had not been involved in such conduct but had only come across it after that acquisition. He further explained that if an employee was found to be in breach of the Cargill Code, then the employee

---

685 See par 36 above. De Samblanx's evidence was that he had never heard of the term "smoothing" before.

686 The other evidence included evidence from De Samblanx: see par 773 above. It also included a Cargill case study, created in November 2012, which referred to a "long-standing practice" of altering Certificates of Analysis. The case study hypothesised that the alleged practice was only discovered generally when a new quality control manager was appointed. The case study was tendered by the Viterra Parties, but was not put to any witness. (For completeness, if such a practice were standard industry practice, then the case study would have made little commercial sense; a generally known industry practice would not have been "discovered" by a new quality control manager if all persons in the industry already knew of such a standard practice: see issue 13 below.)

687 In closing submissions, when asked as to the basis of a written submission contending that Cargill had been engaged in pencilling until at least 2000, the Viterra Parties submitted Eden's evidence "about this matter" was entirely unsatisfactory. It was suggested the words in Eden's email (at par 1091 above), should be taken at their face value. Contrary to the Viterra Parties' submission, Eden's evidence on this issue was plausible. Further, there was no probative evidence to suggest that Cargill itself had engaged in the practice of pencilling up until 2000 other than by reason of businesses it acquired.

would be fired.

1095 Eden gave extensive evidence about the contents of De Samblanx's 10 October 2013 email. He said the email raised various issues for him. These involved concerns over silo capacity, but also issues about how to manage the issues from a customer perspective. Eden knew from past experience that the practice of pencilling had not been tolerated at Cargill, Inc. He gave evidence that the cessation of pencilling by Cargill, Inc after 1 of the acquisitions referred to above had resulted in that business being unable to compete, and the plant being closed and sold off.

1096 On the issue of silo capacity, Eden's evidence was that it was affected by customer requirements, and the number of different grades and specifications.[688] He said the more grades and segregations, the more difficult it became. He stated further that the amount of silo capacity needed also depended on the extent to which a customer allowed flexibility on reporting of the analysis of the malt. Accordingly, he said the issue was broader than it had been referred to in De Samblanx's email.

1097 Eden said he had no knowledge of whether Joe White's customers knew about the approach Joe White was taking and was keen not to make accusations until further information was obtained. In particular, he was concerned about the effect allegations might have had as part of an integration process when Joe White's management were going to be "the new team".

1098 Although Viers could not be precise as to timing, sometime shortly after the email chain which commenced with De Samblanx's email on 10 October 2013, Hughes told him Joe White might not be complying with certain customer requirements. Hughes said words to the effect that for some customers Joe White would not be able to meet specification. Only Viers and Hughes were present when this discussion occurred.

1099 De Samblanx gave evidence that while in Adelaide, he first learnt from Viers about issues concerning barley varieties and gibberellic acid. He said he was surprised to

688 This was Eden's evidence, but it was likely he intended to refer to segregations rather than specifications.

learn of both these matters. He considered he had no reason to question whether Joe White was using incorrect barley varieties during the Due Diligence, and nothing he saw led him to have any concerns regarding barley varieties. With respect to gibberellic acid, Youil had told him previously that it was not used unless permitted by the customer.[689]

1100 As a result of the issues raised, a meeting with Joe White management was arranged by De Samblanx for 15 October 2013. On 14 October 2013, Terry Gray, the human resources director at Cargill, Inc and human relations integration lead, emailed Viers a copy of the Cargill Code. At trial, Viers stated that he could not remember asking for the Cargill Code to be emailed, but accepted that it "would [have been] sensible" to have the Cargill Code available before the upcoming meeting.

1101 Further, around this time, informal notification was given of the Foreign Investment Review Board's impending approval of the Acquisition Agreement proceeding to Completion.[690] While not removing the need for caution in light of the legal advice that had been given,[691] it was generally understood that this occurrence meant that the appropriateness of disclosing sensitive information to Cargill was less restrictive.[692]

1102 The meeting between Cargill and Joe White management was held, as scheduled, and went for around 2 hours ("the 15 October Meeting").[693] Mattiske was aware the meeting was to take place, but did not attend. He understood its purpose was to ensure Cargill had a smooth transition.[694]

1103 There was some inconsistency at trial about who attended the 15 October Meeting.[695]

---

689 See par 788 above.

690 On 17 October 2013, formal approval was given.

691 See par 1050 above.

692 See, for example, par 1068 above.

693 This meeting was distinct from the integration meetings that were occurring from time to time.

694 On 15 October 2013, Mattiske was sent an email with the subject "Integration Kick-off meeting". This was also sent to a large number of persons, including each of the Third Party Individuals, Rees, Norman, De Samblanx, Viers and Christianson. The email referred to the meeting that had been held that day (referred to as the "Joe White integration team kickoff meeting"), and purported to attach materials from the meeting. None of the attached materials or the email from the previous day (which was included and set out the agenda, and had also been sent to Mattiske) referred to the Operational Practices.

695 See also par 1236 below.

De Samblanx gave evidence that he, Viers and Chik Liang Tan ("Tan"), associate, strategy and business development at Cargill Asia Pacific, attended on behalf of Cargill, whilst Stewart, Youil, Wicks and Hughes attended on behalf of Joe White. De Samblanx could not remember if Argent attended the meeting. Viers said he attended with De Samblanx for Cargill and that Hughes, Youil, Wicks and Stewart also were present (however, he also sent an email on 19 October 2013 which recorded that Jones was in attendance). Stewart gave evidence that the attendees were himself, Hughes, Youil, Viers and De Samblanx. However, it was common ground that Stewart gave a presentation at that meeting. Argent did not attend.

1104 It was the first time Stewart had given a presentation to a prospective purchaser of a business. He had not read the Information Memorandum.[696] He was instructed by Hughes to prepare a presentation that outlined the way Joe White generated Certificates of Analysis and to also comment on barley, but was not asked to prepare an analysis (nor did Stewart raise the issue) of the impact of the Operational Practices on the Joe White Business.

1105 Stewart gave evidence that, before giving the presentation, he already knew of Cargill's reputation for not tolerating pencilling and that he had been told by a colleague who previously worked for Cargill that Cargill would not permit reported results in Certificates of Analysis which differed from test results. He had also been told that Cargill generated Certificates of Analysis based on the theoretical blend approach.[697] That said, Stewart was hopeful that Cargill might consider Joe White's model as being suitable going forward.

1106 The document Stewart spoke to was entitled "Malt Analysis & Barley Variety Usage".[698] The contents page of the presentation read:

---

696 Stewart gave evidence he was not involved in the sale process of Joe White before the Acquisition Agreement was signed, save for being "consulted by the Viterra legal team" on a couple of occasions.

697 This was Stewart's evidence in his witness statement. Further, in his oral evidence in chief, Stewart said, at some stage during the presentation, he was aware Cargill used a theoretical blend approach in its analysis and reporting of results. Under cross-examination, he sought to step away from this, saying he was not "entirely sure" of Cargill's position. See further par 1125 below.

698 Stewart could not recall providing a copy of the document to anyone at the time. In fact, a copy of the presentation was not given to Cargill. Further, Mattiske was not aware of its existence at the time.

- The Cargill model
- Current approval system – What we do and why
- Proposed way forward – Science based, but *recognised (sic) the need for change*
- Barley usage

(Emphasis added.)

1107 Stewart gave evidence that, at the start of the presentation, after briefly touching on the Cargill model, he then summarised how "Viterra Malt" issued Certificates of Analysis. Stewart said Viterra Malt tested the actual shipment, whether it be in a container or a truck, with the results of the analysis put into a Sign-Out Report. That report was reviewed using the 2 standard deviations derived from the Malt Proficiency Scheme and then modified to fit the Certificate of Analysis. Further, Stewart said if the analysis was outside 2 standard deviations, the procedure dictated that 2 managers would meet to discuss the sign-off and release of the shipment.

1108 The next slide was headed "Malt Approval" and stated:

> Overarching philosophy – Meet the customer's quality expectations
>
> - Send malt that is within specification according to the customer for those customer's (sic) that analyse malt
> - Meet the customer's quality expectations for those customers who do not analyse malt (judged on brewery performance and their final product meeting specification).

Stewart accepted that the juxtaposition between these 2 approaches was clear (that is, taking a different approach depending on whether or not a customer did its own analysis of the malt delivered), but rejected the proposition that it was a cynical basis on which to supply malt. Stewart described the overall approach as "the business approach" and the way the Joe White Business operated. Plainly, the "philosophy" demonstrated Joe White was more concerned with meeting customers' specifications when it was likely that any non-compliance would be discovered than it was in circumstances where it was much less likely.

1109 The next slide was headed "Current approval system". It displayed a flowchart, the

starting point of which stated, "Theoretical blend. Is it within guidelines?".

1110 If the theoretical blend was not within guidelines, according to the flowchart the next step was to consult the general manager of "technical". Two options followed that step: either the theoretical blend would be re-blended then packed or the shipment rescheduled, or the shipment could be packed if it was "within analysis variation".

1111 If the theoretical blend was within guidelines, the flowchart indicated that the next step was to pack the shipment. The next step in the flowchart then stated "Is the shipment analysis within specification?". If the answer was yes, a Certificate of Analysis could be issued. If the answer was no, there were 2 further steps.

1112 The first further step asked whether the shipment analysis was "[w]ithin customer tolerance". If the shipment analysis was not in specification, but within customer tolerance, a Certificate of Analysis could be issued. If it was not within specification, and not within customer tolerance, the flowchart stated the "[n]on-conforming shipment" required 2 general managers to sign-off the Certificate of Analysis. Stewart gave evidence he did not need to be personally part of this process, as it "just [needed] to be 2 general managers".

1113 The second further step asked whether the shipment analysis was "[w]ithin 2 [Malt Proficiency Scheme][699] standard deviations". If it was, a Certificate of Analysis could be issued. If it was not, the flowchart stated, "[n]on-conforming shipment. Two [general managers] signoff [Certificate of Analysis]".[700]

1114 Stewart gave evidence that, in substance, he stated orally what was set out in the flowchart. However, during the presentation, he did not volunteer any information about whether Joe White's customers were informed of the practice of pencilling.[701]

---

699 See fn 193 and par 216 above.

700 It was not clear on the face of the flowchart whether a Certificate of Analysis could be issued without reference to the general managers if the result was not within customer tolerance, but was within 2 standard deviations. This was not explored in evidence, and it was not clear whether anything was said in that regard with reference to this part of the flowchart.

701 For convenience, the "Current approval system" flowchart was depicted as follows:

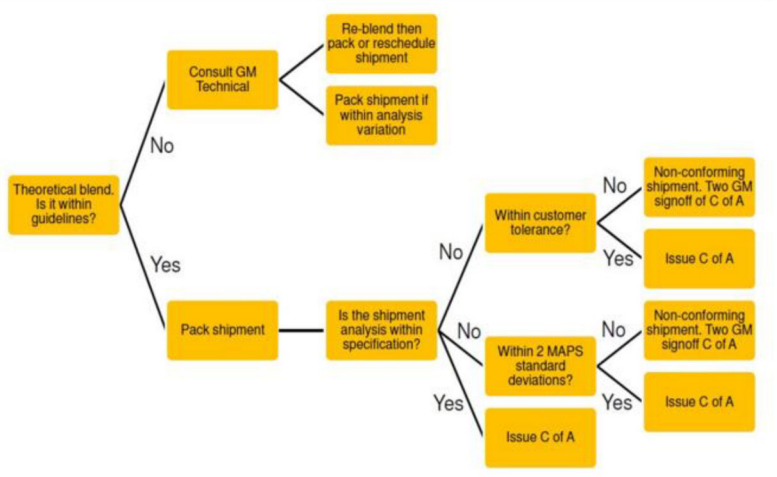
1115 The next 2 slides were entitled "Customer analysis variation". The first of these slides indicated that all laboratories produce variations in results "to a lesser or greater extent". It stated that Joe White "work[s] closely with customers to gain an understanding of how their lab reads certain malt parameters", and "pack[s] and approve[s] shipments based on this intell". On the second of these slides was written:

> Many other examples where the customer expects that they will read within specification, which means that we need to send out of specification according to our own laboratory.

1116 "[Malt Proficiency Scheme] analysis variation" was the title of the next 2 slides. The slides stated that there was an error associated with malt analysis and that there were various sources of accepted error. They continued, in relation to Certificates of Analysis, by explaining that Joe White had chosen the Malt Proficiency Scheme upon which to base their Certificate of Analysis release and that "[t]wo standard deviations are deemed to be 'normal variation'".

1117 The final slide was entitled "Barley variety". In relevant part, the slide read:

- Current philosophy is to provide a customer's desired barley variety
- *If not available, a variety with similar character will be supplied* to ensure the malt meets the customers (sic) expectation
- *Recognise that there will need to be change*
- Will there be a transition period? Start from new crop 2013?
- Some other issues;



- New varieties – Catch 22; there needs to be a critical mass of the new barley before customers will undertake trials, which can take over a year to complete, but growers will not plant a critical mass unless we are buying the barley. Australia is not like Europe regarding new varieties.

- Actively trialling new barley varieties with customers. Able to blend off excess trial barley?

(Emphasis added.)

1118 Stewart gave evidence that he told De Samblanx and Viers that it was "our" philosophy to supply barley nominated by the customer, but, if it was unavailable, to supply a barley variety that would perform in a similar manner. He did not descend to giving details about the particulars of which customers required which varieties, or the extent to which they could not be supplied. Stewart said he could have provided that information if he had been instructed to do so.[702] Interestingly, the prepared script recognised there was a need for a change, rather than seeking to defend the existing practice.

1119 Stewart also gave evidence of Cargill's reaction to the presentation. He said De Samblanx stated that he was impressed by Joe White's procedures and their robustness, and that the procedures aligned with how he thought "Viterra Malt" was operating.[703] In contrast, Stewart said Viers' response was that he was very surprised about the way Viterra Malt was operating, in a quite animated way which appeared to Stewart to be forced or exaggerated.

1120 Although Hughes did not give evidence, his notes of the 15 October meeting , and surrounding events, were tendered by Cargill. On 23 October 2013, the notes were provided by Hughes to Fitzgerald, and then forwarded to Lindner.

1121 Hughes' notes included what purported to be the prelude to the meeting. They stated

---

702 Much of this information was readily available to Stewart. Sheehy sent an email to Stewart that same day attaching a spreadsheet dated 8 October 2013, which contained details of barley varieties required, together with notes of customers for whom Joe White was "waiting for feedback" or for whom the required variety attracted the comment "no barley available this year". That same spreadsheet had been sent by McIntyre to Wicks, Stewart, Dickie and Jones, copied to Hughes, on 8 October 2013. The covering email stated the spreadsheet contained the information that Wicks was after, and tracked all the barley variety trials then in progress: see also par 1211 below.

703 See also par 1296 below.

that Cargill had raised issues concerning Certificates of Analysis and barley suitability on several occasions. According to Hughes' notes, Cargill representatives (not identified) had indicated (not stated how or when) "they understood where industry practice sat in this area", but adopting such a practice was not the "Cargill way". He said they had indicated they wanted to get a handle on the situation as soon as possible. What, if anything, Cargill had allegedly said about what the industry practices were in relation to Certificates of Analysis, or barley suitability was not the subject of the notes.

1122 The notes also referred to an earlier meeting, at which Hughes stated he believed "JR" (presumably a reference to Rees) was present, and a subsequent dinner, but it was recorded that no detail was discussed at that time. Precisely what the reference to "no detail" encompassed was not clear on the evidence given the absence of the relevant witnesses.

1123 According to Hughes' notes, the presentation went for 2 hours in the morning of 15 October 2013. The notes stated Stewart's presentation concerned why Joe White did things "with regard to [Certificates of Analysis], confident that it was a robust process".

1124 Importantly, Hughes' notes acknowledged that customer-specific data, prices and volumes were not referred to.[704] (During his cross-examination, Stewart said he went into "some detail about specific customers". He did not elaborate about what was said. If Stewart did mention specific customers during the presentation, there was nothing to suggest it was accompanied by any detail of those customers' particular circumstances.)

1125 The notes stated that during the course of Stewart's presentation, Cargill discussed its own way of handling malt analysis and reporting challenges by using blending results to avoid conflicts arising from the actual results. Hughes' notes stated that this was challenged as less accurate, which attracted the response that Cargill's approach was

---

704 This may have been as a result of guidelines published by the authorities concerning disclosure to competitors, but there was no direct evidence on the point.

okay as long as the customers were on board. In response to the suggestion that it was unlikely that Joe White's customers would permit such an approach, it was stated that Cargill's approach was not negotiable.

1126 With respect to barley varieties, the notes stated that Joe White had already been specifically asked to introduce how it managed the situation. On this issue the notes stated:

> Discussed critical mass for new barley variety rollouts in Australia, how the process is slow, and how customer approvals often taken longer than the time it takes farmers to change, particularly in recent years.

1127 Consistent with what was presented on 15 October 2013, more generally Stewart gave evidence there could be a very significant lead time in obtaining a local source for a barley variety if there were no pre-existing arrangements. Further, although Joe White could get the message out as to what was required,[705] it had no control over farmers' decisions as to which barley to grow and was dependent upon the preparedness of farmers to choose a particular variety required.

1128 Returning to the notes, they recorded that Cargill asked point blank if Joe White had sufficient stocks of barley remaining to meet specific customer requirements, to which Cargill was told that that was unlikely. On this topic, the notes continued:

> Consequently they wanted to know in more detail what this looked like and we confirmed we were not able to discuss this at this time but would be prepare (sic) something in the background for when we could, most likely post [Foreign Investment Review Board] approval, when confirmed discussions could be more open.[706]

1129 Although not referred to at all in Stewart's written presentation, Hughes' notes indicated that the use of gibberellic acid was also discussed. The topic was said to have arisen as the result of an enquiry as to whether Joe White used gibberellic acid in the Joe White Business. Hughes' notes recorded that Cargill was informed that gibberellic acid was used, including for "non-gibberellic acid customers". Consistent with this note, Stewart's evidence was that he stated that gibberellic acid was used for

---

705 Stewart said this was done typically at industry forums. He also gave evidence that Barley Australia was critical in this role.

706 See par 1210 below.

the majority of Joe White's customers, but there were some customers who objected to its use. He said for the customers that objected gibberellic acid was still used, but there were also several for which gibberellic acid was not used.

1130 On this topic, Hughes' notes stated Cargill was told that in order to meet production and varietal constraints, it was necessary to use gibberellic acid for customers that did not authorise its use. The notes stated that Joe White managed this very carefully to reduce any risk to the Joe White Business.

1131 In response, they were told that, under Cargill, this would need to stop and most likely from legal day 1, being the first day after Completion. When Cargill asked what impact this would have on the Joe White Business, Cargill was informed that some malt production would move from 4 to 5 days, but that it would vary depending on "varieties and year to year". Cargill was informed at the meeting that if increased access "to contacting grain and specific varieties" was achieved, it would result in the problem being minimised.

1132 Finally, the notes stated that the meeting was closed by the Cargill representatives confirming they would communicate with Cargill to determine whether, going forward, there would be any option in a transition period to deal with the issues raised.

1133 De Samblanx's evidence concerning the 15 October Meeting did not accord with Hughes' notes in a number of significant respects. Although De Samblanx could not recall everything that was said, he broadly accepted that what was contained in Stewart's presentation was presented orally as well. However, his reaction to what he was told about Joe White's Certificate of Analysis procedures bore no resemblance to Hughes' summation or Stewart's evidence.[707]

1134 As to his state of mind before this time, De Samblanx gave evidence that during the Due Diligence it never crossed his mind that there would be a practice of using barley varieties that were not permitted by a customer. Further, De Samblanx did not ask

---

707 See par 1119 above.

any questions during the Due Diligence about Joe White's Certificate of Analysis policy or procedures because it did not occur to him that there would be an organised system of the kind he discovered in October 2013. De Samblanx said he knew that all Joe White employees were required to sign a code of conduct, which he understood would obviously include representing values or truths to customers, which informed his approach.

1135 De Samblanx gave evidence that he was really surprised and shocked by what he was told. To elaborate, De Samblanx said he was surprised at the documented procedure which permitted sign-off by 2 general managers even when the malt was non-conforming by more than 2 standard deviations. He said he was uncertain as to what 2 general managers could do to make sure the quality of the malt was guaranteed. He understood that 2 standard deviations could give rise to a high out-of-specification value, and stated that it was puzzling to him that Joe White's procedure was presented as something with a science behind it. He said he was not clearly understanding what the procedure was, and whether it was something that had been agreed with the customer. De Samblanx said he was also really surprised that the procedure was palpably spreading throughout the whole of Joe White.[708]

1136 He also gave evidence that, with respect to barley varieties, he could not recall what was said because he was "a little out of the plate at that moment" because of what he had been told. He said that it was a "no-brainer" that Cargill would only sell customers the varieties that customers ordered. He said by reason of this, there was no real discussion about barley varieties when the issue was raised.

1137 In light of this evidence, not surprisingly, De Samblanx rejected the suggestion during his cross-examination that he stated during the course of the meeting that Joe White's approach was a well thought out procedure.

---

708 Under cross-examination by Stewart's senior counsel, De Samblanx gave evidence in substance that if there was a properly performing laboratory then results should be "trustable" within 2 standard deviations. This evidence was not inconsistent with the reaction he said he had during the 15 October Meeting as it said nothing about pencilling results in the manner which occurred under the Reporting Practice: see also fn 554 above.

1138 On the issue of De Samblanx's reaction, it is necessary to address some evidence given by Viers. Under cross-examination, Viers acknowledged that during the meeting De Samblanx said he was not surprised.[709] But Viers gave this evidence in rejecting a suggestion put to him that De Samblanx said he suspected Joe White was using pencilling and was not operating in the Cargill way because of Joe White's lack of malt storage capacity. Precisely to what Viers recalled that De Samblanx said he was not surprised about was not explored further with Viers.

1139 De Samblanx accepted some parts of Hughes' notes. He agreed that there was a debate about whether the theoretical blend approach used by Cargill or the Joe White approach was the more accurate form of analysis and reporting. At the end of the discussion on this topic, De Samblanx said Joe White would be required to use Cargill's practices. When asked under cross-examination whether De Samblanx was of the opinion that the theoretical blend approach used by Cargill was better, De Samblanx stated that statistically that was so. He offered to explain his position, which he said was easy to explain, but that offer was declined by the cross-examiner.[710]

1140 Further, De Samblanx accepted that during the meeting he considered the presentation was detailed, uninhibited, frank and forthcoming. He believed that he got direct and specific answers to the questions raised and also gave evidence that he believed he could have asked whatever questions he wanted. However, he gave evidence that he did not ask all the questions he wanted to ask because he knew it would "not fly with Cargill". Although his evidence was that he thought it was discussed, he could not recall any discussion about gibberellic acid.

1141 Viers' recollection of what was actually said by Stewart and Hughes at the 15 October Meeting was very poor. He recalled being told that there was a documented process in relation to the issuing of Certificates of Analysis. Much of what was contained in

---

709 See also par 1296 below.

710 For completeness, Testi gave evidence that the initial testing of individual batches by Joe White up to 1 November 2013 was limited to key parameters before the production manager prepared the theoretical blend, whereas under Cargill the initial testing for the theoretical blend was more comprehensive.

Hughes' notes was put to him during cross-examination. In response, he could not recall most of the matters, but equally could not deny the puttage. Viers accepted that he had no doubt after the meeting that the Operational Practices were occurring. However, he did not know the extent to which they were occurring and was certain he was not told that they were occurring routinely or that the processes were being employed daily, which he said he only found out later.[711]

1142 In contrast to De Samblanx's position, Viers gave evidence that, during the meeting, he did not feel that he could ask specific questions about particular customers and their contractual specifications. He said this was because of the anti-trust guidelines for integration, which required Cargill and Joe White to continue to operate as independent and competing companies until Completion.

1143 Shortly after the meeting, Viers sent an email to Eden stating that the issue concerning customer specifications was "very very serious" and broader than might have been expected. Viers told Eden that he, together with De Samblanx, needed to bring Eden up to speed.[712] This gave rise to a series of emails.

1144 Eden responded immediately, asking how Viers knew of the information he had just conveyed. To this, Viers responded stating that Joe White had "shared their process" and there had been a meeting specifically on that subject. Eden further enquired as to whether or not the process had been agreed with the customers. Viers' straightforward response was "No". Eden then asked how much it would cost to fix the problem. Viers stated in a further email that they were trying to get their minds around it, but it was "[significant]. Millions". As a result of this, Eden directed Viers to raise the issue with Cargill's in-house legal counsel, and to discuss with Cargill's lawyers about legal recourse. Eden said that once a legal perspective had been obtained, a conference call could be held.

---

711 This state of knowledge is consistent with Hughes' notes of what was not discussed at the meeting: see par 1124 above.

712 This email was sent with a time of 14 October 2013 at 8.55pm. However, Viers gave evidence that his computer remained on Minneapolis time at all times, even when he was in Australia. Further, it is clear from the contents of the relevant emails in the chain, that the exchange took place after the meeting.

1145 Although he could not recall how, Eden's evidence was that around this time he was also told about Joe White's conduct concerning unauthorised use of barley varieties and prohibited use of gibberellic acid.

1146 Eden said he was very concerned about what Viers had told him, and could foresee the costs of fixing the issues relating to Joe White's Certificates of Analysis could be significant. Further, he was "simply astounded" to learn of Joe White's conduct regarding use of unauthorised barley varieties and prohibited gibberellic acid. He said it was shocking and sounded like a "third–world-country-kind-of activity", rather than the "really nice business system" he had been believing in. Eden was further concerned about the lack of detail with respect to the extent of such conduct. Under cross-examination, Eden said he considered arbitrarily making the decision to use another barley variety was not something he believed that anyone would ever try to achieve and that in his view it was the most shocking part of the story.

1147 Under cross-examination, Eden said there was no suggestion from De Samblanx or Viers that the Joe White executives had not been forthcoming about the processes used for Certificates of Analysis, or about their use of barley varieties or gibberellic acid.

1148 It is convenient here to address some conflicts in the evidence concerning the events of 15 October 2013. While much of what was said is documented either in the form of a presentation or contemporaneous emails, there is a stark contrast between the account given by Stewart and Hughes (by his notes) when compared with De Samblanx's evidence of how he reacted to what he was told. Despite Hughes' contemporaneous note, I do not accept that De Samblanx made any representation at the 15 October Meeting to the effect that each of the practices that was disclosed to him (as they were on that day) were what he had expected.

1149 Given the potential importance of the Operational Practices (to the extent they were disclosed on 15 October 2013 and, to a much lesser extent, in the few days leading up to it) to the fundamental operations of Joe White, having them disclosed for the first time in any intelligible manner on 15 October 2013 would be surprising in itself.

1150 Further, it would have been incredible if De Samblanx and Viers were told of the deliberate deception of Joe White's customers with respect to gibberellic acid and had not been surprised. There is no evidence to suggest such conduct had been properly disclosed before October 2013. A like observation can be made with respect to failing to provide contracted varieties of barley and concealing that fact from the customer.

1151 Furthermore, even if Viers' recollection was correct with respect to De Samblanx indicating that he was "not surprised" at some stage during the meeting, that evidence did not equate to De Samblanx indicating his lack of surprise with everything he was told.

1152 Moreover, the correspondence that followed the meeting from De Samblanx and Viers was entirely inconsistent with a lack of surprise, as both of them were plainly concerned about what they had been told and reacted accordingly.

1153 In addition, the countervailing evidence was not compelling. The effect of Stewart's evidence was that De Samblanx was impressed with Joe White's procedures in their entirety and with their robustness.[713] Although De Samblanx was not entirely certain about what he had been told, including the extent to which the preparation of Certificates of Analysis could be scientifically justified, as a person experienced in the production of malt it would be highly unlikely he would have formed the view that the procedures were either impressive or robust. On the face of what De Samblanx was told, they involved deliberate deception and material non-compliance with customers' specifications.

1154 Turning to Hughes' notes, there was no opportunity for their accuracy to be tested in circumstances where Hughes was not called to give evidence. In any event, in mid-October 2013 Hughes was in a difficult position. He was fully aware of the representations that had been made in the Information Memorandum, and at the Management Presentation, together with the question and answer sessions in July 2013, and must have been conscious of the stark contrast between what was stated at

713 See par 1119 above.

the 15 October Meeting and what had been previously represented, including because of what had been omitted. In these circumstances, a self-serving note purporting to record Cargill's position in the manner that he did was something that he may have seen to be in his best interest at the time. Whether in fact that was Hughes' motive or not is not a matter that needs to be explored. Put simply, the contemporaneous documents exchanged within Cargill immediately after the 15 October Meeting, coupled with the fact that De Samblanx was a credible witness, were far more probative of the matters that were disclosed on 15 October 2013 (and in the lead up to it), and of the fact that they were not things about which Cargill was aware or were of a nature which could reasonably have been anticipated.

1155 Hughes spoke to Stewart after the meeting and instructed Stewart to construct a document detailing Joe White's current ability to comply with its contractual obligations, including: meeting customers' specifications as identified in Certificates of Analysis, supplying the correct barley, supplying gibberellic acid free malt to the relevant customers and servicing customers that had a pre-shipment requirement. Although Stewart gave no evidence of Hughes stating the purpose of such a document, he suggested it was to enable the Joe White Business to be looked at in order to consider the changes that might need to be made in the future once Cargill had taken control.

1156 Shortly after the 15 October Meeting, De Samblanx telephoned Van Lierde. Van Lierde asked De Samblanx what impact Joe White's practices (as they had been described to that time) might have on storage capacity at Joe White's various plants. De Samblanx said he thought Cargill would have to build or rent storage capacity and made some comparison to the storage capacity at Cargill's legacy plants. De Samblanx also said it was difficult to know the precise impact as, at that time, he did not know the extent of the problem.

1157 Van Lierde recalled receiving a call on a Saturday in mid-October 2013, during which he was told about a new development of some bad practices in place at Joe White, concerning producing malt contrary to customers' contractual requirements and the

way malt was certified for customers. Van Lierde contacted Conway to inform him of this development.

1158 During a call with Eden around this time, Eden told Van Lierde Joe White's practices breached the Cargill Code. Eden said if what had been reported was correct, then, depending on the extent of the practices, it could be very difficult and expensive to correct once Cargill owned the Joe White Business. Van Lierde was strongly of the view that Cargill should find out as much information as possible. Eden told him that Cargill would find that difficult as Cargill did not have further access to the Joe White managers until after Completion.

1159 This sentiment was also reflected in an email Eden sent to Van Lierde and others on 16 October 2013. Eden stated as a fact, based on previous experience, that correcting practices to comply with the Cargill Code was expensive. Van Lierde's evidence was that he did not know what previous experience Eden was referring to, and did not recall asking him. It was put to Van Lierde in cross-examination that he understood Eden to be telling him that corrective measures would definitely be expensive.[714] Understandably, Van Lierde said he did not read the email that way. The email was plainly premised on the basis of a possibility the practices at Joe White were unacceptable and extensive, rather than any concluded view in that regard.

1160 Eden's evidence was that both Conway and Van Lierde were involved at this point, and they expressed some opinions on what Cargill should do. Eden's evidence was that he acted in accordance with those opinions, but at the time external advice was sought about the alternative courses of action available to protect Cargill's economic and strategic interests.

1161 Early that afternoon, Cargill sought legal advice from Allens. Tina Savona ("Savona"), legal counsel at Cargill Australia, had initially contacted Clark on 15 October 2013 to give instructions. Savona then participated in a further telephone call that day with Viers and De Samblanx, during which Viers instructed Clark as to what Cargill had

714 This proposition was not put to Eden.

been told earlier that day. Viers gave evidence that he could not recall De Samblanx saying anything at the meeting. Viers' recollection of what he said was quite limited. He informed Clark and Savona about a practice allowing for Certificates of Analysis to be altered if the results were within 2 standard deviations of the specification; about varieties being used that were not approved by Joe White's customers; and about the unauthorised use of gibberellic acid. Clark then advised that he would consult with a colleague who was an expert in the area.[715]

1162 According to notes taken by Savona, a discussion was held between her, De Samblanx and Clark. Initially, Cargill made a claim for legal privilege based upon anticipated litigation with respect to these notes. Any privilege that may have existed was subsequently waived. The notes were tendered by the Viterra Parties.

1163 The notes were in point form, and their meaning was not always entirely clear. Savona was not called as a witness, so the lack of clarity remained. The notes indicated that Savona and Clark were instructed on the following matters:

> [Joe White] not reporting accur (sic)
> [Certificates of Analysis] - in spec/not in spec
> "falsifying" to the customers
> …
> Not be able to ship 50% of our exports
> communication to customer
> contractually agreed - meeting specs
> …

The notes then referred to malt analysis and, amongst other things, recorded that if a result was within 2 standard deviations then it was "within spec + general [manager] approvals - freedom to do anything you want". The notes stated that the process for doing this was laid out. Further, Savona noted that plants were limited in being able to meet specifications.

---

715 This evidence was given in chief. In re-examination, Viers was asked a question as to whether he told Clark what his state of mind was on 15 October 2013 concerning the extent of the practices (about which Viers had stated he did not have any quantified understanding). When Viers gave this evidence, he was then asked the detail of that communication. This was successfully objected to by the Viterra Parties on the basis that Viers had not been cross-examined about his account of the instructions given to Clark on 15 October 2013.

1164 The notes raised the question as to how Cargill found out. Under this question, it was noted:

- low silo capacity;
- [De Samblanx] wondering
- [Certificate of Analysis] compliance …

1165 Under a heading "barley varieties", it was noted that customers required specific barley varieties and then "+ not using the [required] varieties". It was further noted that customers needed to agree.

1166 Under a heading "chemicals", it was recorded that Joe White was using certain chemicals to treat the malt "which accelerates quality + it is strictly forbidden by certain customers - reduces effectively capacity but rectifiable".

1167 The notes also referred to legal recourse. After referring to the production manager at Minto having previously worked for Cargill and knowing Cargill's procedures very well, a side heading "general perception" had the following notes next to it:

> we had the same issue + we had to stop this
> general practice with all maltsters

1168 Finally, the notice referred to breach of contract or any other laws and questions of liability. The question was raised as to whether or not there was a requirement to go to the customer. Immediately next to that was "OR" and a reference to criminal conduct, fraud and a positive obligation to disclose. After stating that Cargill would have to stop these practices going forward, the notes concluded with "+ how? [Because] some cannot just be <u>stopped</u>" (original emphasis).

1169 During Clark's cross-examination, he stated that he had been shown some of Savona's notes before he gave evidence.[716] Clark gave evidence that he was advised by Viers that there were concerns in relation to storage capacity if the use of gibberellic acid was widespread, and also in relation to the need to produce different batches with different barley varieties. Amongst other things, Clark was instructed that Cargill had been told that it was unlikely Joe White had sufficient stocks of barley to meet specific

---

716 These were a different set of notes: see par 1187 below. Clark believed he took notes himself, but disposed of them within the next couple of days.

customer requirements. Viers also instructed that Joe White engaged in a practice of providing Certificates of Analysis that did not reflect the qualities of the malt being provided to customers.

1170 Initial legal advice was provided in the form of a letter of advice dated 17 October 2013 from Clark and Peter O'Donahoo ("O'Donahoo"), another partner at Allens ("the Allens Letter of Advice"). It was addressed to Savona, and Chris Okoroegbe ("Okoroegbe"), a senior lawyer at Cargill, Inc,[717] and entitled "Project Hawk – Malt Quality Issues".

1171 The advice began by noting that the Acquisition was due to close on 31 October 2013. It continued:

> You have informed us that, at integration meetings held between Cargill ([Viers] and [De Samblanx]) and Joe White executives earlier this week, the following practices were disclosed by the Joe White executives.
>
> 1. **Certificates of Analysis** … Some malt buyers (typically brewers) require the malt they purchase to satisfy specific parameters. In connection with its sale of malt, Joe White may issue a [Certificate of Analysis] to a buyer confirming testing results for the relevant parameters. Joe White undertakes this testing in-house. Joe White *may have* issued [Certificates of Analysis] that overstate test results.
>
>   At this point, we do not know whether [Certificate of Analysis] are also issued to the Department of Agriculture, Fisheries and Forestry for the purposes of obtaining export permits.
>
> 2. **Barley varieties**. Some malt buyers require the malt they purchase to be produced from specific barley varieties. Joe White *may have* supplied malt produced from other barley varieties to these buyers.
>
> 3. **Gibberellic acid (*GA3*)**. Some Malt buyers prohibit the use of GA3 in the production of the malt they purchase. GA3 promotes germination of barley. Joe White *may have* supplied such malt to these buyers.
>
> We understand that *no specific examples of these practices occurring were revealed* and no suggestion was made that any malt being sold fails to meet health requirements or is in any way harmful to consumers.
>
> (Emphasis added.)

1172 Allens stated it was providing initial high-level advice on the legal consequences of these practices, "were they to have occurred". The letter noted that the advice was

---

717 Okoroegbe was "tagged" to Cargill's malt business.

provided at a time when insufficient information was available to allow Clark and O'Donahoo to form a conclusive view as to the potential legal issues raised.

1173 The first section of the Allens Letter of Advice surveyed possible criminal offences that may have been committed by Joe White or its executives, including offences under Australian "food and consumer law" and offences relating to the giving of misleading statements, fraud and deception. The second section of the letter was entitled "Other Legal Claims and Consequences", and set out the following:

> - adverse commercial impacts eg on business reputation and profitability;
> - claims by buyers for breach of contract, misleading or deceptive conduct (a statutory tort under Australian law), or deceit (a common law tort under Australian law);
> - claims by buyers under foreign laws;
> - investigations by regulators with the Australian Competition and Consumer Commission (in particular) having widespread powers to demand the production of documents and compel testimony;
> - mandatory or voluntary product recalls by Joe White and affected malt buyers; and
> - a breakdown in the relationship between Cargill and Glencore (eg impact on co-operation in the supply of transitional services by Glencore to the Joe White [B]usiness).

1174 The letter addressed the likely consequences of informing Glencore about what had been disclosed. Under the heading "Next Steps – Informing Glencore", it was stated that Allens was currently working with Cargill to determine the most appropriate responses. Allens advised there were "a number of benefits of informing Glencore promptly". These benefits included:

> - As the current owner of the [Joe White] [B]usiness, *Glencore is best placed to investigate* the practices.
> - Cargill satisfies its obligation under the [A]cquisition [A]greement to inform Glencore promptly upon becoming aware of any matter or circumstance that may give rise to a claim under the [A]cquisition [A]greement. A failure to inform promptly may reduce the extent to which Cargill can pursue compensation claims against Glencore.
>
> …
>
> - Informing Glencore before completion will limit its liability to avoid breaching knowledge-qualified warranties, when those warranties are

repeated on 31 October 2013, *because Glencore will have been put on notice about the practices*.

- *Cargill's confidentiality obligations may constrain its ability* to engage with government agencies and buyers on these issues prior to completion. Glencore is not subject to such constraints.

- The nature of business logistics may necessitate that action is taken now so as to ensure that criminal conduct that is now occurring (if any) ceases before Cargill acquires the Joe White [B]usiness on 31 October 2013.

(Emphasis added.)

1175 Conversely, the letter stated that there would be adverse consequences to informing Glencore, in particular "a souring of co-operation between the parties and an impact on Joe White employee morale". It was suggested the most appropriate method of approaching Glencore would be a combination of telephone calls by Cargill executives to their Glencore counterparts, coupled with measured but firm correspondence to Glencore's solicitors, Mallesons.

1176 The advice then set out a number of potential claims against Glencore, again couched in the language of "an initial high-level analysis". The potential claims listed included claims against Glencore for breach of an obligation to carry on the Joe White Business in accordance with all applicable laws prior to Completion, and breaches of various Warranties in the Acquisition Agreement (including Warranties to the effect that the Records had been compiled and maintained in good faith,[718] Data Room Documentation had been collated in good faith and with reasonable care,[719] and that the Joe White Business had been conducted in accordance with applicable laws and ISO Standards).[720] The letter also noted that claims for misleading or deceptive conduct or deceit may be available under Australian law, despite attempts in the Acquisition Agreement to limit liability. The advice noted that each of the Warranties made on 4 August 2013 was required to be repeated on 31 October 2013.[721]

---

718 Warranty 4.2(a): see par 1034 above.

719 Warranty 12(a): see par 1034 above.

720 Clause 9.1(d) (see par 1028 above) and Warranty 17.1: see par 1034 above.

721 The Viterra Parties submitted that Cargill failed to disclose various matters known to it when providing instructions to Allens after the 15 October Meeting with the Joe White executives. Each of these matters will not be addressed individually. Some of them were premised on certain findings being made as to

1177 Conway read the advice, but did not consider it very helpful because of the lack of information Cargill was able to give Allens concerning the nature and extent of Joe White's practices.

1178 In order to discuss the Allens Letter of Advice, a telephone meeting was arranged for the afternoon of Friday, 18 October 2013. Clark and O'Donahoo were in attendance. Eden, De Samblanx, Savona, Viers and Arndt attended on behalf of Cargill. During the call, Allens advised it had a number of concerns. These included breaches of the *Food Act 1984* (Vic) (because malt was a food product), breaches of offences relating to misleading and deceptive conduct under food regulations and offences under the Commonwealth Criminal Code. Allens also stated there were concerns arising from the manner in which Certificates of Analysis were being provided, which might have given rise to general offences around fraudulent or deceitful conduct. Further oral advice was given consistent with the Allens Letter of Advice.

1179 Arndt enquired of Clark whether Cargill had a right to terminate the Acquisition Agreement in the circumstances. In response, Clark stated there was no contractual right to terminate, but rights of termination might exist under the common law. He said the right to terminate on this basis required a high standard, and that a high threshold would have to be achieved to have that right.

1180 Further, Clark advised that if a party to a contract decides to exercise a right of termination at common law, that party tends to only find out whether it was justified in retrospect. When pressed by Arndt as to whether or not the right existed, Clark said Allens did not have sufficient information to advise at that stage. Clark said he was unaware of the extent of the practices, whether customers were involved, or the level of variance between what was being certified and the actual product content. Further, he did not have instructions on what impact the cessation of the practices raised would have on the ability of the Joe White Business to fulfil customer contracts

---

Cargill's knowledge, which have not been found. In any event, having considered each of the matters raised in the Viterra Parties' submissions, and having reviewed the evidence available to the court as to what was disclosed, including taking into account the uncertainty Cargill had in respect of material matters, there was no substantive basis to suggest that Cargill chose to withhold material information from its external lawyers.

and for Joe White to operate.

1181 Clark also stated that, as it was a highly publicised transaction, a last minute failure of the contract could have an adverse impact on the Joe White Business. He said this could give rise to Glencore having difficulties reselling it and, if any termination was unjustified, may expose Cargill to liability for the difference between what Cargill had been willing to pay and the ultimate price obtained for the Joe White Business.

1182 The Viterra Parties referred to Savona's notes concerning termination and the fact that, on this topic, they were confined to referring to negotiating down the purchase price. It was submitted the court should infer that Clark's advice about termination was not of key importance to Cargill as Cargill wanted to avoid termination.

1183 There can be little doubt that in mid October 2013, Cargill did want to avoid the Acquisition not proceeding to Completion if that course made commercial sense. Numerous members of the Project Hawk team were hoping that the problems that had been identified were not too significant and, accordingly, termination would not have needed to be seriously considered. Further, based on the advice that had been given by Allens, there must have been a wariness about terminating and thereby giving rise to a possible exposure to a substantial claim for damages by Glencore and Viterra if that path were adopted. However, it did not follow that these factors excluded termination being a real possibility, and it being taken seriously. Whatever might have been the state of mind of Savona at the time, the evidence of the Cargill witnesses made it plain that Cargill wanted to know its rights in relation to termination,[722] and that it would have been seriously considered in the event that Cargill was reliably informed about the extent of the problems such that Cargill would have considered those problems to be substantial.

1184 In addition, Clark gave advice on possible claims for breach of Warranty under the Acquisition Agreement. Further, in this context, he discussed statutory causes of action based on misleading or deceptive conduct and that the Acquisition Agreement

722 See, for example, par 1272 below. See also issue 33 below.

had attempted to exclude them, but said the exclusions might not be entirely effective under Australian law.

1185 During the course of the call, the Cargill Code was raised. Clark was instructed that if Joe White was engaging in any criminal conduct, that would have to cease immediately on Completion. Clark gave evidence that Cargill's position on this point had been mentioned to him previously on 15 October 2013 by Savona.

1186 Under cross-examination, Clark stated he was not told that Cargill had informed the Joe White executives on 15 October 2013 that Cargill's practices would have to be adopted from the first day after Completion. He was also not told these discussions had involved the topic of variances between customers' testing of specifications of malt and the testing undertaken by suppliers of malt. Further, he was not aware that there were differences between laboratories' results of testing of the same samples of malt. Furthermore, he was not told that there were new barley varieties that would become available in Australia. However, he was instructed that the Joe White executives had referred to the unlikelihood of Joe White having sufficient stocks of barley to meet certain requirements.

1187 For the purpose of preparing Clark to give evidence, the Cargill Parties' solicitors provided Clark with a number of documents.[723] These documents included a file note prepared by Savona. It read as follows:

> **Subject:** Confidential - not to be distributed beyond the recipient list
>
> **Discussion with Allens (Marcus Clark and Peter O'Donahoo) – Advice from Allens dated 17 October 2013.**
> **Cargill participants: Doug Eden, Brenda Arndt, Chris Okoroegbe, Marc Viers, Steven De Samblanx, Tina Savona.**
>
> **Key points**
>
> **We have limited information at this time.**
>
> We are not *clear as to whether these practices are actually occurring*/allegations; whether they are systematic or otherwise.

723 For further background on this issue, see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 11)* [2018] VSC 453, [7]-[8], [16].

Cargill will not tolerate any continuance of illegal practices on November 1 (completion).

[Certificate of Analysis], barley varieties and [g]ibberellic acid practices – *not clear to what extent* that is being done and the cost to remedy it but *feeling is that it would be substantial* and would have a negative impact on the valuation model we are using and price.

Australian law – misleading and deceptive conduct – possibility that if you supply a product coupled with misleading representations you are exposed to possible prosecution by [the Australian Competition and Consumer Commission]. This is independent of the falsification of a record provided to a government regulator. This is in respect of the contract between [Joe White] and its customers. There are also additional offences under food laws. While most food laws focus on safety some are broader and pick up concepts of misleading and deceptive conduct or the failure to deliver food of the standards required by the customer. "Malt" is food for that purpose.

[With respect to] [g]ibberellic acid practices – Allens noted that this constitutes a credence claim and Australian regulators currently have a focus on prosecuting credence claims.

[With respect to] the [Certificates of Analysis] Allens noted that:

- we currently have minimal information about whether the [Certificates of Analysis] are being provided to government agencies and to the extent they are, this increases the seriousness of the potential offences committed and the consequences.

- Our ability to find out more is constrained as we don't own the business yet so we are ultimately relying on what Glencore and [Joe White] are willing to tell us.

Cargill will take steps to ensure Glencore is notified promptly of these allegations and put on notice, amongst other things, to use their reasonable endeavours to investigate and explain to Cargill how "big" any issue is, the cost to remedy and how Glencore intends to remedy <u>before</u> going to any customers.

If we form the view that these matters are of the type that may give rise to a claim then we have an obligation under the Acquisition Agreement to give notice of that to Glencore.

As current owner of the business Glencore is best equipped to investigate these matters and respond to our queries.

We would like to know what the extent of the issue is and if there was going to be a claim what range would it be.

The advantages of putting Glencore on notice promptly from a legal perspective, outweigh the disadvantages of not doing so.

We can suggest steps we would like to see taken and it is a matter to see what Glencore considers are reasonable endeavours. If we advised Glencore about what we thought to be reasonable endeavours this does not waive any rights we have. We would say we have limited information but feel we are obliged to

give notice of this and make very clear and reserve all rights we have in relation to these and other issues.

2 levels of communication. Communication between lawyers and also Cargill execs maintaining a dialogue with Glencore execs. *Ultimately we are still going to be buying the business* so there is a degree of co-operation that is required to occur.

To the extent we start incurring costs for breach of warranties then subject to the limitation of liabilities in the Acquisition Agreement we can put Glencore on notice. But we will need to start tracking costs as we incur them.

[Joe White] management currently putting together a risk assessment to give an idea of the size of the issue. We *communicated with them not to share with us* until we felt appropriate (following legal advice and [the Foreign Investment Review Board] approval). Advice is if [Joe White] volunteer this info then there is no downside to Cargill accepting it.

Confidentiality

Our confidentiality obligations fall away come 1 November. Prior to that time we would only be able to bypass the confidentiality with the consent of Glencore or if we had a positive legal obligation to disclose a matter to a government agency. At this point in time our view is that we don't have a positive obligation to inform government agencies.

Practical matters

Leadership of Glencore has told us that upon [the Foreign Investment Review Board] approval closing will be imminent and you will have full access to customers and customer information. We currently have a team of people operating in Glencore offices with 24/7 access. Once this issue raised, likely alternative arrangements will need to be made.

Can we delay completion? No unless Glencore agrees and *a few additional weeks is unlikely to resolve the issue. No advantage or reason to delay closing*.

Can we negotiate down the purchase price? – No if we try to do this *they may very well try to terminate the agreement* for our failure to complete and extricate themselves from the problem. Glencore would need to take reasonable endeavours to remedy the breach but we need to get them on notice. *We would have to pay them full price at the time of close* and then seek remedy from them after the fact depending on what we think it will cost us and we won't know what that will cost will be until after close. Purchase price adjustment process will apply.

Announcements following [the Foreign Investment Review Board] approval

As a practical matter we will announce at completion but if Glencore required to announce for regulatory purposes then we will announce as well.

Next Steps

Allens drafting notice to Glencore + script for our executives. Notice to go out some time at beginning of next week and we won't be able to find out anything

> more in terms of impact on business or cost to remedy because we are not going to have the ability to interact with the team between now and when we close.[724]
>
> (Original emphasis in bold and underline, emphasis added in italics.)

1188 On the face of the file note, it appears to be a record of the discussion between Cargill representatives and Clark and O'Donahoo, held after the Allens Letter of Advice was given. Clark's evidence confirmed a discussion took place on 18 October 2013. Clark also said that some things contained in Savona's notes reflected the Allens Letter of Advice.

1189 When Clark was taken to Savona's note under cross-examination, he agreed it was incorrect to say that Cargill was not clear whether the practices the subject of discussion on 15 October 2013 were actually occurring. He said it was clear to him that the practices were occurring and, with respect to the Certificates of Analysis, they were systematic in the sense that there was an internal policy being followed. He also acknowledged he had no doubt about the use of gibberellic acid, but was not sure of the extent of the practice and whether or not it was in breach of customer contracts.

1190 Clark also said he knew, based on his instructions, that barley varieties would have been used contrary to customer specifications, though he was not sure whether this was done systematically or otherwise. Clark said his instructions seemed to imply a regularity about the use of non-authorised barley varieties, but he gave evidence he was not aware of the frequency of the conduct.

1191 When it was put to Clark that the only matter about which he had minimal information was whether Certificates of Analysis were being provided to government agencies, he rejected the proposition. He said he had minimal information at this time about quite a lot of things. Included in the information Clark did not know was whether or not the alleged practices had been disclosed to customers. Clark's thinking

---

724 The Viterra Parties submitted that the fact that Cargill knew access to the Joe White executives was not available until after Completion meant that it was apparent Cargill did not expect the Viterra Parties to "be able" to provide any useful information to Cargill. This simply did not follow, as the Viterra Parties had full access to the Joe White executives and Viterra had been the owner of Joe White since 2009. Further, the subsequent correspondence demonstrated that Cargill did expect meaningful information to be provided before any completion.

at the time was that non-disclosure to customers would be the worst case scenario, but he was unsure of the position.

1192 With respect to the note referring to Cargill notifying Glencore, Clark said he gave advice at the time about there being an obligation to give that notice.

1193 Clark accepted there was nothing contained in Savona's note referring to advice concerning termination of the Acquisition Agreement. Indeed, he acknowledged that the reference to Cargill still going to buy the business appeared to be a contradictory statement. Clark said he had no knowledge at the conference on 18 October 2013 of Cargill's position as to whether it intended to complete the Acquisition Agreement or not, though he did recall discussions about what would happen if Completion occurred.

1194 On the question of whether or not Completion could be delayed, Clark said this was asked by either Arndt or Okoroegbe. Clark said he could not recall whether it was during this conversation or a subsequent conversation that it was decided that a short delay for Completion would not assist Cargill in understanding the issues any better. Further, Clark said that the discussion concerning a renegotiation of the purchase price proceeded on the assumption that Completion would occur upon the reduced purchase price being paid.

1195 Before continuing with the timeline of events, to the extent that it has not been dealt with elsewhere in the judgment, it is convenient to address a bundle of notes (many undated) made by Savona which were tendered by the Viterra Parties.[725] The Viterra Parties relied upon these notes in seeking to establish what Cargill believed after the 15 October Meeting.

1196 A note made by Savona recorded that Joe White permitted changes to be made to Certificates of Analysis to record malt met the customer's specifications if the results were within 2 standard deviations, then further stated if the results were "greater than this" approval could be obtained from general managers. It was further noted that

725 The bundle was the subject of redactions and was largely undated.

this approach applied to more than 50 percent of Joe White's exports and that, to fix it, would require significant capital expenditure because Joe White's plants were limited. On the issue of capital expenditure, a separate note stated it would allow Joe White to blend the malt into specification.

1197 Another note stated that Cargill needed to understand the issue and form its own conclusion. It was further recorded that "On Paper", if Cargill implemented its policy on day 1, Joe White would not be able to ship more than 50 percent. A further note stated that Joe White could not originate the correct barley varieties.

1198 The Viterra Parties submitted that, in circumstances where Cargill knew approximately 80 percent of Joe White's sales were exports, Cargill must have been aware that upon Completion Joe White might be unable to ship at least 40 to 50 percent of its product. However, this submission assumed far too much certainty on the part of Cargill's knowledge. While it is clear that Cargill knew exports represented a very substantial part of Joe White's sales, the evidence overwhelmingly demonstrated that although Cargill had its suspicions and certain beliefs, it was unsure of the full nature and extent of the problem at this time. Savona's notes did not alter this position.

1199 On 18 October 2013, Eden sent an email to Van Lierde and Conway, which referred to a telephone discussion the previous night. Eden stated that the recommendation contained in the memorandum they had reviewed would be followed.[726] He also stated that "we" believed "the issue" was systemic and would require changes that would exceed the minimum thresholds in the Acquisition Agreement for Warranty breaches.

1200 In response, Conway emailed Eden, copied to Van Lierde and Okoroegbe, and stated that he had given MacLennan and Koenig a heads-up. Conway said he would like a full plan of action before Cargill went to Glencore. He also stated that he had read the full memorandum and noted it gave worst-case risks without appearing to know the

---

726 Conway gave evidence that the memorandum referred to was the Allens Letter of Advice: see par 1170 above.

details of the incidents, which he said was unhelpful.

1201 In reply, Eden stated, "Got it". He observed that they did not have the freedom to get into the details at that point. He further stated that Cargill's people on the ground were highly pessimistic, but they were very guarded until they got the facts, which he suggested would not happen until after Completion. After noting there were a host of sensitivities, Eden stated that the Acquisition Agreement would be the guide.

1202 Each of Eden, Van Lierde and Conway were taken to this email chain during cross-examination. Eden said he understood the reference to "unhelpful" by Conway was referring to Eden's views. Eden understood he had expressed views inconsistent with Conway's position. Van Lierde gave evidence that when he read the belief that the issue was systemic, he understood that to mean widespread and had no reason to disbelieve Eden. Conway explained that he was irritated by what he had read, and agreed that what was stated by Eden suggested something serious. Otherwise, Conway's recollection of this particular exchange was weak.

1203 Cargill took steps to notify Glencore. An email from Savona to Clark dated 21 October 2013 set out the steps she had recommended Cargill take to inform Glencore, namely an initial call from Koenig followed by a letter setting out Cargill's concerns. The email stated that Viers would advise Joe White management that "this issue" was currently being considered by senior management at Cargill. Savona wrote that as she understood Hughes was keen to discuss matters further with Cargill's integration team. Sometime shortly after this, Clark was instructed that Glencore had directed that all "Joe White employees" were not to talk to Cargill's representatives. Viers gave similar evidence.[727]

1204 By 21 October 2013, the planned letter to Glencore was in the final stages of preparation. Emails between Savona, Clark, Viers and Arndt, copied to Eden, De Samblanx, Okoroegbe and others, between 20 and 21 October 2013 discussed the draft letter and, in particular, the steps Cargill wished Glencore to take. On 21 October

---

727 See par 1269 below.

2013, Viers wrote to Savona:

> I think we need [Eden's] signoff and guidance on this. Only considerations for me are, if we are not building mitigation plans by late in the week our risk increases and we need the [Joe White] folks to do same. *To the extent we asked [Joe White's] team for similar risk assessment, should we mention same so as not to appear we being (sic disingenuous when [G]lencore finds out. Keep in mind we have asked the [Joe White team] not to share this yet.*[728]
>
> (Emphasis added.)

1205 The letter went through a number of revisions. An email from Arndt on 21 October 2013 stated that the letter had been revised from its original version after a call between Arndt, Eden, Okoroegbe, Van Lierde and Conway. That email suggested the letter had been "softened" because Cargill Australia was "not clearly entitled to terminate the contract or delay completion" and because of Cargill's limited knowledge of the facts. It was stated that the strategy was to control the information gathering and the remedies. It was further observed that Cargill would not foreclose the possibility of either seeking a delay or of negotiating an economic resolution of the issue up front.

1206 Arndt sent a follow up email to Savona and Clark further explaining the reasoning behind the revision of the letter. The email read:

> A bit of additional background:
>
> Turns out [Conway] and [Van Lierde] wanted a call with us this morning. *[Conway] saw the letter as too demanding given our lack of real knowledge.* He and the other business guys also feel that *we'd rather just get control and manage the problem right away rather than see what Glencore does*. We discussed our rights under 9.4,[729] and that Glencore may try to block us. I suggested that we threaten to delay close whilst we have that as leverage, but for now, the business would rather move forward with a softer tone. They *don't want to escalate* with a top to top call at this point. We'll see what happens.
>
> (Emphasis added.)

---

728 Mattiske was not told by Purser that a risk assessment was being done, nor that Cargill had asked it not be shared with Glencore. Precisely what was encapsulated in the risk assessment was not clear as the issue was not raised with Viers, and Savona was not called to give evidence.

729 Clause 9.4 dealt with access rights of Cargill to the Joe White Business prior to Completion: see par 1028 above.

Clark did not have any dealings with Conway, and did not know his position in Cargill. When it was put to Eden during cross-examination that he was told by Conway that he was making the decisions about whether to complete, Eden said he did not recall that. Further, his evidence was that he did not recall Conway making the decision to complete, as it was more of a lawyer's decision (no doubt referring to the advice which had been given about not having sufficient details to be able to determine that Cargill could lawfully terminate with any sort of certainty as to the repercussions). Notably, Conway's evidence was that he had a discussion with Van Lierde in which Conway was told Cargill's advice was that it did not have a right to terminate. Self-evidently, the requirement for a decision from Conway to proceed was not required in light of the legal advice.

1207 On the morning of 21 October 2013, Viers emailed "today's call agenda" to Eden, copied to De Samblanx, and stated that the matters listed were what he and De Samblanx wanted to discuss. Included in the 7 items listed was:

> Risks and potential mitigation plan, customer communication and what we can say, building silos? Renting silos?

1208 Viers explained that the reference to communicating with customers was about honouring their contracts, as well as informing them that something had been done before Cargill took over which was not consistent with Cargill's principles and practices. However, Viers acknowledged that, upon taking control of the Joe White Business, Cargill chose not to communicate the past practices.

1209 With respect to the note about silos, Viers gave evidence that there was a concern of the time that the implication of what they had been told recently would be that Cargill would have to build or rent additional silos because of a shortage of malt storage. Viers' evidence was that Cargill did not know the full extent of the issue at that point and had to assume it was significant and that any contingency that Cargill would build would have to assume the worst. Viers said his feeling at the time was that the issue was significant, and that there would be insufficient storage capacity to produce malt to specification.

1210 Also on 21 October 2013, Stewart sent an email to Hughes, Youil, Wicks, Jones and Robert Dickie ("Dickie"), the marketing manager at Joe White, stating he had dropped a document into a drive of Joe White's computer system for their review. He requested that any changes be marked up. The document was a draft memorandum entitled "Cargill Customer Review – Key Recommendations" ("the Key Recommendations Memorandum").[730]

1211 The Key Recommendations Memorandum referred to a review of Joe White's ability to fully meet all customer requirements. The outcome of that review was recorded in a spreadsheet which had been prepared by Stewart, with the assistance of McIntyre ("the Customer Review Spreadsheet"). Stewart said the Customer Review Spreadsheet was created from an existing document that McIntyre had in place to track barley variety use, which had been expanded. He gave evidence that the original document "probably" only had columns A, B and C.

1212 In the Key Recommendations Memorandum, Stewart recorded that several areas requiring attention had been identified. He listed the main areas requiring such attention, together with the timeframes to achieve a satisfactory outcome, as follows:

> 1. Barley compliance – 6 months for most, to 12 months for others requiring new variety trials.
>
> 2. Pre-shipment sample requirement – 12 months.
>
> 3. Additive free malt – 6 months.[731]
>
> 4. Meeting customer specification on [Certificate of Analysis] – adopt actual blend analysis for [Certificate of Analysis].[732]
>
> 5. Malting processing requirements – Immediate implementation.

1213 The Key Recommendations Memorandum addressed each of these 5 areas. With respect to barley varieties, the position was far from satisfactory. Stewart recorded that, in general, Joe White's plants did not have appropriate varieties to meet the

---

730 See fn 728 above. There can be little doubt the product of the risk assessment sought by Cargill included the Key Recommendations Memorandum. Stewart's evidence was that he prepared this document on or about 18 October 2013.

731 The first draft of this memorandum, apparently created on 18 October 2013, referred to a period of 3 to 4 months.

732 Presumably, a reference to Cargill's theoretical blend approach.

current requirements. He suggested it was necessary to purchase appropriate varieties for use from April 2014. In providing some of the detail that underlay this conclusion, Stewart stated that Sydney had 4,500 tonnes of Hindmarsh, but did not have a customer that had approved that variety. In addition to noting that the approved variety for some customers was in short supply, Stewart observed that Joe White's ownership history had caused direct relationships to be eroded and that there was a need to re-engage.[733]

1214 With respect to pre-shipment sample requirements, Stewart simply stated that for Asahi in Sydney there was an inability to meet those requirements due to malt storage constraints.

1215 On the issue of gibberellic acid, Stewart stated that in order to meet the additive free requirements for Asia Pacific Breweries and Sapporo, Joe White would need to add an extra day of germination for a proportion of batches, which would result in a loss of around 14,000 tonnes of production per annum.[734]

1216 Stewart acknowledged that there was inadequate storage for both barley and malt which had the consequence that there was no ability to reliably meet customer specifications, with the exception of customers being supplied by Tamworth. On this topic, Stewart further stated:

> Scheduling of shipments to certain plants is currently heavily influenced by freight rates. *Barley availability and malt quality will now need to factor heavily in the decision making process*. For example Sydney may require customers with a "similar malt type " to simplify shipping.
>
> (Emphasis added.)

1217 On the final topic of malt processing requirements, Stewart observed that some of these requirements were not currently being met, including with respect to SAB Miller and Heineken B Malt. He noted that meeting the requirement would result in

---

733 This was a reference to the arrangements whereby Joe White acquired significant portions of barley from Viterra, and then Glencore.

734 It was noted that approval of "D Malt" by Asia Pacific Breweries would drastically decrease the size of the loss of production because D Malt could be made with gibberellic acid. There was no statement as to the likelihood of whether, or when, such approval might be given.

increased gas usage.

1218 Youil provided a comment on the Key Recommendations Memorandum, which demonstrated that he had reviewed the Customer Review Spreadsheet. Youil suggested Stewart include an additional column in the Customer Review Spreadsheet that quantified the potential tonnage impacted per customer as, Youil suggested, Cargill would want to know what its exposure was if Cargill was to adopt a hard line approach on reporting from day 1. Further, Stewart spoke to Hughes and Wicks about the Key Recommendations Memorandum. Both of them said they agreed with its contents.

1219 The Customer Review Spreadsheet included 19 rows dedicated to different customers of Joe White.[735] The document contained numerous columns, which contained relevant details with respect to each of those customers.

1220 The details included the plants from which barley was supplied to the customer, barley varieties approved by the customer, and whether Joe White was able to supply the correct variety for the years 2012/2013 and 2013/2014.

1221 Column D recorded that 8 out of the 18 rows of the large customers were not able to be supplied with the correct variety of barley for the remainder of the 2012/2013 year. Further, in addition to those 8, the Customer Review Spreadsheet recorded in relation to Asahi that the correct varieties could be supplied for Perth, but only a little Baudin (being a required variety) was available in Sydney. As for Sapporo, it was said there was a need to acquire more of the barley variety "CCFS Gairdner".[736] Finally, with respect to Thai Beverages, the ability to supply the required barley for the remainder of 2012/2013 was answered in the affirmative in relation to Adelaide, but it was stated that Buloke barley quality was marginal and "would put pressure on the ability to pack".

1222 In summary, in the 2012/2013 year there were issues with supplying the correct barley

735 18 rows were dedicated to individual customers. The last row listed numerous small customers.
736 See fn 337 above.

for more than half of Joe White's larger customers.

1223 Column E showed a forecast for 2013/2014 which was better than the previous year. It recorded that only 2 customers could not be supplied with malt using the correct barley variety for that year, Joe White's largest customer, Asia Pacific Breweries, being 1 of them.

1224 With respect to the use of gibberellic acid, column K identified the customers with the requirement to be additive free. Those customers were Asahi, Heineken, Kirin Brewery Company Ltd ("Kirin"), SAB Miller, Sapporo and a significant list of "other small customers".[737] Column K also identified that Coopers and Thai Beverages had a maximum level of gibberellic acid that could be included. It was recorded in column L which customers were "currently" not being supplied malt with additives.[738] With the exception of Asahi and SAB Miller, none of the customers who required their malt to be additive free were, in fact, being supplied with additive free malt (or, in the case of Coopers, within the maximum prescribed).[739]

1225 In short, Joe White was materially failing to meet the requirements of its customers that specified gibberellic acid was not to be used, or was to be used to a limited extent.

1226 On the issue of whether or not Joe White was able to meet customers' specifications, the information recorded could only be described as alarming. Column P was entitled "Able to achieve specification without applying [standard deviation] buffer". The Customer Review Spreadsheet recorded that Joe White was unable to meet any of its customers' specifications in their entirety, with the exception of 2 customers where it was recorded that Joe White was able to achieve their specifications "some of the time".

1227 In the response for Asahi, not only was it stated that the specification could not be

---

737 Stewart's evidence was that all of the Japanese brewers Joe White supplied, which included Asahi, Kirin, Orion Breweries and Sapporo, prohibited the use of gibberellic acid.

738 See further pars 1233, 1318 below on the meaning of "currently".

739 With respect to Kirin, it appears this requirement may have been met on some occasions as column L recorded "Not always" with respect to this customer. Coopers was not a customer identified in the particulars to Cargill Australia's claim concerning the Gibberellic Acid Practice, but is referred to above as part of the relevant evidence.

met, but it was suggested that the customers should be approached regarding "specification derogation". Presumably, this was in contemplation of the regime that Joe White anticipated Cargill would be introducing.

1228 Columns Q and R recorded potential solutions, short term and long term respectively. The short term solution for each customer was:

> Higher stock levels with longer lead times to shipment packing. Approach customer for blend reporting.[740]

1229 As to the long term potential solution, with respect to each customer it was simply stated that there was a need to increase silo capacity. That is, no other long term solution was identified.

1230 Column S purported to list the implications of complying with the requirements of customer contracts. It read as follows:

> Each batch analysis, substantial change to shipment scheduling process and sales volumes, capital cost for silos.

1231 Column T was concerned with whether there were specific issues with specifications or a customer's laboratory variation. It was stated Boon Rawd's specification was at a very tight Kolbach Index[741] percentage, "high colour low SN". In addition, 3 customers (being Kirin, Nestlé and Phoenix Beverages Ltd ("Phoenix")) were said to have very complex specifications, in addition to the dimethyl sulphite for Phoenix being "a bit difficult". Finally, with respect to Oriental Brewery, it was recorded that a correction was required for the Kolbach Index. Importantly, not only were none of the customers identified as having issues with either specifications or laboratory variations but, most significantly only 1 (SAB Miller) or perhaps 3 (if "correction required" embraced laboratory variation for Oriental Brewery and Sapporo for a limited number of parameters) were said to have issues because of laboratory variation.

---

740 Again, a reference to Cargill's theoretical blend approach.

741 See fn 671 above.

1232 Neither the Customer Review Spreadsheet, nor the level of detail it contained, were conveyed to Cargill before Completion.[742] Self-evidently, the details were a far cry from the various forms of exhortations contained in the Information Memorandum[743] and Management Presentation Memorandum[744] to the effect that Joe White met its customers' "exact specifications".

1233 The Cargill Parties submitted that, from the intensity of activity at this time, no doubt including by reason that Cargill had made its position clear regarding its strict adherence to the Cargill Code, it should be inferred that, if anything, the Customer Review Spreadsheet reflected that the Joe White Business was engaging less in the Operational Practices than in the past. As this was not put to Stewart, no such inference will be drawn. That said, it was clear from what was said during the 15 October Meeting that the Joe White executives were mindful of the need for change.[745] In the circumstances, it is equally not appropriate to infer that Joe White was not engaging in the Operational Practices to a similar or a greater extent in the past.

1234 On 22 October 2013, Purser telephoned Mattiske.[746] She referred to the fact that an integration meeting had taken place[747] and, in very broad terms, what had been disclosed. She said she wanted Glencore to know Cargill had been told of such matters and that Cargill wanted to understand whether they were true.[748] She also said Cargill wanted Glencore to understand that Cargill took the matters that had been raised very seriously. Mattiske told Purser it was the first he knew of them, that he

---

742 See further pars 1265-1266, 1268, 1402, 1429, 1512, 1524 below. Stewart's evidence was that it was disclosed to Cargill in 1 of several meetings held within days after Completion. However, he was uncertain whether it was the same document or a cut-down summary.

743 See pars 504-505, 515-519, 521-522 above.

744 See pars 716, 718, 727 above.

745 See pars 1106, 1117-1118 above.

746 Purser had some notes scripted by Allens and said she "use[d]" them for the call. Mattiske did not know Purser was going to call.

747 Being a reference to the 15 October Meeting.

748 During her cross-examination, Purser acknowledged that Cargill had been concerned about the potential for activities of the nature of the Operational Practices before the Acquisition Agreement was executed. Although she could not recall who told her of these concerns directly, she said it would have come from the managers of the malt division. This evidence was a reflection of the fact that concerns existed in a number of respects up until around 18 or 19 July 2013 (and to a minor extent 23 July 2013), but, to the extent they still existed up to that time, any remaining concerns were substantially addressed and allayed by the Operations Call and the Commercial Call (and the Barley Inventory Call).

was surprised, and that he would investigate. She said a letter would be sent, but she wanted to give him a heads-up. Purser was not challenged on her account of the conversation. Mattiske's evidence was that Purser said Cargill had been told at an integration meeting that there were 3 specific business practices being undertaken by Joe White. According to Mattiske, she said Cargill had asked about them and that Joe White's executives had "freely admitted or opened up about these business practices that they undertook as they saw nothing wrong with it". However, Mattiske also gave evidence that Purser said Cargill took issue with the 3 business practices. He deposed that Purser said she did not want to make it a big legal issue and it should be able to be resolved commercially. Mattiske also gave evidence that he told Purser that the investigation would be conducted in good faith and that Glencore would try and do its best, and respond and help within the integration period.

1235 In Mattiske's evidence in chief, in response to the simple question as to what he said to Purser during the course of this telephone conversation, after stating the matters set out in the preceding paragraph, Mattiske's answer then went beyond what he had been asked. Mattiske stated that Glencore was genuine in its need or desire to help Cargill have a smooth integration. Mattiske continued by stating that Glencore had just been through an integration itself and knew it was complex and difficult to integrate 2 businesses. He said that was why Glencore "gave [Cargill] open access to our executives to facilitate a smooth transition". Contrary to this assertion, Glencore and Viterra did not give Cargill direct access to any Joe White executives after this point in time for the purpose of satisfying Cargill's queries.[749]

1236 Later on 22 October 2013, Cargill Australia sent the letter to the company secretary of Viterra Malt, Viterra Operations and Viterra Ltd ("the Cargill 22 October Letter"), copied to Mattiske, Lindner and Pappas. It was signed by Purser in her capacity as the managing director of Cargill Australia. The letter read:

> Dear Sir
>
> As part of *our agreed upon transition process* for the acquisition of the [Joe White] [B]usiness, an integration meeting was held on 15 October between Cargill

749 See pars 1203 above and pars 1245, 1265-1269 below.

executives ([Viers] and [De Samblanx]) and Joe White executives ([Hughes], [Wicks], [Youil] and [Stewart]). At the meeting, the *Joe White executives disclosed that the [Joe White] [B]usiness had engaged in the following practices*:

1. issuing *certificates of analysis* to customers which represent that malt supplied to the customers met with particular specifications where the malt supplied did not meet those specifications;

2. supplying malt to customers which had not been produced from the specific *barley varieties* required by those customers; and

3. supplying malt to customers which had been produced from a malting process that involved the addition of *gibberellic acid* (GA_3), where those customers require that GA_3 not be used in the production of malt supplied to them.

Our discussion with the [Joe White] team regarding these practices *was limited* and *we have not determined whether these practices have occurred and, if they have occurred, whether they have been sporadic or widespread, which customers are affected and whether the practices are ongoing*. However, the potential ramifications of these practices, should they have occurred, *may be significant* in terms of business operations and the rights and obligations of the parties.

Bearing in mind that completion is currently scheduled for 31 October 2013, we need your co-operation in investigating and remedying the matters raised in this letter *prior to our taking control*. Hopefully, we can work together to minimise any potential adverse impact. In particular, *please let us know whether one or more of these practices has occurred and, in that event, the respective frequency of each*. And if you identify that any of the practices are ongoing please describe:

- *the measures that you propose* to ensure that the business is conducted in accordance with all applicable laws and customer requirements; and

- *what impact* any such corrective measures are likely to have on the ability of the business to satisfy its supply obligations to customers in terms of both *production output and customer malt specifications*.

As you appreciate, to the extent necessary, we reserve all our rights in relation to these matters.

(Emphasis added.)

1237 Some observations about this letter should be made.

1238 *First*, the Viterra Parties attempted to establish at trial that the suggestion in the Cargill 22 October Letter that Cargill had not determined "whether these practices occurred" was a misleading statement by Cargill. This attempt was without substance. Despite the evidence of Viers that he had no doubt the Operational Practices as described on 15 October 2013 were occurring and this aspect of the letter was contrary to what he "personally knew", this knowledge was based on Viers accepting what he was told at

the 15 October Meeting.[750] In other words, Viers' (and De Samblanx's) knowledge did not materially go beyond what had been represented on 15 October 2013. The fact such representations were made on that occasion and were thereby the source of Cargill's "knowledge" was expressly referred to in the opening paragraph of the Cargill 22 October Letter.

1239 In this circumstance, it was reasonable, and prudent,[751] for Cargill's senior management to disclose that Cargill's understanding was based on what had been said, and to ask Viterra to confirm the position 1 way or the other. Further, nothing stated in the Cargill 22 October Letter could be characterised as misleading in circumstances where the primary source of Cargill's information was disclosed.[752]

1240 *Secondly*, it was correct to state that Cargill did not know the extent or frequency of the Operational Practices, or which customers were affected. None of this information was disclosed on 15 October 2013, nor by way of any other disclosures that preceded the 15 October Meeting.

1241 *Thirdly*, it follows that Cargill did not know the impact the practices had had or would have on the Joe White Business, either as implemented or if they were to be ceased.

1242 *Fourthly*, the Cargill 22 October Letter directly enquired both as to the existence and the frequency of each of the 3 practices. The letter made it plain that Cargill required

---

750 In addition, Clark gave evidence that it was not correct to say Cargill was not clear whether the practices were occurring because he had been told that senior officers of Joe White had told representatives of Cargill on 15 October 2013 that the practices were occurring: see par 1189 above.

751 The potential seriousness of the 3 practices identified warranted, if not required, that a cautious approach be taken by Cargill.

752 The Viterra Parties submitted the Cargill 22 October Letter was misleading in other respects. The matters raised were trivial and nothing turned on the points raised. But, for completeness, the additional 2 points are addressed. *First*, the Viterra Parties submitted it was misleading to refer to the 15 October Meeting as "an integration meeting" which was "part of our agreed upon transition process". It was submitted that the meeting was an exception or an addition to the anticipated integration meetings. However, it was a meeting held during the integration process and was part of the integration. If the language used was misleading, it was only based on a strict reading, and further was only marginally and insignificantly so. *Secondly*, exception was taken to the suggestion that the presentation on 15 October 2013 "was limited" in circumstances where the meeting went for about 2 hours and the Joe White executives were frank and forthcoming. While this was broadly an accurate account of the 15 October Meeting, the simple fact was that there was still much material information that had not been disclosed to Cargill when the Cargill 22 October Letter was sent. See further pars 1243-1244 below.

this information to make a proper assessment of the effect on the Joe White Business and the rights and obligations of the parties under the Acquisition Agreement.

1243 The Viterra Parties also submitted the Cargill 22 October Letter was misleading because of the matters Cargill allegedly failed to disclose. According to the submission, Cargill ought to have disclosed the impact Cargill believed ceasing the Operational Practices, coupled with the limited storage and the absence of some of the required barley varieties, would have on the Joe White Business. It was further submitted, by failing to disclose such matters, Cargill misrepresented its knowledge of what was occurring and, in doing so, deliberately deprived the Viterra Parties of important information that would have assisted them in their investigations. It was contended that this was a critical omission.

1244 In my view, there was nothing misleading about Cargill not alluding to any views it had formed leading up to 22 October 2013. The evidence disclosed that many, if not all, of Cargill's views to that point in time were tentative, if not entirely speculative. Such views as it had in relation to the impact of the Operational Practices were subject to Cargill learning the extent, or at least an approximation of the extent, of the relevant conduct. Undoubtedly, a key purpose of the Cargill 22 October Letter was to obtain such information.

1245 Soon after the Cargill 22 October Letter had been emailed, Fitzgerald discussed its contents with Mallesons. Although Lindner could not recall the conversation, she confirmed she sent an email immediately after it to Fitzgerald, copied to Pappas. That email contained a recommendation from Mallesons that informal discussions take place with each of Hughes, Wicks, Youil and Stewart individually to discuss what was said on 15 October 2013. It was further recommended that "we regroup" once the informal discussions had occurred in order to determine whether formal discussions should take place between Mallesons and those employees. Mallesons also advised that a representative of the legal team participate in all future interactions between Joe White employees and Cargill.

1246 When King read the Cargill 22 October Letter, he did not have any real understanding of the allegations it contained. His perception was that it related to detailed operational matters. He did not get involved in formulating a response.[753] That task was left to Mattiske. In performing that task, Mattiske "relied heavily" on Fitzgerald to direct any investigative work that was required.[754]

1247 Mattiske gave evidence he had no knowledge of the subject matter of the allegations. By way of background, Glencore Grain used independent laboratories to test grain quality. He said that, before 22 October 2013, he knew Joe White had its own laboratories, but assumed independent laboratories were used as well (on the basis that, in his experience, customers required independent analysis). Accordingly, Mattiske gave evidence that he was unaware that Joe White might be able to amend test results in Certificates of Analysis. He also was not aware of incorrect barley varieties being used and could not recall being aware of the use of gibberellic acid before 22 October 2013. No evidence before the court provides any basis for doubting this account of Mattiske's knowledge up to 22 October 2013.

1248 Mattiske organised for a telephone meeting to take place with Norman, Fitzgerald, Rees, Hughes, Wicks, Youil and Stewart.[755] As Mattiske was in Melbourne, he asked Norman, Fitzgerald and Rees to arrange the meeting. Mattiske described them as 3 of his deputies, and said they acted like an executive in assisting him to understand everything that was going on. Mattiske went so far as to say that his approach to the investigation was to leave it entirely to Fitzgerald, Norman and Rees as to what should or should not be brought to his attention. Mattiske said it was Fitzgerald who had been charged with the duty of investigating the Operational Practices.

---

753 By this stage, King was involved in another, significantly larger, transaction which was taking up a lot of his time.

754 He gave evidence that from this time Fitzgerald usually reported to him at the end of the day or after he had interviewed people.

755 Mattiske's evidence was that he had 3 meetings with Joe White executives after receiving the Cargill 22 October Letter and before Completion: the first on 23 or 24 October; the second a day or 2 later; and the last some time towards the end of October 2013. Some questions put to Mattiske and the answers he gave did not make it clear to which of these meetings the evidence was directed.

1249 Although a telephone call was scheduled to be held between only Mattiske and these 3 executives, in his witness statement Mattiske said he had no recollection of any such call taking place. However, in oral evidence in chief and during cross-examination, Mattiske said he could recall a telephone meeting (after Purser had called) with Fitzgerald, Norman and Rees. During this call, Fitzgerald expressed his surprise and shock,[756] as well as his disappointment that he had not heard about the Operational Practices.[757] Mattiske's evidence was that he said he told the 3 of them "we" needed to investigate and to find out what had actually happened.

1250 The call with the Joe White executives (or at least some of them) took place with Mattiske in Melbourne and the other attendees in Adelaide.[758] It lasted for between 15 to 30 minutes. Under cross-examination, Mattiske gave evidence that he could not be certain that Stewart was actually in attendance during the telephone call and it was possible he was mistaken about Stewart's presence. Mattiske said he had a specific recollection of Hughes speaking, but could not recall anything said by Youil, Wicks or Stewart. However, later in his cross-examination, Mattiske stated of the Joe White executives that "all of them, including Dr Stewart and others, were unwavering in their response that [altering Certificates of Analysis was] completely allowed and they [were] far better experts" than him. Mattiske suggested he had no reason not to believe them. Also, Mattiske purported to recall Stewart making comments on Cargill's methodology. Stewart gave unchallenged evidence that he had no communications at all with Mattiske in 2013. Accordingly, Mattiske's initial unequivocal evidence that Stewart attended this meeting must be rejected.[759]

---

756 Although he did not state what was said, in his evidence in chief Mattiske said all 3 of them had no knowledge of the practices and "were quite surprised by the whole thing". In response to a leading question, he then said they all said they were surprised.

757 Mattiske's evidence was that around this time he also asked Maw and Tim Krause, head of Viterra Operations, whether they had known about the practices, to which they both responded that they had not.

758 Mattiske gave evidence that Argent may have been at the telephone meeting as well. There was no evidence to suggest he was. Nor was there anything Mattiske could point to when giving evidence which demonstrated Argent was involved in any way in responding to Cargill.

759 In fairness, the unequivocal evidence was in Mattiske's witness statement, but when giving further evidence in chief orally, Mattiske was already expressing some doubts as to who attended this telephone meeting, albeit he also gave evidence purporting to recount Stewart speaking during the

1251 Mattiske gave evidence that he questioned Hughes as to why he was only hearing about these matters from Cargill, and why Hughes had not told him about the 15 October Meeting. Mattiske said he was disappointed Hughes had not told him about the Operational Practices earlier. In his oral evidence in chief, Mattiske said Hughes responded, stating "these practices" were standard industry practice.[760] Mattiske's evidence was that Hughes kept referring to the fact that there were seasonal issues, "that these 3 business practices are completely standard and completely normal", and that he did not think there were any problems. Mattiske's evidence was that Hughes stated numerous times that there was "no problem here". Hughes said Certificates of Analysis were changed, but that it was allowed under testing standards within 2 standard deviations of test results.

1252 Hughes elaborated on the seasonal issues, stating that Australia had just come through a drought which meant the availability of certain barley varieties was not as it would be in a normal season. Hughes said because of the lack of moisture, the overall production not only within South Australia but across the whole country was well down on the previous year. He said Joe White had substituted other varieties that Joe White believed performed just as well to meet what the customers needed in their brewing processes. Hughes said that customers were all happy, and that there had been no claims. Mattiske gave evidence that Hughes said customers were aware of the seasonal issues and were more than happy with the malt they were receiving. Mattiske's evidence was that, up until that time, he did not know that some customers specified the required barley varieties in their contracts with Joe White. Nonetheless, he said he did not ask Hughes about the significance of the correct barley variety from a customer's perspective.

1253 During cross-examination, Mattiske was asked if he queried Hughes, Stewart or any of the other Joe White executives as to what the consequences might be for the

---

meeting: see also par 1257 below.

760 In his evidence in chief, Mattiske purported to summarise Hughes' state of mind when Hughes was giving his initial response. He was then directed to confine himself to giving evidence of what was said. As to Mattiske's evidence of Hughes stating the use of incorrect barley varieties was standard industry practice, compare what Hughes put in writing soon after: see par 1395 below.

capability of Joe White to meet customer contracts and be compliant with specifications as to barley variety if the practice that had been customary of using varieties that did not strictly comply was to cease. Mattiske replied that he did not do that specifically, but generally asked Hughes to confirm that the quality of the malting plants was sufficient to meet "the specifications that we'd sold the business as, and he confirmed that the quality of the malt plants was – they were high-quality malt plants". It was put to Mattiske that he had not answered the question, and he was asked again whether he had discussions with Hughes or others about the consequences for the Joe White Business if only barley varieties as specified by the customer were used. Mattiske's further answer was that Hughes said all "of these issues" would be resolved with the new-crop barley and the varieties would become more readily available. Mattiske could not recall Hughes saying anything about the lead time for the new crop. Mattiske gave evidence that Hughes was also asked to tell him what varieties Joe White needed to meet customer contracts. Mattiske said he did not ask for a thorough investigation on this issue because his focus was on how to solve the issue going forward and what the next steps would be. At the time, Mattiske was unsure whether it would be an ongoing problem and he wanted to find this out.[761]

1254 On the issue of gibberellic acid, Mattiske gave evidence that Hughes said gibberellic acid was a naturally occurring substance in the malt process and was used to increase or decrease the time of germination, particularly in poor seasons, to allow the malting process to happen naturally. Upon being told gibberellic acid was being used notwithstanding some customers' contracts specifically instructed it not be used, Mattiske told Hughes that Joe White had to stop using the substance in these circumstances. Mattiske gave evidence that Hughes said that that would be done and there would be no problems.

1255 Mattiske gave evidence that, in response to a question from him as to why he "or any of us" had not been told, Hughes confirmed that he had not raised the practices specifically "or any of these issues" with "any of the Glencore or Viterra people at that

761 It was not entirely clear from the cross-examination whether each of these matters concerning barley varieties was raised during the first discussion with Hughes or at some later time.

time". Upon Mattiske asking why he had not been told about it, Hughes said the policies or procedures had been endorsed or put in place by Gordon. Mattiske responded that Gordon had been gone for 2 years and if Hughes had had an issue with the policies he could have raised it.

1256 When asked under cross-examination whether Fitzgerald expressed disappointment or criticised Hughes, Mattiske said "I'm sure he did", but then had to concede he did not recall Fitzgerald saying anything to Hughes about it.

1257 Mattiske gave evidence that he asked Hughes to describe what had happened at the 15 October Meeting, to which Hughes said that Cargill had asked whether Joe White was partaking in these practices and that it was openly admitted to.[762] According to Mattiske's evidence, Hughes did not refer to any of the practices being recorded in written policies. Hughes also mentioned that Cargill had a different methodology for analysing results which Cargill preferred to use. Mattiske gave evidence that there was a chorus of agreement, including supposedly from Stewart, about how terrible Cargill's methodology was. Further, his evidence was that Hughes said he thought Cargill's testing was less accurate and would result in a poorer quality malt overall.

1258 Mattiske gave evidence that Hughes was asked about the position going forward, particularly for Cargill if it did not want to participate in the practices. Hughes replied by confirming that the malt plants were of high quality and could deliver on the statements that had been made throughout the Due Diligence. Although Mattiske made no attempt to give his recollection of what was said, his evidence was that this reply was supported by "Youil and the other executives of Joe White". Further, Hughes said there were new varieties of barley coming in that meant the use of gibberellic acid would not be needed as much in the future. Hughes said that, accordingly, it was very much a short term thing for the Joe White Business, as the new crop barley would be ready in the next month and would be available for the new

762 Mattiske's evidence was Hughes said "the Cargill executives" openly admitted to the practices, but plainly he must have intended to refer to the Joe White executives as it would have made no sense, in response to a query from Cargill, for the Cargill executives themselves to be making comments in this regard to answer their own query.

season. Mattiske's evidence was that Hughes said this would then mean that the problem with varieties would be solved and that he did not see any issues with that going forward.

1259 Mattiske said he recalled other Joe White executives speaking at the meeting, but could not recall what they said. That said, Mattiske said various remarks were made by them affirming what Hughes was saying. When counsel for each of the Third Party Individuals who attended this meeting had the opportunity to cross-examine Mattiske, it was not suggested that any of them present expressed disagreement with what Hughes had said.

1260 Pausing here, with respect to barley varieties that Joe White was contractually required to supply, Mattiske fully appreciated that supplying the incorrect variety would amount to a failure to meet a contractual specification. He accepted that either Joe White complied with the specification or it did not, and near enough was not good enough. He further acknowledged that, in normal circumstances, a customer specifying a particular variety of barley necessarily excluded any alternative; and that, if a customer specified a variety but was provided with a different variety without knowing it had occurred, then there would be an issue.

1261 Furthermore, Mattiske appreciated Joe White was not entitled to substitute a variety of barely for the specified variety, whatever the reason, if the variety had been contractually specified. Having accepted those propositions, Mattiske later gave evidence that he did not think the supply of unauthorised barley varieties was that big an issue, as long as the malt was meeting the customer's requirements. After giving this evidence, Mattiske said he acknowledged he was not a person with expertise in malting and that he never raised the issue with Hughes or Stewart to ascertain its significance.

1262 Mattiske's evidence was that, as a result of this call, he believed what he had been told and that the issues Cargill had raised were fairly minor. He also believed, going forward, the issues could be resolved easily. Further, Mattiske gave evidence that he

believed Cargill would have known more about the issues raised than he did because of its experience in the malting industry. His evidence was that this belief was formed despite Mattiske not enquiring as to Cargill's knowledge, including whether the issues had been discovered during the Due Diligence, because he was told Cargill had asked Joe White about them. Accordingly, he deposed that he concluded Cargill knew about them because it knew to ask questions on the topics. Despite apparently holding such a belief, he never suggested to Purser that he had this view of Cargill's knowledge. Whatever belief Mattiske had, his evidence did not suggest that he held a belief that Cargill's enquiries were anything other than genuine. Quite the contrary. Thus, at the very least he must have been unsure as to whether Cargill was fully or even substantially across the issues that had been raised.

1263 Also on 22 October 2013, Stewart sent an email to 15 employees, with the subject "Additive Free Malt".[763] The email directed them, as part of the preparation for transition to ownership by Cargill, to "cease using [gibberellic acid] for 'additive free' customers".[764] Stewart's email stated:

> There may be times that you will need to schedule in an additional day of germination to meet quality requirements; please contact me to discuss on a case by case basis, as I do not want a scenario where there is blanket production of 5 day [gibberellic acid] free customers. Any production impacts will need to be relayed to [Jones] so that he can adjust schedules accordingly.
>
> Please use only additive free malt from 1/11/13 for additive free customers.

1264 In response to a query, by a production manager who was a recipient of Stewart's directive, about whether the new policy would also include lactic acid, Stewart responded:

> Just [gibberellic acid] at this point, but watch this space!

---

763 Although nothing of significance turns on the timing, the email was sent at 12.44pm. Hughes submitted that this meant it must have been sent before the Cargill 22 October Letter was received as that was not emailed until 12.49pm. The court was invited to infer Hughes directed Stewart to send the email as a consequence of Purser's call to Mattiske: see par 1234 above. The next person in the email chain, being 1 of the recipients of Stewart's email (see par 1264 below), was based in Sydney. This suggested the time of 12.44pm was eastern standard or summer time: see fn 311 above. (Another version of this email forwarded to Youil in Adelaide was recorded as sent at 12.14pm). Accordingly, the evidence indicated Stewart's email was sent before the Cargill 22 October Letter was received.

764 It was suggested in the email that Asahi and SAB Miller were "already [gibberellic acid] free".

Stewart gave evidence that he had no recollection as to why he sent these emails, including not recalling whether it was sent as a reaction to the Cargill 22 October Letter. The email chain did not address the issue of using unauthorised barley varieties. Further, it is curious that Stewart's directive was for the additive free malt to be instituted from 1 November 2013 in light of the fact that Mattiske directed this conduct to cease immediately during the first telephone call with Joe White executives (albeit, not including Stewart) after Mattiske had been alerted to the practices by Purser.[765]

1265 At 6.06pm on 22 October 2013, Hughes sent an email to Stewart, Wicks, Jones, Youil and Dickie with the subject "Cargill [Customer] Review & Cargill Customer Review Key Recommendations Document". Plainly, this was a reference to the documents Stewart had circulated the previous day.[766] It stated:

> Dear All until further notice please *cease correspondence and alterations/additions to these documents* immediately. I will discuss with you in more detail tomorrow.
>
> Also there should be *no written correspondence regarding this issue* until further notice, including email or other.
>
> (Emphasis added.)

1266 The email was also copied to Fitzgerald. Accordingly, if Fitzgerald was not already aware, it was likely he was put on notice of the existence of documents concerned with a review of Joe White's customers and related recommendations.[767] At the time, in his role as company secretary of Viterra, Fitzgerald was handling and coordinating the response to Cargill Australia's queries.[768]

1267 Mattiske's evidence was that Fitzgerald did not tell him of any review being conducted by Stewart, and that Mattiske was not told of the embargo on such

---

765 See pars 1250, 1254 above.

766 See pars 1210-1211 above.

767 The Viterra Parties submitted that it ought not to be inferred that Fitzgerald was aware of the existence of the documents because the documents were not attached. However, given the pivotal role Fitzgerald was fulfilling as a lawyer, and that the body of the email established that "these documents" existed, it must be inferred that Fitzgerald read the email and appreciated the documents, expressly identified and commented upon, were in existence.

768 See further par 1334 below.

correspondence as identified above. Further, he initially gave evidence he was aware that integration meetings between Cargill and Joe White had ceased and that, at that point, communication between them had also ceased. When giving evidence 4 days later however, Mattiske said he had no recollection of whether or not the communications between Cargill and Joe White had ceased.

1268 At 6.11pm on 22 October 2013, Hughes sent an email with the same subject line to the same recipients, including Fitzgerald. The email contained the same text as the email sent at 6.06pm, save for an additional sentence, written in red font:

> Further, the content of *these documents* and the issues discussed in them should not be discussed in any way with Cargill employees or representatives.
>
> (Emphasis added.)

1269 Neither email attached the documents referred to. In circumstances where neither Hughes nor Fitzgerald gave evidence, it cannot be said with absolute certainty whether Hughes gave these instructions at his own instigation or upon the direction of Fitzgerald or someone else from Viterra or Glencore. That said, the position adopted by Hughes at this time was in stark contrast to his own expressed desire, only a short time before, to have ongoing communications between Joe White executives and Cargill. Further, there was no evidence that Fitzgerald took any exception to the directions the subject of Hughes' 2 emails. In short, it was highly likely (and I so find) that Hughes was acting on instructions from his superiors at this time. So much was corroborated by Viers' evidence that Hughes told him around the time that the Cargill 22 October Letter was sent that Glencore had put a "gag order" on Hughes, as he had been told not to comment or share any further information. It was further corroborated by what Clark was told around this time concerning Glencore's position.[769]

1270 Stewart was shown the Cargill 22 October Letter shortly after it was received.[770] It was brought to his attention by Hughes. He understood it enquired as to the

---

769 See par 1203 above. See further pars 1334, 1394 below.

770 His evidence was that he did not think he was shown subsequent correspondence.

capability of the Joe White Business having regard to the Operational Practices. Stewart told Fitzgerald that he was in a position to provide information relevant to Cargill's queries. Further, Stewart gave evidence he discussed a "cut-down version" of the Customer Review Spreadsheet with Fitzgerald in a face-to-face meeting in Fitzgerald's office. He said Norman and Lindner were in attendance by telephone. Stewart said he gave Fitzgerald information specifically on barley varieties relating to a specific week, as well as giving "the rest of it" orally. When asked about what was said, Stewart's evidence was vague. He said Fitzgerald asked him about the various practices, and that he answered his questions. Whilst Stewart said he told Fitzgerald that they were occurring, he could not recall whether there was any discussion about the extent of the Operational Practices. Further matters were raised, as set out below.[771] However, Stewart did not provide Fitzgerald, Norman or Lindner with a copy of the Customer Review Spreadsheet.[772]

1271 Shortly after the Cargill 22 October Letter was sent, Viers had a conversation with either Eden or Van Lierde, and made rough notes recording it. Viers was told that the Cargill leadership team was concerned that if the exposure was not quantified then Cargill would not get an appropriate response from Glencore.[773] A question was also

---

771 See pars 1296-1303 below. For completeness, Stewart gave evidence about telling Fitzgerald that Joe White was using off-grade barley and gibberellic acid when it was prohibited by customers. During this discussion, he said there was a request for information about barley varieties which he agreed to provide to Fitzgerald. Stewart's evidence was that he expressed an opinion about how much production might be lost if Joe White produced malt without prohibited gibberellic acid. Also during this discussion, Stewart discussed the existence of new barley varieties that would "potentially" be able to be used to produce malt without gibberellic acid and without adding an extra day of germination, but that this was still under development. At the end of this part of Stewart's evidence, he said that he had a recollection this meeting with Fitzgerald (which Norman and Lindner attended) took place "just prior to 1 November". It was unclear on the evidence the extent to which matters discussed with Fitzgerald as deposed to by Stewart were raised on or about 22 or 23 October 2013 or later in October 2013. Most likely, Stewart's recollection of his discussion with Fitzgerald was largely concerned with the meeting held on 23 October 2013 which was the subject of Lindner's notes: see pars 1296-1304 below.

772 Stewart's evidence was that he did not believe Fitzgerald would have been able to properly interpret all of the information in that document.

773 The Viterra Parties submitted that evidence concerning Cargill's view that quantification might have been necessary in order to elicit an appropriate response demonstrated Cargill knew the Viterra Parties would not be able to understand the effect of the issues raised without further and specific information. In making this submission, no reference was given to this proposition being put to any witness. Further, none of the evidence on this topic suggested that the Cargill employees involved had any such thought process. In any event, such an understanding would make little sense; unlike Cargill, the Viterra Parties had unfettered access to the Joe White executives who would have been able to (and to some significant extent did) give their views on the effect on the Joe White Business of desisting with the Operational

raised as to whether or not Cargill could appoint a "clean team" to come in and do an independent risk assessment and understand the extent of the Operational Practices. Another question identified related to criminal activity; in that regard, Cargill wanted to understand whether Joe White had engaged in any. Viers' notes also referred to ongoing discussions, which he said was a reference to Cargill continuing to try and understand the extent of the Operational Practices. To that point in time, Viers believed, correctly, that Cargill had not had the benefit of full disclosure.

1272 Viers gave evidence that he was asked to quantify any potential financial impact of what had been learned on 15 October 2013, and to get an understanding of Cargill's exit rights and its obligations to complete under the Acquisition Agreement. As a result of this instruction, Viers contacted Clark.

1273 Viers asked Clark whether Cargill was obliged to complete the Acquisition Agreement. Clark stated in substance that there were no clear grounds for Cargill not to complete under the Acquisition Agreement, and that Cargill would have to demonstrate that what it had discovered would undermine the transaction. Clark said that there was a risk that if Cargill wrongfully terminated it would be exposed to significant "financial damages" as a result.

1274 During the course of the conversation, Viers stated to Clark that if Joe White's customers were unaware of the Operational Practices, then he considered Joe White had been engaged in misleading and deceptive conduct. Viers' notes also referred to the possibility of 2 years' litigation. They also contained a note "50/50"; Viers having a recollection that Clark said something about a 50 percent impairment.

1275 After speaking to Clark, Viers contacted Van Lierde. He told Van Lierde that Cargill was obligated to complete. He made a note before speaking to Van Lierde so his message was clear. Viers gave evidence he spoke to the note, which included the following:

Practices. It was not necessary to have a proper understanding of Cargill's policies and procedures in order to respond to the questions raised in the Cargill 22 October Letter.

Not a clear exit right.

We would need to establish that it was so material that it undermined deal.

50% impairment.

2 years litigation to resolve.

Risk lose pay [significant] damage for wrongfull (sic) termination.

1276 On 23 October 2013, Fitzgerald and Norman held separate meetings with Hughes, Youil, Stewart and Wicks. Mattiske's evidence was that after each of these meetings, Fitzgerald and Norman telephoned Mattiske to give an update.[774] There were no contemporaneous notes of what Mattiske was told during these calls.

1277 Lindner attended each meeting with the Joe White executives by telephone and took handwritten notes. Lindner considered herself to be a diligent note taker. She said there were no matters raised that she did not note, and stood by her notes as a full record of these discussions with the executives in question.[775] Mattiske was unaware that Fitzgerald had decided to get Mallesons involved in this process, and did not know Lindner was in attendance at the meetings with the executives.[776]

1278 Throughout Lindner's notes of these discussions appeared the numbers 1, 2 and 3, which were circled. This signified the 3 separate topics that had been raised by Cargill in the Cargill 22 October Letter, namely Certificates of Analysis, barley varieties and the use of gibberellic acid when prohibited, respectively.

1279 The meeting with Hughes began at 1.00pm and was recorded as concluded at 1.58pm. Lindner's notes record that Hughes was asked if the "[f]act" that Joe White was issuing "false" certificates was because Joe White's plant did not allow it to meet specifications. Lindner could not recall the question that was actually put. Hughes' response, as recorded by Lindner, was that the issue of certification and barley

774 Cf fn 754 above.

775 Lindner was not challenged by the Viterra Parties about this evidence.

776 Mattiske also gave evidence that Fitzgerald did not report back on the meetings that Lindner had with the Joe White executives. This evidence was given in relation to a question during cross-examination which did not include any reference to Fitzgerald also being in attendance at the meetings with the Joe White executives. In fact, there were no meetings attended only by Lindner and a Joe White executive. Accordingly, this evidence should not be understood to mean that Fitzgerald did not report to Mattiske on meetings with the Joe White executives at which Lindner was also in attendance by telephone.

suitability had been raised "several times" before the 15 October Meeting. Under the heading "Pre mtg" (which Lindner said was a reference to discussions with Cargill), her notes read as follows:

> – issue of CMA (←certificates?) and barley substitutability raised several times pre 15/10 mtg.
>
> – *they knew industry practice*
>
> – wanted to understand how [Joe White] approached it
>
> …
>
> – 15/10 – preso[777] on screen only. Preso didn't discuss data not industry available
>
> – talked about Cargill mode of CVA's (sic)[778]
>
> – what [Joe White] [does] and why they do it
>
> – discussed proposed way forward
>
> – *[Joe White] thought their process was robust and Cargill may want to adopt same practices*
>
> • Cargill went through this process. They use blend analysis, don't do final malt analysis
>
> • Discussed preparation of CVA's and how try [to] use [the Malt Proficiency Scheme]. [The Malt Proficiency Scheme] demonstrate intra laboratory varability (sic). There is much variation.
>
> • *[Hughes] to provide procedure*
>
> • *Use [Malt Proficiency Scheme] data, take to 2nd std dev*[779] variation between malt anysis (sic) + blends within 2 [standard deviations] – ok.
>
> …
>
> (Emphasis added.)

1280 In what appeared to be a new section of the notes, an asterisk contained in a circle was placed on the first line of the note, that read as follows:

> • Glencore know what customers lab will say because of [the Malt Proficiency Scheme] & exchange of data

---

777 An abbreviation for presentation.

778 Lindner could not say whether this acronym referred to Certificates of Analysis or if it was referring to the same subject matter as "CMA" earlier in her notes.

779 A reference to 2 standard deviations.

- So make the malt meet customer [specifications] & *represent it meets those [specifications]*
- So on [Joe White] [system] it's a 10, on client it's a 12 *BUT say it's a 12*
- *Some* open [communications] with customers re process
- Why issue *wrong* certificate? Telling them how they can expect it to behave.
- Certificate of analysis:
  - *process documented*
  - ISO audits – no issue ⇒ask [Stewart]
- Whether malt plants can produce what is required
  - *we are not doing this to make up for faults.*
- *How did Cargill respond at [meeting]?*
  - *They expected it*
- *Well known in industry* that there is variation of approx. 2 [standard variations][780]

  …
- *we do this all the time – every plant. For all customers*
- *ongoing* & no customers raised issues with malt quality

…

(Emphasis added.)

1281 On the next page, the number 2 was circled (signifying barley varieties) and then the following was recorded:

- required to go out & find cheaper barley[781]
  - There are some [contracts] where we use *barley inconsistent with the [contract]. ⇒ Forever* [words deleted][782]
  - No claims or allegations made yet

---

780 Lindner's note was "2 stand var" which she said referred to 2 standard variations. Although this was presumably what was said, no doubt it was a reference to 2 standard deviations.

781 No doubt a reference to the transformation projects: see pars 122, 134 above.

782 The Viterra Parties submitted that the reference to "forever" should be understood as Hughes having said the practice of inconsistent barley was long-standing.

– Now until end of March – we *don't always have barley available* to us needed between now & then. [*Could*] *be big $*

– post March: better position

– [Mattiske] not aware

– How much higher [would] *cost base* be if had been using right barley? *About $1.5m/yr higher*[783]

– *None of this discussed with Glencore during acq of [Viterra] by [Glencore]*

(Emphasis added.)

1282 On the following page, the number 3 was circled (signifying gibberellic acid), which was followed by:

Many customers use [gibberellic acid] some don't. We admitted *sometimes we've use (sic) it when we shouldn't have*.

Impact on business – possibly *move to 5 day germination* from 4 day. *If* had access to certain grain, *risk lower*.

Why don't people want it – fear it's an additive

- Some adamant – absolutely don't use it (well some exceptions).
- Prefer not to – more loose about it.
- We do *prob have [contracts] that say don't use it & We use it*.
- *Difficult to detect*
- *Routinely do this when shouldn't at all plants*[784]

---

783 The Viterra Parties accepted in closing submissions that this had been stated by Hughes, and submitted the figure of $1.5 million per annum was Hughes' best guess. Further, senior counsel stated that if it was treated as a generalised statement that was "more or less right", then the Viterra Parties accepted Hughes' remark as representing the fact.

784 Without raising the issue at all with Lindner, the Viterra Parties submitted that it was likely that she may have misunderstood this part of the discussion when taking this note. This was put on the basis that she was on the telephone and that this statement appeared to be inconsistent with the statement that Joe White probably had contracts that said not to use gibberellic acid and Joe White did use it in any event (see 2 bullet points above the bullet point in question). The Viterra Parties submitted "probably" in the earlier statement suggested there was "only a probability that [Joe White uses] it, improbably", before submitting this statement did not sit well with the later statement soon after. It was contended the first statement looked more probable than the later statement. In making this contention, reliance was placed upon Hughes' notes of the 15 October Meeting: see par 1120 above. There were a number of obvious difficulties with the position contended for by the Viterra Parties. *First*, Lindner's uncontroverted evidence was that she was a diligent note taker: see par 1277 above. *Secondly*, it was not suggested that because Lindner was on the telephone it affected her ability to take reliable notes with respect to any other part of this discussion, or any of the other discussions held.

- Who decides whether GA_3 used – technical decision ([Stewart] + local plant)
- No adverse impact to humans.
- 4 → 5 day germination
  - depends on yr whether & have to
  - 10 Kt[785]/year ⟹ not huge < $1/tonne *BUT reduces capacity by say 20%*
- Why we use – *drives capacity*

(Emphasis added.)

1283 At this point on the page there was a line through the paper and 4 further dot points. Lindner gave evidence at trial that she believed these 4 points may have been notes to herself:

- what can we do to comply?
- *Financial impact on business*
  - *[Stewart] pulling [numbers] together*
- Reputation risk
- Did [Hughes] sign off on warranties?

(Emphasis added.)

As to the second point, Lindner had no recollection of following up on any numbers from Stewart.

Thirdly, the word "probably" did not make the 2 statements necessarily inconsistent. In any event, Hughes knew full well that the Gibberellic Acid Practice was in place and being implemented: see, for example, pars 1212, 1215, 1218, 1224 above. *Fourthly*, the account given by Hughes and the other executives was entirely consistent with the statement that Joe White was routinely using gibberellic acid in breach of contractual requirements. *Fifthly*, if it were necessary to decide whether 1 statement was more probable than the other (to the extent it was suggested Hughes was unsure about the contractual position), it was highly unlikely that Hughes was unaware of the key contractual terms of some of Joe White's largest customers. *Sixthly*, Lindner's first note on this topic made it clear Hughes knew some customers did not (knowingly) use gibberellic acid. *Seventhly*, the Viterra Parties' contention invited the court to draw an inference in their favour when they had every opportunity to raise the matter with Lindner and chose not to do so: see par 1990 below. For completeness, it was of no moment that the Cargill Parties did not call Hughes to give evidence that he said this. The note was clear and unambiguous. Further, Hughes' senior counsel cross-examined Lindner at some length. Lindner's note on this point, and for that matter her notes of the discussion with Hughes more generally, were not challenged.

785 Kt stands for kilotonnes.

1284 The final page of Lindner's notes of the meeting with Hughes recorded:

- Do you feel misrepresented?
  - Yes but I was looking at customer practice.
  - I thought process managed risk + no prior issues.

1285 Pausing here, the notes of Lindner demonstrate Glencore was informed by the most senior Joe White executive, Hughes, that each of the Operational Practices identified in the Cargill 22 October Letter existed, and at least to a not insignificant extent. With respect to Certificates of Analysis, Glencore was told there was a written procedure, which could be provided. It was also stated that the procedure was ongoing and adopted for every customer, which Hughes stated was in line with industry practice.

1286 As for barley varieties, Glencore was told the correct barley was not always available, but that supplying the incorrect barley had not resulted in any claims or allegations. Glencore was also told the financial ramifications of this past conduct and the inability to supply the correct barley varieties up to March 2014 could be significant.

1287 In relation to gibberellic acid, Glencore was informed this practice was difficult to detect, that it was in breach of certain contracts, and that it was carried out routinely at all plants when it should not have been. Further, Glencore was told ceasing the practice would have an adverse effect on production schedules, in the order of 20 percent with respect to the relevant customers, which would obviously have flow on effects for other production schedules. Furthermore, it was said that *if* access to certain varieties of barley could be achieved, the risk of an adverse effect on ceasing the practice would be lower.

1288 More generally, it was conveyed that any financial impact on the Joe White Business of the conduct identified had not been ascertained with any precision. Plainly from what Hughes had stated he considered the impact of ceasing the Operational Practices would be significant.

1289 Next, Lindner's notes recorded the meeting with Youil which ran from 1.58 to

2.35pm.[786] Youil discussed the 15 October Meeting. The notes recorded that when "Eden" and Viers came for that meeting they raised "this practice (as they have come across it)[787] and it doesn't comply with [Cargill]'s policies and will have to stop". It was said the 15 October Meeting was to address this issue from "LD 1", signifying legal day 1, being the day after Completion. Youil confirmed that the details concerning particular customers or the impact on the Joe White Business were not discussed on 15 October 2013.

1290 Youil stated that Stewart produced a powerpoint presentation of "what Viterra currently does". Lindner said she did not recall asking for a copy of the presentation, but she believed it was provided by Hughes to Fitzgerald.

1291 Lindner recorded that Youil stated that the requirements placed by brewers on malt companies "are almost impossible to achieve". Youil referred to Cargill using the theoretical blend approach, whereas Joe White also did a shipping analysis. He referred to inherent errors, amongst other things. Relevantly, Lindner's notes continued:

> *Do customers know we do that – don't know.*[788]

> Cargill acknowledged matters haven't address (sic) with brewers.

> Not a plant capability issue. It's a barley variety issue ⇒ *always struggling to meet [specifications]*. We've *lost close contact with procurement team*.

> *Have we sent out of [specification] malt to customer in past? Yes*

> *Has [Cargill] bought something that cannot deliver? Cannot answer that. If adopt theoretical blend model of [Cargill], probably ok.*

---

786 The timing of this meeting, commencing immediately upon Hughes' interview concluding, suggested it was highly unlikely Mattiske was updated after every meeting: compare par 1276 above.

787 It was unclear what this was referring to. On the face of the notes, it may have been a reference to previous experience at Cargill or that "Eden" and Viers had learnt about some of the conduct at Joe White. Further, unless the note reflected a mistake, either it was not a reference to the 15 October Meeting, as Eden did not attend or Youil said Eden was in attendance instead of De Samblanx. It was plainly not a reference to the meetings held in mid September 2013 (see pars 1066-1071 above), as there was no mention of the Operational Practices (or any requirement to stop them) at that time.

788 This followed on from, and appeared to be a comment with respect to, "[laboratory] to [laboratory] differences", Joe White's analysis of customer results and altering results in Certificates of Analysis "to ensure consistent", but it was not entirely clear.

…

(Emphasis added.)

1292 Next to a circled "2", the following appeared:

> Not sure how often we do this. I [presumably, Youil] was surprised

> We have been told to [reduce] quality of product[789]

> *Breach of [contract] – reputation risk? Yes*

> Heineken – very surprised doing it

> How much do we gain by using lesser grade $10/t- $20t (ask [Wicks])

…

> If told to change overnight – impact ?

– *variety a challenge*

– need to source right varieties, possibly have to pay more, or fail to satisfy obligations under [contracts]

(Emphasis added.)

1293 On the topic of gibberellic acid, the following was noted:

[Gibberellic acid]:– by and large where client says no, we don't use it. Sometimes use it.

– even if extend process time, lose capacity. Still doesn't guarantee will meet [specification].

…

– what if we didn't use it, impact output [would] need to make more 5 day malt ⟹ [reduce production] capacity

…

> why do customers not want it? Purity of product. *Hit will be in first 6 [months]*. Once we have right barley.

(Emphasis added.)

1294 Lindner's notes then addressed all 3 issues again. The notes recorded the Certificates of Analysis issue could be overcome by the theoretical blend model. Issues 2 and 3 were dealt with together, the collective observation being there was a cost impact issue. It was further noted that both issues were impacted by barley varieties and that

789 Presumably, a further reference to the transformation projects: see par 1281 above.

purchasing the correct variety would cost more.

1295 Finally, it was noted:[790]

> – *[Mattiske] not aware* of these issues. No idea why not aware. Practice has been *acceptable for yrs. Business as usual*.

(Emphasis added.)

1296 Lindner's notes of the meeting with Stewart recorded that it ran from 3.00 to 3.40pm. As with Hughes and Youil, Stewart discussed the content of the 15 October Meeting. Stewart stated that Joe White had a rigorous procedure. Stewart was asked whether the Cargill 22 October Letter reflected what was discussed at that meeting. Lindner's notes recorded Stewart's response as:

> Yes. But doesn't capture [De Samblanx] (operations in Europe) of Cargill saying, completely what expected. [Viers] – salesman, surprised but doesn't know industry

1297 Lindner's notes relevantly recorded the following from the meeting with Stewart concerning Certificates of Analysis:

- We adopted [the Malt Proficiency Scheme] – we outlines (sic) errors associated with tests [Joe White] uses. But at the same time we have very good intel into what their [laboratories] will say.
- we *ensure customer is always right by changing the result*
- customers have said the [specifications] are a "target"
- Error of test bigger than [specifications].
- Legal implications of [certificate] saying 12 when 10 – *no idea?*

---

790 In Youil's closing submissions, it was contended it had not been established that what Youil said on 23 October 2013 in this meeting reflected his knowledge of the Operational Practices in July or August 2013. This was put on the basis that although Youil attended the 15 October Meeting there was no evidence that Youil himself disclosed anything at that time. Further, it was submitted the reference to Youil being surprised and suggesting Wicks should be asked about matters (see par 1292 above) indicated either a lack of knowledge or only recent knowledge of certain matters. Based upon this, it was also contended that it had not been established that Youil knew that what he said to De Samblanx concerning the use of gibberellic acid was wrong: see par 788 above. On the evidence available, it was implausible that Youil was not aware of at least some aspects of the Operational Practices in the period from June to August 2013, and long before that time: see, for example, par 206 above. In circumstances where he chose not to give evidence, it would not be appropriate to draw any inference in his favour in that regard. However, it is unnecessary to make any definitive finding about the exact extent of Youil's knowledge in order to determine the issues in the case.

- Cargill run there (sic) business very differently. Cargill blend & analyse this but don't analyse final shipment. Customer will analyse when received.
- [Just in time] – cost conscious. Cargill have huge storage (not [just in time]) so they can get blend in [specification].
- *To apply Cargill model to [Joe White] will be difficult*.
- Cargill have more flex of blending (by holding more inventory)
- *[Joe White] have been getting bad barley from Glencore.*[791] Getting what they don't want. *Erodes ability to hit [specification]*.[792]
- Sydney – limited storage, everywhere else better storage, extra day of germination, could get there.
- changing specs even if report in, customer read out of specs.
- if had right barley, relax shipping – plant good enough.

(Emphasis added.)

1298 Stewart gave evidence that at this meeting Fitzgerald said he was interested to hear from Stewart about whether the Operational Practices in relation to Certificates of Analysis were occurring, and Stewart responded by saying that they were. Stewart also gave evidence that he probably told Fitzgerald the extent to which they were occurring, but could not recall exactly.

1299 On the issue of failing to use the correct barley varieties, it was noted:

- Trying to make malt as cheap as possible.
- *Did we communicate with customers/around [contracts]? No. MD (Rob Gordon Oct/Nov 2011) at time said to do it.*[793]

---

791 After Glencore acquired Viterra, Mattiske's evidence was Glencore Grain sold barley to Joe White "through the Viterra arm".

792 In closing submissions, the Viterra Parties' senior counsel acknowledged there was no dispute this was said, and that it was the fact according to its terms. It was submitted it had to be read in context, and that it was unclear from the note if it was Glencore's fault that bad barley was being supplied. As to Glencore's knowledge, it was submitted that "Glencore" meant 1 of the "thousands of Glencore subsidiaries that happen to be operating in Australia" and selling barley. Further, in circumstances where Glencore did not know Joe White customers' specifications, it was submitted Glencore could not know if the barley was "bad" for Joe White's purposes: but see pars 603-605 above.

793 This note was plainly ambiguous. It may be read to convey that Gordon told the Joe White executives they should communicate with customers concerning contracts. The note makes clear that Joe White, in fact, did not. Equally, the note could be read to mean the absence of communication was the direction Gordon gave. There was nothing on the evidence to suggest the Joe White executives were deliberately acting contrary to Gordon's instructions or that they were seeking to conceal their conduct from Viterra (as opposed to customers and auditors). However, a finding that Gordon directed that Joe White not

- Why not raised with [Mattiske]? Expectation to make margins still there.

- *Glencore doesn't supply required varieties*.

- Now until April – main exposure if need to use varieties specified in [contracts]. *May have to push shipments back*

- We have new varieties - getting close but *need to get brewers on board*. Have been working on this for a long time.

- *We have been breaching contracts & not telling customer*
- New varieties– 75% approved
- *Exposure of [Legal Day 1] cannot use wrong varieties*

…

- Do we substitute with consent? Sometimes occurs for some more often than others.

- 6 [months could] transition out. *Don't think customers [could] find out about it*.

- *Why not informing customers when going outside [contracts]?* Industry [standard]. Brewers knew about it. Not sure re decision making process behind it.

(Emphasis added.)

1300 In giving his evidence on this aspect of the meeting, Stewart said he had told Fitzgerald that Joe White was using off-grade barley, and that, in part, the genesis of this was the Malt Cost Reduction Transformation Project.

1301 The note then addressed the issue of gibberellic acid. In estimating the additional cost for the next 6 months, the following was recorded:

- 120Kt of [gibberellic acid should] be producing [should] be producing about ½ that

- We [would] need to (sic) extra day [production].

On the question of costs pertaining to this issue, the following was recorded:

---

communicate with customers around customer contracts would be tantamount to a finding that Gordon directed Joe White executives to deceive their customers. Such a serious matter being found would require more than an ambiguous note of something said (which may have been hearsay) by someone other than the note taker. Accordingly, no specific finding as to what was said is made but, at the very least, it may be said that the note did not provide a basis for finding that Joe White executives were acting in defiance of a direction from Gordon when failing to communicate with customers: see also par 166 above.

– Loss of [production] cost – 15% of 30,000 (extra day)

– Electricity costs – 7% over 30,000t

– we are also moving to alternative malt scheme. *If* we get there, goes away.

Reputational risk! For some customers this is bigger issue (x 2) eg where customer is additive free

Don't market it as additive free. Just a preference.

…

(Emphasis added in italics; original emphasis in underlining.)

1302 Stewart gave evidence that he told Fitzgerald that "we" were using gibberellic acid for some customers who prohibited its use. During his cross-examination, Stewart rejected the proposition that he ignored the proscription with respect to gibberellic acid, stating the decision to use gibberellic acid when prohibited was a decision made by the business.[794]

1303 Finally with respect to the meeting with Stewart the following was recorded:

- Warranty verification process – he was only asked about IPRs.[795]

1304 Although Stewart's memory of the precise instructions was vague, he said he was told by Fitzgerald to provide some information by way of a snapshot of 1 week in September 2013.[796]

1305 The final of this series of meetings on 23 October 2013 was with Wicks. Lindner's notes record that this meeting ran from 3.55 to 4.30pm. Lindner's notes state that Wicks indicated that the Cargill 22 October Letter was a "fair statement of what was said". Relevantly, Lindner's notes of the meeting with Wicks also stated:[797]

---

794 Stewart's evidence was that approval to use gibberellic acid despite the customer's contrary requirement was sought from Wicks or Stuart, sometimes through him.

795 IPRs stands for intellectual property rights.

796 See further par 1387 below. Stewart gave evidence of having 2 meetings with Fitzgerald, the first also attended by Norman, and the second when Rees was in attendance: see par 1323 below.

797 To the extent any of these notes might be said to conflict with the accounts given by De Samblanx or Viers, the weight of their sworn evidence must be preferred over the notes of Lindner, which at times were unclear as to whether they recorded what Wicks was stating as the position, rather than what Cargill had been told at the 15 October Meeting. Further, it was significant that Wicks observed what was contained in the Cargill 22 October Letter represented a fair statement of what was said.

- Cargill noted have seen [Joe White's] storage capacity, there is no way [Joe White could] do it the Cargill way
- Cargill are the exception. Industry operates like this
- [Hughes] asked [Viers] is that what you thought? He said prob worse than expected
- Everyone agreed we [should] work out how to do things the Cargill way & the costs
- [Stewart] pulling something together.

…

1306 The notes did not record how the topic of Joe White's use of Certificates of Analysis was introduced, and Lindner had no recollection of it. The notes recorded:

- Customers analyse the malt, they love us, complaints aren't around barley
- Has met [specifications] within error
  - part lab variation/analytical error
  - we're allowing for there (sic) wrong analysis
- Do we communicate with customer that this is what we've done? Don't know. Sometimes

  (Meet specs with sampling or analytical error)

  we can produce to their specs. All we're doing is adjusting.
- *Can we meet [specifications]? Yes with right barley*

(Emphasis added.)

1307 With respect to barley varieties the following was noted:

- Buying barley – difficult to get barley you want
- What do you do? Some test for it/ particular. They get what they want
- Some are less concerned but have [specifications] stated
- Heineken – varieties approved eg [Gairdner, Stirling]. Both hard to get.
- *We don't communicate different variety knowingly*. What about our obligation to communicate varieties [?] That's the balance. We are *trying to guess what the customer wants* & act accordingly rather than just tell them.

- *What happens from [1 November 2013] if have to supply in accord with [the contract]? Commercial suicide. Brand will be decimated.*[798]

- What transitional period [would] be needed. Crop looks good = more barley. [Therefore] more chance of being able to swap barley say with Glencore.

- *We have done this to make as much [profit] as possible whilst keeping customers happy.*

- If we have to buy barley in April it will cost us more. How do you mitigate, back to [contracts] with farmers.

(Emphasis added.)

1308 On the topic of gibberellic acid, the following was recorded:

- None of them advertise as additive free
- If don't use [gibberellic acid] must germinate for longer
- *We do it about 20% of the time when we shouldn't*
- Heineken and Sapporo *do audit. [Wouldn't] know about [gibberellic acid]*

1309 Lastly, there was a space after the notes concerned with gibberellic acid, followed by a single line which read:

- *[Specifications] outside of contract often*

(Emphasis added.)

1310 Although the accounts given by each of Hughes, Youil, Wicks and Stewart differ in material respects, nothing said by Youil, Stewart or Wicks was fundamentally inconsistent with the position as outlined by Hughes.[799]

1311 In short, by means of these interviews, Glencore, through its solicitor Lindner, and Viterra, through the same solicitor and 2 senior executives,[800] were informed that there

---

798 The Viterra Parties submitted that this statement and related comments by Wicks were made in the context where interviews had already been conducted with 3 other executives who did not characterise the barley varieties issue in such terms. As to the fact that Mattiske was not told of this by Fitzgerald, the Viterra Parties submitted that was because it was not considered important enough to pass on. There was no evidence as to why it was not passed on. If Fitzgerald decided this information was not important, it was a curious decision. In 2013, Wicks was the executive responsible for barley procurement and customer sales. His opinion on such matters was plainly material.

799 See pars 1285-1288 above.

800 For completeness, Lindner was also acting for Viterra (see fn 299 above); and the 2 Viterra executives were also acting at the direction of Glencore, under Mattiske's instruction.

was substance to what was contained in the Cargill 22 October Letter and that the matters raised had the potential, if not a likelihood, to have a materially adverse financial impact upon the Joe White Business and its reputation.

1312 Following these interviews on 23 October 2013, Lindner was not aware of any further request by any of the Viterra Parties for further interviews or any suggestion that longer or more detailed interviews were needed.

1313 After his meeting with Fitzgerald, Norman and Lindner, Stewart received an email from Fitzgerald noting that Stewart had "mentioned" the Viterra Certificate of Analysis Procedure. Fitzgerald asked if the document was on Pulse, or alternatively if Stewart could send it through to him. It was on Pulse,[801] but Stewart responded via email attaching the "Malt Certificate of Analysis Generation Procedure (3)". What Fitzgerald did with this document remained a mystery. He did not show it to Mattiske, or, it seems on Mattiske's evidence, even bring it to his attention. Mattiske was unaware that under the Viterra Certificate of Analysis Procedure there was the ability to alter results even when they were outside the band of 2 standard deviations. He gave evidence he had not considered whether alterations were permitted for results beyond 2 standard deviations and that he made no enquiries on that question.

1314 At 2.34pm on 23 October 2013, Hughes sent Fitzgerald an email attaching a document prepared in response to the Cargill 22 October Letter. The email stated:

> [M]y response notes supplied to you are based on information I have been provided by my executive, I suggest it important (sic) to review that particularly with [Stewart] to confirm the accuracy of it in case I do not have some of the nuances correct.[802]

1315 The attached 1 page document contained 2 headings: "Certificate of Analysis" and "GA" (a reference to gibberellic acid). Under the first heading, the document stated that the preparation of Certificates of Analysis had been conducted "in line with

---

801 See par 278 above.

802 Based on the contents of this email, the Viterra Parties submitted Hughes' reliance on the other Joe White executives indicated Hughes did know the "details of, or the extent to which, Joe White engaged in [the Operational Practices]". No inference could be drawn in light of other evidence demonstrating Hughes' extensive knowledge on the topic: see pars 3260-3261 below.

specific consideration of the accuracy of the tests in question". After referring to the "reproducibility and repeatability accuracy" and the Malt Proficiency Scheme, it stated that the reporting of parameters to within 2 standard deviations was capable of capturing:

> both test variance plus inter-laboratory variance, together with any long term identified variance between the [Joe White] and the end customer inter-laboratory analysis accuracy.

1316 The document described this process as allowing for "natural analytical differences that occur between a prepared blend (the date Cargill uses to assess malt quality) and the final malt packed". Hughes continued:

> This is a *routine* process in the preparation of Certificates of Analysis.
>
> This activity is not unique to [Joe White] and has been an accepted and *documented practice in [Joe White] for many years*. While this does not align with Cargill's usual practise (sic) which relies on the use of the prepared blend analysis results it is a philosophical difference and corrects the result in consideration of this natural analytical variance rather than using the blend analysis and not analysing the final malt delivery which removes the repeatability/reproducibility risk associated with the analysis.
>
> As mentioned above this is a documented process which is *recorded within [Joe White]'s OPG's*[803] and has been in place for a number of years *and many external ISO audits*.
>
> (Emphasis added.)

1317 Under the heading "GA", the document stated that the use of gibberellic acid did not "directly" impact Joe White's declared design capacity which was stated to be 550,000 tonnes.[804] Further, it was recorded that using gibberellic acid allowed for production to occur over a 4 day, rather than a 5 day, germination period. It continued:

> Many customers continue to allow the use of [gibberellic acid] during malt production and *[Joe White] is currently only using [gibberellic acid] on malt produced for customers that allow the use of [gibberellic acid].* [Joe White] has *never been identified* by a customer as supplying non conforming malt on the basis of [gibberellic acid] use.
>
> (Emphasis added.)

1318 Obviously, Hughes' remarks concerning gibberellic acid use were materially different

---

803 Presumably OPG's stands for operational guidelines.

804 See pars 488, 1079 above.

to what Fitzgerald had been told by Hughes, and others, orally, earlier that day. The use of "currently" was presumably to distinguish the supposedly new situation[805] with what had occurred in the past, including up until when the Cargill 22 October Letter was sent. The remarks made no reference to deliberately using gibberellic acid contrary to the relevant customers' requirements, nor the change in approach that either had just occurred or was about to occur (with the possible consequences to production capacity). Further, the reference to never being identified by a customer appeared to suggest that no customer had ever caught Joe White using gibberellic acid when prohibited, not that it had not been done.

1319 Earlier on 23 October 2013, Mattiske had called Purser. An email from Purser to Eden, Savona, Arndt and Viers purported to record the substance of the conversation.[806] It stated that Mattiske had acknowledged receipt of the Cargill 22 October Letter and "declared *Glencore's* complete lack of knowledge of the matters raised" (emphasis added). Purser's email further stated that Mattiske had said that "together with Malleson's (sic) they would investigate and revert" to Cargill. Purser's account continued:

> He accepted that, if confirmed as true, the issues were *serious and unacceptable*. He had clearly spoken informally to [Hughes] and/or other employees but had not begun the formal investigation.
>
> He implied that they would ensure the practiced (sic) referred to would stop immediately – I restated our position in the letter that we need to know if that (sic) doing so *impacts the business in any way including profitability* and ability to meet *customer contract specifications*.
>
> *He promised to keep us informed* and revert when they have more information.
>
> (Emphasis added.)

1320 Mattiske gave evidence of having a telephone discussion with Purser on either 23 or 24 October 2013. He said that he told Purser that he did not really have enough time to do a proper investigation or to substantiate any of the statements the Joe White

---

805 See par 1555 below.

806 Purser said she took a note of the conversation, which she checked with Savona before sending the email. Savona did not cause any changes to be made to the note.

executives had made. Mattiske said he called Purser in good faith to tell her about the Operational Practices and was trying to help Cargill prepare for what it needed to do post-Completion.[807]

1321 In his evidence in chief, Mattiske was asked whether he would have made a comment that the issues were "serious and unacceptable" if established. Not only did Mattiske say he did not recall the comments, he gave evidence that they were not words he would ordinarily use. However, he also said Purser may have used these words. Nothing really turned on this. The contemporaneous record of the discussion indicated such a sentiment was conveyed and acceded to, regardless of who actually spoke the words.

1322 Mattiske gave further evidence that Purser did not mention anything about the profitability of the Joe White Business. When Purser was taken to her email during cross-examination, it was not put to her that her email on this point was inaccurate. In the circumstances where Purser's contemporaneous unchallenged note was in evidence, the only appropriate conclusion to draw was that Mattiske had forgotten this aspect of the conversation at the time he gave his evidence. In short, Purser's email reflected the best evidence of the substance of the conversation.

1323 At 6.00pm on 23 October 2013, Stewart received an email from Fitzgerald. Fitzgerald asked Stewart to meet with him that evening, together with Rees and Norman, to walk them through the Certificate of Analysis procedure. Stewart met with Fitzgerald and Rees later that night. Stewart's memory of this meeting was dim. He described it as a bit of a recap.

1324 Later, in the evening of 23 October 2013, Fitzgerald emailed Lindner, attaching the Viterra Certificate of Analysis Procedure.[808] The email stated:

---

807 Mattiske said he could not recall a telephone conversation with Purser other than the conversation he had with her during which he used prepared talking points: see par 1368 below. However, it is clear that a conversation took place before the talking points were finalised, as reflected in Purser's email: see par 1319 above.

808 This document was actually entitled "Viterra Malt Certificate of Analysis Generation Procedure". It recorded it was in the "Trim Folder CF/04/398 – Obsolete": see pars 284-292 above. Another email indicated Fitzgerald had emailed it to himself shortly before sending it to Lindner.

> As discussed. The Procedure discusses the sign off process if the [specifications] are outside of two standard deviation parameters.
>
> We are checking *whether this Procedure was in the [D]ata [R]oom* – we believe it was – so *they can hardly say they weren't aware of it*.
>
> (Emphasis added.)

Lindner said she could recall asking someone to check the Data Room to see if the document was there, but she could not remember what the outcome of that enquiry was.[809] Of course, it was not there. Further, neither Fitzgerald not Lindner appear to have made any reference to its "obsolete" status.

1325 The Viterra Parties submitted that it should be inferred, on reviewing the Viterra Certificate of Analysis Procedure, Fitzgerald did not understand the document to be recording "(if it were the fact, which is denied)", that Joe White was systematically acting in breach of customer contracts. It was further submitted that, if Fitzgerald had appreciated this to be the case, he would no doubt have raised the issue with Lindner, and also would not have assumed that the information had already been disclosed to Cargill. This submission made assumptions and invited inferences which, with some exceptions, were not established or reasonably open on the evidence.

1326 *First*, it assumed that Fitzgerald raised any material matter of which he became aware with Lindner. There was no evidence to that effect. Indeed, there was no evidence of Fitzgerald reporting to Lindner (or anyone else) the outcome of the search of the Data Room, which, materially, would have disclosed to Fitzgerald that the very document outlining the procedure at the centre of 1 of the key issues raised by Cargill had not been included in the Data Room.

1327 *Secondly*, it assumed that Fitzgerald reviewed the Viterra Certificate of Analysis

---

809 For completeness, later in her evidence she was asked whether she accepted that Fitzgerald should have disclosed the Viterra Certificate of Analysis Procedure to Cargill. Somewhat cryptically, she responded that she did not agree with the proposition and was not in a position to respond to it, but then added that she did recall "that particular matter being considered at the time". Precisely what was being referred to in giving this answer was not explored. Further, still later in her evidence she said that Pappas discussed with "the client" if any obligations arose under cl 13.8 of the Acquisition Agreement, but she was not sure to whom Pappas spoke or what the outcome of the discussion was. When the topic was touched upon subsequently, Lindner stated she had no recollection of the Viterra Certificate of Analysis Procedure being considered or being the subject of any advice.

Procedure. This assumption was undoubtedly correct. In his email, Fitzgerald was referring to an aspect of the document and making the salient point that Cargill could not complain about Joe White's conduct in relation to Certificates of Analysis if the documentation fully disclosing the nature of the conduct was contained in the Data Room. Undoubtedly, Fitzgerald would have been keen to know the outcome of the checking. Further, having discovered that the documentation was not included in the Data Room,[810] it must be inferred that Fitzgerald reviewed the Viterra Certificate of Analysis Procedure to properly understand what had not been disclosed as part of his investigations directed towards responding to Cargill's queries. Indeed, to have not done so would have been to have acted recklessly to the issues at hand.

1328 *Thirdly*, by this point in time, Fitzgerald had been informed that Joe White had been breaching customer contracts in various respects to a significant extent and, in some respects, routinely.[811] In these circumstances, at the very least Fitzgerald must have had more than a trivial doubt about whether supplying malt in accordance with the Viterra Certificate of Analysis Procedure was in compliance with customer contracts or whether the existence of the Viterra Certificate of Analysis Procedure meant specifications in customer contracts were being adhered to.

1329 *Fourthly*, the contents of his email disclosed that he and Lindner had been expressly discussing the contents of the Viterra Certificate of Analysis Procedure in relation to the sign-off process in circumstances where specifications were outside of 2 standard deviations. Self-evidently, this did not accord with what Fitzgerald and others had been told about the alleged standard industry practice allowing results within 2 standard deviations to be treated as compliant. Accordingly, the obvious inference was the document was being checked, at least in part, because this aspect of the procedure did not comply with what had been stated as being standard industry practice.

1330 *Fifthly*, there was no evidence to indicate that Fitzgerald was ever told about how often

---

810 The Viterra Parties' senior counsel accepted this inference concerning its absence from the Data Room was fairly open.

811 See pars 1281-1282, 1291-1292, 1295 above.

approval was given for malt to be shipped when a parameter was outside 2 standard deviations. In the absence of such information, it was not possible to draw any reasonable inference as to what Fitzgerald might have understood about the regularity or otherwise of the adoption of this part of the Viterra Certificate of Analysis Procedure.

1331 *Sixthly*, Fitzgerald was part of the drafting and approval process of the Viterra Parties' response to the Cargill 22 October Letter.[812] In relation to some talking points, before they were finalised an assertion that the relevant documentation was included in the Data Room was removed from a draft and did not form part of the final version.[813] Further, in circumstances where many material matters (of which Fitzgerald had been informed before the written response was sent) were omitted,[814] there was no proper basis to infer that Fitzgerald's failure to raise a matter must have been because of a lack of knowledge or notice.

1332 Accordingly, in the circumstances leading up to the evening of 23 October 2013, the inference to be drawn from the contents of this email, together with the fact that the Viterra Certificate of Analysis Procedure was not in the Data Room and Fitzgerald must have become aware of that fact, was clear. That is, Fitzgerald must have either appreciated or strongly suspected there was a real risk that customer contracts had not been complied with regarding the sign off of results and the related reporting in Certificates of Analysis, at the bare minimum whenever results were outside 2 standard deviations.

1333 Of course, it must be noted in this context that Fitzgerald was not called as a witness despite having a pivotal role in the period between 22 October 2013 and Completion of the Acquisition on 31 October 2013.

1334 In the early evening of 23 October 2013, Fitzgerald emailed Stewart, copied to Hughes, referring to a discussion they had had. Fitzgerald confirmed that some reports would

812 See par 1405 below.
813 See pars 1363-1365 below.
814 See annexure C to these reasons.

need to be created for the purpose of obtaining legal advice. Stewart was directed that if he communicated with any staff for the purpose of obtaining reports he was to ensure that all emails were marked that they were subject to legal professional privilege. Fitzgerald also requested that Hughes forward his email to all key persons who might be involved in the relevant discussions. Fitzgerald concluded the email by stating that there was a need to restrict email correspondence "on this topic" at that time. Hughes duly forwarded the email to Youil, Wicks, Jones and Dickie. In response to this, Jones dryly noted by email to Wicks and Dickie, "It's getting even better!".

1335 Also later on 23 October 2013, Stewart received an email from a production manager concerning barley varieties that had been packed. The production manager stated that he had been through all shipments packed for a particular week chosen at random and looked at the varieties that were packed for each customer in that week. It was recorded that Joe White had packed 13 shipments for a total of 3,194 tonnes. The email set out the varietal splits for each shipment. Bringing a sense of humour to the situation, but also perhaps reflecting the lack of regard for meeting customer requirements, the production manager stated:

> I noticed that we are reporting [Stirling] for [Asia Pacific Breweries] group. As far as I'm concerned Stirling is the town I grew up in. Other than this the *only customers where the variety matches the [Certificates of Analysis] are the ones where we don't report the variety*.
>
> (Emphasis added.)

1336 Consistent with the production manager's summation, the list indicated that the Asia Pacific Breweries plants that had been supplied that week were delivered varieties other than Stirling.

1337 Although Mattiske largely left the investigation process under the control of Fitzgerald, he also chose to make some limited enquiries concerning whether the Operational Practices were consistent with industry standards. He made a number of enquiries with barley traders within the Glencore and Viterra businesses.[815] The 3

---

815 Mattiske's evidence was that in particular he spoke to Wilson, Andrew Freebairn and Lyndon Asser; and "on the technical side" to Kevin Tidmas who was "our" export manager.

traders he spoke to said they did not know anything about the Operational Practices, but also said in substance that it was quite normal to blend barley of different grades within the same variety to meet an average blend for a customer contract.

1338 Mattiske gave evidence that, in response to 1 of his questions, he was also told by at least 1 of the traders that Vlamingh was a barley variety that might provide a solution. Mattiske was also told by 1 of them that they had researched approved varieties for Asia Pacific Breweries on the website and had found varieties that were listed as approved. Having been told this, Mattiske did not seek to verify the information with any of the Joe White executives. Further, Mattiske did not check to see what barley varieties were accredited by Grain Trade Australia as malting varieties as he did not know it was part of that organisation's function to publish a list of approved varieties.

1339 Mattiske gave evidence that he did not make enquiries of Stewart because he presumed that the Viterra traders were talking to Joe White, as they did on a daily basis as barley traders. Mattiske acknowledged that the traders were unable to give him any details of any contract between Joe White and its customers. When it was put to Mattiske that Stewart could have provided that information, Mattiske said he was uncertain about his role and thought Wicks would have been the relevant person. In any event, having obtained some information from Glencore's traders, Mattiske chose not to verify the information with any of the Joe White executives, or to ask Fitzgerald to do so.

1340 When Mattiske spoke to the Viterra export manager, who was responsible for preparing export documentation for sales to international customers and for dealing with laboratories, Mattiske was told that the export manager did not know whether adjusting Certificates of Analysis was standard practice or not, but thought it was reasonable to amend them within 2 standard deviations. Mattiske was told that this employee would follow the question up with a company that prepared documents and laboratory tests on behalf of Glencore and other companies. Mattiske was later informed that this company had said there were a lot of quality deviations in laboratory tests and it was reasonable to think a test could easily be out by 2 standard

deviations. However, this company was not sure about anything specific to the "malt barley industry", but it seemed reasonable to the company that the practice would occur.

1341 As a result of these discussions, Mattiske said he was not sure whether what had been told to Cargill by the Joe White executives about the Operational Practices was right or wrong. As to his state of mind at the time, he believed that providing "malt which was within 2 standard deviations of the actual test result" would be "completely legitimate".

1342 Notwithstanding the lack of knowledge of each of these employees of the subject of Mattiske's enquiries, Mattiske did not seek to enquire of any person in the malting industry as to whether or not the conduct alleged was in fact standard industry practice. Further, he did not direct Fitzgerald or any other person to make such enquiries.

1343 Despite the activity prompted by Cargill within Glencore, Viterra and Joe White, and Mattiske's assurances given to Cargill, pencilling was continuing to take place within Joe White. As an example, a Sign-Out Report for Nestlé dated 23 October 2013, corresponding to a Certificate of Analysis, demonstrated evidence of the conduct.[816] The Sign-Out Report reflected the pencilling of no less than 14 separate specifications. These included where the customer's maximum or minimum tolerances had been exceeded or not reached, the pencilling simply altered the result so that it was reported that the relevant specifications had been satisfied. The Sign-Out Report was signed by Stewart in his capacity as general manager, technical, on 23 October 2013. Despite having the Cargill 22 October Letter drawn to his attention by Hughes on either 22 or 23 October 2013, Stewart gave evidence that he did not seek to withdraw this Certificate of Analysis "because as an employee of Viterra Malt [he] followed the appropriate procedures".

1344 On 24 October 2013, Purser and Mattiske had a further call. As a precursor to this, a

816 The estimated time for delivery recorded in the Certificate of Analysis was 24 October 2013.

first draft of talking points for use by Mattiske during the call was prepared by Mallesons and sent by Lindner to Fitzgerald in the morning of 24 October 2013. Mattiske gave evidence the document was drafted by Mallesons in conjunction with "our internal legal team … led by Fitzgerald".

1345 This first draft of the talking points stated that Glencore had "commenced enquiries" in relation to the Operational Practices, and relevantly stated the following:

- Your concern around the plant not being sufficient to meet the specifications set out in customer contracts is unfounded. *We have confirmed that the plant is adequate to deliver malt that meets customer specifications*.

- *The certificate of analysis issue can be explained by differences between labs and standard variation in testing*.

  - ***Differences between labs***:

    - It is well known and understood within the industry that laboratories have analytical errors. For example, a sample may test as a 12 at [Joe White's] lab, but test as a 10 at Cargill's lab. [Joe White] is aware of these errors *as they are discussed with customers* and also because there is a published program known as [*the Malt Proficiency Scheme*] which details these errors. The *[D]ata [R]oom contained information on [the Malt Proficiency Scheme]*.

    - We now understand from the management team that the practice referred to in your letter involves [Joe White] including on the certificate the specification that the sample would have if tested in the customers' lab rather than the specification it had when tested in [Joe White's] lab …

  - ***Standard variation in testing***:

    - I also understand that when [Joe White] blends barley there is some variation in the results every time the test is repeated. This is well understood in the industry. Given the variation, provided the variation is within an acceptable range, [Joe White] does certify that the specifications are met. But the variation is to be expected and is not significant.

- Hopefully this background has been helpful and provide[s] reassurance that there is an explanation for the certificates being issued as they are and that the (sic) there is *no question* about the plants' ability to deliver malt that *meets customer specifications*.

- In relation to the practice of substituting barley varieties, as we understand it [Joe White] has *at all times* supplied malt that *meets customer specifications* and in doing so [Joe White has] conducted their business in accordance with industry practice.

- In relation to [gibberellic acid], it appears that *from time to time [gibberellic acid] has been included when it should not have been. But we understand that it is very hard to detect and as far as we are aware no customer complaints have been received.*

(Emphasis added.)

1346 Mattiske gave evidence that he understood this draft had been based on information provided to Fitzgerald in the interviews held with Joe White executives, and reflected the instructions Fitzgerald had been given. As to the last of the points raised, under cross-examination Mattiske accepted he knew at this time that gibberellic acid was being used as part of the malting process for customers who had prohibited its use as an additive. Although he said he could not recall reading the last sentence, Mattiske agreed it was not good or ethical business practice to do something that deceived a customer, particularly where the detection of what was occurring was difficult.

1347 Mattiske did not recall asking any questions about the Malt Proficiency Scheme or being told it was not the applicable policy. Mattiske was not aware of the Viterra Certificate of Analysis Procedure at this time.

1348 When asked whether the sentence referring to Joe White being aware of errors and discussing them with its customers conveyed to him that the Certificate of Analysis process was disclosed to customers, Mattiske said he did not recall thinking too technically about that. Then, entirely non-responsively, Mattiske volunteered that he understood "customers would be doing their own testing" to make sure they were happy with the quality of the products they were getting. However, as Mattiske conceded, this understanding was not based on any information provided by Joe White's executives or, as far as he could recall, Fitzgerald. Mattiske said it did not occur to him to ask whether Joe White's customers were not rejecting the malt delivered because they were ignorant of what was occurring.

1349 Mattiske accepted that the draft talking points referred to Certificates of Analysis recording specifications as they would have tested in a customer's laboratory, but said nothing about the practice of altering the test results.

1350 The talking points went through a number of revisions. Mattiske said he did not spend a lot of time reviewing the drafts.

1351 In response to the email attaching the original version of the talking points document, at 10.10am on 24 October 2013, Mattiske sent an email entitled "Ballarat: Talking points for call with Cargill" to Fitzgerald and Lindner, copied to Pappas, in which he sought to contribute to the talking points:

> To clarify, we will still close on the 31st October. And will proceed to this effect.
>
> Can we strongly say we have not had any rejections from our customers and that all deliveries have been accepted by customers and there are no claims outstanding.
>
> [Joe White] management are of the firm opinion that all transactions are considered standard industry practice over the 100 + years of operation.

1352 The first revisions were made by Stewart and emailed to Fitzgerald at 10.28am on 24 October 2013. In the email, he described his changes as small, and stated that the sentiment was fine. Critically, in the context of barley varieties, Stewart suggested deleting the word "specifications" and replacing it with "needs" in the seventh dot point extracted above, so that it read:

> - In relation to the practice of substituting barley varieties, as we understand it [Joe White] has at all times supplied malt that meets customer ~~*specifications*~~ *needs* and in doing so [Joe White has] conducted their business in accordance with industry practice.
>
> (Emphasis added.)

Mattiske said he did not ask about this change and did not recall spending any time considering the difference. Mattiske said he understood at the time that Joe White was talking to its customers about what they needed. However, he acknowledged that he did not know what Joe White was talking about with its customers. Mattiske also gave evidence he did not recall asking any questions about whether customers had agreed to substitute a particular type of barley for another. Further, he could not explain why he did not, given it was a fundamental question he needed to ask to understand whether there was a problem.

1353 As for Stewart, he said the change was his recommendation as he "knew that it was

not the practice of [Joe White] … to meet customers' specifications" and, being "conscious of this disconformity", he made the amendment to "reflect exactly how Joe White was operating". He said, in this context, "needs" was referring to the needs of the customers in Stewart's assessment to produce beer within specification.[817] He did not discuss the change with Mattiske or Fitzgerald. Under cross-examination, Stewart agreed it was a watering down of the wording and avoided the real fact that the specifications were not being complied with. He acceded to the proposition that a good description of the making of this amendment was an "elision".

1354 At 10.35am, Fitzgerald sent an email to Rees and Norman, stating he attached the latest version, after discussion with Norman. He stated he needed to check the contents of the last paragraph. An hour or so later, Fitzgerald sent an email to Lindner, Pappas and Mattiske, attaching a further version of the talking points, marked up for a discussion at midday.

1355 The third version of the talking points contained significant revisions. Underneath the heading "Differences between labs", the following third dot point was added:

> • It is also worth noting that this process is documented in [Joe White]'s quality system which is ISO accredited. There are documented authorisation levels and the whole procedure is a controlled open process. The documentation explaining this was available in the [Data Room] during the due diligence process.

Under cross-examination, Mattiske said he was not aware of any specific documents relating to the Certificate of Analysis procedures. Upon acknowledging this passage put him on notice that procedures were documented, he gave evidence that he did not ask to see the relevant document. Further, he did not know that the document being referred to and the Certificate of Analysis procedure it contained were hidden from auditors of the International Organisation for Standardisation. And to repeat, it was

817 Stewart had a very broad understanding of what he meant by customer's needs. It was subsequently clarified that when Stewart referred to meeting customers' needs, he included within the meaning of that phrase malt that was supplied even in breach of contract, for example by using gibberellic acid when it was prohibited, provided the beer ultimately produced by the customer was within specification.

incorrect to state that the documentation explaining the "controlled open process" was in the Data Room.

1356 The end of the third version of the talking points also contained significant additions and revisions to the final dot points in tracked underlined changes, including those contemplated by Mattiske's email.[818] Following these revisions, the end of the third version read as follows:

> - In relation to the practice of substituting barley varieties, as we understand it [Joe White] has at all times supplied malt that meets customer ~~*specifications*~~ *needs* and in doing so [Joe White] have conducted their business in accordance with industry practice. There are times when, due to supply issues within the Australian barley market, like varieties have been used to satisfy customer needs – this has in no way compromised the quality of malt being produced and the malt has been accepted by customers without complaint.
>
> - In relation to [gibberellic acid], a small number of [Joe White] customers have requested that [gibberellic acid] not be used in the malting process – for those customers where it is clear that this is important to them then [gibberellic acid] has not been used. For a small number of other customers where this is not a high priority [gibberellic acid] has been used to ensure orders were filled. ~~It appears that from time to time GA3 has been included when it should not have been. But we understand that it is very hard to detect and as far as we are aware no customer complaints have been received.~~ Once again, there have not been any customer complaints and if we believed that this would be a significant issue for the customer it would not have been done.
>
> It is important to note that [Joe White] manages each of its customer's expectations carefully and there have never been any rejections by customers due to the issues raised in your letter. [Joe White] management have also made it clear that they operate within parameters that are consistent with accepted industry practice.
>
> (Additions underlined.)

1357 Despite Mattiske advocating the inclusion of a reference to the lack of complaints Joe White had received from customers, he made no enquiry about whether customers had been informed about the fact that barley varieties were being substituted, or whether the lack of complaint arose from an ignorance of what was occurring. He gave evidence that he simply did not know if the customers had been informed.[819] On

---

818 See par 1351 above.

819 Both earlier and later in his evidence, Mattiske was not so unequivocal. When first asked under cross-

the question of Mattiske's understanding concerning Joe White's customers' knowledge of the Operational Practices, and his attitude towards having a proper understanding, the following exchange during his cross-examination was informative:

> And it's your evidence your investigation or the 1 that you caused to be undertaken was thorough and searching?---I believe at the time the investigation was sufficient given the size of the issue we thought it was at the time.
>
> Just in that context explain to his Honour again, would you, why you didn't ask any of the [Joe White] executives whether the practices had been disclosed to customers or not?---Because the customers appeared to be very happy and quite accepting of the quality of malt they had been getting; there hadn't been any issues.
>
> They were happy in their ignorance of what was going on?---I don't know.
>
> You didn't even bother to find out whether [Joe White's] customers knew or not, did you?---No, I didn't.
>
> And yet you say to his Honour that because there was no complaint from the customers, without even knowing whether they knew anything, you drew comfort from that?---Absolutely, yes, I did.

A little later in his evidence, Mattiske said he had a belief that Joe White's executives were actively talking to Joe White's customers, and while he did not know explicitly what they were being told "I *guess* I believed that the customers were *generally* aware of those [Operational Practices]" (emphasis added).

1358 As to the sentence struck through in the third version relating to gibberellic acid, Mattiske gave evidence that he did not recall why it was deleted, or if he asked for it to be deleted, but he did not believe so. He did not recall whether he noticed the

---

examination, Mattiske said he did not know what Joe White was telling its customers about altering Certificates of Analysis and was not aware of whether Joe White was making alterations without the knowledge of customers. When it was put to Mattiske that he did not even ask Hughes whether customers were aware of the practices occurring, notwithstanding his earlier answers, Mattiske stated that he thought in general terms Hughes said that customers were aware of "these industry practices, generally" but that he did not "recall the exact conversations we had at the time. It was certainly inferred". In addition to this vague and conclusory evidence (there were other similar accounts given by Mattiske), later during the cross-examination Mattiske gave evidence that he may have had a discussion on the topic of whether customers had been informed about substitution of barley varieties with Fitzgerald, but he could not recall. In summary, when Mattiske's evidence was considered as a whole, there was no probative evidence that he ever had a discussion with anyone in which he asked whether customers knew about each of the Operational Practices, or any practice related to them: see further par 1535 below.

change at the time, and could not recall discussing specific changes with Fitzgerald. When asked whether he had discussions about the drafts, Mattiske said he would have, but he did not recall. Having answered the question, Mattiske continued to give evidence, stating Fitzgerald was getting the points "fact-checked by everybody that needed to check it".

1359 In relation to the last added paragraph, Mattiske said a statement to this effect was what he wanted to be included. However, he conceded he was not familiar with the industry practice being referred to, and said that was why Joe White's management was referred to as part of the comment.

1360 At around midday on 24 October 2013, Lindner and Mattiske discussed by telephone the contents of the talking points. Mattiske did not recall being involved in any discussion about whether to make or accept the amendments then proposed, or any discussion considering the effect of those amendments. His involvement cannot be doubted.

1361 Immediately after this telephone call, Lindner sent an email to Mattiske, copied to Fitzgerald and Pappas, referring to the call and attaching both a marked-up and a clean version of the talking points.[820]

1362 The fourth draft of the talking points contained 2 further changes.

1363 *First*, the sentence inserted in the third version, "The documentation explaining this was available in the [Data Room] during the due diligence process", was deleted. Mattiske said he had no recollection of any discussion as to why this was deleted. He said he took no steps personally to check the underlying documents because he was relying on his "team" to make sure the talking points were accurate. Further, Mattiske gave evidence he did not recall having anything to do with what was in the Data Room.

1364 Mattiske also gave evidence that he probably did ask whether any documents relevant

---

820 This email was also forwarded to Glencore's in-house counsel, Matthew Weber, and others at Glencore.

to the practices were included in the Data Room, but he did not recall. Shortly after giving this evidence, Mattiske said he could not recall why he did not ask whether the documentation was in the Data Room. Mattiske then said he recalled asking Fitzgerald and Rees about "what was or wasn't disclosed about those practices in the [D]ata [R]oom, and neither of them were sure". Mattiske then changed his evidence yet again, saying he could not recall whether he asked or whether it was volunteered, but he did recall a discussion about what was disclosed in the Data Room.

1365 In the absence of any direct evidence on the point, it must be inferred that someone involved in the settling of the fourth draft of the talking points could not, at the very least, be satisfied that the relevant documentation had been included in the Data Room. Much more likely, given both the issue had been squarely raised and the simplicity of the task of checking, together with Fitzgerald stating the matter would be checked,[821] was that Fitzgerald (and probably also someone under his direction) realised the relevant documents were not in the Data Room. That this occurred is made even more likely by the fact that the talking points specifically stated, correctly, that the Malt Proficiency Scheme was actually in the Data Room, and made no reference directly or otherwise to the Viterra Certificate of Analysis Procedure or any other document. Indeed, the reference to the "documentation explaining" the "authorisation levels and the whole procedure" was consciously deleted.

1366 *Secondly*, the dot point relating to gibberellic acid underwent the following revision:

> - In relation to [gibberellic acid], ~~a small number of [Joe White] customers have requested that GA3 not be used in the malting process – for those customers where it is clear that this is important to them then GA3 has not been used. For a small number of other customers where this is not a high priority GA3 has been used to ensure orders were filled. Once again, there have not been any customer complaints and if we believed that this would be a significant issue for the customer it would not have been done.~~ it appears that from time to time [gibberellic acid] has been included when it should not have been. However, I am not aware of any complaints or claims in relation to this.

Mattiske said he did not recall reading these amendments.

---

821 See par 1324 above.

1367 The above revision in relation to gibberellic acid brought the document largely in line with the original draft, aside from the final sentence with the reference to the difficulty of detecting gibberellic acid having been removed.

1368 The final version of the talking points reflected all the changes proposed in the fourth version and read as follows:

> - I am calling in relation to your letter of 22 October. Further to our discussion yesterday, we have commenced our internal enquiries in relation to the 3 practices noted in your letter.
> - Your concern around the plant *not being sufficient to meet the specifications set out in customer contracts is unfounded*. We have confirmed once again with the malt management that the plants are adequate to deliver malt that *meets customer specifications*.
> - The certificate of analysis issue can be explained by differences between labs and standard variation in testing.
>
> - ***Differences between labs***:
>
> - It is well known and understood within the industry that laboratories have analytical errors. For example, a sample may test as a 12 at [Joe White]'s lab, but test as a 10 at Cargill's lab. [Joe White] is aware of these errors *as they are discussed with customers* and also because there is a published program known as [the Malt Proficiency Scheme] which details these errors. *The [D]ata [R]oom contained information on [the Malt Proficiency Scheme].*
>
> - We now understand from the management team that the practice referred to in your letter involves [Joe White] including on the [Certificate of Analysis] the specification that the sample would have if tested in the customers lab rather than the specification it had when tested in [Joe White]'s lab. For example, the certificate would say 10 instead of 12. When issuing the [Certificate of Analysis Joe White] is taking into account the analytical error.
>
> - It is also worth noting that this process *is documented* in [Joe White]'s quality system which is *ISO accredited*. There are *documented* authorisation levels and the whole procedure is a *controlled open process*.
>
> - ***Standard variation in testing***:
>
> - I also understand that when [Joe White] blends malt there is *some variation in the results* every time the test is repeated. *This is well understood in the industry*. Given the variation, *provided the variation is within an acceptable range, [Joe White] does certify that the specifications are met*. But the variation is to be expected and *is not significant*.

- Hopefully this background has been helpful and provide[s] reassurance that there *is an explanation for the [Certificates of Analysis] being issued as they are* and that the there is *no question about the plants ability* to deliver malt that *meets customer specifications*.

- In relation to the practice of substituting *barley varieties*, as we understand it [Joe White] has at all times *supplied malt that meets customer needs* and in doing so [Joe White] *have conducted their business in accordance with industry practice*.[822] There are times when, due to supply issues within the Australian barley market, like varieties have been used to satisfy customer needs – this has in *no way compromised the quality of malt being produced and the malt has been accepted by customers without complaint*.

- In relation to [gibberellic acid], it appears that from time to time *[gibberellic acid] has been included when it should not have been*. However, I am not aware of any complaints or claims in relation to this.

- It is important to note that [Joe White] manages each of its customer's expectations carefully and there have never been any rejections by customers due to the issues raised in your letter. [Joe White] management have also made it clear that they *operate within parameters that are consistent with accepted industry practice*.

(Emphasis added.)

1369 Mattiske gave evidence at trial that although he could not recall "in what order or how" he ran through the matters in the talking points with Purser, he would have had the notes in front of him when making the call. When asked specifically about whether he told Purser Joe White had met customer needs with respect to barley varieties, Mattiske said he would have said something along those lines. Further, although Purser only had a general recollection of this conversation, her evidence was not inconsistent with the talking points.

1370 In addition, Mattiske repeated to Purser he was unaware of any practices as identified by Cargill before 22 October 2013.[823] Mattiske gave evidence that he told Purser that Glencore did not have time to do a proper investigation, and that all Glencore's investigations had been based on interviews with Joe White's executives. When it was suggested to Mattiske during cross-examination that it was within his power to cause enquiries to be made to analyse the extent of the 3 practices, which customers they related to, what percentage of sales they represented, and a thorough analysis,

822 Compare par 1395 below.
823 See par 1234 above.

Mattiske agreed, but then suggested it would have taken months. When challenged about the length of time it would have taken, Mattiske immediately acknowledged he was not sure how long it would have taken, but said he did not think it could have been done in the available timeframe. Mattiske said further he was focused on the solution and did not believe he needed to know the size of the problem to find a solution.

1371 In any event, I find that, in substance, Mattiske stated each of the matters set out in the final version of the talking points. The intention of preparing the document was for him to convey each of the points, and nothing in Mattiske's evidence suggested he did otherwise.

1372 In response, Purser told Mattiske Joe White's conduct was unacceptable and a major issue. She stated that Cargill was maintaining all its rights. Purser further stated that Cargill took offence at the notion that the conduct identified was standard industry practice.[824] She told Mattiske that Cargill would not engage in such conduct. Mattiske gave evidence that he believed he responded by saying that Glencore honoured its contracts and that, if Joe White was acting outside customer contracts, then Glencore would not condone this. Purser said she wanted a written response to the Cargill 22 October Letter. She also gave evidence that, at that time, she considered that, if the alleged conduct were true, then it was a serious matter.

1373 A comparison between the final talking points and the matters that Hughes, Youil, Wicks and Stewart told Fitzgerald during the interviews on 23 October 2013 demonstrated the significant difference between what Cargill was told and what the executives told Glencore and Viterra as part of the investigation. Without being exhaustive, Cargill was not informed of the following matters stated by 1 or more of

824 An interesting feature of this case was that there was no issue that Cargill's stated position to the Viterra Parties in October 2013 was that the Operational Practices were not standard industry practices. Further, despite Purser being the conveyor of Cargill's position, during her cross-examination it was never put to her precisely what the Viterra Parties contended were standard industry practices. Furthermore, Purser's evidence was that she had no knowledge of the suggestion made to her during cross-examination that Cargill was aware of the Operational Practices before the Acquisition Agreement was entered into.

the Joe White executives interviewed:[825]

(1) Joe White was always struggling to meet customer specifications.

(2) Brewers' malt requirements were almost impossible to achieve.

(3) It could not be stated with certainty whether Cargill had purchased a business that could not be delivered.

(4) Specifications were often outside customer contracts.

(5) Hughes did not take exception to a question referring to wrong certificates being issued.

(6) There were *some* open communications with customers regarding the practices (but also see subparagraphs (17), (19), (20), (26), (27), (28), (32) below).

(7) Stewart had no idea of the legal implications of stating a result in a Certificate of Analysis when the laboratory result was different.

(8) If Joe White were required to comply with customer specifications it would create a reputational risk.

(9) Breaches of contract with Joe White's customers were a reputational risk.

(10) If Joe White had to supply malt in accordance with customer contracts it would result in commercial suicide and Joe White's brand would be decimated.

(11) There was legal exposure on legal day 1 if the wrong barley varieties could not be used.

(12) Applying Cargill's model would be difficult.

---

825 A similar list of the comparison, which includes a comparison of the 25 and 30 October Reply Letters (see pars 1405, 1512, 1524 below), is to be found in annexure C to these reasons.

(13) Joe White was trying to buy barley as cheap as possible.

(14) It had been suggested that Cargill knew of "industry practice" and wanted to know how Joe White approached the issue.

(15) Joe White was required to source cheaper barley and up until March 2014 would not always have barley available which could mean big monetary losses.

(16) Youil did not know if customers were aware of Joe White's approach.[826]

(17) If Joe White were required to source the correct barley varieties overnight, Joe White would possibly need to pay more or fail to satisfy obligations under customer contracts.

(18) Joe White did not knowingly communicate the substitution of different barley varieties to customers.

(19) Joe White guessed what the customer wanted and acted accordingly rather than telling the customers.

(20) It was difficult to get the required barley.

(21) Glencore did not supply Joe White with the required barley varieties.

(22) Joe White was getting bad barley from Glencore.

(23) Provision of bad barley eroded Joe White's ability to meet customer specifications.

(24) If Joe White was required to use the correct barley varieties, there may be delays with shipments.

(25) Joe White did not communicate with its customers around contracts.

826 From the notes it was not clear to what this was referring: see fn 788 above.

(26) Joe White had been breaching customer contracts by using barley inconsistent with the contracts and not telling the customers.

(27) Gibberellic acid was used at all of Joe White's plants routinely when it should not be used.

(28) Gibberellic acid was used to drive capacity.

(29) Gibberellic acid was used about 20 percent of the time when it should not have been.

(30) Specifications were often outside customers' contractual specifications.

(31) Whilst Heineken and Sapporo conducted audits, they would not know about the use of gibberellic acid.

(32) The use of gibberellic acid was a reputational risk, which was twice as big an issue when the customer required its malt be additive free.

1374 To be clear, there was no evidence to suggest that each of the matters identified in the previous paragraph were actually conveyed to Mattiske. Indeed, in light of his responses both orally and in writing to Cargill, it was likely that they, or at least many of them, were not. Exactly how the various statements of the Joe White executives were reconciled and why they were filtered in the manner that they were was not clear on the evidence, particularly in light of the fact that none of Fitzgerald, Norman, Rees or Hughes were called to give evidence and Lindner's recollection of this issue was almost non-existent.[827]

1375 On the evidence that was available, it seemed that Fitzgerald was the representative of Viterra, also acting on the instructions of Glencore, who was co-ordinating the information and determining the message that ought to be conveyed to Mattiske for the purpose of responding to Cargill.[828] Alternatively, it may have been that there was insufficient rigour in the reporting process so that, through inadvertence or lack of

827 See par 1384 below.
828 See par 1248 above and par 1384 below.

care, material matters were not brought to Mattiske's attention. Viewed objectively, there could have been no basis to conclude that the matters that had been relayed to Fitzgerald were insignificant and therefore need not have been communicated to Mattiske. Many matters apparently not told to Mattiske were highly material to the queries that had been raised. That said, in fairness to Fitzgerald and others who reported to Mattiske, it would not be sound to draw a conclusion too firmly on these matters based on Mattiske's evidence. His recollection of some of the conversations he was involved in at the time was either non-existent or far from reliable.

1376 At 2.30pm on 24 October 2013, Mattiske sent an email to Lindner, Fitzgerald and Pappas, stating that the conversation with Purser was "ok" and that she had requested a written response be provided. Mattiske stated that, during the conversation, he confirmed various matters, including that the changes to the Certificates of Analysis were within the "approved document process" of the International Organisation for Standardisation and referred to in the Malt Proficiency Scheme. His email referred to barley varieties and gibberellic acid, and on both topics stated there had been no claims or disputes. With respect to gibberellic acid, he referred to it being used for customers who specifically excluded it, and said Hughes had confirmed this had now stopped. Mattiske did not refer to any such confirmation of cessation with respect to barley varieties.[829]

1377 He said in his email that he mentioned Completion "about 3 times" and the fact that 31 October 2013 was very close, and Purser gave no indication of an intention to defer. Pappas responded, stating it looked like a good outcome. Mattiske gave evidence that he raised the issue of Completion because of the logistics involved, and not because he had any concern about whether Cargill would complete.

1378 Purser sent an email to Eden, Viers and Savona summarising the telephone discussion with Mattiske.[830] The email, the accuracy of which Purser confirmed in her evidence, referred to Mattiske confirming Glencore had been involved in investigating the

829 See par 1390 below.

830 The email was sent on the following day.

points raised in the Cargill 22 October Letter. The email recorded the main points Mattiske relayed as:

> (1) [Joe White] employees are adamant that the plants are capable of producing the qualities contractually sold to customers.
>
> (2) The policy around how they manage quality certificates *was disclosed in the Data Room in the [Malt Proficiency Scheme] documents*.
>
> (3) All quality issues are *fully and properly documented*.
>
> (4) All testing procedures are within industry standards.
>
> (5) [Joe White] has not received any quality complaints from [its] customers – most of whom [Joe White has] very long relationships with.
>
> (6) [Joe White] has "occasionally" used [gibberellic acid] when supplying malt to customers that have requested that it not be used. He implied the customers were implicitly aware of this although they required the [Certificate of Analysis] saying it had not been used. He said *the practice would stop immediately*.
>
> (7) [Joe White] has sometimes been unable to source a specific barley variety required by a customer because it was unavailable in the market. In such cases they would source and use a variety with the same technical [specifications]. The *customers might be aware* but the process was *not documented*.
>
> (Emphasis added.)

The email also recorded Mattiske's stated belief that while a couple of Joe White's practices needed tightening up, there was no fundamental issue. Mattiske also repeated that Glencore had been completely unaware of the practices. In her evidence in chief, Purser said that she could not recall the exact words, but that Mattiske told her that Joe White's plants were able to produce to the required specifications, that the

testing standards were as expected and that as a result of the conversation she believed the problem was not that severe.[831]

1379 In closing submissions, the Viterra Parties noted that the email had not been put to Mattiske during his cross-examination. Little, if anything, arose from this fact. After giving evidence her email was accurate and the email having been tendered, Purser was not taken to this document during her cross-examination. In the circumstances where the contents of the email was not put in issue with Purser, the decision not to cross-examine Mattiske on its contents was perfectly understandable.

1380 There are a number of observations to make about what Mattiske said to Purser. *First*, all the Joe White executives were not adamant Joe White's plants were capable of producing malt of the quality contractually agreed to be sold to its customers. Quite the contrary.[832] *Secondly*, not only were the policy or procedures around managing Certificates of Analysis not disclosed in the Data Room, but neither the Viterra Certificate of Analysis Procedure nor the Malt Blend Parameters Procedure was referred to by Mattiske. Further, the Malt Proficiency Scheme document (which was in the Data Room and was referred to) did not disclose the Operational Practices. Rather, what was disclosed merely represented a component of some of the procedures concerning Certificates of Analysis, but the manner in which it did so could not be discerned from the Malt Proficiency Scheme document itself. *Thirdly*, Mattiske had obviously been informed that there were documents available which disclosed "[a]ll quality issues". *Fourthly*, Mattiske was sufficiently concerned about the use of gibberellic acid contrary to customers' instructions to direct it must stop immediately. Further, Purser understood from what Mattiske said that a level of

---

831 The Viterra Parties submitted it should not be found that Mattiske said words to the effect that there was no fundamental issue because the effect of Purser's evidence was that that was the impression Purser formed, and it was not the evidence of what was said. This submission is rejected for a number of reasons. The contemporaneous email recorded that Mattiske's belief was "there was no fundamental issue" in the context where she was purporting to record what he had said. (The fact that the words "he told me" do not preface the relevant statement does not detract from the relevant context.) Further, the proposition that Mattiske did not say these words was not put to Purser. Furthermore, her evidence of her belief was entirely consistent with the words having been spoken. Finally, it is highly likely Mattiske would have said words to that effect; it was consistent with the message that was being conveyed by the Viterra Parties at that time: see par 1405 below.

832 See, for example, pars 1280, 1281, 1291, 1292, 1297, 1299, 1307 above. Compare par 1306, but, obviously, Joe White did not have the "right barley" for all its customers.

misreporting had been involved. *Fifthly*, with respect to the use of unauthorised barley varieties, Mattiske could only say that customers "might" be aware; in short, he did not express any belief that they were aware. He also appreciated the practice was not recorded in any written policy or other document. Further, in contrast to the prohibited use of gibberellic acid, he gave no assurance that the Varieties Practice would stop.

1381 Lindner sent a first draft of the proposed response as an attachment to an email to Fitzgerald, copied to Pappas and Mattiske, at 4.38pm on 24 October 2013. This draft of the letter stated:

> Dear Philippa
>
> I refer to your letter dated 22 October 2013 and our subsequent discussions on 23 October 2013 and 24 October 2013. As discussed, *Glencore* was surprised by your letter and had no knowledge of [Joe White] engaging in the practices referred to. *Glencore has since made inquiries of [Joe White] management* and can advise as follows:
>
> 1. **Issuing certificates of analysis to customers which represent that malt supplied to the customers met with particular specifications where the malt supplied did not meet those specifications**
>
>   We understand that you are concerned that the plant is not sufficient to meet the specifications set out in customer contracts. *This concern is unfounded*. We have confirmed that the *plants are adequate to deliver malt that meets customer specifications*.
>
>   [Joe White] *issues certificates of analysis in compliance with its ISO accredited quality system*. It is well understood within the industry that variations exist between labs and arise when the same sample is repeatedly tested within the same lab. The *discrepancy referred to is within tolerances permitted by the ISO certified quality system*.
>
> 2. **Supplying malt to customers which has not been produced from the specific barley varieties required by those customers**
>
>   *There have been instances* where barley other than that specified in a particular contract has been used. However, *the malt delivered has, as far as we are aware, always met the technical specifications* required by the customer. We are *not aware of any complaints* or claims from customers about this.
>
> 3. **Supplying of malt to customers which had been produced from a malting process that involves the addition of gibberellic acid (GA3), where those customers require that GA3 not be used in the production of malt supplied to them**
>
>   *There has been non-compliance* with customer requirements around GA3. However, we are *not aware of any complaints* or claims in relation to this.

> [Joe White] manages each customer's expectations carefully and as far as we are aware no customer has ever rejected malt due to the issues raised in your letter. The senior managers of [Joe White] have made it clear that *they operate within parameters that are consistent with industry practice*. (Given this and the short time between now and completion, we don't propose to introduce changes to the processes and procedures of [Joe White]. We believe that it would be more appropriate for Cargill to consider what (if any) changes are required once it takes control.)
>
> (Emphasis added.)

1382 At 5.02pm on 24 October 2013, Lindner sent a further email to Mattiske, copied to Pappas and Fitzgerald, that attached a second draft of the letter "incorporating [Fitzgerald]'s comments".

1383 Lindner sent an email to herself on the evening of 24 October 2013.[833] It recorded a conversation she had had with Fitzgerald that afternoon concerning the proposed response. Lindner recorded that in that conversation she asked Fitzgerald whether there was any risk that the "responses under headings [numbered] 2 and 3 could be considered misleading on the basis that they understated the frequency of the practices referred to". Lindner's note recorded:

> Subject to making the amendments in the attached revised draft emailed to [Mattiske], [Fitzgerald]'s view was that the responses were not misleading.

1384 Although Lindner said she could not recall the specific conversation with Fitzgerald, she gave evidence that she discussed her concerns with Fitzgerald and she was "satisfied with where we landed". She said that neither herself nor Pappas had verified anything and that they were being very mindful of the specific words being used.

1385 The Viterra Parties submitted that this exchange demonstrated that the Viterra Parties were determined not to mislead Cargill and to do their best in the circumstances, including the tight timeframe. This submission overstated the position. It was clear that Lindner was conscious that there might have been a risk that the responses concerning unauthorised barley varieties and gibberellic acid were misleading in light

833 The email Lindner sent herself attached both the email she sent to Fitzgerald at 4.38pm on 24 October 2013 and the email she sent to Mattiske at 5.02pm on the same day.

of her understanding of the frequency of the relevant practices. In the absence of any evidence about what Fitzgerald said to her to alleviate her concerns, it would not be plausible to find that her state of mind after her discussion with Fitzgerald exhaustively reflected the state of mind of each of the Viterra Parties, or even that her state of mind was necessarily consistent with others acting for or on behalf of the Viterra Parties.

1386 Shortly after, Mattiske made a suggestion with respect to the paragraph numbered 3 in the draft. He asked Lindner to add that Joe White management had confirmed that they were able to produce the required customer specifications without adding gibberellic acid. He also asked for the last sentence in brackets to be removed on the basis that he did not want to "infer anything at this stage". On the draft being amended by Lindner as directed, Mattiske said he would discuss it with Glencore Grain BV[834] overnight.

1387 Also in the late afternoon on 24 October 2013, Stewart sent an email to Fitzgerald, copied to Hughes. Stewart stated the email contained the information requested for barley variety use and additive free malting, and that it was subject to legal professional privilege. The attachment entitled "Barley Use and Additive Free Malting" provided a snapshot of Joe White's position. Stewart stated a survey had been conducted of barley varieties used across Joe White's plants for the week of 9 to 15 September 2013. Stewart stated: "Compliance to the correct barley variety is expressed in the table below". That survey revealed an average compliance rate of 74 percent. Some plants were well below this level, with Port Adelaide only complying 42 percent of the time, Perth complying 60 percent and Sydney 68 percent. Stewart observed that the off-specification barley usage was in line with the "Transformation Project targets".[835]

---

834 Glencore Grain BV was the head company of Glencore's grain business.

835 The Viterra Parties submitted the attachment was unclear as to its meaning. It was suggested the percentage figures Stewart provided may have reflected the percentage of total barley used that was the correct variety, or they may have reflected the percentage of shipments in respect of which there was some level of non-compliance with the customer's specified varieties. In my view, the plain words used, being "Compliance to the correct barley variety" and "Compliance to Barley Variety" have the

1388 Consistent with the Key Recommendations Memorandum circulated on 21 October 2013,[836] Stewart estimated a loss in production of around 14,000 tonnes, or 2.5 percent, if "the appropriate malt quality" was to be achieved without using exogenous gibberellic acid where prohibited. Stewart expected these figures would decrease as new varieties became available, as it was anticipated they would have higher levels of vigour.

1389 Stewart gave evidence the email was forwarded to Fitzgerald following a request from Fitzgerald at a meeting on 23 October 2013.[837]

1390 Pausing here, Mattiske gave evidence that "[o]n or prior to 24 October 2013" he had at least 1 further conversation about the Cargill 22 October Letter with Hughes, and possibly others, but he could not recall the specific details. However, Mattiske did recall telling Hughes in the conversation or conversations that "the practices" needed to stop immediately. According to Mattiske's evidence in his witness statement, Hughes accepted that both the use of "non-prescribed" barley varieties and the prohibited use of gibberellic acid should be stopped.[838] But Hughes continued, stating the Certificate of Analysis issue was not a problem. During this conversation Mattiske's evidence was that Hughes also said that the use of gibberellic acid would be resolved in the near future, and that the barley varieties issue was a "one-off". Finally, Mattiske deposed that Hughes said there were no issues and that the customers were happy.

1391 There was an obvious conflict between Mattiske's account of what was said concerning the use of unauthorised barley varieties. On the account referred to immediately above, Hughes accepted the practice should stop. In his initial

---

clear meaning that the figures stated represented the level of compliance. Further, it was noteworthy that the suggested ambiguity was not raised with Stewart. He was taken to this document during his cross-examination to confirm its contents. No uncertainty as to the meaning of the document was raised. The Viterra Parties chose not to raise any issue in this regard in re-examination.

836 See pars 1210, 1215 above.

837 See par 1304 above.

838 Contrast this evidence with what Mattiske said Hughes had said at the first meeting between them after receipt of the Cargill 22 October Letter concerning the acceptability of using alternate barley varieties: see pars 1251-1252 above. See also par 1351 above.

response,[839] Mattiske gave evidence that Hughes said there was nothing wrong with the practice. There was no suggestion Hughes changed his mind, or was persuaded to alter his position over this short period of time.

1392 Further, there was also a tension between Mattiske's position that he believed there was nothing wrong with any of the practices, and telling Hughes that they were to stop immediately. On this version of his evidence, Hughes only sought to persuade him Joe White's conduct was satisfactory with respect to Certificates of Analysis.[840]

1393 Mattiske also gave evidence of another discussion about which he was not precise with respect to its timing. His evidence was that "the Joe White executives around this time"[841] stated that the practices relating to Certificates of Analysis were fine. Further, Mattiske said 1 or more of them stated that Cargill had a different process and that if Joe White started using that different process it would mean that Joe White's current process would not be required in any event. Mattiske was further told that Joe White engaged in far more extensive testing, which resulted in much higher levels of subjectivity, which gave rise to the need to amend to reflect what the customer would see in its own tests. Finally, Mattiske was told Cargill's process involved a far narrower form of testing which might resolve the issue.

1394 No doubt in response to what Mattiske had told Purser the day before,[842] on the morning of 25 October 2013 Savona sent an email to Eden and Viers attaching the Malt Proficiency Scheme. The email simply said, "Document discussed with [Purser]". On the same day, Viers sent an email to Van Lierde and Eden. The subject of the email was "recap on conversation with [G]lencore", and referred to Purser's email setting out the details of her discussion with Mattiske. Viers stated that he had been approached by the chief financial officer of Viterra (presumably Rees) earlier that day,

---

839 Ibid.

840 See further pars 1536-1537 below.

841 Although this evidence was plainly indiscriminate, it was contained in Mattiske's witness statement and not the subject of objection. However, the evidence will not be treated as establishing each and every executive made the statements attributable to them. In particular, the statements will not be attributed to Stewart or Argent as there is no probative evidence that either of these executives ever discussed these subject matters with Mattiske in October 2013 (or, for that matter, at any other time).

842 See par 1378(2) above.

and had been told that customer and competitive information would be locked down until Completion. Viers said that the chief financial officer had also stated that "their sensitivity was up" in light of Cargill's communication to discuss the matter of Certificates of Analysis (being a reference to the Cargill 22 October Letter). Viers recorded his understanding that Hughes and his team were not to discuss the matter with Cargill. Viers suggested there were a number of issues for Glencore to deal with, and expressed the view that Cargill would not be completely clear about them until Completion. Viers then made specific reference to the second matter raised in Purser's email,[843] and stated that on De Samblanx's initial review of the Malt Proficiency Scheme it was unclear how the Viterra Parties were making a connection to the Certificates of Analysis, given it was simply an industry calibration exercise.

1395 Also on 25 October 2013, Fitzgerald forwarded the draft letter to Hughes, requesting confirmation that Hughes was "comfortable" with the contents of the letter.[844] The last sentence of the draft sent to Hughes recorded that senior managers of Joe White had made it clear that they operated within parameters that were consistent with industry practices. At 2.52pm, Hughes replied, attaching an amended draft and stating in his email:[845]

> [Fitzgerald] please call me when you get back in your office to discuss, I have made some changes. Comfortable with it now but I would point out that the last sentence applies to 1 and 3 but is probably stretching it for point 2 *as this was an internal Viterra driven initiative to use cheaper barley to improve profitability, this does happen elsewhere but is stretching the industry practice comment.*
>
> I reviewed together with [Stewart].

---

843 Ibid.

844 Obviously, Hughes was aware that Fitzgerald had been provided with far more information about the Operational Practices in the preceding days as Hughes himself had given substantially more detail than was contained in the draft letter: see pars 1279-1288 above. Presumably, Hughes accepted that Fitzgerald, as in-house counsel who had been told directly by Hughes of the more detailed information, had decided it was appropriate to give such a limited response and that the query about Hughes being "comfortable" was directed to what was actually contained in the draft rather than a more probative request about what could be included to properly respond. Interestingly, when Hughes' senior counsel was asked during closing submissions about the level of disclosure contained in the Viterra Parties' draft response to the Cargill 22 October Letter, he declined the opportunity and said he did not want to make any submission on the issue. It was perfectly understandable why such an approach was adopted.

845 As per the draft at par 1381 above, the references to 1, 2 and 3 in Hughes' email reflected respectively the 3 practices that had been raised by Cargill.

(Emphasis added.)

Mattiske was not certain whether Hughes had specifically referred to the internal Viterra driven initiative when Mattiske first telephoned Hughes and others after receipt of the Cargill 22 October Letter.

1396 The draft of the letter, as amended by Hughes, contained a number of significant changes from Lindner's original draft.

1397 *First*, the words "and have been audited and approved by customers as required" were added to the last sentence in the first paragraph under point 1, so that it read:

> We have confirmed that the plants are adequate to deliver malt that meets customer specifications and have been audited and approved by customers as required.

1398 *Secondly,* the sentence "[t]he discrepancy referred to is within tolerances permitted by the ISO certified quality system" was deleted from the second paragraph under point 1.

1399 *Thirdly*, the second sentence under point 2 was amended, to read:

> However, the malt delivered has, as far as we are aware, always met the technical ~~specifications required by~~ <u>needs of the customer</u>.

1400 *Fourthly*, the words "although modified production conditions may be required" were added to the last sentence of the first paragraph under point 3, so that it read:

> However, we are not aware of any complaints or claims in relation to this and [Joe White] management has confirmed that they are able to produce the specification of malt required to meet customer demands without adding GA3 although modified production conditions may be required.

1401 In the early afternoon of 25 October 2013, Fitzgerald forwarded Hughes' email and the attached revised letter to Mattiske and, separately, to Lindner and Pappas. Fitzgerald wrote that he had asked Hughes to consider the draft letter, and drew attention in both emails to the fact that Hughes was not comfortable saying that point 2 was industry practice. He said he would speak with Lindner to vary the wording "a bit". Fitzgerald took no exception to Hughes' suggestion in the email that the issue being addressed in point 2 was because of Viterra's initiative to use cheaper barley to

improve profitability.

1402 In stark contrast to much of Mattiske's evidence about being unable to recall what Fitzgerald, Norman or Rees told him about the interviews with Hughes, Youil, Wicks and Stewart in response to the Cargill 22 October Letter, Mattiske purported to be able to recall specifically a conversation with Fitzgerald before the 25 October Reply Letter was sent.[846] Mattiske gave evidence that he asked if "everyone had reviewed" the 25 October Reply Letter. Unprompted, Mattiske then chose to add to his answer and explain what he meant by "everyone", which he said included the Joe White executives, the other Viterra executives and legal counsel. He continued by stating that he asked Fitzgerald if "he was comfortable with what was put in the letter as a result of *those people* having reviewed it" (emphasis added). He also gave evidence he asked Fitzgerald whether he was satisfied with its factual accuracy and Fitzgerald said he was.

1403 Mattiske was then asked if he enquired of Fitzgerald whether Fitzgerald sought an assurance from "the [Joe White] executives" about the factual accuracy. Mattiske answered affirmatively, before gratuitously stating that he was confident Fitzgerald "had asked the [Joe White] executives" to review the 25 October Reply Letter. When pressed on this issue, Mattiske then said Fitzgerald referred to Hughes checking the letter,[847] but could not recall any other Joe White executive being referred to. Mattiske gave evidence that he also relied on Rees and Norman, as well as Mallesons, to have checked the letter.

1404 Later in his evidence, Mattiske said he relied on the data collected by the people drafting the letter, including Fitzgerald, with the belief that the majority of the information came from Hughes. Consistent with the talking points,[848] he said it was his idea to state that Glencore was not aware of any complaints. However, Mattiske acknowledged he did not know whether Joe White's customers had been made aware

---

846 See par 1405 below.
847 Mattiske did not directly discuss any draft with Hughes or any other Joe White executive.
848 See par 1351 above.

of any of the matters the subject of the 25 October Reply Letter.[849]

1405 The final version of the letter was sent to Purser on 25 October 2013 ("the 25 October Reply Letter")[850] and read:

> Dear Philippa
>
> I refer to your letter dated 22 October 2013 and our subsequent discussions on 23 October 2013 and 24 October 2013. As discussed, Glencore was surprised by your letter and had no knowledge of [Joe White] engaging in the practices referred to. Glencore has since made inquiries of [Joe White] management and can advise as follows:
>
> 1. **Issuing [C]ertificates of [A]nalysis to customers which represent that malt supplied to the customers met with particular specifications where the malt supplied did not meet those specifications**
>
>   We understand that you are concerned that the plant is not sufficient to meet the specifications set out in customer contracts. This concern is unfounded. We have confirmed that the plants are adequate to deliver malt that meets customer specifications and have been audited and approved by customers as required.
>
>   [Joe White] issues [C]ertificates of [A]nalysis in compliance with its ISO accredited quality system which is a documented procedure. It is well understood within the industry that significant variations exist between laboratories and also arise when the same sample is repeatedly tested within the same laboratory.
>
> 2. **Supplying malt to customers which has not been produced from the specific barley varieties required by those customers**
>
>   There have been instances where barley other than that specified in a particular contract has been used. However, the malt delivered has, as far as we are aware, always met the technical needs of the customer. We are not aware of any complaints or claims from customers about this.
>
> 3. **Supplying of malt to customers which had been produced from a malting process that involves the addition of gibberellic acid (GA3), where those customers require that GA3 not be used in the production of malt supplied to them**
>
>   There has been non-compliance with customer requirements around GA3. However, we are not aware of any complaints or claims in relation to this and [Joe White] management has confirmed that they are able to produce the specification of malt required to meet customer

---

849 Based on the contents of the 25 October Reply Letter, Mattiske said he believed the customers were "testing the barley" and were happy with the products they were getting.

850 The 25 October Reply Letter was on Viterra letterhead, and signed by Mattiske as country manager of Australia and New Zealand Glencore Grain, Viterra Ltd. Mattiske gave evidence the letter was sent in his capacity as an executive of Glencore. Whether this was "Glencore Grain" or Glencore was of little moment, as the letter itself spoke on behalf of "Glencore" and Viterra Ltd.

> demands without adding GA3 although modified production conditions may be required.
>
> [Joe White] manages each customer's expectations carefully and as far as we are aware no customer has ever rejected malt due to the issues raised in your letter.[851]

1406 When Eden read the 25 October Reply Letter, he thought the response was very casual. He said he took comfort from the reference to Joe White's "ISO accredited quality system",[852] but he thought there was insufficient detail overall to put his mind at rest. He said the 25 October Reply Letter gave him no understanding of the extent of the problem as there were so many unknowns.

1407 Equally, Viers did not consider the 25 October Reply Letter was a complete answer to the questions raised. In particular, Viers said Glencore seemed to be suggesting the issues of incorrect barley varieties were limited, and did not say the wrongful use of gibberellic acid was widespread, but he remained concerned about whether there would be ongoing issues.

1408 Viers emailed Cargill's in-house lawyers referring to an expectation that at least some of the practices would continue to take place and might not be able to be remedied in the short-term without significant concessions by the customers. He further stated that his biggest concern was around the barley variety issue, which he suggested could put Cargill in a very difficult situation and in immediate default on day 1. Viers expressed the need to understand the extent of the issues and to work well with Joe White management to define an approach, which he suggested would be complex and take time. After noting Cargill did not have access to Joe White management at that time, he suggested a further letter be sent to Glencore "demanding immediate access to the issues" for the purpose of mitigating Cargill's loss.

---

851 For completeness, Viers gave evidence that after Cargill took control of Joe White he did not become aware of any complaints from Joe White's customers about the supply of malt before 1 November 2013 because Joe White had used the incorrect barley variety or prohibited gibberellic acid. However, he also gave evidence that he was not sure how the customers would have known about such things in relation to barley varieties. No doubt, the same observation could have been made with respect to gibberellic acid, but the issue did not arise during his cross-examination.

852 Viers gave evidence that he also took some comfort when the existence of ISO accreditation was brought to his attention in July 2013.

1409 As aspects of the Operational Practices were becoming known at Cargill, a document was being prepared in advance of an upcoming Cargill, Inc board meeting in November 2013. On 25 October 2013, Eden sent an email to Conway and the executive assistant of 2 other senior executives stating he had updated the document being prepared for the board.[853]

1410 The proposed board paper provided some history of the board approval process. It noted that the purchase price of $420 million was the equivalent of US$374 million, being below the amount approved by the board on 9 July 2013 of US$400 million. An estimate was given that the total funds required to complete was nearly US$450 million, noting that this was an increase from Cargill's projections as at 4 August 2013 due to currency fluctuations.

1411 The document also gave some history of the integration, noting the project team had launched it on 1 October 2013. It was stated that the integration team was on track for a smooth transition for Cargill's takeover of the Joe White Business on 1 November 2013. The last paragraph of the document, which was added by Eden and approved by Conway, read as follows:

> Of significance, we have reason to *believe certain practices of [Joe White] plant and lab operations are not aligned with [the Cargill Code]*. While our *knowledge of the details are limited*, the potential *costs to remedy may be significant*. We have put Glencore on notice as per the [Acquisition Agreement] conditions. Our *discovery of the details and costs to remedy will happen post close*.
>
> (Emphasis added.)

1412 Conway's evidence was that, as Eden had said so, he believed it was true that the integration was on track for a smooth transition.[854] Conway approved the wording of the document and was happy for it to be provided to the board. Further, contrary to the Viterra Parties' submission, the last sentence of the passage referred to above did not reflect a belief on Cargill's part that it was not entitled to receive, and would not

---

853 On its face, the document stated that Eden had prepared it, but Eden said it had been prepared by someone else before he added his comments.

854 Incidentally, Conway did not see the 25 October Reply Letter, and gave evidence that he saw it for the first time when it was shown to him in the witness box. Conway's evidence was that he was told that Glencore's response was not full, but he never reviewed the letter to form a view about this himself.

have received, substantive answers from the Viterra Parties to its queries in late October 2013. Such a submission ran contrary to Cargill's openly stated position at the time.[855] Rather, the statement in the last sentence reflected the fact that once Cargill had control of Joe White it would be in a much better position to find out the details and the remedial costs.

1413 On another matter, there was no suggestion in this document that Cargill was contemplating the possibility of terminating the Acquisition Agreement or delaying its Completion in light of the recent disclosures. Eden acknowledged under cross-examination that, at this time, he was contemplating the transaction would be completed before any further action would be taken regarding the problems that had recently been identified.

1414 At the same time, others at Cargill were working to seek to determine Cargill, Inc's rights under the Acquisition Agreement. In an email dated 24 October 2013,[856] Okoroegbe asked Clark to provide legal advice in the event that Cargill, Inc decided to retain a portion of the purchase price. In the same email, he stated, "[o]f course, the intent is to close on this deal". Clark responded with some preliminary advice, including noting that should Cargill, Inc elect to act unilaterally, "it hands Glencore options, including termination". In response, Okoroegbe wrote, "Thanks, Marcus. Termination isn't something we want at all." However, he continued by stating Glencore's response might influence the decision to pursue that option.

1415 Clark gave evidence that he understood Okoroegbe's comments concerning termination to be reacting to Clark's email, and that Okoroegbe was conveying that Cargill did not want Glencore to have a termination right, rather than some broader statement as to Cargill's position on termination. However, Clark acknowledged the earlier statement of Cargill's intention to close the deal was very clear. Clark also gave evidence that he advised Cargill it had no right to withhold funds.

1416 Purser's reaction to the 25 October Reply Letter was that it had not fully answered the

855 See, for example, par 1450 below.

856 Precisely when this email was sent was unclear. Clark's response was dated 23 October 2013, at 7.01pm.

questions asked. She also thought that the written response was not Glencore's position as had been espoused by Mattiske in their telephone call before the letter was sent. She discussed the 25 October Reply Letter with Viers and Cargill's lawyers.

1417 After receiving the 25 October Reply Letter, representatives of Cargill, including Viers, Savona, Okoroegbe and Arndt, sought advice from Allens. Cargill was advised that Allens did not have sufficient information to be able to advise whether Cargill had a right to termination. Further, Clark thought the answers in the 25 October Reply Letter were considerably less detailed than he had expected and he considered it was necessary to press Viterra for further information on the 3 issues raised.

1418 In further discussions with Viers and Savona, Clark advised that, if Cargill wanted to raise the topic of a retention fund, it needed the agreement of Viterra. In addition, Clark said if Cargill was to provide estimates, those estimates would have needed to be sound.

1419 Viers had made an attempt to estimate an appropriate retention fund.[857] On 28 October 2013, Viers recorded some calculations in an email to Eden and Jewison. That email indicated Viers had quantified the potential losses as ranging between $70.95 million and $82.95 million. In a section of the email dealing with curtailed use of gibberellic acid where customers did not permit it, Viers estimated an additional cost of $5 per tonne to produce malt without using gibberellic acid. Further, Viers estimated $13.7 million would need to be spent over 24 months to address an expectation that 50 percent of production would be out of specification, of which half would "[receive] customer variance", and 137,000 tonnes would not be "directly usable at $50 [per tonne]". In addition, Viers provided for $33 million in capital expenditure to increase capacity "sufficient to eliminate the 25% nonconformance's (sic) referenced immediately above".

1420 After sending this email, Viers spoke with Eden. Eden reviewed Viers' calculations in light of the fact that Cargill did not have full information, and made some downward

857 See par 1272 above for when this process commenced.

adjustments.

1421 Viers revised his calculations accordingly, and the estimate of the range of losses was reduced to between $41 million and $53 million. His estimate concerning the additional cost for producing malt without gibberellic acid when required remained at $5 per tonne. While maintaining $13.7 million would be required over 24 months, Viers reduced the estimated capital expenditure to $21 million. This information was provided to Clark during the afternoon of 28 October 2013 in an email from Viers which stated Cargill did not have visibility of the magnitude of the issues. At the time it was contemplated a letter would be sent by Allens giving the Viterra Parties an estimate of potential losses.

1422 As a result of Eden being unimpressed with the casual response to the Cargill 22 October Letter, he held a discussion about the options for a firm reply to Glencore. In an email to Van Lierde sent on 28 October 2013, he stated that a further letter would be sent as Glencore's response had been insufficient to allay Cargill's fears of the costs on Joe White's customers and the processing of the 3 issues raised. He stated Cargill's goal was to raise awareness of the potential scope of these issues both in terms of customer and operating implications. He also indicated an intention to ask that all Warranties be honoured when the Joe White Business was turned over to Cargill. Eden suggested Cargill would submit a range of what Cargill thought it would mean in terms of the value of Joe White and observed the range would be large as a result of Cargill's significant knowledge disadvantage. Further, Eden said Cargill wanted to protect its economic interests and believed the "reserve approach" was the best option to do this. He expressed an expectation that Glencore would push back, which would be likely to give rise to further discussions before Completion. Eden suggested that time was of the essence to get such discussions going to minimise and mitigate Cargill's exposure.

1423 Late on 28 October 2013, Allens sent written advice to Viers and Savona concerning the inclusion of indicative loss estimates in any letter to Glencore. The advice recorded that Cargill was concerned Glencore may not appreciate the severity of the issues that

had been raised. After advising that presenting estimates as indicative would not compromise Cargill's ability to claim a higher amount, Clark stated that if Cargill wanted to propose a portion of the purchase price be reserved, then any amount proposed would need to be justified.

1424 Viers spoke to Clark and told him of Cargill's (particularly Purser's) concerns regarding setting out detailed calculations of loss in a letter when Cargill did not have all the facts. In other words, Viers was reluctant to specifically quantify an amount because he did not have the information he needed to understand what the impact would be. Ultimately the decision was made by Cargill not to refer to any loss estimate in further communications with Viterra.

1425 Shortly after 8pm on 28 October 2013, Allens emailed 2 revised draft letters to Viers and Savona. The second version did not include Viers' calculations as a result of Viers' discussion with Allens. Viers forwarded the email, including to Eden and Van Lierde. Van Lierde responded by stating he was okay with the version that did not include Viers' calculations. He added that he would also delete the section of the draft which required that Joe White's customers be informed of any failure to meet their contractual requirements of which they were not aware. When it was put to Van Lierde that his suggestion to remove this section of the draft letter demonstrated he adopted some flexibility in relation to Cargill's guiding principles under the Cargill Code, he firmly rejected the proposition. He gave evidence he made the suggestion because he believed Cargill could not be held responsible for the way Joe White was running the Joe White Business, and it was not for Cargill to intervene or be giving directions about what Joe White should tell its customers.

1426 The Viterra Parties submitted that by choosing not to provide them with Viers' estimates Cargill had decided to deny the Viterra Parties the benefit of Cargill's best guess as to the potential loss that might have arisen because of the issues raised. Further, Viers' estimates were contrasted with those of Mattiske, coupled with the contention that Mattiske formed the view that any potential loss would not be material without the benefit of Viers' estimates. While the Viterra Parties did not learn of Viers'

calculations or estimates, there were sound reasons for Cargill choosing not to provide information. Cargill's knowledge was limited and its ability to obtain further information at that time was restricted by Glencore. Accordingly, it was prudent not to provide estimates that might turn out to be completely wrong once the facts were known. This was the advice Cargill received at the time.

1427 It was apparent from Savona's notes that at some stage on 28 October 2013 she had a discussion with Viers. In red ink, Savona recorded "non-compliance + committed varieties not commercially [available] - contract until 2014". After referring to plant operating expenses, her note continued "cannot remedy this issue for probably 1 year - which is [product][858] of contract". Also in red ink, Savona noted that if the use of gibberellic acid was stopped immediately at Cargill's disadvantage, it would cost $2 to $3 million per year.

1428 In black ink, on the second of the 2 pages where these notes were made, Savona recorded the goal of ensuring Cargill close and that Cargill purchase at a fair value. Also in black ink, Savona noted that Cargill needed comfort on day 1 that Cargill was not committing offences. It was unclear on the face of the note whether the notes in black ink were made as a result of discussions with Viers or otherwise. Viers gave evidence that he did not recall telling Savona it was Cargill's goal to ensure Completion at fair value, and could not recall his state of mind at that precise point in time.

1429 On 28 October 2013, Stewart emailed McIntyre the Customer Review Spreadsheet, containing the extensive information about the ability of Joe White to supply its customers as required. This was an updated version of the Customer Review Spreadsheet emailed on 21 October 2013.[859] Mattiske had not seen the Customer Review Spreadsheet before being shown it in the witness box. He agreed it would have been very, very interesting and helpful to have seen the information in late

858 The letters "prd" were what was written and there was no evidence as to what they referred to.

859 See par 1211 above. None of the information in the Customer Review Spreadsheet had been amended, though some changes to the shading of the columns had occurred.

October 2013.

1430 During the Cargill Parties' opening, the Customer Review Spreadsheet was tendered and referred to as a very instructive document. When McIntyre and Stewart were in the witness box, the accuracy or otherwise of the Customer Review Spreadsheet was not raised with them. In short, any concern about the reliability of the information it contained was not raised with any witness. Further, Mattiske was cross-examined extensively on the contents of the Customer Review Spreadsheet on the basis that it was accurate. When a particular question put to Mattiske was objected to on the grounds that it was unclear whether Mattiske was being asked to verify the document. The Viterra Parties' senior counsel further stated that the document spoke for itself. That position was accepted by the Cargill Parties and the question was withdrawn. Despite all of this, the Viterra Parties submitted the Customer Review Spreadsheet was not a reliable representation of the true state of affairs of Joe White.

1431 The Viterra Parties referred to Stewart's evidence, that not all the information came from electronic databases and it was "a little bit tricky" to get the information concerning barley varieties, in an attempt to cast doubt on the correctness of the Customer Review Spreadsheet. However, Stewart also gave evidence that the information pertaining to each customer with respect to barley varieties was readily available. Further, his evidence was that it was McIntyre who generated the spreadsheet "probably from - she had access to customer contracts". Furthermore, his evidence was that McIntyre was "probably plucking the variety information and entering it in the [Customer Review Spreadsheet] because it was a little bit hard to get hold of". Stewart then completed his answer by stating that the Customer Review Spreadsheet became a good repository for the information about barley varieties.

1432 There are 2 observations to be made about Stewart's evidence. *First,* it was McIntyre who was putting together the information, and accordingly Stewart's evidence was plainly speculative with respect to how that was done. There was no reason to assume that McIntyre acted anything other than diligently in compiling the information.[860]

860 See, for example, par 257 above.

Secondly, Stewart's conclusion was not that the information was unreliable, but rather it was a good repository of the information contained concerning barley varieties.

1433 The Viterra Parties also referred to customer contracts in an effort to create doubt about the ability of the court to rely upon the relevant information. The position with respect to 8 large customers was analysed. It was demonstrated there were discrepancies with respect to each of them when comparing the details in the Customer Review Spreadsheet with the contractual documents relied upon in the particulars to the Statement of Claim. In relation to 2 customers, there were less barley varieties approved according to the contractual documents referred to, and in relation to the remainder there were more that were apparently approved or "neutral". At the conclusion of this exercise, the Viterra Parties submitted that the Customer Review Spreadsheet was significantly inaccurate for half of the customers identified. This proposition was also not raised with either McIntyre or Stewart, or any other witness.

1434 The Viterra Parties were correct in identifying differences between the contractual documents and the Customer Review Spreadsheet. However, the difficulty the Viterra Parties faced in making this submission was that McIntyre's uncontroverted evidence was that on occasions customer specifications were the subject of less formal agreements or arrangements beyond the strict contractual position.[861] In these circumstances, it would be wrong to conclude the Customer Review Spreadsheet was unreliable simply because it did not accord entirely with the contractual terms of all of the customers.[862]

1435 Further, when adducing evidence in chief from Stewart, the Viterra Parties asked questions directed to when Cargill employees obtained access to the Customer Review Spreadsheet, or some other document containing or summarising the information contained in that spreadsheet.[863] In stating that this access was given, his evidence did not suggest that in providing the information to Cargill any of the Joe White executives

---

861 See pars 256-259 above.

862 Such a finding does not exclude the possibility that the Customer Review Spreadsheet had some errors in it. However, the evidence demonstrated the document was generally reliable and accurately conveyed the substantive position in relation to Joe White's customers in October 2013.

863 See fn 742 above.

indicated there were inaccuracies in the detail.

1436 Furthermore, and critically, not only was the Customer Review Spreadsheet the subject of evidence by Stewart which suggested the details were accurate, or at least substantially accurate, but the document was provided by Stewart in October 2013 to each of the Joe White executives, who either expressly or implicitly approved its contents.[864] In summary, the evidence overwhelmingly indicated that the Customer Review Spreadsheet was considered to be a reliable business record of Joe White in October 2013.

1437 Finally, McIntyre gave evidence that, on 28 October 2013, she was asked by email to provide a list of all customers and "what varieties *we have to* use for them" (emphasis added).[865] McIntyre emailed the details of the customers and barley varieties the same day. The varieties McIntyre identified that Joe White *had to use* mirrored exactly the varieties listed in the Customer Review Spreadsheet. It was never suggested to McIntyre during her evidence that the email she sent on 28 October 2013 identifying the relevant barley varieties was inaccurate. Moreover, the Viterra Parties' submissions on this point failed to address this evidence.

1438 Also on 28 October 2013, Stewart directed Joe White employees to cease using laminex[866] and lactic acid[867] immediately. Stewart gave evidence at trial that he was aware that lactic acid had been used in respect of a customer without that customer's knowledge. In the same email, Stewart instructed Joe White employees that from 1 November 2013, they were to "ensure that shipments are packed using malt from an approved barley variety".

1439 Shortly after, the Joe White production manager responded to Stewart, his email

---

864 See par 1218 above.

865 There is an obvious ambiguity in this wording; it is unclear whether the "have to" related to the contractual or other agreed requirements, or whether it related to what Joe White had to use based on what was available. The existence of the Customer Review Spreadsheet and the related evidence suggested it was a reference to what Joe White was obliged to supply, but as the matter was not raised at all with McIntyre it is not possible to express a view with any certainty as to what she understood it to mean.

866 Laminex is a brewing enzyme used in the production of malt to break down betaglucan.

867 Lactic acid is the acid that brewers use to reduce the pH in mash tuns. Both laminex and lactic acid are different additives to gibberellic acid.

stating he had removed laminex from all batches. The email also addressed the problems being experienced with barley varieties. He referred to Asia Pacific Breweries, noting that he had no approved barley varieties available, and asked Stewart whether he should remove the gibberellic acid given the barley variety was not approved. The email continued:

> What is to happen to the Commander [barley variety] that I am producing? Should I remove the [gibberellic acid] from them as either way it is not an approved variety?
>
> I believe there is only a few hundred tonnes of Gairdner available and no Sloop and I have over 1000mt of shipments scheduled for 1/11 to 8/11. If this malt is not able to be shipped my silos are in danger of filling.

1440 When taken to this email, Stewart gave evidence that it did not demonstrate to him that, if Joe White were to comply with customer specifications it was in real trouble because it did not have existing supply chain arrangements in place for important varieties for important customers. Stewart's position at trial was that he had little or no knowledge of what barley varieties Joe White's plants had access to as the operations department was in charge of that. Whatever Stewart's position was, on the face of the email serious availability problems were plainly identified with respect to certain barley varieties.

1441 On the same day, David Cooke, production manager at Joe White's Sydney plant, forwarded Stewart's email to Prazak. In contrast to the message conveyed in the 25 October Reply Letter on this issue, he stated that Joe White was "in trouble if we have to stick to approved varieties. Hindmarsh?".[868]

1442 In light of the very limited information provided in the 25 October Reply Letter, Cargill resolved to send a further letter to Glencore. Consistent with her earlier approach, on 29 October 2013 Purser telephoned Mattiske to foreshadow the upcoming letter.

1443 Purser told Mattiske that Cargill was going to send a further letter as Cargill did not agree that the matters raised were standard industry practice. Mattiske's evidence

---

868 As to Hindmarsh, see par 126 above.

was that Purser went through the practices in quite a lot of detail explaining why she disagreed that the practices were standard industry practice. She also said the letter would address the issues relating to barley varieties. Purser then elaborated on matters concerning each of these topics,[869] together with addressing breach of customer contracts.

1444 Under cross-examination, it was put to Mattiske that upon Purser telling him that it was not standard industry practice to alter Certificates of Analysis, he must have placed some weight upon it given Cargill was a significant player in the malting industry. Mattiske responded by stating that the proposition was fair. He acknowledged that he knew at the time that Cargill was a very major player in the industry. Mattiske then gave some evidence that was far from convincing. When he was asked whether he then raised that issue with anyone at Joe White, he said *he* did. He then said that upon raising it *he* was told that Cargill had a different testing procedure which was less accurate and more prone to error, and that Cargill was delivering malt that was substandard.

1445 When he was pressed with respect to these answers, Mattiske said he "believe[d] *we* would have spoken to Hughes". Mattiske then said he did not recall whether he spoke to Hughes, but that he believed it would have been done by Fitzgerald, Norman or Rees. When pressed further as to the question Hughes was asked, Mattiske said he did not recall the exact question and it was not a question that he directly asked. Even further, Mattiske then gave evidence that he did not personally receive the response as he relied on his executive team to follow up the response. He then gave evidence that the response received through his executive team was that Cargill had a different procedure. It was then put to Mattiske that there was a difference between a response that referred to Cargill's methodology and a response relevant to the question of whether altering Certificates of Analysis to report a result that differed from the laboratory testing was standard industry practice. Mattiske simply replied, "I'm not

869 Mattiske's evidence was that Purser referred to specific barley varieties, including Hindmarsh and "things like that that were non-malt varieties". It was unclear to what other varieties this evidence was referring.

a technical expert in laboratories at all, but I take your point". Mattiske then appeared to recant. When the Cargill Parties' senior counsel sought to confirm this evidence, Mattiske said:

> I honestly have no knowledge of that. All I know is that [Joe White] said that the practices were standard industry practice and that their alteration in the way they did it was perfectly allowable under testing standards. That's all I know.

This appeared to be a reference to a conversation that happened days earlier.[870]

1446 In short, Mattiske's initial evidence that, *after* speaking to Purser and being told of Cargill's position, *he* asked the direct question and that *he* was given a direct answer on whether or not Joe White's conduct with respect to Certificates of Analysis was standard industry practice cannot be accepted.

1447 Purser also said in the telephone conversation that Cargill would certainly not permit gibberellic acid to be used where Joe White customers had specifically requested it not be used. According to Mattiske's evidence, he said to Purser that, to his knowledge, there was only 1 customer with a 70,000 tonne contract that was using gibberellic acid and the rest was fine.[871] Further, he said that the Joe White executives had told Glencore they would stop the practice of using gibberellic acid contrary to customers' contracts, which would just increase the germination time "a little bit" from 4 days to 5. Mattiske further said Glencore would be willing to assist with respect to short term issues of accumulating the correct barley varieties, but to that time Glencore had not been able to substantiate the details. In that part of the discussion, Mattiske raised Admiral and Vlamingh barley varieties as possible solutions.

1448 Mattiske also told Purser that Glencore was there to help Cargill resolve these issues. He said to Purser that he did not think the issues were very large by themselves, so they could be fixed.

---

870 See par 1251 above.

871 It may be that this was said in a later conversation (see par 1462 below) where this was raised as part of the discussions with Joe White executives, and was also the subject of a later discussion with Purser: see par 1505 below.

1449 In response to a question from Mattiske about whether Completion would go ahead, Purser said she did not want to make this a legal issue. She said she did not want to go to court but wanted a commercial resolution, and that, in order to achieve that end, she needed more information.

1450 According to Mattiske's evidence, he said to Purser he did not know anything about these practices. Further, he said he repeated that Glencore was not in a position to conduct a full investigation. Whilst Purser did not recall this being said, she did not dispute it. Purser said Glencore needed to make provision for a claim, but Purser did not recall that point being addressed further on the telephone. According to Mattiske, Purser went on to say that Cargill could not assess its loss until after Completion and that someone from overseas would be making the call. His evidence was that Purser also said Cargill wanted Glencore to give Cargill more feedback and more information about the practices. Purser further stated that she did not see anything that would hold up Completion and that, although she was not in charge, she expected Cargill would complete. During the conversation, Mattiske confirmed that he had been told by Joe White's executives "that Certificates of Analysis [were] allowable under the testing parameters of what Joe White had".

1451 On 29 October 2013, Cargill Australia responded by letter to the 25 October Reply Letter ("the Cargill 29 October Letter"). The Cargill 29 October Letter was emailed by Savona on behalf of Cargill Australia to Mattiske as country manager at Glencore Grain.[872] It stated:

> Dear David
>
> I refer to [the 25 October Reply Letter].
>
> We are concerned that Viterra Ltd … has not addressed adequately the matters raised in [the Cargill 22 October Letter] with the result that the impact or potential impact of those matters on [the Joe White Business] remains uncertain. In particular:
>
> 1. We questioned whether [Joe White] has and/or had a practice of issuing certificates of analysis to customers (that may or may not have

[872] The letter was copied to Fitzgerald in his capacity as the company secretary of Viterra Malt, Viterra Operations and Viterra Ltd, together with Pappas and Lindner. It was signed by Savona as Purser was travelling at the time.

been provided to others) which represent that the malts supplied to customers met with particular specifications where the malt supplied did not meet those specifications. Our question was focused not only on differences in analysis outcomes that may result from tests undertaken at different times but *whether the certificates themselves did not reflect accurately the outcomes of the test* on which each certificate reports. If this practice has occurred:

- *What is the frequency* of such occurrence and what percentage of [Joe White]'s contracts is affected? Also detail how many customers may have received inaccurate certificates and the total annual volume those customers represent.

- Have *affected customers been informed* and have they *consented in writing* to such activity?

- Have the certificates of analysis or any inaccurate data found on such certificates of analysis been provided to any further parties, including by [Joe White], its agents or its customers?

2. You concede that there have been instances where barley, other than that specified in a particular contract, has been used. You state that the malt delivered has, however, always met the "technical needs" of the customer and that you are not aware of any complaints or claims from customers about this practice. However, *in the absence of disclosure to the customer, a lack of complaints would seem not to be an answer*. Further, it is not evident from your response *how widespread* this practice is or has been. Have *affected customers been informed* of and consented to this practice? Please quantify *the number of customers* that may have been impacted and outline their total volume and the remaining term of the relevant agreement(s).

3. Related to paragraph 2, we are concerned that the barley varieties required by some of [Joe White]'s customers may not be presently available on commercial terms. Should this be the case, we understand that [Joe White] is *not in a position to supply malt in compliance with those affected customer contracts. Is this the case?* If so, what percentage (by volume and by total value) of [Joe White]'s contracts are affected?

4. You concede that there has been "non-compliance with customer requirements around [gibberellic acid]" but [Joe White] is able to produce the specification of malt required to meet customer demands save that modified production conditions may be required. Again, you state that you are not aware of any customer complaints or claims in relation to this practice. *Your letter does not address how widespread this practice is or has been and the percentage of [Joe White]'s contracts that are affected*. With respect to the absence of any consumer complaints or claims, is it the case that *full disclosure* has been made *to affected customers and agreed by them?* Last, your letter does not address the volume of product in inventory which is not compliant or the costs arising from any necessary modifications to production conditions to produce the required contract compliant malt.

We would be grateful if you would let us have your response concerning these questions as a matter of urgency.

You will appreciate that we are particularly *concerned about the impact* these practices may have on our ability to conduct [Joe White]'s business operations immediately after completion in compliance with [Joe White]'s customer contracts and all applicable laws. As such, please ensure that *adequate measures are put into place before completion* to ensure that:

- to the extent that affected customers are aware of the practices and have previously agreed (expressly or impliedly) to accept malt which does not comply with those customers' formal contractual requirements, those customers' express written agreement to these variations is obtained;

- all product shipped to customers and all inventory on hand is compliant with the specifications of customer contracts (as varied by written agreement, if applicable), including in relation to the use of [gibberellic acid], varieties of barley required by particular customers, and the accuracy of certificates of analysis; and

- [Joe White]'s business is conducted in accordance with all applicable laws.

Please inform us prior to completion of the measures you take to secure these ends.

Significant loss and damage may result from these practices and the remedial measures required to correct and otherwise address them. Given our limited access to information, we are not able to quantify the magnitude of this loss and damage, save to say that it *may be in the order of tens of millions of dollars*. Without being in any way exhaustive, material loss and damage may result from:

- immediate and long term loss of sales for inability to secure compliant barley varieties;

- losses and expenses associated with curtailment of the use of [gibberellic acid];

- expense and capital expenditure to remedy malt produced out of specification; and

- third party claims related to the identified activities.

Bearing in mind that [C]ompletion is currently scheduled for 31 October 2013, conscious that these practices have now been revealed, and the potential for losses to accrue, we propose that a mutually agreed reserve should be made out of the purchase price …

In the meantime, please provide us with *full access to [Joe White's] records and current employees* so that we can continue to plan for the future operation of the [Joe White Business] in full compliance with customer requirements and all applicable laws.

> As you appreciate, to the extent necessary, we continue to reserve all of our rights in relation to these matters.
>
> (Emphasis added.)

1452 Consistent with the position adopted in the Cargill 22 October Letter, the Cargill 29 October Letter did not refer to any desire on the part of Cargill to terminate the Acquisition Agreement.

1453 When Mattiske read the Cargill 29 October Letter, he formed the view that it was likely Cargill would make a claim, but he did not think the financial impact on Cargill of the matters the subject of the letter would be significant. Mattiske's evidence was that he believed this based on his understanding that Joe White was entering into contracts around market rate. Mattiske gave evidence that even if customer contracts had to be unfulfilled, he did not think that would give rise to any significant loss.

1454 The Cargill 29 October Letter was circulated within Glencore and Viterra. It soon came to King's attention, who promptly forwarded it to Walt. Walt responded to King, stating he was on the phone to Mattiske. When King enquired as to the outcome of that telephone conversation, Walt emailed King stating the view was to close on the sale, and to deal with a potential warranty claim thereafter. King's response was to the point, and expressed some doubt:

> Agreed but question is whether we can push to close given this?

King gave evidence that "given this" was a reference to the revelations concerning the practices referred to in the Cargill 29 October Letter. He said the enquiry was an honest question having regard to what had been raised.[873] It was obviously also a prudent question.

1455 The last email in this chain was from Walt, who indicated there was no suggestion that Cargill did not want to close. He also said there were other issues that were being worked on, without elaboration. King had no recollection of speaking directly with Walt about the matters referred to in the email chain.

---

873 King was not involved in preparing a response to the Cargill 29 October Letter.

1456 Mattiske immediately forwarded the Cargill 29 October Letter to de Gelder, Mahoney and Mostert marked "Confidential". The email referred to a meeting to be held shortly with Mallesons. The email continued:

> We can discuss this evening, they have mentioned potential claims on losses, due to corrective action that may need to occur, but no mention of delaying Settlement.

1457 Around lunchtime on 29 October 2013, Mattiske received an email from Fitzgerald, addressed to Lindner. The email asked Lindner for a meeting to be arranged at 1.00pm South Australian time. Fitzgerald stated that Hughes and Wicks would be in attendance to answer any questions. Fitzgerald also noted that Wicks would be sending through information needed on barley varieties before the meeting.

1458 Mattiske gave evidence that he attended this meeting by telephone. He said he was focused on the likely financial effect over the next few months of ceasing the practices Cargill had raised and the potential financial liability. During the meeting, the manner in which to respond to the Cargill 29 October Letter was discussed. Mattiske gave further evidence that he believed the likely financial effect of ceasing the alleged practices was discussed by reference to some specific contracts.

1459 Most of Mattiske's evidence on this meeting in his witness statement was in response to some of the allegations in the Statement of Claim about what had occurred at the meeting. Mattiske, in substance, stated he could not recall the various matters being discussed or expressed a view as to the unlikelihood of them being discussed. Those allegations purported to reflect, in part, the substance of Lindner's contemporaneous notes of the meeting.[874] Subject to any ambiguity in their contents, Lindner's notes are the most reliable account of what was said at the meeting.[875]

1460 As to what he did recall, Mattiske gave evidence of a discussion to the effect that Joe

---

874 The particulars to these allegations also referred to handwritten notes taken by Fitzgerald and Rees, but these notes never became the subject of evidence. Accordingly, it is only necessary to refer to Mattiske's evidence to the extent it contained his recollection of what was said or it was responsive to what was in evidence.

875 See par 1277 above.

White was ceasing to use gibberellic acid and that it would reduce Joe White's production capacity. He recalled that it was stated that "our" internal calculations showed this would be in the order of 14,000 tonnes of capacity per year. Mattiske said he had been told by Hughes that a new variety, Admiral,[876] would become available in the next season and that would solve the problem.

1461 Mattiske also recalled it being stated that someone had asked Stewart to go away and check the number of times that the incorrect barley variety had been delivered. Beyond Mattiske stating that he was very focused at this stage on quantum issues, nothing further was addressed on this point in Mattiske's witness statement.

1462 Lindner's notes, which recorded that the meeting was attended by Hughes, Wicks, Fitzgerald, Norman, Rees[877] and Mattiske, and went from 1.30pm to 2.19pm, read as follows:

---

① BARLEY: Lion [Nathan]

✷

- 8,500t - ~~impact on line business~~ (after January until 1 April)
- [Asia Pacific Breweries]/Heineken group – *22, 000t of malt outstanding*[878] – *only have enough Barley to supply 21,000t* (Now until 1 April) (~11kt WA + SA)

TOTAL SHORT: 29,500t of barley short to meet [specifications]

Heineken: Only 3 varieties allowed - Stirling, Gardiner, Flute (?)[879]

Commander, Bulock (?)← substitutes (?)

The 3 varieties allowed are diminishing. Trials underway for new varieties. *Heineken dogmatic.*

Lion [Nathan]: ~~Lion~~ *Will run out of barley sooner than expected*. But will be same kind of barley. Just newer crop year.

Implication? *Lion [Nathan] will say in breach*.

How many times delivered incorrect varieties? [Stewart] to advise

---

876 Admiral was a trial variety from in or around 2012.

877 There was a note Rees joined later.

878 The reference to 22,000 tonnes outstanding appears to be a separate point to the immediately following reference to having 21,000 tonnes of barley available for supply. Subsequent communications indicate Mattiske understood there to be a shortfall of 22,000 tonnes: see par 1467 below, par 2b) of the email. See also pars 1487-1491 below.

879 The reference to "Flute" was plainly an error and should have been a reference to Sloop: see par 2483 below.

No claims re barley ??

What's the breach? Wrong crop yr.

Significance of crop yr – they contract to buy on a crop yr. ∴ could potentially reject it.

New crop barley won't malt as well.

If doesn't malt well, [couldn't] supply.

Who determines how much we buy? We bought right amount for them, but ~~shld~~ have used it for other [contracts].

Barley in Glencore's name.

Tamworth + Sydney – need Gairdner or Commander

Not enough barley in Australia to fill in shortfall.

Unable to supply malt only if required to supply exactly as specified.[880]

~~Short for Lion: January~~

<u>How mitigate</u>:

- *go to customer & try to get approval* to use alternatives varieties to meet same [specification].
- *Heineken: prob. won't react ~~ok~~ well*
  ↳+ Lion
- normally we [wouldn't] be worried as we [would] use ~~of~~ alternatives.
  ~~####~~
- other varieties are better quality. But trials at these [breweries][881] not complete ∴ won't acknowledge it.

- [Contracts] in or out of the money:
- lower price than the current [market].
- ~~## 20t – 50t oct~~
  ~~US~~
- $10 US in the money. ∴ if replace for someone else U$10 loss.
- *went to Heineken, breach*, supply [alternative] at different price (<U$10)
- *Brewers will spin a story re damages.*
- What does the [contract] say re default?

Heineken expires 31/3/13 (sic)

- Heineken:
- Lion [Nathan]:

---

880 During closing submissions, Hughes' senior counsel was asked whether this statement was as broad as it appeared. In response, he stated he thought it dealt with issues relating to varieties of barley. He also stated that it was a very sweeping statement and could not argue that the note did not reflect what was stated at this meeting. In the circumstances, even if the comment was confined to varieties, it was an acknowledgement of a substantial incapacity to meet customer specifications in relation to major customers.

881 Lindner's evidence was she believed the word was intended to be "brewers".

② [Gibberellic acid]

Loss 14,000t 530,000 = 2.6%. But [gibberellic acid] impact will [reduce] other time as better quality barley introduced – possibly 12 months

- Unable to fulfil existing committed volumes? NO. Not fully sold immediate impact minimal

- Lose 14,000t of capacity/yr →
- Have discontinued use.
- Stock with [gibberellic acid] will be provided to customer's (sic) who ~~accept it~~ allow use of [gibberellic acid]. (<5000t)

→ # 70,000t/75,000t have had [gibberellic acid] when [shouldn't] for Heineken + [Asia Pacific Breweries]

→ [Heineken] + [Asia Pacific Breweries] prob wouldn't sign up if included [Asia Pacific Breweries]. Last yr of supply anyway. *[Heineken] want to renegotiate.*

③ Certificates:

part of the

- ISO manual – apparently different to approved[882]
- manual audited
- between labs – known inconsistent analysis
- [standard deviation] – demonstrates usual variation.
- [amount] of variation can >[883] range of [specifications]
- if within range = acceptable variation – correct lack original blend
- issue of certs + analysis = common practice

- Use Cargill blend analysis (rather than malt analysis)
- Some don't stipulate it, → no issue. Provided customers accept it. need for analysis [Lindner: if not stipulated, just don't provide][884]

FOLLOW UP

- How many times Incorrect varieties delivered
- Default mechanisms [in] Heineken + [Asia Pacific Breweries]

- *customers not aware getting something other than under [contract].*

(Emphasis added.)

1463 Neither the notes, nor the evidence given at trial, enables the court to form any view

882 In closing submissions, Hughes suggested the Viterra Certificate of Analysis Procedure was "part of the ISO manual" and that the manual was audited. However, when invited to provide evidence to support the suggestion, none was forthcoming.

883 Lindner was unsure if this symbol indicated "greater than" or "leads to".

884 Lindner's evidence was that she believed the words in parenthesis were a note to herself.

about which person or persons made observations that gave rise to the notes made by Lindner.

1464 Lindner only had a vague recollection of this meeting. However, she did recall that during the course of the discussion, someone stated that Joe White provided Certificates of Analysis even when it was not required under a contract. Further, when deciphering her notes in the witness box, she positively stated that what she had written down on the first page of her notes (she was not asked about the others) was as a result of what someone had said in the meeting. That said, subject to some exceptions, the remainder of the notes are plainly a record of what was being said.

1465 Regardless of who spoke to which item or items at this meeting, Lindner's notes indicate in substance that what Mattiske and the others present were told included the following:

(1) There was a shortage of barley for supply to Heineken.

(2) There was a total shortage of 29,500 tonnes of required barley varieties.[885]

(3) The 3 varieties allowed were diminishing and trials were underway for newer varieties, but Heineken would be dogmatic.[886]

---

885 Mattiske's evidence was that this was unlikely to have been discussed. He did not purport to have an actual recollection of it not being said, but expressed a belief that if it had been mentioned he would have included the detail in his email to his superiors later that day: see par 1467 below. This evidence, such that it was, can be given little weight in light of Lindner's clear and unambiguous note on the topic. The Viterra Parties submitted the allegation to this effect was inconsistent with Lindner's notes. How it was said to be inconsistent was not identified. Perhaps the submission was intended to focus on "Joe White was short 29,500 tonnes of barley to meet customer specifications *for Lion Nathan*" (emphasis added). Admittedly, there was some ambiguity about whether the observation specifically related to Lion Nathan or more generally. The most natural reading of the note was it did relate to Lion Nathan, but, in any event, the critical fact was a shortage of 29,500 tonnes of required barley. Further, Mattiske gave evidence of discussions, not specific as to time or who was involved, where there was trouble finding the correct barley variety for a particular contract. Later he said he was told the contract in question authorised the use of another variety, Vlamingh, and it was available. He then stated, without any further detail, that there were "a lot of unknown things like that". None of this evidence detracts from the probative value of Lindner's note on this issue, taken approximately a week after Cargill had raised its queries.

886 The actual allegation on this issue was: "Only 3 varieties were allowed by Heineken which were not available to Joe White". In the absence of anything further, the statement "[t]he varieties allowed"

(4) Joe White would run out of the barley variety required by Lion Nathan sooner than expected, and Lion Nathan would be likely to assert that Joe White was in breach of its contract with Lion Nathan.

(5) Stewart would have to make further enquiries to ascertain the number of times incorrect varieties of barley had been delivered.

(6) To that time, no claims had been made with respect to the supply of incorrect barley.

(7) Barley varieties from the new crop would be not likely to malt as well and, if that eventuated, Joe White could not supply the relevant customers.

(8) There was not enough of the required barley varieties in Australia to fill the shortfall of barley, and there would be an inability to supply if Joe White was required to supply exactly as its customers had specified.

(9) To mitigate the circumstances, Joe White could confer with customers to try to get approval for alternative varieties of barley to meet the same specifications and, if that were done, it was likely that Heineken and Lion Nathan would not react well.

(10) Normally, Joe White would not be worried about such circumstances and it would use alternative varieties.

(11) Other varieties were of better quality, but as trials were not complete brewers would not acknowledge the varieties.

---

carried with it the implication that other varieties were not allowed. In the context in which this phrase appeared such an implication was fortified. However, reference to those varieties diminishing suggested some were still available. Accordingly, on the evidence this particular allegation has not been established.

(12) If Heineken decided to use another supplier rather than permit substitute varieties, this was likely to result in a loss of around US$10 per tonne.[887]

(13) Another option for Heineken was to offer to supply at a lower price.

(14) It was likely brewers would "spin" a story concerning breach of contract and damages.

(15) Supplying incorrect barley was a default under Joe White customer contracts, but there was an uncertainty as to what the contracts said.

(16) Desisting in the unauthorised use of gibberellic acid would result in the loss of 14,000 tonnes of capacity per year,[888] equating to a loss of 2.6 percent in production, but it was expected that the impact would reduce over time as better quality barley was introduced which could possibly take 12 months.

(17) Joe White was not unable to fulfil existing committed volumes because of the discontinuation of the prohibited use of gibberellic acid, and the immediate impact would be minimal.

(18) About 70,000 to 75,000 tonnes of malt containing gibberellic acid had been supplied to Asia Pacific Breweries (Heineken).

(19) Joe White was said to have discontinued the use of unauthorised gibberellic acid.

1466 Considerable uncertainty attached to Lindner's notes taken under the heading "FOLLOW UP". Lindner was asked no questions about whether or not those notes reflected what was stated in the meeting or whether they were a note to herself. Also no questions were asked about the line separating the first 2 items from the third item

887 Being a total loss of US$220,000 if all 22,000 tonnes were affected. It seems neither the likelihood or otherwise of Joe White obtaining another customer, nor the effect this situation might have on Heineken's overall position (given its contract was up for renewal in April 2014) was discussed.

888 This is what Lindner said her note recorded.

under this heading. Thus, contrary to Cargill's submissions, although the notes make clear the first 2 topics were raised at the meeting, the court cannot be satisfied that it was expressly stated at the meeting that customers were not aware they were getting something other than what was specified under the relevant contract. However, it must be observed that Lindner's note was a statement, not a question.

1467 Returning to Mattiske's emails, based on the times recorded on the emails,[889] there was some uncertainty as to when Mattiske emailed some background on the issues raised in the Cargill 29 October Letter. In any event, in the email to de Gelder, Mahoney and Mostert, Mattiske wrote:

> … the changes to the analysis results appear to be covered under [Joe White's] testing policies *which have been disclosed in the [D]ata [R]oom* including the ISO accreditation and the [Malt Proficiency Scheme]. Any changes made to certificates *appear to be in line with the allowed standard deviations within these schemes*, [Joe White] say this is *fully document* (sic), *we are getting copies* these (sic) records. The other 2 issues around changes to varieties delivered and use of [gibberellic acid] are the issues.
>
> It seems evident that *Cargill are setting themselves up for some sort of claim*. I have separated the issue in the 2 parts
>
> 1. Transactions in the past
>
> 2. Transactions in the future
>
> 1. *Unless Cargill were to notify all customers of the transactions involving delivery of goods not consistent with the contract* we have minimal liability as Customers are very happy with the product received and have given excellent feedback. It is unlikely we would get any claims *unless Cargill decided to throw us under the bus.*
>
> 2. The exposure in the future:
>
> a. *Barley Varieties*, [Joe White has] a domestic exposure with Lion Nathan *… some exposure is evident, but minimal.*
>
> b. *Barley Varieties Export*. There is a sale to [Asia Pacific Breweries] (Sub of Heineken) expecting to receive 22 kmt of Sterling (sic)/Gairdner/Sloop. *There are not sufficient quantities of these varieties in Australia*, [Joe White] were intending to deliver Commander/Bulloke (sic), where (sic) are premium to the contractual varieties *however not specifically approved by [Asia Pacific Breweries] at this stage*, they expect this to occur by January. This particular contact (sic) is a long term contract for 75 kmp per annum, priced annually, it expires at the end

889 Whatever the sequence, Mattiske said this email was sent after receipt of the Cargill 29 October Letter. Mattiske's evidence was that it was sent later in the day on 29 October 2013.

of April. Pricing of Contract is only $10 above the current market price. I am *getting legal to check the default clauses on the contract*.

…

c. Use of [gibberellic acid]. This has now stopped no forward risk. [Gibberellic acid] was used on [Asia Pacific Breweries] Malt on approx. 70,000mt where it was not allowed under the contract. The *short term impact would be to reduce capacity by 14,000mt*, however this would only be over 12 months as the new varieties in the pipeline result in not requiring this as an additive and the ability to renegotiate this contract in April would result in only short term losses.

…

My Estimates (back of the envelope) on *potential liability*:[890]

2a) Nil, or worst case a small discount to delivery (sic) new crop varieties, *even if disclosed to the customer*

2b) $10mt out of the money on 22kmt, We could *possibly bring more barley* in from Victoria, *if it exists*, worst case $60mt IMO,[891] $1.3m

c) [Gibberellic acid] Usage, if capacity was to reduce by 14kmt from total capacity of 530kmt, then *2.6% of 420m would be $11m*, however we would never accept this claim as it is clear this would be only short term so could only be $1m or less.

Of course we will not accept any liability or claim and will fight all representations. A *standard response will be available and sent to you* in draft this evening when ready.

(Emphasis added.)

1468 Mattiske did not communicate directly with Hughes or Stewart about the contents of this email, though he gave evidence that he "believe[d]" he would have obtained the relevant information from Hughes. He then said he could not recall to whom he spoke specifically, but that he would have spoken to people internally, and Rees in particular.

1469 Leaving aside the provenance of the information, a number of observations should be made about the contents of Mattiske's email.

---

890 Mattiske gave evidence that he may have discussed the back-of-the-envelope calculations with Mahoney, but he could not recall. In his evidence in chief, Mattiske said that based on these estimates his commercial assessment was that Cargill's total losses would be less than $2.3 million. In closing submissions, the Viterra Parties were asked how it was that Mattiske arrived at the figure of $2.3 million (obviously beyond the addition of $1.3 million and $1 million). There was no evidence to show precisely how the amounts of the components of this sum were arrived at.

891 Presumably, IMO stands for in my opinion.

1470 *First*, Mattiske incorrectly stated that Joe White's testing policies had been disclosed in the Data Room.[892] There was no evidence to suggest that Hughes, or anyone else, had specifically told this to Mattiske or anyone else at Glencore or Viterra. Further, as referred to above,[893] it was apparent that the absence of such testing policies from the Data Room had been fully appreciated by others by this time.

1471 *Secondly*, the suggestion that changes made to Certificates of Analysis appeared to be in line with "allowed standard deviations" was incomplete and inaccurate. The suggestion that the changes were "allowed" was not by reference to any particular contractual term. Further, leaving aside whether industry practices permitted changes for results within 2 standard deviations, if the statement was read as referring to up to 2 standard deviations, it was plainly wrong as the Viterra Certificate of Analysis Procedure allowed for approval of specifications beyond 2 standard deviations. Conversely, if it was to be understood as a reference to standard deviations beyond 2 standard deviations, then the statement was of no substance when it suggested Certificates of Analysis were "in line" with the approved standards given there were no standards for such approvals (beyond approval by 2 managers without any criteria as to how any approval might be forthcoming). Mattiske's evidence was that he was never told that the Viterra Certificate of Analysis Procedure permitted alterations for results beyond 2 standard deviations. Accordingly, when making this statement he presumably only contemplated results within 2 standard deviations as being the "allowed standard deviations".

1472 *Thirdly*, Mattiske's statement that the relevant "schemes" were fully documented, and that copies were being obtained may well have been his understanding at the time. However, at trial, Mattiske gave evidence that he did not in fact obtain a copy of the Viterra Certificate of Analysis Procedure before Completion. Indeed, Mattiske went so far as to say under cross-examination that at no time before Completion was he

---

892 The reference to getting copies of relevant records did not make clear whether Mattiske understood such records had been included in the Data Room. Regardless of this, his statement that the testing policies had been disclosed in the Data Room was categorically incorrect.

893 See par 1365 above.

aware of any written policy concerning the manner in which Certificates of Analysis might be produced. This evidence was directly contrary to Mattiske's stated belief in October 2013.[894]

1473 *Fourthly*, the summary given by Mattiske essentially dismissed any concerns about past conduct relating to Certificates of Analysis being issued by Joe White. Whatever Mattiske might have been told, as a matter of fact there was no basis for such an entirely dismissive approach. So much ought to have been clear from what Purser had told him.[895]

1474 *Fifthly*, Mattiske's reference to the possibility of Cargill notifying Joe White's customers of transactions involving goods not consistent with their contracts was an implicit acknowledgement that those customers had not been notified of that fact already. Further, it was an express acknowledgement by Mattiske that he appreciated Joe White was supplying malt inconsistent with the terms of customer contracts at a level that, if Cargill was to disclose this, it would be likely to result in liability other than minimal liability.

1475 *Sixthly*, if there had been full and frank disclosure to Joe White's customers, then, with respect to Joe White's past conduct, there was nothing for Cargill "to throw … under the bus". Further, the use of such language suggested that what was being referred to was something more than trivial. Indeed, Mattiske's evidence was that he used the metaphor to indicate a situation where the parties "end up in court such as this".[896]

1476 At the end of Mattiske's re-examination, he was asked why he thought Cargill could throw Glencore under the bus, to which he responded that "Cargill could have made and have made a big issue out of these issues". When he was asked why he thought that might happen if he had formed the view that there were not any big issues,

---

894 In addition to the contents of this email, see, for example, pars 1355, 1376, 1378, 1380 above and 1512, 1526-1532 below.

895 See pars 1372, 1443 above.

896 Interestingly, when Mattiske was asked in cross-examination if, by using this metaphor, he really meant to be referring to Cargill letting customers know what had occurred, Mattiske answered that it was more general than that and asked if he could give some background. In re-examination, he elaborated on the background by stating, amongst other things, that he did not believe the issues in the past were material and that he was focused on the future.

Mattiske's evidence was that he thought legally there was no issue because the customers had accepted the malt. His evidence continued:

> So if Cargill were to make a massive issue out of this legally, because they kept telling me, "We didn't want to take you to court; we want to resolve it commercially; we want to" - you know, all of these sort of things. So by Cargill throwing us under the bus I figured they would want to make a big legal issue out of it.
>
> A big legal issue out of what?---Out of these practices.

1477 This evidence of Mattiske did not in any way explain how he could have thought Cargill could make a big legal issue out of matters that were not material. There was no suggestion by Mattiske in October 2013 that he thought Cargill would act in a manner which was disingenuous or otherwise in a manner that was not reasonable commercially. Accordingly, if Mattiske held the considered view that none of the matters raised were material, such an opinion was plainly qualified by the view that Cargill could throw Glencore "under the bus". At the very least, the use of such language demonstrated that Mattiske appreciated there was a real risk that the matters raised were material.[897]

1478 *Seventhly*, on the question of barley varieties, Mattiske was fully aware that some exposure existed.

1479 *Eighthly*, with respect to Asia Pacific Breweries, Mattiske understood there were not sufficient quantities of the required barley varieties in Australia. Further, Mattiske appreciated that the approval of alternate varieties was yet to occur, and would not occur before Completion.

1480 *Ninthly*, Mattiske was certain that there would be a reduced production capacity as a result of Joe White ceasing to use gibberellic acid. Further, he decided to adopt an optimistic view of the prospects of resolving issues that would necessarily arise from this cessation.

1481 *Tenthly*, the back-of-the-envelope assessment of potential liability demonstrated that

---

897 Lindner gave evidence that in late October 2013 she was "certainly suspicious" that after Completion Cargill Australia would make a claim for breach of a Warranty.

Mattiske, at the very least, had not satisfied himself that customers had been told about the Operational Practices. Indeed, on a natural reading of his reference to "even if disclosed to the customer", it appeared highly likely he appreciated that the manner in which Joe White did its business involved at least some customers not knowing about the substitution of non-approved varieties.

1482 *Eleventhly*, Mattiske appreciated that there was a risk that the required barley may not exist (and hence, there could be an ongoing problem).

1483 *Twelfthly*, Mattiske chose to take an optimistic view with respect to the potential exposure concerning unauthorised gibberellic acid use.

1484 *Lastly*, Mattiske's parting comment reflected his overall attitude to press on without making any concessions.

1485 As to the surrounding circumstances Mattiske faced, he said he had numerous important matters to deal with at that time and was "putting out fires". When it was put to him that he must have given top priority to the issues Cargill had raised, he said it was in his top 5. Mattiske said Cargill was but 1 of a very large number of issues he was dealing with and that "we" did not think it was all that material. All in all, Mattiske's position was that he had assessed the issues raised as not material to the sale, and on that basis the parties should proceed to Completion. Mattiske was also concerned that if Cargill delayed the settlement, Glencore would have to prepare to run the Joe White Business for an extended period of time. Mattiske said, with the benefit of hindsight, he might have paid "a lot more attention" to what had arisen; later he further acknowledged that he should have given it "a bit more attention at the time perhaps".

1486 Concluding on the position Mattiske adopted on 29 October 2013, it was apparent he formed the view that it was in Glencore's interests to press on to Completion regardless of the substance or otherwise of the issues that had been raised, particularly

with respect to Joe White's past conduct.[898] The email disclosed that Mattiske formed the view that the risk on completing without resolving the issues, or making all the enquiries necessary to resolve those issues, was a risk worth taking and that, with an aggressive approach to any claims, Glencore's exposure could be kept to a minimum.

1487 Mattiske gave evidence that the email to his superiors set out his understanding as to the potential amount of loss that might be caused by the use of unauthorised barley varieties. He said his understanding at the time was that 22,000 tonnes of the Gairdner variety had to be found. He also understood that, as there was insufficient Gairdner in Australia, Joe White would have to negotiate with Asia Pacific Breweries to use a different variety if the full amount was to be supplied. Mattiske said his understanding was based upon what the Joe White executives had told him, and that he did not have the ability to independently verify the situation.

1488 Mattiske was cross-examined about the potential difficulties that arose because Joe White was using unauthorised barley varieties. He said that, having learned that barley varieties could also be a customer specification provided for contractually, he knew that there would be difficulty going forward with compliance unless the particular varieties of barley as requested by customers were available to Joe White. As a result, he had asked "Joe White's executives" to tell him of the contracts that currently contained varieties specifications and how much barley was required in order to meet those specifications. In response, Mattiske's evidence was that he was told that Lion Nathan's requirements would be satisfied with the delivery of the new crop, "so that wasn't an issue". Mattiske was also told of another contract with Asia Pacific Breweries that needed roughly another 20,000 tonnes of the required barley variety, of which Mattiske believed Glencore could buy at least 7,000 tonnes.

---

898 In answering a question under cross-examination as to what questions he asked, after referring to some questions, Mattiske, non-responsively, added that if Cargill wanted to take over custody of the Joe White Business on 1 November 2013, he thought that he knew enough to tell Cargill what it needed to do to run the Joe White Business the way Cargill wanted to run it. On what basis Mattiske formed this view, given his lack of direct involvement in the investigations (save for the limited telephone conversations in which he was involved) and his self-professed ignorance of the Joe White Business before 22 October 2013, was far from clear. The basis upon which Mattiske claimed to have formed this view was not explored.

1489 With respect to each of these matters, Mattiske did not ask about the likely timeframe but said he did not expect it to be a problem because Glencore had a very large procurement team and he understood they were on the doorstep of harvest. Therefore he believed there would be ample supply of barley within a matter of weeks. Mattiske explained that none of this was stated to Cargill in writing because Glencore did not feel that it could correctly substantiate "the statistics". Further, having given this evidence, Mattiske acknowledged that he could not be certain of anything at that point in time, though, in re-examination, Mattiske also said that Glencore thought it could easily provide the solutions. Mattiske was not invited in re-examination to say what these easy solutions were, let alone how they might have been achieved. It was clear on the evidence that some "solutions" would not be available for many months.[899] Further, based on what Mattiske was told, he may have been able to form the view objectively that some of those solutions were likely, or even probable, but nothing he was told could have reasonably allowed him to have formed the view that the solutions to all of the issues raised were certain, or even likely, in the short term.

1490 In response to Mattiske's email, Mahoney emailed that he supposed that a more aggressive approach would be to make clear to Cargill there and then, in writing, that Glencore would not entertain any claims. However, he also said that he did not think it was a poker game Glencore wished to play.

1491 Mattiske sent a further email stating that if Cargill's main concern was the business going forward, then the only real issue was the supply of 22,000 tonnes of Gairdner to Asia Pacific Breweries. Mattiske said that Glencore, as a trading business, would be most likely to be able to find 7000 tonnes that day, but observed it was extremely limited and would result in significant freight costs. Mattiske stated that "we" had not considered providing this information to Cargill at this stage, but that he was happy to disclose the information if it was felt this was the best strategy. Mattiske concluded by stating that the bottom line on the contract with Asia Pacific Breweries was that if Cargill wanted to fully comply with the details of the contract, Cargill

899 See, for example, par 1212 above.

would have to negotiate with Asia Pacific Breweries.

1492 De Gelder then joined the email discussion. He stated that there was no point in disclosing the Gairdner issue. Mattiske gave evidence that he was not sure whether or not this statement was an instruction.

1493 In his witness statement, Mattiske stated that in participating in drafting the response to the Cargill 29 October Letter he tried to respond accurately and in good faith. Mattiske's correspondence with his superiors suggested otherwise. Mattiske's decision-making process as to whether or not to disclose something based upon "the best strategy" for Glencore did not reflect someone acting entirely in good faith. Further, it was apparent that his superiors were also willing to adopt a strategic approach so as to ensure the Completion of the Acquisition proceeded as scheduled. Furthermore, in circumstances where Mattiske knew full well that Joe White had consciously and materially breached customer contracts, at the very least with respect to gibberellic acid and probably in relation to barley varieties, it was difficult to see how a stated intention to not accept any liability, and to fight all representations regardless reflected the state of mind of a person acting in good faith.[900]

1494 With respect to Mattiske's attitude, he gave evidence that if he had known about the Operational Practices before the Acquisition Agreement had been executed, he would have taken certain steps. Although Mattiske did not identify the specific steps, he said he would have ensured that an investigation would have been undertaken to determine whether, and to what extent, the Operational Practices were actually occurring. Further, Mattiske's evidence was that, insofar as the Operational Practices that were occurring (and should not have been), the practices would have immediately ceased. Next, Mattiske said he would have obtained legal advice on what further steps ought to have been taken, including in particular on how to disclose information to Cargill. Finally, Mattiske said he would have recommended to his

900 Mattiske's evidence included a statement that he did not want to say anything in writing to Cargill that he was not sure of because he knew Cargill would have had direct knowledge of the relevant issues within a few days.

superiors that an acquisition agreement ought not be executed until the issues were resolved.[901]

1495 When asked during cross-examination if he had known of the Operational Practices before Glencore provided the Information Memorandum to prospective purchasers, whether the Operational Practices would have been disclosed in the Information Memorandum, Mattiske said he would have needed to investigate whether the Operational Practices were material or not.[902] Further, Mattiske said he believed in late October 2013 that the practices that had been discovered with respect to the conduct of the Joe White Business were not material. He said the reason they were investigated was because Cargill was quite concerned about them. Later in his evidence he said that he did not stop the process to conduct an investigation in late October 2013 because it was only a week away from Completion and he did not think the issue was all that material. Mattiske also said that with the benefit of hindsight, stopping the process and investigating the issue might have been an option.

1496 Precisely how Mattiske determined whether or not something was material in this context was not fully explored. Suffice to say, the evidence disclosed that Mattiske appreciated at least some of the issues raised were not insignificant and may have given rise to later claims by Cargill.[903] Nonetheless, both Mattiske and his superiors chose to proceed to Completion on the basis that any fallout could be dealt with after Completion. This reflected a state of mind that Glencore was willing to take the risk that it could be exposed to a claim for damages and could lose the ability to resolve the matter commercially as initially suggested by Purser and subsequently reiterated.[904] Further, notwithstanding Mattiske's particularly robust approach (which was emulated by his superiors), it must have been appreciated that it was a substantial risk to take in circumstances where, on Mattiske's own evidence, he did

---

901 For a more detailed discussion concerning Mattiske's evidence regarding what he said he would have done, see issues 131, 139 below.

902 In relation to Mattiske's evidence about what he understood the Operational Practices to be, see issue 131 below.

903 This represented the objective assessment of the contemporaneous evidence, rather than Mattiske's general assertions otherwise: see also Mattiske's evidence at par 1370 above.

904 See pars 1234, 1449, 1476 above. See also pars 1506-1517 below.

not have a proper understanding of the Joe White Business. There was no suggestion that those in Switzerland had any greater understanding. On the contrary, the evidence disclosed that their understanding of the Joe White Business was even more superficial than that of Mattiske.

1497 On 29 and 30 October 2013, Clark had a number of discussions with Lindner. During these discussions, Lindner enquired as to whether Cargill would be closing. Clark replied that he did not know. He said there was obviously an issue concerning malt quality, but the solicitors needed to plan on the assumption that Completion would be occurring.

1498 Also on 29 October 2013, Cargill was assessing the steps it should take in relation to the Operational Practices on Completion. An email chain between Viers, Okoroegbe, Eden and others between 28 and 29 October 2013 demonstrated that Cargill was considering closely the best course to take.

1499 Viers observed that Cargill would get its first look at the magnitude of the issues on the Friday (being the day of Completion) and suggested certain customers would need to be spoken to "asap". He said he was concerned not to magnify the situation or create additional risk. He also spoke in terms of "Joe White folks" becoming "Cargill folks" and that the Joe White employees would be the subject of questioning about how long the Operational Practices had been going on, and who authorised them. He sought some direction about what to say and what not to say.

1500 In response, Okoroegbe suggested that "you may want to find out customer's (sic) expectations first vs discussing past practices". He said he would wait to find out what Viers wanted to share with customers before giving any advice. Eden then wrote:

> Do we have to be so quick to be ready to advise customers on day 1. Would it not be [a] practical solution to do our investigation of the events and come up with a plan. I think we do not have to rush to the customer until we fully understand the extent of the issues and can come up with strategies, plans, and contingencies to manage in a proper way.

> I am not saying we won't stop what we can immediately, but could we not get alignment around when is the proper time to discuss with the customers?

1501 Eden gave evidence that, at the time he wrote this email, he wanted to understand the magnitude of the impact, which customers were affected, how long it had been going on, and at which plants. He said once this information was available, Cargill would have had a better idea of how to explain the situation to customers. Eden was also grappling with the appropriate time to raise past practices with the customers.

1502 The email chain concluded with Viers suggesting Cargill ought not be responsible for shipments in transit that had already been sent by Joe White under Glencore, and it needed to be clear Cargill was "not responsible to take further action on same".

1503 In addition, on 29 October 2013, Mattiske called Purser. Purser said Mattiske gave her a heads up, but her recollection of what was actually said was vague.

1504 In contrast, Mattiske gave specific evidence of telling Purser a number of things. These included that the Cargill 29 October Letter was asking for quite a lot of information on 30 October 2013, when the parties were settling the following day. Mattiske said there was no way Glencore could possibly respond to Cargill's questions in the detail that Cargill had asked for in that space of time.

1505 Mattiske said that Glencore was still acting in good faith and wanted to help Cargill complete the deal and run the Joe White Business from legal day 1. Further, Mattiske said the Joe White executives had told Glencore that the use of gibberellic acid related to 1 specific contract with Asia Pacific Breweries for 70,000 tonnes of malt. Mattiske said that if Joe White stopped using gibberellic acid on that contract, which Joe White had been asked to do, it would increase the germination time from 4 to 5 days, but there were new varieties coming out that would reduce the need for the use of gibberellic acid.

1506 Mattiske touched on further details about barley varieties before asking Purser whether Cargill was still going to complete. Purser stated that Cargill was planning to do so. She further stated that Cargill wanted to resolve the issues commercially.

According to Mattiske, the issue of provision in Glencore's accounts was raised again.[905] Mattiske gave evidence that he was an accountant by trade and knew provision could not be raised without any justification, and that Purser could not say how much was being claimed at that time.

1507 There was obviously considerable overlap between Mattiske's account of this telephone conversation and the exchange that took place between them when Purser called him before sending the Cargill 29 October Letter.[906] It was possible Mattiske had conflated some parts of the conversations and also duplicated some matters in his mind. This was perfectly understandable given the lapse of time. In any event, the only issue Purser took substantial exception to in relation to Mattiske's account of this conversation was Mattiske's evidence about the contract with Asia Pacific Breweries for 70,000 tonnes of malt. She said if she had been told that it would have stood out in her memory and it would have been something about which she would have taken a note.

1508 It was clear from Mattiske's email of the same date[907] that Mattiske had been informed of the matters he said he stated to Purser. Further, there was no apparent reason why he would not have informed Purser of this if he was aware of it. Unlike some other subjects that were discussed with his superiors and about which it was decided not to disclose to Cargill, there was no suggestion this piece of information should have been withheld. Although there was no contemporaneous record of Mattiske's conversation with Purser, Mattiske explained that these matters were not put in a subsequent letter to Cargill because Glencore did not feel "the statistics" could be correctly substantiated in the time available.

1509 In circumstances where Purser's recollection of this particular conversation was weak, on balance I find that Mattiske's account of this part of the conversation ought to be accepted.

---

905 The term provision was a reference to the "mutually agreed reserve" suggested in the Cargill 29 October Letter.

906 See pars 1442-1450 above.

907 See par 1467 above. See also par 1462 above.

1510 Just before 4:00pm, Fitzgerald sent an email to Stewart, copied to Norman, which asked Stewart to come to Viterra after he landed in Adelaide. Fitzgerald stated that they needed to discuss how the specifications "come to [Stewart]" and to run through other documentation from customers. Fitzgerald apologised for the urgency but said the process needed to be sorted out as soon as possible. He asked Stewart to call him when he arrived.

1511 Stewart gave evidence that he could not recall this email, but he certainly recalled getting a telephone call from Fitzgerald to this effect. Stewart said he was sitting in Melbourne Airport about to fly to Hobart when he received the call from Fitzgerald directing him to return to Adelaide. Stewart said he could not recall the specifics of the conversation but did remember being slightly annoyed because he really wanted to go to Hobart for a meeting he had organised. When asked whether he recalled any discussion about specifications, Stewart gave evidence that there may well have been such a discussion. He said he recalled feeling the meeting was not overly important and speculated that it might have been a rehashing of previous discussions, but then stated that he could not really recall the content of the discussion. In short, beyond the details set out in the email sent around 4:00pm, there was no meaningful evidence of the discussion that took place either on the telephone or when Stewart arrived back in Adelaide.

1512 A draft response to the Cargill 29 October Letter was prepared by Lindner and circulated to Fitzgerald and Mattiske later that afternoon. Lindner asked Fitzgerald to review it and provide comment. It read:

> I refer to [the Cargill 22 October Letter] and [the 25 October Reply Letter]. As noted in my letter to [Purser], Glencore had no knowledge of [Joe White] engaging in the practices referred to by [Purser] in her letter. As such, we have had limited time to explore the matters raised by [Purser] with [Joe White] management. Having said that, we have made further inquiries and can advise as follows:

1. **Issuing certificates of analysis to customers which represent that malt supplied to the customers met with particular specifications where the malt supplied did not meet those specifications**

   Certificates of [A]nalysis have been issued in compliance with [Joe White]'s *ISO accredited quality system and [Joe White]'s documented procedures*.

2. **Supplying malt to customers which has not been produced from the specific barley varieties required by those customers**

   It is common knowledge within the industry that there is *a short term shortage* of certain barley varieties. [Joe White] management are currently considering how to manage this shortage.

3. **Supplying of malt to customers which had been produced from a malting process that involves the addition of gibberellic acid (GA3), where those customers require that [gibberellic acid] not be used in the production of malt supplied to them**

   [Joe White] management have taken steps to ensure that *going forward no [gibberellic acid] is added* to malt where customers require that it not be used in production.

I disagree that [Joe White] and Cargill will suffer significant loss and damages (sic) from the above practices and the remedial measures required to correct and otherwise address them.

In relation to your suggestion that a mutually agreed reserve should be made out of the purchase price payable under the Acquisition Agreement, we do not agree to this. The Acquisition Agreement does not provide for this. In the event Cargill becomes entitled to make a claim, the Acquisition Agreement contains provisions detailing the procedure to be followed.

In relation to your request for *full access to [Joe White]'s records and current employees, we believe that we have and continue to provide Cargill with an appropriate level of access*. In any event, from 31 October Cargill will have full and unfettered access to all records and employees of [Joe White].

(Emphasis added.)

1513 Fitzgerald forwarded the draft letter to Hughes asking for his comments, but specifically informed Hughes that he was not requesting any changes.[908] Hughes replied 7 minutes later stating that "[n]one of the content regarding points 1, 2 and 3 is inaccurate". Fitzgerald then communicated this to Lindner and, through Lindner, Mattiske, saying that Hughes had agreed with the contents via email. The draft was then forwarded by Mattiske to Walt. Mattiske's evidence was that he believed that Mostert also reviewed the draft. Mattiske also said that the response was prepared in

908 Fitzgerald also sent the draft Lindner had prepared to Norman and Rees, stating the draft looked fine to him and he was checking the Acquisition Agreement before he confirmed this.

the same way as the first response. Mattiske asserted that the response was checked "by all parties", by which he explained included the Joe White executives, the Viterra executives and his superiors in Switzerland. As to which of the Joe White executives were involved, Mattiske said he believed Hughes, Stewart, Youil, Wicks and Argent had reviewed the response and had indicated they were comfortable with it. This evidence cannot be accepted. Mattiske had no direct knowledge of these matters as the response was being coordinated by Fitzgerald. Further, in emailing Lindner to say "we" were fine with the draft letter, Fitzgerald noted that Hughes had agreed with the contents. He did not refer to any of the other executives in this regard.

1514 On 30 October 2013, Mattiske called Purser again. Purser said she had no explicit memory of the conversation, though she accepted it was plausible that it took place. Further, she gave somewhat confused evidence that if Mattiske had said anything that was not in the letter that was sent later that day then she would have taken notes. The difficulty with this evidence was that, at the time Mattiske was stating the Viterra Parties' position to her, she did not know what was to be contained in the yet-to-be-sent letter. Under cross-examination, she accepted that not having the letter in front of her meant Mattiske not saying something additional to its contents could not be the reason for there not being a note. That said, she also gave evidence that if Mattiske had told her anything substantive, in accordance with her practice she would have taken notes.

1515 In her evidence in chief, Purser was taken to various statements it was anticipated would be the subject of evidence from Mattiske as to what he told her on 30 October 2013. With respect to some of this anticipated evidence, Purser stated simply she could not recall, whereas with other matters she stated not only that she could not recall it being said but also expressed her belief that it was not said. On the question of Completion, her evidence was that she did recall Mattiske raising the issue by asking her whether it was going ahead, and by her responding that as far as she was aware it would.

1516 Both during cross-examination and in their closing submissions, the Viterra Parties

contended that it followed from this evidence from Purser that Mattiske's version of the conversation should be preferred. Naturally, regardless of the extent of Purser's recollection, the court must be satisfied as to the veracity of Mattiske's evidence on this topic.[909]

1517 Much of what Mattiske deposed as to what he said on this occasion was not really controversial. His evidence was that he said that the Cargill 29 October Letter was asking quite a lot of information in circumstances where Completion was imminent, and that there was no way Glencore could possibly respond in the detail that Cargill was asking for in such a short space of time. He repeated that Glencore was acting in good faith and wanted to help Cargill complete the deal and to run the Joe White Business from legal day 1. Consistent with Purser's evidence, Mattiske said he asked her whether Cargill was going to complete and Purser said she saw no issues that would hold it up. Further, Purser repeated that Cargill wanted to resolve the issue commercially and did not want to take the matter to court.

1518 In a further repetition of what had been discussed previously, Purser stated that Glencore needed to raise a provision in its accounts for the sale. In response, Mattiske said that he did not know how Glencore could raise a provision because he did not know what Cargill was claiming or the amount to be raised. Mattiske's evidence was that Purser also said that she could not tell him how much Cargill was claiming at that time. As to the outstanding issues, Mattiske gave evidence that he said Glencore was there to help Cargill resolve them, that Glencore did not think any of the issues were very large by themselves and that Glencore thought it could fix them.

1519 More controversially, Mattiske gave evidence that he said to Purser he would tell her about some details he had been given, but would not include them in the upcoming letter because Glencore could not substantiate the information. Those details included that there was a specific 70,000-tonnes contract with a customer, Asia Pacific Breweries, in respect of which Joe White was using gibberellic acid that was not

---

909 *Ellis v Wallsend District Hospital* (1989) 17 NSWLR 553, 586C-588B (Samuels JA, with whom Meagher JA agreed and Kirby P relevantly agreed).

permitted. He said to his knowledge that was the only contract where gibberellic acid was being used where it was not allowed, and that the Joe White executives had said they could stop using gibberellic acid for this contract which would have the effect of increasing germination time from 4 days to 5 days. Mattiske also said that the Joe White executives had been told to stop using gibberellic acid for this customer. Further on this issue, Mattiske stated that it would not be a long-term issue because a new variety called Admiral would be released within 12 months which would solve the issues with respect to the use of gibberellic acid.

1520 In relation to other varieties, Mattiske's evidence was that he told Purser there were some short-term issues with accumulating the correct barley varieties. Mattiske stated that "we" had found another variety called Vlamingh which was widely available in Western Australia and was deliverable against customer contracts. He said further that "we were doing our best" to try to procure the other required barley varieties for them and offered Glencore's help "to try" to resolve the short-term issues. In his evidence, after referring to trying to resolve the short-term issues, Mattiske continued "knowing that the new crop had been harvested or [was] about to be harvested which would then solve *all* of their varietal issues" (emphasis added). Given Mattiske's propensity to add comments rather than confining himself to answering the question, I am not satisfied that this last part of his answer reflected what he told Purser. Further, the comment did not reflect the true position, as Mattiske appreciated the new crop had yet to be proven and could give rise to discounts.[910]

1521 The fact that Mattiske spoke to Purser on 30 October 2013 was corroborated by an email sent by Mattiske to de Gelder, Mahoney and Mostert on the same day. In that email, Mattiske stated that he "gave 'off the record' assurances that the issues raised by Cargill are not problematic for the business going forward". No doubt reflecting Purser's reaction, Mattiske also stated that Cargill was still somewhat sceptical but confirmed Completion would occur. He further stated Cargill's position to be that it would assess the Joe White Business after Completion regarding a potential claim.

---

910 See par 1467 above.

1522 Again, in circumstances where Purser's recollection of this conversation was also weak,[911] subject to the matters set out above, I am satisfied that Mattiske's evidence as to what he said to Purser on 30 October 2013 was in substance what was in fact stated.[912] Further, although not put to her while she was in the witness box, a possible reason why Purser did not take notes of the conversation may have been because Mattiske stated the additional matters he conveyed to Purser that were not contained in the foreshadowed 30 October Reply Letter could not be substantiated. Presumably, in those circumstances, little if any reliance would have been placed upon the additional matters stated "off the record" by Mattiske. Mattiske's contemporaneous email effectively recorded this as Cargill's position.

1523 The Viterra Parties submitted that in this call to Purser, Mattiske provided Cargill with the details that he, Fitzgerald and others involved in the investigation had received which related to the likely effect of the issues raised. In fact, much of the information that had been provided to Fitzgerald was never conveyed to Cargill before Completion.[913]

1524 Later on 30 October 2013, a response was sent to Savona, signed by Mattiske in his role as managing director of Viterra Ltd and on Viterra letterhead ("the 30 October Reply Letter"). Mattiske said the letter was a response on behalf of Viterra Ltd, not Glencore, but also conceded he did not notice the change in title from the 25 October Reply Letter as it was not of importance to him. The final version of the letter was identical to the draft circulated by Lindner on 29 October 2013.[914]

1525 Lindner gave evidence that she believed, both in October 2013 and at the time of giving her evidence, that the 30 October Reply Letter was accurate and not misleading. Further, Mattiske's evidence was that he believed he was giving a true and fair account of what "we" had been told by the relevant Joe White executives. Of course, Mattiske

---

911 As it was with respect to the conversation held on 29 October 2013: see par 1509 above.

912 Out of an abundance of caution, in stating the obvious, this finding is necessarily subject to the possibility that Mattiske did not say some of the matters he said he did on 30 October 2013 because he had already conveyed the substance of them to Purser the day before: see pars 1503-1509 above.

913 See esp pars 1270, 1373, 1387-1389 above and annexure C to these reasons.

914 See par 1512 above.

had not been privy to what each of the relevant Joe White executives, being Hughes, Youil, Stewart and Wicks, had said individually about the practices. That said, the fact that Hughes had given his imprimatur to the contents of the 30 October Reply Letter must have given Mattiske a considerable level of comfort.

1526 When Eden read the 30 October Reply Letter, he noted it referred again to the International Organisation for Standardisation accredited quality systems. Eden gave evidence that he also noted the letter referred to short term shortages of some barley varieties, but could not recall that matter having been raised before. Consistent with his response to the 25 October Reply Letter, Eden said after reading the further responses he had no way of knowing the true nature or extent of the issues and what impact they would have on the Joe White Business after Completion. He thought Mattiske was being dismissive of the issues. Eden thought, understandably given the lack of detail in the letters, that Glencore and Viterra had not given any reassurance about the extent of the Operational Practices.

1527 Viers also considered the 30 October Reply Letter did not enable Cargill to understand the true extent of what had been raised on 15 October 2013.[915] As for barley varieties, he said a short term shortage had been suggested without any explanation of the practical impact it may have had on Joe White. He remained concerned.

1528 As to Van Lierde's position, he ultimately formed the view that there may have been some practices at Joe White which would not be tolerated by Cargill, but the responses given to Cargill's queries indicated that they were not ongoing and that there were no concerns from customers. He also said he had no information which would provide a basis to make any decision to stop the transaction. Based on the information available, Van Lierde formed the view, as project sponsor, that Cargill should complete the Acquisition.

1529 Cargill sought advice from Allens in relation to whether Cargill should proceed to

---

915 Upon receipt of the 30 October Reply Letter, Viers sent an email to Van Lierde simply stating, "Not a surprise here Frank". Van Lierde's evidence was that he did not know whether he had any expectations at the time about what response Cargill would receive. Viers was not asked any questions about the email.

Completion of the Acquisition in light of the 30 October Reply Letter. Clark advised that Cargill was in no better position than when the issues were first raised, and that he thought the matters were being downplayed. Clark said that his reading of what had been stated with respect to Certificates of Analysis was that they were not being falsified by Joe White, and that any difference between what was certified and the actual malt quality appeared to be within some sort of tolerance that was within the ISO Standards. Further, Clark was unsure whether Certificates of Analysis were only used to certify the quality of malt to the customer or whether they were being handed to government agencies. Also on the use of gibberellic acid, Clark observed that Viterra had said that the practice would cease without an impact on production and hence Allens was in no better situation to advise.

1530 Clark gave evidence that, in order to have been able to advise on the question of Cargill's right to terminate, he would have needed to know if the practices identified had a substantial impact on production such that the Joe White Business could not fulfil customer contracts. He further stated if customers had not acquiesced or approved the practices, if they were widespread and if the customers viewed them seriously and could possibly make claims, these matters would also have been highly determinative of Cargill's rights. Clark would have also wanted to know whether Certificates of Analysis were being provided to government authorities.

1531 Up to this time, Mattiske said he did not ask, or seek a report from, anyone about how many Joe White customers were affected by Joe White's pencilling of Certificates of Analysis. He said that despite Hughes' explanation indicating to him that the practice was more than a one-off,[916] he made no such enquiry, nor did he personally ask whether any document recorded the practice, because he did not think it was necessary and because others were investigating in any case.[917] However, Mattiske

916 Later in Mattiske's evidence, he appeared to contradict this evidence, stating he did not know whether the practice of altering Certificates of Analysis occurred once or twice, or across the board. This later evidence was inconsistent with Mattiske's stated position that he understood the conduct in question was standard industry practice and was generally known. Plainly, he had formed a view at the time that it was more than a one-off.

917 Mattiske said he left the conduct of the investigation entirely in the hands of Fitzgerald, Norman and Rees.

said he did not know if anyone else asked these questions. Mattiske said he believed "Hughes and his executive team" when "they" said: "There is no problem with it. It's completely allowed." Mattiske's approach in this regard was somewhat remarkable when his email sent 29 October 2013,[918] Lindner's draft response and the 30 October Reply Letter all expressly referred to documented procedures.[919]

1532 Perhaps even more surprising than Mattiske's lack of enquiry was his evidence that no one told him in October 2013 that Joe White had a written policy in place concerning the creation and dissemination of Certificates of Analysis. Given the relevant documentation had not been included in the Data Room (or shown to Cargill before Completion), this was a glaring oversight in the investigative and reporting process that was conducted after receipt of the Cargill 22 October Letter, not to mention a material deficiency in the Data Room disclosure.[920]

1533 Further, neither Hughes nor anyone else told Mattiske that, despite Hughes' assurances about standard industry practice and assertions that Joe White's approach to Certificates of Analysis was in accordance with the ISO Standards, the Viterra Certificate of Analysis Procedure was marked "obsolete" and was not disclosed to customers or auditors.[921]

1534 Mattiske did ask a series of questions, which undoubtedly reflected his attitude to the issues he was confronted with at that time.[922] Mattiske said he asked how to fix the issues for the Joe White Business going forward. To that end, he also asked how the problem was going to be resolved, what varieties were needed, what the impact of not using gibberellic acid was on the relevant customers, and other questions directed to Mattiske knowing "enough to tell [Cargill] what [Cargill] needed to do to run the [Joe White] [B]usiness the way [Cargill] wanted to run it".

1535 Returning to the enquiries Mattiske did not make, if Mattiske's evidence that he did

---

918 See par 1467 above.
919 See par 1512 above. See also pars 1378, 1380, 1472 above.
920 Cf par 1324 above.
921 See pars 287-292, 1324 above.
922 See par 1486 above.

not know that customers had not been told about the Operational Practices were to be accepted, it would have been extraordinary that he did not ask whether or not Joe White's customers knew about the practices. The fact is that he did not ask. Mattiske gave evidence he was not aware that whether the customers knew or not was an issue and that was the reason he did not ask. He also explained the position on the basis that he did not think any such enquiry was necessary as he thought it was reasonable to put "a lot of faith" in the fact that customers were happy and there was no "smoking gun" from the customer side. He said he put a lot of weight on the evidence that customers had not raised issues with the malt they had received. This evidence cannot be accepted at face value. This is especially so in light of Purser repeatedly informing Mattiske that Cargill's unequivocal position was that none of the matters referred to in the Cargill 22 October Letter were standard industry practice.[923] In any event, it must have been glaringly obvious to Mattiske that if Joe White had been completely open and transparent in its dealings with customers, there could have been no real substance to the issues that had been raised.

1536 With respect to gibberellic acid, it was completely implausible that Mattiske believed the customers had been told of its use when the very issue in question was the unacceptability of using gibberellic acid when a customer had not permitted it. Axiomatically, if a customer was informed of its use and allowed it to continue, then the problem identified by Cargill would have been trivial, if not entirely non-existent. Furthermore, upon learning of this issue Mattiske immediately directed the cessation of this practice.[924] The only rational basis for such a direction was an appreciation that the relevant customers did not know about it, or, at best, an entirely inappropriate clandestine arrangement had been put in place with 1 or more employees of the relevant customers.[925] If the customers had been informed about it, and permitted it to occur, it would have made no commercial sense to immediately cease the practice,

---

923 See pars 1234, 1372, 1443-1444, 1449 above. During closing submissions, the Viterra Parties provided 25 separate transcript references to Mattiske's evidence concerning his knowledge of whether or not Joe White's customers knew of the Operational Practices. The fact that Mattiske repeated his evidence on numerous occasions did not make it any more plausible.

924 See pars 1254, 1376, 1378(6), 1390 above.

925 There was no probative evidence to suggest the latter of those 2 alternatives had occurred.

at least without discussing the issue with the relevant customers.

1537 When this point was raised with the Viterra Parties' lead senior counsel in closing submissions, it was properly conceded that there appeared to be an inconsistency in Mattiske's position. It was frankly acknowledged that Mattiske's reaction in this manner suggested he must have appreciated that the practice was something that was wrong. This was undeniably correct.

1538 The position with respect to the use of unauthorised barley varieties was arguably a little less clear. Mattiske swore that he accepted, if customers had been told about the practice of substituting barley varieties when it occurred, that would be the end of any basis for a customer complaint. He further gave evidence that he was not informed the customers were so told, but he did not infer that they had not been told. In re-examination, he explained that he assumed customers had been told and had given their consent because they had accepted delivery of the malt against their contracts. In itself, this explanation was not implausible. Absent other relevant facts, it might be that someone in Mattiske's position, who was not told specifically about the lack customers' knowledge, might infer that the customers knew of the substitution because such an inference would be consistent with Joe White acting lawfully as and when the required barley variety was not available.

1539 However, the surrounding circumstances meant that this evidence of Mattiske also could not be accepted at face value. Those circumstances included, for reasons discussed,[926] Mattiske must have known that a practice of non-disclosure existed in relation to gibberellic acid, and in those circumstances was plainly put on notice that a practice of concealment might also exist in relation to the substitution of barley varieties.[927]

1540 Further, it was difficult to accept that a person with Mattiske's background and experience would not have asked the question about whether customers were informed about incorrect barley varieties being used, if he genuinely had a doubt

926 See pars 1285-1286 above.
927 See also pars 1390-1392 above.

about it, or was genuinely only making a positive (and uninformed) assumption about it, rather than knowing the true position. Most likely, the question was not asked because Mattiske believed the customers had not been told or understood that that was the likely position, and wilfully shut out having the true position confirmed.[928] Furthermore, whilst Mattiske's evidence was that he believed that Joe White customers were aware of the conduct, this was not consistent with his contemporaneous written communications. Most tellingly, in his email sent 29 October 2013 to Switzerland,[929] when discussing "[t]ransactions in the past", Mattiske made no suggestion to his superiors that "transactions involving delivery of goods not consistent with the contract" did not include those transactions involving the substitution of incorrect barley varieties. On the contrary, as already discussed,[930] the language used by Mattiske made plain that he understood Joe White's customers were not being properly informed about the practices. Moreover, as identified above,[931] Mattiske effectively acknowledged that Joe White's customers had not been notified of the replacement barley varieties, or at the very least had not been properly notified.

1541 Lastly, with respect to Certificates of Analysis, there may have been some plausible basis for Mattiske to assume, at least at the outset, that there was some awareness of pencilling by reason that he was told altering Certificates of Analysis in such a manner was standard industry practice. However, assumptions that might have been made because of this information only went so far.

1542 Speaking generally, Mattiske fully appreciated that a standard industry practice might

---

928 When it was put to Mattiske that he studiously and wilfully failed to ask obvious questions, he "actively" disputed it. Further, when Mattiske was asked whether he was seriously undertaking an enquiry into the practices or whether he was looking the other way and studiously not asking questions that were obviously available to be asked, Mattiske gave evidence that he was relying on his deputies to report on what they had found. He said he was not personally undertaking any of the investigation himself, other than the 2 meetings he had with the Joe White executives. For completeness, Mattiske's evidence was that while he did not ask for an analysis to be undertaken of the extent and scale of the practices, or their implications in terms of the existing customer base, he did ask how to "fix this" for the Joe White Business going forward, how to resolve this, what varieties were needed, and what the impact of not using gibberellic acid would be.

929 See par 1467 above.

930 See pars 1475-1478 above.

931 See pars 1378(7), 1467, 1530-1535 above.

be wrongful. Further and more specifically, he acknowledged it crossed his mind that the standard industry practice Hughes referred to might have been a wrongful practice.[932] In such circumstances, it was difficult to accept that Mattiske would not have asked a question about whether Joe White customers were notified of the impugned conduct, if he intended that Glencore in good faith would provide full and frank information to the best of Glencore's ability in response to the queries that had been raised by Cargill.

1543 On a more general level, it would have been a perfect manner by which to diffuse much, if not all, of Cargill's concerns if Glencore was able to state in relation to each of the practices raised that Joe White's customers were fully aware of the conduct involved. It beggars belief that this would not have occurred to Mattiske. Indeed, the fact that Mattiske was so keen to emphasise that customers had not complained demonstrated that he was fully appreciative of the significance of the Joe White customers' position to the issues at hand. When it was put to him during cross-examination that if it had been reported back to him that all 3 Operational Practices had been disclosed to customers and that they had consented to them it would have been music to his ears, Mattiske noted it was a hypothetical question.[933] Having made this observation, he said he did not know; and then he said possibly. When he was pressed, he acknowledged it would have been comforting because then he would have told Cargill of his knowledge. Mattiske also acknowledged that in these circumstances, there would be no basis for the customers to complain. He further understood that if the customers had agreed, then that would have been a simple

---

932 Later in his evidence, Mattiske said it did not occur to him that the practices he was told were standard industry practice were standard corrupt practices. Later still, he said that it did not occur to him that the excellent relationships Joe White enjoyed with its customers were based on a lie about compliance. None of this evidence, nor the other evidence Mattiske gave, detracted from his unequivocal evidence that it crossed his mind that the "standard industry practice" might be wrongful. Further, given what was involved and the fact that Mattiske was an experienced business person, it would be very surprising if it had not crossed his mind.

933 Obviously, Mattiske appreciated that when the talking points were being prepared and finalised, the reference to discussing laboratory results being altered with customers was confined to possible variances in laboratory test results between those of the customers' and Joe White's: see pars 1345, 1368 above.

consensual variation to the contract.

1544 By reason of these matters, it must have occurred to Mattiske that if he had any doubt, as he said in his evidence he did, about whether customers were being informed, he should have asked the question in light of Cargill's enquiries. Moreover, upon receiving various reports from Fitzgerald, Norman and Rees which did not convey that customers knew about the practices,[934] at the very least it was likely Mattiske had real and serious doubts about the extent of Joe White customers' knowledge but chose not to ask a question in that regard.

1545 As already touched upon,[935] the position was heightened even further after the 25 October Reply Letter in light of Purser's communication with Mattiske on 29 October 2013, when she informed him again that Cargill's position was that altering Certificates of Analysis was not standard industry practice. Yet, Mattiske again chose not to ask the obvious question.[936] In my view, it was highly likely that the reason neither the 25 October Reply Letter nor the 30 October Reply Letter (together, "the Reply Letters") referred to the knowledge of Joe White's customers was because Mattiske either appreciated or strongly suspected that they had not been informed, or properly informed, of the Operational Practices. I so find.

1546 Finally, as to Mattiske's position at this time, Mattiske gave evidence that he did not see any benefit in not providing all relevant information to Cargill, because Cargill was going to own the Joe White Business within a matter of days. Be that as it may,[937] the obvious benefits in not providing Cargill information that might disrupt the settlement were that Glencore would not be left with the burden of running the Joe White Business[938] and would not be out of pocket while having to try and finalise a delayed completion.

---

934 Perhaps with a possible minor exception insofar as the draft talking points were approved by others (see pars 1345, 1368 above); but noting that the discussions with customers alluded to were confined to laboratories having analytical errors.

935 See par 1535 above.

936 See pars 1444-1446, 1531-1535 above.

937 Compare pars 1491-1492 above.

938 Something Mattiske was concerned about: see par 1485 above.

1547 Eden's reaction to the 30 October Reply Letter was much the same as it had been to the 25 October Reply Letter; he thought Mattiske was being dismissive of the issues. Eden thought, understandably given the lack of detail in the letters, that Glencore and Viterra had not given any reassurance about the extent of the Operational Practices.

1548 The Viterra Parties submitted that the evidence showed Mattiske's beliefs as to the existence and effect of the practices were consistent with information provided to Cargill by way of both the Reply Letters, together with his discussions with Purser. In particular, it was submitted that, as at 30 October 2013, Mattiske:

(a) believed that Cargill had issues with these practices;

(b) believed that these practices were occurring;

(c) was not sure if there was anything wrong with them at that point in time; and

(d) believed they could all be resolved in any case.

While the first 2 of these suggested beliefs are uncontroversial, the latter 2 alleged beliefs must be rejected, at least in part.

1549 In relation to the third suggested belief, Mattiske unreservedly understood that the use of gibberellic acid when it was prohibited was wrong. Whatever assurances he may have received from Hughes or any of the other Joe White executives, no comfort could have been derived from what was said. The conduct was patently improper and Mattiske, as an experienced business person, realised as much. Undoubtedly, this gave rise to his direction that the conduct had to cease immediately.[939] Further, I am not satisfied that Mattiske believed there was nothing wrong with the practice of using unauthorised barley varieties in the manner that Joe White did. Again, Mattiske's evidence was that he told Hughes the practice had to stop.[940] While I accept that some of the conduct concerning unauthorised barley varieties was plausibly explained by reference to weather conditions and poor seasons, that explanation did not justify the

939 See pars 1536-1537 above.
940 See par 1390 above.

conduct more generally.[941] Furthermore, as Mattiske acknowledged, being told that something was standard industry practice was not some sort of panacea upon which Mattiske could assume nothing improper was occurring.[942] Moreover, Mattiske knew that issues concerning barley varieties were ongoing, which was demonstrated by the fact that he offered to assist Cargill to procure the correct varieties.[943] At the time that Mattiske made his offer, he had not made any proper enquiries to ensure that all the required barley varieties were actually available. Finally, I accept that Mattiske may have had some uncertainty in relation to Certificates of Analysis.[944] However, he must have appreciated there must have been real doubt about what he was being told by the Joe White executives after being informed numerous times by Purser that Cargill's view was that the practice being discussed was not standard industry practice.

1550 The fourth suggested belief ran counter to Mattiske's own email to his superiors on 29 October 2013.[945] That email made clear that Mattiske did not believe all issues could be resolved. On the contrary, he plainly anticipated some of them would not be and that claims by Cargill was likely to follow. Moreover, on his own evidence, Purser effectively told him that Cargill would be making claims.[946] Although Mattiske said some comforting words to Purser on 30 October 2013 about being able to resolve the issues, his evidence was that he could not be certain about anything at that point in time.[947]

1551 Despite the concerns raised in the Cargill 22 October Letter and the Cargill 29 October Letter, Completion proceeded as scheduled on 31 October 2013.

1552 As part of the settlement, a deed of release with respect to the Confidentiality Deed was executed on 31 October 2013 ("the Deed of Release"). The Deed of Release identified Glencore as the "Beneficiary" and Cargill, Inc as the "Recipient". It recited that Cargill, Inc had executed the Confidentiality Deed in favour of Glencore, and that

941 See pars 1538-1540 above.
942 See par 1542 above.
943 See par 1520 above.
944 See par 1541 above.
945 See par 1467 above.
946 See pars 1467, 1517-1518, 1521 above.
947 See par 1489 above.

Glencore had agreed to release Cargill, Inc from any further liability under the Confidentiality Deed.

1553 The Deed of Release contained the following:

> **1 Interpretation**[948]
>
> …
>
> **Claim** means any allegation, debt, cause of action, liability, claim, proceeding, suit or demand of any nature howsoever arising and whether present or future, fixed or unascertained, actual or contingent, whether at law, in equity, under statute or otherwise.
>
> …
>
> **Existing Deed** means the deed entitled "Confidentiality Deed" between [Glencore] and [Cargill, Inc] dated 27 May 2013.
>
> …
>
> **2 Release**
>
> On and from Completion and subject to clause 3, [Glencore] releases [Cargill, Inc] from all Claims and obligations under the Existing Deed.
>
> **3 Preservation of obligations and rights**
>
> Nothing in this document affects or otherwise prejudices:
>
> (a) the rights or obligations of any party arising under or in relation to the Acquisition Agreement; or
>
> (b) any accrued rights, obligations, Claims or liabilities arising under or in connection with the Existing Deed before Completion which the parties may have against each other.
>
> **4 Further steps**
>
> [Glencore] and [Cargill, Inc] each agree to do anything reasonably required by the other party (including completing and signing any document) that is necessary to give full effect to this document.

1554 Also on 31 October 2013, Cargill (being Cargill, Inc and Cargill Australia individually) and Viterra (being Viterra Ltd, Viterra Operations and Viterra Malt individually), as well as Viterra Packaging and Processing Pty Ltd executed a letter recording a series of matters that had been agreed.[949]

---

948 Headings were for convenience only and were not to affect the interpretation of the Deed of Release: cl 1.2.

949 This letter was included in the evidence as it was material to whether or not Cargill was entitled to recover any loss suffered arising out of the Co-Operative Bulk Agreement. As Cargill no longer presses any claim under that agreement, it is unnecessary to set out those parts of this letter that were referred to in the pleadings.

1555 Right up until the moment Cargill took control, Joe White continued to engage in the Operational Practices, including the Gibberellic Acid Practice. On 31 October 2013, an illuminating exchange occurred between McIntyre and a production technician at Joe White. The technician enquired as to whether McIntyre was in the loop on Buloke being supplied to Asia Pacific Breweries in Singapore,[950] being a customer that prohibited the use of gibberellic acid. He stated that approval of the shipment needed to occur that day because gibberellic acid had been used in producing the malt. After McIntyre indicated that she was aware that was the position, the technician stated:

> [Don't] you think that is absolutely [atrocious]. We are just about to go to everything by the book but even at the very last [minute] *we are still doing what we have always done*.
>
> (Emphasis added.)

McIntyre responded with:

> Of course but what else did you expect. You [didn't] think there was going to be some kind of eleventh hour conscience growth did you?

The technician then suggested that whoever was still "taking the low road" ought to have been sacked, to which McIntyre said, "That would be everyone."

1556 Without descending to all the detail, McIntyre and others were also struggling to decide how to manage operations leading up to Completion. In an earlier exchange on 28 October 2013, McIntyre was responding to queries about what should occur regarding batches that would contain exogenous gibberellic acid for customers who prohibited it. McIntyre was asked whether it was necessary to stop using gibberellic acid because they would not be completed until after 31 October 2013 or whether it was okay. McIntyre simply responded that she did not know. After a further query, McIntyre said she could not send preshipments. She also said she could not send Certificates of Analysis and that there was "no point doing my spreadsheets [because] they are only useful to help us lie".

---

950 In relation to supplying malt to Asia Pacific Breweries using Buloke, see pars 1781, 1786, 2482-2485 below. See also par 1307 above and the reference to examples of approved varieties for Heineken having been Gairdner and Stirling and par 1462 above recording the approved variations as having been Stirling, Gairdner and Sloop (mistakenly recorded as Flute).

U. Post-Completion events

1557 Cargill decided that, at least initially, in its communications with Joe White's customers it would not refer to Joe White's past conduct reflecting the Operational Practices. Also, Cargill decided to retain the Joe White brand, Viers informing others at Cargill that that was how the Joe White Business would be known in the market.

1558 The process of integrating Joe White within Cargill's business then began. Viers was the person primarily responsible for integration activities after 31 October 2013. However, it was De Samblanx who sent an email on 1 November 2013 to Hughes, Stewart, Youil and Wicks, copied to Viers, welcoming them to Cargill. He had met with Hughes, Stewart, Youil and Wicks the previous day to explain the Cargill Blending and Certificate of Analysis Procedure. He attached this to his email,[951] and provided a link to the relevant manual. De Samblanx did this because Joe White management were told they needed it to implement Cargill's procedures going forward.

1559 Cargill immediately implemented Cargill's standards in relation to Certificates of Analysis within the Joe White Business. From the close of business on 31 October 2013, pencilling stopped immediately and there were no shipments for which a previously generated Certificate of Analysis was sent to customers. This required Cargill to seek derogations from a high proportion of Joe White's customers. Viers gave evidence that this was the result of not having the correct varieties of barley or the capability to produce malt in accordance with customers' specifications in the right quantities. He described this as a major problem for the Joe White Business. It created both short and long-term problems.

1560 In the short-term, Cargill was required to seek agreement from Joe White's customers to accept different barley varieties or to obtain the correct barley varieties (if possible) from some other source. Alternate sources were other Joe White plants or outside sources. Either way, this led to additional cost.

---

951 This was the first time it had been provided to Joe White.

1561 In the long-term, Cargill was required to identify potential suppliers of the contracted barley varieties or to get customer approval to use new and available barley varieties. Viers' evidence was that Cargill was often unable to identify or secure barley that allowed Joe White regularly to meet the customer requirements contractually agreed. Viers said it was unclear at the time whether barley grown in Australia could allow Joe White to meet customer specifications it had already committed to prior to the Acquisition.

1562 In his evidence in chief, Viers attested that the practice of using Hindmarsh barley to make Joe White's malt ceased as soon as Cargill took control. During cross-examination, and quite obviously much to his surprise, this evidence was shown to be incorrect. Viers had forgotten about correspondence he received in May 2014 which demonstrated that Joe White continued to use Hindmarsh, albeit at limited levels. Viers gave evidence that he could not recall what he did when he received an email pointing out that Hindmarsh was being used.[952] Further, earlier emails sent in November and December 2013 showed Hindmarsh was being blended at that time. Viers simply could not explain how this had occurred in circumstances where he had given instructions that Hindmarsh was not to be used and that it should be purged from the system.[953] His unequivocal evidence, which I accept, was that he did not know Hindmarsh was being used at this time in 2013. In re-examination, Stewart gave evidence that "the new Cargill Malt business made the decision" that [Joe White was] allowed to put 5 percent of "off-spec" barley into those blends. No details of any such

---

952 Perhaps Viers' lack of recollection can be explained by the fact that an email chain in May 2014 referred to Hindmarsh stored at Tamworth and the fact that it was being blended out "at 5% on contracts are (sic) compliant with". Although Viers could not recall, it would seem the email was referring to contracts that permitted up to 5 percent of Hindmarsh being used. Self-evidently, there would be nothing improper in the use of Hindmarsh if its proposed use had been raised with a customer and the customer had approved: see fn 114 above. The other key emails put to Viers during cross-examination were between a marketing manager and the Tamworth plant manager, which referred to the previous week's discussions and the prospect of using Hindmarsh for customers at the maximum specification levels. The marketing manager also referred to a varietal tolerance permitting use of a maximum of 5 percent Hindmarsh. Two observations should be made. Nothing in the emails supported anything was to be done in breach of contract. Further, and in any event, nothing suggested the conduct in late 2013 had the imprimatur of Cargill or that it was being done with Cargill's knowledge; the other recipients to the emails included Youil, Stewart and Jones but no one from Cargill itself. Further, Jones was taken to these emails and had no recollection of the circumstances.

953 See pars 1566, 1596 below.

decision were elicited from him. When asked whether this conduct continued after November 2013, Stewart's evidence was that he could not recall but that he thought it must have. He clearly did not know.[954]

1563 Stewart's evidence was that he did not think Joe White was given enough time to absorb Cargill's new approach, although it was in accordance with his understanding up to that time.

1564 Also on 1 November 2013, Stewart sent an email to representatives of Sapporo informing it that Joe White was having "quality problems" with its barley crop, and enquiring whether Sapporo would give permission for Joe White to use gibberellic acid on its remaining 2012/2013 crop to address these issues. Stewart said he appreciated this was "an unusual request", and was not made lightly. He also expressed concern that if the suggested approach was not taken there would be a risk regarding malt quality. A representative of Sapporo replied on 5 November 2013, stating that Sapporo had rejected the use of gibberellic acid for malting, because it was classified as a food additive in Japan. The email recorded that "[t]his has been their rule" and that it was "hard to revise". However, the email also referred to Sapporo's malt stock being "so tight" and the possibility of a shortfall if shipments were delayed. The email then sought advice on various scenarios, including the possibility of using gibberellic acid. In evidence, Stewart said all Japanese brewers supplied by Joe White prohibited the use of gibberellic acid.[955] Although he said he could not be certain where the enquiry with Sapporo ended up, when taken to an email addressed to him from Sapporo, he admitted that Sapporo rejected the request.

1565 On the same day, Stewart also sent an email to plant and production managers, copied to a large number of people including Hughes, Wicks, Youil, Sheehy and McIntyre. The email concerned approved barley varieties and attached a spreadsheet providing an analysis of customer requirements. An action list was provided on tasks that were then underway. Stewart stated that each plant would be contacted daily in the short

954 See further fn 1021 below.

955 These brewers included Sapporo, Asahi, Kirin and Orion Breweries.

term regarding efforts to move malt under the new Cargill system.[956]

1566 Stewart's email attached 3 documents, 1 of which was entitled "Actions – Barley and Malt Solutions". The document listed in excess of 20 actions that needed to be taken, all of which attracted the status "Not Started". Essentially, the list sought to address the steps that needed to be taken so that barley varieties were supplied as required by customers, if customer dispensation was not forthcoming. Further, a direction with respect to the Sydney plant required the removal of Hindmarsh barley.

1567 Stewart gave evidence that the introduction of the Cargill way of doing business "without any period for transition" gave rise to a difficulty in producing malt which sufficiently conformed with customer specifications. Problems arose because Joe White did not have enough approved varieties of barley to meet customer specifications, and held stocks in other varieties including Hindmarsh. Further, when Cargill sought to use the approved varieties from the new barley, such barley did not have suitable vigour, which resulted in longer germination times. Furthermore, as a consequence of variable batches of malt requiring greater segregation, Joe White's storage facilities became strained. This inhibited the flexibility of plants to blend shipments suitably for customers. Stewart gave evidence that he took a number of steps to "facilitate the change with customers".[957]

1568 The difficulties referred to above resulted in bottlenecks in production. Stewart gave evidence that for several months there were a number of shipments of malt that were ready to be packed, but the theoretical blend results were out of specification. The resultant filling of Joe White's storage meant production had to be reduced or stopped

---

956 The email of 1 November 2013 and its attachment were referred to in the witness statements of McIntyre, Testi and Stewart. The Viterra Parties did not ask any questions of these witnesses about these 2 documents. However, when Scaife was cross-examined she was asked a series of questions about them despite the fact she did not commence at Joe White until a year later, in late 2014, and that she had never seen the email before. Then, by reference to documents in 2015, it was put to Scaife that a misunderstanding existed at Joe White in relation to what Heineken's approved varieties included. In essence, not surprisingly, Scaife said she did not know the position in 2013. However, to the extent the Viterra Parties sought to rely on some of Scaife's answers to submit the approved varieties list prepared by Stewart was inaccurate, such an attempt was without merit.

957 By way of example, he referred to an email he sent to Lion Nathan on 1 November 2013 by which he sought approval to use Commander instead of Gairdner.

until the malt could be moved to another plant, shipped or sold as feed.

1569 On 3 November 2013, De Samblanx received a stocktake which showed that various steeping vessels, boxes and kilns at the Perth plant were empty. This was the result of production having been halted. Upon receiving this, De Samblanx enquired as to whether the report on the work in progress was correct. He received a response from Youil, confirming the accuracy of the report and stating it was part of the alignment to Cargill policy. Youil stated Joe White needed to position correct barley and customer profiles to match and take care of the existing stock. De Samblanx forwarded the email exchange to Viers noting that capacity was already lost because of the Certificate of Analysis rules, and stated that what was attached was about Perth. De Samblanx's evidence was that he was acknowledging that Joe White was already losing capacity due to the implementation of the Cargill Blending and Certificate of Analysis Procedure.

1570 In order to assist with the integration, on 6 November 2013 De Samblanx emailed an example of a standard Cargill Certificate of Analysis to Hughes, Youil, Stewart and Wicks. He also attached a single page document entitled "Certificate of Analysis (COA) Policy".[958]

1571 In early November 2013, De Samblanx returned to Belgium. After this time, his involvement in the operations of Joe White was minimal.

1572 Also on 3 November 2013, Stewart sent an email with the subject "[Certificates of Analysis] Out of [Specifications]" and asked for a review of recent regular out-of-specification items for the customers for whom the respective recipients had packed. Stewart asked that a list be developed of affected customers, the issue for each

---

958 This document provided a definition of a Certificate of Analysis, together with the requirements that needed to be met. In particular, it stated results recorded in the Certificate of Analysis must be obtained from a representative sample of the product being shipped unless Cargill mutually agreed otherwise with the customer. Further, it stated that if some alternate agreement had been reached, additional language needed to be included to ensure the customer understood the results provided were not from testing the specific lot. Furthermore, it was stated that out-of-specification malt was not to be shipped unless the customer agreed before shipment. If those circumstances arose, the Certificate of Analysis was required to record the out-of-specification results. Finally, it stated that each "Plant Food Safety/Quality/Regulatory Compliance Leader" was responsible for verification compliance by all employees involved in the testing and the creation of Certificates of Analysis.

customer and an action to address it. Stewart gave an example by referring to the Perth plant, which he said had regular issues with grain size for Heineken customers and suggested changes that would need to be made.

1573 On 4 November 2013, the Tamworth plant manager replied by sending an email to Stewart, copied to others including Wicks, McIntyre, Youil and Sheehy. The email referred to various parameters of Lion Nathan, SAB Miller and Nestlé that were out of specification and suggested how that situation might be remedied.

1574 On 12 November 2013, Viers forwarded a status update from Stewart to Eden and Van Lierde, copying in De Samblanx. Viers recorded that all plants were fully operational, with the exception of Cavan in Adelaide, which was running at 80 percent. Viers stated capacity was "curtailed due to being out of position on approved varieties". In referring to the primary customer issues as set out by Stewart concerning gibberellic acid and barley varieties,[959] Viers commented that whilst Joe White was still waiting on some additional responses from clients as to whether use of gibberellic acid or unapproved varieties of barley would be approved, "the customer flexibility has been surprisingly good".[960] After listing the "primary impact to date", including shuffling business between plants (creating out-of-line freight), purchasing small lots of barley at a premium, selling 300 tonnes of malt as feed malt at a loss, and altering processing conditions (in some cases resulting in longer germination and reduced

---

959 Without being exhaustive, Stewart's email included the following: (1) With respect to Asia Pacific Breweries and Sapporo, both of whom had been supplied malt with the use of unauthorised gibberellic acid, after setting out various details Stewart stated Joe White would need to produce 5 day germination malt to make up for not using gibberellic acid. He suggested this time period would be reduced as new varieties came in through the year. (2) For customers being supplied the incorrect barley variety, Stewart stated it would be 11,000 metric tonnes from 1 November 2013 to 31 March 2014 for Asia Pacific Breweries, which could be reduced by moving to a new crop a little earlier "subject to barley quality" and mentioned other possible options that could reduce the tonnage substantially. Stewart stated 15,000 metric tonnes referable to Nestlé would be reduced to zero as it "look[ed] like" Joe White had received permission to ship 100 percent Buloke and Joe White would move to a new crop early. With respect to San Miguel, there were 4,600 metric tonnes of non-approved variety that had accumulated and Joe White was currently trying to seek approval. As to Lion Nathan, 9,000 metric tonnes would need to be new crop barley when "technically" Joe White should have been shipping the old crop. Stewart said Joe White was currently planning a "commercial/technical" solution.

960 Perhaps the initial response from customers was because they needed the malt to meet their production schedules or because they did not expect requests for derogations would occur very often. Whatever the reasons for this initial flexibility, it did not last: see for example, pars 1580, 1585, 1601-1606, 1622-1625, 1640, 1656-1661, 1677, 1682, 1706-1713, 1718-1719, 1728, 1739-1741, 1744-1745, 1747, 1785, 1793, 1797-1798 below. For completeness, also see pars 1596-1598, 1662, 1666-1669, 1675 below.

capacity), Viers continued:

> While the list is long there has been substantial mitigation and cost avoidance. Not that (sic) is any less important but a good amount of the cost to date is opportunity loss. I have asked the [Joe White] team to compile a full status update and specific costs to date which we will review [tomorrow]. While we are evaluating the [economics] of each of these decisions we have not consolidated at this point.
>
> The [Joe White] team feels optimistic that we can get in position on varieties for new crop and that the vast majority of the [gibberellic acid] and variety issues will subside (albeit with some reduced capacity due to process condition changes …) While the theoretical blend will help we have not yet contended with the [Certificate of Analysis] issue and potential for out-of-spec production. There will also be customer audits where in the past items like aging for example were not completely transparent and may result in additional changes/capex to meet [customer requirements].

1575 On 18 November 2013, Viers sent an email to Youil, Wicks and Dickie with the subject "RE: guys have I captured all the issues and in a generally complete way. Please confirm". Viers referred to malt inventory that was made from unapproved varieties or from non-malting barley. He stated the existence of this barley would require malt to be sold to alternate outlets, including feeder channels if customer concessions were not obtained. Viers stated that excess inventory had blocked the system and in some cases had necessitated production being stopped. He provided an early estimate of lost production of 8500 "tonnes" to date. Viers continued:

> [G]iven that we are fully sold this may require we ship product from alternative origins inside and outside of [Australia] which is less attractive economically. This production is lost for good and we still absorb the fixed cost and lost margin.

Viers also referred to the unlikelihood of all customers agreeing to concessions.

1576 Further, his email referred to malt that had already been treated with gibberellic acid, which was not approved by certain customers. Again, he noted that concessions were required or an alternative disposition, such as selling as feed.

1577 Finally, the email addressed the fact that Joe White had old and new crop barley contracts which allowed suppliers, at their discretion, to provide non-approved varieties or non-malting barley. Viers referred to a plan then being developed to address this, but noted Joe White may have been required to take possession of the

non-approved or non-malting barley, and trade out of it or pay an "up charge" in certain cases to convert the contract to a viable barley, or both. Viers stated that Joe White remained at risk of being unable to acquire the correct varieties and thus, Joe White faced both economic and supply assurance issues.

1578 On the same day, Dickie sent a response confirming the information was accurate, and clarifying the reference to "non-malting barley" was a reference to Hindmarsh and not to a feed-grade barley.

1579 On 20 November 2013, Dickie sent an email in further response to Viers, copied to Hughes, Wicks, Youil and Jones, with the enlarged subject "[G]uys have I captured all the issues and in a generally complete way[?] Please confirm – additional issue raised." The email referred to a discussion that morning with Viers and stated Dickie wanted to raise a further issue which he identified as the topic of "MIN" grade malting barley on the new crop Glencore barley purchase contracts. That email stated:

> At the time of buying new crop barley from Glencore, *[Joe White] was asked to add 'MIN' grades*, at a price discount, to barley purchase contracts. There were no quality specifications attached to the 'MIN' grade at the time of contracting as you do not know what the actual MIN grade barley quality will be until harvest, if and when it is implemented by the storage & handler. Now that the quality of the harvest is becoming clear, *Glencore is advising they intend to deliver* what has been segregated as 'MIN' grade, which is at a *barley quality [specification] lower than we would accept*. Glencore is arguing that *[Joe White] have accepted this in the past, and that this is a basis for us to accept 'MIN' grade barley this harvest* on their barley sales contracts to us, combined with the fact that the MIN option is on our barley purchase contracts with Glencore, at their request. [Joe White] do not have MIN grades acceptable on any other barley purchase contracts from any other suppliers, other than Glencore.
>
> (Emphasis added.)

Dickie indicated that negotiations were ongoing in seeking to resolve the matter.[961]

1580 Whatever the cause or causes, there can be no doubt that within 3 weeks of Completion, there were very significant problems being experienced by Joe White in seeking to meet customer requirements. Hughes himself acknowledged this in an email to Eden, copied to Viers, on 22 November 2013. That email referred to a weekly

---

961 It cannot go without comment that this position adopted by Glencore was in stark contrast to the assurances that had been given before Completion by Mattiske: see pars 1234, 1320, 1448, 1505, 1517-1518, 1520 above.

meeting that had just been completed during which a review was conducted of Joe White's malt delivery commitments as compared to its ability to pack and meet those commitments. Hughes stated he walked out of the meeting slightly more optimistic than when he walked in, but said there were still several risk points he wanted to bring Eden "up to speed on". The email continued:

> The delayed shipments from the first couple of weeks have compounded and created a situation where we are behind in meeting our shipment schedule and this is further compounded by our ability to consistently meet quality. Essentially this means that we are *barely meeting our existing commitments* and anything we miss is delayed, as we will already have a full shipping schedule we are *unlikely to catch these up in the short term*. As we often represent a large proportion of the malt supply for many of our customers *this has significant flow on effects for the breweries*. To alleviate this we have done the following:
>
> - Asked Boon Rawd to *reduce their current malt demand* for the next few months (the Thai market is a little slow at the moment).
>
> - We have also sent samples of our Kwinanna varietal mix in [Western Australia] to [San Miguel] which we have *offered to supply at a discounted rate* which allows us to not only move the malt rather than sell as feed but also make stock available we will otherwise be short on.
>
> - [Wicks] is also meeting with the greater Cargill malt commercial team to negotiate supply from other regions where possible (*but some customers have rejected this*).
>
> The above are critical in enabling us to meet our go forward commitments. Should these be rejected I am then concerned there are some shipment volumes we will be unable to meet, with the attached *customer fallout and costs that this would result in*.
>
> The two drivers for this situation are our short varietal stocks (combined with falling quality at the end of the season) and *our requirement to be fully compliant on specifications (with derogations being slow in receipt with some customers rejecting the concept entirely)*.
>
> I will know more next week and update you accordingly but I thought it important to give you some advance warning regarding the *critical stage* we are at.
>
> (Emphasis added.)

This email was tendered by the Cargill Parties during their opening. No other party referred to it during the trial in order to impugn the accuracy of its contents.

1581 A further version of the Cargill Blending and Certificate of Analysis Procedure[962] was

---

962 The document was marked "Rev 07". See par 302 above.

created on 25 November 2013. De Samblanx gave evidence that the timing of this document was not linked to the Acquisition. Relevantly, the new version included the following passage in relation to out-of-specification shipments:

> The Plant Production Department can reject analyses on the original sample only once.
>
> …
>
> **Re-analyses shipment sample**
>
> Following process has been established for shipment analyses and re-analyses in case of out-of-specs (OOS).
>
> 1. Run the original sample (which has been blended in-spec per the blending procedure[])
>
> 2. If OOS, the parameter(s) in question is [analysed] as a recheck
>
> 3. If still OOS, the sample will be considered flawed. The entire analyses set is discarded and a re-probe sample is [analysed] for full analyses
>
> 4. If OOS, the parameter(s) in question is [analysed] as a recheck
>
> 5. If the re-probe is OOS following the recheck, the customer will have to be contacted for derogation. If not approved the shipment will be unloaded or redirected to a different customer.
>
> At any point along this flow the customer accepts an OOS parameter, the analyses will stop at that point.

1582 The first sentence of the extract above was not new. De Samblanx gave evidence that the effect of this was that if the department was unhappy with the results for some reason, these results could be rejected and the batch could be tested again. De Samblanx was cross-examined on the effect of the addition to the Cargill Blending and Certificate of Analysis Procedure. He agreed that the above steps were intended to apply when Cargill had already run a theoretical analysis that was in specification, but had also, "probably because the customer require[d] it", run an actual analysis on the batch to be shipped that had returned results that were out of specification. In that case, the parameters that had been returned as out of specification were required to be re-analysed. De Samblanx agreed that the procedure stated that if the re-analysis of the sample still returned out-of-specification results, the sample (not the batch) would be considered flawed and a new sample taken and analysed, starting the process again. When it was put to him that this process, that he recommended,

allowed Cargill "4 shots at getting an actual analysis that works" in an attempt to have actual results consistent with the theoretical blend, De Samblanx replied "under certain conditions".

1583 Emails between Joe White employees and Joe White customers during November 2013 demonstrated the difficulties experienced in converting to the Cargill theoretical blend model of operation. By way of example, an email from McIntyre to Heineken on 19 November 2013 attached 3 theoretical blends "[a]s per the global Cargill procedure", noting that all 3 were out of specification in relation to soluble protein and requesting confirmation as to whether the Asia Pacific Breweries would accept the shipments.[963]

1584 After further prompting by McIntyre, Heineken responded by stating that McIntyre's request was not understood as B-malt had to be delivered on B-malt specifications. Heineken stated they had previously discussed with Stewart the Cargill procedure being adopted rather than doing an analysis for every batch after blending, with the Certificate of Analysis being based on the individual batch analysis results and blending ratio. Heineken noted that Stewart had explained that the Certificate of Analysis was the result of a calculated value rather than the actual measurement. No exception was taken to this alternate approach in Heineken's email, however it was stated that the specifications for B-malt had to be complied with in the Certificate of Analysis.

1585 Stewart, who was copied on the original email and the response, later clarified that McIntyre's request was by reference to the Cargill practice of "requesting derogation on certain parameters if they are slightly out of specification". Stewart stated he was meeting with Dr Albert Doderer ("Doderer"), Heineken's principal scientist, that week and that he had already discussed with Doderer that Heineken in Europe had a

963 The email was copied to Stewart and expressly stated approval was being sought of theoretical blends. When giving evidence about theoretical blends, Stewart asserted there were no overt communications with Joe White's customers regarding the change to using the theoretical blend approach. He said his understanding was the fact was recorded "at a very fine print" at the bottom of Certificates of Analysis. When it was suggested he was speculating about the level of communication with Joe White's customers, Stewart rejected this, stating he was "saying exactly what happened". When Stewart was later taken to this email chain, he immediately acknowledged he was involved in discussion about the change to theoretical blend and said he stood corrected.

long established history of operating in such a manner with Cargill. Stewart stated that Heineken Europe was well aware of the system and asked whether it could also be adopted by Heineken outside of Europe. Stewart's email concluded:

> Essentially if a shipment blend is slightly out of specification we would like to be able to contact you, or a nominated person at each brewery, to ask for derogation to ship.
>
> I know that there has (sic) been many requests of late and I am very appreciative of understanding to date.

Heineken responded by stating that, unless the specific receiving brewery agreed otherwise, the malt was required to be within specification, regardless of whether the method of determining the analysis had changed under Cargill.

1586 Stewart provided a further response, noting that he had discussed the position with Doderer. He said Doderer was in agreement with the essence of Heineken's email set out in the previous paragraph. Stewart stated that Joe White would move to the blend analysis system that Cargill used with Heineken in Europe, together with the checks that had been incorporated into the system. Further, he said that Doderer had advised him that there was a tolerance list for B-malt that Heineken could use as a guide for accepting malt that was slightly out of specification. Stewart also sought the name of the relevant person to contact at each brewery with respect to future derogations.

1587 When taken to this email chain during his evidence, Stewart acknowledged that at that point in time he was advocating the theoretical blend approach. He explained that he did so because he had no direct experience of a brewer receiving a theoretical blend and was happy to participate with the Cargill approach. Stewart acknowledged that Heineken was happy with the theoretical blend approach, but also said there were other brewers that were not so happy.

1588 After 3 weeks at the helm, Viers recorded some observations about the Joe White Business in an email. In substance, he said the conduct reflecting the Operational Practices had been a real eye-opener for him. He acknowledged that he had made an assumption that in the malting industry participants may on occasion tweak a Certificate of Analysis, but did not expect a systematic approach that underpinned

how the Joe White Business and industry was run. He suggested that Malteurop and Graincorp in Australia were engaged in the same practices. He also thought it was pretty obvious that the practices were pervasive.

1589 In addition, he suggested that Cargill was at a disadvantage because its competitors were adding free capacity with the use of gibberellic acid and lowering the operating costs as a result. Further, he suggested there was an irony in Cargill's reputation being hurt because of Cargill's "self-report problems" and the identified need for derogation. In this regard, he said it gave rise to limitations for any possible alliance or joint venture because other players in the industry were not going to operate to Cargill's standard. As to the knowledge of Joe White's customers, Viers stated:

> I suspect the procurement departments are likely aware at some level this is happening and don't take a hard line as it will potentially reduce their suppliers and disadvantage them vs [competitors] from a cost perspective, not to mention the internal headaches for them.

1590 Viers was not taken to this email when giving evidence. Accordingly, it is not possible to know how he formed the views that he had in the 3 weeks he had been in charge of Joe White.[964] In short, Viers may have been doing no more than repeating what he had been told by 1 or more of the Joe White executives.[965]

1591 In response to Viers' email, Eden stated that Cargill needed to stand behind all of Joe White's product, even if the product was not in compliance. Essentially, Eden's position was that if Joe White was providing the same malt under Cargill that had been provided previously, then the customers ought to be happy. Eden then listed 5 other approaches. Having listed them, he said it was necessary to form an integrated plan, rather than have a casual commercial discussion. He suggested Cargill could not hide with its head in the sand because Cargill was putting itself at a competitive

---

964 Some of these views may have germinated earlier than 1 November 2013 as a result of the disclosures made in October 2013 about the Operational Practices engaged in by Joe White: see, for example, pars 1112-1142 above.

965 Although the Viterra Parties referred to this email in their closing submissions, no reference was made to it in contending the existence of the Alleged Industry Practices: see par 1860 and issue 13 below. No doubt this was a reflection of the limited probative value it had in relation to that issue: see also par 1700 below.

disadvantage without getting the same freedoms as Joe White's competition.

1592 With 1 exception, it is unnecessary to elaborate on the 5 different approaches Eden identified, nor the evidence Eden gave in relation to them. Suffice to say, nothing suggested by Eden contemplated an approach which was not to be negotiated with and accepted by Joe White's customers.

1593 Viers responded stating that he agreed with Eden's observations, but emphasised his primary point that, in his view, Cargill needed to make it an industry problem as Cargill was incapable of completely solving the issue itself. When cross-examined about this email chain, Eden stated that Viers' suggestion was partially fair. In explaining his answer, Eden said that brewers had specifications tighter than maltsters could meet.

1594 The exception referred to above was Eden's second possible approach, which was to "[p]romote standard deviation approach to be within spec regardless of lot analysis". While Eden accepted there were parts that were similar, he rejected the suggestion put to him in cross-examination that this was a reference to the erstwhile Joe White approach. Eden explained that this point was a reference to work that was then being done in North America on statistical variation and trying to use that as proof that the quality of malt was not impacted by using such a statistical analysis on a lot by lot basis.[966] In seeking to distinguish what he was referring to from the Joe White approach, Eden noted that the plus or minus 2 standard deviation approach was not written on Joe White's Certificates of Analysis.

1595 When it was put to De Samblanx during his cross-examination that Eden may have argued for a policy that allowed the creation of Certificates of Analysis which showed malt to be within specification although it was outside specification according to some statistical parameter, De Samblanx gave evidence that he could never believe there would be a Cargill policy allowing for this type of thing. When he was asked whether Eden had ever suggested to him that Cargill should adopt such an approach,

966 As to which, see par 1612 below.

De Samblanx said he had never heard of it from Eden and that, in any event, it would not be Eden who would be setting such policies. During the course of this cross-examination, De Samblanx understood a question put to him was raising whether or not having some statistical boundary or deviation as part of a reporting policy was an approach Cargill had in fact adopted. His answer was emphatic in rejecting any such suggestion.

1596 On 27 November 2013, Viers sent a further update as to the progress of the integration to Van Lierde and Eden, copying in Hughes. He stated that he anticipated the "tentative" financial impact of implementing the Cargill Blending and Certificate of Analysis Procedure at Joe White as just under $1.5 million,[967] which represented "the cost to basically purge the system of non-compliant malt/barley and reposition". Viers continued:

> Any cost from here would be due to a new problem which we are not facing today. What [the cost estimate] does not include is lost profits due to capacity shutdowns which we will be unlikely to recover through warranties and represents approx. $1 [million]. Significant cost was mitigated by a multitude of customer derogations …Today we are operating at close to 100% of capacity. That said we continue to run on the edge and are susceptible to challenges in meeting customers [specifications], production disruption, as well with our volume short fall certain customers are running very tight. This is in part due to the fall off of the barley quality on the tail of the crop year particularly around the approved varieties which are in short supply. Getting to new crop will provide some much needed relief. We have been able to push out our planning horizon to a couple of weeks from a few days and are working to secure the production shortfall ex the EU. Bottom line we are stable at the moment.

Viers then turned to what he referred to as a number of positives. After making some complimentary observations about Joe White employees, Viers continued:

> In reviewing the customer book it looks like our assumption in the deal model were (sic) right in line on volume and margins even a bit better than we expected.

Viers then referred to a number of processes and projects underway to capture synergies and expressed confidence that Cargill would find additional synergies

967 Some of which Viers said could be off-set because malt and barley in stock at the time of Completion was distressed and not saleable as good product and therefore would have a lower realisable value than had been paid to Glencore.

particularly on the commercial side. After referring to a possible reduction in the purchase price by reason of various incidental matters, Viers concluded:

> I'm not discouraged by anything I see to date we just need to get all to Cargill standard.

1597 In response, Van Lierde wrote "[o]verall it looks significantly better than the various scenario's (sic) that we came up with in the last days before closing". He then asked for Viers' opinion on what could be claimed back from Glencore and whether Cargill was now in a position to make a good assessment of the short and long-term impact. Viers replied with some comments about Cargill's rights under the Acquisition Agreement, and expressed his uncertainty about whether Cargill's claims would meet the threshold of $3.5 million,[968] and continued:

> The situation was not far off from what we anticipated in the last days. The surprise to me was the number of derogations we received from [customers] on [gibberellic acid]/variety/[specification] and sometimes a combo. Nearly every shipment require same. Speaks to how much [customers] want/need the malt.

Viers then addressed various other matters, but was not willing to definitively express his position on capacity impact and implications, stating a fairly detailed study was required. Further, he was reluctant to impose on the Joe White plants at that time, and referred to other priorities.

1598 On 29 November 2013, Stewart emailed Joe White employees including Wicks, and copied to others including Hughes, Sheehy, Viers and Youil. He stated that following a meeting the previous day, with Lion Technical and the West End brewers, Lion Nathan[969] "seem happy to adopt a standard deviation either side of their specification that would not require derogation", whilst West End had agreed to the proposal "at a brewery level". After referring to a number of other customers who were to be approached, Stewart stated that Coopers had confirmed their agreement to a similar arrangement.

1599 Viers responded congratulating Stewart and suggesting that they should continue to

---

968 See cl 15.7(a)(ii): see par 1030 above.

969 Viers described Lion Nathan as a very large customer of Joe White.

discuss with Hughes how to "keep momentum" and align with additional customers. Eden also responded:

> [Stewart], thanks for your patience and persistence in moving this forward. Your efforts and approach are going to be used as a model to approach this issue more broadly across our entire business. Trust me, this issue being resolved in the manner you have accomplished is of tremendous value across our entire malt business. It will be a key part of our business plan going forward.
>
> Thank you very much. We have better days ahead.

1600 Eden was not cross-examined about the contents of this email. Viers gave evidence that, from this email, he understood Eden to be suggesting that a standard deviation approach that was used by Joe White could be something that might be able to be used across Cargill's malt business in the format that Stewart had secured it. As part of this email chain, Stewart suggested Joe White should try to push on with other customers.

1601 Meanwhile, customers continued to express dissatisfaction with Joe White's requested derogations. On 4 December 2013, Asia Pacific Breweries[970] responded to a notification from McIntyre that certain parameters were out of specification as follows:

> So, in total with this shipment
>
> Ale malt is out of [specification] on soluble protein and sacch time?
>
> Wheat malt is out of [specification] on total protein and boiled wort colour?
>
> And the pilsner is out on grading?
>
> I need this shipment here before I run out of malt, so please proceed to ship.
>
> But this is far from ideal.

McIntyre responded, acknowledging the situation was far from ideal and expressing her gratitude for the cooperation. She promised that Stewart would liaise with the plant employees on quality and then be in touch.

1602 During cross-examination, Stewart was taken to this email chain. He gave evidence that in December 2013, Joe White was experiencing real difficulties in supplying malt with barley varieties compliant with customer specifications. He said there were

970 This particular shipment was concerned with a craft brewery of Asia Pacific Breweries.

"many, many instances" where that had occurred to his knowledge. He said that McIntyre was the point of contact at Joe White to liaise with customers on seeking to obtain derogations.

1603 Stewart agreed with the suggestion that customers became intolerant of derogation requests. Stewart said brewers were frustrated by the imposition of derogations, especially when they were sought repeatedly. Stewart's discussions with brewers disclosed that brewers did not readily understand what had brought about the change in Joe White's malt. He said considerable difficulty arose in maintaining smooth relationships with Joe White's customers. In some instances, in order to get a request for a derogation accepted, some compensation from Joe White was required. Others accepted "under protest" (because rejection would have adversely affected their production) or as a "one-off".

1604 Various measures were taken to try and ease the situation with Joe White's customers. Notwithstanding, the repeated requests for derogations led some Joe White customers to find alternate malt suppliers. This included Coopers, who built its own malthouse to produce malt for its own brewery requirements.[971] At the time Stewart gave his evidence, Coopers was producing 16,000 tonnes of malt per annum,[972] whereas previously Joe White had supplied all of Coopers' malt requirements.

1605 Also on 4 December 2013, McIntyre sent an email concerning Certificates of Analysis. The email referred to the requirement of having to ask customers for a derogation on any parameter that was out of specification. The email stated that Joe White was asking for a derogation on almost every shipment being packed, not just in relation to the initial blend but "more often than not" by way of a request for a second derogation when the remaining results were analysed on the shipment sample. McIntyre then set out an action plan to try and reduce the number of derogations required. McIntyre gave evidence that, in response to the requests for derogations, customers frequently queried what was going on and why Joe White could no longer produce compliant

971 The construction of the malthouse took several years, and the gradual transfer of supply away from Joe White was completed in early 2018.

972 Some of which was sold to other brewers.

malt.

1606 McIntyre also gave evidence of a "traffic light system" being introduced to try and alleviate the need to seek derogations so often. If a result was within specification it would receive a green light. If it was out of specification, but within 2 standard deviations then it was given an amber light. Results beyond two standard deviations were given a red light. The proposal was that derogations would only be required in the event that the parameter received a red light. Some of Joe White's customers accepted this regime, but others did not. The regime was not implemented if the customer did not agree.

1607 On 9 December 2013, Hughes sent through a further integration update to Eden, writing:

> - Both domestic customers[973] have now agreed to [standard] deviation type system for delivery of malt
> - [Oriental Brewery] has also agreed to a variation of this approach, once details finalised update to follow
>
> …
>
> - *Adelaide is most problematic with Buloke quality now almost unusable on its own*. New seasons grain being delivered next week to provide blendable material. [Gibberellic acid] will be important for [its] performance and will be used where customers allow
> - A high proportion of 5 day malt will continue to be required in Adelaide, due to Buloke performance and early malting of new seasons (sic) grain
> - Shipping companies are tolerating our constant rescheduling but it is getting more difficult out of Adelaide, we are working with [Cargill's grain and oilseeds supply chain] to manage this, new seasons (sic) grain performance will be critical
> - *Most customers have worked well with [revised] program but some have been resistant*, particularly Vietnam based customers excluding [Asia Pacific Breweries] who are familiar with Cargill Heineken relationship. Guinness Anchor in Malaysia has also been challenging. Nestlé are also difficult but have agreed to some [standard specification] variations.
>
> (Emphasis added.)

1608 Eden replied on 10 December 2013, copying in amongst others Sagaert, Viers, Jewison and De Samblanx:

---

973 Eden gave evidence that these customers were Lion Nathan and possibly Boags.

> Could we not ask/tell we will have to use [gibberellic acid] on the new crop, at least for the first few months?

When Eden wrote this, he had no intention of continuing Joe White's practice of covertly including gibberellic acid contrary to a customer's instructions. He gave evidence that, both with respect to gibberellic acid and alternate barley varieties, any variation in supply to what a customer had ordered was only to be done with the customer's approval and collaboration.

1609 On 11 December 2013, Purser on behalf of Cargill Australia sent a letter to Mattiske "Country Manager ANZ, Glencore Grain" referring to the correspondence between the parties in late October 2013. The letter stated that Cargill had investigated the matters previously raised, and had identified a number of issues.

1610 After setting out a series of problems with respect to customer specifications, barley varieties, gibberellic acid and Joe White's barley supply contracts with Glencore (pursuant to which Glencore asserted an entitlement to supply Joe White non-approved varieties or grades that were said to be not suitable for malting consistent with Joe White's existing customer contractual obligations),[974] the letter identified measures that had been taken to seek to address the issues and mitigate any resulting loss. The letter also stated that there were potentially major financial and business implications for Cargill arising from the matters raised. An invitation was made for Glencore to work with Cargill to further mitigate the issues raised. Cargill expressly reserved all its rights.

1611 As Joe White was struggling to produce malt within specification, Cargill was also investigating shortcomings in its own malt analysis methods more broadly. On 15 December 2013, Matthew Evers ("Evers"),[975] reliability excellence leader of the malt business unit at Cargill, emailed Stewart, copied to Hughes and others. He referred to a conversation with Hughes about some of the work Stewart had been doing.

---

974 See par 1579 above.

975 Evers was employed at Cargill for approximately 13 years until September 2014. He started working in the malt business in around October 2011 as a reliability excellence leader, responsible for efficiency and reliability of assets. He is a mechanical engineer. Evers had been involved in mid 2013 in assisting at a Cargill plant in North Dakota which consistently had problems producing malt that met customer specifications.

Before contacting Hughes, Evers had been told that there had been issues in Australia in relation to Joe White meeting customer specifications.

1612 Evers stated in his email that over the past several months, he had been engaged in a project designed to reduce Cargill's out-of-specification shipments. He stated that he had obtained "tons" of data and analysis concerning Cargill's process and analytical capabilities. Evers expressed a desire to find the best way to engage with Cargill's customers about analytical capability, measurement system capability, statistical confidence in data, consumer and producer risk, and so on. He continued:

> To make it blunt … in my opinion (and based on the data we have) the analytical capability of the methods for moisture, color, dp and several other attributes do not have sufficient repeatability and reproducibility to meet our customer expectations …
>
> Going forward, we will be working to figure out the best way to solve this very significant and impactful puzzle; I'm hoping we can get some of your time/insight for this effort!!

1613 Evers' email attached a presentation entitled "Our customers … our process".[976] The presentation was for Cargill, not Joe White.

1614 The presentation provided details of the cost to Cargill, Inc of, amongst other things, production of out-of-specification malt, estimated to be $50,000 to $75,000 a month "due to unloads and reprobes". On a slide entitled "PROCESS AND ANALYTICAL CAPABILITY", the presentation read:

> 1. We are working to improve process capability, however the analytical capability needs to be addressed in parallel.
>
> 2. Values on [Certificates of Analysis] (values reported) seem to drive perception of quality more (or equal to) than actual malt quality.
>
> 3. Analytical capability of the methods *does not allow statistical confidence* within specification.
>
> …

---

976 The first slide of the presentation bore Cargill, Inc's logo and at the bottom of the slide read: "© 2011 Cargill, Incorporated. All Rights Reserved. For Internal Use Only." Notwithstanding this earlier date, the presentation included figures up to October 2013.

5. Even though theoretical blend is currently possible in Europe and Argentina, *customers seem to be pushing more for actual analysis*.[977]

…

7. This seems to be an industry wide issue.

(Emphasis added.)

1615 With respect to the third point, Evers said the work he had done to that time had led him to conclude that methods of testing malt lacked absolute precision. He had further observed that the typical specification ranges in the industry were tighter than the analytical methods allowed. He had also become aware of malt quality variability. His evidence was that a batch could be tested 5 times and receive 5 different results.[978]

1616 A slide entitled "Practical consequences: Finding result Out-of-Specification: Csp[979] Example" displayed a graph that measured the probability of an out-of-specification result against "true strength". Evers gave evidence that the graph, and his comments on it included in the presentation, were designed to demonstrate that even if a sample tested for wort colour returned a value of 2.5, there was in fact a 50 percent chance that the actual value was within specifications and a 50 percent chance it was outside specifications. This was due to the limits of testing accuracy in relation to Csp, which did not allow statistical confidence within specification.[980]

1617 A slide entitled "What can we do??" set out several options for Cargill, Inc to possibly take in relation to customers who required analysed results as opposed to theoretical blends.[981] One of the 6 options was recorded as:

> Engage conversation with the customer to allow a +/- 2 standard deviations of the analytical method.
>
> (this would reduce our [out of specification] issue by more than half).

Evers gave evidence that the possibility of inviting customers to allow the test results to be acceptable if within plus or minus 2 standard deviations was just 1 of several

977 Evers gave evidence this comment was based on some limited feedback from some people in the industry.

978 In a later presentation in January 2014, Evers stated that analytical capability had been identified as causing significant negative impacts to Cargill and its customers: see par 1646 below.

979 Evers gave evidence that "Csp" was a measurement of wort colour.

980 See par 1614, point 3 above.

981 It was noted that, in regions where theoretical blend was used "this is a non-issue".

options that were evaluated after discussion with Stewart. Evers said he agreed this was a possible solution, but only on the premise that the customers were "aligned". Further, although it was a possible option, Evers said he never personally presented it as an option. In short, Evers' position was that this option was put forward on the basis that it had been discussed with the "Joe White team and their customers and being accepted within that area".[982] Effectively, Evers continued if this option were ever adopted, what would occur would be no more than inherently widening the specification by an additional 2 standard deviations.

1618 The next slide, entitled "Recommendation", stated:

> Engage with our key customers to have open dialogue, share findings and determine next steps.
>
> (could be one, or a combination of the 7 options - or something different).

1619 After being taken to this presentation at some length, it was forcibly and repeatedly put to Evers during cross-examination that the actual numbers recorded in the Certificate of Analysis forwarded to a customer did not ultimately make much difference because of the inherent difficulties with the testing processes. It was further put that the real issue was how the malt performed in the brewing process, rather than what customers were told about the testing results for the customers' specifications.

1620 Evers repeatedly rejected these propositions, stating that the numbers as reported mattered. Further, he also rejected the suggestion that his presentation was seeking to convey that Cargill should not get hung up on the actual numbers recorded in a Certificate of Analysis. A fair reading of the presentation did not give any basis to doubt Evers' evidence on this point.

1621 On 17 December 2013, Stewart emailed Evers stating his presentation gave a good picture of the problem "we face" with out-of-specification malt. Stewart referred to some initial success with customers, and offered to share some data.

1622 Despite Joe White's concerted efforts to set up arrangements with customers that

---

982 No doubt, this was Evers' belief at the time, based on what he had been told. There was no evidence that Evers had had any direct dealings with Joe White's customers in forming this understanding.

would allow for regular derogation, some customers were continuing to push back.

1623 On 18 December 2013, Stewart sent an email to the technical controller of Asia Pacific Breweries inviting him to accept a shipment of malt that was out of specification. Stewart was not sure approval would be forthcoming. He enquired as to whether Asia Pacific Breweries would like to wait to see if Joe White could further improve the malt. After a conversation on this matter, Stewart sent a further email explaining why he thought there would not be any "implications" if the malt were used. Additionally, he informed Asia Pacific Breweries that he could not guarantee Joe White would be able to improve the situation. Lastly, Stewart stated his understanding that Asia Pacific Breweries was able to ask for dispensation for any malt shipment, and suggested this line of enquiry ought to be explored.

1624 On 19 December 2013, the technical controller replied:

> After discussion internally, we have decided *to make an exception* to accept this lot. However, we *expect this to be an isolated incident* and should not set as precedence (sic) for future shipments.
>
> This is the 2nd time this has occurred. We have always had positive experience with quality from [Joe White] and we are concerned to why there is a lapse in control over black malt cleaning. It is worrying to hear that specialists are not confident if their improvement efforts will deliver results.
>
> We *take a serious view towards quality* and will not accept chronic deviations from quality deviations. Rest assured that we are in close contact with Heineken and they are being informed and consulted on our decisions.
>
> (Emphasis added.)

1625 Stewart accepted this was a manifest example of a Joe White customer expressing frustration. Stewart gave evidence that the email demonstrated Asia Pacific Breweries' patience for further derogations or variations was effectively exhausted.

1626 The projected earnings for Joe White were soon below expectations, at least according to Cargill. On 19 December 2013, Jewison emailed Van Lierde and others (copied to, amongst others, Hughes, Viers, Eden and De Samblanx) about earnings projections for Joe White. In response to a question from Van Lierde as to why the projections to 31 October 2014 were as low as they were, Jewison wrote:

> The operating results in the first 12 months of the model are impacted by these items:
>
> - Lower margins due to higher barley costs that are still expected from the prior year dislocation of barley prices. This is an impact of approximately ($3-4 [million]) after tax in the first 12 months. Year 2 in the model reflects the recovery to normal margin levels.
>
> - Depreciation/amortization may be high in the model by $200-300K per month based on the Nov monthly results …
>
> …
>
> Also, in the commitment, some of the closing costs were treated as tax-deductible, but they may not be.

1627 Eden gave evidence that Cargill's forecast for barley earnings in the first year turned out not to be achievable.

1628 Further, Eden acknowledged that the operational budget for depreciation devised almost immediately after Cargill took control was set at $15.2 million, as opposed to the $10.4 million allowed in Cargill's previous deal model. Eden also accepted these 2 items were the biggest financial difference between what he had expected Joe White to attain and what was actually achieved.

1629 Jewison was also asked questions about this email. She said she was comparing the details in the Information Memorandum, with the budget that had actually been put in place. Further, she accepted the projected decrease in performance relating to barley trading, depreciation and tax deductibility had nothing to do with the Operational Practices.

1630 Although Sagaert could not be certain of the date, but probably in November or December 2013, she had a telephone discussion with Viers. Sagaert gave evidence that Viers said he was stupefied by the Operational Practices that had been discovered. Viers told Sagaert that Joe White was clearly falsifying Certificates of Analysis and delivering malt not in line with customer specifications. Sagaert's evidence was that it was during this conversation that she learned of the Operational Practices for the first time.

1631 Sagaert's evidence was that the Operational Practices caused difficulties in 2 key areas,

namely customer relationships and the realisation of synergies Cargill had expected to achieve. As to the latter, Sagaert attended a meeting in November 2013 at which synergies were discussed. This resulted in a report being produced in December 2013. The report stated that the synergies identified had a varying degree of certainty. Further, the cycle of contracting and the Completion Date (said to have been 1 November 2013) were referred to in stating that the synergies identified for the first year were highly opportunistic. It was stated the commercial team would closely monitor trading activity in order to achieve the synergies referred to. The report also contained the assumption that there would be no additional capacity at Joe White; therefore the volume allocation to Joe White would only count the additional margin as a synergy.

1632 Under cross-examination, Sagaert stated that it was very difficult to realise synergies in the first year if you were solving problems all the time. She also acknowledged that the change in the Certificate of Analysis procedures resulted in reduced capacity at the Joe White plants. She rejected the proposition that the report was identifying a failure in the original valuation model to ascribe probabilities or risks to the various synergies. A more detailed report on this issue was subsequently prepared in February 2014. With 2 exceptions (which were set at 70 percent), the probabilities of synergies being realised for the 2014 to 2015, 2015 to 2016 and 2016 to 2017 financial years were rated at 50 percent or less (with some of them rated at zero).

1633 On 8 January 2014, in response to a further reply from Van Lierde, Jewison made clear that the lower projections for barley trading earnings were only for the year to 31 October 2014, and the projections "ramp[ed] up" in the following year.

1634 On 24 January 2014, Viers sent an email to Eden and copied to Van Lierde with a suggested update for the Cargill, Inc board about the Acquisition. The update stated that from Completion the Joe White Business had experienced disruptions in production and additional logistics costs as a result of complying with "the Cargill [Certificate of Analysis] policy". Viers said that while this issue had stabilised, "the [l]ong term implications" were being assessed. Viers noted that closing and

integration cost projections were $3 million below the deal model of $29 million because of lower technology costs and lower stamp duty.

1635 Van Lierde responded that he considered the phrase "the [l]ong term implications are being assessed" was too vague "and could lead to wrong interpretations". He advised Viers to either delete the wording or to include a monetary range with it. He also suggested Viers make reference to how the deal had been received by customers and the commercial outlook as against Cargill, Inc's assumptions entering into the deal.

1636 Van Lierde was cross-examined about Viers' email. He said it was incorrect to suggest that Cargill was expecting disruptions in production and additional logistic costs when the Acquisition Agreement was signed on 4 August 2013.

1637 Ultimately, the update Viers prepared for the Cargill, Inc board did not contain the phrase "the long term implications are being assessed", but did include the following:

> Key commercial assumptions including margin structure and sales volume have been confirmed vs the deal model. Customers and new employees are pleased to see a buyer with a long term view and commitment to the malting business acquire Joe White.

1638 The update, which Viers sent through to Eden on 26 January 2014, also stated that the base business of Joe White was "stable".

1639 Viers gave evidence that at the time he sent the update he believed that Joe White had not lost any customers.

1640 On 28 January 2014, Viers emailed Eden concerning a discussion he had had with Hughes and Wicks. Viers told Eden they had arranged a meeting for the upcoming Friday to discuss the policy with respect to specifications and approaching Joe White customers. Viers stated that Joe White was still not hitting all the customer specifications, which meant it was asking for a derogation on essentially all shipments. Viers noted that Joe White's customers had grown weary and were beginning to wonder what had changed. Viers also said that he believed customers either knew what was going on or were simply suspicious. When Stewart was taken to this email in cross-examination, he said this observation of Viers also reflected his state of mind.

1641 Viers stated that the merits of going to Joe White's customers to explain that nothing had changed, except for Cargill's Certificate of Analysis policy, was to be debated at the proposed meeting. Viers suggested communication could be developed about how Joe White handled tests and sampling variability. Viers said Hughes was comfortable with this and that Wicks wanted to pursue a clear and upfront approach. With respect to the use of unauthorised varieties and gibberellic acid, Viers said this would not be touched as it was strictly a compliance issue.

1642 Eden responded with some quick thoughts. These included that he wanted to get the Joe White approach "in the worst way". Eden gave evidence explaining that by this he meant he wanted to reach an agreement with Joe White's customers to adopt the approach that had been used in the past. Eden said he understood that Joe White's approach had meant that the Joe White Business was running much smoother and he had a desire to get back to that approach as best as Cargill could.

1643 Eden also referred to Evers' work.[983] He suggested that it might be supportive of Joe White's approach, but Eden said he did not know. Eden said he understood from Viers' email that Joe White's customers, or at least many of them,[984] had not been told about the Operational Practices before 1 November 2013.

1644 In response to a request from Viers for information, on 1 February 2014 Evers forwarded a draft presentation entitled "Analytical Variability and Customer Expectations". That presentation again reflected work Evers had done in North America and contained observations, some of which were similar to information Evers had previously presented.

1645 As part of an executive summary, Evers suggested that Cargill Malt seemed to be holding itself to a higher standard than its competitors did, or than its customers appreciated in terms of statistical confidence. When taken to this observation during cross-examination, Eden said he agreed with it in some sense. Eden said he had no

983 See pars 1613-1618 above.

984 Eden gave evidence that he could not be certain about what some customers may or may not have been told.

way of knowing what customers appreciated, and nor did Evers given that he was an engineer who had never worked with the customer.[985]

1646 De Samblanx was taken to Evers' executive summary. He gave evidence that there was a persistent problem, in at least part of the malting industry, that customer specifications assumed a precision that analytical capabilities could not deliver. With respect to Evers' point in the summary that analytical capability had been identified as a cause of significant negative impacts to Cargill and its customers, De Samblanx gave evidence that he did not agree. (De Samblanx understood that this point was referring to some parameters having a variability so high that they could bring the malt out of specification.) As for the observation concerning Cargill holding itself to a higher standard than its competitors or customers appreciated, De Samblanx said he could not agree because he did not know the standards to which Cargill's competitors were holding themselves and could not compare.

1647 Later in the draft presentation, under the heading "PROCESS AND ANALYTICAL CAPABILITY", Evers stated the following:

> - Analytical capability of the methods does not allow statistical confidence within specification for color, moisture, PS[986] and other attributes.
> - Even though theoretical blend is currently possible in Europe and Argentina, some customers seem to be pushing more for actual analysis.
> - …
> - Analytical capability relative to customer expectations seems to be an industry-wide issue.

1648 Under cross-examination, De Samblanx said with respect to the first point concerning colour, moisture and soluble protein, he partially agreed. The extent to which De Samblanx agreed, and the basis for that agreement were not explored.[987] On the

---

985 See further par 1818 below.

986 PS stands for soluble protein.

987 The Viterra Parties submitted that it should be found that De Samblanx knew in 2013 that, in the malting industry, analytical capability of testing results did not allow for there to be statistical confidence of being within specification for colour, moisture or soluble protein analysis results. In light

second point, De Samblanx gave evidence that Cargill customers in Europe were not pushing more for actual analysis. As to the last point, De Samblanx said he disagreed with it. He said that Evers had not consulted him with respect to this point.

1649 Under the heading "What can we do?", various solutions were suggested. The first of these was to engage Cargill's customers to get them to adopt the theoretical blend. When taken to this point, De Samblanx rejected the suggestion that this approach made it easier to satisfy customer specifications. The next possible solution referred to introducing a "typical range" in Certificates of Analysis rather than doing a specific analysis. De Samblanx's evidence was that he did not know precisely what Evers had proposed and this was not something Cargill had engaged in. A further matter listed under this heading was to widen customer expectations.

1650 As for another possibility suggested by Evers of engaging customers to allow 2 standard deviations on either side of the specification, De Samblanx gave evidence that, to his knowledge, this was not something Cargill wished to do at the time. Further, to an observation by Evers in the draft presentation that that was what Joe White was doing at the time,[988] De Samblanx took exception, stating it was not the same.

1651 The reason why De Samblanx gave this answer was provided during re-examination. De Samblanx said (correctly) that what Joe White had been doing was correcting within 2 standard deviations all the time at the convenience of Joe White. He said that accepting a raw result plus or minus 2 standard deviations could be considered correct if the customer agreed to it. Further, he indicated the correct manner to report such an approach if it were adopted would be to give the customer the actual result and state it was plus or minus 2 standard deviations so then the reporting was clear.

---

of the vague evidence on this topic, there was no proper basis to make such an all-encompassing finding. On the contrary, the fact that De Samblanx only partially agreed with the various propositions put suggested there was an element of statistical confidence. However, it also indicated a level of a lack of confidence; but what that level was remained unidentified. It should be further noted that the "other attributes" were not identified for De Samblanx, and he was uncertain as to its meaning.

988 Evers gave evidence that he did not know whether or not Joe White was engaging its customers to get agreement to a regime where a result within 2 specifications was acceptable.

1652 While dealing with De Samblanx's evidence concerning variation and uncertainty, he readily accepted under cross-examination that a test result might read out of specification but variances that arise from the testing process may mean that it was actually within specification. He also acknowledged that it can never be certain if something was precisely within specification, because there was always a level of uncertainty. However, he suggested the closer the result was to the required specification, the higher the probability the malt complied with the specification.

1653 In giving this evidence, De Samblanx gave a hypothetical example where there was a variance in laboratories giving rise to a 2 standard deviation difference. It was in that context that it was put to him in cross-examination that taking data from the system consisting of the results of the tests was not a reliable way of knowing whether in fact the malt shipped was within the customer's specification, to which he responded, "It's all the time coming back to that 2 standard deviations that you have on all the analysis. So a value is never 100 percent sure whether it's malt or whether it's nuts and bolts."

1654 Evers was also cross-examined on the contents of this draft presentation. It is unnecessary to go through each of the matters put to him, which were said to arise out of the contents of the document; many of which he rejected. Further, it was not entirely clear how Evers' work and experience in a plant in North Dakota could be directly related to Joe White's situation in Australia. Evers' own evidence was that the Kaizen and Six Sigma tools used with respect to the North Dakota plant were great for some applications, but for some business problems they did not apply.[989] He also declined an invitation during cross-examination to express an opinion about the appropriate way to change from the practices Joe White had been using to a theoretical blend model, because there were too many variables preventing him from giving an answer.

1655 Suffice to say, in Evers comparing what he was considering with what Joe White had been doing, Evers said it was contemplated that customers would be aware, or should be aware, of errors in testing and that there would be transparency if his possible

989 Evers stated that Kaizen and Six Sigma were different management approaches.

alternatives were adopted.

1656 Many further examples were given of exchanges between Joe White and its customers in seeking to obtain derogations.

1657 By way of another illustration, in early February 2014, McIntyre emailed Nestlé regarding 2 lots of malt. She advised that the order was all within specification apart from total protein which was just above specification. She asked whether the shipments were acceptable. Nestlé responded that they were not. In rejecting the request Nestlé stated that it had given too many "of this type of releases to [Joe White] and it [reflected] badly on our factory KPIs".[990]

1658 Stewart then responded to Nestlé's position, stating he fully understood its comments regarding the large number of requests that Joe White had made. He further stated that Nestlé's understanding had helped Joe White get through a very difficult period of barley quality. He then queried whether Nestlé would reconsider, given all specifications were within the revised parameters apart from protein, which he said was not a functional malt parameter. This email was followed up by Stewart the following day. In again seeking approval, Stewart stated the malt was typical of the remaining 2012 crop that Joe White had, and therefore Joe White expected to see more of this style of malt for the next month or so. Stewart stated that he was concerned that if this higher protein malt was not suitable then Joe White may have issues with supply in the short term.

1659 Nestlé then responded, stating it was agreeable to accepting the 2 lots. However, it enquired as to when the higher protein barley would be used up and when Nestlé could expect to have supply back to normal.

1660 Many other attempts made by Joe White to obtain such understanding were unsuccessful. It is readily apparent from a review of the many emails relied upon by the Cargill Parties that many of Joe White's customers were dissatisfied, and substantially so, with the inability of Joe White to supply malt within specification and

990 KPIs stands for key performance indicators.

on time. The correspondence also illustrated that Joe White suffered a significant reduction in the amount of malt supplied to some customers.

1661 Adapting Joe White's operations to Cargill's business model was an ongoing process. A "Derogation Customer Review", dated 6 February 2014 and prepared by Stewart as a starting point, set out Joe White's customers, their "Current Situation", their "Customer Attitude/Potential Reaction" and suggested action. It detailed a number of different approaches taken or suggested by Joe White in relation to derogations, and recorded Stewart's views as to whether concessions or derogation approval were likely to be obtained.

1662 More specifically, the review recorded that nothing further needed to be done with respect to Coopers or Lion Nathan as each of them had accepted a standard deviation be applied to their specifications (or at least most of their specifications).[991] Viers gave evidence he had no reason not to believe the contents of the review were accurate, though he said he was not certain whether certain derogations were temporary or long term.

1663 With respect to the other brewers, Stewart's evidence was that by the end of February 2014 he had been able to negotiate tolerance ranges with about a fifth of Joe White's customers. Further, Stewart was of the opinion that Japanese brewers would be the least likely to agree to any arrangement that they were not aware of "to the very last detail". He suggested it would be difficult to get Japanese brewers to accept specification variation. That said, he suggested that Sapporo would be the most willing to agree to some sort of specification variation based on Joe White's strong relationship and the fact that Joe White had limited barley choice. As for Asahi, Stewart said there was little chance of it agreeing to any type of concession. Regarding Kirin, Stewart said this customer might be sympathetic as it was an ex-maltster. However, he said that Japanese culture would dictate the need for full disclosure.

1664 Of the other main customers, Stewart made various observations. He stated that Boon

991 See also pars 1598-1600 above.

Rawd understood "that maltsters 'modify'" Certificates of Analysis and wanted to maintain a tight specification as a result. Stewart recorded that Boon Rawd had flatly refused to allow "a yellow and red region approach" to specifications.

1665 The Viterra Parties submitted that Boon Rawd's understanding as recorded in this document showed that Boon Rawd believed Certificates of Analysis could be amended regardless of what Joe White (under Cargill) was saying in respect of its practices. Notably, although dealing with this very customer in his evidence, Stewart did not state this was Boon Rawd's position. Further, this wording, read in context, did not indicate that Boon Rawd had such a belief.[992]

1666 By way of further background, around the end of February or early in March 2014, Stewart visited Boon Rawd in Bangkok to discuss derogations required from it as a result of Cargill's approach. Stewart gave evidence that he was told by Boon Rawd that it wanted Joe White to revert to the way malt had been supplied to it prior to the Acquisition. In response, Stewart said this would include adjusting Certificates of Analysis results, to which Boon Rawd said it knew maltsters made adjustments to Certificates of Analysis.

1667 A meeting with Boon Rawd was also held by Hughes and Wicks, and was referred to in an email from Wicks to Viers, Hughes, Youil and others. The email noted that Boon Rawd was 1 of Joe White's largest customers. It stated that Joe White had been delaying shipments due to its inability to meet Boon Rawd's specifications with old and new (still dormant) crop Buloke barley. In response to orders for 12 shipments of 450 tonnes, Joe White had been unable to supply any malt in March 2014 and only half the requirements in April 2014. Boon Rawd was concerned it would run out of malt as Joe White was its largest supplier.

1668 The email set out some of the details of the meeting. It noted that the Buloke variety consisted of poorly performing old crop and still dormant new crop, which caused loss of production due to 5 day malt cycles and missed batches. The Cargill

992 See further pars 1739, 1747, 1811 below.

requirement that every parameter had to meet specification or the malt could not be sent was discussed. Wicks recorded that he and Hughes admitted that Joe White in the past would "make judgments based on the error of the test" to adjust [Certificates of Analysis] "to meet their requirements and ensure [Joe White] kept the malt flowing without bothering [Boon Rawd] with derogation requests". It was also pointed out that Boon Rawd did not have quality problems with Joe White's malt under the previous regime, to which Boon Rawd agreed.

1669 The discussion then turned to how Joe White could increase supply to Boon Rawd. As part of the solution, Boon Rawd agreed to a different variety of barley and Joe White using the blend analysis results from the theoretical blend for the Certificates of Analysis.

1670 On 24 February 2014, Youil sent an email to Eden, copied to Viers, Hughes, De Samblanx and another, concerning storage capacity. That email attached the "first high-level assessment of the storage capacity requirements for [Joe White], as a result of the introduction of Cargill's [Certificate of Analysis] policy". Youil stated that the Sydney and Adelaide plants were in most need of storage and a request had been made by him for additional funds to undertake further scoping work towards a long-term solution. The attached report also suggested that the Perth plant needed additional storage capacity. The total estimate of the capital expenditure required was $30 million.

1671 In the report, which was copied to Hughes and others, Youil stated as a fact that the implementation of the more stringent Cargill Blending and Certificate of Analysis Procedure had meant that Joe White was unable to produce and deliver malt that consistently complied with customer specifications.[993] The result of this was that the Joe White Business was losing production "due to curtailment on account of full product storage as well as longer processing times that have been implemented to

[993] Youil's view that Cargill's approach was more stringent was to be compared with the view apparently expressed by a number of the Joe White executives in October 2013: see par 1257 above. Presumably, Youil's reference to a more stringent approach included the inability to alter Sign-Out Reports and Certificates of Analysis, and perhaps also to the inability to use the wrong barley varieties.

improve the probability of being in specification". Youil referred to an area of concern, being malt storage and blending capacity. After reporting that both top-down and bottom-up assessments had occurred, it was stated that the current storage and blending capacity for the 3 export plants (being Sydney, Adelaide and Perth) was not sufficient to consistently manufacture malt or base malts to inventory and blend malt to meet customer specifications. Youil stated that this had been partly driven by the Australian variety make-up as well as the specifications of the Joe White customer portfolio.

1672 Around this time, Sagaert was concerned about the impact the Operational Practices were having on Cargill's image. In response to an email from Viers enquiring as to whether Cargill Argentina and Europe could cover some supply issues for Joe White, Sagaert declined assistance from Argentina for capacity reasons but offered some possible assistance from Europe. However, Sagaert emphasised that Cargill should not use Europe as a fall back for the problems at Joe White unless it was the only way not to jeopardise Cargill's image. Sagaert stated that it was probably Cargill Malt's biggest priority to get things fixed at Joe White. She stated that if this did not occur it could really impact Cargill's "image, future earnings, team engagement etc". She also noted she was copying Eden into the email as it was "a too important topic".

1673 In response to the email, Viers suggested that things were improving at Joe White. Viers indicated that Joe White had an action log of initiatives which had been broken down to short, medium and long-term. These initiatives included planning, execution, barley, capital expenditure, process change and "you name it, if it impacts [specifications], customer, or the ability to operate at capacity [it's] on the list". Viers referred to weekly meetings being held with the full management team, as well as plant and production managers. He recorded that customer shipments, production, barley needs and "any road blocks" were being reviewed, with a separate customer log being maintained to record requests regarding specifications, barley varieties and process approvals. He referred to a weekly scorecard which measured capacity utilisation for each plant, including production losses due to "5 day malt, barley, …

space restrictions etc". Viers continued:

> The number of variety approvals, [specification] changes, [gibberellic acid] exceptions, secured while moving all [customers] to a blend analysis to me is phenomenal and a direct [reflection] of the urgency and ownership by the [Joe White] team. We started day one by shutting most everything down and today we have Perth and Minto at full capacity and all indications are that Port [Adelaide] will get there as well. We probably [have not] done a good job broadcasting the same. [I am] not suggesting these are permanent fixes nor sustainable for the long term but necessary for now.
>
> What is clear to me is that coming out of crisis mode and validated by your email is we need to expand the visibility and gain broader support around these issues.

1674 When cross-examined about Viers' response, Sagaert said she read the email and understood that Viers was acknowledging that Cargill had not done a good job in explaining to Joe White's customers what it was doing and the reasons for it. Viers was not cross-examined about the contents of his email. In any event, in an email sent by Sagaert a little later she referred to her own feedback from some Japanese customers to the effect that communications between Joe White and those customers had been less than satisfactory.[994]

1675 Returning to Stewart's derogation review, it stated that Beer Thai 1991 Public Co Ltd ("Beer Thai") would potentially be open to returning to the way Joe White did things previously because Beer Thai analysed the malt delivered and would be in a position to raise issues if they arose. With respect to Beer Thai's current situation, Stewart observed there had been little supply of malt of late. He said there had been 2 successful derogations, before supply slowed down.

1676 Stewart recorded that recent events had strained Joe White's relationship with Hite Brewery Co Ltd ("Hite").[995] Stewart suggested an environment may have been created where Hite would be agreeable to reverting "to our previous operating model". Stewart recorded that there had been intense negotiations with Hite to seek to get agreement for the use of Buloke, a barley variety that had previously been

---

994 The email was sent on 9 May 2014, and concerned Asahi, Sapporo and Orion Breweries. When giving evidence, Sagaert could not recall whether the feedback was directly to her or whether she had received information from someone else at Cargill.

995 See also fn 1586 below.

accepted for premium beer production only. After referring to potential trials of another barley variety and Hite's acceptance of out-of-specification malt, Stewart observed that this had largely been due to the risk of Hite running out of malt.

1677 Stewart described the current negotiations with Heineken as very active. He recorded that Heineken had moved to the theoretical blend approach, based on Cargill's strong relationship with Heineken in Europe. Stewart said there had been several derogation requests for out-of-specification malt with some Heineken breweries being forced to accept it or face running out of malt, which had created negativity towards Joe White. Reference was also made to screenings in black malt that had added to Heineken's frustrations with Joe White.[996]

1678 As to the possible way forward with Heineken, Stewart suggested a different approach. It was contemplated that Joe White would get Heineken's technical controller to help coordinate a more consistent approach across the operating companies. Stewart said that Heineken had an internal "yellow and red system" and it should be Joe White's goal to try to make that more transparent, thereby giving Joe White more freedom to operate.

1679 With respect to San Miguel, reference was made to a good deal of negotiation around barley varieties with Buloke finally being approved "and an eye on Vlamingh". Stewart expressed the view that, as the companies that comprised San Miguel were "bulk customers" with an achievable specification, he believed Joe White could meet their needs.

1680 As for SAB Miller, Stewart said there was no change to the way Joe White had been operating in the past. He said that SAB Miller was very prescriptive, however it was a savvy brewer and willing to consider variation from barley quality. He said good communication was the key to successfully dealing with SAB Miller.

1681 Finally, Stewart stated that Saigon Alcohol Beer and Beverage Joint Stock Corporation

---

996 When it was put to Viers during cross-examination that screenings in black malt had nothing to do with the Operational Practices, Viers was unable to answer 1 way or the other.

("SABECO")/Hanoi Beer Alcohol and Beverage Joint Stock Corporation ("HABECO") had been engaged in negotiations with Joe White about malt quality. He said that, regardless of what was sent to them, Joe White would be judged on their own analyses of Joe White's malt; and that there would be a need to compensate SABECO/HABECO if the malt delivered by Joe White was found to be out of specification. Having said that, he said that because their analysis decision was final, they may have been receptive to resuming Joe White's historical practices.

1682 Stewart gave evidence that the implementation of the steps referred to above reduced the number of derogations required, but many derogations still continued to be raised.

1683 The ongoing attempts at business transformation were proving difficult. In an email chain between Viers and Eden in late February 2014, Viers detailed the challenges he was facing. The first email in the chain was concerned with a report on malt storage. Viers concluded the covering email apologising for being a little negative at times, stating it had been a challenge to go to work day after day for months on end only to watch the Cargill team struggle and the results fall short. Eden responded by stating he read and felt the pain. Eden expressed the opinion that Cargill could not rely upon Glencore if it was assumed Cargill was going to have a significant warranty claim. After thanking Viers for his assistance, Eden continued:

> Sometimes it is very hard to provide positive leadership when you are surrounded with adversity. You are not in this alone and should not feel the total burden of the issues. I would like you to continue to find leadership that provides hope. As importantly (sic) is to get to capacity as quickly as possible.

1684 In a further email in the chain, Viers stated:

> I think the reality is we might have expected a certain amount of red lining however what we have found was not tweaking but *a systematic approach much more pervasive then (sic) we could have imagined* (to the extent *the asset and business system were built on it*). What *we did not at all expect was the issues around variety and [gibberellic acid] and the ignoring of specific customer requirements*. The result of the later (sic) is in part a variety profile and availability that is not aligned with [customer] portfolio and their subsequent specifications which will take time to correct.
>
> (Emphasis added.)

1685 At trial, it was not put to Viers that the views he expressed in this email were anything other than his genuinely held views at that time. Further, Viers gave evidence that he was optimistic when he sent the email in stating that the issues would take time to correct. He said the issues he had encountered with respect to the Operational Practices were fundamental to the Joe White Business and he was of the view that a great deal of hard work and goodwill was required of Joe White employees and customers to try and limit the significant and overwhelming consequences the Operational Practices had had within the Joe White Business.

1686 Viers also gave evidence that the majority of his time, together with that of Joe White management, was dedicated to damage control or mitigation on a day-to-day basis. This evidence was also not challenged, Viers agreeing with the proposition put under cross-examination that he was considering how to limit the damage of the problems that flowed from the Operational Practices right from day 1. Viers agreed from the first day Cargill took over he was gaining an understanding of whether or not Cargill was succeeding with its damage control, but added that issues continued to unfold regularly and that he had to address those new issues.

1687 Returning to the email chain, in response to Viers' email, Eden said he was struggling as to why it was so difficult to get Joe White customers to accept the different barley varieties and malt being out of specification. He said he understood it was very difficult to tell a customer that it was not getting what it thought, but the fact was that those customers were happy before they were informed of the undisclosed conduct reflected by the Operational Practices (with the exception of gibberellic acid, which had been largely withdrawn as a practice, unless approved by the relevant Joe White customers). Eden's email continued:

> So in some respects, I have a feeling that we will find a way forward. In other respects, once we bring attention to a change, it will be easy for our customers to push back.
>
> No matter what, if we have to spend more money the payback gets worse and we lose a tonne of credibility. We will not get the corporate support for the next deal as a result. It will impact our ability to grow. Not a happy situation, but we need to deal with the reality of the situation. Much of the pain will be eased if we are able to get a meaningful warranty claim.

1688 In the final email in this chain, Viers said in substance that he understood what Eden was saying and that it kept him awake at night. He informed Eden that he was pushing on the issue of specifications and was meeting all day the following day on that and other potential remedies. Viers said he was not giving up but he did not think Cargill could ignore the other solutions.

1689 On 28 February 2014, Stewart emailed a summary of customers who had accepted the use of gibberellic acid and Laminex as additives. The summary listed 18 customers, of which Asahi, SAB Miller, Heineken (both A and B) (being a reference to Asia Pacific Breweries) and Sapporo were listed as still prohibiting exogenous gibberellic acid.

1690 Back on 19 February 2014, Evers sent an email to Okoroegbe requesting a review of various customer contracts. In his initial email, Evers referred to the work he was doing on customers' specifications and terminology for Certificates of Analysis. He then requested that certain contracts be reviewed so that Cargill's malt business was aware of any potential issues that could arise in changing the way malt specifications were reported. Evers stated the exercise was a business critical issue, with the topic having a significant impact on Cargill's malt business in North America.[997] Later in the email chain, Evers stated that Cargill wanted to understand if legally there was anything in the contracts that prevented Cargill from using the theoretical blend approach (as used in Europe and Argentina).

1691 In fact, the contracts were not reviewed by Cargill, Inc's legal department until early in March 2014. When they were, and further instructions were given on various matters, Cargill, Inc's legal department advised that there was nothing that would expressly prohibit Cargill from changing its testing procedures for the purpose of issuing Certificates of Analysis, although it was noted that several contracts contained clauses that imposed quality or service obligations on the parties. The advice also noted that (as raised by Evers with them previously) even if it were technically permissible under the contracts to switch to a theoretical blend analysis, there could

997 In North America, the majority of Cargill's malt customers required actual analyses to be conducted, rather than allowing the theoretical blend approach to be adopted.

be pushback from customers if Cargill was to change its analysis method.

1692 Evers forwarded this advice to others within Cargill, including De Samblanx, Viers and Eden, stating there was probably nothing legally preventing Cargill from switching to theoretical blend analysis immediately (subject to some practicalities). He said customers would have to be informed. He enquired as to how bold Cargill, Inc wanted to be in North America on this issue. Evers also said it was his feeling that a change to theoretical blend analysis would essentially lead to the out-of-specification issues in North America going away. Evers added that it was probably important to note that, essentially, the malt would not materially change from what was already being shipped.

1693 After numerous further emails on 10 March 2014, Viers forwarded the email chain to others, including Eden and De Samblanx, noting the Joe White Business had more than 95 percent of its volume converted to the theoretical blend approach.

1694 De Samblanx concluded the email chain, reminding those involved in any change to a Certificate of Analysis that Cargill's corporate policy stated:

> When Cargill mutually agreed with a customer's request to include information on a [Certificate of Analysis] when a sample is not tested for the specific lot, then the [Certificate of Analysis] must provide additional language to ensure that the customer understands that the result provided was not tested for the specific lot.

1695 When Evers was cross-examined on the email chain and what was being considered for North America, he accepted that, by seeking to adopt the theoretical blend approach, a maltster is not required to test the final shipment and therefore is not troubled by the inherent variations and discrepancies that might be produced in the final blend. Evers further accepted that using the theoretical blend approach essentially eliminated a source of out-of-specification reporting, thereby excluding the analytical variability that may arise in the final sample.

1696 For clarity, the actual analysis approach by Cargill, Inc in North America could not be sensibly compared with the Viterra Certificate of Analysis Procedure. There was no suggestion that in North America, Cargill, Inc was engaging in altering actual test

results in order that Certificates of Analysis issued reported compliance with specifications contrary to actual test results.

1697 Stewart gave evidence that in around January or February 2014, he travelled to Europe to inspect malting facilities and to meet with Cargill, Inc staff in the Netherlands. He said that during the trip he met with Evers and De Samblanx. According to Stewart, Evers said that Cargill had appreciated before the Acquisition that other maltsters engaged in practices such as adjusting results in Certificates of Analysis. When this was put to Evers under cross-examination, Evers stated unequivocally that he had never said that.

1698 Stewart also gave evidence that De Samblanx told him during this trip that Cargill, Inc had undertaken numerous previous acquisitions of malting companies, and had found that some of them were engaged in practices of using off-spec barley and altering documentation in ways which were incompatible with Cargill, Inc's business practices.[998] This matter was not raised with De Samblanx when he gave his evidence.

1699 Nothing much turned on whether or not Stewart's account of these conversations was accepted.[999] The evidence demonstrated that Cargill had some awareness of pencilling before the relevant events in 2013. Accordingly, to the extent that the evidence of Stewart might be considered to be admissions by Evers and De Samblanx against the interests of Cargill, any such admissions made in substance did not go much further than other uncontroversial evidence already before the court. To be clear, Cargill plainly knew at all relevant times of the existence of pencilling and of some malt suppliers using off-spec barley. However, such knowledge did not equate to knowing Joe White was (or was likely to be) engaged in any such practices, nor did it provide a basis for concluding that Cargill ought to have known of the Operational

998 To be clear, to the extent Stewart's account of discussions many years ago included a statement by De Samblanx of "numerous previous acquisitions", I do not accept De Samblanx would have been referring to any more than 2 or 3 acquisitions. This topic was explored by the Viterra Parties exhaustively during cross-examination, and there was no evidence to suggest a significant number of acquired businesses had been involved in using incorrect barley or had engaged in pencilling: see pars 1091-1095 above.

999 If it were necessary to make a finding, in light of the lapse of time and the lack of any contemporaneous record, coupled with Evers' unequivocal denial, and the relevant matter not being put to De Samblanx, I would not have been satisfied on the balance of probabilities that such matters were said to Stewart.

Practices based on the information that was available to it.

1700 Regardless of what Stewart was told, in 2014 he was certainly not recommending pencilling or other conduct encapsulated by the Operational Practices be part of the operations of the Joe White Business. On 6 March 2014, Stewart sent an email to De Samblanx and others, copied to Hughes and Testi, which attached the Viterra Certificate of Analysis Procedure. The document attached was version 2 revised on 26 September 2012.[1000] The email read:

> Hi Steven,
>
> This procedure reflects the way that [Joe White] operated prior to Cargill. *I would not suggest for one moment* that this procedure could be used within the Cargill environment and I do not want anyone scrutinising the procedure with that intent. I am merely supplying it for your reference.
>
> It is worth noting [Joe White] had quite a formal procedure for [Certificate of Analysis] generation, whereas I would suggest that many of our competitors do not. This should give you an indication of the freedom our competitors operate under.
>
> (Emphasis added.)

1701 De Samblanx gave evidence that he was surprised when he saw the Viterra Certificate of Analysis Procedure. He had not seen the document at any time during the Due Diligence leading up to the Acquisition. Further, his surprise was based not only upon provision for adjustment of figures for results within 2 standard deviations, but also because it provided for adjustments beyond that if 2 general managers agreed.[1001]

1702 In around February 2014, Jewison instructed Argent and Scott Barnett[1002] to prepare monthly updates in respect of Joe White. These were produced until around the middle of 2015.

1000 See par 286 above.

1001 For completeness, De Samblanx gave evidence that he could not recall when he first saw a Viterra document entitled "Malt Analytes Proficiency Testing Schemes Procedure" (being the Malt Proficiency Scheme), including whether or not he saw it during the Due Diligence. However, he gave evidence that this document, which related to laboratory performance, had nothing to do with malt analyses in Certificates of Analysis provided to customers and did not give him any concerns with respect to those matters.

1002 Scott Barnett worked in the Cargill Energy Transport Metals – Asia department.

1703 On 11 March 2014, Youil emailed a spreadsheet to Viers concerning Joe White's plant capacity. The spreadsheet set out a considerable amount of detail in relation to each plant, including the loss of production "due to 5 day Malt Production".[1003] The total loss of production projected on this account for the 5 plants affected was 16,350 tonnes. In a separate sheet dedicated solely to "5 day Losses", columns listed the days required to produce contract volume, the days required assuming 5 days of production and the "days lost due to extended germination".[1004] The total lost production capacity was recorded as 16,600 tonnes.

1704 On 15 March 2014, Jewison circulated a February 2014 Joe White monthly update to various persons, including Eden, Viers, Hughes and Argent. The update was prepared by Jewison and painted a negative picture of the Joe White Business. The presentation (which was based on Joe White's existing budget information and not a Cargill budget) recorded that Joe White's year-to-date results comprised a $6.2 million loss, including operating losses of $4.9 million. Overall, the legacy business (being all Cargill, Inc malt businesses other than Joe White) year-to-date earnings after tax were $20.6 million, which was down 34 percent from the original budget of $31.2 million.[1005]

1705 Later, the presentation listed a number of contributors to Joe White's operating results, including a delay on a shipment to SAB Miller, malt inventory downgrades, transport related issues and barley sold as feed. Jewison gave evidence at trial that she could not recall whether these operating adjustments or any other negative matters reported were related to the Operational Practices. The update gave details of Joe White's operating costs to date. The figures presented represented earnings before tax. The lower than expected margin was accompanied by a comment referring to completion of 2012 barley contracts with high carry and finance costs. When giving evidence, Jewison similarly could not recall whether this had anything to do with the

---

1003 See pars 755, 779, 789, 819, 893, 1131, 1505, 1519, 1673 above.

1004 The customers identified as being affected included Asia Pacific Breweries, SAB Miller, Sapporo and Asahi.

1005 A breakdown of these figures was also provided, but corresponding figures for May 2014 are discussed in more detail below: see pars 1756-1758 below.

Operational Practices.[1006]

1706 According to Stewart, by around March 2014, Joe White was able to source and use appropriate varieties of barley and had been able to negotiate changes of the specified barley varieties with some Joe White customers. Stewart's evidence was that a number of operational issues had been resolved, and the malt supplied from the Sydney and Perth plants in particular was being produced within or closer to specification. However, Stewart also said that, despite this progress, Joe White had ongoing difficulties in producing malt of suitable quality, and derogations continued. The quality of malt produced from the Adelaide and Cavan plants remained especially problematic.

1707 Stewart said he also observed a change in the production approach, with more attention given to calculations in the theoretical blend rather than the quality of the malt product. Further, Stewart said that difficulties arose because, under Cargill's direction, Joe White had to seek derogations where the theoretical blend resulted in even minor deviations from contractual specifications.

1708 Problems with customer satisfaction continued. On 4 April 2014, Wicks emailed Joe White production managers and plant managers, copying in others including Stewart, Jones, Youil and Viers. In the email, which had the subject line "'B' Malt Quality Issues", Wicks wrote:

> Please be aware Heineken/[Asia Pacific Breweries] have made it clear that we are now on our last chance with [Asia Pacific Breweries] ie we cannot miss any further shipments. The consequences go beyond immediate brewery claims and will impact future business with our largest customer.

This was a response to a number of emails from Heineken which included statements by Heineken that its brewing issues across the Asian region had become much more concerning than any discount from Joe White could compensate for, and that an immediate response on a resolution was required.

1006 The data and commentary had been drafted by Argent and approved by Jewison.

1709 When taken to this email during cross-examination, Stewart agreed Heineken took its malt specifications very seriously.[1007] He also accepted the problem with Heineken had become quite acute in relation to Joe White complying with specifications. Stewart understood that, by this email, Heineken was giving an ultimatum.[1008]

1710 The problems with Heineken were ongoing. On 31 July 2014, a meeting was held in Singapore, which was attended by Viers and Wicks on behalf of Joe White.[1009]

1711 In an email dated 2 August 2014, Wicks provided a summary of the meeting. He said that he and Viers explained how Joe White had previously disguised some out-of-specification malt by adjusting analyses "for analytic error". Heineken was also told that Joe White lost over 50,000 tonnes of product due to poor quality barley. Reference was made to farmers' hugely popular choice of growing Hindmarsh, which made it more difficult for Joe White to source Heineken's approved varieties in sufficient quantities.

1712 Negotiations ensued to allow use of gibberellic acid, only as an interim measure. That and various other matters were agreed, but not without Heineken expressing its frustration and annoyance about a number of operational matters.

1713 Wicks commented in the email that the meeting had been held in a constructive atmosphere, but he had no doubt Heineken had reservations about Joe White's reliability. He said it would have to be assumed Heineken would have been exploring alternative suppliers.

1714 In around mid-April 2014, the March 2014 monthly update was produced.

1715 On 15 April 2014, Viers sent an email to Eden, De Samblanx, Hughes and others.[1010]

1007 Stewart was also taken to other examples of Joe White customers treating specifications seriously.

1008 To demonstrate the importance of this issue for Joe White, Asia Pacific Breweries included Asia Pacific Breweries Singapore, Asia Pacific Breweries Hanoi, Brasserie de Tahiti, Cambodia Brewery Ltd, Guinness Anchor Berhad, Lao Asia Pacific Breweries Ltd, Myawaddy Trading Ltd, Pt Multi Bintang Indonesia, South Pacific Brewery Ltd, Thai Asia Pacific Brewery Co Ltd and Vietnam Brewery Ltd. The Viterra Parties disputed 3 of these companies formed part of the group, but an email from McIntyre dated 20 August 2012 demonstrated all these companies, and more, were included.

1009 The meeting was preceded by correspondence concerning availability of required barley varieties.

1010 Only Eden was asked about the details of this email. He said he accepted what Viers reported.

The email provided another update on the status of Joe White's operations and attached 2 documents providing the details. Viers stated there had been 2 issues limiting the ability to deliver financial results over the first 5 months, namely "production and logistical". Viers stated that both of them were symptoms of the Certificate of Analysis "cut over", a failing old crop barley, variety misalignment and curtailment of gibberellic acid use.

1716 With respect to production, Viers set out what had been produced when compared with Cargill's expectation. He noted approximately 32,000 tonnes a month had been shipped, and that at the current pace only 385,000 tonnes per annum would be produced, compared with an expectation of 525,000 tonnes per annum. He said there had been a number of limiting factors, including a lack of conforming raw material and "scheduled/unscheduled downtime", a lack of space and the need to run 5 day malt. He said the last of these was probably the most prominent limiting factor. In that regard, Viers reported that a transition back to 4 day malt, after some promising test batches, was beginning.

1717 On the issue of logistics, Viers stated the primary problem was non-conforming barley and malt. The problems included demurrage, shipping barley and malt "out of the line", selling malt and raw barley as feed and dead freight. Viers suggested the costs had totalled several million dollars, but that he believed nearly all issues had been cleaned up and such costs should be behind them.

1718 Viers also reported that Joe White was moving at full speed in terms of long-term solutions, including capital expenditure to build storage and blending capacity. After referring to a number of other issues, Viers provided a somewhat pessimistic summary of the effect of those issues on the Joe White Business:

> It is obvious from the derogation chart as well [as] the fact that we have not met our production commitments that we have tried the patience of our customers. We have a lot of work to do over a long period of time to regain their confidence.

1719 The attached derogation chart contained 5 worksheets. The information included the total number of derogations over the first 22 weeks of production, as well as the

volume of production that had been affected (comparing volume with the total production figures). Suffice to say, both in number and volume, the level of production affected by derogations was substantial. For example, in relation to pale malt, derogations had been sought in relation to approximately 60 percent of total volume.

1720 The other attachment provided production figures for a number of the plants. The effective utilisation of those plants was recorded. Broadly speaking, the spreadsheet indicated a loss of production capacity of approximately 25 percent. As McIntyre explained in her evidence, due to being unable to meet customer specifications, including because it did not have sufficient quantities of the required barley varieties, Joe White often had to postpone or cancel malt shipments. Equally, when customers did not accept requested derogations, this delayed the particular shipment in question as new batches had to be produced. Naturally, while such new batches were being prepared, Joe White's production facilities were affected and its capacity to meet other orders was commensurably reduced. When it was put to McIntyre during cross-examination that she had only given limited examples of such postponing or cancellation of orders because there were not many such instances after March 2014, she rejected the suggestion, affirming there were many instances.[1011]

1721 In around mid-May 2014, the April 2014 monthly update was completed. Amongst other things, this update indicated that Joe White had suffered an operating loss of $7.407 million to the end of April 2014, in contrast to the budgeted gain of $998,004 for earnings after tax.

1722 Various issues were detailed in a presentation entitled "Malt Operations Update Australia Frank Van Lierde – Visit", prepared by Youil and presented to Van Lierde on or around 22 May 2014 ("the Malt Operations Update Presentation"). The Malt Operations Update Presentation was reviewed by Viers before being presented to Van Lierde. The first slide entitled "Situation this Past Year and Overall Impact", stated that the implementation of Certificate of Analysis procedures and a decline in

1011 Scaife gave similar evidence: see par 1798 below.

2012 barley performance "impacted plant utili[s]ation, our customers and shipping lines". Dot points on the slide listed the following:

- [Certificate of Analysis] policy introduced Nov 1st 2013
- Decline in 2012 Barley Performance
- Misaligned Barley Variety vs. Customer Profile
- Early Malting of 2013 Barley
- Inability to use [gibberellic acid] for certain customers.

1723 A slide entitled "Capacity Utili[s]ation Loss – Breakdown" contained a pie chart that attributed a shortfall in utilisation for plants in Perth, Adelaide and Sydney to various different factors, including 48 percent for "5-day malt losses", 22 percent to storage, and 11 percent to barley variety shortages.

1724 The next slide was headed "Root Cause Analysis" and contained an elaborate flowchart. A "brainstorm" was contemplated, by which to identify strategies to reset the Joe White Business, including to deal with the issue that "[m]alt from Adelaide does not meet customer specifications".

1725 Later slides addressed barley varieties and procurement. Viers said at that time Joe White was having a very difficult time securing the right quality barley. The first slide on this topic gave various short term solutions. These involved moving barley from interstate if required to meet customer specifications, and fast tracking new varietal approvals.

1726 The Malt Operations Update Presentation also contained medium and long term strategies to ameliorate the identified drop in utilisation. These were largely directed to increasing barley procurement measures, and rationalising the varieties to enable the supply of customers to be shifted between plants.

1727 The document also detailed a long-term storage strategy, which anticipated building or securing additional malt storage in Sydney, Port Adelaide and Perth. The relevant slide stated that doing so would, amongst other things, "[a]llow sufficient malt storage pending customer derogation approvals".

1728 A further slide entitled "Risks" listed a number of risks to the Joe White Business in the short to medium term, including that "[c]ustomer frustrations with derogation requests may impact shipments or future sales" and deterioration of barley quality.

1729 A lengthy presentation, also dated May 2014, dealt specifically with Cargill's integration of Joe White.[1012] At several points the presentation alluded to difficulties in the integration process, including in implementing Cargill's policies. The integration objectives "meet synergy value capture targets" and "[stabilise] the base business" were recorded in the presentation as "Needs More Time" (as opposed to "On Track"). The progress recorded to date in relation to the latter of these objectives included adopting Certificate of Analysis procedures and progressing with customers on derogation procedures, but the outstanding steps remaining were recorded as:

- Sustain profitable operating performance and meet FY14 and FY15 budget goals
- Execute on multiple initiatives to adapt the various parts of the business to new procedures

1730 The presentation was divided into sections, including: "Barley", presented by Dickie; "Commercial", presented by Wicks; "Technical", presented by Stewart; "Operations", presented by Youil and Forsythe; and "Finance", presented by Argent.

1731 Both global and Australian barley were addressed, it being noted that malt and barley production in Australia largely exceeded malting demand in the major barley regions. With respect to barley and synergies, it was stated that Joe White and Cargill's grain and oilseeds supply chain were aligned and had collaborated to capture greater synergies.[1013] Various aspects of how that had been achieved were listed. The presentation continued:

1012 Viers had little or no recollection of it, but believed it would have been prepared because of Van Lierde's visit and may also have been connected with Cargill's end of fiscal year.

1013 On 8 May 2014, the synergy results for April 2014 were circulated. The covering email stated the synergies value was ramping up and had an upward trend. It was also stated most synergies were the result of collaboration between Joe White and Cargill's grain and oilseeds supply chain. Various synergies were yet to be quantified. As for new volume in Japan, the synergy was forecast at US$1.1 million, of which only US$300,000 had been captured. Further, for additional volumes or margin upgrades, none of the forecast of US$700,000 synergies had been achieved.

> This partnership has already started capturing value and has achieved the targeted increased elevator volumes synergy in the deal model.

Examples of how this value had been captured were set out.

1732 The presentation also identified the key actions and risks. Those included varietal alignment with Joe White's customer profile, which was stated to have the potential to limit merchandising activities.

1733 Under the commercial section, it was recorded that Joe White accounted for 70 percent of export volume of malt out of Australia. After some positive statements about Joe White's ability to compete, it was stated that with the Acquisition Cargill was well positioned to capture the growth in the Asia Pacific. It was also stated that Joe White had built up a good track record of supplying the biggest customers in the largest markets in Asia.[1014]

1734 With respect to Joe White's customers, it was stated that Joe White targeted the premium segment of the Asian market, with 66 percent of its volumes going to high margin customers "who value quality and service over price".

1735 The technical part of the presentation recorded the shortage of "current (2012/2013) crop barley" and referred to the need "to move to new crop before the barley was ready". It was also noted that some barley classes had not performed due to harvest rain in the previous year. Reference was made to the use of gibberellic acid which was required for certain customers to meet quality requirements. In addition, reference was also made to the immediate transition to the Cargill Blending and Certificate of Analysis Procedure.

1736 The following slide detailed "Customer Reaction". It was stated that the drop in production capacity "[g]enerated varying levels of concern amongst our customers who expect reliable quality and service from [Joe White]". It was also recorded that production was at less than capacity and shipments were missed as the Joe White

---

1014 For the 2012 financial year, it was recorded that Joe White's sales volumes were as follows: Australia 22 percent, South Korea 18 percent, Thailand 13 percent, Vietnam 12 percent, the Philippines 10 percent, Singapore 7 percent, Japan 5 percent and others 13 percent.

Business had to "rapidly adapt to the new conditions".

1737 The reasons given for shipments to customers being delayed were three-fold, namely poorly performing barley, the inability to use gibberellic acid for some customers and wrong barley varieties on site "or on contract". This was said to have resulted in 5 day germination and delayed production.

1738 With respect to the ability of Joe White to meet customer specifications, it was stated that Joe White was actively working with various approaches to improve its ability to meet those specifications. After referring to the fact that several customers had been approached about their willingness to adopt flexibility, it was stated that this had been successful with some customers, but with others who were "reluctant" the reaction had been negative and even strained those relationships.

1739 On the topic of derogations, it was stated:

> The reaction to such requests has been negative and has strained the relationship with many customers. Some customers are now becoming accustomed to the process.

It was recorded that success had been achieved in dealings with Lion Nathan, Oriental Brewery, Phoenix and SAB Miller. However, it was stated that Sapporo, Guinness Anchor Berhad, several other Heineken operative companies, Coopers and Boon Rawd were reluctant to agree to derogations.

1740 A bar graph then set out the volume of malt affected by requests for derogations compared to the total volume produced on a weekly basis. Of the 28 weeks identified, in most of them the volume affected by derogations was substantial, including more than half the total volume in a number of weeks.

1741 With respect to seeking derogations for the use of gibberellic acid, it was stated there had been success with Heineken, Orion Breweries, and with SAB Miller on a temporary basis. It was stated that Sapporo had refused such derogations and it was unlikely in the long term that Japanese customers, Heineken or SAB Miller would allow such derogations.

1742 In relation to barley varieties, the success and failure rates were recorded with respect to customers agreeing to new varieties of barley. With respect to Sapporo and Heineken, it was stated that the new approved variety did not match quality requirements in the absence of the use of gibberellic acid. Some medium and long term strategies were then set out to deal with the issues referred to above.

1743 Slides in the "Technical" section of the presentation addressed the immediate steps put in place to adapt Joe White to Cargill policies and procedures, and stated that there had been an "immediate transition to Cargill [Certificate of Analysis] procedure – 100% compliance". The presentation stated that the drop in production capacity "[g]enerated varying levels of concern amongst our customers who expect reliable quality and service from [Joe White]".

1744 The next several slides detailed steps put in place by Joe White to address shipment and production delays caused by poorly performing barley, inability to use gibberellic acid, and the wrong barley varieties on site or on contract. They noted that whilst some customers were receptive to flexibility around varieties, others were not. Similarly, requests for derogations in relation to specification parameters resulted in negative reactions that had strained relationships with customers. The presentation recorded that whilst Joe White had had success with some specific customers accepting derogations, others were "reluctant".

1745 A slide entitled "Future Strategy" stated that Joe White staff were intending to undertake a round of face-to-face customer visits, with the goals of "relationship building and expectation setting", "further explain[ing] the reason behind derogation requests", and undertaking discussions around specification flexibility, barley varieties, malt analysis and crop forecasts. As to future operations, it was stated that there was a need to improve Joe White's ability to meet customer specifications, to estimate the cost of non-conformance and to improve customer relations. It was further stated that Joe White was required to improve its ability to operate at capacity, to have the right barley varieties in place and, amongst other things, have a stronger alignment with barley suppliers.

1746 The section entitled "Operations" broadly mirrored the content of the Malt Operations Update Presentation.

1747 On the question of synergies, in mid-May 2014 a spreadsheet was circulated.[1015] The spreadsheet forecast that almost none of the synergies with respect to global, Japanese or other accounts would be achieved in 2014. It contained various comments, including:

> The loss of 48,000t production in Australia prevents any additional sales from the origin.
>
> …
>
> [D]ifficult and low probability for now [to achieve synergies in respect of Carlsberg].
>
> …
>
> [D]ifficult now ([to achieve synergies in respect of Asahi, Orion Breweries and Sapporo]) since current quality issues [at Joe White], but in 23rd of June meeting/new chapter and start discussion regarding synergies.
>
> …
>
> Priority [for HABECO/SABECO/Thai] is using spare European malt to honour Australian contracts jeopardised by lost production.
>
> …
>
> Focus [for Boon Rawd] is on overcoming current delivery problems and resistance to derogation requests.

1748 On 14 May 2014, Sagaert sent an email with respect to the spreadsheet. She stated that Cargill kept on following action points and chasing opportunities, but observed that the current quality and capacity issues limited Cargill's potential in the short run. She said Cargill would keep working on creating the synergy value for 2015 on the premise that "hopefully" Joe White would be operating at normal standards again.

1749 Sagaert gave evidence that, at some point in 2014, discussions regarding synergies previously identified ceased.

1750 Viers and Tan also prepared a further document dated 30 May 2014,[1016] entitled "[Joe White] Acquisition Integration Review", which was submitted to the Cargill

---

1015 It was in the same format as the spreadsheet that had been circulated in February 2014, with some of the figures updated: see par 1632 above.

1016 It was circulated on 18 June 2014, Viers noting that it had been sent to Cargill's leadership team strategy and commitment committee.

leadership team in mid-June 2014 ("the Acquisition Integration Review"). The stated purpose was to provide a progress update on the integration of the business after 7 months.

1751 After a brief description of the employees from Cargill and Joe White involved in the integration process, the executive summary read:

> From a financial perspective, the base business operating performance and synergies capture *have fallen short of the first year commitment targets*. The leadership team strongly believes that *this setback is only temporary* and that the *original assumptions* around the long term strategic rationale to align [Cargill] Malt's footprint to the growing Australian market and the GOSC[1017] origination system *remains valid*. The business anticipates that Joe White will achieve its commitment targets on an annual basis in FY14/15.
>
> (Emphasis added.)

1752 Under the heading "Base Business Performance", the document relevantly read:

> Joe White recorded an $8.6M loss in earnings before tax from November 2013 to May 2014 compared to a $3.7M profit in the budget.
>
> The *root cause* of the *underperformance* of the base business in the past 7 months can be attributed to the combined effects of *the introduction of [the Cargill Blending and Certificate of Analysis Procedure], the misalignment of required barley varieties, the curtailment of unapproved processing additives and the poor malting performance of the 2012 barley crop* …
>
> Although no key customers have been lost in last 7 months, *Joe White's customers have voiced considerable frustration and concerns around the supply and quality issues experienced*. While this is being proactively addressed and significant progress has been made in serving customers, the *risk of customer and financial loss remains*.
>
> The business is currently executing a multi-front strategy to adapt to the new business conditions. Customers have been engaged and consulted on greater specification flexibility and approvals of additional barley varieties. A barley strategy is in place to ensure the right barley varieties are available in the right regions. Plant upgrades and process improvement initiatives have been made to eliminate process variations in malt production. And finally, lease plans or capital requests have been initiated to increase malt storage capacities.
>
> (Emphasis added.)

1753 With respect to the "root cause" comprising combined effects of various events, the introduction of the Cargill Blending and Certificate of Analysis Procedure was

---

1017 This refers to Cargill's grain and oilseeds supply chain.

something De Samblanx had raised as a potential difficulty in July 2013. Viers gave evidence that the reference to misalignment of required barley varieties related to the fact that the "proper barleys" had not been purchased and secured. The third matter referred to was addressing the previously unauthorised use of gibberellic acid (and perhaps other substances). On the last cause, Sagaert agreed that the poor malting performance of the 2012 barley crop was a contributing root cause, and that fact was no fault of the Sellers.[1018]

1754 Under the heading "Synergies and Integration Budgets", the Acquisition Integration Review stated that the "teams" had analysed and validated the deal model synergy projections and had confirmed that they were achievable (something Viers believed at that time), with $1.8 million in synergies having been realised up to that time. However, it was noted that the predicted commercial and energy cost saving synergies had not been achieved because malt customer contracts were generally long-term, and most of Joe White's contracts were not yet up for renegotiation. Sagaert gave evidence that she disagreed with the last statement, though she did not challenge it at the time it was sent to her. Jewison could not recall all the reasons for the synergies not being achieved.[1019]

1755 The final substantive section of the Acquisition Integration Review was entitled "Lessons Learnt – Where We Could Have Done Better". Relevantly, the document stated:

> Actively manage change for high impact initiatives
>
> - The introduction of the [Certificate of Analysis] procedures led to high levels of stress, frustration and anxiety for many employees as they struggled to adapt to the new business rules.
>
> - The team could have done better in managing these change (sic) with the employees to better set expectations on the impact of this change, to provide regular updates on progress and finally to communicate the "light at the end of the tunnel" messages.
>
> …

1018 Jewison said she did not recall whether this matter was related to the Operational Practices.

1019 Viers was not questioned about this particular statement.

Consider timing of [contract] negotiations when estimating Year 1 synergies

- Many of the malt customer contracts and energy contracts are multi-year in nature and may only come up for renegotiations less than once or twice every year.

- Due to the low probability of re-contracting within the initial 12 months of the integration, it is important to be more conservative about the synergies that can be achieved within the first year.

Negotiate stronger terms around warranty claims

- In an auction process, the information available for due diligence is limited. In the case of [Joe White], information was not provided for customer or (sic) contracts, processing techniques and quality analysis. Despite asking multiple questions differently, other than a clear statement that testing and reporting protocol were documented and validated as part of their ISO certification, the responses from the seller or their advisors were generic or indicated that no responses could be provided.

- In these situations, the associated risks should be highlighted in the investment, and there should be more focus on the warranty claims to ensure that they are robust and cover any business practices that are not compliant with customer contracts, laws, and good manufacturing processes.

1756 In June 2014, the May 2014 monthly update of the performance of Joe White was circulated. The update contained information concerning both Joe White and Cargill Malt's business more generally. An overview was given in relation to both. It was stated that legacy business earnings (again being all malt businesses other than the Joe White Business) were $27.9 million, down 34 percent from a budget of $42.5 million.[1020] With respect to the Joe White Business, it was recorded that the earnings for the 2013 to 2014 financial year to date were at a loss of $2.6 million. It was further stated that actual losses for Joe White for that year were $27.1 million, which included $20.1 million of acquisition-closing and integration costs.

1757 A breakdown of the earnings for each region was provided. In relation to the legacy

1020 It was not clear on the face of this document whether amounts were referred to in Australian dollars or United States dollars. On page 13 of the document it was expressly stated that the figures referred to on that page were in Australian dollars. The amounts referred to on that page were also prefaced with "A$". This would seem to suggest that the other amounts in the document were in United States dollars. However, in Viers' witness statement he referred to some figures not designated as Australian dollars and gave evidence that those amounts referred to Australian dollars. In the circumstances, all figures from this document are referred to on the basis they are in Australian dollars. If that assumption is incorrect, it does not affect the substance of what is set out in these reasons about the contents of this document.

business, the after-tax earnings were recorded at $24.475 million. This included "mark-to-market implementation" losses of $3.4 million excluded in the figures referred to in the previous paragraph. This total was broken down into 3 regions. Europe's earnings after-tax to date were $2.007 million against a budget of $4.92 million (being approximately only 40 percent of budget). North America's earnings after-tax to date were $13.157 million against a budget of $22.170 million (being approximately 60 percent of budget). South America's earnings after-tax to date were $9.311 million compared to a budget of $15.41 million (being approximately 60 percent of budget). In short, none of Cargill Malt's businesses were tracking to budget, or even close to budget.

1758 Also in relation to the legacy business, the budget for the month of May 2014 was $3.322 million. In fact, only $525,000 earnings after-tax had been achieved, representing only around 15 percent of budget.

1759 When Eden was taken through these figures during cross-examination, he accepted without qualification that at this point in time there were adverse circumstances for Cargill Malt's business generally. Eden accepted that Cargill Malt was underperforming. The report also contained Unadjusted Earnings figures for the legacy business, both collectively and by region. These figures also indicated that Cargill Malt was not achieving the expected returns.

1760 As for Joe White, its figures were broken down into various components. In relation to operations, for earnings after tax a loss of $7.372 million was recorded against a budget of $1.164 million profit. Integration costs were slightly ahead of budget in the amount of $20.007 million against a budget of $21.611 million. Finally, synergies were recorded at $225,000, well short of the budget figure of $2.228 million.

1761 Turning to the Joe White Unadjusted Earnings figures, the year-to-date amount was $645,000 against a budget of $12.006 million. However, for the month of May 2014, actual Unadjusted Earnings was recorded as $1.514 million against a budget of $1.428 million. As for synergies, the unsatisfactory position was even more stark. The

actual amount was again recorded as $225,000 but the Unadjusted Earnings budget was $3.183 million. In other words, the synergies achieved were less than 10 percent of what had been forecast.

1762 Also in mid-June 2014, a paper was presented entitled "Cargill Malt Platform Review". This presentation was circulated by Jewison and contained an update with respect to Joe White and the remainder of Cargill Malt.

1763 With respect to Joe White, the situation since Cargill took over the Joe White Business and its overall impact were reported. It was stated that the implementation of Certificate of Analysis procedures from 1 November 2013, together with the decline in 2012 barley performance, impacted upon plant utilisation, Joe White customers and shipping lines. Reference was also made to a misalignment between barley varieties and the profiles of Joe White customers, the early malting of 2013 barley, and the inability to use gibberellic acid for certain customers.

1764 When cross-examined about these matters, Jewison could not recall whether the performance of the 2012 barley had anything to do with the Operational Practices. In explaining her answer, she stated that the information in the document was provided by other people. Plainly other matters referred to were referable to the Operational Practices. The presentation also reported that plant utilisation bottomed in November 2013 and was well on the way into recovery.

1765 Viers gave evidence that Cargill had modelled for an increase in capacity through efficiencies and reducing downtimes for maintenance. With the May 2014 results, it was apparent that the opposite had occurred. Capacity was less than it had been at the time of Completion. Further, the prospect of obtaining further customers for Joe White had to be put on hold while Cargill addressed the difficulties it was facing.

1766 In relation to Cargill Malt more generally, a summary was provided of the current year. It was stated that flat global demand, poor barley quality and extreme weather patterns had led to a difficult operating environment, which had negatively impacted results. Jewison acknowledged that flat global demand and extreme weather patterns

had nothing to do with the Operational Practices, but was unsure about the issue of poor barley quality as she could not recall to what that matter was referring.

1767 With respect to the demands for malt, it was stated that the world beer industry was essentially flat in 2013 and that the performance outcome reflected the challenging global economic environment. Again, Jewison acknowledged that these factors had nothing to do with the Operational Practices. A summary was also provided for the 2014 to 2015 financial year. Reference was made to the continuation of a downward cycle in malt since 2009, as well as excess capacity and slow to no demand growth pressure margins. However, reference was also made to exceptional internal opportunities to increase plant and sales effectiveness, and to Joe White adding value-enhancing global merchandising insights and opportunities. In concluding, it stated that despite the negative business environment, earnings after tax of US$56 million were achievable with exceptional execution of business plan initiatives.

1768 Further integration processes continued to be implemented in the following months. On 21 June 2014, Stewart sent an email to Joe White's plant and production managers, copied to others including Youil, Wicks, Hughes, McIntyre and Jones, with the subject line "Barley Draw Down Planning". The first lines of the email read:

> Hi all,
>
> As you are all aware we are operating under a strict policy of matching the appropriate barley variety to customer requirement. This requires a more detailed level of barley use planning than was historically necessary.

Stewart gave evidence that historically there was certainly less emphasis on matching barley varieties with customer specifications. Stewart said Joe White was experiencing real practical difficulties because arrangements were not in place for established supply chains that were needed to match barley variety specifications. Stewart further explained that, under Cargill, it was necessary to have very exact planning to make sure the correct varieties were available as approved by customers. As a result, there was a need to have a plan throughout the year to make sure that the shipment schedule lined up with the barley stocks available, right down to the very

last shipment of the year, such that the right barley varieties could match the barley specified.

1769 The email went on to request that its recipients prepare a plan for barley use that ensured that the correct varieties were available to meet the needs of customers, "right through to the new crop transition". Stewart noted that Joe White was seeking to expand approved varieties with customers to increase flexibility, but that the plan needed to be prepared to deal with the varieties that were currently approved. After stating that McIntyre could provide the approved barley list if needed, Stewart's email concluded by stating:

> Please look to identify any obvious issues/shortfalls so that we can address through shifting customers, acquiring more of certain barley varieties where possible or take other action as appropriate. Can you please complete by the 11th of July? Thanks.

1770 Cargill's position of imposing a strict policy of matching the customer's required barley variety with the barley used in the malt supplied as reflected in this email was affirmed in Jones' evidence. Jones also confirmed that Cargill's policy resulted in a more detailed level of barley-use planning than that which occurred before the Acquisition.[1021]

[1021] Because of the use of Hindmarsh after the Acquisition (see par 1562 above), the Viterra Parties submitted this evidence of Jones should not be accepted. A possible explanation for the use of Hindmarsh after the Acquisition has already been suggested: see fn 952 above. However, in closing submissions the Viterra Parties sought to rely upon an email chain in November 2013 to demonstrate that Joe White was using Hindmarsh in breach of contract after the Acquisition, and therefore submitted the suggested strict policy of Cargill was not in place. The email chain concerned the supply of an order from Oriental Brewery. One of the emails referred to a further attempt to blend the required malt "this time with Hindmarsh kept to 4.96%". The recipients of the emails in that chain included McIntyre, who was asked no questions about it during cross-examination. She also was the author of the final email in which she enquired as to whether or not it was okay to send the blend through to Oriental Brewery. Another recipient of the chain, who also authored 1 of the emails, was Jones. He was taken to the emails in the course of his cross-examination. He gave evidence that in November 2013 he was trying to meet the shipment required by Oriental Brewery. The email recorded that at that time Oriental Brewery was "desperate" to receive the malt. When it was put to Jones that the email chain demonstrated that Oriental Brewery had subsequently been supplied with a blend that included Hindmarsh, Jones said he was unsure and had no recollection. Further, he noted that, reading the relevant email, it was difficult to say whether or not the further blend was delivered. He accepted the further proposition put to him that it appeared from the emails that they did not suggest there was any difficulty with the concept of blending in some Hindmarsh in the malt to be supplied. At no time was it put to Jones (or McIntyre, being the person responsible for maintaining details of the specifications) that the supply of malt would have been in breach of Oriental Brewery's requirements at that particular

1771 In around July 2014, Scaife was approached by Eden to discuss a proposal that she take up the role of general manager at Joe White. Scaife had not previously been involved in any of Cargill's dealings with Joe White.

1772 Eden informed Scaife that Hughes was leaving the Joe White Business. He also told Scaife that Viers had previously relocated to Australia as Cargill's integration manager, but would shortly be moved back to Cargill's head office in Minneapolis. Eden said he wanted someone to take on the role who knew the grains industry and had an operations and processing background, as well as a strong commercial background.

1773 Eden also told Scaife that after Cargill took over the Joe White Business, the Operational Practices had ceased. Eden also said that the Joe White Business was experiencing difficulty producing malt within its customers' specifications.

1774 Scaife accepted Eden's offer, and it was agreed that she would commence at Joe White in Adelaide on 1 November 2014. In anticipation of commencing her new role, Scaife visited Adelaide for a few days in September 2014, during which she spent time at Joe White as well as arranging for her return.

1775 In early September 2014, Viers returned to Minneapolis. On his departure, he sent an email to various Cargill employees including Purser, Woodburn and Savona, entitled "Winding Down". Relevantly, this email read:

> This will be my last day working here at Joe White. I [w]anted to thank each of you for your support of the integration. By nearly all measures the integration itself was a success …
>
> In addition to the integration *we found ourselves running a mitigation given the practices in place under Viterra ownership. This had a profound impact* on our ability to produce and deliver product on time and in [specification] basis (sic) Cargill

---

point in time when they were desperate for malt or that Hindmarsh was being used without the customer's permission. The Viterra Parties relied upon the fact that the required specifications of Oriental Brewery included a long list of approved barley varieties, but none of them included Hindmarsh. Based on this evidence, the Viterra Parties submitted the court should not find that Cargill was concerned after the Acquisition to meet customers' specifications concerning barley varieties. To refrain from making such a finding would be contrary to the evidence of Jones, who was an entirely credible witness, and whose evidence was corroborated by the contemporaneous email of Stewart referred to above, together with Stewart's evidence at trial. In this regard, see also the evidence given by Viers: at par 1562 above.

> standards and our contractual obligations. While in the first 6 month *we lost more than 20% of our capacity*, I'm pleased to say that last month we were near 96% cap utilization although *not without flexibility from our customers and additional cost*.
>
> *A good deal of work remains*. We are investing capex in the form of storage and blending capacity as a strategic fix to a number the production issues. Many of the synergies took a back seat to the near term issues however we can now bring them forward with the proper focus.
>
> *All said the strategic rationale, overall quality and placement of the assets, and the benefits of being aligned with [the grain and oilseeds supply chain] all remain intact*. The value will come, it unfortunately is taking longer to ramp up then (sic) we anticipated.
>
> (Emphasis added.)

1776 Upon his return, Viers gave Scaife a briefing on Joe White. Viers told Scaife that the expected synergies were not being achieved regarding barley purchases because Joe White's stock and book of barley purchase commitments did not match the varieties specified by Joe White's customers. He told Scaife she would need to focus on securing the correct barley as required by Joe White. Further, Viers said that Scaife would need to help Joe White produce malt within specification. He said it was necessary to work with Joe White's customers to improve their perceptions of the malt being supplied to them. Obviously, from Viers' perspective, the operational problems Joe White was experiencing were far from over.

1777 Also in September 2014, Stewart ceased his employment with Joe White and commenced his new role at Coopers.[1022] Stewart gave evidence that he received numerous shipments from Joe White after this time that were reported to be within specification in the Certificates of Analysis, but when tested at Coopers were out of specification or did not properly perform in Coopers' brewery.

1778 Although Scaife was still working in the United States, she started to receive information concerning Joe White. The August 2014 monthly update was sent to her by Jewison. That report indicated that for the month of August 2014 Joe White had suffered losses of US$2.5 million against budgeted profits of US$3.6 million. It was

---

1022 Stewart had been offered the "global technical role" for Cargill, but ultimately decided to continue his career with Coopers.

noted that negative variances to budget existed across nearly all areas of the Joe White Business, though integration costs were actually down US$600,000.

1779 With respect to margin, it was adversely affected by the continued impact of revenue synergies not being achieved, changes to the customer mix, additional barley varieties purchased to conform with customers' specified barley and "nil Sydney packing to date".[1023] In addition, margin was down because of higher ocean freight costs. As for volumes, they were also below budget. It was stated this was because of Joe White continuing to refine 5 day malt requirements and because production capacity utilisation was at 93 percent. Another factor identified was a delayed vessel to San Miguel. It was also recorded that there were higher water costs at 3 of Joe White's plants because of maintenance issues and customer approval issues. In relation to synergies, US$2 million had been achieved, against a budget of US$4.1 million. Various other matters were referred to in explaining Joe White's performance.

1780 On 22 September 2014, a report for Joe White prepared by Youil was circulated. The report addressed plant utilisation rates from November 2012 to September 2014. The target capacity of 97 percent was almost achieved for September 2014, which was at 96 percent. However, the last time before September 2014 that those levels had been achieved was July 2013. In November 2013, being the low point, they were at 65 percent. From this low point, broadly speaking, the capacity achieved trended upwards through to September 2014.[1024]

1781 The meeting of Heineken's specifications was said to have been a major contributing factor for reduced utilisation rates. Germination had been extended to 5 days to ensure Heineken's specifications were met. The report referred to the recent grant by

---

1023 As to the last of these factors, precisely what was involved was not explored.

1024 During the course of 2014, the Port Adelaide plant was shut down to allow for the installation of steeping tanks, which adversely affected capacity in around April 2014. A second phase of works was foreshadowed to continue at this site until July 2015. Some of these later works were required because of a decision by Glencore not to renew a lease over Viterra's property, which had been used by Joe White to gain access to its Port Adelaide plant. Cargill offered to buy the land, but the offer was declined. This position also caused delay to some of the second phase of the works. Also shortly before Scaife commenced, works had started at the Sydney plant to increase silo storage and create the ability to outload malt by way of a dispatch chute for supply to domestic customers. By this time, Joe White had also entered into a lease with Co-Operative Bulk in order to secure further storage in Perth.

Heineken of limited approval to use gibberellic acid on Commander and Buloke varieties for the 2013 crop, which would result in shorter germination time and improved utilisation rates. There were 2 risks identified: that Heineken would not approve the use of gibberellic acid for 2014 (which would require the continuation of the 5 day malt production); and that the barley quality for the 2014 crop would be such that 5 day germination would be required to meet specifications for other customers, including those allowing the use of gibberellic acid.

1782 Youil's report stated that gas and electricity consumption increased as a result of extending kilning in order to meet customer requirements. Scaife, who was a recipient of this report, gave evidence that with respect to producing malt, gas and electricity consumption are an important component of variable costs as they can have a significant impact on the cost of production, and therefore profitability. Having read the report, Scaife formed the view that improving the economics of the Joe White Business was directly correlated with the ability to move production through at full capacity.

1783 Upon receiving this monthly report, Van Lierde sent an email stating it was a disappointing month again. He enquired as to where additional storage would be built or whether there was any other remedy to get Joe White back on track. In response, Youil agreed the result was disappointing. He stated that the Australian employees were putting in significant effort to put the Joe White Business back on course. He also provided details of the plans going forward.

1784 An annual "commitment report", prepared in around October or November 2014 by Jewison, with Argent's assistance,[1025] set out a "profile" of the Acquisition. One part of the report mirrored the language in the Acquisition Integration Review in relation to the impact of the Cargill Blending and Certificate of Analysis Procedure on Joe White staff, and the need to communicate "the light at the end of the tunnel".[1026] In relation to the performance of the Joe White Business, the report stated that sales

---

1025 Argent provided a number of other financial reports throughout October 2014, the detail of which was considered by Scaife in preparation for her start in November 2014.

1026 See par 1755 above.

volume was under expectations by approximately US$3.3 million, largely attributable to the cost of conformance with Cargill operating procedures as opposed to those in place under Viterra. It stated that production volumes had fallen as a result of efforts to correct the Operational Practices, with sales volumes falling as a result. Further, the inability to meet customer specifications resulted in derogations being required for nearly 60 percent of malt sales.

1785 The report also detailed costs incurred as a result of a need to purchase additional barley, often at a premium, to meet customer specifications. Other difficulties referred to were additional freight costs (to recall malt from wharfs and to move malt between plants), distressed malt being dumped or sold as feed, and demurrage arising from missed or rolling shipping bookings because of malt quality issues. Further, synergies were delayed, in some respects because Joe White's customers already had contracts in place. Furthermore, the report recorded customer impatience with the number of requests for derogations and deferring of shipments Joe White was making. Nonetheless, the report also stated that "assumptions of future margins expectations remain sound" and Joe White remained a very good strategic fit for Cargill. Emphasis was also placed on Cargill having become a truly global presence. It was stated that, in September 2014, actual production exceeded budgeted production for the first time since 1 November 2013. However, it was observed that the disruptions to the Joe White Business had come at a cost to the Joe White brand.

1786 Towards the end of October 2014, the malt leadership team provided an update for the whole of Cargill Malt. A presentation was given, attended by various Cargill employees, including Scaife. The update contained a section concerned with actions to be taken in relation to Joe White. That part of the update referred to progress that had been made with Heineken in relation to the use of gibberellic acid (which was limited)[1027] and the approval of Buloke barley. In relation to barley merchandising, it

[1027] The document stated: "Transition Heineken to [gibberellic acid] (completed in August)". Scaife's evidence was that Heineken had only consented to gibberellic acid being added for a defined period in relation to the 2013 crop. Her evidence was that Heineken only agreed to exogenous gibberellic acid being used sparingly and not for the entire contract, with further approvals required. She rejected the suggestion put to her that the issue was alleviated for Heineken in August 2014 by stating "not entirely"

was noted that a new merchandising manager would be appointed which would allow an increase in merchandising activity. A large number of other steps were listed in order to increase merchandising and yield. However, it was noted that southern and eastern Australian barley crops had been negatively impacted by a hot and dry weather pattern. Manufacturing and distribution costs were also addressed.

1787 A section of the update addressed volumes and margins. For Joe White, the original budget of 529,967 tonnes was reduced by only 10,000 tonnes.[1028] The reason for this reduction at this level was not explained.

1788 On 1 November 2014, Scaife commenced at Joe White. It was the first occasion she had worked in the malting industry, and her first role as general manager. Scaife never discussed the Joe White Business with Hughes, and Stewart had also departed by this time.[1029] Scaife initially decided not to replace Stewart after his departure, but rather split his responsibilities between Testi, Sheehy, McIntyre and another employee,[1030] together with obtaining assistance from De Samblanx and another individual from Cargill Malt's global business.

1789 Scaife met with the Joe White executives to get an understanding of their immediate priorities, the direction they thought should be taken and the help they required.

1790 She met with Youil, who told her that Joe White could not consistently make malt within specification. He said that he was feeling optimistic that volumes of malt produced had improved, but stated that Joe White was still having a lot of problems. Youil informed Scaife that Joe White had a number of capital projects to seek to reduce the rate at which it was producing malt out of specification. He said these works were

---

and explained why. In essence, the longer term proposal was to supply malt without adding gibberellic acid: see par 1816 below.

1028 This part of the update also appeared to deal with gross margin per "metric ton". However, the only witness asked about this issue was Scaife, who was unable to speak to this aspect of the update.

1029 Scaife gave evidence she had previously spoken with Stewart.

1030 In April 2015, a replacement for Stewart was appointed. Scaife rejected the suggestion put to her in cross-examination that she should have replaced Stewart earlier, saying she relied on the technical assistance of De Samblanx and another Cargill employee, before making more permanent arrangements from around March 2015.

critical to help reduce the rate of non-complying malt.[1031]

1791 When Scaife spoke to Wicks, he told her that every time Joe White produced malt out of specification it was necessary to obtain a derogation. He said he needed more time to visit customers face-to-face to assure them Joe White was taking action to reduce production that was out of specification and also to explain why Joe White did not have the barley varieties specified. Wicks said he wanted to get those customers affected by unauthorised barley use to accept alternative varieties. Scaife gave evidence that a difficulty she faced when she joined Joe White was that Joe White did not have relationships in place with farmers and therefore it was not in the supply chain influencing what was being grown. This had been the position long before her arrival.[1032]

1792 Scaife met with Testi, Sheehy, McIntyre and another member of the technical team together. She stated that dividing up Stewart's responsibilities between them provided them each with an opportunity to take on additional responsibility. She then met with them individually.

1793 McIntyre told Scaife that she needed support in seeking derogation approvals from customers. She said she also needed assistance working with plants with respect to storing malt that had been produced but was required to be stored while waiting for customers to accept derogation requests. As part of her role, being principally responsible for obtaining derogations, McIntyre prepared derogation spreadsheets listing details of each of the derogations sought for out-of-specification malt. Scaife reviewed these on a monthly basis to assess the performance of the Joe White Business.

1794 In December 2014, Scaife assisted Argent with the monthly update for November 2014. At the time it was circulated, Scaife was satisfied that it best reflected Joe White's performance and forecasted performance. The update reported that Joe White

---

1031 Before Scaife commenced at Joe White, approval had been obtained for capital expenditure to address storage and supply chain issues. In part at least, these issues arose because of customer requirements for particular barley varieties, which had to be kept segregated throughout the supply chain. In order that Joe White could meet customer specifications, increased storage was required in this regard.

1032 See par 1291 above and the reference to Joe White having lost close contact with the procurement team.

suffered a loss of US$1.8 million for the month. In relation to year-to-date earnings, the Joe White Business had suffered a loss of US$4.1 million to the end of November,[1033] compared with a budget of US$6.4 million in earnings.

1795 Scaife presented this update during a conference call in which she reported that ceasing the previous Operational Practices of Joe White had had a negative impact of US$4.2 million. Scaife said she derived this figure from reviewing each component of loss in the profit and loss accounts. Further, for the 2015 financial year budget of US$11.4 million, she reported a forecast impact of US$7.1 million with respect to ceasing these Operational Practices.

1796 As 2014 flowed into 2015, the Joe White Business continued to experience significant difficulties. One of them occurred in March 2015, with the collapse of a silo at the Cavan plant. The smaller of the 2 production lines became inoperable as a result. It also had some impact on the storage and handling configurations and had implications for the larger production line as well, because the conveying systems were interrelated.

1797 In around March 2015, Scaife prepared 2 slides for Eden. The first of these noted that over 40 percent of Joe White's malt volume was being shipped with derogation, due to barley quality or processing failures, or both. The document stated that some customers were opting to cancel contracts as a result of delayed orders. In addition, Joe White had sold less than 50 percent of its contracted malt, leaving it vulnerable to losses in an environment where margins were being pressured by the state of the market in the European Union.

1798 Scaife gave evidence that delays arose when a Joe White customer was requested to make a derogation for malt out of specification. As the malt could not be loaded until the approval was forthcoming, the malt needed to be stored. If no storage was available, then the flow-on effect was that Joe White was not able to start producing new batches of malt for other customers. Given the number of batches affected by the

1033 Integration costs were an additional US$1 million.

need to seek derogations, the delays were significant.[1034]

1799 The first slide also contained a "plan B". Scaife said she created this because she anticipated that, if Joe White customer volumes and profit margins did not improve, the Cargill Malt leadership team would ask her what steps she was considering to reduce fixed costs to respond to demand being below production capacity. Plan B involved a partial closure of the Cavan plant and a complete closure of Devonport. Scaife further suggested a reduction in costs associated with sales and administration if the Joe White Business were to be downsized.

1800 The second slide detailed difficulties experienced in sourcing approved barley varieties. These issues included Joe White's competitors establishing grower relationships and growing premium varieties close to processing assets. A further issue was that Joe White's competitors determined the quality of barley that they delivered to Joe White and to themselves from their storage handling facilities. Scaife explained that often grains were comingled and Joe White did not necessarily get to prescribe the quality of the barley that was delivered. In response to this, Joe White sought its barley through Cargill's grain flow system to have more control over quality. Cargill also sought out additional third party storage so Joe White could better preserve high quality barley stocks rather than having them comingled.

1801 Minutes of a conference call held on 8 May 2015,[1035] between representatives of Joe

---

1034 From the day after Cargill took control of Joe White, McIntyre maintained yearly spreadsheets of derogations. She also prepared derogation charts for the periods 9 November 2013 to 31 December 2014 and 2 January 2015 to 30 December 2016. Export pale malt represented approximately 90 to 95 percent of total overseas malt orders. The information McIntyre collated showed, in relation to exported pale malt only: for the period from 1 November 2013 to 31 December 2014, 405,110 tonnes of malt were shipped to export customers, with 171,700 tonnes either requiring a derogation or having a derogation approved (being on average just over 42 percent of this malt requiring a derogation) (other than for 2 weeks which were relatively high, the percentage of derogations fell towards the end of this period. Also Oriental Brewery gave Joe White a standing arrangement for dispensation with respect to some parameters; for the period from January 2015 to December 2016, 557,271.35 tonnes of malt were shipped to export customers, with 87,441.28 tonnes requiring a derogation (being on average 16 percent of this malt). Again the percentage of derogations fell towards the end of this period, particularly after October 2015. There was also some evidence with respect to the period from January 2016 to October 2017 which it is unnecessary to refer to, save to note that with the exception of the month of July 2016 (which was 10 percent), the percentage of volume the subject of derogations was less than 10 percent.

1035 The meeting was cut short, and a written exchange of questions and answers was recorded to state the respective positions.

White, including Wicks, and "Heineken Asia Pacific", demonstrated some of the ongoing issues Joe White was facing. During the call, Joe White sought approval for the use of gibberellic acid and for the use of further varieties of barley, as part of a plan to reduce shipment derogation requests. The minutes indicated that Heineken would cooperate with Joe White.

1802 Before June 2015, Wicks, as Australian commercial manager, reported directly to Sagaert in her capacity as global commercial manager. Upon Sagaert replacing Eden in June 2015, Wicks reported to the new global commercial manager who, in turn, reported to Sagaert.

1803 Both before and after June 2015, Sagaert had a number of dealings with Heineken in an attempt to keep the relationship on an even keel. In 2015 Heineken had a long-term contract with Cargill which had approximately 12 to 18 months remaining. Sagaert wanted to convince Heineken to keep the existing arrangements in place going forward and to regain some of the business lost by Joe White with 1 of its largest customers. Sagaert gave evidence that she was unsuccessful in securing the full volume of malt sales going forward, with the "biggest part of the volume" not taken.

1804 By way of background, in March 2015, Sagaert met with representatives of Heineken in Dublin. In an email sent to Scaife, copied to Wicks and others, Sagaert described the meeting as positive and constructive. During the meeting, Heineken raised an issue concerning the quality and specification issues with respect to malt from Joe White. Sagaert was told that Heineken was disappointed about the fact that it was not "structurally informed about [Cargill's] plan to get into the [specifications] and the progress [Cargill was] making". Sagaert proposed a plan for Cargill and its customers to communicate in a more formal way.

1805 Wicks responded stating that Heineken did not need a public relations exercise, but real actions and results. Wicks had also recently met with Heineken. He had been informed that Heineken's immediate concern was Joe White's ability to meet contractual obligations for 2015. He said Heineken wanted to discuss 2016, but could

not commit until it was confident Joe White could meet Heineken's specifications and ship on time. Wicks said it was Joe White's challenge to convince Heineken that it could overcome the problems which remained despite Heineken allowing Joe White to use gibberellic acid in 2014. The email continued:

> I explained that the number of shipments requiring derogation had halved since takeover but at about 25% [this] was still not acceptable to us either.
>
> Additional storage, extending [gibberellic acid] derogation will assist us [in] supply in 2015 and longer term. [The] new variety (Flinders) would be a huge step towards non-[gibberellic acid] supply in 2016.
>
> She liked the fact that Cargill had appointed a regional Manager ([Scaife]) to support the business and that technical support ([De Samblanx]) was being provided from Europe.

1806 Wicks suggested Scaife be directly involved in a further meeting that week. In a return email, Scaife said she would be. The email concluded by referring to a meeting that Wicks and Viers had had with Heineken the previous year in which Heineken was assured that Joe White would get on top of the quality issues. Wicks said it was likely that Heineken would be questioning Joe White's slow progress.

1807 After receiving these emails, Scaife decided to assume responsibility herself for dealing with Heineken on behalf of Joe White. Scaife considered that work needed to be done to assure Heineken that Joe White could reliably meet its obligations with respect to specifications and timely delivery.

1808 Some 3 days later, Scaife participated in a call with Heineken. Before the call, Heineken sent an email setting out an agenda which included quality issues, gibberellic-acid derogations and malting audits. A summary list was included with respect to the quality issues, which did not exhaustively set out 6 separate quality issues Heineken had for the first quarter of 2015.

1809 Scaife gave evidence that during the call she was told that if Joe White was a new supplier, Heineken would never consider approving Joe White. She was also told that Heineken did not feel like a valued customer. Heineken said the issues with Joe White created a headache in its organisation it could do without. Scaife was told Heineken

could not continue to procure malt from Joe White under these circumstances and that it had accepted the issues for too long already. In an email reporting what Heineken had said, after listing the matters referred to above Scaife noted that, in relation to the list of complaints, it was "unfortunately longer". After setting out the key aspects of the meeting, Scaife gave a series of directions for steps to be taken before a further planned meeting with Heineken.

1810 Scaife's email was not entirely negative. She indicated that "[d]espite the facts and the stated frustration" both she and Wicks felt the discussion was positive and that there was a fast alignment on the way forward. However, Scaife noted that Joe White was now required to deliver. Under cross-examination, Scaife accepted that she believed it was a constructive conversation and that Heineken had given constructive feedback.

1811 Upon receiving Scaife's email containing these directions, Dickie emailed Scaife and the other recipients stating that Lotte Chilsung Beverage Co Ltd ("Lotte"), Thai Beverages and Boon Rawd "amongst others … also want to know *how and when we will be able to deliver on time and in specification*" (emphasis in original).

1812 It was Scaife's opinion, which she expressed at the time to Joe White's executives, that Joe White had a number of problems with respect to Heineken. She believed that Joe White did not have access to the barley varieties required, that it did not have robust enough supply chain processes to meet the complexity involved in supplying Heineken in accordance with its contractual specifications, and that Joe White's contract management and customer management records for Heineken were incomplete.

1813 Towards the end of March 2015, Heineken sent an email to Wicks itemising a series of issues for Joe White to address. Without descending to the detail, the email identified barley variety issues, quality issues and quality inconsistency. The email stated that the number of lots of malt out of specification was very high and that consistent quality between malt batches had not been achieved.

1814 In late March 2015, a presentation was prepared by Scaife and Wicks for submission

to Heineken. Scaife was responsible for all the information and action items contained in the presentation. The presentation recorded that Joe White had an existing agreement with Heineken for 60,000 tonnes of malt for the period from 1 April 2015 to 31 December 2015. This was compared with a supply contract of 80,000 tonnes for the period from 1 April 2014 to 31 March 2015. It was further suggested that on 17 March 2015, Cargill and Heineken had agreed that the relationship could be "restored" by taking action across derogations, barley varieties, quality and specifications. The 16 page presentation identified the ways in which Cargill said it could improve Joe White's performance. It also proposed the traffic light approach to handling derogations.[1036]

1815 A meeting was held with Heineken on 1 April 2015, at which Scaife gave a presentation. The proposed traffic light approach was rejected by Heineken. In an email later that day, Scaife reported that Heineken considered the reductions in gibberellic acid derogations did not appear to be ambitious enough, but that the plan presented was a good first step and far more than Cargill had provided in the last 18 months. However, Heineken said further refinement and detail was required.

1816 After some exchanges, Scaife prepared a further version of the presentation that had been given on 1 April 2015. Part of the presentation dealt with performance improvement. Of the various measures and aims set out, it was stated that Joe White proposed to deliver malt without added gibberellic acid by 1 April 2016. In the email forwarding the updated presentation, Scaife sought various confirmations. In an email sent in late April 2015, Heineken expressed doubt on some aspects of the plan. One of the 7 subjects addressed in the email was Joe White's control and influence over barley traders and farmers. The email referred to a previous discussion about how Joe White and Cargill could ensure influence over farmers, and to a lesser extent traders, so that the barley supply source for required varieties could be secured. The Heineken representative stated that the issue was important for the approach adopted

1036 See par 1606 above.

for the 2014 crop and beyond.[1037]

1817 Throughout May and June 2015, there was ongoing interaction with Heineken. In the first week of June 2015, Heineken conducted audits of Joe White's Port Adelaide and Cavan plants, with Port Adelaide obtaining approval.

1818 Negotiations continued and various emails were exchanged. In mid-July 2015, Sagaert met with the global procurement director of Heineken over lunch in the Netherlands. Sagaert reported that Heineken was convinced that Cargill should be its global partner to do business in all regions. However, the report also referred to "dark clouds" in North America and Australia with respect to quality and supply assurance. Sagaert said she explained the position of Joe White and the "higher standards in terms of acceptance of variations in [specifications], resulting in asking for derogations and problems in deliveries".[1038] The report suggested that Heineken's position would be that, if the malt was better than before, then there should not be a problem as Heineken would be willing to broaden their specifications in order to receive what it had received before.

1819 When cross-examined on this meeting and her subsequent report, Sagaert acknowledged that Heineken's reaction at this point in time was generally positive, but noted that Heineken ultimately did not agree to broaden its specifications. Sagaert's evidence was that after this time Joe White continued to deliver malt to Heineken but not at 100 percent of the normal daily volume.

1037 The Viterra Parties sought to make much of this, in effect suggesting this was evidence that Cargill had not been concerned about, or at least sufficiently focused on, securing the correct barley varieties. Submissions based on such a premise must be rejected. There was a substantial body of evidence demonstrating Cargill was most concerned about this issue. Further, the reference to the 2014 crop in this email was of no moment given the email was sent in 2015; the reference did not suggest Cargill had had no concern about taking steps to source the correct varieties after the Acquisition. Furthermore, the evidence was that it took time for farmers to accede to requests for different varieties to be grown and harvested: see pars 1126-1127 above. In essence, if Joe White had an inability to procure the correct barley varieties immediately before the Acquisition because of a lack of availability of particular varieties, which it did, the problem could not be fully remedied in the short term because of the practicalities involved: see, for example, par 1212 above and pars 2417-2419 below.

1038 Conway's evidence was that Cargill attempted to operate at the highest standards in relation to all aspects of its business. Eden gave evidence that the Cargill Code set Cargill apart from many others in the business world and that in the malting industry there were "few people [who] would run their business the same way the family of Cargill runs their business".

1820 In mid August 2015, in the lead up to a meeting, the third iteration of the presentation was provided to Heineken, incorporating developments that had occurred. This presentation contained a graph showing the total volume of malt sold to Heineken on a monthly basis, together with the amount and percentage of that volume that was the subject of derogations. The graph showed improvement in percentage terms from April to July 2015, though it also showed a reduction in total volume. A second graph provided a breakdown of the derogation data, which was said to demonstrate the improvement in overall quality because of a significant decline in the number of parameters out of specification. A third graph sought to demonstrate the shift in malt quality and identified seasonal crop related issues as the cause of most of the derogations. Cargill's technical team leader, Marcello Marchetti, gave this presentation to Heineken.

1821 On 10 September 2015, Scaife sent an email to all plant managers and the Joe White leadership team, attaching charts prepared by McIntyre setting out details of derogations for the period from January 2014 to August 2015. Scaife stated that the plant managers' perseverance was paying off and that she was delighted with the trends. Scaife suggested that the performance showed certain improvement in Joe White's reliability as a supplier which would build confidence with its customers and local team. In raw numbers and percentage terms, the number of derogations sought by Joe White had declined steadily since February 2015 (from about 25 percent to 10 percent).

1822 A meeting with Heineken was scheduled to be held in mid November 2015. It did not occur as no Heineken representative dialled into the meeting. Shortly after the meeting was due to be held, Heineken emailed Joe White with a list of the issues outstanding. These were addressed by Joe White. Accordingly, late in 2015, Scaife was able to negotiate for the supply of malt to Heineken for the 2016 calendar year.

1823 The November 2015 commitment report, again prepared by Jewison and Argent, set out the difficulties experienced by the Joe White Business in the second year following the Acquisition. The report recorded that all 3 of the actual cumulative volume results,

actual cumulative margin results, and projected volume results were below target, and stated the following in relation to the financial performance of Joe White:

> Sales volumes were under expectations by (Y1) 55.85kt/US$9.3 [million] and (Y2) 101.4kt/US$13.2 [million]. Year 1 variances were related to Cargill's conformance with customer contractual obligations from Day 1 vs. former [Joe White] practices. Prior [Joe White] practices were fraudulent in that they allowed for the changing of [Certificate of Analysis] documentation and delivery of malt, which did not meet customer specifications. These practices were not uncovered in the due diligence process given limited information that was made available, despite multiple questions. Production volumes, and subsequently sales volumes, fell due to our inability to source customer approved barley varieties, produce malt in specification without the use of additives (which are not approved by many customers) and an inability to blend out of specification malt with other batches. These same challenges continued into Year 2 and volume loss was further compounded by surplus global malt supply and competitive forces favouring exports from other origins (primarily Europe).
>
> Spend to date on additional capital related to storage is US$7.1 [million].[1039]

1824 Sagaert rejected the suggestion under cross-examination that the inability to source the correct barley varieties had nothing to do with any past Operational Practices of Joe White. Further, although the position in Europe was not related to the Operational Practices, she gave evidence that because of the surplus in Europe, if Joe White was not able to supply malt as ordered, then it was easy for Joe White's customers to source malt from elsewhere, compounding the difficulties Joe White was facing.

1825 The report then referred to margins related to shipping, stating it was a negative impact largely for reasons that had been previously explained concerning the Operational Practices. Without going into the detail here, Sagaert repeatedly rejected propositions put to her under cross-examination that the matters reported in this section were not related to the Operational Practices (or in some instances she could not say).

1826 The report dealt with future projected volumes for years 3 to 10, which were expected to be below previous expectations (due in part to a slower than expected market

---

1039 The evidence at trial was that up to 2018 $5.155 million had been spent on 10 additional silos at Minto, Sydney; $2.588 million had been spent on 6 additional silos during stage 1 at Port Adelaide; and $3.88 million had been spent on additional silos during stage 2 at Port Adelaide. In relation to Perth, Joe White entered into an agreement with Co-Operative Bulk to access additional storage adjacent to the Perth plant at a cost of $452,000.

recovery). That aspect of the report referred to a silo collapse at the Cavan plant. Sagaert accepted this was entirely unrelated to the Operational Practices. She also accepted that other matters raised in the report were not related to the Operational Practices.

1827 In dealing with supply issues, it was reported that there had been a need to change processes to comply with customer obligations as there had been an inability to produce malt within customer specifications "resulting in substantial loss in volume and increased cost of conformance". It was also stated the supply disruptions across the first 2 years had negatively impacted the ability to supply a number of major customers, and in some cases Cargill had been locked out of supply for the medium-term on the basis of poor quality performance. In responding on Joe White's performance, it was stated that Viterra's operating practices were fraudulent by the delivery of malt that did not meet customers' contractual obligations; and that Cargill's actions to correct the problems resulted in product quality issues, lower production and sales volumes as well as higher barley and production costs.

1828 The report stated that 2 years post-Acquisition the Joe White Business had losses of $9 million, in contrast to its projected earnings of $19 million.

1829 The final page of the report recorded an "overall view", which was accompanied by a frowning face in an orange text box. The overall view stated:

> First-year underperformance stems from corrections needed to a business model to be able to comply with customer requirements. To offset the valuation impact, Cargill filed a breach of warrant (sic) claim with the seller. Despite this setback, the acquisition established a truly global footprint for the malt business, a valuable attribute in the industry.

1830 In late 2015, Scaife completed contract negotiations with Heineken for the supply of malt for 2016. This fact was put to Sagaert during her cross-examination coupled with a proposition that the reduction of sales by Joe White after 2013 was mainly because of the under-performance of new barley varieties and the reduced availability of older varieties. In response, Sagaert said she did not know the contractual position of Heineken in late 2015, but rejected the suggestion that the main reason for the decline

concerned availability of barley varieties, stating that "the true root cause was the [Certificates of Analysis]", which was plainly a reference to the Reporting Practice and, to some extent, the Varieties Practice.[1040]

1831 At the end of 2015, it was decided to close the Cavan plant. Scaife explained that this decision was made as the overall volumes of malt being produced were so low and the associated fixed costs of the business were too high. Further, the silo collapse earlier that year had made the plant less viable. Cavan had had a rated capacity of 94,000 tonnes per annum, which capacity was lost once Cavan was closed.

1832 By 2016, Joe White was also dealing with poorly performing Australian barley crops. A joint Joe White/Cargill presentation delivered to Hite in February 2016 stated that the 2015 crop of barley had suffered from 1 of the 3 worst El Niño events since 1950, and as a result malting-quality volumes of barley were extremely short across Australia. It was recorded that the 2015/2016 harvest selection rate was around 10 percent, whereas the long term average selection rate for malt 1 barley was 30 percent. The presentation stated that there was no malt grade Buloke or Commander barley varieties available in Western Australia at all, whilst the same varieties were limited in New South Wales. It stated that for the 2016 crop, Joe White was looking to increase plantings of various varieties of barley as a result.

1833 These problems were reiterated in a further Joe White/Cargill presentation to San Miguel Brewery in Manila dated 16 February 2016, which stated that the Western Australian malting barley industry had been transitioning away from certain varieties of barley, namely Baudin, Buloke, Gairdner and Vlamingh. Scaife and others met with San Miguel to seek to secure malt supply contracts for 2016 and 2017. Two days later, a similar presentation was given to Nestlé, but it was adapted to address Nestlé's specifications. Like presentations were also given to HABECO and Vietnam Brewery Ltd in March 2016.

1834 A presentation entitled "Barley Varieties for Craft Beer", prepared by Stewart for

---

1040 Being the extent to which barley varieties were misstated in Certificates of Analysis.

Coopers in March 2016, discussed the use of different barley varieties in craft beer. In the introductory slide, Stewart wrote that "[m]atching the right malting barley variety to a beer style is of great importance for all market sectors, including craft". Stewart gave evidence that barley varieties for craft brewers were certainly important, but also accepted the variety of barley mattered to brewers who provided a specification as to variety.[1041]

1835 Difficulties regarding the availability of barley varieties were also being communicated within Cargill in 2016. A September 2016 Cargill presentation, entitled "F15-16 Q1 Regional Update Asia Pacific", stated that volumes were "impacted by lack of competitive advantage over Europe and previous quality issues", in particular stating that Heineken had lost confidence in Joe White's ability to supply in-specification malt. On a slide entitled "Historical Malting/Feed Barley break up", a graph appeared showing the amount of malting barley available declined from 2012 to 2014. Underneath the graph the presentation stated, amongst other things:

- Despite increasing crop size we are seeing more new Varieties which are unapproved by Cargill Malt [Joe White] customers at this stage.
- For 2015 forecast 49% of varieties are not approved, and we are assuming a selection rate of 40% malting grade barley quality.

1836 Scaife gave evidence that the level of malting grade barley available placed a further constraint on the supply chain given Joe White's previous practice of not disclosing the type of barley being used had ceased.

1837 Broadly speaking, the November 2016 Joe White commitment report reiterated the issues noted in the 2014 and 2015 reports,[1042] recording the unsatisfactory second and third year performances were by reason of the same challenges faced in the first year

---

1041 Eden also gave evidence about customers taking barley varieties seriously. He said customers built their brands of beer around barley varieties and that not to use the correct variety was extremely serious. The Viterra Parties invited the court to reject this evidence as the "underlying premise" had not been established. However, Eden's evidence was consistent with Stewart's evidence on the point. See also par 18 above. For completeness, during re-examination Stewart said that he believed small amounts of other barley varieties, so long as they were in a similar class of fermentability, would typically give no issue to the brewer. It was unclear whether this evidence related to a customer who was fully informed of the situation, or otherwise: see par 170 above.

1042 See pars 1784-1785, 1823-1829 above. The document was prepared with the assistance of Argent, in conjunction with Sagaert and her financial controller.

after the Acquisition. The cumulative Unadjusted Earnings for the 3 years was $15.117 million, in comparison to forecast Unadjusted Earnings of a total of $98.036 million. On the question of realising synergies, it was stated that there were many hurdles to overcome before a strong trusting partnership could be established. It was noted that Joe White integration management actively involved Cargill's grain and oilseeds supply chain from the start to define profit sharing and cost sharing frameworks to realise synergies. However, the synergies actually achieved were less than what had been forecast.[1043] It was also noted that the issues experienced in relation to surplus global malt supply and international competition continued "whilst also battling the headwinds of a poor [Australian] crop".[1044] As in 2015, actual cumulative volume results, actual cumulative margin results, and projected volume results were all below target. Again it was recorded that production volumes fell due to the inability to source customer-approved barley varieties and to produce malt within specification without the use of additives. Reference was also repeated to the inability to blend out-of-specification malt with other batches. The report stated that future projected volumes for years 4 to 10 post-Acquisition were expected to be cumulatively 528,000 tonnes below previous expectations. The report said this was explained, in part, by a slower than expected market recovery following Joe White's quality issues and the increasing influence of Chinese manufacturers in the export market.

1838 The report stated that Joe White's projected margins were expected to remain lower than the original deal model assumptions over the next 5 years for 2 reasons:

(1) Additional competitive pressure from China and other regions and also lost volumes due to quality issues. It was stated that it took time and margin to win volumes back that were lost because of quality issues.

1043 For the 2014 financial year $1.131 million had been forecast, whereas $1.071 million was realised. In the following financial year $2.584 million had been forecast, but $2.293 million had been realised. And for the 2016 financial year, $2.755 million had been forecast, but this time $2.436 million was realised. None of the projections that followed from these years up to year 10 had estimates that matched or exceeded the original forecasts.

1044 Reference to a very poor 2016 crop and a shortage of malting grade barley was also made in Cargill Malt's quality business review dated 16 December 2016.

(2) The market was cyclical and the Australian origin malt was periodically less competitive, primarily due to the spread between Australian and European barley prices.

With respect to the steps that had been taken to maintain or improve operating results, it was stated that there had been investment in barley varietal approval partnering with farmers in order to originate grain that was in the right location and consisted of the correct varieties.

1839 Later in the report, Joe White's performance was explained by the operational changes that had been necessary because of the Operational Practices. An explanation for operating performance included Joe White being unable to produce malt within customer specifications, resulting in substantial loss in volume and increased costs. The supply disruptions were reported to have negatively impacted Joe White's ability to supply a number of major customers for 2 years. It also repeated that Joe White had been locked out of supply for the medium-term because of poor quality performance. Steps were referred to aimed at recovering "Cargill's"[1045] quality reputation and regaining market share. It was stated those changes needed to be made to correct product quality issues not disclosed by Viterra which resulted in lower production and sales volumes, and higher barley origination and production costs. The report also stated that the results were further impacted by weaker crops in Australia, a surplus in global malt supply and competitive forces that favoured exports from other origins. Sagaert gave evidence that it was clear in preparing the report that these matters were the root causes of lower earnings, both looking back and looking forward.

1840 Sagaert gave evidence that the conclusion she reached at the time this report was prepared was that the position was worse than the view that had been formed at the time of the 2015 commitment review; it was observed that there would be a longer term negative impact of the Certificate of Analysis situation. She said the conclusion reached was that it had given rise to greater damage than had been anticipated. Her

[1045] Joe White was referred to as Cargill throughout the report.

evidence was that Joe White was not capable of producing malt within specification, resulting in Joe White being unable to deliver to customers' specifications, which gave rise to lost volume. Sagaert said this resulted in Joe White customers looking for alternative suppliers to avoid having to stop their beer production. She said Joe White customers found malt from competitors, mainly from Europe and sometimes China. Sagaert referred to a price dislocation between Australia and Europe at the time, and said it was "a perfect moment actually to lose a customer" from the customer's perspective.

1841 As in 2015, the "overall view" was represented by a sad face. The underperformance for the first 2 years was said to stem from corrections needed to the business model to address Joe White's customer requirements with which Joe White had not been complying. However, again, the report concluded by stating that the Acquisition established a truly global footprint, which was a valuable attribute in the malting industry.

1842 Sagaert was directly involved in preparing this report. At the time it was produced she had replaced Eden as global managing director of Cargill Malt. The report was prepared with assistance from a financial controller (working for Cargill)[1046] and Argent.

1843 A financial summary prepared in 2018 recorded Joe White's annual financial results from November 2012 to October 2013 (being the first year) through to November 2016 to October 2017. A note in the summary (note 9) recorded a loss of volume had been impacted by commercial changes unrelated to the Acquisition. That note stated Heineken's contracted volume had fallen from 80,000 tonnes to 20,000 tonnes due to a breakdown in discussions concerning price. Further, the summary indicated that the volumes of malt produced from November 2013 to October 2017 were significantly below those achieved before the Acquisition. In addition to identifying the drop in sales reflected in the reduced volumes, in relation to the malt that was actually sold

1046 The precise title of this person was not the subject of evidence. He was described by another witness as the financial planning and analysis lead in consideration of the sale of Cargill's entire global malt business.

the amounts that were delivered in accordance with customer contracts were specified. This information demonstrated approximately 42 percent of malt sold in the first financial year after the Acquisition was supplied pursuant to a derogation (that is, the malt did not comply with the contractual specifications). For the second financial year, the amount supplied pursuant to derogations was 28 percent. In the third and fourth financial years, derogations were required for just under 19 percent of malt supplied.[1047]

1844 In summary, for each financial year ending May 2014, 2015, 2016 and 2017, Joe White suffered losses.[1048] Further, before it was sold by Cargill, Joe White's sales volumes had failed to return to the levels that were being achieved before the Acquisition. Joe White's sales volumes were not forecast to return to such levels until 2022.[1049]

1845 Sometime in 2018, Cargill, Inc decided to engage in a project, known as Project Colombo, with a view to selling all interests in its malt businesses globally. In September 2018, Cargill, Inc disseminated an information memorandum, with the assistance of Crédit Agricole Corporate and Investment Bank, for the sale of the entirety of Cargill Malt, including Joe White. This information memorandum commenced with a disclaimer which disavowed any representation being made as to accuracy, relevance or completeness and required each recipient to rely on its own investigations and analysis. In short, and broadly speaking, this disclaimer was similar to the disclaimer which appeared at the commencement of the Information Memorandum.[1050] Ultimately, the Joe White Business was sold by Cargill on 20 December 2018 as part of the sale of Cargill, Inc's entire global malt business.

1846 On 23 April 2019, Cargill, Inc and Copagest NV entered into a final sale agreement by which it was agreed that Cargill Malt would be sold for US$847 million, subject to various adjustments. Further, the amount of US$188.3 million was to be allocated to

---

1047 See also fn 1034 above.

1048 This was the evidence of Van Lierde. However, for completeness, the documents produced by Cargill as part of Project Colombo (see par 1845 below) recorded an amount for earnings before interest and tax of negative $6.8 million in 2016, but an amount of $8.3 million profit for 2017.

1049 The estimate for 2021 was 471,400 tonnes and for 2022 was 516,400 tonnes.

1050 See par 475 above.

the Australian and Pacific region, with a more detailed allocation to be made before 31 March 2019. Subsequently, the date for this allocation was extended to 31 May 2019, 28 June 2019 and then 12 July 2019. On 27 September 2019, Cargill sent a letter to Axereal referring to the agreement with Copagest NV. The "debt free/Cash Free Price" as finalised was set out, which indicated that US$188,382,287 had been allocated for the purchase of Joe White. The sale of the entirety of Cargill Malt was completed on 31 October 2019.

1847 This completes the narrative of the key facts in the case. Some further facts are set out below. The compilation of these facts has involved (more than usual) an ongoing consideration of what to include and what to leave out. Given the large volume of factual matters put before the court, and the extent to which they were the subject of dispute, this has taken a significant period of time.[1051]

1848 Very broadly speaking, the main claim for loss by Cargill Australia was simple. Cargill's case was that if, before the Acquisition Agreement had been executed, it had been told of the Operational Practices it would not have agreed to purchase Joe White and the Joe White Business. Further, if, after the Acquisition Agreement had been executed but before the purchase was completed, Cargill had been told of the true nature and extent of the Operational Practices it would not have completed the purchase and would have terminated the Acquisition Agreement. In short, it was a no transaction case; Cargill Australia claims the difference between the amount it paid for Joe White and the Joe White Business, being $420 million, and the amount Cargill says the Joe White Business was actually worth, which was substantially less.

V. The pleadings

1849 By its fifth further amended statement of claim ("the Statement of Claim"), Cargill Australia made a large number of claims connected, in various ways, to the Acquisition. Speaking very broadly, claims were made in reliance on provisions under Schedule 2 of the *Competition and Consumer Act 2010* (Cth) ("the Australian

1051 See further pars 5345-5349 below.

Consumer Law"),[1052] in tort for deceit and for breach of contract.

1850 By a defence to the Statement of Claim and a further amended counterclaim ("the Defence"), save for formal matters the Viterra Parties substantially joined issue with the Statement of Claim. The Viterra Parties made allegations against the third parties ("the Third Party Claim"), each of whom filed a defence to the Third Party Claim.

1851 Key allegations were contained in paragraph 19 of the Statement of Claim, which was entitled "Non-disclosure of material information". It read as follows:

> Glencore and/or Viterra did not disclose, either in the Information Memorandum or during Due Diligence,[1053] and it was the fact:
>
> (a) that [Joe White] routinely, and without informing customers:
>
> (i) supplied malt to customers that did not comply with contractual requirements and specifications; and
>
> (ii) supplied [C]ertificates of [A]nalysis to customers that misstated the results of analytical testing on the malt, so that certificate reported that the malt complied with contractual requirements and specifications when it did not,
>
> (together, "**Viterra Practices**");[1054]
>
> (b) that the Viterra Practices were partly recorded in and endorsed by policies entitled "Viterra Malt Certificate of Analysis Generation Procedure" and "Malt Blend Parameters Procedure" (together, "**Viterra Policies**");
>
> (c) that [Joe White]'s financial and operational performance for the financial year 2010 to part of financial year 2013 (including that reported in the financial and operational information disclosed in the Information Memorandum and during Due Diligence (collectively or in any combination, "**Financial and Operational Information**")) was substantially underpinned by [Joe White]'s practice of supplying malt to customers pursuant to the Viterra Practices and Viterra Policies that did not comply with the relevant customer contract; and
>
> (d) that, but for the Viterra Practices, [Joe White] could not produce and sell malt:
>
> (i) in the volumes and to the specifications required by customers;
>
> (ii) in the volumes and for the returns reflected in the Financial and

---

1052 Pursuant to s 130, Australian Consumer Law means Schedule 2 of the *Competition and Consumer Act* as applied under Subdivision A of Division 2 of Part XI of the *Competition and Consumer Act*.

1053 Due Diligence was defined in the Statement of Claim to mean participation in Phase 2 of the sale process which involved conducting due diligence on Joe White and the Joe White Business: see also par 1022 above.

1054 To be clear, the definition of Viterra Practices employed in paragraph 19(a) of the Statement of Claim comprised the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice, where such practices were implemented collectively, on a routine basis and without informing customers.

Operational Information,

(collectively, individually or in any combination, the "**Undisclosed Matters**").

Extensive particulars were provided to these allegations, the details of which are not necessary to set out here.

1852 The definitions in paragraph 19 of the Statement of Claim will be adopted for the remainder of the judgment. To be clear, the definition of the Viterra Practices is different from the definition of the Operational Practices.[1055] The Operational Practices (the existence of which, ultimately, there was no dispute) incorporates the Reporting Practice, the Varieties Practice, and the Gibberellic Acid Practice. In substance, the Viterra Practices was a reference to the Operational Practices being implemented in a particular manner, at a particular level of regularity, and being characterised in a particular way.

1853 The defences filed by the Viterra Parties up until the defence filed on 20 August 2018 (more than 2 months after the trial had commenced), save for complaining about the inadequacy of particulars, in substance simply did not admit the allegations contained in paragraph 19 of the Statement of Claim. Further, the Viterra Parties relied upon the disclaimers contained in various documents provided before the Acquisition Agreement was entered into, and also made certain allegations with respect to Cargill's position, including its knowledge, before its execution of the Acquisition Agreement.

1854 Despite a substantial body of evidence, including agreed documents, being before the court from the time of the Cargill Parties' opening in the second half of June 2018, it was not until 13 December 2018 that the Viterra Parties made certain admissions with respect to paragraph 19 of the Statement of Claim.[1056] For the first time, the Viterra Parties then admitted that the Joe White Business had written policies in the form of the Malt Blend Parameters Procedure and the Viterra Certificate of Analysis Procedure. The admissions were confined to *Joe White* having these written policies despite the fact that they were both business records of Viterra. This defence

1055 See par 43 above.

1056 See also fn 56 above.

continued:

> (bc) subject to subparagraph (ca) below, [the Viterra Parties] admit that at all material times until about 31 October 2013 the [Joe White Business] was generally conducted in accordance with the [Malt Blend Parameters Procedure and the Viterra Certificate of Analysis Procedure] as they existed from time to time;
>
> (bd) subject to subparagraph (ca) below, [the Viterra Parties] admit that on occasions prior to 31 October 2013 the [Joe White Business] supplied shipments of malt to customers which were produced in part or whole from barley varieties which had not been approved by the customer in question, but do not admit the number of occasions upon which that occurred;
>
> (be) subject to subparagraph (ca) below, [the Viterra Parties] admit that on occasions prior to 31 October 2013 the [Joe White Business] supplied shipments of malt to customers which were produced using gibberellic acid in circumstances where the customer in question did not permit the use of gibberellic acid, but do not admit the number of occasions upon which that occurred;
>
> (c) otherwise do not admit paragraph 19; and

>
> (ii) the [Viterra Parties] only came to know of those matters as a result of:

>
> (B) being told of them by one, some or all of the [Third Party Individuals] on or after 22 October 2013; and …

The remainder of the defence at that point in time replicated what had previously been stated with respect to disclaimers and Cargill's position.[1057]

1855 Given the limited nature of the admissions made by the Viterra Parties on the pleadings, it is convenient to also refer to their closing submissions with respect to the Varieties Practice and the Gibberellic Acid Practice.

1856 In relation to the Varieties Practice, the Viterra Parties repeated the substance of what was contained in subparagraph (bd) as set out above, and then stated that the evidence did not demonstrate that the Varieties Practice was routine, systemic, or anything

---

1057 For further details of amendments made by the Viterra Parties to their defence, see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 25)* [2020] VSC 172, [19], [22], [60]-[64], [76].

other than an occasional practice that was employed by Joe White in circumstances where there were shortages of approved varieties. It was further submitted that, as at October 2013, Joe White's practice was to use a customer's desired variety where available, but if it was unavailable, to use a variety with a similar character to ensure the malt met the customer's expectation. It was further contended that the conduct engaged in by Joe White with respect to supplying unauthorised barley was consistent with industry practice.

1857 As for the Gibberellic Acid Practice, the Viterra Parties repeated the substance of what was contained in subparagraph (be) as set out above, and then stated there was no evidence to the effect that the practice of using prohibited gibberellic acid was routine, systemic, or anything other than an occasional practice that was limited to a small number of customers. Similar to the response to barley varieties, the Viterra Parties further contended that the relevant conduct was consistent with industry practice.

1858 In short, there was ultimately no controversy that before Cargill took control of Joe White, Joe White engaged in conduct as contemplated by the terms of the Viterra Certificate of Analysis Procedure and the Malt Blend Parameters Procedure, including pencilling. So much so that the Viterra Parties positively contended in their closing submissions that the majority of participants in the commercial malting industry "engaged in practices in relation to the production of [C]ertificates of [A]nalysis which involved the use of pencilling", and defined them as the "Analysis Industry Practices".

1859 Equally, there was ultimately no dispute that Joe White historically had been using unauthorised barley varieties when supplying malt and using gibberellic acid contrary to some customers' instructions. The extent to which each of these practices had been engaged in, whether such practices aligned with industry practices and, to some extent, whether Joe White customers knew of such practices, was in dispute. That said, the Viterra Parties' case as ultimately put positively asserted the existence of the practices set out above, which were defined by them respectively as the "Barley Variety Industry Practices" and the "Gibberellic Acid Industry Practices", in seeking to defend the allegations made against them.

1860 Notably, in their closing submissions, in seeking to define each of these alleged industry practices they contended existed (collectively "the Alleged Industry Practices"), the Viterra Parties were silent on whether or not such practices were disclosed to customers of malthouses, and whether or not the Alleged Industry Practices involved deliberately concealing the relevant conduct from customers and, for completeness, auditors. However, in the Defence, the Viterra Parties positively alleged the Alleged Industry Practices "were not ordinarily disclosed to customers".[1058]

1861 Subject to what is set out above, it is unnecessary to set out in detail here the specific allegations in the pleadings. By way of a list of issues, the parties helpfully identified for the court, by reference to the pleadings, the issues that required determination. To the extent necessary, further details of the pleadings are addressed in dealing with the issues for determination. However, not all matters that require determination arose out of the pleadings. During the course of the trial, further issues arose. Some of these will be addressed before those the subject of the list of issues.[1059]

W. Ancillary issues for determination

W.1 Whether parts of the Statement of Claim should be struck out because of Cargill's agreement with Hughes

W.1.1 Introduction

1862 The Viterra Parties apply to strike out parts of the Statement of Claim which relate to Hughes' knowledge.[1060]

1863 They do so on either or all of 3 bases:

(1) Rule 23.02 of the *Supreme Court (General Civil Procedure) Rules 2015* (Vic) ("the Rules").

1058 See issue 13 below.

1059 See also issue 145 below.

1060 The application was made on day 101 of the trial. The parties were informed the ruling would form part of the final judgment.

(2) Sections 16 and 19 of the *Civil Procedure Act 2010* (Vic).

(3) The court's inherent jurisdiction to address a contempt of court.

1864 Essentially, the Viterra Parties' application rests on a fundamental submission: that Cargill Australia engaged in conduct, in respect of Hughes, which was liable to interfere with the administration of justice, and accordingly amounted to a contempt of court.

1865 If this characterisation of Cargill Australia's conduct were accepted, then the identified parts of the Statement of Claim may be struck out on any of the 3 bases identified.[1061] If the characterisation of Cargill Australia's conduct is not accepted, the application must fail.

1866 Essentially, there are 2 components to Cargill Australia's impugned conduct.

1867 The first is an agreement, entitled "Separation and Release", entered into between Cargill Australia and Hughes on 25 June 2014, around the time Hughes resigned his employment with Cargill Australia ("the Hughes/Cargill Agreement").

1868 The second is a letter sent by Eden to Hughes ("the Hughes Letter") on 9 July 2014, in which Eden, on behalf of Cargill Australia, covenanted on certain conditions not to take directly any action against Hughes in relation to "the practices that were engaged in by the Joe White [Business] prior to [the Acquisition]" ("the Cargill Covenant").[1062]

1869 For the reasons that follow, I do not accept the Viterra Parties' characterisation of Cargill's Australia's conduct. Accordingly, the Viterra Parties' application to strike out parts of the Statement of Claim will be refused.

1061 This was not disputed.

1062 The Hughes Letter stated that the Cargill Covenant did not apply to a situation where Viterra or other parties claimed against Hughes in order to reduce their liability to Cargill. See further pars 1899-1900 below.

W.1.2 Background

W.1.2.1 Hughes' employment and retention

1870 Hughes' employment history with Joe White has already been touched upon.[1063] Hughes also worked, from 1987, for Joe White's predecessor, Adelaide Malting.

1871 Between 1987 and 2007, Hughes held various positions at Adelaide Malting, and then Joe White, including "Technical Manager", "Technical and Plant Manager", "General Manager – Operations" and "Executive Manager – Malt".

1872 From the time Viterra acquired Joe White in September 2009, Hughes was employed by Viterra Ltd as "Executive Manager – Malt".

1873 The contract of service between Viterra Ltd and Hughes, effective from 1 November 2009, set out the terms of Hughes' employment as "Executive Manager – Malt". Two aspects of the Hughes/Viterra Contract are presently relevant:

(1) Hughes' superannuation-inclusive remuneration for the position of "Executive Manager – Malt" with Viterra was set, effective 1 November 2009, at $300,000.[1064]

(2) The Hughes/Viterra Contract could be terminated by Viterra Ltd on the provision of 6 months' notice, although Viterra Ltd could make payment to Hughes in lieu of that notice period.

1874 In November 2011, Hughes was appointed a director of Viterra Malt, Viterra Operations and Viterra Ltd. On 20 December 2011, he was also appointed a director of Joe White. He ceased to hold these positions on 17 December 2012.[1065]

1063 See par 47 above. Although some detail is set out there, it is convenient to refer to the relevant facts here.

1064 By June 2014, however, Hughes' total remuneration had evidently increased. See further pars 1885, 1904 below.

1065 For completeness, Hughes also executed an indemnity agreement with Viterra Inc on 8 August 2012 pursuant to which it was agreed that Viterra Inc would indemnify Hughes in certain circumstances in respect of a liability which Hughes might have incurred as a result of acting as an officer of Viterra Inc or a subsidiary.

1875 Following Glencore's acquisition of Viterra in December 2012, Hughes continued as "Executive Manager – Malt", reporting to Mattiske, then managing director of the Australian division of Glencore Grain.

1876 Shortly after Glencore's acquisition of Viterra, Glencore commenced preparations to sell Joe White.[1066] To that end, Glencore engaged Hughes, amongst others, to assist with the sale of the shares in Joe White and the other assets used in the Joe White Business. Hughes' engagement was formalised in a letter sent to him on 9 May 2013, entitled "RE: RETENTION PROGRAM", signed off by Mattiske as "COUNTRY MANAGER",[1067] on the basis that "we require" Hughes' assistance. That letter relevantly stated that Hughes:

(1) Had been selected to participate in a "retention program for key staff" in relation to the planned divestment of "the Viterra Malt business", and that he would be required to assist in that divestment and to ensure "operations *continue* in a professional and efficient manner" (emphasis added).

(2) Would, subject to the successful sale of "the Viterra Malt business", be paid a "retention incentive" bonus payment by "the Company[1068] [of] no less than [3 months'] and no more than [6 months'] pay, to be determined at the Company's discretion".

Mattiske concluded the letter by thanking Hughes *on behalf of Glencore* for his continued support.

1877 Mattiske's evidence was that he agreed with the Glencore executives, Walt and Mostert, that it was important to ensure Hughes "did not leave Joe White prior to the sale of the business" as this was "standard practice within Glencore". Both the

---

1066 See pars 362-363 above.

1067 The header to the letter was "Viterra™" and the footer of the letter referred to Viterra Ltd and its details. On its face, the letter was not clear for which Viterra company or companies Mattiske was signing off as country manager. No questions were asked of him about this during his evidence.

1068 Which company was not specified, but presumably this was a reference to Viterra Ltd.

contents of the letter and the evidence as a whole[1069] disclose that the requirement for Hughes to assist was agreed by both Glencore and Viterra.[1070] As for the retention program, this was stipulated by the letter to be a confidential agreement between Hughes and "Viterra (a subsidiary of Glencore International Plc)".[1071] The confidentiality regime imposed meant Hughes was prohibited from discussing the agreement with any other employee.[1072]

1878 Following the Acquisition, and until his resignation on 24 June 2014, Hughes was employed by Cargill Australia as "Regional General Manager, Asia Pacific"; a period of nearly 8 months. He was reappointed a director of Joe White on 2 November 2013 and held that position until 23 June 2014. The circumstances which brought about Hughes ceasing his employment with Cargill Australia were not fully explored at trial.[1073]

1879 The Viterra Parties contended that the court should infer that Hughes told Cargill Australia what he knew about the matters the subject of the proceeding before his resignation. However, this was not put to the Cargill Parties' witnesses, including those who were directly involved in the conduct of the Joe White Business after the Acquisition. Contrary to this contention, an inference was also available that the Hughes/Cargill Agreement was in the terms that it was because Hughes had not told Cargill of such things. In these circumstances, it would be pure speculation on the part of the court as to whether any such communication had taken place to that point

---

1069 Without being exhaustive, King gave evidence that Glencore considered Hughes and Argent should be retained as it would not be possible to run the Joe White Business without the management of the company and it was also important to assist Glencore in the conduct of the sale process. See also par 368 above.

1070 Mattiske's evidence was that Argent was also offered a retention bonus of approximately 6 months' pay at "our discretion" in the event the sale successfully completed.

1071 Again, which Viterra company was being referred to was not specified. Further, in relation to the reference to "Glencore International Plc", see fn 371 above.

1072 If Hughes failed to maintain confidentiality, any entitlement to a "retention incentive" bonus would be lost.

1073 The Viterra Parties noted that the Cargill Parties had not discovered documents providing an explanation as to why Hughes departed. This was of little moment in the context of the real issues in the case.

in time, and therefore it is inappropriate to draw any inference on this issue.[1074]

W.1.3 The Hughes/Cargill Agreement

W.1.3.1 Terms of the Hughes/Cargill Agreement

1880 The Hughes/Cargill Agreement was entered into the day after Hughes resigned from his employment with Cargill Australia. Cargill Australia was referred to as the "Employer". By operation of clause 12, unless the context required otherwise, "the Employer" extended to Cargill Australia's "… subsidiaries, associated entities, related bodies corporate, businesses …". This included Joe White. Accordingly, in this section of the judgment only, when "Cargill Australia" is referred to, such a reference includes Joe White.

1881 For present purposes, there are 3 relevant elements to the Hughes/Cargill Agreement.

1882 *First*, the Hughes/Cargill Agreement documented Hughes' resignation. It recorded that Cargill Australia and Hughes had agreed that Hughes would resign his employment with Cargill Australia effective 24 June 2014. Clause 1 required Hughes to issue Cargill Australia with a written letter of resignation with an "effective date" of 24 June 2014, and Cargill Australia to accept that resignation without requiring Hughes to work out his notice period.[1075]

1883 *Secondly*, in the recitals, Cargill Australia denied any liability to Hughes in relation to his employment by Cargill Australia or the termination of that employment (Recital C). Further, the Hughes/Cargill Agreement released Cargill Australia from any claim(s) that Hughes might have against it in relation to his employment by Cargill Australia or the termination of his employment.[1076] Consistent with the release, the

---

1074 See *Australian Securities and Investments Commission v Hellicar* (2012) 247 CLR 345, 412 [165] (French CJ, Gummow, Hayne, Crennan, Kiefel and Bell JJ).

1075 See also par 1873(2) above.

1076 Clause 3, entitled "Release by Employee", relevantly provided:
[Hughes] absolutely releases and forever discharges [Cargill Australia] from and against all claims, suits, demands, liabilities, actions, damages and costs of whatsoever kind … and howsoever arising in any way relating to or arising out of [Hughes' employment by Cargill Australia or the termination of his employment] which [Hughes] has or may have had in the future against [Cargill Australia] but for [the Hughes/Cargill Agreement], excluding any statutory claim for workers' compensation or superannuation.

Hughes/Cargill Agreement provided, generally, that it would operate as an absolute bar to all claims that might be brought by Hughes in connection with his employment or the termination of his employment.[1077]

1884 *Thirdly*, the Hughes/Cargill Agreement provided for payment to Hughes of an amount in addition to his statutory and contractual entitlements. This additional payment was structured so as to incentivise Hughes' compliance with a series of obligations owed by Hughes to Cargill Australia pursuant to the Hughes/Cargill Agreement.

1885 Speaking broadly,[1078] Cargill Australia was obliged to pay Hughes any accrued but untaken leave entitlements ("the Leave Payment"), together with a further amount of $498,308.64 ("the Further Payment").[1079]

1886 The Further Payment was to be paid to Hughes in 2 equal instalments. The first instalment was to be paid, along with the Leave Payment, within 14 days of Cargill Australia receiving an executed copy of the Hughes/Cargill Agreement. Those 2

1077 Clause 10, entitled "Absolute Bar", relevantly provided:

> Except by way of enforcement of this Agreement, or in respect of any claim for statutory superannuation or workers' compensation, [the Hughes/Cargill Agreement] will operate as an absolute bar to all claims, suits, demands and actions of whatsoever kind threatened or brought or attempted to be brought by or in the name of [Hughes] against [Cargill Australia], arising out of or in connection with [Hughes' employment by Cargill Australia or the termination of his employment].

1078 Clause 2, entitled "Entitlements", relevantly provided:

> (a) Without any admission of liability, [Cargill Australia] will, subject to having received [Hughes'] letter of resignation and subject to [the Hughes/Cargill Agreement]:
>
> (i) pay to [Hughes] the gross amount of $498,308.64, to be taxed as an employment termination payment (**Payment**);
>
> (ii) pay to [Hughes] his accrued but untaken entitlement to annual leave and long service leave (if any) to be taxed according to law; and
>
> (iii) issue a statement to relevant staff confirming that [Hughes] has resigned from his [employment by Cargill Australia].
>
> (b) The Payment will be made in two equal instalments. The first instalment with the benefits referred to in paragraphs 2(a)(ii) and (iii), will be made within fourteen days of [Cargill Australia] receiving an original of [the Hughes/Cargill Agreement]. The second payment will be made 26 weeks after the cessation of [Hughes'] employment but only if [Hughes] has complied with each and every obligation in [the Hughes/Cargill Agreement].
>
> (c) [Hughes] acknowledges and agrees that, subject to receiving the first instalment of the Payment and the benefits referred to in clause 2(a)(ii), he will have received all of his statutory and contractual entitlements in connection with [his employment by Cargill Australia and his termination].
>
> (Emphasis added.)

1079 This represented a total of 18 months of Hughes' base salary at the date of the Hughes/Cargill Agreement. See further par 1904 below.

payments were taken to satisfy all of Hughes' statutory and contractual entitlements arising from his employment by Cargill Australia.

1887 The second instalment of the Further Payment, to which Hughes would otherwise not have been entitled, was to be paid 26 weeks after the cessation of Hughes' employment on the condition that Hughes complied with each and every obligation under the Hughes/Cargill Agreement. From Cargill Australia's perspective, this delay in payment made commercial sense in circumstances where part of that payment of the second instalment was referrable to Hughes providing assistance after the execution of the Hughes/Cargill Agreement.

1888 In addition to the obligation to provide a written letter of resignation, Hughes was required to comply with 4 further obligations. In light of the Viterra Parties' submissions as to the overall effect of the arrangement in question, it is necessary to refer to these in some detail.

1889 The first was the obligation on Hughes to "render assistance" to Cargill Australia ("the Render Assistance Obligation"). This obligation was in the following terms:[1080]

> (a) [Hughes] agrees *to render such assistance to [Cargill Australia] as may be reasonably required*, as requested by [Cargill Australia], *in relation to any dispute* with, or claim against, Viterra or Glencore Xstrata plc *arising from or relating to the Acquisition* (including but not limited to any dispute or claim relating to breach of warranty or to accounts of the [Joe White Business] prepared in relation to the Acquisition). Such assistance may include but is not limited to:
>
> (i) meeting with [Cargill Australia's] lawyers;
>
> (ii) *giving evidence in proceedings* initiated by [Cargill Australia], including providing a witness statement if required;
>
> (iii) reviewing documents; and
>
> (iv) responding to requests made by [Cargill Australia];
>
> (b) [Cargill Australia] will meet any reasonable business expense associated with such assistance, subject to [Hughes] seeking [Cargill Australia's] approval (which will not be unreasonably withheld) before incurring the expense and producing evidence of the expense.

1080 Clause 4.

(c) [Cargill Australia] will agree to a request by [Hughes] that he renders assistance in accordance with clause 4(a) at particular times and/or locations, but only if the request is:

(i) reasonable; and

(ii) made so that [Hughes] does not compromise or conflict with any future employment.

(Emphasis added.)

1890 Further, there were obligations on Hughes to maintain confidentiality in relation to 2 sets of specified matters ("the Confidentiality Obligations").

1891 Clause 5, entitled "EMPLOYEE TO KEEP TERMS CONFIDENTIAL", provided by sub-clause (a) that:

[Hughes] must keep absolutely confidential and not divulge or allow to be divulged to anyone:

(i) the terms of [the Hughes/Cargill Agreement];

(ii) the discussions and circumstances leading to the making of [the Hughes/Cargill Agreement]; or

(iii) information disclosed to [Hughes] by or on behalf of [Cargill Australia] *during any meeting or discussion relating to any dispute with, or claim against, Viterra or Glencore Xstrata plc arising from or relating to the Acquisition.*

(Emphasis added.)

1892 This obligation was qualified. Clause 5(b) provided that clause 5 did not preclude disclosure of the matters identified in clause 5(a):

(i) *as required by law*;

(ii) with the express written authority of [Cargill Australia];

(iii) to enforce [the Hughes/Cargill Agreement]; or

(iv) for the purpose of obtaining confidential accounting or legal advice.

(Emphasis added.)

1893 Clause 6, entitled "CONFIDENTIALITY", obliged Hughes to keep confidential the "protected information of a confidential nature" of "the Employer".[1081] It included

1081 Which included Joe White: see par 1880 above.

that:

> [Hughes] will not, except with the prior written consent of [Cargill Australia] disclose any *information of a confidential nature relating to the business or the affairs of* [*Cargill Australia*] which [Hughes] has learned while employed with [Cargill Australia] to any other person and will not use for [Hughes'] own purposes any such information so acquired.
>
> (Emphasis added.)

1894 Clause 6 provided that the protected "information of a confidential nature" included ordinarily non-public information (including data and records) relating to the business affairs and operations of Cargill Australia.

1895 Furthermore, there was an obligation of non-disparagement ("the Non-Disparagement Obligation"). Clause 7, entitled "NON-DISPARAGEMENT", provided that:

> [Hughes] agrees not to make *any negative,* derogatory, disparaging or defamatory comments whatsoever about [Cargill Australia].
>
> (Emphasis added.)

1896 With respect to the construction and operation of these and other clauses, a severability clause stated that the invalidity or unenforceability of a clause or part of a clause did not invalidate or modify the remainder of the Hughes/Cargill Agreement.[1082]

W.1.3.2 Payments under the Hughes/Cargill Agreement

1897 A document sent by Cargill Australia to Hughes on 21 July 2014, entitled "Terminated Employee Listing" recorded that on 15 July 2014, Hughes was paid, pursuant to the Hughes/Cargill Agreement, a gross amount of $385,602.30, comprising:

(1) $249,154.32, being the first instalment of the Further Payment, and described in that document as a "Golden Handshake".

1082 Clause 13. There were some other general provisions it is unnecessary to discuss. The Hughes/Cargill Agreement is governed by the laws of South Australia.

(2) $136,447.98, being the Leave Payment.[1083]

1898 On 20 February 2015, Hughes was paid $249,154.32, being the second instalment of the Further Payment, which was nearly 2 months after it was due.[1084]

W.1.4 The Cargill Covenant

1899 The Hughes/Cargill Agreement contained no provision effecting Hughes' release from any claim(s) Cargill Australia may have had against him. Hughes' protection against such claims was, instead, addressed in the Hughes Letter, containing the Cargill Covenant.[1085]

1900 The Cargill Covenant was conditional upon:

> (a) [Hughes'] *full and frank assistance* to Cargill in prosecuting [its] claims, which includes providing *accurate instructions and testimony* about matters relating to Cargill's [claim in respect of practices engaged in by Joe White prior to the Acquisition]; and
>
> (b) [Hughes'] compliance with the obligations under the [Hughes/Cargill Agreement].
>
> Should you breach any of the abovementioned obligations, the [Cargill] Covenant ceases with effect immediately.
>
> (Emphasis added.)

1901 The Cargill Covenant did not offer, nor could it offer, any bar against the possibility that the Viterra Parties or others might join Hughes to any future proceeding. Further, no indemnity was proffered with respect to this possibility.

W.1.5 Additional context

1902 It is necessary to provide some further context in relation to the Hughes/Cargill Agreement and the Cargill Covenant.

1083 The Leave Payment comprised amounts of $49,899.12, $34,800.44, and $51,478.42 in respect of Hughes' long service and annual leave entitlements.

1084 Contrary to the Viterra Parties' submissions, it was not readily apparent why this relatively short delay needed to be explained. This proceeding was in its very early stages in both December 2014 and February 2015.

1085 See par 1868 above.

1903 On 24 June 2014, negotiations between Hughes and Cargill Australia over the form of the Hughes/Cargill Agreement had not yet concluded. That day, Cheryl Zampin ("Zampin"), a client human resource manager for Cargill Australia, sent Hughes an email entitled "As discussed".

1904 In the email, Zampin proposed the ultimate amount of the Further Payment, and attached a schedule which explained its composition. The schedule provided that the Further Payment consisted of 6 months' pay in lieu of notice, together with the equivalent of 12 months' pay.

1905 The next day, Hughes replied to Zampin, enquiring as to the status of a " release", that he had previously discussed with Eden. After referring to the difficulty of getting advice at short notice, Hughes suggested a clause should be inserted providing that the second instalment of the Further Payment should not be unreasonably withheld.[1086]

1906 Later that day, Hughes sent Zampin another email. In it, Hughes confirmed that he was content with the formulation of clause 2(b)[1087] and that he would sign and return the Hughes/Cargill Agreement. He continued:

> The only outstanding issue which may be a separate document was regarding Cargill's release of me with regard to any claims/losses with regard to Cargill (sic) purchase of [Joe White] being [sought] from me, as per phone comments by [Eden].

1907 Still later that day, Hughes emailed Zampin enclosing a copy of the Hughes/Cargill Agreement, which he had executed. In that email, he reiterated his understanding that a release in his favour (albeit, incorrectly described as an indemnity) would be provided by Cargill in a separate document:

1086 The Viterra Parties submitted it ought to be inferred from this that the prospect of the payment of the second instalment "was playing strongly on Hughes' mind as an inducement". There was no evidence which might properly support such an inference. The request for such a term for a deferred payment cannot be considered out of the ordinary in a commercial negotiation or demonstrating any particular concern, and no subsequent correspondence suggested that this was a matter of particular significance to Hughes (it not being included in the executed document).

1087 See fn 1078 above.

> Please come back to me regarding the [*Eden*] *indemnity matter*. I have executed [the Hughes/Cargill Agreement] in good faith and expect that *the indemnity offered by Eden yesterday morning* will be a supplementary document, thank you.
>
> (Emphasis added.)

1908 Zampin replied shortly afterwards, stating that she was "following up on the indemnity matter and [hoped] to have something with [Hughes] soon".

1909 On 9 July 2014, Zampin emailed to Hughes a copy of the Hughes Letter.

W.1.6 Origins of this application

1910 The Hughes/Cargill Agreement was put into evidence on 27 June 2018, the seventh day of trial, and the first day of Eden's evidence.

1911 On 6 August 2019, the one-hundredth day of trial, and the second day of oral closing submissions, the court asked the Viterra Parties' senior counsel whether the Viterra Parties wished to make any application concerning any allegations made in the Statement of Claim. This question was put in light of written submissions to the effect that Cargill Australia should not be permitted to "rely on its pleadings, and the related part of its submissions, in relation to those parts of its claim which rely on Hughes' knowledge".[1088]

1912 The following day, the court was told that the Viterra Parties wished to make the present application.[1089] A draft summons was filed that same day.[1090] The present application was heard that afternoon.

1913 The parties' submissions were directed at 2 questions.

(1) Should the present application be entertained?

1088 The submissions referred to the power of the court to prevent Cargill Australia from relying on the relevant parts of its pleading, but was silent as to whether any application was made by the Viterra Parties or whether the Viterra Parties intended to move on this issue in any way.

1089 This was the first notice that the Cargill Parties had of this application.

1090 The draft summons identified those parts of the Statement of Claim that the Viterra Parties sought to have struck out. The following day, at the request of the court, an amended draft summons was filed which further identified those parts of the Third Party Claim which would, if the application was successful, also fall away.

(2) If so, should the present application succeed?

W.1.7 Should the present application be entertained?

W.1.7.1 The Cargill Parties' submissions

1914 The Cargill Parties submitted that the court should not entertain the strike-out application, for 3 reasons.

1915 *First,* they submitted that the matters the subject of this application were not raised at an appropriate time, and as a result inadequate notice was given to the Cargill Parties.

1916 *Secondly,* they submitted that the allegations underpinning the application were not properly put to the Cargill Parties' witnesses. To the extent allegations of impropriety in relation to the Hughes/Cargill Agreement or the Cargill Covenant were raised, they were raised only in the cross-examination of Eden and were not put to any other witness. Further, the allegation of impropriety was put to Eden in relatively narrow terms; namely, that the provision for the second instalment of the Further Payment could be characterised as an:

> [a]greement that [Hughes] would be entitled to the sum of about a quarter of a million dollars if he *acted according to your directions, that is to say Cargill's direction, in relation to these proceedings*.
>
> (Emphasis added.)

1917 Furthermore, Eden did not agree to the proposition put, and stated that he did not recall the Hughes/Cargill Agreement. Moreover, the Cargill Parties relied upon the fact that the additional allegations which underpin the present application were never put to Eden, nor any other witness. For instance, it was not put that, by the Hughes/Cargill Agreement, Cargill sought to: prevent Hughes being available to the other parties or the court; compromise his candour as a witness; or, otherwise interfere with the administration of justice.[1091]

1918 *Thirdly,* they highlighted that the Viterra Parties did not plead the facts or matters the

---

[1091] For completeness, Eden gave evidence that he saw nothing in the Hughes/Cargill Agreement, nor the Cargill Covenant, as inconsistent with the Cargill Code.

basis of this application. Rule 13.07(1) of the Rules relevantly requires that a party:[1092]

> … in any pleading subsequent to a statement of claim, plead specifically any fact or matter which –
>
> (a) the party alleges makes any claim … of the opposite party not maintainable; or
>
> (b) if not pleaded specifically, might take the opposite party by surprise;
>
> …

1919 The Cargill Parties submitted that because this application would, if successful, make the Cargill Parties' claims of deceit not maintainable, the facts or matters the basis of this application were required to have been, and were not, specifically pleaded by way of defence.

1920 The Cargill Parties emphasised that rule 13.07 of the Rules reflects a principle of fundamental importance: that a pleading must state with sufficient clarity and particularity the case that must be met.[1093] Because a properly drawn pleading ensures the basic requirement of procedural fairness that the opposite party has the opportunity of answering the case against it,[1094] a pleading will not be sufficient if it does not allow the opposite party the opportunity to know, in advance, and in a timely way, the case it must meet.[1095] This may be particularly so when the proceeding is large and complex, and involves very substantial costs.[1096]

W.1.7.2 The Viterra Parties' submissions

1921 *First,* the Viterra Parties submitted that this application ought to be entertained, notwithstanding that it had been belatedly brought, as the delay could be explained.

1092 See in relation to pleading a defence: *Bright v Sampson & Duncan Enterprises Pty Ltd* (1985) 1 NSWLR 346, 350C (Kirby P), 353C (Samuels JA).

1093 *Banque Commerciale SA (en liquidation) v Akhil Holdings Ltd* (1990) 169 CLR 279, 286.8 (Mason CJ and Gaudron J); see also *Dare v Pulham* (1982) 148 CLR 658, 664.3 (Murphy, Wilson, Brennan, Deane and Dawson JJ).

1094 *Sunland Waterfront (BVI) Ltd v Prudential Investments Pty Ltd* [2013] VSCA 237, [94] (Warren CJ, Osborn JA, and Macaulay AJA).

1095 See, for example, *Charlie Carter Pty Ltd v The Shop, Distributive and Allied Employees' Association of Western Australia* (1987) 13 FCR 413, 417.7 (French J).

1096 *Patrick v Capital Finance Pty Ltd* [2003] FCA 206, [10] (Tamberlin J). In line with these principles, the court made plain to the parties at the commencement of this proceeding that the court would determine the issues in this proceeding solely on the pleadings. If any of the parties wished to depart from the pleaded case, it was made clear that it would be necessary that they make a timely application to do so. This was reiterated to the parties throughout the proceeding: see also *United Petroleum Australia Pty Ltd v Hudson* [2020] VSCA 14, [54] (Whelan, McLeish and Niall JJA).

It was accepted, appropriately, that the application had been unsatisfactorily delayed "in some respects". This delay was candidly attributed to: (1) the Viterra Parties' failure to appreciate the significance of matters relating to the present application until consideration and discussion in the course of preparing written closing submissions; and (2) the necessity of taking detailed instructions from a client based outside Australia before bringing the application.

1922 *Secondly*, it was submitted that it was appropriate that the court entertain the application, because the Viterra Parties' delay could not have caused the Cargill Parties any relevant prejudice, as the Cargill Parties ultimately decided *not* to call Hughes.

1923 *Thirdly*, it was submitted the application raises important issues in relation to the preservation of the administration of justice.

1924 *Fourthly*, the Viterra Parties contended that the allegations underpinning this application were put to Eden to the extent it was reasonably possible to do. The limited cross-examination of Eden in relation to the Hughes/Cargill Agreement was a necessary consequence of Eden's responses in relation to that issue. Specifically, it was said any further cross-examination in relation to the Hughes/Cargill Agreement would have lacked utility once Eden gave evidence that he did not sign the Hughes/Cargill Agreement and could not recall it.

W.1.8 Analysis

1925 It is appropriate that the application be entertained.

1926 Significantly, it involves very grave allegations in relation to the conduct of this case, which are potentially relevant to the administration of justice. It is important that those allegations be fully ventilated, and considered.

1927 Further, although it does not follow that no prejudice would flow to the Cargill Parties simply because they did not call Hughes as a witness, the issue of the nature and extent of any prejudice is, in the present circumstances, more appropriately taken into

account in considering the substantive application.

1928 Furthermore, save for the inconvenience of hearing the present application during time allocated for oral closing submissions, the application will not cause any material delay in this proceeding.

1929 Moreover, in order to ensure that the real issues are the subject of determination, and consistent with previous rulings in this case,[1097] it is appropriate, in the context of a large, long, and complex case such as this, to afford the parties a degree of latitude in respect of inadvertent, rather than strategic, procedural lapses. In respect of candidly acknowledged oversights, both the Cargill Parties and the Viterra Parties have benefited from this approach in the past.

1930 That said, it must also be observed that the Cargill Parties were justified in their criticism of the very late timing of this application. Though the product of oversight, it is nonetheless entirely unsatisfactory that it was made more than a year after Eden's evidence, and during oral closing submissions. It is also especially unsatisfactory that the Cargill Parties were not given notice of the application before the court was informed that the application would be made.

1931 Additionally, I reject the Viterra Parties' submission that Eden's lack of memory of the Hughes/Cargill Agreement provided a basis to refrain from putting to him in cross-examination that he had been allegedly directly involved in interfering with the due administration of justice. His lack of memory did not prevent such a line of questioning; he could have been taken to what the Viterra Parties considered to be the relevant parts of the Hughes/Cargill Agreement in any event. More fundamentally, if such a serious allegation is to be made about the conduct of a witness, the proper conduct of a trial requires such matters to be squarely put so the witness is given the opportunity to respond.[1098]

1097 See *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 22)* [2019] VSC 351, [30]–[31], [58].

1098 See, for example, *Nicholls v The Queen* (2005) 219 CLR 196, 233 [88], 234 [90] (McHugh J), 267-268 [189] (Gummow and Callinan JJ), 296-297 [281]-[282] (Hayne and Heydon JJ); *Browne v Dunn* (1893) 6 R 67, 70.7-71.4 (Lord Herschell, with whom Lords Halsbury and Morris agreed).

W.1.9 Should the present application succeed?

W.1.9.1 Applicable provisions and principles

1932 The critical issue is the characterisation of Cargill Australia's conduct in relation to the Hughes/Cargill Agreement and Cargill Covenant. Specifically, it is necessary to determine whether the impugned conduct was or is liable to interfere with the administration of justice, and so amounts to a contempt of court.

1933 The principles applicable to the 3 bases of the application[1099] were neither substantially developed, nor substantially disputed, by the parties. It is, therefore, sufficient to set out the relevant principles very briefly.

1934 Rule 23.02 of the Rules provides that the court may order that the whole or part of a pleading be struck out or amended where a pleading or any part of a pleading:

> …
>
> (c) may prejudice, embarrass or delay the fair trial of the proceeding; or
>
> (d) is otherwise an abuse of the process of the Court.

1935 The *Civil Procedure Act* sets out a series of overarching obligations,[1100] which applies to, amongst other persons, the parties to a proceeding.[1101]

1936 Section 16 of the *Civil Procedure Act* provides that each person to whom the "overarching obligations" applies:

> … *has a paramount duty to the court to further the administration of justice* in relation to any civil proceeding in which that person is involved …
>
> (Emphasis added.)

1937 Section 19 sets out a particular overarching obligation; namely, the obligation to only take steps "to resolve or determine dispute". It provides:

> For the purpose of avoiding undue delay and expense, a person to whom the overarching obligations apply must not take any step in connection with any claim or response to any claim in a civil proceeding unless the person

---

1099 See par 1863 above.
1100 *Civil Procedure Act*, Pt 2.3.
1101 Section 10(1)(a).

> reasonably believes that the step is *necessary to facilitate the resolution or determination of the proceeding.*
>
> (Emphasis added.)

1938 The court is empowered by section 29 to address any contravention of the overarching obligations by making any "order it considers appropriate in the interests of justice", including:

(1) An order that the party which has contravened the overarching obligations not be permitted to take specified steps in the civil proceeding.[1102]

(2) Any order that the court considers to be in the interests of any person who has been prejudicially affected by the contravention of the overarching obligations.[1103]

1939 In addition, the court has an inherent jurisdiction to address, and punish, a contempt of court.[1104] A contempt of court includes conduct interfering with the proper administration of the law.[1105] The essence of a contempt has been described as:[1106]

> action or inaction amounting to an interference with, or obstruction to, or having a tendency to interfere with or obstruct the due administration of justice, using that term in a broad sense.

1940 It is necessary that the relevant conduct have a "real and definite tendency as a matter of practical reality" to interfere with the proper administration of justice.[1107] However, is not necessary that interference *in fact* occur.[1108]

1102 *Civil Procedure Act*, s 29(1)(e).

1103 *Civil Procedure Act*, s 29(1)(f).

1104 The Viterra Parties stated they sought to characterise Cargill Australia's conduct as amounting to a civil contempt rather than a criminal contempt: see, for example, *Witham v Holloway* (1995) 183 CLR 525, 531.6-534.5 (Brennan, Deane, Toohey and Gaudron JJ).

1105 *Lane v Registrar of the Supreme Court of New South Wales* (1981) 148 CLR 245, 257.5 (Gibbs CJ, Mason, Murphy, Wilson and Brennan JJ), referring with approval to *In Re Dunn* [1906] VLR 493, 497.1 (Cussen J).

1106 Ibid.

1107 *R v Vasiliou* [2012] VSC 216, [15] (Beach J). See also *Farahbakht v Midas Australia Pty Ltd* [2006] NSWSC 1322, [25] (Brereton J); *John Fairfax & Sons Pty Ltd v McRae* (1955) 93 CLR 351, 370.6 (Dixon CJ, Fullagar, Kitto and Taylor JJ).

1108 *R v Vasiliou* [2012] VSC 216, [20] (Beach J); *Harkianakis v Skalkos* (1997) 42 NSWLR 22, 29D (Mason P,

1941 Further, it is necessary that the person said to have committed a contempt of court intended to do the conduct which has the tendency to interfere with the proper administration of justice.[1109] It is not necessary that that person also intend to interfere with the proper administration of justice,[1110] although such an intention may be relevant, including by rendering the offence more serious.[1111]

1942 Relevantly, a contempt of court may be committed if conduct amounts to interference with witnesses before trial. It is a contempt to:[1112]

> intimidate, induce or deter witnesses in a manner calculated to deter them from giving evidence or to influence them in the evidence that they are to give, because that may prejudice the course of justice.

1943 Inducement of witnesses in the relevant sense may extend to subtle "blandishments and calls to affection and loyalty, as distinct from … threats, bribes and violence".[1113] In this regard:[1114]

> More witnesses are probably deterred from or influenced against giving truthful evidence by affection for or loyalty to a party than by threat or intimidation. A deterrence from giving truthful evidence in those more subtle ways is just as much an interference with the course of justice as one attributable to the more gross methods ….

W.1.9.2 The Viterra Parties' submissions

1944 The Viterra Parties characterised Cargill Australia's conduct, in relation to the Hughes/Cargill Agreement and the Cargill Covenant as "egregious conduct" and "really very bad behaviour" which, it was submitted, has significant potential to pervert the course of justice and undermine its administration.

---

with whom Beazley JA agreed).

1113 Ibid, [52].

1114 Ibid.

1945 It was submitted that this was primarily because the Hughes/Cargill Agreement provided for a payment from Cargill Australia to Hughes in the order of $250,000, being the second instalment of the Further Payment, for Hughes co-operating with Cargill Australia to Cargill Australia's satisfaction. It was submitted this payment was "solely to secure his co–operation for the purposes of this proceeding". This was said to be, if not a bribe, then at least something "more than a blandishment" in favour of Hughes, a potential witness.

1946 Further, it was submitted that the impugned payment was accompanied and reinforced by a "litigation threat" contained in the Cargill Covenant. The relevant threat was said to be that if Hughes failed to satisfactorily co-operate with Cargill Australia, it may (in addition to bringing an action against Hughes for breach of the Hughes/Cargill Agreement) bring an action against Hughes of the kind Cargill Australia had covenanted not to bring; that is, an action in relation to the practices engaged in by Joe White prior to the Acquisition.[1115]

1947 Together, the Hughes/Cargill Agreement and the Cargill Covenant were said to operate to deny the court "knowledge of the relevant law or of the true circumstances of the case",[1116] essentially in 2 ways.[1117]

1948 The *first* was said to be by impairing Hughes' candour and honesty. In simple terms, it was argued that: (1) the Hughes/Cargill Agreement and the Cargill Covenant

---

1115 This threat was said to arise because the Cargill Covenant's protection against this type of action depended on Hughes' ongoing compliance with the Hughes/Cargill Agreement and his "full and frank" assistance to Cargill Australia in relation to the present proceeding. Thus, a failure to co-operate with Cargill Australia would deprive Hughes of protection against any claim(s) Cargill Australia covenanted not to bring. See pars 1899-1900 above.

1116 See *R v Rogerson* (1992) 174 CLR 268, 280.6 (Brennan and Toohey JJ).

1117 For completeness, the Viterra Parties asked the court to infer that Cargill Australia sought to keep the Viterra Parties from knowing about the Hughes/Cargill Agreement because it was not discovered in the proceeding by Cargill Australia, and Hughes was required to keep its existence strictly confidential. There is no substance to this. *First*, the fact that a document is confidential does not take it outside discovery obligations. Hughes, in fact, discovered the document after the Viterra Parties filed a summons seeking discovery. *Secondly*, the Viterra Parties' submission did not state why it was that Cargill Australia might have breached its discovery obligations by not discovering this document. Without the benefit of any such submissions, it is far from apparent why this document (and related documents) ought to have been discovered by Cargill Australia. This was particularly so when a protocol was in place excusing a party from discovering a document if it had already been discovered by another party.

incentivised Hughes, by the "carrot" of the second instalment of the Further Payment and the "stick" of threatened litigation by Cargill Australia against Hughes, to comply with his obligations under the Hughes/Cargill Agreement; and (2) either of those obligations,[1118] or the manner in which Hughes was incentivised to comply with them,[1119] necessarily impaired Hughes' candour and honesty.

1949 The *second* way in which the Hughes/Cargill Agreement and the Cargill Covenant were said to operate to deny the court knowledge of the true circumstances in this case was by practically reducing, if not eliminating, the prospect of Hughes giving evidence in the proceeding unless called by the Cargill Parties.[1120] By Hughes receiving a substantial payment to co-operate with Cargill Australia pursuant to the Hughes/Cargill Agreement, it was submitted Hughes was placed "decidedly in [Cargill Australia's] camp". The Viterra Parties went so far as to submit that evidence of Hughes would be "irrevocably tainted, indeed spoliated" and that the conduct in question was said to be "analogous to a litigant destroying relevant documents in anticipation of litigation, in that it effectively and permanently alter[ed] the evidence available to the court". It was contended the arrangement would make it unlikely that any other party to the proceeding would call Hughes, because of the risk associated with calling a witness "financially beholden" to another party.

1950 In any event, it was said that the Confidentiality Obligation not to disclose "information of a confidential nature relating to the business or the affairs of" Joe White except with the written permission of Cargill Australia,[1121] foreclosed the possibility of Hughes usefully co-operating with any of the other parties in relation to

---

1118 For example, it was submitted that the Non-Disparagement Obligation prevented Hughes from raising "negative" matters in relation to Cargill Australia or Joe White with other parties; and the Confidentiality Obligations prevented Hughes from "disclosing effectively anything about the subject matter of the case" to Cargill Australia's opponents.

1119 For example, it was said that Hughes was, by reason of the Further Payment, "financially beholden" to Cargill Australia. It was further said that the delayed nature of the second instalment of the Further Payment meant that Hughes needed to assist Cargill Australia to Cargill Australia's satisfaction, and presumably in ways that furthered its interests in the proceeding, to receive the Further Payment.

1120 Hughes filed a witness statement, but did not give evidence in his own case. Hughes, along with the other Third Party Individuals, was subpoenaed by Cargill Australia and an outline of evidence was filed. However, Hughes was not called by the Cargill Parties as a witness (noting that the Cargill Parties were not required to make a decision about this until after the Viterra Parties had led their lay evidence in the case: *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 12)* [2018] VSC 454, [30]–[31], [33]).

1121 See pars 1891, 1894 above.

this litigation.

1951 In a submission directed to the alleged overall effect of the Hughes/Cargill Agreement and the Cargill Covenant, it was said that if quarter-of-a-million dollar payments to prospective witnesses were to become "the fashion, and if they were sanctioned in any way" by the court, this would undermine the administration of justice.

W.1.9.3 The Cargill Parties' submissions

1952 By contrast, the Cargill Parties characterised Cargill Australia's conduct in relation to the Hughes/Cargill Agreement and the Cargill Covenant as unexceptional and commercially sound. They submitted the conduct in question could only be understood in light of its context, including that:

(1) Not only had Hughes been intimately involved in the Acquisition, but he was a very senior employee.

(2) Hughes had had a long tenure at Joe White, and its predecessor and successor entities.

(3) Hughes was recognised as being of particular value to Joe White, as evidenced, for example, by the fact that he had previously been incentivised by Glencore to assist with the Acquisition.[1122]

(4) At the time of Hughes' departure, Joe White had only been in Cargill Australia's possession for around 8 months. During this time Cargill Australia had formed the view that the Joe White Business was "fundamentally different" to the business it thought it had purchased, and began to contemplate bringing proceedings against the Viterra Parties.

(5) For Cargill to work out what it was going to do "with the situation it found itself in", it would require Hughes' assistance.

1122 See par 1876 above.

(6) In circumstances where Hughes had been "heavily involved" in the sale and had overseen the Operational Practices before the Acquisition, Cargill would need his involvement to manage various things going forward.

1953 Thus, it was said to be unsurprising that: (1) Hughes would cease employment with Cargill Australia; (2) the cessation of Hughes' employment would be on agreed terms; and (3) Cargill Australia would make provision for ongoing assistance.

1954 Further, the Cargill Parties submitted that the form and content of the Hughes/Cargill Agreement accorded with mainstream commercial practice. Reference was made to industry practice guides and templates for "deeds of separation and release" in respect of departing senior employees. Those guides and templates indicated that in order to ensure finalisation of all potential claims by an employee, such agreements routinely:

(1) Provide for an ex gratia or discretionary payment or other extra benefits in addition to payments to which the departing employee is entitled.

(2) Contain release, confidentiality (including with respect to the terms of the agreement itself), and non-disparagement provisions.

(3) Where the departing employee provides a release in favour of the employer, provide for an additional or greater payment to the departing employee.

(4) For executive employees, the courts have found reasonable periods of notice to be in the order of 6 to 12 months.

1955 Furthermore, the Cargill Parties disputed that the obligations in the Hughes/Cargill Agreement or the Cargill Covenant, or the way in which Hughes was incentivised to observe them, could have the effect of impairing Hughes' candour or honesty. In support of this contention, a number of points were made.

1956 *First*, the second instalment of the Further Payment could not reasonably be understood as simply a payment for Hughes to co-operate with Cargill Australia. Rather, it was consideration for a number of valuable promises flowing from Hughes to Cargill Australia under the Hughes/Cargill Agreement, including, in particular, the release and bar in favour of Cargill Australia.[1123]

1957 *Secondly*, the second instalment of the Further Payment depended only on Hughes' compliance with the obligations under the Hughes/Cargill Agreement. None of those obligations required Hughes to take any step favourable to Cargill Australia in connection with, or to achieve any particular outcome in, this proceeding. In any event, to whatever extent the Further Payment could incentivise Hughes to favour Cargill Australia's interests, it could only realistically do so in the 26 weeks before that instalment fell due, which, in the context of this proceeding, was an insignificant period of time and long before any possible trial.

1958 *Thirdly*, in any event, nothing in the Hughes/Cargill Agreement or Cargill Covenant foreclosed the possibility that Hughes would be joined as a party to this proceeding.[1124] Once that possibility eventuated, Hughes and Cargill Australia's interests in the proceeding necessarily diverged: far from Hughes favouring Cargill Australia's interests, Hughes' interests were served in succeeding in his case by opposing Cargill Australia's case. In the circumstances, where it was directly in Hughes' interests for the Viterra Parties to successfully defend Cargill Australia's claims against it and Hughes was no longer a Cargill Australia employee, there was no real basis to suggest Hughes was in "Cargill's camp".

1959 *Fourthly*, provisions of the Hughes/Cargill Agreement did not necessarily foreclose the possibility of Hughes *also* co-operating with, or assisting, other parties to this proceeding, for example:

(1) Clause 5 applied only to matters disclosed to Hughes by Cargill Australia "during any meeting or discussion *relating to any dispute with*

1123 See generally pars 1883-1896 above.

1124 See, for example, par 1900 above.

… Viterra or Glencore Xstrata plc arising or relating to the Acquisition" (emphasis added). Whilst this might prevent disclosure of privileged post-Acquisition discussions between Cargill Australia and Hughes relating to the present dispute, it did not prevent disclosure of pre-Acquisition matters about which Hughes was aware and which are relevant to the present dispute.

(2) The Non-Disparagement Obligation, properly construed, captured only disparaging and defamatory comments, and did not prevent Hughes from describing to other parties a fact or facts that Hughes believed to be true about Cargill Australia's conduct.

1960 *Fifthly*, the Cargill Covenant cannot be characterised as a "stick" when it is apparent that the Cargill Covenant was actively sought by Hughes.[1125]

1961 *Sixthly*, and in any event, the Cargill Covenant required rather than impaired Hughes' candour and honesty: the protection of the Cargill Covenant depended on Hughes giving "*full and frank* assistance" to Cargill, including "providing *accurate instructions and testimony"* (emphasis added).

W.1.9.4 Analysis

1962 Whilst all of the Cargill Parties' submissions cannot be accepted unreservedly, I am not satisfied that Cargill Australia's conduct in respect of the Hughes/Cargill Agreement and the Cargill Covenant was or is liable to interfere with the administration of justice.[1126]

1963 There are several reasons for this.

1964 *First,* the second instalment of the Further Payment cannot properly be characterised as a payment "solely" for Hughes' co-operation in this proceeding.

1125 See pars 1902-1909 above.

1126 For completeness, it was also not a contravention of the duties and overarching obligations contained in ss 16 and 19 of the *Civil Procedure Act*, nor was conduct capable of enlivening r 23.02 of the Rules.

1965 No obligation to which Hughes was subject under the Hughes/Cargill Agreement amounted to an obligation that Hughes "co-operate" with Cargill Australia in this proceeding.[1127] This includes the Render Assistance Obligation, which the Viterra Parties appeared to treat as a general obligation on Hughes to "co-operate" in this proceeding. At a general level, an obligation to assist is not necessarily equivalent to an obligation to "co-operate". Co-operation requires, and so connotes, a certain degree of unity in action or commonality of purpose,[1128] which assistance does not.[1129]

1966 More significantly, however, even supposing that the Render Assistance Obligation could be characterised as an obligation to "co-operate", the second instalment of the Further Payment could not be described as payment *solely* for that co-operation. To do so would be to overlook a number of valuable contractual promises, in addition to the Render Assistance Obligation, given by Hughes in exchange for the second instalment of the Further Payment. These included Hughes' resignation without protest, the release in Cargill Australia's favour, and the Confidentiality and Non-Disparagement Obligation.[1130]

1967 *Secondly*, and relatedly, the second instalment of the Further Payment was not dependent upon Cargill Australia's "satisfaction" with Hughes' co-operation or assistance.[1131] The mere fact that the second instalment was payable 26 weeks after the first instalment created no such dependency. The only conditions on the payment of the second instalment were that Hughes had provided full and frank assistance to Cargill and had complied with his obligations under the Hughes/Cargill Agreement. Whether or not there was a "breach" of those obligations was a question of objective fact, rather than something to be determined at Cargill Australia's discretion. In any event, the finite period of 26 weeks meant the duration of any possible dependency

---

1127 The word "co-operation" (or related words) did not appear in the Hughes/Cargill Agreement. Nonetheless, the Hughes/Cargill Agreement was described by the Viterra Parties as the "Secret Hughes Co-operation Agreement", and the second instalment of the Further Payment as the "Secret Hughes Co-Operation Payment".

1128 *Macquarie Dictionary* (7th ed, 2017) "co-operation" (n[1], def 1), "assistance" (n, def 1); *Oxford English Dictionary* (2nd ed, 2019) "co-operation" (n, def 1), "assistance" (n, def 3a).

1129 That is not to say that opposing parties to a civil proceeding cannot co-operate: *Civil Procedure Act*, s 20.

1130 See pars 1882-1895 above.

1131 See par 1945 above.

would have necessarily expired long before the possible hearing and determination of any future proceeding. The fact that Hughes may have had to repay part of the second instalment, or have been liable for damages, if he breached the Hughes/Cargill Agreement was of little significance. It was the obverse of the contractual obligations to assist, which obligations were entirely consistent with the due administration of justice.

1968 *Thirdly,* the Cargill Covenant cannot be properly characterised as a "litigation threat" against Hughes. Hughes repeatedly sought the Cargill Covenant. The Cargill Covenant offered a degree of protection to Hughes against litigation that Cargill Australia might, but for the Cargill Covenant, threaten against him. To characterise the Cargill Covenant, given in favour of Hughes and at his urging, as a threat against him would be to ignore the context in which it came into being. It would also ignore the context of the Cargill Covenant itself, including that it required nothing more of Hughes than to be "full and frank" in providing assistance and to comply with the Hughes/Cargill Agreement.

1969 *Fourthly*, subject to obligations of confidentiality,[1132] the Hughes/Cargill Agreement and the Cargill Covenant did not necessarily prevent Hughes from co-operating or assisting other parties in this proceeding, if he was ever inclined to do so.[1133] At a general level, it does not follow that an obligation to assist a party necessarily forecloses the possibility of assisting another. The Hughes/Cargill Agreement contains positive obligations to assist Cargill Australia, but not negative obligations that prevent Hughes from assisting other parties to the litigation.[1134] Further, the Non-Disparagement Obligation cannot be properly construed as precluding Hughes from communicating the facts as he understood them. Clause 7 was concerned with comments Hughes may have otherwise made, and not with any facts which he might

---

1132 See par 1972 below.

1133 As an opposing party in the proceeding, there would have been every prospect that Hughes would have been advised not to assist the Viterra Parties, irrespective of any perceived inability to do so because of the Hughes/Cargill Agreement: *Commonwealth v Sanofi (formerly Sanofi-Aventis)* [2017] FCA 382, [83] (Nicholas J).

1134 In this regard, compare the treatment of clauses 6 and 8 of the agreement at issue in *Commonwealth v Sanofi (formerly Sanofi-Aventis)* [2017] FCA 382, [17], [19], [82].

communicate.

1970 *Fifthly*, the Hughes/Cargill Agreement and the Cargill Covenant did not have the effect of aligning the interests of Hughes and Cargill Australia in this proceeding. This is most acutely demonstrated by the fact that the Hughes/Cargill Agreement did not foreclose, and the Cargill Covenant explicitly acknowledged, the possibility that Hughes would be joined by the Viterra Parties in this proceeding; and that as a result, Hughes and Cargill Australia's objectives in material respects would be likely to be fundamentally different (if they were not already). This, of course, is precisely what has occurred. The fact that Hughes received payments which, in part, were referable to him providing assistance to Cargill Australia, did not result in Hughes being "beholden" to Cargill Australia, nor, in light of the terms of the Hughes/Cargill Agreement viewed objectively, did they constitute some "more subtle" form of influence.[1135]

1971 *Finally*, there is nothing sinister or inimical to the due administration of justice for an employer to secure the assistance of an outgoing employee with respect to likely upcoming litigation, particularly in circumstances where the employer has only recently acquired the business that employed the outgoing employee. Of course, the terms of any such agreement need to be carefully scrutinised; but provided the terms are consistent with the principles which apply to the absence of property in a witness and like matters,[1136] they may well be entirely consistent with the administration of justice. Indeed, in many instances, it would be remiss of the employer not to enter into such an arrangement as part of an overall settlement of the employee's termination.

1972 Equally, the imposition of an obligation of confidentiality is not inconsistent with the due administration of justice. Although clause 6 of the Hughes/Cargill Agreement

---

1135 See par 1943 above.

1136 See, for example, *Commonwealth of Australia v Helicopter Resources Pty Ltd* (2020) 94 ALJR 466, 473 [20] (Kiefel CJ, Bell, Gageler, Keane, Nettle and Gordon JJ) in the context of criminal proceedings; *Crown Resorts Limited v Zantran Pty Limited* [2020] FCAFC 1, [2]-[7], [24]-[60] (Allsop CJ, with whom White J agreed), [83]-[86] (Lee J, with whom Allsop CJ and White J agreed); *Harmony Shipping Co SA v Davis* [1979] 1 WLR 1380, 1384H, 1386D-G (Lord Denning MR), 1387A (Waller LJ agreeing).

would be likely to limit what information Hughes could voluntarily disclose to others about the Joe White Business and matters relating to the Acquisition, that clause would not interfere with Hughes' discovery obligations or, if sought and appropriate, any other disclosure obligations ordered by the court. Courts often have to deal with confidentiality regimes in commercial litigation, this case being no exception. Those regimes are usually part of normal and proper commercial practice, and, in themselves, do not undermine or prejudice the due administration of justice. The fact that a litigant, or prospective litigant, puts steps in place to ensure legal privilege or confidentiality may be maintained is not contrary to public policy, even if a consequence of that is that it limits the ability of an opposing party to have access to information or the means by which it might be accessed.[1137]

1973 Although I accept the Cargill Parties' submission that the Hughes/Cargill Agreement did not necessarily foreclose Hughes co-operating with the other parties, in all likelihood, because of clause 6, that would have been its effect to some extent.[1138] However, for the reasons explained, that does not establish a proper basis for the Viterra Parties to have parts of the Statement of Claim struck out.

1974 On the issue of confidentiality, it was proper for Cargill Australia to seek to maintain confidentiality with respect to any discussions that were had after the Hughes/Cargill Agreement was executed. Ordinarily, an aspect of maintaining litigation privilege is the existence and maintenance of confidentiality.[1139] In dealing with Hughes, without such an obligation, Cargill Australia would have run the risk of losing a right it was, and is, lawfully entitled to.

1975 For completeness, it should be noted that it would have been surprising if Cargill Australia had not entered into an agreement like the Hughes/Cargill Agreement when it was likely that the ability to make any claim successfully would require collecting evidence of the Joe White Business operations before it came under Cargill's

---

1137 Ibid; *Commonwealth v Sanofi (formerly Sanofi Aventis)* [2017] FCA 382, [83] (Nicholas J).

1138 There is no evidence as to whether, in fact, this ever occurred.

1139 *Evidence Act*, s 119. See also *Australian Securities and Investments Commission v Mining Projects Group Pty Ltd* (2007) 164 FCR 32, 42-43 [30], [32] (Finkelstein J).

control.

W.1.10 Conclusion

1976 Thus, the application must fail.[1140] For clarity, the dismissal of this application in no way is intended to convey that the court sanctions the payment of a large sum of money in order to secure the services or evidence of a lay witness. For the reasons set out above, the Viterra Parties' submission to that effect mischaracterised the nature of the arrangement entered into between Hughes and Cargill Australia.[1141]

W.2 Credibility of witnesses

1977 The credibility of a number of witnesses was challenged by opposing parties. As a general comment, most witnesses before the court appeared to be doing their best to give evidence of the events as they recalled them, or of such other matters as required.

1978 This cannot be said of Mattiske. As would be readily apparent from some of his evidence referred to above,[1142] numerous aspects of his evidence were unsatisfactory. Rather than answering questions directly and confining himself to matters within his knowledge, Mattiske demonstrated a propensity to give non-responsive or argumentative answers consistent with what he undoubtedly perceived to be an account of events in the interests of the Viterra Parties. By way of illustration only, the following 2 passages are good examples of where Mattiske strayed into making assertions and extraneous comments, rather than simply answering the questions that were put.

1979 Under cross-examination by the Cargill Parties' senior counsel, the following exchange took place:

> You accept you were not told that the customers had been told [about the practices]?---I expected - can I just clarify what I think the question is?

1140 In these circumstances, it is unnecessary to consider what prejudice might have been suffered by the lateness of the application in light of the decision not to call Hughes: see par 1927 above.

1141 See par 1951 above.

1142 See pars 1235, 1348, 1357, 1364, 1402-1404, 1513 above. Further, a reading of the transcript demonstrated many further examples could be given.

No, just see if we can concentrate on my question?---I'm trying to.

Do you accept that you were not informed, so you were not informed that customers had been informed of the practices?---I don't know what I expected.

I'm not asking you what you expected. Do you accept that you were not in fact told that the customers had been informed of the practices?---No, I'm honestly not sure. I'm not sure.

Mr Mattiske, what I'm struggling with is how you can be not sure about that question, for this reason. What I'm suggesting to you is that had you been told affirmatively that the customers knew about these practices, you would remember that, that would have been the end to the matter; is that not correct?---No, I don't believe that's entirely correct, but---

What's wrong about that proposition, Mr Mattiske?---Well, I didn't know anything about these practices and my knowledge is still very limited. *My sole - not sole reliance, but my main reliance was that the customers, as I've said many times, had accepted delivery of the product and were happy---*

Mr Mattiske, you keep making that sort of statement. You are not answering my question?---That was important to me at the time, your Honour.

Yes, you have said that countless times now?---Yes.

I'm just asking you to concentrate on my question, and my question, proposition, is this: do you accept that had you been informed that the customers had been told about the practices, you would remember getting that information?---It is probable that I would have remembered that, yes.

And:

Could you go down the page and you will see the dot point, "Traditionally, off-grade was taken largely as a necessity through seasonal conditions and elements outside Viterra control." Pausing there, *you knew that at times of climatic conditions where particular varieties of barley couldn't be obtained it might be customary to use off-grade barley; was that your understanding of the position?---And that there's absolutely nothing wrong with using off-grade barley.*

And that, I take it - did you understand that the use of off-grade barley in those conditions was done with the knowledge and consent of the customer?---*I can't see why it would ever be an issue with the customer because they were still getting exactly what they want. But I imagine the customers would know about this. It's not a secret. Everyone knows. We do it for Cargill now.*

Mr Mattiske, you knew back in 2013, didn't you, that it was important to disclose to the customer if a particular grade of barley was to be used that was different to the specification that related to the supply to that customer?---*But in this case what they are talking about here isn't that.* What they are talking about here is delivering exactly what the customer wants under the customer contract. Off-grade is not off-variety. Off-grade is off-grade. So you can have Gairdner, Gairdner malt industrial, Gairdner feed. As long as you can blend Gairdner with Gairdner you still get Gairdner. It's still the same barley, still the same specifications. That is what it means.

> You say you can use feed-grade barley?---All barley is barley. It depends on specifically how it tests within a lab as to how it's graded. We sell feed barley to maltsters all over the world every day. All barley can be germinated and turned into malt.
>
> Do you tell these maltsters all over the world that that's what you are doing, selling them feed-grade barley, and do you get their consent?---Yes, we tell them exactly what they are going to be delivered and they get exactly what they have asked for. Absolutely. *And then they test it in the labs themselves to make sure they are happy with the quality, as all of these customers did, and accepted the barley they were getting.*
>
> HIS HONOUR: When you say "as all of these customers did", are you talking about Joe White customers, are you?---Yes. So the customers you sell your barley to test the barley on receival to make sure they are happy with it.
>
> MR ANASTASSIOU: Mr Mattiske, you don't know - you didn't know in 2013, anyway, which of the Joe White customers tested barley and - tested the malt and which didn't, did you?---I presumed all of them do. It's a very standard practice worldwide for all grain trading.
>
> I think we established on either Wednesday or Thursday last week you didn't ask anybody the question, did you?---No, *but I presume that to be the case.*
>
> You are keen to argue Glencore's case, aren't you, Mr Mattiske?---No, I'm keen to tell you the facts of the case.
>
> (Emphasis added.)

W.3 Witnesses not called

W.3.1 Overview of the witnesses in question

1980 The Viterra Parties submitted that the Cargill Parties failed to call a number of witnesses, and did not provide an adequate explanation for their failure. These potential witnesses fall into various categories.

1981 *First*, there are persons who at the time of trial and at all relevant times were employees of Cargill and who were involved in matters the subject of dispute, including events leading up to the Acquisition Agreement and the Acquisition.

1982 *Secondly*, there are those who were employed in relation to the Joe White Business leading up to the Acquisition, and beyond, who are not parties to the proceeding.

1983 *Thirdly*, there are former employees who worked in the Joe White Business, who are also some of the Third Party Individuals.

1984 *Fourthly*, there are persons who were employees at Joe White at the time of the trial who are the remaining Third Party Individuals.

1985 *Fifthly*, there are Joe White's customers, none of whom were called.

1986 Further, the Cargill Parties made submissions concerning the absence of some witnesses.

W.3.2 Legal principles[1143]

1987 Before a court makes its determination, all evidence must be weighed according to the proof that was in the power of a party to have produced, and the power of an opposing party to have contradicted.[1144] In weighing the evidence, a court may consider not only the evidence itself, but also inferences that are open on that evidence (or any lack of evidence).

1988 The inference the court was invited to draw with respect to numerous witnesses is commonly referred to as the *Jones v Dunkel*[1145] inference, and has been described as follows:[1146]

> The failure to bring before the tribunal some circumstance, document, or witness, when either the party [itself] or [its] opponent claims that the facts would thereby be elucidated, *serves to indicate, as the most natural inference, that the party fears to do so, and this fear is some evidence that the circumstance or document or witness, if brought, would have exposed facts unfavourable to the party*. These inferences, to be sure, *cannot fairly be made except upon certain conditions*; and they are also open *always to explanation* by circumstances which made some other hypothesis a more natural one than the party's fear of exposure. But the propriety of such an inference in general is not doubted.
>
> (Emphasis added.)

1989 The unexplained failure to call a witness *may* give rise to a number of possible

---

1143 Ordinarily, it would not be necessary to expound on this area of the law generally to deal with submissions concerning witnesses not being called. However, given the number and variety of witnesses, the subject of such submissions, it is appropriate to do so.

1144 *Blatch v Archer* (1774) 1 Cowp 63, 65 [98 ER 969, 970] (Lord Mansfield), referred to with approval in *Australian Securities and Investments Commission v Hellicar* (2012) 247 CLR 345, 405 [144], 412 [166] (French CJ, Gummow, Hayne, Crennan, Kiefel and Bell JJ), 441 [250] (Heydon J).

1145 (1959) 101 CLR 298.

1146 Ibid, 320.10-321.2 (Windeyer J), quoting from *Wigmore on Evidence*, 3rd ed (1940) vol 2, s 285, 162. See also 308.5-308.7 (Kitto J) and 312.6-312.8 (Menzies J).

inferences. These include: (1) the uncalled evidence would not have assisted the party that failed to call the witness;[1147] (2) the court may draw, with greater confidence, any inference unfavourable to that party if that witness would be able to "cast light on whether the inference should be drawn";[1148] (3) the court may more readily accept evidence because it was left uncontradicted;[1149] and (4) the failure may permit a court to be less inclined to draw inferences favourable to that party from other evidence on that issue.[1150]

1990 Such inferences may be drawn not only by reason of a failure to call witnesses to give evidence, but also where a witness is called and the party calling the witness fails to adduce evidence on particular topics. Failing to do the latter may be more significant than the former.[1151]

1991 Naturally, before a court can draw an inference, there must first be a proper basis for it do to so. Each case turns on its facts. The applicability and the extent of any applicability to be accorded to the relevant principles may vary depending on the circumstances, including the particular inference under consideration.[1152] That said, it is generally accepted that the court must be satisfied of certain conditions before drawing an inference. They are as follows:[1153]

1147 Sometimes referred to as an "adverse" inference, but, to be clear, the inference is that the evidence would not assist, not that it, in itself, would be adverse or unfavourable to the party's case: *Kuhl v Zurich Financial Services Australia Limited* (2011) 243 CLR 361, 385 [64] (Heydon, Crennan and Bell JJ); *Australian Securities and Investments Commission v Fortescue Metals Group Ltd* (2009) 264 ALR 201, 225 [102] (Gilmour J).

(1) There must be an expectation that the party would call the witness, particularly if that witness is in that party's camp, or because that witness is available to that party rather than the other.

(2) The evidence of the witness would explain a particular matter or issue in dispute. What is required is more than a mere assertion by the opposing party that the witness has knowledge, or may have knowledge.

(3) There has been no explanation for the absence, or the explanation proffered by the relevant party is considered unsatisfactory. (The *Jones v Dunkel* principle has no application in circumstances where the party that otherwise ought to have called the witness, provides a satisfactory explanation for not doing so.)[1154]

(4) There are no principles of law which prevent the inference being relied upon.[1155]

1992 Determining whether an inference ought to be drawn requires the application of common sense.[1156] The issue is whether, based on the circumstances of the case and on the balance of probabilities, the inference might reasonably be considered to have a degree of likelihood.[1157] The inference "must do more than give rise to conflicting inferences of equal degree of probability so that the choice between them is mere matter of conjecture".[1158]

1993 The effect of an inference may be significant, in that "if drawn [the inference] may

1158 Ibid, 309.8-310.1. See also 319.8 (Menzies J).

weigh the scales, however slightly, in favour of the opposing party".[1159] However, there are limitations on the principle in addition to the matters referred to above. It will not ordinarily operate where it is merely cumulative evidence that the witness would contribute (such as an attendee at a meeting when evidence has been given by numerous others who were at the meeting),[1160] or where senior decision-makers were called and more junior participants, who contributed to the decision-making process, were not.[1161] Further, an inference cannot be used to "fill gaps or to convert suspicion into inference".[1162] Furthermore, the principle applies only where there is a requirement for the party to explain or contradict evidence;[1163] if there is no issue between the parties as to a particular matter, the party against whom the inference is being sought to be drawn need not provide an answer.[1164]

1994 With respect to the adequacy of any explanation and whether it precludes an inference being drawn, the following explanations have been found to be satisfactory:[1165]

(1) The party not being sufficiently aware of what the witness would say to warrant the inference that it feared to call her or him.[1166]

(2) The party is aware that a witness will refuse to assist or has a reason for not being truthful.[1167]

(3) Further to (2) above, notwithstanding a close relationship with a party, there exists a reasonable apprehension that the witness is biased in favour of the opposing party.[1168]

1162 *Jones v Dunkel* (1959) 101 CLR 298, 313.4 (Menzies J).

1163 Ibid, 321.2 (Windeyer J).

1164 See J D Heydon, *Cross on Evidence* (LexisNexis Butterworths, 11th ed, 2017) 38-46 [1215].

1165 Ibid.

1166 A party is not required to call a witness "blind": *Fabre v Arenales* (1992) 27 NSWLR 437, 450A (Mahoney JA, with whom Priestley JA and Sheller JJA agreed).

1167 *Fabre v Arenales* (1992) 27 NSWLR 437, 450B.

1168 *Spence v Demasi* (1988) 48 SASR 536, 548.2 (Cox J, with whom White J agreed).

(4) The trouble and expense involved in having to call the witness outweighs the value of any evidence that would be elicited, particularly where the claim or the issue is small, or relatively so.[1169]

(5) The party is not in a position to call the witness.[1170]

(6) The witness is suffering from an illness, is overseas, or by reason of some other unavailability, is unable to attend to give evidence.[1171]

(7) A defendant (or a third party) considered that a plaintiff (or a defendant) had not made out its case.[1172]

(8) A witness fearing that she or he will prejudice themselves.[1173]

1995 A party's decision to limit the number of witnesses called,[1174] and a defendant's belief that the evidence of the plaintiff is insufficient,[1175] have both been found to be unsatisfactory explanations. Naturally, each case will depend on its particular circumstances.[1176]

1996 Finally, the fact an inference is able to be drawn is not the end of the matter. The court must then consider whether the inference *should* be drawn.[1177] This requires an examination of "the logical coherence of the conclusion, its consistency with other facts, premises or principles or the weighing of it against other facts or conclusions",[1178] and a consideration of whether general human experience (plain

common sense) will not be contradicted if the inference is drawn.[1179] Particular caution must be exercised if the inference sought to be drawn is what an individual would or would not have done.[1180]

W.3.3 Ongoing Cargill employees

1997 Hermus and Christianson were, at the time of trial and at all relevant times, employees of Cargill. Both were involved in the Due Diligence preceding the Acquisition Agreement. The Viterra Parties contend that the court ought to make a finding that the decision by the Cargill Parties not to call Hermus and Christianson was strategic and that, generally, it ought to draw an inference that their evidence would not have assisted the Cargill Parties' case.

1998 For the reasons that follow, no such inference will be drawn.

W.3.3.1 Hermus – his role

1999 Hermus was the European quality manager. Prior to the Acquisition, he was responsible for the preparation of Certificates of Analysis for malt for Cargill, Inc subject to the direction of De Samblanx. Hermus was based in Mechelen, Belgium.

2000 In mid-April 2013, he was assigned as the food safety quality and regulatory lead on Project Hawk. A spreadsheet setting out activities by project delivery process stipulated Hermus' role in the Due Diligence with respect to feasibility, development, planning, and the execution of implementation.[1181]

1179 Ibid, 445F-446A, 449G-450B.

1180 *Jones v Sutherland Shire Council* [1979] 2 NSWLR 206, 223F (Mahoney JA).

1181 These included:

> Identify applicable food and feed regulations and evaluate project accordingly.
>
> Identify appropriate resources and capabilities needed for food safety/regulatory compliance risk management.
>
> Perform the Cargill Corporate Food Safety and Regulatory Affairs Audit as part of Due Diligence activities.
>
> Finish the [due diligence] document request list (section M4 [Food Safety, Quality and Regulatory]).
>
> Review [due diligence] documents.

2001 Hermus was involved in aspects of the reports that arose out of the Due Diligence. As the food safety quality and regulatory lead, Hermus reviewed documentation contained in the Data Room. De Samblanx's evidence was that in reviewing the Data Room, he understood Hermus was trying to find what was important in Hermus' area of responsibility.

2002 Hermus also formulated some questions, which were included in the Tracking Sheet.[1182] The Tracking Sheet identified the questions he devised. These related to, amongst other things: (1) the results of the last HARAM proficiency test by Joe White; (2) the latest "ISO 22000 findings"; (3) the extent to which gibberellic acid, betaglucanase and multifect were used in production; (4) Joe White's reaction to customers requiring a germination time of more than 4 days; (5) contaminant analyses in barley and malt. See "Request" column, rows 108-119); (6) how Joe White assured that if delta T requirements were not met for certain customers, that malt was not used in blends for those customers; and (7) whether Joe White's employees had to annually sign a code of ethics. During cross-examination, Eden stated that those questions were all important, with some more important than others.

2003 The questions as recorded did not entirely mirror questions put forward by Hermus

---

> Review [Joe White's Food Safety, Quality and Regulatory] organization and determine the gaps to get to the Cargill [Food Safety, Quality and Regulatory] organization model.
>
> Create a [Food Safety, Quality and Regulatory] plan to mitigate and manage identified risks and needed changes [from] the [Corporate Food Safety and Regulatory Affairs] Audit, the [due diligence] Document Checklist, and the Organization review.
>
> Update and follow-up on [the plan referred to in the preceding item] to mitigate and manage the identified risks and need changes …
>
> Complete plans for eliminating/mitigating [Food Safety, Quality and Regulatory] compliance risks (include capital needs).
>
> Continue to review [due diligence] documents.
>
> Conduct [a Food Safety, Quality and Regulatory] follow-up meeting, involving Corporate Food Safety, Quality and Regulatory as appropriate, to discuss the prepared … action plan.
>
> Understand customer needs, product specifications, and analytical testing procedures.
>
> Ensure that customer needs can be met.

1182 See par 931 above.

to De Samblanx for consideration. In an excel spreadsheet, in early July 2013, "Questions for [Joe White]" were listed which, according to De Samblanx' evidence, was "the only written thing" he got from Hermus.[1183] De Samblanx discussed these proposed questions with Hermus. During his cross-examination, De Samblanx gave his account of the discussions, including some conclusions reached. After his discussions with Hermus, De Samblanx submitted the questions to the Project Hawk team.

2004 Further, the question formulated by Hermus as to whether Joe White employees were required to sign annually a company code of conduct or ethics charter was contained in the Tracking Sheet, but attributed to someone other than Hermus. The question was put and answered to the effect that Joe White employees read and acknowledged they understood and complied with the code of conduct on an annual basis. Furthermore, to the question concerning a required germination period of 4 days,[1184] the response was that it rarely occurred. Moreover, the question concerning delta T received the response that it was a question that was not relevant to value.

2005 Not all the questions raised by Hermus were put to Viterra. The first 3 questions listed in paragraph 2002 above were not put.[1185]

2006 De Samblanx gave evidence that he, with Hermus, amongst others, also had a role in giving a more complete picture of the risks involved in purchasing Joe White.

2007 According to contemporaneous records, Hermus accessed the Data Room a total of 34 times, and reviewed 136 documents, including the Management Presentation Memorandum, the Joe White chemical register, all plant dossiers,[1186] the "Viterra Malt

---

1183 See par 821 above. De Samblanx suggested he cut and pasted what was provided by Hermus and included it in the excel spreadsheet. There was no discovery of such a document being sent by Hermus, however the Tracking Sheet made it plain that, at least for most of them, the questions emanated from Hermus.

1184 See par 2002(4) above.

1185 However as to the third question, De Samblanx gave evidence that he asked Youil directly whether gibberellic acid was used in breach of Joe White customer's contracts and was told it was not: see par 788 above.

1186 The dossiers were for the Joe White malting plants located at Cavan, Delacombe, Devonport, Sydney, Perth, Port Adelaide and Tamworth, as at June 2013. The dossiers contained information about each

Risk Management Policy" dated May 2013, a summary of the key customer contracts,[1187] and the Malt Proficiency Scheme policy document. The Viterra Parties emphasised that a number of these documents were not viewed by De Samblanx and that none of the Cargill Parties' witnesses accessed all the documents that Hermus reviewed.

2008 By way of further background, Hermus had been referred to in a series of affidavits, and court orders and rulings since at least 8 December 2017.[1188] It is unnecessary to traverse in detail the circumstances surrounding those orders and rulings, save to say that they relate to the creation of due diligence reports for the purposes of Project Hawk and the alleged failure by the Cargill Parties to discover certain documents.[1189] Hermus was plainly someone who had relevant information in relation to the existence or otherwise of some of the matters raised.

2009 However, the extent of his involvement in material events surrounding the Acquisition was limited. During cross-examination of the Cargill Parties' witnesses other than De Samblanx, the following evidence was elicited:

(1) Eden knew of Hermus, but did not recall whether he was involved in the preparation of any due diligence reports.

(2) Viers knew Hermus as "1 of our technical folks".

(3) Sagaert stated that Hermus reported to De Samblanx in 2013.

(4) Jewison knew Hermus and recorded him as the "food safety, quality and regulatory lead", but was not aware of, nor did she follow up as to, whether he performed the duties she assigned to him during the interim

---

plant, including barley varieties utilised, and barley and malt storage capacities.

1187 The customers were not named, but were referred to by letters of the alphabet.

1188 For example, see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 6)* [2018] VSC 44, [13]; *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 4)* [2017] VSC 797, [42]-[44].

1189 For example, orders were made on 20 December 2017 and 9 February 2018, whereby the Cargill Parties were ordered to discover drafts and final versions of due diligence reports produced for the Acquisition and prepared by the commercial and operations workstream, the tax and restructuring workstream, the valuation and synergies workstream and the legal and regulatory workstream of Cargill Australia.

period before Engle and Le Binh took over, as it was not her role.

(5) Le Binh did not know who Hermus was, but upon reviewing previous email correspondence, accepted that he was part of the due diligence work group from the operational side. Le Binh said Hermus did not raise concerns with him at any stage.

(6) Hawthorne recognised Hermus' name, but did not remember precisely what his role was. He believed that Hermus was on the technical side in food safety and quality assurance, but did not recall ever having contact with him.

(7) Engle reviewed a workstream work chart that stated that Hermus was responsible for the food safety quality assurance aspect of the Due Diligence for Project Hawk. Engle dealt primarily with the workstream leaders, and not with members within the workstream subgroups. He said he did not recall his name until he was preparing to give evidence. Engle only had a very vague recollection of Hermus and did not recall interacting directly with him. Engle's evidence was that, since Hermus worked with De Samblanx, he would not "immediately jump" to the conclusion that Hermus would have needed to produce a report independently of De Samblanx. Engle gave evidence that he did not recall receiving anything by way of a report from Hermus, nor did he come across anything in preparing to give evidence.

(8) Bowe did not recall Hermus or even his name, and did not interact with him.

2010 Hermus' involvement continued after the Acquisition Agreement was entered into. He exchanged various emails with De Samblanx before Completion, including an email which noted that all legal non-conformance with respect to Joe White was required to be immediately reported to him on the first day after Completion. However, there was no evidence (and according to the Viterra Parties' submissions,

no discovery) which indicated that anything was reported to Hermus in this regard.

W.3.3.2 The Cargill Parties' submissions and related evidence

2011 Two key reasons were advanced for not calling Hermus.

2012 *First,* the Cargill Parties submitted that the work performed by Hermus, and therefore the evidence that would be elicited from him, was thoroughly covered by the evidence of De Samblanx. It was submitted that Hermus did not visit any malting sites, nor did he speak to any of the Viterra Parties' representatives. According to the Cargill Parties, Hermus' role was largely confined to a "remote desk top review of documents from his office". It was contended, therefore, that it was not surprising that the majority of the members of the Project Hawk team did not recall, or only vaguely recalled, Hermus. In short, it was submitted that because of Hermus' limited involvement in the relevant events, considered in the context of the other witnesses called, the inferences the court was being invited to draw were not open.

2013 *Secondly,* Hermus had been on extended sick leave since 3 June 2015, and following their analysis of Belgian employment law, the Cargill Parties formed the view that it was not lawful for them to ask Hermus to give evidence in the proceeding.[1190]

2014 As to the second matter, the Cargill Parties relied on the following:

(1) Evidence of Filip Tilleman ("Tilleman"), a Belgian employment lawyer.

(2) Evidence of Steven Vinken ("Vinken"), Cargill, Inc's human resources market leader for Belgium and France.

(3) An affidavit of Savona sworn on 16 May 2018.

2015 Tilleman is a partner of a Belgian law firm, Tilleman van Hoogenbemt, and is a member of the Antwerp Bar in Belgium. He has specialised in the area of employment

---

1190 The court was informed during the course of the trial that Cargill was unsure whether or not this witness could be called to give evidence. In late July 2018, Cargill had not made a final decision on whether or not Hermus would be a witness at trial. Cargill's position was that it was taking advice from lawyers concerning the restrictions that existed in relation to the calling of, or even approaching, an employee under Belgian law when the employee was absent from work for reasons of illness.

law since 1987. He has given hundreds of lectures and seminars regarding labour law. Tilleman provided responses to 4 questions put to him in relation to the sick leave currently taken by Hermus.

2016 To the question whether an employer could require an employee to perform services for the employer if the employee was absent from work on sick leave, Tilleman's answer was unequivocally no. He stated that:

> During the suspension of the execution of the contract, it is *prohibited* for the employer to require the employee to perform services. If the employer would require the employee to perform services, this would be an infringement of the legal suspension of the execution of the employment contract. During the period of work disability, the execution of *the employment contract has been suspended so the employer can't require the employee* who is absent from work on sick leave, to perform services.
>
> (Emphasis added.)

2017 On the issue of whether an employer could request or ask an employee to perform services for the employer, reference was made to article 31 § 2 of the Law of 3 July 1978 on employment contracts. Under this article, an employer is only entitled to be informed of the existence of a disability and its likely duration, but not the nature and reason for it (which is considered medically confidential). Tilleman then stated that because an employer does not know the disability, there is a risk of further deterioration or interference with the healing process if an employer were to ask an employee to perform services whilst on sick leave. He continued:

> In [the] case of absence of the employee because of illness, the *employer must be very careful*. The employer has to respect the consequences of the suspension of the execution of the employment contract.
>
> So if an employee is absent from work on sick leave, the employer *may not* request the employee to perform services for the employer.
>
> (Emphasis added.)

2018 Dealing with the third question on the meaning of "services" in this context, Tilleman said both "services" and "perform the work" were very widely interpreted under Belgian law. Tilleman expressed the view that, as the employment contract had been suspended, an employer could not ask the sick employee to perform any services that

were related to work.

2019 In response to the final question whether a requirement or request to perform services included, or was capable of including, assistance with or giving evidence in a court proceeding, Tilleman answered in the affirmative. In doing so, he referred to a judgment handed down on 10 April 2009 by the Labour Court of Appeals of Ghent.[1191] In that case, an employee was asked to attend an internal disciplinary hearing by their employer whilst on sick leave. It was held that the suspension of an employment contract because of illness included suspending any obligation of an employee to attend a hearing.

2020 During cross-examination, Tilleman agreed that under Belgian law there was no concept of precedent, but said a decision of the Court of Appeal of Ghent was a valuable opinion that would be followed by other labour tribunals. Tilleman also accepted that there is no specific statute which stipulated that the giving of evidence by an employee in a court proceeding, at the behest of their employer or otherwise, constituted performance of their duties under their employment contract. However, he referred to a general principle of suspension of the execution of an employment contract, which he considered prevented an employer from asking an employee to give evidence during a period of sickness. He also observed that it was impossible in a written law to enumerate everything an employer could not ask or could not do. Tilleman stated that, depending on the circumstances, such as when a request was made by the employer, the giving of evidence could be considered as "performing or connected to" the employment contract.

2021 With respect to the Ghent Court of Appeal decision, he acknowledged the case concerned a professional soccer player who was injured and claimed wrongful termination of his contract. He further accepted the case was concerned with a failure of the player to attend an internal disciplinary hearing, to be conducted at the club's facilities, which the player had been directed to attend, as opposed to being concerned

1191 Labour Court Ghent (2nd Court) 10 April 2009, Chr DS – Soc Kron, 2010, 07.

with a request to give evidence in a court proceeding.[1192]

2022 A passage in this decision stated that an employee on sick leave was under no obligation to present himself at the employer's office for the hearing.[1193] He said this passage amounted to a finding that the giving of evidence in a court case constitutes the performance of an employee's functions. In light of his other evidence, I did not understand this answer to suggest the passage was directly on point; rather that it was entirely consistent with the opinion Tilleman held on the issue in question before this court. Indeed, Tilleman volunteered that he was not aware of any case under Belgian law where the specific issue concerning Cargill's position in light of Hermus' sick leave had been decided.

2023 In relation to Vinken's evidence, an affidavit sworn by him exhibited a series of Hermus' doctors' certificates commencing on 3 June 2015. Hermus had been on sick leave from that time.[1194] When he commenced with Cargill in June 2017, Vinken was appointed to the position of human resources market leader. He had no knowledge of the facts in issue in this case.[1195] He gave evidence of Cargill, Inc's position in the following terms:

> *[Cargill, Inc's] practice in respect of employees on sick leave is not to contact such employees about their work*, as under article 31 § of the Belgian law of 3 July 1978 on employment, the execution of an employment contract is automatically suspended in case of work disability due to sick leave. During the suspension of the execution of the employment contract, *it is prohibited for the employer to require the employee to perform services*.
>
> (Emphasis added.)

2024 During cross-examination, Vinken also accepted that Belgian law does not explicitly prohibit an employer from asking an employee to voluntarily perform services whilst on sick leave, and presumed it technically could be possible to ask, but stated that, from Cargill's perspective, it was its "practice to not address such questions to employees". His evidence was that Cargill did not do so as a matter of principle.

1192 Later in his evidence, Tilleman seemed to suggest the decision covered requests as well as requiring an employee to attend.

1193 Labour Court Ghent (2nd Court) 10 April 2009, Chr DS – Soc Kron, 2010, 07, 380 [3.1.6].

1194 This evidence was based on Cargill, Inc's records rather than Vinken's own knowledge.

1195 He gave evidence that he had only heard of this litigation a few weeks before giving his evidence.

Vinken stated that he was not aware of Hermus being contacted by Cargill, Inc whilst he was on extended sick leave, nor if Hermus had been asked whether he was willing to give evidence in this case.

2025 Also under cross-examination, Vinken was presented with a series of email exchanges in February 2018. These included an email Savona sent to De Samblanx dated 12 February 2018, referring to Cargill being in the middle of a "continuous onslaught" of requests for documents from the Viterra Parties in relation to the Due Diligence. In addition to De Samblanx's involvement, Savona referred to the fact that Hermus was recorded as having worked on the Due Diligence, and that his name kept coming up in the requests as well. Savona said she thought she had previously heard De Samblanx say to her that Hermus was on an extended period of leave from work due to illness and, as a result, that meant "we" could not speak to Hermus directly. Nevertheless, Savona asked De Samblanx to call him and ask a series of questions she had set out concerning the existence or location of certain due diligence reports (which she also asked De Samblanx to answer for himself). Savona said that if this were to occur, at least the court could be told that Cargill had made enquiries, and the result of those enquiries.

2026 In reply, De Samblanx confirmed Hermus was on long-term sick leave and said that he would make attempts to contact him. De Samblanx sent a further email, informing Savona that he had spoken to Hermus, who stated that he was "not sure of having had such [due diligence] reports". That email also stated Hermus had returned his laptop to Cargill, Inc about 1½ years earlier, in accordance with a rule of Cargill, Inc to do so if a laptop is "idled" for more than 1 year.

2027 Savona then repeated her request 1 day later that De Samblanx obtain Hermus' answers to the same series of questions. In that email, Savona stated that she would not ordinarily be so pedantic, but noted there was a court order requiring the steps to be taken and that Cargill needed to confirm to the court that it had acted accordingly. Subsequently, De Samblanx responded attaching an email from Hermus which stated, "Below my answers". Hermus' email stated, amongst other things, that Hermus was

not aware if there were final versions of the due diligence reports for each of the identified workstreams. He also said he had no knowledge in relation to each of the other questions raised by Savona.

2028 After being shown this correspondence, Vinken confirmed his understanding that under Belgian law and by Belgian practice, Cargill, Inc did not contact employees whose contracts were suspended due to illness, but noted that he could not guarantee someone else in the corporation would not contact an ill employee. Vinken then accepted the proposition that from a "purely legal" position, there was no prohibition on Cargill merely asking Hermus to give evidence. He also acknowledged, in light of the matters that had been put before him for the first time, that Cargill, Inc's practice had not been followed "on multiple occasions" in 2018. When it was suggested that the reason Cargill, Inc was not making enquiries of Hermus was because, in substance, he would give evidence unfavourable to Cargill, Inc, Vinken was in no position to comment given his very limited involvement in this case.

2029 In summary, the Cargill Parties submitted that there was a satisfactory explanation for not calling Hermus; namely, Cargill held a belief that it was not permitted to call Hermus, with such a belief being reasonable in light of Belgian employment law.

W.3.3.3 The Viterra Parties' submissions and related evidence

2030 The Viterra Parties similarly led evidence from an expert lawyer in Belgian employment law, Jacques Aubertin ("Aubertin"). Aubertin was admitted to the Brussels Bar and was a partner of Stibbe, a law firm in Brussels. Aubertin has practised in the area of employment law for 15 years and stated that he is recognised as a specialist in the area, having published "several contributions" regarding Belgian labour law.

2031 Like Tilleman and Vinken, Aubertin accepted that the performance of an employment contract is suspended for the period an employee is on sick leave. He gave evidence that, during this suspension, both the employer and employee are released from their

obligations under the employment contract.[1196]

2032 Aubertin also agreed that Belgian law prevents an employer from requiring an employee to return to work. However, he expressed the opinion that Belgian law does not prevent an employer from *asking* an employee to return to work or to perform job activities. Whilst he acknowledged an employer cannot place pressure on, or force, the employee to work, Aubertin considered that an employer is not prohibited from making contact by telephone or email with an employee on sick leave.[1197] He stated that, if contact were made, it would be open to the employee to ignore or not respond to that communication, or to refuse any request. He also stated that an employer was not prohibited from contacting the employee and requesting her or him to work, but could not place pressure on the employee, including by conveying an expectation that the request would be complied with.[1198] However, he said it would not be advisable for an employer to make repeated requests, as this could be perceived as harassment.

2033 In forming this view, Aubertin relied upon a decision by the Belgian Court of Cassation on 10 January 1983.[1199] A passage in that case stated that an employee may still, despite being on sick leave, perform work under the employment contract. In short, "suspension" does not prohibit the employee from working and performing the contract, though an employer is not under an obligation to allow the employee to work.

2034 In addition, Aubertin stated that an employee giving oral evidence in a court proceeding did not fall within the ambit of discharging her or his duties under an employment contract, but constituted "a matter of personal civic responsibility" (as opposed to a legal obligation). However, under cross-examination he accepted there was no clear legal provision in that respect. His evidence was that "anyone needs to serve" based on a civil responsibility for witnesses in cases where she or he might

---

1196 An employer has to pay the normal remuneration for the first month of leave.

1197 See further fn 1201 below.

1198 This was the evidence Aubertin ultimately gave on the point. He also gave evidence that it was not permissible to harass an employee, but to contact the employee "so that [she or he] may have maybe the impression that he is required to work is, as such, not prohibited". The critical point of his evidence appeared to be whether pressure was placed on the employee.

1199 Cass 10 January 1983, *Pas* 1983, 543.

help, regardless of the existence or otherwise of an employment contract; but whether the "need to serve" arose would depend on the circumstances.

2035 Aubertin also agreed that there was no legal principle to the effect that it could never be the case that an employee giving evidence in a court proceeding would not be doing so in the course of discharging her or his employment obligations. He accepted that it would depend on the circumstances as to whether there was a sufficient link between the giving of evidence in court and the employment contract. He declined to express an opinion as to whether a request to give evidence in a foreign court, involving travel and being away from home for a period of time, would be assessed as being related to the performance of an employment contract, only repeating it would depend on the circumstances.

2036 Further, in relation to the Ghent Court of Appeal decision,[1200] Aubertin stated that it did not support the propositions Tilleman had put forward. However, when cross-examined, Aubertin accepted that there was no principle of Belgian law that, when an employee gives evidence in a court proceeding, the employee is not doing so in the course of discharging her or his employment contract.

2037 In addition, Aubertin accepted that, depending on the circumstances of the case, under Belgian law it would be open to conclude that requesting an employee to return to work could compromise the safe well-being of an employee; albeit he said it would only be in very exceptional cases.

2038 Aubertin acknowledged the positive obligation of an employer to avoid creating circumstances that would cause harm to the well-being of an employee, including stress or "burnout".

2039 He also accepted that there were circumstances where, depending on what was being asked of the employee and the individual's predicament, a request by an employer may have the potential to cause the sick employee stress.[1201] Since an employer is not

1200 See par 2019 above.

1201 For clarity, ordinarily there is nothing preventing an employer merely contacting a sick employee;

permitted to know of the nature of the illness (unless the employee willingly proffers that information), Aubertin accepted that an employer must take into consideration the potential harm when deciding whether to make a request of their employee. Further, again subject to the circumstances, he accepted it may be reasonable for an employer to form the view that asking an employee to do something may give rise to stress or pressure; and, accordingly, for the employer to conclude that the request should not be made because it might violate the employer's obligation not to cause harm to the employee.

2040 Aubertin acknowledged that the Belgian Court of Cassation decision he had referred to involved an employee who wanted, and had offered, to return to work. He further acknowledged the case did not explicitly stand for the proposition that an employer may make a request for an employee to return to work, and that there was no Belgian case dealing directly with that point. But he also said scholars considered a request could be made of the employee. He gave evidence this position was based on the Belgian Court of Cassation decision, and "this is the case". Aubertin's evidence was that, whilst there is no statutory provision or decided case explicitly permitting an employer to make a request of their employee, it was a matter of common sense involving an assessment of all the circumstances in the case.

2041 In summary, based on Aubertin's opinions and the other evidence before the court, the Viterra Parties submitted that:

(1) Hermus was "the" person in the Project Hawk team responsible for investigating and assessing Joe White's engagement in the Alleged Industry Practices and the alleged Undisclosed Matters.

(2) The Cargill Parties were not, according to Belgian law, prohibited from contacting Hermus and requesting that he give evidence in the proceeding.

---

indeed, Aubertin gave uncontroverted evidence that there was a duty to keep in contact to some extent to see how the employee was going and whether she or he was recovering.

(3) Belgian law did not state that giving evidence in a court proceeding constituted performance of a person's employment duties; the giving of evidence is a matter of "personal civic responsibility" that exists regardless of whether the person's employer was a party to the proceeding.

(4) The Cargill Parties did not adduce any evidence as to whether they had any knowledge of Hermus' medical condition, and whether they had reason to believe that because of his medical condition the Cargill Parties would be harassing Hermus if they requested that he provide evidence in the proceeding.

(5) The Cargill Parties did not adduce any evidence that they had asked Hermus whether he was willing to give evidence in the proceeding, either before or after the matter commenced in October 2014.

(6) The Cargill Parties did not establish how they formed a reasonable opinion that they were precluded from contacting Hermus to make a "simple request" as to whether he could provide evidence in the proceeding.

(7) Cargill had previously communicated with Hermus,[1202] contrary to Cargill Inc's "so-called practice" of not contacting employees on sick leave, and that the questions put to Hermus on that occasion related to matters relevant to the proceeding.

2042 In light of the above and the various other matters raised in their submissions,[1203] the Viterra Parties submitted that in circumstances where the Cargill Parties did not provide a credible explanation for Hermus' unavailability, the court ought to infer that:

(1) Between October 2014 (when the proceeding commenced) and June 2015

1202 See pars 2025-2027 above.

1203 Which have been largely reflected in the section above dealing with Hermus' role.

(when Hermus took sick leave), the Cargill Parties had communicated with Hermus and discussed the evidence he would give in the proceeding.

(2) If Hermus' evidence assisted the Cargill Parties' case, there was no legal prohibition preventing Hermus from being called.

(3) If Hermus had refused to give evidence, the Cargill Parties would have adduced evidence to that effect to explain his unavailability.

(4) Hermus, "as the person to whom all Joe White legal non-compliances were to be reported following completion", would not support Cargill's case that Joe White routinely, without informing customers, supplied malt in accordance with the Viterra Practices.

(5) Hermus would not have given evidence that the Undisclosed Matters were not disclosed to him or that he was otherwise unaware of them.

(6) Hermus would not have given evidence that the Alleged Industry Practices did not exist, nor that he was unaware of them.[1204]

(7) Hermus would not have given evidence that the Due Diligence was conducted with reasonable care.

(8) As a result of the information received during the Due Diligence, Hermus believed, before the Acquisition Agreement was entered into, that: (a) Joe White's production involved non-conformance with customer specifications, and addressing this non-conformance could result in a reduction of Joe White's plant capacity; (b) there was a risk that Joe White's procedures were inconsistent with the Cargill Code and therefore changes would be required to Joe White's operating

[1204] In support of this, the Viterra Parties referred to the fact that Hermus was responsible for preparing the Cargill Blending and Certificate of Analysis Procedure from 2011 to 2013. With respect to the 2 documents recording this fact, they also recorded that De Samblanx either approved or verified Hermus' work.

procedures; (c) in relation to barley available to and used by Joe White, around half of Joe White's contracts did not specify a variety, Joe White purchased significant quantities of non-grade 1 malting barley, Joe White used up to 30 percent of non-grade 1 malting barley, and Joe White regularly purchased Hindmarsh; (d) Joe White used gibberellic acid as an additive "which was normally not allowed by most international brewers" and there was a risk that it was being used when it was not allowed; (e) Joe White's analytical approach was to record a result as being non-conforming only if the result was plus or minus more than 2 standard deviations from the target parameter.

(9) On the basis that Hermus raised the question as to whether Joe White had a code of conduct in relation to Certificates of Analysis, Hermus believed there was a risk that Joe White was engaging in unethical conduct in relation to the production of Certificates of Analysis.

W.3.3.4 Hermus - conclusion

2043 For a number of reasons, no material inference will be drawn from the fact that the Cargill Parties did not call Hermus as a witness.

2044 Before addressing the multitude of inferences put forward by the Viterra Parties that have not been established, it is convenient to make a number of observations and findings.

2045 As to the experts called, both of them were credible witnesses and the views they expressed, although different in some respects, were reasonable in light of the uncertainty under Belgian law surrounding the issues in question. Both made proper concessions with respect to their lack of certainty of their opinions.

2046 It is likely that Hermus was not asked by Cargill, and that he has never refused, to give evidence. I accept the Viterra Parties' submission that if such a state of affairs existed, Cargill would have adduced that evidence in order to explain his unavailability. It is far more likely, and I so find, that Cargill has never asked Hermus

to give evidence, and that this was by reason of his long-term illness. Such a finding is consistent with Cargill simply having implemented its company policy.

2047 Further, in circumstances where the details of Hermus' condition are confidential under Belgian law and the court has no information as to the nature of his illness beyond the fact that Hermus has been unwell for a number of years, there is no basis to find that Cargill knew or had any substantive belief as to the nature of his illness.

2048 Furthermore, the decision not to ask Hermus to give evidence was in line with Cargill's company policy in Belgium.[1205] The fact that, in February 2018, Savona indirectly approached Hermus, through De Samblanx, did not suggest that the company policy did not exist or was only intermittently adhered to. There was no evidence that Savona was aware of the company policy in Belgium. Even if Savona had been, it is clear she was acting upon court orders and believed Cargill had an obligation to behave in accordance with those orders in making the enquiries that she did. Obviously, any company policy would not override an order of the court.

2049 It is unnecessary for the court to determine which of the 2 employment experts' evidence was correct. For present purposes, it suffices to say, based on the evidence of both of them and the circumstances, that Cargill's adoption of the company policy with respect to Hermus was reasonable given the law in Belgium.

2050 Next, when the evidence is considered as a whole, Hermus could not objectively be considered to have been a material witness. Without being exhaustive, this can be illustrated in a number of ways.

2051 *First,* it is likely that any substantive evidence which might have been elicited from Hermus could have been largely addressed by De Samblanx. As the leader of the operations workstream for Project Hawk,[1206] De Samblanx participated in a discussion with members of the Project Hawk team on 23 May 2013 about the Information Memorandum, attended the Management Presentation, made site visits between 26

1205 See par 2023 above.

1206 De Samblanx also referred to himself as the manufacturing technology lead for Project Hawk.

and 28 June 2013, was a participant in the Operations Call with Youil and Hughes,[1207] circulated his own due diligence report known as his "Resumé of Findings", and travelled to Minneapolis between 16 to 18 July 2013 to attend a working session to review all assumptions.[1208]

2052 It was he, not Hermus, who went beyond performing a "desk-top" exercise and was involved in the decision-making process of the Due Diligence. There are already many findings that demonstrate this, but by way of illustration the following points are referred to.

2053 With respect to the Management Presentation, De Samblanx recalled enquiring about Joe White's malt storage capacity based on his review of documents in the Data Room.[1209]

2054 With respect to the site visits, in addition to making the observations that he did, De Samblanx prepared the Operations Spreadsheet, which summarised his observations with respect to matters such as steeping, germination, the control rooms, and the kilns at each of the Joe White plants. Further, De Samblanx stated that during his investigations, he attended to the majority of the "activities" assigned to him. De Samblanx deployed his own method of due diligence. As De Samblanx explained, sometimes there are very complex guidelines and he was not a "paper person". He described himself as someone of practice and relied on his experience. He said it was acceptable to do it his way. He said the guiding principles in the Cargill Code were more important to him than whatever documents or procedures that had to be complied with. There was no evidence to suggest De Samblanx relied upon Hermus in any material way such that De Samblanx was dependent on Hermus for the views that he formed.

2055 Furthermore, De Samblanx gave evidence that the question as to Joe White's use of

---

1207 See par 865 above.

1208 The meeting was initiated by Le Binh, with Engle, Jewison and Christianson in attendance: see pars 862-864 above.

1209 See par 737 above.

gibberellic acid[1210] was put to Youil, who was "very firm", and stated that Joe White would not use gibberellic acid when a customer did not allow it.

2056 With respect to the Operations Call, De Samblanx stated that the responses he received from Hughes and Youil satisfied any concerns he had with respect to the operations aspect of the Joe White Business. According to De Samblanx, "from that moment on I got really the comfort that my doubts about silo capacity and in relation [to] Certificates of Analysis were satisfactorily answered". This was because De Samblanx was informed that Joe White had "good upcountry storage", was in the process of building more silos at its Sydney plant, and there was no issue with limited storage capacity as Joe White had limited customer books allocated to each plant which took into consideration the types of barley varieties available and the capabilities of the individual plants. De Samblanx concluded that Joe White was "simplifying according to the possibilities or capabilities of the plant, as well [as] processing-wise, [specification]-wise". De Samblanx was also informed that Joe White was seeking certification from Heineken to supply "A" malt and was already delivering "B", "C" and "D" malt, and further, that Doderer was conducting the audits. De Samblanx considered this statement significant, because according to De Samblanx, if Heineken had approved Joe White as a supplier, it verified the (high) standard at which Joe White operated.[1211] De Samblanx drew the same conclusion when he was informed that Joe White also supplied malt to SAB Miller.

2057 With respect to his role generally, De Samblanx admitted that he was a person "well able to judge the capabilities of a malting plant and the capabilities of those who operate the malting plant". According to Eden, the responsibility of considering specific queries (such as the ISO 22000 certification) lay with the management team, and were more relevant to a person of De Samblanx's standing and position in Cargill. It was Eden's understanding that De Samblanx was tasked to "go in and to look at the

---

1210 Being one of the questions devised by Hermus: see par 2002 above.

1211 Further, according to De Samblanx, as a supplier to Heineken, Joe White was also therefore a participant in the HARAM ring test scheme, a proficiency testing standard in which Heineken required its suppliers to submit testing results and ranked those results with other suppliers: see fn 554 above. Suppliers with low rankings were expected to improve. This was a query raised by Hermus in the Operations Spreadsheet.

deeper areas of the operational" performance of the Joe White Business.

2058 Though not to understate Hermus' role in the operations workstream, amongst the individuals involved in the Due Diligence, De Samblanx was primarily responsible for the operations side. In my view, De Samblanx's experience in the industry, the site visits and his general level of involvement were critical in the decision-making process and in providing a more in-depth means of conducting the Due Diligence.[1212]

2059 In summary, De Samblanx was cross-examined extensively on his participation in key meetings, his discussions with key Joe White personnel, and his attendance at Joe White's malting plants regarding the operations aspect of Joe White. Most of these meetings and events Hermus did not attend.[1213] On that basis, it can be said that whilst Hermus was involved in the Due Diligence, his role in the Acquisition pertained to alerting De Samblanx of matters requiring further investigation, and that it was De Samblanx who ultimately needed to be satisfied that the manner in which Joe White operated was acceptable.[1214] Any information that Hermus uncovered during his review of the Data Room was disclosed to, and to the extent considered necessary investigated further by, De Samblanx.[1215]

2060 *Secondly*, the probative value of the documents that Hermus viewed in the Data Room that De Samblanx did not access has not been established.[1216] Although the

---

1212 Indeed, when it was put to him that some of the questions contained in the Tracking Sheet (devised by Hermus) were not formally put to the Viterra Parties because they were of low importance to Cargill, Le Binh stated that "there were other ways to actually collect the information. A lot of the questions get answered through the site visits or through conversations with the Joe White management team".

1213 The fact Hermus' role in the Due Diligence was restricted to viewing documents in the Data Room was reinforced by De Samblanx when he stated that Hermus was "surely not" at the meeting held in Minneapolis between 16 to 18 July 2013, because De Samblanx was "the only one" representing the operations workstream.

1214 It was De Samblanx who informed the other leaders of Project Hawk that he was prepared to proceed with the Acquisition.

1215 De Samblanx gave evidence that Hermus "spot" and "drew to [De Samblanx's] attention" the inventory for gibberellic acid.

1216 By way of background, a spreadsheet was created which recorded which person accessed which document or documents at which time or times: see further fn 3794 below. This spreadsheet was voluminous. It was not tendered in its entirety. The parties were directed to prepare a summary. In short, there were a large number of documents referred to in the spreadsheet not tendered at trial. The agreed summary was put before the court on the basis that it was an annotated version of part of the spreadsheet, which only contained the documents tendered and did not include the full list of the 71 persons representing Cargill who had access to the Data Room. As the agreed summary was confined

contemporaneous record (which was not in dispute) showed De Samblanx accessed 56 documents, whereas Hermus accessed 136 documents, most of these documents were not in evidence.

2061 Relevantly, of the tendered documents there were only 4 documents reviewed by Hermus that De Samblanx did not review: slides comprising the Management Presentation Memorandum; the barley purchasing contracts for the 2010/2011, 2011/2012 and 2012/2013 seasons; the Joe White Maltings Risk Management Policy; and a summary of the key customer contracts. Each of these will be dealt with in turn.

2062 The Management Presentation Memorandum said nothing about the Operational Practices; quite the opposite.[1217] Further, numerous attendees of the Management Presentation were available for cross-examination. It is far from apparent what Hermus might have seen in the Management Presentation Memorandum that no one else did. Nothing was suggested in the Viterra Parties' closing submissions.

2063 The barley purchasing contracts were relied upon by the Viterra Parties for their disclosure of certain facts, including that half of Joe White's contracts for the purchase of malting barley did not specify any particular variety, that Joe White purchased significant quantities of non-grade 1 malting barley, and that Joe White purchased substantial quantities of Hindmarsh in each season.

2064 As to the first of these points, it follows from the fact that around half of Joe White's contracts for the purchase of malting barley did actually specify the particular variety or varieties required that there was nothing disclosed by this which indicated that purchases being made by Joe White would give rise to contractual breaches with customers. Further, the fact that Joe White purchased up to 30 percent of non-grade 1 malting barley was something known generally within Cargill. It was expressly recorded in the notes to the Barley Inventory Call, which became part of the

---

to documents tendered, it did not contain a full list of the documents in the Data Room, but that list was already in evidence as it was part of the Acquisition Agreement.

1217 See pars 716, 718, 727 above.

Acquisition Agreement.[1218] Finally, the knowledge of the use of Hindmarsh has been discussed elsewhere.[1219] It could not be sensibly inferred that Hermus had some special knowledge about this barley variety that others in Cargill did not. Regardless of this, Hermus did not have access to Joe White's customer contracts to know whether or not the use of Hindmarsh was permitted.

2065 It follows that the significance of Hermus accessing the barley purchasing contracts for the preceding 3 financial years was minimal.

2066 The Joe White Maltings Risk Management Policy was not referred to by the Viterra Parties in either their written or oral closing submissions. It was far from clear what was to be considered significant about Hermus reviewing this document. As was observed by Argent's counsel, the key aspects of this policy found their way into the Management Presentation Memorandum. Further, the policy in the Data Room was also reviewed by Bowe, Breszee, Clark, Jewison, Le Binh, Sagaert and Viers, all of whom were witnesses in the case, and were asked questions about this document.

2067 The summary of key customer contracts provided a breakdown of customer sales volumes for Joe White's top 10 customers. This was the only observation made about this summary in the Viterra Parties' closing submissions. There was simply no basis to infer that Hermus gained relevant knowledge above and beyond De Samblanx with respect to operations because he reviewed this document.

2068 Although De Samblanx gave evidence that Hermus viewed documents in the Data Room in "trying to find what was important for him in the area of his responsibility", in light of the above matters, evidence from Hermus about what he viewed would have been of little moment.

2069 *Thirdly*, in circumstances where Cargill, Inc was precluded from knowing details of Hermus' medical affliction, which had been ongoing for a number of years, it was not unreasonable to err on the side of caution as his employer. Even if Cargill had some

---

1218 See pars 924-926 above.

1219 See pars 954-955 above and pars 2702, 2715 below.

idea in mid-2015 about the illness (there was no evidence to suggest that it did), and even if initially that illness had not been serious (which seemed highly unlikely given the duration of his absence), that is not to say that by 2018 Hermus' illness had not developed into something far more serious. Further, whatever might be considered to be someone's "civic responsibility", if Hermus had given evidence in this case it would have been inextricably interwoven with his role as a Cargill employee.

2070 *Fourthly*, and further to the preceding matter, the fact that it was Cargill, Inc's company policy not to communicate with employees whilst on sick leave demonstrated that Cargill, Inc was an employer that erred on the side of caution as a matter of course by refraining from communicating with its employees for fear of harassment or creating undue stress. There was nothing to suggest that Hermus was being treated any differently to the manner in which any other Cargill employee in Belgium on long-term sick leave would have been treated.

2071 *Fifthly*, the fact Cargill previously communicated with Hermus through De Samblanx was of little moment. Although this indicated that Hermus was able to respond to some limited issues relating to the case (albeit to say, effectively, he could not answer any of the questions asked in a substantive manner), and purely as a matter of fact he could have been contacted to be asked whether he could have given evidence in the proceeding, the circumstances surrounding the confined communications on the limited subject matter in February 2018 cannot be ignored. It would have been an entirely different matter to ask Hermus to be a witness in a very large and hotly contested proceeding between 2 multinationals involving millions of dollars.

2072 Turning to the specific inferences the Viterra Parties invited the court to draw:[1220]

(1) There was no basis to find that between October 2014 and June 2015, the Cargill Parties had communicated with Hermus and discussed the evidence he would give in the proceeding. In the first months this proceeding was on foot, the parties were engaged in an extensive

1220 See par 2042 above.

discovery process. There was no order for witness statements or outlines until long after June 2015, and the Viterra Parties did not point to any matter upon which it could be concluded that Hermus had been approached before this time for the purpose of discussing his evidence.

(2) The next inference proceeded on the assumption that Cargill had obtained some form of proof from Hermus. Accordingly there is no basis to draw the inference. In any event, Cargill was justified in relying upon its company policy.

(3) I have accepted that if Hermus had refused to give evidence, the Cargill Parties would have adduced evidence to that effect to explain his unavailability.[1221]

(4) The suggestion that Hermus would not have supported Cargill's case that Joe White routinely, without informing customers, supplied malt in accordance with the Viterra Practices is contrary to the facts as found.[1222] In light of the extensive history evidencing the Viterra Practices, there was no basis for such an inference to be drawn.

(5) This suggested inference, concerning the Undisclosed Matters, appears to run directly contrary to the suggested inference immediately above. In any event, the material relevantly of substance that he reviewed that was in addition to what De Samblanx accessed, provided no basis to suggest Hermus would not have given evidence that the Undisclosed Matters were not disclosed to him or that he was otherwise unaware of them. On the contrary, that material suggested the Undisclosed Matters were also not disclosed to Hermus.

(6) There was nothing in the evidence to infer Hermus would not have given evidence that the Alleged Industry Practices did not exist, nor that

---

1221 See par 2046 above.
1222 See issue 10 below

he was unaware of them. The mere fact that he was involved in the preparation of the Cargill Blending and Certificate of Analysis Procedure at the relevant time did not establish otherwise. Further, the suggested inference is contrary to the facts as found.[1223]

(7) The court cannot form a view about what Hermus would have deposed in relation to whether the Due Diligence was conducted with reasonable care. In those circumstances, no inference can be properly drawn.

(8) It is not necessary to deal with each of the individual beliefs it was alleged by the Viterra Parties that the court should infer Hermus would have had. For the reasons set out above, there is no basis to infer that Hermus' beliefs would have been materially different to those of De Samblanx.

(9) Hermus was not the only person involved in Project Hawk that raised the question as to whether Joe White had a code of conduct. It was self-evidently a prudent question to ask. By asking such a question, the enquirer would not necessarily have made any assumption that Joe White was doing anything unlawful or unethical. There was nothing to suggest that Hermus had such a belief when he made this enquiry. In any event, the question was asked and an affirmative response was received. Presumably, in such circumstances, if Hermus did have any belief of the kind alleged at the time he formulated the relevant question, such a belief would have been dispelled upon being informed that a code of conduct was in place.

2073 Accordingly, save for the minor exception referred to, the court will not draw any of the inferences the Viterra Parties invited it to make. To the extent that the suggested inferences were not contrary to the evidence, essentially the inferences have not been drawn because the Viterra Parties sought to fill gaps in the evidence or elevate what

---

1223 See issue 13 below.

might, at its very highest, have given rise to a bare suspicion to seek that inferences be drawn about what Hermus would have thought, and therefore what Cargill believed. Further, assuming there might have been some basis for an inference, an additional ground for rejecting the submissions was that the court cannot be satisfied that Hermus would have given any evidence of any materiality, adverse to Cargill or otherwise; particularly in light of the other witnesses called. In any event, even if Hermus could have been considered to be a material witness, the decision by the Cargill Parties not to call Hermus was adequately explained by Hermus' extended sick leave, and Cargill, Inc's company policy in the context of Belgian law with respect to not communicating with its employees while on sick leave.

W.3.3.5 Christianson – his role

2074 In his role as 1 of the "content experts", Christianson was responsible for preparing the due diligence report with respect to barley varieties, and along with Purser was assigned as the barley supply chain workstream lead. Christianson was the lead of the global merchandising team, and was responsible for sourcing grain and conducting market analysis "most closely" within the malting business unit. He worked "hand in hand" with members of the grain and oilseeds supply chain in seeking to ascertain synergies in that regard.

2075 Christianson reported directly to Viers.[1224] Viers considered Christianson the individual within Cargill who was dedicated to barley trading and malt sales in Australia "for nearly the full project". During cross-examination, Viers stated that questions pertaining to the sufficiency of supply of malting varieties ought to be directed to Christianson, "the person leading the malting barley assessment".

2076 Viers also gave evidence of the conclusions reached concerning barley supply to Joe White in Australia before the Acquisition Agreement was entered into. He said the conclusions touched upon buying directly from the farmer, position earnings by taking long or short positions, freight economics, and a number of other things. He

---

1224 The evidence was that Viers directed or led Christianson, supervised his work and was the person to whom Christianson "was responsible".

said the work was benchmarked against "a very similar market", being Canada, where there had been a thorough analysis of how things evolved there and what margins were experienced. Further, Viers said Christianson spent several days with trading experts in Melbourne, working in detail to understand the facts relating to barley supply. On the topic of the spread of feed barley and malt barley, although he was certain the question was examined, Viers was unable to give any evidence "as we sit here today" on what the spread was. However, he recalled conclusions on where Cargill believed the sources of value were coming from, and that there were a number of sources, including directly from farmers. As to the effect that the spread had on the production by Australian farmers, Viers' evidence was that he would have observed the spread at the time, but could not recall his observations when giving his evidence.

2077 Christianson devised only 4 questions for the Tracking Sheet,[1225] which were marked as "1 (Critical)". Each of them was put and answered. Broadly, the questions related to: whether all malting barley was purchased through Viterra Ltd, and, if not, what volumes were purchased from other sources; the annual by-product volumes sold by Joe White in the last 3 years; and the use, economic benefit, and the extent of subsequent ownership of the Dom Boxes following the Acquisition. The answers to the 4 questions, as provided on 22 and 23 July 2013, appeared in a column of the Tracking Sheet and were intelligible and responsive to the questions put.

2078 Christianson accessed 53 documents in the Data Room, including: the Management Presentation Memorandum, the barley purchasing contracts for the 2010/2011, 2011/2012 and 2012/2013 seasons, the Joe White Maltings Risk Management Policy, a summary of the key customer contracts,[1226] and various accounts and the Data Books. Like others, he was not permitted to access the black box documents.

2079 Christianson came to Australia in June 2013, but was not present at the Management Presentation as he went to Melbourne "to do barley work". He participated in the

---

1225 Out of a total of 132 questions in the relevant section of the Tracking Sheet: see pars 931-933 above.

1226 Each of these documents has been addressed above: see pars 2061-2067 above.

Barley Inventory Call along with other Cargill employees.[1227] According to Engle, the Barley Inventory Call was "primarily an opportunity … to leverage [Christianson's] expertise and to better understand their barley procurement process".

2080 He also may have attended the meeting in Minneapolis on around 18 July 2013,[1228] considered by De Samblanx as "the most important meeting in the whole process of due diligence". During this meeting, the Project Hawk workstream leaders each indicated that they were prepared to proceed with the Acquisition.

2081 Christianson prepared a due diligence report for Project Hawk in relation to the supply of barley, which he forwarded to Viers on 17 July 2013.[1229] The report included "Key insights". Insights affecting valuation included a statement that the grain and oilseeds supply chain already had resources in place to facilitate the origination of malting barley. Further, it was stated that with the annual demand for Joe White, Cargill would be responsible for originating 20 to 25 percent of the Australian barley crop, and would be a strategic player in the Australian barley market. On the topic of future integration, it was stated there would be a need to originate a large percentage of the volume, in the order of 70 percent, through Cargill's grain and oilseeds supply chain to realise origination synergies. Reference was also made to a need to effectively pass through the actual barley market replacement cost to the customer to achieve projected barley margin revenues.

2082 He also, jointly with Viers, prepared an internal memorandum entitled "Potential Cargill Malt, [Grain and Oilseeds Supply Chain] Australia origination structure" dated 17 July 2013.[1230] This document outlined the proposed terms of a commercial origination agreement between Joe White and Cargill's grain and oilseeds supply chain in Australia to originate the annual "malt barley needs" for the Joe White

---

1227 In addition to the agreed summary of the Barley Inventory Call being in evidence (see par 924 above), each of the other Cargill employees referred to in par 924 above was called to give evidence.

1228 See par 862 above. Neither De Samblanx nor Le Binh could be certain about whether Christianson was there. Eden did not recall the meeting.

1229 No other witness was asked any questions about the comments made in this document: though note par 2076 above.

1230 Viers was not asked any questions about this memorandum; Purser was the only Cargill witness cross-examined about it.

Business. Also on 17 July 2013, Christianson, amongst numerous others, was recorded in an email from Viers as having been required to attend in the malt conference room in Minneapolis to discuss key questions for the upcoming Commercial Call with Hughes. There was no evidence as to whether or not Christianson attended, but it appeared likely that he did.

2083 On the issue of how synergies and margins were estimated in July 2013, Purser gave evidence that the assumption was made (without specific verification or enquiry) that, because of the existing relationship Cargill's grain and oilseeds supply chain had with barley suppliers in Australia, the required varieties of barley would be able to be purchased.

W.3.3.6 The Cargill Parties' submissions

2084 The Cargill Parties submitted that there was no basis on which to draw an inference against Cargill concerning Christianson that would serve to assist in the determination of the issues in dispute.

2085 The Cargill Parties submitted that the fact Christianson's evidence was absent could not fill the "evidentiary gap" that could have suggested Cargill was aware that Hindmarsh (an Australian variety) was a non-malting barley variety being used by Joe White. It was submitted that Christianson, as a merchandising leader in Canada for Cargill, had some knowledge about the barley industry in Australia, but it could not be said that he knew that Hindmarsh was not a malting variety. Further, it was submitted that unless Christianson had access to Joe White's customer contracts, there was no basis to conclude that Christianson would know whether Hindmarsh was a customer-approved barley variety.[1231]

2086 The Cargill Parties also referred to statements made during the Barley Inventory Call that "malt blending with lower and higher grade barley up to 30% of non-malt 1 varieties can be utilised". They submitted that there was no basis for finding Christianson would have understood the implication of that information as being that

---

1231 See also evidence of Purser's knowledge and the difficulties with that part of the Viterra Parties' case: see pars 954-955 above.

Joe White used non-malting grade barley contrary to customer specifications.

2087 Further, Savona made the same enquiries of Christianson as she made of De Samblanx and Hermus with respect to due diligence reports.[1232] In short, Savona's evidence was that Christianson could not recall or could not provide an unequivocal answer as to the status (or whereabouts) of final versions of the due diligence reports for the various workstreams.

W.3.3.7 The Viterra Parties' submissions

2088 The Viterra Parties submitted that there was an expectation that Christianson would be called to give evidence and that the Cargill Parties failed to provide an explanation for failing to do so.

2089 They submitted that Christianson had detailed knowledge of barley procurement in Australia, and the questions he devised for the Tracking Sheet demonstrated that he was investigating whether Joe White was able to procure the barley it required to fulfil customer requirements. They also submitted that having attended the Barley Inventory Call, Christianson was informed on a number of occasions that Joe White utilised "non-malt 1 barley".

2090 Further, the Viterra Parties relied upon the evidence of Viers, to the effect that he did not recall whether he asked Christianson to review documents in the Data Room pertaining to barley varieties or whether Christianson drew his attention to the "large quantities of Hindmarsh barley".

2091 Furthermore, it was also submitted that, given Christianson's familiarity with Cargill's barley requirements for malt, he would have noticed if Joe White's barley procurement was significantly different to that of Cargill.

2092 Moreover, it was submitted, by reference to the cross-examination of Purser, that Cargill was careless in conducting the Due Diligence. The Viterra Parties referred to the memorandum prepared by Viers and Christianson,[1233] and put to Purser that by

1232 See par 2025 above.
1233 See par 2082 above.

not knowing what barley varieties would be supplied by the grain and oilseeds supply chain, Cargill Australia could not have properly identified synergies and analysed margins for the purposes of Project Hawk.

2093 Based on the above, the Viterra Parties submitted that Christianson ought to have been called as a witness, and it should be inferred that "as the person responsible for due diligence in relation to barley supply" he would not have given evidence that the Cargill Parties conducted the Due Diligence with reasonable care.

W.3.3.8 Christianson - conclusion

2094 No inference of the kind suggested by the Viterra Parties will be made by reason that Christianson was not called as a witness. There are a number of reasons for this.

2095 *First*, the relationship between Christianson and Viers was similar to that of Hermus and De Samblanx. Viers was the enterprise risk manager for Cargill, Inc's food ingredient and bio-industrial enterprise. Since 2010, he had been Cargill's global commercial manager for malt, which involved the purchasing of barley and the selling of malt. For Project Hawk, Viers was assigned the commercial leader and became the integration manager for the integration of Joe White. Christianson reported to Viers and assisted Viers during the Due Diligence. With minor exceptions, Viers was able to address the relevant issues concerning barley varieties.

2096 As for the minor exceptions, there was a real possibility that, if Christianson had been called, he may have been able to give evidence on some topics that no other witness was able to address. However, it was highly unlikely this would have been material. Christianson, like the other Cargill employees, was not able to access Joe White's contracts with its customers. In the circumstances, it was not plausible that Christianson could have formed any view that required barley varieties were unavailable or would be unavailable in the foreseeable future. The evidence identifying the relevant circumstances included that barley varieties in Australia were different to those elsewhere, and that it was quite possible that some customers could have authorised the use of non-malting barley or malting barley that was not grade 1. Further, there was no suggestion whatsoever that Joe White was covertly not

complying with customer contracts or specifications.

2097 *Secondly*, there was nothing in the evidence to suggest that Christianson withheld information from Viers. Viers gave evidence that, although he could not recall, he would expect that Christianson would have reported to Viers what he found when he reviewed the information in the Data Room. Viers went so far as to say that if Christianson observed there was Hindmarsh barley in large quantities in Joe White's inventory and he knew it was a non-malting variety, then he would have reported it to Viers. There was no suggestion any such report was made. Viers had no recollection of it.

2098 Further, given the manner in which the Due Diligence was conducted, it would be fanciful to think that Christianson would have discovered a materially adverse piece of information and chose to conceal that fact from Viers and others. Furthermore, documents that Christianson received which purported to demonstrate the use of Hindmarsh barley, such as the minutes of the Barley Inventory Call prepared by Merrill Lynch and Goldman Sachs, were also circulated to Viers. The fact that Cargill was informed of the existence of Hindmarsh barley in Joe White's inventory was not in controversy. Equally uncontroversial was the fact that no one informed Cargill that Hindmarsh was a barley variety which was not approved for malting or that there were no Joe White customers who had approved the use of Hindmarsh and, notwithstanding, Hindmarsh was being used by Joe White in the production of malt for some of its customers.

2099 *Thirdly,* it is important to focus upon the inference invited concerning a want of care in relation to the Due Diligence. The matters referred to above identify why it was that Christianson would not have understood there was or would have been any material problem with barley supply. Further, the Viterra Parties' submissions appeared to run somewhat counter to Christianson being involved in an inadequate due diligence. The submissions included the statement that Christianson received "detailed information" in making the submission that Cargill had "detailed

knowledge" in relation to the procurement of malting barley in Australia.[1234]

2100 Therefore, I do not consider it appropriate for the court to draw an inference that Christianson would have given evidence to the effect that Cargill conducted the Due Diligence without reasonable care or any other inference to the effect that Christianson's evidence would not have assisted Cargill Australia's case.[1235]

W.3.3.9 Savona – her role

2101 Savona was in-house legal counsel at Cargill Australia. Her role in the relevant events became more active in the 2 or so weeks before Completion. As well as taking and giving instructions herself, she attended on a number of occasions when instructions were given to Allens with respect to Cargill being informed about matters relevant to the Operational Practices and what might have followed from that.[1236] She was also directly involved in the preparation of the Cargill 22 October Letter and the Cargill 29 October Letter. No explanation was given as to why she was not called as a witness. She was often present in court during the course of the trial.

W.3.3.10 The Cargill Parties' submissions

2102 The Cargill Parties submitted that there was no evidentiary gap for Savona to fill. In short, they contended the evidence of other witnesses was well and truly sufficient for the court to draw the relevant conclusions about reliance and causation.

W.3.3.11 The Viterra Parties' submissions

2103 The Viterra Parties submitted that Savona had a key role in October 2013. They referred to conversations with Clark and various Cargill employees to which Savona was privy, as well as her involvement in correspondence with the Viterra Parties.

2104 It was contended that the court should draw inferences that Savona would not have given evidence that Cargill was forthcoming in its instructions to Clark about everything Cargill knew relevant to what it had been told up to and including 15 October 2013; nor would she have given evidence that Cargill Australia, and not

---

1234 A significant amount of information was referred to in making this submission, the detail of which is not necessary to set out.

1235 See issue 80 below.

1236 See pars 1161, 1178, 1187, 1195, 1417, 1427 above.

Cargill, Inc, drove the transaction and initiated this proceeding in its own right independently of Cargill, Inc.

W.3.3.12 Savona - conclusion

2105 In relation to the first suggested inference, those who gave instructions to Savona (principally, Viers, De Samblanx and, to a lesser extent, Eden) were all called as witnesses. They were all the subject of cross-examination about the details of instructions given to Allens and Savona. Unlike the other relevant Cargill witnesses, Savona could not have been expected to give material evidence about matters concerning the malting industry or the Joe White Business, or the extent to which the matters under consideration would have been material to Cargill's decision on how to proceed.

2106 Further, Clark was called and, generally speaking, was able to give the substance of the instructions Allens received.

2107 Furthermore, there was no suggestion that Savona herself was responsible for any of the decisions made in October 2013 concerning the course that Cargill might have adopted or did in fact adopt. The same observation may be made in relation to the decision to commence this proceeding.[1237]

2108 Although Savona may have been able to shed some light on the meaning of some of her notes, there was no obvious reason for the Cargill Parties to call Savona as a witness.

W.3.4 Employees who worked at Joe White[1238] and who are not parties to the proceeding

2109 The Viterra Parties identified a number of "Joe White employees" that they submitted ought to have been called by the Cargill Parties.

W.3.4.1 Sheehy – her role

2110 Sheehy was the chief chemist at Joe White, who was appointed as the technical

---

1237 See issue 101 below.

1238 This phrase is used as Joe White was not the employer at the relevant times.

services manager in 2012. Until Cargill took control of Joe White, Sheehy reported to Stewart. She ceased her employment with Cargill in late 2015. Sheehy was the author of both versions of the Viterra Certificate of Analysis Procedure. Stewart delegated to Sheehy the task of preparing the first draft, and approved both versions. Although McIntyre was the person who changed results on most Certificates of Analysis up to October 2013, from time to time Sheehy was also involved in pencilling results and arranging for Certificates of Analysis to be issued in accordance with the changed results.

W.3.4.2 The Cargill Parties' submissions

2111 The Cargill Parties submitted that there was already very extensive and clear evidence about all the matters upon which Sheehy could have given evidence. In those circumstances, it was contended it was unnecessary to call her.

W.3.4.3 The Viterra Parties' submissions

2112 The Viterra Parties referred to various facts and sought to demonstrate that significant matters were not the subject of evidence because Sheehy was not called.

2113 They referred to an email sent by Sheehy in October 2012, and submitted that it was Sheehy who decided that the second version of the Viterra Certificate of Analysis Procedure should be marked as obsolete.[1239] In fact, the email stated that "we" had decided to make the procedure obsolete, the email having been copied to several other employees including Stewart and McIntyre. This email was not put to either Stewart or McIntyre during their cross-examination. In the circumstances, on the face of the document, it suggested that the decision was not made by Sheehy alone. Further, although during Stewart's cross-examination by the Cargill Parties he agreed that Sheehy seemed to be taking the lead when it came to organising for the filing of the Viterra Certificate of Analysis Procedure as obsolete, there was no suggestion that it was only her decision to "disguise" the document in this way. The evidence was to the opposite effect.[1240]

1239 See par 287 above.

1240 Ibid. See in particular the reference to Hughes' direction.

2114 Next, the fact that Sheehy took over the responsibility for benchmarking compliance with the Viterra Certificate of Analysis Procedure was referred to.[1241] However, this evidence was of little significance. When Testi was responsible for benchmarking before Sheehy took over, she said the spreadsheet created for that purpose was only used for a very short period of time. Further, there was no evidence referred to by the Viterra Parties of the details of the benchmarking performed by Sheehy, much less why that evidence might be material given the amount of discretion that existed under the Viterra Certificate of Analysis Procedure, particularly with respect to pencilling and the approval of out-of-specification malt for shipping.

2115 Next, the Viterra Parties correctly pointed out that the evidence did not establish which of the test results were adjusted by any of McIntyre, Sheehy or Moller. McIntyre gave evidence that both Sheehy and Moller also engaged in pencilling, but she could not even hazard a guess as to what proportion of the total Certificates of Analysis issued were the result of either Sheehy or Moller changing test results. However, the submission did not address the uncontested evidence of McIntyre that she changed the test results on most occasions.[1242]

2116 Next, it was submitted that in light of McIntyre's evidence that she did not understand why some adjustments were being made by other staff, and that Sheehy had more technical knowledge than McIntyre, Sheehy ought to have been called. But this submission did not address the fact that Stewart was amply qualified to answer any technical questions with respect to the Viterra Certificate of Analysis Procedure. Indeed, he was asked many questions on the topic. Further, when it was put to McIntyre that each of Stewart, Testi and Sheehy had more technical knowledge about the science of malting than her, McIntyre gave unchallenged evidence that Stewart did but expressed doubt about Sheehy in stating "perhaps, yes". There was no gap in the evidence in this regard. Again, it was relevant that it was McIntyre who, herself, was responsible for most of the pencilling giving rise to the issuing of the Certificates of Analysis. Furthermore, McIntyre gave evidence that at times, Sheehy's Sign-Out

1241 See par 224 above.
1242 See pars 75-76 above.

Reports would show amendments to results that were within specification, and she did not understand why those amendments had been made, but also said on those occasions she would discuss the amendments with Sheehy. McIntyre was asked no questions during cross-examination about those discussions.

2117 Next, the Viterra Parties referred to the fact that Sheehy was originally a witness on Cargill's witness list, but before the trial started the court was informed she would no longer be a witness.

2118 The Viterra Parties submitted that because Sheehy was not called by the Cargill Parties it ought to be inferred that Sheehy's evidence, in relation to each of the matters listed below, would not have assisted Cargill's case that Joe White routinely supplied Certificates of Analysis that misstated the results of analytical testing and reported that the malt complied with contractual requirements and specifications when it did not:

(1) The preparation of the Viterra Certificate of Analysis Procedure (including its purpose, how it was intended to operate and the outcome it was intended to achieve).

(2) The reasons why the Viterra Certificate of Analysis Procedure was marked obsolete in "Viterra's system" and not stored in official procedure folders.

(3) Any instructions that Sheehy gave to Moller or McIntyre, or both, in relation to how the Viterra Certificate of Analysis Procedure should be applied.

(4) The purpose for and manner in which Sheehy made adjustments herself.

(5) The reasons for any differences between original test results (as measured by Sheehy "or members of her team") and reported results (as adjusted by her).

(6) The factors Sheehy considered when deciding whether to approve Certificates of Analysis.

(7) The manner and extent to which members of the "Technical Services Team" (including McIntyre and Moller "as her proxies from 26 September 2012")[1243] complied with the Viterra Certificate of Analysis Procedure, having regard to Sheehy's supervision of them, and further or alternatively in her role in benchmarking compliance with the Viterra Certificate of Analysis Procedure.

W.3.4.4 Sheehy - conclusion

2119 A number of the bases upon which the Viterra Parties sought to place significance on the evidence Sheehy might have given have already been rejected in addressing the position they adopted. More generally, whatever approach Sheehy might have taken with respect to the propriety or otherwise of the Viterra Certificate of Analysis Procedure,[1244] on the evidence before the court it would not reasonably be open to draw any inference to the effect that Joe White was not routinely engaged, up until October 2013, in misstating the test results in Certificates of Analysis.[1245]

W.3.4.5 Moller - her role

2120 Moller was the technical centre chemist at Joe White from around May 2009.[1246] Under the first version of the Viterra Certificate of Analysis Procedure, Moller (or her nominated proxy) was stated to be the person authorised to make adjustments to test results.[1247]

1243 See fn 238 above.

1244 Compare the position of Stewart who was entirely unsuccessful in any attempt to justify the underlying premise of the Viterra Certificate of Analysis Procedure: see, for example, pars 168-182 above.

1245 See issue 10 below.

1246 This evidence was taken from Stewart's witness statement. In giving extensive evidence about the operations of Joe White, it was the only time throughout the entirety of Stewart's evidence that he referred to Moller.

1247 The Viterra Parties submitted that as neither version of Joe White's sign-off procedures, dated 9 July 2010 and 26 September 2012, identified any proxies for the technical centre chemist, it followed that Moller was the only person authorised to make adjustments under the first version of the Viterra Certificate of Analysis Procedure: see also fn 238 above as to the position under the second version. There were 2 difficulties with this submission. *First*, the uncontested evidence of McIntyre that, as a matter of fact, it was McIntyre who changed most of the results with respect to Joe White's Certificates of Analysis. *Secondly*, neither of the sign-off procedure documents was put to any witness, nor was any

W.3.4.6 The Cargill Parties' submissions

2121 Essentially, the Cargill Parties adopted the same approach with Moller as they did with Sheehy. In light of the evidence led, they contended it was unnecessary to call Moller as a witness.

W.3.4.7 The Viterra Parties' submissions

2122 The Viterra Parties referred to the Cargill Parties' opening, in which it was stated that Moller would be called to give evidence in relation to Joe White "shipping malt as though it was within specification when it was not". They further referred to the Cargill Parties informing the court on day 32 of the trial that Moller would no longer be called as it was not necessary having regard to the matters covered already by McIntyre. The Viterra Parties submitted that not calling Moller should not be seen as anything other than a forensic decision, and it ought to be inferred that it was considered the testimony would not be sufficiently helpful to the Cargill Parties.

2123 Similar to the submission made with respect to Sheehy, the Viterra Parties contended Moller's evidence would not have assisted Cargill's case with respect to the Reporting Practice with regard to the following matters:

(1) Any instructions provided to Moller by Sheehy in relation to how the Viterra Certificate of Analysis Procedure was to be applied (including in relation to the period up to 26 September 2012 when Moller was the "only person authorised to make adjustments").[1248]

(2) The purpose for and manner in which Moller made adjustments herself (including in relation to the period up to 26 September 2012).

(3) The reasons for any differences between original tests (as measured by Moller) and reported results (as adjusted by Moller) (including in relation to the period up to 26 September 2012).

---

proposition to the effect that because of these documents no one other than Moller was authorised to make adjustments. For completeness, the evidence was that Sheehy also made changes.

1248 See fn 1247 above.

W.3.4.8 Moller - conclusion

2124 For substantially the same reasons that the court declined to draw inferences with respect to Sheehy, none of the suggested inferences will be drawn in relation to Moller. In short, Cargill led more than enough evidence to establish its case on the issue of the Reporting Practice and the Undisclosed Matters; the evidence that was led established that none of the suggested inferences were open.

W.3.4.9 Production managers

2125 In light of the rulings given above concerning Sheehy and Moller, this aspect of the Viterra Parties' submissions may be dealt with briefly. Essentially, they contended it should be inferred that none of the production managers were called because their testimony would have been unfavourable to the Cargill Parties. It was submitted that their absence, coupled with the failure to tender data about domestic customers, meant it ought to be inferred that their evidence would not have assisted in establishing the routine adoption of the Reporting Practice to misstate test results. The absence of evidence with respect to domestic customers is dealt with elsewhere.[1249] As the evidence led by the Cargill Parties clearly established the Operational Practices were routinely implemented, including by witnesses to whom the production managers reported, there was no significance in the fact that none of the production managers gave evidence.

W.3.5 Former employees who worked at Joe White and who are Third Party Individuals

2126 There were 2 potential witnesses identified to fall into this category, Hughes and Wicks. The position of Hughes has been dealt with elsewhere, including the fact that Hughes was not a person in Cargill's camp.[1250] Quite the contrary, once Hughes became a third party to the proceeding, he had a direct interest in the Viterra Parties succeeding because if they were to do so no claim could be successful against Hughes. Further, given the clear and incontrovertible role Hughes had in signing off on substantial parts of the Information Memorandum and the Management Presentation

---

1249 See pars 225, 283 above and pars 2318-2319, 2413 below.

1250 See par 1970 above.

Memorandum, together with the manner in which he presented the Joe White Business more generally before mid October 2013, it would be expected that Hughes' position would be very defensive to many of the more significant allegations made by Cargill Australia.[1251]

2127 With respect to Wicks, the Viterra Parties referred to him being responsible for negotiating supply contracts and maintaining customer relationships. On this basis, it was submitted that Wicks would be "the relevant person who may *perhaps* have been able to shed some more light on the issue [of the Varieties Practice]" (emphasis added). The Viterra Parties also highlighted the fact that Wicks was subpoenaed by the Cargill Parties to give evidence, and that the outline of evidence was filed on his behalf by them. Based on these matters, it was contended that the court should infer that Wicks would not have given evidence in support of the allegation that Joe White routinely failed to comply with customer requirements concerning barley variety.

2128 In my view, there is no basis to draw the suggested inference. Like Hughes, as a third party in the proceeding, Wicks was not in Cargill's camp. Further, there was little significance in the fact that, early in the trial, the Cargill Parties chose to subpoena Wicks and file a witness outline of the evidence they anticipated he was going to give, along with each of the other Third Party Individuals. No doubt, this would have been done out of an abundance of caution in the event that the Cargill Parties formed the view after calling their other witnesses that there were still some matters that needed to be the subject of evidence. It must be inferred that, having obtained the evidence of others, including Lindner being called by the Cargill Parties and Stewart being called by the Viterra Parties,[1252] the Cargill Parties concluded it was unnecessary to call any of the Third Party Individuals in order to prove Cargill Australia's case. Further, in light of what Hughes said on the topic of barley varieties in October 2013,[1253] if any inference were to be drawn about what Wicks might have said, it would

---

1251 Similar to Stewart's position: see par 168 above. But, again like Stewart, such defensiveness would not equate to being able to justify the Viterra Practices or, with respect to Hughes, the Undisclosed Matters.

1252 For reasons it is not necessary to explain here, the Cargill Parties had the ability to call further evidence by way of evidence from the Third Party Individuals after Stewart had given his evidence: *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 12*) [2018] VSC 454, [30]-[31].

1253 See par 1307 above.

be the opposite to that suggested by the Viterra Parties.

W.3.6 Employees who worked at Joe White and who are Third Party Individuals

2129 There were 2 potential witnesses in this category of Third Party Individuals, Youil and Argent.

2130 In relation to Youil, the Viterra Parties referred to the fact that he was general manager of operations at Joe White from 2010 until after the Acquisition, and would have been capable of giving evidence in relation to Joe White's operational capabilities both pre- and post-Acquisition, including what particular factors impacted its operations.

2131 With respect to Argent, the Viterra Parties relied upon Argent being the financial controller of Joe White at all relevant times, including after the Acquisition. They submitted he could have given evidence of Joe White's financial performance, including what particular factors impacted Joe White's financial results.

2132 Although the position was not as clear as that of Hughes and Wicks given that Youil and Argent were employees of Cargill at the time of trial, in my view it could not be said with any conviction that Youil or Argent were relevantly in Cargill's camp. Despite their position as employees, they were being sued for significant amounts in this proceeding as individuals. Each of them had separate independent legal representation. Further, like Hughes and Wicks (and Stewart), it was in the direct interests of each of Youil and Argent as individuals for Cargill Australia's claim to fail.

2133 For completeness, the same observations made in relation to Wicks may be made with respect to the fact that Youil and Argent were the subject of subpoenas issued at the behest of, and witness outlines of evidence filed by, the Cargill Parties.

W.3.7 Joe White's customers

2134 The issue with respect to Joe White's customers was that none was called in circumstances where the Cargill Parties contended that those customers were misled by the Operational Practices.

W.3.7.1 The Cargill Parties' submissions

2135 It was submitted that it was unnecessary for any of Joe White's customers to be called (who, of course, became Cargill customers) because of the extensive evidence tendered that demonstrated that compliance with contractual terms was a matter of utmost importance to customers. Those documents were tendered for the truth of their contents. They also referred to the evidence of Joseph Hertrich ("Hertrich"), called as an expert brewer, as to the absence of the Alleged Industry Practices.[1254] Further, it was submitted that it could be readily understood that considerable difficulty would be created in maintaining commercial relations if Cargill was to ask brewers to come to court to give evidence about something in the past when Cargill had gone to great lengths to restore the relationships. Furthermore, it was submitted that it was fatuous to suggest that the court would not know the position of customers' expectations because they were not called.

W.3.7.2 The Viterra Parties' submissions

2136 The submissions of the Viterra Parties were premised on the basis that Cargill had failed to prove the analytical specifications of Joe White's customers and the failure to meet those specifications. On this basis, it was submitted that it must follow that it had not been established that Joe White misstated analytical test results when providing Certificates of Analysis. After referring to the inferences that it was contended ought to have been drawn by reason of Sheehy, Moller, and the production managers not being called, it was submitted that Cargill had also failed to establish this allegation because none of Joe White's customers were called.

2137 Further, it was submitted that Cargill had failed to lead evidence in relation to what Joe White's obligations to its customers were in relation to information reported in Certificates of Analysis. By way of example, it was submitted that it had not been established that Joe White's customers expected that a Certificate of Analysis would record the "rule measurements" of individual test results, rather than "simply being a representation of what the attributes of the lot were based on various factors which include[d] Joe White's consideration of the raw analytical test results". In addition,

---

1254 See par 2817 below. See more generally issue 13 below.

the Viterra Parties submitted that, in light of the limitations of analytical testing procedures, it was more likely that Joe White's customers had an expectation that Certificates of Analysis would report something other than "raw analytical test results". Finally, in these circumstances, it was submitted that not calling any customers should give rise to the inference that those customers did not in fact expect Certificates of Analysis would record raw analytical test results without regard to factors such as bias, error and uncertainty.

2138 The Viterra Parties suggested that there may have been various reasons why Cargill called no customers, including that Cargill could not identify with precision which particular shipment or shipments Joe White should have told customers about, or which customers were unsatisfied with the malt supplied.

W.3.7.3 Joe White's customers - conclusion

2139 The underlying premise of these submissions, namely that the analytical specifications of customers and the failure to meet those specifications was not established, has been rejected.[1255] Further, in circumstances where the evidence was that breweries treated their specifications and the requirement to meet them seriously,[1256] there was no sensible basis to infer that Joe White's customers across the board would have permitted a completely non-transparent process to be engaged in, whereby results were allowed to be amended and reported differently even when beyond 2 standard deviations. Nor could it be inferred that they would have assumed such matters would have been occurring.[1257]

2140 Additionally, it would be self-evidently unseemly (given the subject matter) for Cargill to call upon its customers to get involved in a dispute between it and another large multinational in relation to conduct that occurred approximately 5 or more years before the trial. In some cases, it might be necessary for a corporation to do such a thing in order to establish its case. In this case it was not.

2141 For completeness, insofar as customers might have given evidence about the Alleged

---

1255 See pars 2324-2413 below.
1256 See, for example, pars 18, 1709, 1834 above and pars 2817-2821 below.
1257 See issue 13 below.

Industry Practices, it was the Viterra Parties who raised the issue by way of a defence. Establishing the extent or otherwise of any industry practices formed no part of Cargill Australia proving its case. Furthermore, and in any event, the Viterra Parties submitted that the "only rational way" the evidence from the industry experts could be reconciled was on the basis that the Alleged Industry Practices were not ordinarily disclosed to customers. In these circumstances, and accepting the premise of this submission for present purposes only, on the Viterra Parties' own case there was no real prospect that customers might have given probative evidence about the existence or otherwise of the Alleged Industry Practices. Moreover, in circumstances where Joe White went out of its way to conceal the Operational Practices, it was highly likely that Joe White's customers would not have been aware of them.

W.3.8 Viterra employees

2142 The Cargill Parties identified a number of witnesses that were not called by the Viterra Parties, including Hughes, Fitzgerald, Rees, Norman, Pappas, Gordon, Ross and Mahoney. They contended that an inference ought to be drawn that the evidence of each of those witnesses would not have assisted the Viterra Parties' case. To the extent considered necessary, the Cargill Parties' submissions on this point will be examined in the context of the relevant issues below.

W.3.9 Some further remarks

2143 The matters set out above deal with the submissions concerning the absence of certain witnesses at trial. Although these reasons need not be supplemented, before leaving this topic some further observations should be made. There were many individuals who could have given evidence that were not called. In the context of a trial that commenced in June 2018 and had its last hearing date in April 2020,[1258] with a total of 114 hearing days, considerations of whether or not witnesses ought to be called must also be considered in light of the overarching purpose of conducting civil proceedings

[1258] This does not include hearings in 2021 in relation to applications concerning confidentiality issues: see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 26)* [2021] VSC 242; *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 27)* [2021] VSC 321.

in a manner to facilitate the just, efficient, timely and cost-effective resolution of the real issues in dispute.[1259] Leaving aside that some key witnesses in the case (including some of the parties themselves) did not give evidence, for the Cargill Parties and the Viterra Parties to have called all potential witnesses would have substantially increased the duration of the trial. Such a course would not have been consistent with the overarching purpose prescribed by the *Civil Procedure Act*.

X. Issues for determination

2144 As has been noted,[1260] the parties helpfully provided the court with a list of issues requiring determination. Broadly speaking, the issues were grouped into the various claims, counterclaims and third party claims in the proceeding, and sequentially addressed the questions of fact and law necessary to resolve those claims. As may be expected in a case of this magnitude and complexity, elements of some issues overlap in such a way that makes their neat categorisation difficult, and consequentially findings have been cross-referenced between issues where necessary. Nonetheless, the remainder of this judgment is structured according to the parties' agreed list of issues.

2145 Without being exhaustive, the issues for determination fell into the following broad categories:

(1) **Issues 1-23** address Cargill Australia's claims for misleading or deceptive conduct and deceit in respect of the Financial and Operational Performance Representations and other matters relating to the sale process and its context.[1261]

(2) **Issues 24-38** address Cargill Australia's claims for misleading or deceptive conduct and deceit in respect of the Pre-Completion Representations.[1262]

1259 *Civil Procedure Act*, s 7.
1260 See par 1861 above.
1261 See par 2826 below.
1262 See par 3299 below.

(3) **Issues 39-47** address Cargill Australia's claims that Viterra breached certain Warranties in the Acquisition Agreement.

(4) **Issues 48-53** address Cargill Australia's claims for misleading or deceptive conduct and deceit in respect of the Warranty Representations.[1263]

(5) **Issues 54-60** address Cargill Australia's claims for misleading or deceptive conduct and deceit in respect of the Other Bidders Representations.[1264]

(6) **Issues 61-68** related to certain claims arising in respect of the Co-Operative Bulk Agreement, however these claims were abandoned by Cargill Australia in closing submissions.

(7) **Issues 69-72** address various matters relating to an expert determination on certain issues.

(8) **Issues 73-84** address loss and damage claimed by Cargill Australia.

(9) **Issues 85-99** address the Viterra Parties' counterclaims against Cargill Australia.

(10) **Issues 100-123** address the Viterra Parties' third party claims against Cargill, Inc.

(11) **Issues 124-134** address the Viterra Parties' third party claims against Joe White and the Third Party Individuals for misleading or deceptive conduct.

(12) **Issues 135-143** address the Viterra Parties' third party claims against the Third Party Individuals for breach of contract.

(13) **Issue 144** addresses Cargill, Inc's counterclaim in relation to the

---

1263 See par 3739 below.

1264 See par 3777 below.

Confidentiality Deed.

(14) **Issue 145** addresses clause 15.4(b) of the Acquisition Agreement and what effect that clause has on Cargill Australia's claims as a result of the sale of Joe White by Cargill in 2019.

X.1 Did the Information Memorandum contain statements pleaded in the Statement of Claim and in the Defence?

2146 Ultimately, there was no issue that the relevant parts of the Information Memorandum pleaded by Cargill Australia and the Viterra Parties respectively in substance reflected those parts of the Information Memorandum relied upon.[1265] The statements in the Information Memorandum upon which Cargill Australia contended that it relied in 2013, were as follows:

(1) Joe White's historical and forecast future operational and financial performance was as set out in the Information Memorandum.[1266]

(2) Joe White's earnings platform was supported by its long-term customer contracts.

(3) Joe White's business model was focused on developing relationships with key global and regional brewers underpinned by Joe White's high-quality product and tailored service offering.

(4) The effectiveness of Joe White's business model was demonstrated by the strong track record of contract renewal and the strength of customer relationships.

(5) Joe White's leading Australian market position was underpinned by long-term customer relationships, and its earnings platform was supported by long-term customer contracts and a strong history of contract renewals.

(6) Joe White was focused on developing a detailed understanding of specific customer requirements with respect to volume, demand, consistency, certainty of supply and innovation.

(7) Joe White's strong track record of contract renewal demonstrated the depth of the customer relationships and the quality of the service offering.

(8) Joe White devoted significant time and effort to understand its customers' product specifications.

(9) Joe White had an annual production capacity as set out in the Information Memorandum, in a portfolio of modern, well-capitalised, state-of-the-art manufacturing facilities with high levels of capacity utilisation as set out in the Information Memorandum.[1267]

1265 The terms of the Information Memorandum and related matters are relevantly set out in pars 475-542 above.

1266 See annexure B to these reasons.

1267 This included information set out in par 532 above.

(10) Joe White's asset base included best-in-class production facilities requiring limited future capital investment after the 2013 financial year.

(11) Over the last 10 years, Joe White had undertaken a substantial capital investment program which had created a state-of-the-art manufacturing footprint with high operational efficiency and low future capital needs in the short to medium term.

(12) Joe White's production function was underpinned by state-of-the-art manufacturing facilities which consistently produced high-quality malt.

(13) Joe White utilised technical analysis and strict quality control measures to ensure that customer specifications were consistently met.

(14) Joe White's high-quality manufacturing assets had an outstanding reputation for product uniformity, consistency and an ability to produce to a customer's exact specifications, and 1 of its key areas of focus included creating state-of-the-art malt analytical laboratories to ensure the highest level of quality assurance.

(15) Joe White had a "proven effective business model" underpinned by a commitment to quality, in that Joe White's business model was focused on delivering high-quality products and adhering to specific customer requirements.

(16) Joe White's business model was focused on ensuring its customers received the highest quality malt to meet their exact specifications and requirements. To achieve this, Joe White ensured that quality remained the key consideration across each of its key operational functions of sales and marketing, procurement and production.

(17) Joe White's success was based upon its strong commitment to consistently meet the product specifications of its customers.

(18) Joe White had an unrelenting focus on quality across all areas of its business to ensure that it met customers' requirements.

(19) Joe White had consistent access to high-quality malting barley.

(20) Joe White's procurement function was focused on the selection of high-quality barley that best met customers' specifications.

(21) Joe White's procurement process was focused on meeting customer specifications.

(22) Once a customer's specific needs had been identified, the procurement function ensured the appropriate quantity of malting barley was acquired to meet the specifications.

(23) The barley procurement function was driven by the sales and marketing team, together with "Technical", identifying varieties best suited to meet customers' malt specifications.

(24) Stringent internal protocols and control measures were in place across the entire production cycle.

(25) Regular compliance and audit of all production facilities was undertaken.

(Collectively, "the Information Memorandum Statements".)

2147 The Viterra Parties submitted that the Information Memorandum Statements had to be understood in the context of the relevant disclaimers, including those contained in the Information Memorandum. In addition, they pleaded that the Information

Memorandum contained the following:[1268]

(1) The document comprising the Information Memorandum had been prepared by Glencore and its subsidiaries to provide background information to assist the recipient in deciding whether to further consider the possible acquisition of Glencore and its subsidiaries' interest in the malt business trading as "Joe White Maltings" ("Proposed Transaction").

(2) This document was being provided on a confidential basis to selected recipients.

(3) In accepting this document, each recipient agreed for itself and its related bodies corporate and their respective directors, officers, employees, agents, representatives and advisers (together, the "Recipients") that it was provided on the terms and conditions of this disclaimer.

(4) This document was being delivered subject to the terms of a confidentiality undertaking and may only be used in accordance with the terms of such confidentiality undertaking.

(5) This document was not to be considered as a recommendation or legal or financial advice by Glencore or any of its affiliates or subsidiaries (the "Glencore Group"), Merrill Lynch International or any person named in or involved in the preparation of this document or any of their respective directors, officers, employees, agents, contractors, advisers, shareholders, partners, related bodies corporate or affiliates (together, the "Discloser") in relation to the Proposed Transaction.[1269]

(6) The Recipient should conduct and rely on its own investigations and analysis of the information in this document and other matters that may be relevant to it in considering the Proposed Transaction.

(7) A Recipient that was considering the Proposed Transaction must make, and would be taken to have made, its own independent investigation and analysis of the information in this document.

(8) Independent expert advice (including from a Recipient's accountant, lawyer or other professional adviser) should be sought before making a decision in connection with the Proposed Transaction.

(9) This document did not purport to contain all the information that may be necessary or desirable to enable the Recipient to properly evaluate and consider the Proposed Transaction.

(10) To the maximum extent permitted by law, no representation, warranty or undertaking, express or implied, was made and, to the maximum extent permitted by law, no responsibility or liability was accepted by the Discloser or any other person as to the adequacy, accuracy, correctness, completeness or reasonableness of this document, including any statements or information provided by third parties and reproduced or referred to in this document, or any other written or oral communications transmitted or made available to a Recipient.[1270]

1268 In relation to subparagraphs (1) to (23), the disclaimer in full appears at par 475 above.

1269 This term appeared under the heading "Recipient to Conduct own Investigation and Analysis".

1270 This term appeared under the heading "No Responsibility for Contents of Document".

(11) To the maximum extent permitted by law, no responsibility for any errors in or omissions from this document, whether arising out of negligence or otherwise, was accepted.

(12) The information contained in this document had not been independently verified.

(13) This document contained various opinions, estimates, forward-looking statements and forecasts which were based on assumptions which may not prove to be correct or appropriate.

(14) No representation or warranty as to the fairness, adequacy, accuracy, validity, certainty or completeness of any of the assumptions, information, opinions, estimates, forward-looking statements or forecasts contained in this document or any written or oral information made available to any interested party was made by the Discloser and no liability whatsoever was accepted by any such Discloser in relation to any such information, opinion, estimates or forecasts.

(15) The information or opinions contained in this document or any written or oral information made available to any interested party did not purport to be comprehensive and had not been independently verified.

(16) The Discloser was under no obligation to correct any errors or omissions in connection with the information contained in this document.

(17) Each Recipient acknowledged that no person had been authorised to give any information concerning the Joe White Business or the Proposed Transaction itself other than as contained in this document and, if given, that information could not be relied upon as having been authorised by the Discloser.[1271]

(18) In particular, no representation or warranty was given as to the accuracy, completeness, likelihood of achievement or reasonableness of any forecasts, projections or forward-looking statements contained in this document.[1272]

(19) Forecasts, projections and forward-looking statements were by their nature subject to significant uncertainties and contingencies.

(20) A Recipient should make its own independent assessment of the information and should seek its own independent professional advice in relation to the information in any action taken on the basis of the information.

(21) The information contained in this document had been prepared as at 1 May 2013.

(22) The Discloser made no representation or warranty that the information contained in this document remained correct at, or at any time after, 1 May 2013.

(23) The Discloser was under no obligation to update this document or to correct any inaccuracies contained in this document at any time after 1 May 2013.

(24) Joe White was able to generate stable earnings through expansion in malt margins and a disciplined approach to cost reduction.

(25) The Management team of Joe White included: Hughes as executive manager; Argent as financial controller; Wicks as general manager, commercial; Stewart as general manager, technical; and Youil as general manager, operations.

(26) Financial information for the forecast period of the 4 years ending 31 October 2016 had been prepared by Joe White management.

1271 This term appeared under the heading "Acknowledgements".

1272 This term appeared under the heading "Accuracy of Financial Information".

(27) Joe White management's primary focus during the 3 years ending 31 October 2012 had been on increasing malt margins, rather than sales revenue.

(Together, "the Information Memorandum Disclaimers".)

X.2 During the Operations Call, did representatives of (a) Glencore and/or (b) Viterra say words to the effect pleaded in paragraph 17 of the Statement of Claim?[1273]

2148 The circumstances and content of the Operations Call have been described elsewhere.[1274] Given some of the submissions made, it is necessary to set out precisely what was alleged in the Statement of Claim to have occurred during the Operations Call.

2149 Cargill Australia alleged:

> In [the Operations Call] between representatives of Cargill and representatives of Glencore and/or Viterra on 18 July 2013:
>
> (a) representatives of Cargill asked how [Joe White] dealt with quality problems when they arose;
>
> (b) representatives of Glencore and/or Viterra said words to the effect that:
>
> (i) [Joe White] malt plants supplied to a customer base with a wide range of specifications, enabling malt to be reassigned to another customer in the event it did not meet targeted specifications;
>
> (ii) [Joe White] was able to blend malt into a wide variety of specifications;
>
> (iii) [Joe White]'s plants were sufficient to produce malt to customer specifications; and
>
> (iv) all of [Joe White]'s malt plants had malt storage capacity that was more than sufficient for their requirements, save that, in Sydney, construction of sufficient storage capacity was underway.

(Collectively, "the Operations Call Statements".)

2150 It was admitted by the Viterra Parties that, during the Operations Call representatives

---

1273 The phrase "and/or" appeared frequently in the parties' agreed list of issues, and has been adopted accordingly.

1274 See pars 865-884 above.

of Cargill, Inc or Goldman Sachs, or both, asked questions about quality and specifications, and storage. Specifically, with respect to quality and specifications, it was admitted that questions were asked about how often Joe White experienced quality problems; how Joe White reprocessed product that was not within specifications; and what were the internal tolerances around specifications. It was further admitted that it was asked, in looking at the system and current storage limitations, what sorts of challenges that presented; whether Joe White had outside storage or outside blending capabilities; and how Joe White managed malt quality and grades of barley for its customers.

2151 As to the responses given, it was admitted that *Hughes or Youil*, or both,[1275] made the following statements during the Operations Call:

(1) Joe White's plants supplied to a customer base with a wide range of specifications, enabling malt to be reassigned to another customer in the event it did not meet the originally targeted specifications.

(2) Joe White was able to blend malt into a wide variety of specifications.

(3) All of Joe White's malt plants had malt storage capacity that was more than sufficient for their requirements, other than Sydney, where the plant was in the process of building 2 additional storage silos.

2152 Ultimately, as between Cargill Australia and the Viterra Parties,[1276] 2 issues remained in dispute. *First*, whether Hughes or Youil, or both, made the statement that "Joe White's plants were sufficient to produce malt to customer specifications". *Secondly*, whether Hughes or Youil, or both, were acting as representatives of Glencore or

---

1275 To be clear, this admission still left in issue the extent to which Youil made any of the Operations Call Statements.

1276 Some additional matters were raised by Youil in the context of his defence to the Third Party Claim against him, which are dealt with below: see par 2156 and fn 1280 below. To be clear, the allegations against Youil in the Third Party Claim against him were that he made the alleged statements to Glencore and Viterra. During closing submissions, the Third Party Individuals were told that the court was proceeding on the basis that none of the Third Party Individuals took issue with any of the admissions in the Viterra Defence unless it was told otherwise. After this position was stated, no Third Party Individual raised any such issue.

Viterra, or both, during the Operations Call.

2153 In paragraph 17 of the Statement of Claim, the alleged statements were the subject of particulars, which stated the Operations Call Statements were oral and made by both Hughes and Youil. The record of the Operations Call was relied upon.[1277] The particulars did not further allege that the statements pleaded were also implied by what was actually expressly stated.[1278] Accordingly, the first issue required a comparison between the agreed record of the Operations Call and any other evidence given of what was actually stated, and the specific statements alleged.

2154 As already noted, there was no dispute that during the Operations Call, in response to questions about the frequency of quality problems and the ability of Joe White to reprocess malt not within specifications, it was stated that Joe White supplied to a customer base with a wide range of specifications and this enabled it to reassign to another customer "in the event the malt did not meet the specification it was originally targeted towards".

2155 The Cargill Parties submitted it was implicit in such statements that Joe White was supplying malt that met customer specifications. They also relied upon the subsequent statement made in the same context that all of Joe White's plants (other than Sydney, which was being expanded) had "more than sufficient" malt storage capacity to meet Joe White's requirements.[1279] There was considerable force in these submissions, but they did not reflect how the case was pleaded. Accordingly, although it was likely De Samblanx understood from what he was told that Joe White's plants were sufficient to produce malt to customer specifications and, for that matter, that Joe White's Sydney plant would have sufficient malt storage itself after the construction of the 2 additional silos was completed, those statements were not

---

1277 See par 884 above.

1278 This is not an insignificant matter, and may have affected the manner in which cross-examination was conducted. When the way in which the allegation had been pleaded was raised in closing submissions, the Cargill Parties' senior counsel accepted that the allegations may have been pleaded very economically. It was submitted that annexure E to the Statement of Claim made it clear what was relied upon. However, it was reaffirmed that the Cargill Parties' position was that the words were not said and that the statement in question arose by way of implication.

1279 See par 884 above.

actually made expressly and thus the allegations as pleaded were not made out.

2156 For completeness, it was alleged in paragraph 17 of the Statement of Claim that it was represented during the Operations Call that construction of "sufficient" storage in Sydney was underway. The admission in the Defence reflected the agreed record, namely that 2 additional silos were being built, without acknowledging anything about its sufficiency. The Viterra Parties' closing submissions did not appear to make a separate point of this. However, in case a finding is necessary, the issue will be addressed. For the same reasons stated above, the pleaded case was that this representation was expressly stated, which it was not. Accordingly, what has been established on the pleaded case included that a statement was made during the Operations Call which made the reference to sufficiency of malt storage space, but it was confined to all of Joe White's plants other than Sydney.

2157 So there is no misunderstanding, it should be added that what is set out above does not amount to a finding that the representation in question was not made. Rather, it is a finding that the case as pleaded on this point has not been made out. The representation made as to all plants having sufficient malt storage, except Sydney, coupled with informing Cargill what was happening with Sydney and there being no suggestion that the additional storage would be insufficient, probably would have been understood to implicitly convey that the construction of additional malt storage underway would be sufficient for Joe White's requirements in Sydney. However, this was not the manner in which the case was pleaded and no application to amend the Statement of Claim was made in this regard.

2158 In my view, not much, if anything, turned on this minor point. In the context of the Due Diligence to assess (amongst other things) the viability of Joe White throughout its Australian operations, there was very little difference between a representation that all plants had sufficient malt storage except Sydney, where 2 additional silos were being built, and a representation that all plants had sufficient malt storage except Sydney, where construction of sufficient storage capacity was underway. Further, there was no suggestion during the Operations Call that Sydney's current storage

capabilities meant that customer specifications were not being met. On the contrary, further explanation was given as to how the Sydney plant was successfully operating in its then current condition.[1280]

2159 As to the *second* issue, although De Samblanx only wanted to speak to Youil, that was not what occurred. The Operations Call was coordinated by Glencore, through Merrill Lynch, so that Youil was not left to speak to De Samblanx alone.[1281]

2160 Both Hughes and Youil were employees of Viterra Ltd, being a Seller and the sole shareholder of Viterra Operations, which in turn was the sole shareholder of Viterra Malt (being the other 2 Sellers). There could be no dispute that Glencore was represented during the Operations Call by Merrill Lynch. Further, Hughes had been retained by Glencore and Viterra to assist in the sale of the "Viterra Malt" business.[1282]

2161 The Operations Call was part of the Due Diligence. In these circumstances, Hughes, who did nearly all the talking in response to Cargill's queries, was acting for Glencore and the Sellers. In these circumstances, the submission made by the Viterra Parties that Hughes' duties in July 2013 were "exclusively" in relation to the Joe White Business was inconsistent with Hughes' position, and ignored the ongoing role

---

1280 Briefly dealing with the other matters raised by Youil, it was submitted that the allegation that representatives of Cargill asked how Joe White dealt with quality problems when they arose did not reflect the evidence or the admissions made by the Viterra Parties. While it was correct that the Viterra Parties did not admit the entirety of this allegation, the allegation referred to the substance of the subject matter of questions asked, the details of which were precisely particularised. Youil's counsel also focused on the summary of evidence in par 812 of the Cargill Parties' closing submissions, and contended that because nothing contained in that paragraph was misleading that that was fatal to Cargill Australia's claims based on the exchange during the Operations Call. However, that paragraph was only concerned with De Samblanx's evidence of what he could specifically recall. That evidence did not in any way diminish or alter the other evidence before the court, including the agreed record of what was said (which formed part of annexure E to the Acquisition Agreement), nor the scope of the admissions made by the Viterra Parties. Further submissions were made by Youil on the basis that the Cargill Parties had not confined themselves to the pleading, but it is unnecessary to address these in circumstances where this issue has been decided on the pleadings.

1281 See par 872 above.

1282 See par 1876 above. The Viterra Parties sought to distinguish the position of Viterra Operations and Viterra Ltd on the basis that the Operations Call was concerned with the Joe White Business and not the sale of property held by these 2 companies. On that basis, it was submitted that neither Viterra Operations nor Viterra Ltd had any interest or involvement in the Operations Call. As has already been noted, as employees of Viterra Ltd, both Hughes and Youil were acting on its behalf. Further, it was entirely artificial to seek to distinguish these 2 companies in this way when the sale was always to include the assets held by these 2 companies as part of the sale of the Joe White Business and no such effort to so distinguish them was made in the Information Memorandum, the Management Presentation Memorandum or the other presale documents or discussions.

Hughes played at the direction of Glencore in assisting with the sale. Further, although Youil was not subject to the same formal arrangements as Hughes in relation to his assistance with the sale process, his involvement in the Operations Call evidenced an arrangement or understanding that Youil would assist Glencore and Viterra with the sale in this regard. It was no part of his usual responsibilities as an employee of Viterra Ltd to be assisting in the sale of Joe White and could not sensibly be viewed as part of his usual responsibilities as a Joe White executive. De Samblanx's preference to speak to Youil alone, outside the Due Diligence regime had been thwarted and there was no ability for Youil to "stray" from Glencore's desired message by Youil giving his own personal uninhibited view on things.

2162 Furthermore, at the very least, Youil must have been acting for his employer, Viterra Ltd. Whether or not he acted for Glencore or the other Viterra companies was of little moment in circumstances where Hughes did nearly all of the talking. There was no statement identified which could be attributed to Youil alone. In closing submissions, Youil sought to emphasise this and pointed out that, beyond proving that Youil spoke for only 5 to 10 percent of the time,[1283] it was not established that Youil made any of the particular statements in the agreed record. However, this submission must be viewed in light of the fact that Youil helped to finalise the agreed record of what was said.[1284]

2163 In conclusion, as a matter of fact, each of the statements found to have been made during the Operations Call was made on behalf of Glencore and the Sellers.[1285] In any event, in relation to the Sellers this position reflected what the parties agreed in the Acquisition Agreement.[1286]

X.3 During the Commercial Call, did representatives of (a) Glencore and/or (b) Viterra say words to the effect pleaded in paragraph 18 of the Statement of

---

1283 See par 873 above. De Samblanx gave evidence that he could hardly remember Youil saying anything.
1284 See issues 125-126 below, including in particular pars 4889-4890 below.
1285 The legal principles in relation to attribution are discussed below, particularly in issues 11 and 18.
1286 See pars 2178-2179 below in the context of discussing the Management Presentation and management presentations more generally.

Claim?

2164 On this issue, with respect to what was said during the Commercial Call, little more need be done than set out the terms of paragraph 18 of the Statement of Claim. During closing submissions, the Viterra Parties' senior counsel simply read out each of the subparagraphs and stated either the particular allegation was true or it would be interesting to see why it was said it was false.[1287]

2165 Paragraph 18 alleged that during the Commercial Call Glencore or Viterra, or both, stated in substance:

(1) Although there was a shortfall in profits for the then-current financial year, Joe White was currently seeing conditions return to normal, partly due to a good Australian barley crop.

(2) A factor supporting Joe White's earnings base was its high-quality malt.

(3) Joe White had always managed to secure the right amount of barley, even during times of drought.

(4) Joe White also had a good record of communicating with customers.

(Collectively, "the Commercial Call Statements".)

2166 The only issue which remained in dispute was whether what was said by Hughes was said on behalf of the Viterra Parties.

2167 For the reasons set out in response to issues concerning the Operations Call,[1288] Hughes was acting for Glencore and the Sellers in making these statements during the course of the Commercial Call.

X.4 During the Management Presentation, did representatives of Viterra on behalf of (a) Glencore and/or (b) Viterra say words to the effect pleaded in paragraph 18A of the Statement of Claim, and did the Management

1287 The Viterra Parties' written submissions in substance also accepted the allegations.
1288 See pars 2159-2163 above.

Presentation Memorandum contain the Management Presentation Memorandum Disclaimers pleaded in paragraph 29B of the Viterra Defence?

X.4.1 Were the statements as pleaded made during the Management Presentation?

2168 It was admitted that all but 1 of the statements pleaded in the Statement of Claim were made during the delivery of the Management Presentation; the admitted statements were reflected in the Management Presentation Memorandum.[1289] They were:

(1) Joe White's business model was focused on ensuring customers received the highest quality malt to meet their exact specifications and requirements.

(2) Joe White had a top-down approach to understand each customer's unique requirements.

(3) In relation to procurement, Joe White selected and had access to high-quality barley that best met customer specifications.

(4) Joe White had best-in-class manufacturing facilities producing consistently high quality malt.

(5) Quality and technical capabilities underpinned each operating function within Joe White.

(6) Joe White had an ability to retain customers who had established long-term relationships, due in part to having high quality product.

(7) Joe White had a stable, high-quality barley supply.

(8) Joe White had an active barley research and development program in place with the University of Adelaide and closely collaborated with customers, barley breeders and researchers to enhance the research and

1289 See pars 711-734 above.

development effort, with specific programs completed for 9 of Joe White's top 10 customers since 2006.

(9) In relation to capital expenditure, Joe White had low future capital needs in the short to medium term.

(10) Joe White had a reputation for production uniformity, consistency and ability to meet exact specifications.

(11) In relation to risk management: (a) Joe White maintained a disciplined approach to minimising operational, business and financial risks whilst securing quality malting barley to allow full plant operation over the medium term; and (b) in relation to exposure to the operational risk of being unable to source barley of the correct variety, quality and specification, the risk management disciplines were barley sampling (on delivery and in storage), self-insurance and contract terms.

(12) Whilst Joe White had limited storage capacity, Joe White managed its customers well, and there were no real quality issues.

(Collectively, "the Management Presentation Statements".)

2169 The final of these statements,[1290] which remained in dispute, was alleged to have been said by Hughes. This statement was not included in the agreed record of the questions and answers, which became annexure D to the Acquisition Agreement. Reflecting the form in which it was drafted before being agreed upon, annexure D stated "[w]e request that you review this document and confirm that the messages conveyed are consistent with your understanding of the meeting". This duly occurred. However, as annexure D was expressed to be a summary, which "contain[ed] the key themes/concepts that were articulated", the absence of the statement in question did not indicate that it was not made.

1290 See par 737 above.

2170 Eden gave evidence that he believed the question as formulated with respect to limited storage capacity was asked,[1291] and that on this subject, in essence, Hughes had said that "on the barley side they had limited storage but they had upcountry storage arrangements to handle a just-in-time delivery of barley". De Samblanx gave evidence that Hughes made the statement in response to his own question about low silo capacity.[1292] His evidence on this point was not challenged, including by Hughes' senior counsel who cross-examined De Samblanx.

2171 The evidence of De Samblanx should be accepted. He was a credible and generally reliable witness. He was asked many questions throughout his cross-examination about what he could recall of various discussions back in 2013 and was discerning and careful in confining his answers to the substance of what he could recall. Although the versions of Hughes' answer given by Eden and De Samblanx were different, Eden stated he could only recall "the essence" of the answer and his evidence was not inconsistent with the substance of the statement described by De Samblanx; that is, that the limited storage was managed so that it did not cause any real quality issues.

2172 It follows that it has been established that each of the representations alleged by Cargill Australia to have been part of the Management Presentation was made.

X.4.2 Were the statements pleaded made by a representative of Viterra on behalf of Glencore and/or Viterra?

2173 The extraordinary lengths to which the Viterra Parties had to go in order to submit that Hughes was not acting or making any representations on their behalf during the selling process was apparent from their submissions on this point.

2174 Significantly, those submissions did not refer to what was stated in the Management Presentation Memorandum about by whom the document was prepared, namely Glencore and its subsidiaries (which included each of the Sellers), or the fact that Hughes and Argent each fell within the definition of "Discloser".[1293] They did not

1291 See par 736 above.
1292 See par 737 above.
1293 See pars 475, 711 above.

refer to the fact that both Hughes and Argent were required by Glencore to attend rehearsals before giving the Management Presentation, or the evidence of King that such rehearsals were to ensure Hughes and Argent were familiar with the key messages they were required by Glencore to deliver.[1294] Further, no reference was made to King's evidence that Glencore, including Merrill Lynch, checked with management to ascertain whether the type of message being conveyed was what Glencore wanted from its perspective. Furthermore, the significance of King's evidence that he gave advice to Hughes about how he might modify the presentation and improve the message was not addressed.[1295] Equally, no reference was made to Hughes' understanding that he was not to stray from the approved message on this or other occasions and, with the agreement of Merrill Lynch (conducting the sale process on behalf of Glencore), that Hughes should ensure others did likewise.[1296] Moreover, no mention was made in their submissions on this issue of the fact that both Hughes and Argent had been incentivised by Glencore and Viterra to assist in the sale of Joe White on the basis of a successful divestment.[1297] Notably, it was the incentivised Joe White management who were asked to give the Management Presentation, and no one else.

2175 The Viterra Parties submitted that the very nature and purpose of the Management Presentation was to provide Cargill with an opportunity to obtain information from and ask questions of Joe White's management. It was submitted the Viterra Parties could not have substituted Hughes and Argent with any other "non-Joe White persons" as their role as representatives of Joe White was the essential reason they gave the presentation. It was further submitted, without reference to any evidence, that Cargill knew Hughes and Argent were representing Joe White *and not the Viterra Parties*.[1298] In addition, it was contended that, as the Management Presentation was

---

1294 See pars 696-700 above. See also par 1876 above concerning Hughes' assistance being "require[d]".

1295 Ibid.

1296 See par 872 above.

1297 See pars 366-367, 373, 1876 above.

1298 Whilst there was no question that Cargill knew Hughes and Argent were part of the senior management of Joe White and were there to give a presentation because they held those positions, it did not follow that they also knew Hughes and Argent were giving the Management Presentation exclusively

directed at the operations of the Joe White Business, Viterra Operations and Viterra Ltd had no interest or involvement in the presentation.

2176 The Viterra Parties' submissions must be rejected. On the face of the cover page of the document, the Management Presentation Memorandum was being put forward by Glencore (defined to mean Glencore and its subsidiaries) and Merrill Lynch.[1299] On the first page of the Management Presentation Memorandum itself it was expressly stated the document had been prepared by Glencore (again, meaning Glencore and its subsidiaries) to provide background information to assist in the decision as to whether to purchase Joe White. Further, much of the Management Presentation involved Hughes, and to a much lesser extent Argent, delivering the messages contained in the Management Presentation Memorandum. It was irrefutable that, in doing so, Hughes and Argent were making representations authorised by Glencore, as part of the selling process, which contained the messages Glencore wanted delivered.

2177 The fact that each of Hughes and Argent were Joe White executives, and were in attendance by reason that they held those positions, did not somehow exclude them acting for the Viterra Parties. In short, the submissions of the Viterra Parties emphasising the fact that Hughes and Argent were Joe White executives were not to the point.[1300]

2178 Furthermore, the conclusion reached on this point was supported by what the parties agreed on 4 August 2013. The agreed record of this presentation, being annexure D to the Acquisition Agreement, was expressly referred to in schedule 8 and recorded the fact that the Management Presentation had been "conducted by Representatives

---

connected with their position as officers of Joe White and not on behalf of the Viterra Parties: see pars 2177-2180 below. In any event, if any belief was held by any representative of Cargill (there was no evidence of any Cargill witness that a belief was held that Hughes or Argent were in attendance as Joe White management only, to the exclusion of them acting in the sale process on behalf of the Viterra Parties), then such a belief would have been entirely misplaced.

1299 The cover page consisted of some photos with the words "Joe White Maltings Management Presentation June 2013" and next to that a visual design which might be described as Joe White's coat of arms. The only other information contained on the cover page was the words below this, being "Glencore" and "Merrill Lynch" together with Merrill Lynch's corporate symbol.

1300 See par 402 above.

of the Seller".[1301] In this regard, it was agreed that what had been represented on behalf of the Seller was not confined to what was contained in annexure D; rather it incorporated all management presentations, including what was set out in annexure D.[1302] In other words, in schedule 8 identifying of what the Disclosure Material consisted, the agreed position was that "management presentations", not just the Management Presentation, were conducted by Representatives of the Seller.[1303] Similar to the position with annexure D, the management presentations were specified to have included "to the extent identified in any written summary of those management presentations prepared by the Representatives of the Seller". As set out above,[1304] the written summaries in the Acquisition Agreement included summaries for the Operations Call, the Commercial Call and the Barley Inventory Call.

2179 While dealing with schedule 8 of the Acquisition Agreement, the fact that it identified other matters and information that fell within the meaning of Disclosure Material should be referred to. Disclosure Material also included all written information and data provided or communicated as part of or during the site visits,[1305] "including to the extent identified in any written summary of these site visits *prepared by Representatives of the Seller*" (emphasis added). Equally, the description included "any formal or informal information request process *conducted by or on behalf of the Seller* in conjunction with the review by the Buyer of the Data Room Documentation (*including*

1301 Schedule 8, (d)(i) of the Acquisition Agreement. It was not clear which Seller was being referred to in this clause, but nothing turned on this: see the definition of Seller and Sellers in par 1022 above. If it had been intended in this clause to confine Seller in the context to a particular Seller, then no doubt "Share Seller" (for Viterra Malt), "Land Seller" (for Viterra Operations) or "Dom Box Seller" (for Viterra Ltd) would have been inserted.

1302 For completeness, for the purposes of defining Disclosure Material the information or data provided or communicated had to be in writing.

1303 In relation to the Management Presentation, this must have included a reference to Hughes and Argent as the Representatives as both of them spoke to the Management Presentation Memorandum and what was stated by them was included in a written summary. Although in attendance, and also making representations on behalf of the Viterra Parties (see par 709 above), the fact that Merrill Lynch performed that role did not relevantly affect the proper characterisation of Hughes and Argent as persons acting on behalf of the Viterra Parties. The position was the same with respect to the other "management presentations" that were the subject of written summaries included in the Acquisition Agreement.

1304 See pars 884, 910, 924 above.

1305 See pars 641, 744 above.

the information set out in Annexure E)" (emphasis added).[1306] Presumably by reason of oversight, the Viterra Parties did not address any of these matters in contending the pleaded statements were not made on behalf of Viterra (or Glencore). Nevertheless, the wording in the Acquisition Agreement reflected the clear understanding and agreement that the information being disclosed was being provided as part of the sale process of the "Seller". This position confirmed what was apparent from the sale process and documentation itself, for the reasons already stated.[1307]

2180 Returning to the Management Presentation, the fact that something said during the Management Presentation was not in the Management Presentation Memorandum or was not subsequently reduced to writing did not alter the capacity in which Hughes and Argent were acting at the time they made statements as part of the Management Presentation. Both of them were duly authorised by the Viterra Parties to present the Joe White Business in positive terms and in the manner that had been rehearsed under the supervision of Glencore and Merrill Lynch.[1308] The possibility that they may have gone off-script to some extent in presenting the Joe White Business that was for sale (though, Hughes' statement in response to the question about silo capacity was entirely consistent with the positive message King wanted to be conveyed) did not mean that they would then somehow not be acting for the Viterra Parties and would be acting solely for Joe White.[1309]

2181 The various terms relating to the "Discloser", including the acknowledgement in the legal disclaimer to the effect that no person had been authorised to give any information concerning the Joe White Business other than what was contained in the Management Presentation Memorandum, and if given could not be relied upon as having been authorised by the "Discloser", did not change the position. Primarily,

---

1306 Annexure E concerned questions and answers from various discussions including those at the finance meeting on 5 July 2013 (see par 832 above), the Operations Call (see par 865 above), the Commercial Call (see par 910 above) and the Barley Inventory Call: see par 924 above. Further, this contemplated position existed before any of these calls took place as it was so provided in the draft acquisition agreement forwarded to Cargill on or about 14 July 2013: see fn 612 above.

1307 See pars 475-483, 711 above.

1308 See par 699-700 above.

1309 See par 3088 below.

this was because both Hughes and Argent fell within the definition of Discloser as that term was defined in the Management Presentation Memorandum. Each of them were persons involved in the preparation of the document as well as being officers or employees of Glencore's "affiliates or subsidiaries".[1310] Further, the very premise of the Management Presentation was that senior Viterra Ltd executives, Hughes and Argent (who had been retained to assist with the sale), had been expressly authorised by the Viterra Parties to attend the Management Presentation and to discuss the Joe White Business with prospective purchasers in the presence of the Viterra Parties' representative, Merrill Lynch.

2182 Although not part of the reasoning for the conclusion expressed in the previous paragraph, for completeness, it should be noted that there was no opportunity for the Cargill employees in attendance on 26 June 2013 to read the Management Presentation Memorandum Disclaimers before the Management Presentation itself.

2183 Finally, on the issue of the additional statement made by Hughes, the Viterra Parties submitted that there was no request by Cargill to include this additional statement in annexure D, and that it followed that Cargill knew Hughes was not representing the Viterra Parties in making the statement. Why this followed was not explained. Perhaps it was a reference to the fact that if it was not in writing, it would not form part of the Disclosure Material for the purposes of schedule 8.[1311] In any event, any omission of a particular statement in a document that on its face was not purporting to be exhaustive was in no way indicative of Cargill's state of mind with respect to authority at that time.

2184 In making these findings, it must follow that the submission that Viterra Operations and Viterra Ltd had no interest or involvement in the Management Presentation is also rejected. Not only did the introductory words "Glencore and its subsidiaries" in the Management Presentation Memorandum include these companies as being

---

1310 This definition of Discloser also included Merrill Lynch who was present throughout the Management Presentation. See further par 2670 below.

1311 See also cll 13.1 and 13.4 of the Acquisition Agreement.

involved in the preparation of the document as well as the preparation and provision of background information to assist in a prospective purchaser deciding whether to purchase the Joe White Business,[1312] but each of these companies was 1 of the proposed Sellers.[1313] In these circumstances, the submission that these 2 companies had no interest or involvement was without substance; even more so given it was Viterra Ltd's employees, Hughes and Argent, who were making the Management Presentation.

2185 The Management Presentation Memorandum was included in the Data Room and therefore formed part of the Data Room Documentation for the purposes of the Acquisition Agreement. The Viterra Parties acknowledged the Management Presentation Memorandum was subsequently incorporated into the Warranties and formed part of the Acquisition Agreement "for the purposes provided for in the [Acquisition Agreement] but not otherwise". Naturally, the fact that the document was incorporated into the Acquisition Agreement on a particular basis did not alter what had occurred before, nor the fact that its contents were proffered by "Glencore and its subsidiaries".

X.4.3 Did the Management Presentation contain the Management Presentation Memorandum Disclaimers pleaded in paragraph 29B of the Defence?

2186 It was agreed that the Management Presentation Memorandum contained the disclaimers as pleaded ("the Management Presentation Memorandum Disclaimers").[1314] It is unnecessary to set them out here, as in substance they repeated the Information Memorandum Disclaimers.[1315]

1312 Also the definition of "Discloser" in the Management Presentation Memorandum reflected what was contained in the Information Memorandum: see par 475 above, under the heading "Recipient to Conduct own Investigation and Analysis".

1313 See also fn 1301 above.

1314 See par 2147 above. See also pars 475, 711-714 above.

1315 See par 2147 above. The Management Presentation Memorandum Disclaimers covered: (1) each of the matters set out at par 2145(1)-(20) above by reference to the Management Presentation Memorandum rather than the Information Memorandum, except that: (a) in relation to the statement at par 2145(3), the disclaimer was said to apply both to the document and the presentation of it, (b) in relation to the statement at par 2145(4), the confidentiality undertaking applied both to the document and the

X.5 Did the Confidentiality Deed contain the confidentiality deed terms pleaded at paragraph 18 of the Defence, and the further terms referred to in paragraph 18 of the Reply, and did the confidentiality deed terms apply to Cargill, Inc and Cargill Australia prior to the provision to Cargill, Inc of the Phase 1 Process Letter and the Information Memorandum?

2187 The *first* issue is not contentious. As agreed by the parties, the Confidentiality Deed contained the terms as pleaded both in the Defence and in Cargill Australia's reply to the Defence ("the Reply").[1316] Those terms comprised various definitions and clauses within the Confidentiality Deed ("the Confidentiality Deed Terms").[1317]

2188 As to the *second* issue, the Cargill Parties contended that the terms of the Confidentiality Deed did not apply to Cargill until 27 May 2013, when the final form of the Confidentiality Deed was executed by Glencore.[1318] The Viterra Parties on the other hand submitted that the Confidentiality Deed was binding on Cargill from 13 May 2013, before the Phase 1 Process Letter and the Information Memorandum were provided to Cargill.[1319]

2189 The issue is straightforward. For the reasons that follow, Cargill, Inc was bound by the terms of the Confidentiality Deed as originally executed and it did not matter that the Confidentiality Deed of 13 May 2013 was not countersigned by Glencore.

2190 The Confidentiality Deed executed by Cargill, Inc on 13 May 2013 became contractually binding, at the very latest, when Glencore (through Merrill Lynch)

---

presentation, (c) in relation to the statement at par 2145(7), it was provided that the Recipient must make, and will be taken to have made, its own independent investigation and analysis of the information in the document and the presentation of it; (2) the information contained in the document had been prepared as at 21 June 2013; (3) the Discloser makes no representation or warranty that the information contained in the document remained correct at, or at any time after, 21 June 2013; and (4) the Discloser is under no obligation to update the document or to correct any inaccuracies contained in the document at any time after 21 June 2013.

1316 See pars 585-590 above.

1317 The provisions pleaded were: (1) the definitions of Approved Purpose, Confidential Information, Information, Loss, Representative and Transaction (see pars 586, 588 above); (2) clauses 2.1, 2.2, 3.1(b), 3.2, 3.3, 8.1(a)-(e), 8.2, 8.3, 9.3(b), 10.1, 10.2, 10.3, 10.4, 11: see par 590 above.

1318 See pars 584-585 above.

1319 In closing submissions, the Viterra Parties also referred to Cargill being estopped from denying the operation of the Confidentiality Deed, but as this was not pleaded it will not be considered.

provided the Information Memorandum to Cargill, Inc by email later on 13 May 2013 and Cargill, Inc agreed to accept it.[1320]

2191 Although not strictly necessary,[1321] adopting the lens of offer and acceptance,[1322] the execution of the Confidentiality Deed by Cargill, Inc was an offer, which Glencore accepted by either agreeing to furnish or by in fact furnishing Cargill, Inc with the Information Memorandum. As consideration for Cargill, Inc's promise to perform the obligations set out in the Confidentiality Deed, Glencore agreed to provide and provided the Information Memorandum. Given the commercial context including the terms of the Confidentiality Deed itself, an intention to create legal relations existed. On the basis of the above, the elements of contract formation were satisfied on 13 May 2013 and Cargill, Inc was bound by the Confidentiality Deed from this point. The position was affirmed by Cargill, Inc accepting the Information Memorandum on the terms specified by Glencore in the Phase 1 Process Letter (including that the terms of the Confidentiality Deed applied).[1323]

2192 In any case, the Confidentiality Deed was patently a deed, on the basis of its form, substance and objects as a whole,[1324] and thus binding;[1325] irrespective of Glencore failing to countersign. There were several contextual indications that manifestly proved the parties' intention that the instrument be executed as a deed. These included:[1326] (1) the instrument was entitled "Confidentiality Deed"; (2) the word

---

1320 Although the Phase 1 Process Letter accompanying the Information Memorandum, addressed to Hawthorne and sent via email, was dated 14 May 2013, the documents were first provided to Hawthorne on the evening of 13 May 2013 (no doubt the difference being explained by the different time zones).

1321 See, for example, *Brambles Holdings Ltd v Bathurst City Council* (2001) 53 NSWLR 153, 177-179 [74]-[81], 181 [85] (Heydon JA); 196-197 [171]-[175] (Ipp AJA, with whom Mason P agreed).

1322 See generally *Empirnall Holdings Pty Ltd v Machon Paull Partners Pty Ltd* (1988) 14 NSWLR 523 (Kirby P, Samuels and McHugh JJA); *Australian Woollen Mills Pty Ltd v Commonwealth* (1954) 92 CLR 424 (Dixon CJ, Williams, Webb, Fullagar and Kitto JJ).

1323 See par 469 above.

1324 *Comptroller of Stamps (Vic) v Associated Broadcasting Services Ltd* (1988) 19 ATR 1401, 1403.6-1404.4 (Murphy J, with whom Gobbo and Southwell JJ agreed).

1325 See *Hooker Industrial Developments Pty Ltd v Trustees of the Christian Bros* [1977] 2 NSWLR 109, 118D (Helsham CJ); *Federal Commissioner of Taxation v Taylor* (1929) 42 CLR 80, 87.03 (Rich, Starke and Dixon JJ).

1326 See, for example, *Twenty Ninth Macorp Nominees Pty Ltd v George* [2017] VSC 136, [236] (Almond J); Nom de Plume Nominees Pty Ltd v Fingal Developments Pty Ltd (2016) 337 ALR 303, 320-323 [73]-[86] (McLeish JA, with whom Tate JA and Ginnane AJA agreed) and the cases referred to therein; 400

"deed" appeared consistently throughout the instrument; (3) the execution block for Cargill, Inc was drafted on the basis that the instrument was a deed, applying the phraseology "signed, sealed and delivered"; and (4) the instrument included the phrase "executed as a deed".

2193 Regardless of whether the basis on which the Confidentiality Deed was binding was as an executory contract or as a deed, Glencore and Cargill, Inc's subsequent conduct was consistent with both operating on the basis that Cargill, Inc was bound by the Confidentiality Deed executed on 13 May 2013.[1327] In addition to the matters set out above, this can be inferred on the basis of the following.

2194 *First*, during the negotiations for the Confidentiality Deed, it was clear that the Information Memorandum would only be provided once the Confidentiality Deed was settled, executed by Cargill, Inc and returned to Glencore. This was understood by Cargill from the outset.[1328] *Secondly*, the Information Memorandum disclaimer contained a statement that the document was "subject to the terms of a confidentiality undertaking".[1329] Cargill, Inc took no exception to this. *Thirdly,* when Merrill Lynch emailed the Phase 1 Process Letter and Information Memorandum to Hawthorne on 13 May 2013, the email stated "[t]hank you … for executing the Confidentiality Deed", which statement was also reiterated within the Phase 1 Process Letter.[1330] *Fourthly,* the Phase 1 Process Letter expressed that the Information Memorandum "represents Confidential Information as defined in the Confidentiality Deed".[1331] *Fifthly,* when Hawthorne circulated the Information Memorandum by email to, amongst others, Eden, Sagaert, Jewison and Engle, Hawthorne expressly stated that the information

George Street (Qld) Pty Ltd v BG International Ltd [2012] 2 Qd R 302, 316 [32]-[34] (Muir JA); *Comptroller of Stamps (Vic) v Associated Broadcasting Services Ltd* (1988) 19 ATR 1401, 1403.6 (Murphy J, with whom Gobbo and Southwell JJ agreed). See also *Corporations Act*, s 127(3).

1327 Subsequent conduct may be considered in determining whether or not a contract existed: cf *Regreen Asset Holdings Pty Ltd v Castricum Brothers Australia Pty Ltd* [2015] VSCA 286, [134] (Warren CJ, Kyrou and McLeish JJA), citing *Brambles Holdings Ltd v Bathurst City Council* (2001) 53 NSWLR 153, 163-164 [25] (Heydon JA).

1328 See par 454 above.

1329 See par 475 above.

1330 See par 462 above.

1331 Ibid.

was subject to strict confidentiality provisions pursuant to a "Non-Disclosure Agreement executed by Cargill, [Inc]".[1332]

2195 For the reasons discussed above, Cargill, Inc was bound by the Confidentiality Deed from 13 May 2013. To the extent that the Confidentiality Deed applied to Cargill Australia, it was also bound from 13 May 2013.[1333]

X.6 Did the Phase 1 Process Letter contain the Phase 1 Process Letter statements as pleaded at paragraph 12 of the Defence?

2196 Yes. It was conceded by the Cargill Parties that the Phase 1 Process Letter contained the 7 statements as pleaded at paragraph 12 of the Defence ("Phase 1 Process Letter Statements").[1334]

X.7 Did the Phase 2 Process Letter contain the Phase 2 Process Letter statements as pleaded at paragraph 25 of the Defence, and the further statements in paragraph 25 of the Reply?

2197 Yes. It was conceded by the Cargill Parties that the Phase 2 Process Letter contained the statements as pleaded at paragraph 25 of the Defence ("the Phase 2 Process Letter Statements").[1335] It also contained the statements pleaded in paragraph 25 of the

---

1332 See par 471 above.

1333 The enforceability of the Confidentiality Deed against Cargill Australia is dealt with in issue 85 below. Pursuant to the terms of the Confidentiality Deed, employees of Cargill Australia who were given access to the Information Memorandum before 27 May 2013 were bound by its terms in any event: see cll 3.1(b), 3.2(a), 3.3, par 590 above. The evidence demonstrated that Cargill, Inc ensured employees were made aware of the Confidentiality Deed before any Confidential Information was disseminated.

1334 The 7 statements as pleaded were: (1) thank you for executing the Confidentiality Deed; (2) the Information Memorandum is being provided pursuant to the terms outlined in the Information Memorandum and represents Confidential Information as defined in the Confidentiality Deed; (3) on the basis of indicative bids received, Glencore intends to select a short list of parties who will be invited to participate in Phase 2 of the proposed transaction, which will include access to a virtual data room and discussions with Joe White management; (4) Glencore has a strong preference that your indicative bid be expressed as a single number and if a range of values is provided it will be assumed that your indicative bid is at the low end of that range; (5) Glencore and Merrill Lynch reserve the right, in their absolute discretion, at any stage during the proposed transaction, to restrict any party's access to Confidential Information or management (particularly with regard to commercial sensitivities); (6) you are required to make and rely on your own investigations and satisfy yourself in relation to all aspects of the proposed transaction; and (7) the existence and contents of the Phase 1 Process Letter in all discussions, communications and information relating to the proposed transaction are Confidential Information which is subject to the terms and conditions of the Confidentiality Deed.

1335 The pleaded statements were as follows: (1) in order to assist you in making your final bid, the Phase 2

Reply.[1336]

X.8 Was Cargill, Inc and its Representatives' access to the Data Room documentation (as defined in paragraph 26(a) of the Defence)[1337] pursuant to, and subject to, the Data Room Protocol and did the Data Room Protocol contain the terms pleaded in paragraph 26B of the Defence?

2198 As conceded by the Cargill Parties, Cargill's access to the Data Room "was *pursuant* and *subject to* the Project Ballarat Data Room Protocol dated 17 June 2013" (emphasis added). The terms set out in paragraph 26B of the Viterra Parties' Defence replicated clauses 1, 2.1, 2.3, 2.7, 3, 7(f), 8.1(a), 8.2 and 8.3 of the Data Room Protocol ("the Data Room Protocol Terms").[1338] This was also conceded by the Cargill Parties.

X.9 Is it the fact that:

(1) Any laboratory test measurement of the properties of material such as malt is necessarily subject to error and uncertainty?

(2) The main causes of such error and uncertainty are:
(a) inherent limitations on the precision of the testing equipment and testing procedures;
(b) random effects, including natural variability of the material;
(c) sampling effects; and
(d) systematic/recovery bias errors?

(3) As a result, any laboratory test measurement is only an estimate/approximation of the true value of the measurand (i.e. the physical/chemical property being measured), and merely implies a

---

process will include (a) access to a data room and a Q&A process, (b) a management presentation, (c) site tours of Joe White's export super sites in Sydney, Adelaide and Perth, (d) the provision of a draft share purchase agreement; (2) we remind you that all information in Phase 2, including but not limited to the management presentation and data room documents, is subject to the Confidentiality Deed; (3) Glencore and Merrill Lynch reserve the right, in their absolute discretion, to conduct the process in a manner consistent with section 4 of the Phase 1 Process Letter; (4) you are required to make and rely on your own investigations and satisfy yourself in relation to all aspects of the proposed transaction; (5) you are reminded of your obligations under the Confidentiality Deed; and (6) we remind you that all information provided during the site visits is subject to the Confidentiality Deed.

1336 See pars 639-644 above.

1337 The definition in the Defence did not replicate the definition of Data Room Documentation in the Acquisition Agreement (see par 1022 above), but was simply defined as information and documents in an online data room established for the purposes of the Proposed Transaction, to which Cargill, Inc and its Representatives had access from about 14 June 2013. This description largely (but not completely) amounted to an admission of Cargill Australia's allegation in the Statement of Claim, which contained a definition of Data Room Documentation which was also slightly different to the definition in the Acquisition Agreement.

1338 Together with certain definitions contained in cl 9.3 and cll 1.1, 1.5, 2(a), 2(c), 5 and 9 of Schedule 2: see pars 650, 658 above.

range of values which can reasonably be attributed to the measurand, such that the true value of the measurand cannot be determined?

(4) Accordingly, the supplier/producer must seek to ensure that any particular laboratory test measurement best takes into account all of the known effects of error and uncertainty including by the application of the subjective experience or expertise of the laboratory professionals conducting the measurements?

(5) Recognising the matters set out in (3) and (4) above, a supplier/producer's process for determining whether or not a product complied with contractual specifications such that it can be released to its customer, can include a set of decision-making rules or policies ("a decision rule")?

(6) Uncertainty in laboratory test measurement can be addressed by the application of subjective experience/expertise of a suitably qualified person?

(7) A decision rule can take into account:
- **(a) inherent limitations on the precision of testing equipment and testing procedures; and**
- **(b) random effects, including natural variability of the material, by reference to industry accepted objective quantification of the magnitude of such uncertainty?**

(8) One such objective quantification accepted within the commercial malting industry and the brewing industry is that derived from continuing (corroborative) programs such as the American Society of Brewing Chemists Laboratory Proficiency Testing Scheme and the Maltsters of Great Britain Malt Analytes Proficiency Testing Scheme to incorporate a tolerance of 2 standard deviations to the measurement of measurands in respect of malt?

(9) The Viterra Certificate of Analysis Procedure is an example of a decision rule?

X.9.1 Background

2199 This issue for determination reflected the form of paragraph 30(e) of the Defence. Paragraph 30(e) was part of the response to a key allegation made by Cargill Australia; namely, that the Viterra Parties failed to disclose the existence of the Undisclosed Matters, including the Viterra Practices and Policies, before the Acquisition Agreement was entered into, and again failed to disclose the Undisclosed Matters to Cargill Australia prior to the Acquisition.[1339] By paragraph 30(e), it was contended that the Viterra Certificate of Analysis Procedure, which recorded and governed 1 of

[1339] See pars 36-44, 1851 above. The Viterra Parties' response to that allegation evolved in significant respects over the course of the proceeding: see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 22)* [2019] VSC 351, [10]-[14]. See also par 45 above.

the Operational Practices, namely the Reporting Practice, was a permissible and scientifically-justifiable "decision rule" designed to take into account error and uncertainty inherent in chemical testing.[1340] If that was so, it was further contended, the Reporting Practice need not have been disclosed to Cargill as part of the sale process.

2200 Paragraph 30(e) was introduced very late in the proceeding. The background to its introduction may be briefly stated as follows.[1341] On 20 May 2019, some 11 months after the trial commenced, and shortly after the evidence had apparently concluded, the Viterra Parties sought leave to file and serve: (1) a proposed amended defence, which contained, amongst other proposed paragraphs, paragraph 30(e); and (2) an expert report on matters relevant to the proposed paragraphs.

2201 Ultimately, leave was granted to file and serve:

(1) The Defence, which introduced only paragraph 30(e).[1342]

(2) A limited version of an expert report ("the Hibbert Report") of Professor David Brynn Hibbert ("Hibbert"), an emeritus professor in analytical chemistry, on the basis that Hibbert be made available for cross-examination.[1343]

2202 The Defence and the Hibbert Report were filed and served on 22 May 2019. Hibbert gave evidence on 14 June 2019.[1344]

X.9.2 Hibbert's qualifications and approach

1340 *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 22)* [2019] VSC 351, [14].

1341 The background to the introduction of paragraph 30(e) is covered extensively in *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 22)* [2019] VSC 351, [15]-[36], [51], [66].

1342 Leave was refused in respect of sub-paragraphs (f) and (g) of paragraph 30: *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 22)* [2019] VSC 351, [61]-[65].

1343 Ibid, [2], [68]. Leave was only sought on a limited version of the Hibbert Report, excluding Hibbert's answer to a question relating specifically to the Viterra Certificate of Analysis Procedure. However, Hibbert's opinion on the Viterra Certificate of Analysis Procedure was ultimately elicited in cross-examination: see par 2230 below and see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 22)* [2019] VSC 351, [35], [40]; *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 24)* [2019] VSC 438, [27].

1344 This delay was to allow sufficient time for the Cargill Parties to consider whether they wanted to file any expert report in response and to prepare for cross-examination.

2203 Appropriately, Hibbert's expertise and opinions were not substantively challenged by the Cargill Parties. Hibbert is an eminent chemist with special expertise in, relevantly, analytical chemistry, the chemical analyses of substances, and the uncertainty of quantitative chemical measurement results. He is presently a professor emeritus of analytical chemistry at the University of New South Wales, where, from 1987 to 2013, he held the chair of analytical chemistry. He is a fellow of the Royal Australian Chemical Institute and the Royal Society of Chemistry, amongst other professional bodies. He is also the author of several hundred refereed articles, including articles on topics directly relevant to the present issue, some of which were referred to in the Hibbert Report.

2204 Hibbert was a credible, reliable and truly independent expert witness, who gave thoughtful and helpful evidence to the best of his ability. In particular, Hibbert was careful to keep his evidence confined to those areas in which he had relevant expertise.[1345]

X.9.3 The key matters in issue

2205 Given that Hibbert's opinions and expertise were not substantively challenged, the real dispute between the parties related to the *application* of Hibbert's opinions to the Viterra Certificate of Analysis Procedure during the relevant period.[1346]

2206 Specifically, the issue related to whether Hibbert's evidence established that the Viterra Certificate of Analysis Procedure was, in form and application, a permissible and scientifically justifiable, "decision rule".

2207 It is convenient to address that issue by responding, in sequence, to the following 3 questions:

(1) What is a "decision rule" and how is it utilised?

1345 On a number of occasions, he appropriately declined to opine on matters or respond to questions in ways that would have taken him outside his areas of expertise.

1346 As already noted, this was not addressed directly in the Hibbert Report as tendered, but was addressed extensively in his cross-examination: see *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 22)* [2019] VSC 351, [35], [40]; *Cargill Australia Ltd v Viterra Malt Pty Ltd (No 24)* [2019] VSC 438, [27].

(2) What relevant standards should a scientifically-justifiable "decision rule", in form and application, satisfy?

(3) Did the Viterra Certificate of Analysis Procedure, in form and application, satisfy those standards?

X.9.3.1 Question 1: The definition of a Decision Rule and its application generally

2208 Hibbert's evidence, on this question, was substantially accepted.[1347] In simple terms, a decision rule is a tool used in assessing whether or not a product or material complies or does not comply with specifications ("a Decision Rule").

2209 The use of such a tool is necessitated by the existence of "measurement uncertainty". As Hibbert explained:

> For chemical or physical *measurements* (whether industry or commerce, or any other sphere) of *quantities* associated with material there is always uncertainty regarding the *true value* of a *measurand,* which by definition is unknowable.
>
> (Emphasis in original.)

2210 In other words, measuring a quantity associated with a material (that is, a "measurand")[1348] does not yield a *true* value, but rather yields a *measured* value, which is attended by a degree of uncertainty. Naturally, no matter how precise an instrument of measurement may be, there is necessarily uncertainty in at least the last figure of a result, whether rounded or unrounded.

2211 "Measurement uncertainty" arises from, amongst other factors: the finite resolution of a measurement instrument; the samples of material selected for measurement; and systematic error. The first 2 matters are self-explanatory. As for systematic error, it is a type of error which, in replicated measurements, remains constant or varies in a predictable manner. Systematic errors may be estimated,[1349] and a "correction", which compensates for the estimated systematic error, may be applied to the initial measured

---

1347 Whether it was faithfully reflected in paragraph 30(e) of the Defence, however, was another matter: see pars 2253-2263 below.

1348 Hibbert defined a "measurand" as being the quantity of the thing being measured.

1349 An estimate of a systematic error is referred to as a "bias".

result ("Bias Correction Standard").[1350]

2212 As a result of "measurement uncertainty", deciding whether or not a measured quantity can be treated as complying with precise specification limits on the basis of a measured value involves a degree of risk. The adoption and application of a Decision Rule addresses that risk by prescribing how "measurement uncertainty" is to be taken into account in accepting or rejecting a product according to its specifications and measured value.

2213 A Decision Rule must account for 3 things:

(1) The measured quantity value.

(2) Measurement uncertainty.

(3) The specification limit(s).

In doing so, it must also account for the acceptable level of *probability* of making an incorrect decision; that is, a decision that a material is in compliance with a specification when the true value is outside the specification limit (known as a "false acceptance"), and a decision that a material is *not* in compliance with a specification when the true value is within specification limit (known as a "false rejection"). What is considered an acceptable level of probability will depend on the requirements of the Decision Rule applied and the context in which it is used, including especially the risks associated with making an incorrect decision.

2214 A Decision Rule operates by determining the location of "acceptance zones" and "rejection zones" in respect of a measured quantity and a specified measurement process. Those zones are set relative to the specification limit or limits. The magnitude of the offset from the specification limit to the boundary of the acceptance or rejection zone is described as the "guard band". Where a measured quantity value falls within

---

1350 If a "correction" is made in respect of a systematic error, then the initial measurement result should be corrected, and the "uncertainty of the correction" incorporated into the overall "measurement uncertainty".

the range of values comprising the "acceptance zone", it is to be accepted as compliant; conversely, where a measured quantity value falls within the range of values comprising the "rejection zone", it is to be rejected as non-compliant.[1351]

2215 An example of a Decision Rule in relation to a measurand for which the specification limit is an *upper limit* may be given. In simple terms, it is to set the upper boundary of the "acceptance zone" as the value of the specification limit *plus* the value of expanded measurement uncertainty. Expanded measurement uncertainty, or expanded uncertainty, is a quantity representing the result of a measurement that may be expected to encompass a large fraction of the distribution of values that could reasonably be attributed to the measurand. Accordingly, in this example, any measured value equal to or less than the specification limit *plus* expanded measurement uncertainty falls within the "acceptance zone"; conversely, any measured value greater than the specification limit *plus* expanded measurement uncertainty falls within the "rejection zone".[1352]

2216 In addition to its role in assessing conformity with specifications, a Decision Rule is also relevant to reporting conformity with specifications to third parties. A reference to the Decision Rule or Decision Rules used is to be stated when reporting on the compliance of the product or material tested. As Hibbert put it, any Decision Rule should be "stated and … available to people who need to see it", including, for example, auditors of the testing laboratory.[1353] Being open and transparent about the process is necessary to *justify* the decisions ultimately taken. Indeed, the importance of openness and transparency in chemical analysis was an important and overriding theme in Hibbert's evidence.

X.9.3.2 Question 2: What standards should a scientifically-justifiable Decision Rule, in form and application, satisfy?

2217 For a particular Decision Rule to be scientifically justifiable, it is necessary that it satisfies certain standards. The following standards, which emerged in Hibbert's

---

1351 See further par 2226 below.
1352 See further par 2227 below.
1353 In this regard, see pars 90, 226, 285-293, 542, 1533 and fn 808 above.

evidence, are presently relevant.

2218 Any Decision Rule must establish a rule or procedure which operates in a mandatory fashion. It must prescribe a procedure for assessing compliance with specifications which, once the rule has been established, leaves no room for discretion. Further, it must determine an "acceptance zone" and a "rejection zone", and mandate that: a measurement result falling within the "acceptance zone" results in the product or material being declared compliant; and a measurement result falling with the "rejection zone" results in the product or material being declared non-compliant ("the No Discretion Standard").

2219 For completeness, Hibbert gave evidence that the use of some subjective judgment in the chemical analysis and reporting process is to be expected, and may be permissible. This evidence should not be misunderstood. It did not provide any justification for a procedure which permits general, non-transparent and non-systematic decisions to be made with respect to compliance. This was so for a number of reasons.

2220 *First*, Hibbert's evidence related not to the form of a Decision Rule, but to laboratory practice in respect of matters not explicitly addressed in written standards and procedures. As such, it should not be understood to detract from the No Discretion Standard, which relates to both the form and application of a particular written procedure, that is, a Decision Rule.

2221 *Secondly*, that some subjective judgment may be permissible does not mean that there exists a general licence to use subjective judgment or discretion in chemical analysis. The permissible use of subjective judgment is strictly confined in scope: to "eventualities" for which written standard operating procedures do not give clear written guidance. Such eventualities should be few. Consistent with Hibbert's evidence, laboratories should strive for standard operating procedures which are as thorough and comprehensive as possible, and leave as little room for subjective judgment as possible, provided that they produce a measurement result that is fit for purpose. At a minimum, written procedures should contain any "important series of

steps", and such steps should be followed.

2222 *Thirdly*, that some subjective judgment may be permissible does not mean that there is a general licence to depart from the written standards or procedures. Any subjective judgment must be used *consistently* with any written procedures or standards.

2223 *Fourthly*, where subjective judgment is used, it must be recorded, so that any supervisor or auditor of the laboratory may adequately understand how the laboratory's processes have been implemented, how testing results were achieved, and why the subjective judgment was warranted.

2224 Returning to the relevant standards, Hibbert recommended that the estimate of measurement uncertainty for which a Decision Rule accounts should be an estimate of measurement uncertainty *assessed by a particular laboratory for a particular result*. Conversely, it should *not* be an estimate of measurement uncertainty assessed on the basis of a dispersion of results obtained by different laboratories. This was because measurement uncertainty is "a property of a measurement result", and "not a property over method or a global assembly of results".

2225 Best practice, Hibbert stated, is that a single laboratory assess measurement uncertainty in respect of *each* particular result. An acceptable, and less time-consuming approach, is that a single laboratory take an average uncertainty figure in respect of *that* laboratory's experience of measurement uncertainty. An unacceptable approach, however, would be to use an average uncertainty figure in respect of multiple laboratories' experience of measurement uncertainty. Hibbert gave evidence that he was aware of instances where "other people's experience" is taken in the "*hope* that they do it similarly enough to use the measurement uncertainty figure" (emphasis added).

2226 Hibbert endorsed recommendations contained in a guide entitled "Use of Uncertainty in Compliance Assessment" ("the Eurachem/International Guide") prepared by a

joint working group comprising members of Eurachem,[1354] a European association of chemist and chemical societies, and members of the Co-operation on International Traceability in Analytical Chemistry. Hibbert considered that the Eurachem/International Guide represented "sound practice" in the field of chemistry. Specifically, Hibbert endorsed 4 recommendations:

(1) In order to decide whether or not to accept or reject a product, given a result and its uncertainty, there should be:

(a) A specification giving the upper or lower permitted limits, or both, of the characteristics (measurands) being controlled.

(b) A Decision Rule that describes how the measurement uncertainty will be taken into account with regard to accepting or rejecting a product according to its specification and the result of a measurement.

(2) The Decision Rule should have a well-documented method of unambiguously determining the location of the acceptance and rejection zones, ideally stating or using the minimum acceptable level of the probability that the measurand lies within the specification limits. It should also give the procedure for dealing with repeated measurements and outliers.

(3) Utilising the Decision Rule, the size of the acceptance or rejection zones may be determined by means of appropriate guard bands. The size of the guard band is calculated from the value of the measurement uncertainty and the minimum acceptable level of the probability that the measurand lies within the specification limits.

(4) A reference to the Decision Rule used should be included when

1354 For some time, Eurachem has developed and published "particularly useful guides" concerning the practice of analytical chemistry and are highly regarded in that field.

reporting on compliance.

(Together, "the Eurachem/International Standards".)

2227 Further, Hibbert set out 4 criteria for best practice in respect of "conformity assessment" involving a Decision Rule.[1355] There is a degree of overlap between these criteria and the Eurachem/International Standards, in particular, the fourth Eurachem/International Standard. The 4 criteria require that any reported result must state:

(1) The measurand and compliance requirement.

(2) The measured quantity value and its standard uncertainty[1356] or expanded uncertainty;[1357] that is, the estimated measurement uncertainty.[1358]

(3) The Decision Rule to be applied.

(4) The result of applying the Decision Rule to the information.

(Collectively, "the Conformity Assessment Criteria".)

2228 Finally, in relation to a correction for systematic error, Hibbert stated that any bias correction would need to be made uniformly and consistently. His evidence was that it should be the same and applied in the same way to all the results, in other words, through the use of the Bias Correction Standard.

X.9.3.3 Question 3: Does the Viterra Certificate of Analysis Procedure, in form and application, satisfy those standards?

2229 Hibbert's evidence made it plain that, both in form and application, the Viterra Certificate of Analysis Procedure did not satisfy these relevant standards.

1355 A conformity assessment is an "activity to determine whether specified requirements relating to a product, process, system, person or body are fulfilled".

1356 "Standard uncertainty" is measurement uncertainty expressed as a standard deviation.

1357 "Expanded uncertainty" is the "product of a combined standard measurement uncertainty and a factor larger than the number 1".

1358 Hibbert said best practice would provide for a report giving the measured result, as well as the standard deviation or expanded uncertainty.

Accordingly, it is not an example of a scientifically-justifiable Decision Rule.

2230 For the sake of clarity, it is necessary to say something at the outset about Hibbert's originally stated opinion, that the Viterra Certificate of Analysis Procedure *was* an example of a Decision Rule. This initially formed part of the Hibbert Report, but was not the subject of the Viterra Parties' application for leave to file and serve the Hibbert Report out of time. Accordingly, neither this opinion nor the basis upon which it was made was initially before the court. However, during cross-examination, in commencing a line of questioning concerning what a Decision Rule encompassed, it was put to Hibbert he had expressed this opinion in "the part [of the Hibbert Report] that has been crossed out". Obviously, at least prima facie, this created an issue; as a result of this approach to the cross-examination, the court has before it an expert opinion without the evidence establishing how that opinion was formed or how it was based on specialised knowledge.[1359] However, in light of the evidence given by Hibbert on this point, this difficulty need not be addressed.

2231 At a general level, the real issue was not just whether or not the Viterra Certificate of Analysis Procedure was a "Decision Rule", but whether in form *and application*, it was a *scientifically-justifiable* Decision Rule.[1360] Further, Hibbert's opinion as expressed in the Hibbert Report as originally served was based only on the form of the Viterra Certificate of Analysis Procedure. That opinion was given without, for example, Hibbert having been shown:

(1) Any documents relating to the Malt Proficiency Scheme, which scheme was said to be the basis of adjustments made under the Viterra Certificate of Analysis Procedure.

(2) Any Certificate of Analysis generated under the Viterra Certificate of Analysis Procedure.

1359 See *Evidence Act*, s 79(1). There was no re-examination on the issue.

1360 See pars 2213-2216, 2226(2) above.

Once Hibbert was shown, in cross-examination, examples of documents relating to the Malt Proficiency Scheme and the Viterra Certificate of Analysis Procedure, Hibbert swiftly, and very significantly, moderated his initial opinion (based on the limited information he was provided). Once Hibbert had concluded his evidence, it was apparent that the Viterra Certificate of Analysis Procedure was not, even in form, a procedure that remotely resembled a scientifically-justifiable Decision Rule. It departed from scientific best practice and applicable standards in many respects, and in some respects quite severely. Only some of them need to be mentioned.

2232 *First*, the Viterra Certificate of Analysis Procedure did not satisfy the No Discretion Standard. Rather than operating in a mandatory and binary fashion, the procedure adopted permissive language which allowed for discretion in making adjustments and approving shipments. Relevantly, the Viterra Certificate of Analysis Procedure provided that:

> Results that appear out of specification on the [Certificate of Analysis] *may* be adjusted by the Technical Services Manager (or their nominated proxy).[1361]
>
> (Emphasis added.)

It further provided that an adjustment "*may* be made up to" 2 standard deviations as required. Further still, it provided that results that remained out of specification after a maximum of 2 standard deviation adjustment could be *altered further* and released for shipment with approval of 2 or more general managers.[1362] Rather than operating in a mandatory and binary way, the Viterra Certificate of Analysis Procedure allowed for the application of an all-encompassing managerial discretion at several distinct stages.

2233 *Secondly*, the Viterra Certificate of Analysis Procedure's reliance on data from the Malt Proficiency Scheme was problematic. The Viterra Certificate of Analysis Procedure provided that any adjustment of out-of-specification results was to be based:

1361 See further fn 187 above.

1362 This last aspect of the Viterra Certificate of Analysis Procedure, the Viterra Parties accepted represented a managerial "discretion".

> on the *associated analytical error for that test parameter as defined in the [Malt Proficiency Scheme] program and may be made up to two [s]tandard [d]eviations, where required*. These changes will be approved by the Technical Services Manager and General Manager Technical when signing off the Certificates of Analysis.
>
> (Emphasis added.)

2234 As a preliminary matter, by using Malt Proficiency Scheme data as a *basis* for adjusting reported results, the Viterra Certificate of Analysis Procedure used the Malt Proficiency Scheme for a purpose for which it was not designed. As Hibbert accepted, the purpose of the Malt Proficiency Scheme was to assist participating laboratories in monitoring and improving measurement performance. No part of its purpose was to provide laboratories with a basis for adjusting measured results.

2235 Further, the Malt Proficiency Scheme data could not be justifiably used either to estimate measurement uncertainty, or to correct for systematic error.

2236 To elaborate, using the Malt Proficiency Scheme data would have contravened the proper basis for estimating measurement uncertainty. This is because it would have involved estimating measurement uncertainty on the basis of a dispersion of results obtained by different laboratories participating in the scheme, not, as that standard requires, on the basis of a *particular laboratory*'s result or, at the very least, an average of that laboratory's results.[1363]

2237 Alternatively, and proceeding on the basis that there was some proper justification for assuming that systematic errors at Joe White's laboratories bore some similarity to the published data (although there was no evidence to make any such assumption), Hibbert's evidence was that using the Malt Proficiency Scheme as a basis for correcting for systematic error would only have been justifiable if it was applied consistently and uniformly, for example, as a Bias Correction Standard. This was undoubtedly correct. The Viterra Certificate of Analysis Procedure did not apply the Malt Proficiency Scheme data in this way. Rather than being applied uniformly, the data (such as it was) was usually only applied in respect of out-of-specification results.[1364] Indeed, in

---

1363 See par 2224 above.

1364 See pars 77-78 above and par 2240 below.

respect of the practice of adjusting only out-of-specification results, Hibbert stated, tellingly:

> … this is not a "scientific" – by the time we are making these adjustments for compliance I would say that it has gone outside the realm of the scientist. This appears to be some – this is a commercial kind of a decision, I think …

2238 Stewart gave evidence entirely consistent with Hibbert's position. When asked whether it was up to him to decide whether malt could be shipped even if a specification or specifications were outside 2 standard deviations, Stewart said it was not. Rather, he gave evidence that it was up to 2 general managers "and normally it would be a business decision and perhaps a financial decision as to whether it would be recalled or not". He confirmed that there were no rules about how the discretion was to be exercised and that the business or financial decision was made to serve Viterra Malt's business or financial interests. When asked to explain this answer, Stewart continued, "So it was no longer technical … [it] then became a decision for the business to make". Stewart then agreed with the proposition that, in these circumstances, Joe White was so far out of the ballpark as far as any scientific justification was concerned that the decision had become a decision entirely of commercial convenience. Stewart also gave evidence that where malt produced departed from a customer's specifications "but … was technically suitable", Joe White treated the variation as a commercial decision. At another point in his evidence, Stewart stated it was "a bit more of a business decision than more technical", requiring consideration of impact on the Joe White Business if the malt were not shipped.[1365]

2239 To put it bluntly, if the Viterra Certificate of Analysis Procedure was intended to be a scientifically sound approach, it was flawed to adjust predominantly only out-of-specification results, but generally make no adjustment for results that were apparently within specification. If there were a proper basis for any adjustment with respect to a particular analyte, then that adjustment needed to be made across the

---

1365 See also par 1108 above.

board for the reported results to have any scientific rigour.[1366]

2240 Furthermore, even assuming that there was some scientific justification for using the Malt Proficiency Scheme data as the basis for adjusting results pursuant to the Viterra Certificate of Analysis Procedure, the Malt Proficiency Scheme data was not properly used as the basis for adjustments. There are several indicators that that was so.

2241 The internal "standard deviation" table which Joe White used to make adjustments was not periodically updated to reflect updates to the Malt Proficiency Scheme data.[1367] Hibbert, in cross-examination, stated that if Joe White were using the Malt Proficiency Scheme data as a basis for adjustment, he would expect to see Joe White's internal standard deviation table periodically updated to incorporate the results of each proficiency testing round.

2242 Further, that same internal standard deviation table contained figures for analytes for which the Malt Proficiency Scheme published no data, or figures for those analytes different from the corresponding figures in the Malt Proficiency Scheme. In cross-examination, Hibbert accepted that there were examples in Joe White's internal standard deviation table that did not match with the corresponding values in the Malt Proficiency Scheme data, and so, at least to that extent, Joe White's malt adjustments could not be said to be based on the Malt Proficiency Scheme data. The examples Hibbert was taken to were the values for moisture and diastatic power. There were 11 other analytes which appeared not to be based on the Malt Proficiency Scheme data.[1368]

2243 The Viterra Parties submitted that a degree of departure from the Malt Proficiency Scheme data was appropriate. This was put on the premise that the Viterra Certificate of Analysis Procedure was "based on", but not strictly beholden to, the Malt Proficiency Scheme data. It was contended that if it was "based on" the Malt Proficiency Scheme data that was enough, when combined with the form of the

---

1366 Noting, for completeness, that if this approach were taken, it might mean that results within specification would be out of specification once such an adjustment was consistently implemented.

1367 See annexure A to these reasons.

1368 See also par 198 above.

Viterra Certificate of Analysis Procedure, to give the approach sufficient "scientific rigour".

2244 This submission did not withstand scrutiny.

2245 As a preliminary matter, the Viterra Certificate of Analysis Procedure explicitly mandated that the "associated analytical error" for a test parameter as "defined in the" Malt Proficiency Scheme be the basis for any adjustment. Further, the Malt Proficiency Scheme was pleaded at paragraph 30(e)(viii) of the Defence as the sole applicable and industry-accepted example of an "objective quantification" of the magnitude of measurement uncertainty for which a Decision Rule may account. Indeed, on its face the objective of paragraph 30(e) was to establish that the Viterra Certificate of Analysis Procedure met the description of a Decision Rule in part because it accounted for uncertainty by reference to the Malt Proficiency Scheme. In other words, that the "objective quantification of the magnitude of such [inherent] uncertainty"[1369] was said to be anchored in the Malt Proficiency Scheme data was an important plank of the posited scientific justification for the Viterra Certificate of Analysis Procedure. In those circumstances, to the extent the data contained relevant information it was problematic that Joe White did not consistently utilise the most current iteration of the relevant data.

2246 In substance, the submission lacked merit. Out-of-date Malt Proficiency Scheme data was used, and so for some analytes corresponding adjustments were in no way derived from Malt Proficiency Scheme data.[1370] Hibbert's evidence provided no basis for suggesting such an application of the Malt Proficiency Scheme data was scientifically rigorous; quite the contrary. Nor did the Viterra Parties identify any other evidence establishing a scientific rationale for departing from the up-to-date Malt Proficiency Scheme data in general, let alone only in respect of particular analytes.

2247 Accordingly, the manner in which the Malt Proficiency Scheme data was used, or not

---

1369 This quote adopts the language used in par 30(e) of the Defence.

1370 See par 286 above and annexure A to these reasons.

used, as a basis for adjustments was not even remotely scientifically rigorous.

2248 *Thirdly*, the Viterra Certificate of Analysis Procedure in application contravened each of the Conformity Assessment Criteria, and the fourth Eurachem/International Standard. Hibbert, during the course of his cross-examination, was taken to an example of:[1371]

(1) A Sign-Out Report in respect of a particular shipment of malt. That report relevantly recorded, amongst other things, the following information in respect of certain parameters:

(a) Two sets of laboratory test measurement results taken at the plant at which the shipment was first tested and at Joe White's central laboratory in Adelaide.

(b) A customer specification.[1372]

(c) A "reported" test measurement result,[1373] which was either left unmarked, or struck-though and replaced by a pencilled figure. Where the "reported" test measurement result was outside the customer specification, that result was shaded, as well as struck-through and replaced with a pencilled figure.[1374]

(2) The Certificate of Analysis, corresponding to this particular Sign-Out Report, which was provided to the customer to whom that particular shipment of malt was supplied.[1375] It relevantly recorded, in respect of the parameters identified in the Sign-Out Report, a single "result" value

---

1371 Before giving evidence in court, Hibbert had not been provided with a Certificate of Analysis by the Viterra Parties, despite asking if he could see an example of a Certificate of Analysis created in the conduct of the Joe White Business.

1372 A customer specification was provided for all but 1 of the "parameters", titled "Extract %-Coarse Grind-Dry Basis, Co".

1373 With 1 exception, the "reported" test measurement result corresponded with the test measurement result recorded at Joe White's central laboratory in Adelaide. Customers varied as to parameters to be reported upon.

1374 Stewart gave evidence that Sign-Out Reports were reviewed and authorised (including by him) for Certificate of Analysis production.

1375 Some customers required a pre-shipment Certificate of Analysis to be sent. This was a draft based on the theoretical blend that a customer could review prior to the malt being shipped: see par 79 above.

that corresponded to either the unmarked "reported" test measurement result or the pencilled figure. In contrast with the Sign-Out Report, it did not record any of the laboratory results or the specifications in respect of any parameter.

2249 Hibbert considered that collectively the Sign-Out Report and the Certificate of Analysis contravened each of the Conformity Assessment Criteria. To elaborate:

(1) The Certificate of Analysis did not satisfy the first Conformity Assessment Criterion, as the result reported to the customer did not state the measurand and the compliance requirement, being the specification.

(2) The Certificate of Analysis did not satisfy the second Conformity Assessment Criterion for 2 reasons. It did not give the "measured quantity value" or the "quantity value representing the measurement result"; namely, the laboratory results. In addition, it did not provide an estimate of measurement uncertainty, being either "standard uncertainty" or "expanded uncertainty", in respect of those results.

(3) Neither the Sign-Out Report nor the Certificate of Analysis satisfied the third Conformity Assessment Criterion because neither contained any statement of a Decision Rule.[1376]

(4) Neither the Sign-Out Report nor the Certificate of Analysis satisfied the fourth Conformity Assessment Criterion because neither stated the outcome of applying any Decision Rule. Absent any statement of a Decision Rule, it was entirely unclear whether the stated results in those documents were the outcome of a Decision Rule being applied.

2250 What is set out above concerned a single Sign-Out Report and its corresponding Certificate of Analysis. From an assessment of the other Sign-Out Reports and Certificates of Analysis in evidence, it was plain that Hibbert's observations

1376 This also must constitute a failure to satisfy the fourth Eurachem/International Standard.

concerning non-compliance were equally applicable to those additional documents. The Viterra Parties did not seek to introduce any Sign-Out Reports or Certificates of Analysis into evidence in order to attempt to demonstrate that Hibbert's observations did not apply. On the evidence available, it was plain that Hibbert's observations were applicable to the Sign-Out Reports and Certificates of Analysis produced by Joe White more generally.

2251 In relation to the Conformity Assessment Criteria, the Viterra Parties contended that a failure to satisfy those criteria was irrelevant because customers to whom the results were reported did not express any dissatisfaction with the figures they were provided. This submission was not to the point. This issue was not concerned with the satisfaction of customers. It was concerned with the satisfaction or dissatisfaction of standards of scientific practice. Whether or not Joe White's customers expressed displeasure with the fact that standards of scientific practice were not complied with did not alter or detract from the fact that they were not complied with.

2252 It follows that the Viterra Certificate of Analysis Procedure, both in form and as it was applied in practice, did not comply with the analytical chemistry standards that were identified by Hibbert.

X.9.4 Some further remarks

2253 For completeness, the Cargill Parties' submissions identified some respects in which paragraph 30(e) of the Defence departed from Hibbert's evidence in relation to this issue, including by mischaracterising or imprecisely deploying certain scientific concepts relevant to a Decision Rule.

2254 The most significant of these was that paragraph 30(e) appeared to conflate concepts of "error" and "uncertainty". This first occurred in paragraph 30(e)(i), which stated that:[1377]

> any laboratory test measurement of the properties of material such as malt is necessarily subject to *error and uncertainty*.

1377 This reflects question (1) at the start of issue 9.

(Emphasis added.)

2255 The pairing of "error and uncertainty" was replicated in other subparagraphs of paragraph 30(e), as set out above in identifying the questions for issue 9. The repeated pairing of "error and uncertainty" suggested that "error" and "uncertainty" were not, where paired, being treated as distinct concepts, but rather as a single or amalgamated concept: "error and uncertainty".

2256 Further, the reference to "error and uncertainty" in paragraph 30(e)(i) and (ii) necessarily informed the overall import of the paragraph: from the propositions expressed in subparagraphs (i) and (ii), the proposition expressed in subparagraph (iii) was derived; from it, in turn, the proposition expressed in subparagraph (iv) was said to follow.[1378] The definition of "decision rule" given in subparagraph (v) responded to, and recognised, the matters set out in those preceding 4 subparagraphs. It was this definition, informed by what was put in subparagraphs (vi) to (viii), which, in subparagraph (ix), the Viterra Certificate of Analysis Procedure was said to meet.[1379]

2257 The framing of paragraph 30(e)(i) and (ii) by reference to "error and uncertainty" was, therefore, significant. This framing was problematic for 2 reasons.

2258 *First*, the proposition in subparagraph (i) was, to the extent it related to "error", not supported by Hibbert's evidence. Hibbert's evidence was that it was only "uncertainty" to which laboratory test measurements were necessarily subject.[1380]

2259 That measurements were only necessarily subject to "uncertainty", and not necessarily subject to "error" was conceded by the Viterra Parties' senior counsel in closing address. That concession was appropriate.

2260 *Secondly*, the repeated pairing of "error" and "uncertainty" was inclined to mislead. It inadequately distinguished the 2 distinct concepts. Hibbert's evidence provided no basis to pair them, and consistently treated the 2 concepts as distinct. Indeed, the

---

1378 See questions (1)-(4) of issue 9.
1379 See questions (5)-(9) of issue 9.
1380 Leaving aside systematic error: see pars 2235-2239 above.

Hibbert Report referred to a scientific publication in which it was stated that great care needed to be taken between the 2 terms, as the 2 concepts:[1381]

> are not synonyms, but represent completely different concepts; they should not be confused with one another or misused.

2261 One effect of repeatedly pairing error with uncertainty in the Defence was to obscure the relationship between them. To briefly repeat, error is not uncertainty, but only 1 of a number of possible causes of uncertainty. Systematic error may be corrected, via a Bias Correction Standard, but that correction is not a Decision Rule, or part of a Decision Rule, but rather an adjustment to an initial result which stands outside the application of a Decision Rule itself. Where a correction for systematic error is made, then the uncertainty of that correction must be incorporated into the measurement uncertainty for which the Decision Rule accounts.[1382] A single error, or a number of errors not giving rise to a systematic error, are also errors which may give rise to uncertainty, but they are not of a kind that may be dealt with by application of a Bias Correction Standard.

2262 This was not the only way in which the pleaded paragraph 30(e) was said to depart from, or overstate, Hibbert's evidence in relation to this question. Three further examples, which are not exhaustive, illustrate the point:

(1) Paragraph 30(e)(ii) of the Defence sought to identify the "main causes" of "error and uncertainty". However, the Hibbert Report did not identify "main causes", but rather identified particular "factors" from which uncertainty arises.[1383]

(2) Paragraph 30(e)(iii) provided that "any laboratory test measurement was only an estimate/approximation of the true value of the measurands … and merely implies a range of values which can

---

1381 Joint Committee for Guides in Metrology: "JCGM 100. Evaluation of measurement data – Guide to the expression of uncertainty in measurement" BIPM (Sèvres, 2008), [3.2.2] n2.

1382 See par 2237 above.

1383 The particular factors Hibbert identified are those about which he was instructed to respond.

reasonably be attributed to the measurands". However, neither the Hibbert Report nor Hibbert's evidence provided any support for the proposition that a laboratory test measurement implies (merely or otherwise) a range of reasonably attributable values.[1384]

(3) Paragraph 30(e)(iv) provided that a supplier/producer must seek to ensure that any particular test measurement takes into account "error and uncertainty". That paragraph suggested, inaccurately, that "error and uncertainty" were to be accounted for collectively, or by a single set of measures. However, as noted above, the measures which take into account systematic error and the measures which account for uncertainty are different, and occur at different stages. Systematic error may be corrected by adjusting the initial result; uncertainty may be addressed by the application of a Decision Rule, which accounts for, amongst other things, measurement uncertainty incorporating the uncertainty of any error corrections.[1385]

2263 However these additional matters need not be separately addressed, as ultimately very little turns on them. This is because the answer to the previous question disposes of this issue. Put simply, whatever a Decision Rule is (expressed by reference to whichever scientific concepts), Hibbert's unequivocal evidence was that the Viterra Certificate of Analysis Procedure was *not* an example of one. With respect, that evidence was plainly correct. The Viterra Certificate of Analysis Procedure was not, nor was it even close to being, a scientifically-justifiable Decision Rule.[1386]

2264 Addressing this topic would not be complete without dealing with a fundamental difference between the application of the Viterra Certificate of Analysis Procedure with respect to 2 standard deviations and the logical and necessary consequence of any procedure which allowed for error or uncertainty, or both.

1384 Subject, of course, to the number of decimal places used in any numerical result; the more decimal places used the smaller the necessary uncertainty arising from rounding.

1385 See par 2261 above.

1386 See par 2229 above.

2265 If a test result were at the outer limits of 2 standard deviations because of, for example, variability in test equipment, the non-homogenous nature of malt, or some other factor or combination of factors, then under the Viterra Certificate of Analysis Procedure results could be reported as being within specification (which reporting was unqualified). However, it must follow as a matter of logic that the test result at the outer limits of 2 standard deviations could have in fact been out of specification well beyond 2 standard deviations. This was because the risk of an incorrect result must mean that the test result could be higher or lower than the true result. So much was accepted by the Viterra Parties' senior counsel in closing submissions.

2266 The Viterra Certificate of Analysis Procedure ignored this reality. It allowed for results to be reported within specification when the test result was within 2 standard deviations without making provision in any way for the possibility that the result was in fact well beyond 2 standard deviations. As Hertrich stated in his evidence, the Viterra Certificate of Analysis Procedure assumed that any variance was only one-directional (that is, towards the direction of the required specification), whereas variance is bi-directional. De Samblanx put it succinctly in giving evidence that the Viterra Certificate of Analysis Procedure involved correcting all the time at the convenience of Joe White.[1387]

X.9.5 Answers to specific questions

2267 This conclusion effectively disposes of the ultimate issue in this section. However, each question arising from the pleadings should be addressed.[1388]

2268 In light of the above, the questions posed in the heading to this issue should be answered as follows:

(1) Yes, except for the use of the words "error and".

1387 See par 1651 above.

1388 In taking this approach, the Cargill Parties' submissions concerning the relevance or otherwise of the questions will not be addressed. In light of the conclusion, it is unnecessary to respond to these submissions.

(2) Yes, except for the use of the phrase "the main",[1389] the words "error and", and if the word "are" is replaced with the word "include".

(3) Yes, provided the phrase "as a result" is understood to refer only to "uncertainty" and not to "error", and except for the phrase "and merely implies a range of values which can reasonably be attributed to the measurand".

(4) Yes, except for the use of the word "Accordingly", and provided it is understood that "error" and "uncertainty" are separately addressed and with the qualifications given by Hibbert concerning subjective judgment and his evidence more generally concerning a Decision Rule.[1390]

(5) Yes, subject to the previous answers and the terms of any contract between a supplier and its customer.

(6) Yes, subject to the qualifications given by Hibbert concerning subjective judgment[1391] and his evidence more generally concerning a Decision Rule.

(7) (a) Yes. (b) No.

(8) Unnecessary to answer.[1392]

(9) No.

X.10 Was it the fact that:

(1) Joe White routinely, and without informing customers:[1393]

(a) supplied malt to customers that did not comply with contractual requirements and specifications;

(b) supplied Certificates of Analysis to customers that misstated the results of analytical testing on the malt, so that the

---

1389 See par 2262(1) above.
1390 See par 2219 above.
1391 Ibid.
1392 But see par 2822 below.
1393 This issue as defined in subparagraph (1) was a reference to the Viterra Practices: see par 1851 above.

Certificates of Analysis reported that the malt complied with contractual requirements and specifications when it did not?

(2) The Viterra Practices were partly recorded in and endorsed by the Viterra Policies (being the Viterra Certificate of Analysis Procedure and the Malt Blend Parameters Procedure)?

(3) Joe White's financial and operational performance for the financial year 2010 to part of the financial year 2013 was substantially underpinned by Joe White's practice of supplying malt to customers pursuant to the Viterra Practices and the Viterra Policies that did not comply with the relevant contracts?

(4) But for the Viterra Practices, Joe White could not produce and sell malt in the volumes and to the specifications required by customers and in the volumes and for the returns reflected in the Financial and Operational Information disclosed in the Information Memorandum and during the Due Diligence?[1394]

2269 For the reasons that follow, the answer to each of these questions is yes. Primarily, this issue was decided on the evidence given at trial by a number of persons involved in the operations of the Joe White Business at the relevant times. The findings made were corroborated by statistical analyses done in relation to the prevalence of the Reporting Practice and the Varieties Practice. No such analysis was done with respect to the Gibberellic Acid Practice as there was no relevant data maintained to enable it to be done.

X.10.1 Routinely supplying malt and providing Certificates of Analysis in accordance with the Operational Practices

2270 The word "routinely", in this context, must mean customarily or regularly. In other words, it would not follow that establishing an exception or some exceptions to a course of conduct would necessarily mean the course of conduct was not engaged in routinely. The case of the Cargill Parties was conducted on this basis.[1395]

2271 Generally speaking, customers were not informed about the Operational Practices. Although at times there was vague evidence about the possibility of some customers being informed about some relevant conduct, on the whole customers were not so

---

1394 The matters identified in subparagraphs (1) to (4) were the matters identified in the Statement of Claim collectively, individually or in any combination as the Undisclosed Matters: see par 1851 above.

1395 The Viterra Parties submitted there was some lack of clarity of Cargill Australia's case because of the use of "routinely" to describe the extent of the Viterra Practices. There was no application to strike out this part of the Statement of Claim. Further, the use of a term such as routinely or customarily was far from new: see par 3400 below and the cases referred to in fn 2684 below.

informed. Indeed, Joe White went out of its way to ensure the Operational Practices were concealed. This was done in different ways, depending on the Operational Practice. Sometimes it involved a systematic and organised form of deception. Systems were designed and steps were put in place to ensure that neither customers nor auditors would be any the wiser of the procedures being implemented. On other occasions, it simply involved not telling a customer what was contained in a batch of malt when non-compliance knowingly occurred or when Joe White took no steps to ascertain whether or not it had occurred.

2272 For the purpose of answering the questions posed, it is convenient to deal with each of the Reporting Practice, the Varieties Practice and the Gibberellic Acid Practice individually. However, this should be prefaced with a reference to Youil's statement on 23 October 2013, as the general manager of operations, in relation to the Operational Practices generally, that they had been acceptable for years and that their implementation was "[b]usiness as usual".[1396]

X.10.2 The Reporting Practice

X.10.2.1 The effect of implementing the Viterra Policies

2273 As clarified in the pleadings as they ultimately stood,[1397] there was no issue that the Joe White Business "was generally conducted" up until 31 October 2013 in accordance with the Viterra Certificate of Analysis Procedure and the Malt Blend Parameters Procedure. Contrary to the Viterra Parties' position, in the context of the evidence given at trial and the flaws with both the terms and implementation of the Viterra Policies, this admission carried with it that Joe White routinely supplied malt to customers that did not comply with contractual requirements and specifications.[1398]

2274 There was simply nothing in any of the customer contracts which permitted a system whereby Joe White could, without transparency (let alone with orchestrated secrecy), change test results to report the "result" of each affected parameter to be within

---

1396 See par 1295 above. These statements were made in the context of discussing "these issues", which on the face of the note was a reference to issues concerning each of the Operational Practices. See also pars 1282, 1328 above.

1397 See par 1854 above.

1398 For the avoidance of doubt, the evidence demonstrated what was admitted.

specification when the test results indicated otherwise and when there was no proper analysis engaged in to justify the changes. Nor was there any right for Joe White to substitute parameters in accordance with the Malt Blend Parameters Procedure for the parameters the subject of the customers' specifications, which was done every operating day at every plant for those malt blend parameters listed.[1399]

2275 The evidence that showed that malt supplied by Joe White did not comply with contractual requirements and specifications was essentially in 2 forms: evidence from Joe White's employees in substance to that effect; and a statistical analysis of certain orders for the supply of malt. In relation to the first of these, although evidence of other witnesses was also relevant, the 3 critical witness were McIntyre, Testi and Stewart.

X.10.2.2 The lay evidence and conclusion

2276 At all relevant times, McIntyre was the person who changed the results on most of the Certificates of Analysis.[1400] She had no scientific or technical background or expertise relevant to this conduct. Accordingly, the attempt by the Viterra Parties to seek to scientifically justify the Viterra Certificate Analysis Procedure or the Malt Blend Parameters Procedure was, in practical terms, often beside the point.[1401] This position was not altered by the fact that Stewart would sign off on many, but not all,[1402] of the Certificates of Analysis. The simple fact was that, whenever the test results did not comply with customer specifications and pencilling occurred to record otherwise, usually the Sign-Out Reports and the Certificates of Analysis were not being prepared

---

1399 See pars 235-242 above.

1400 See par 75 above.

1401 In the Viterra Parties' closing submissions, it was contended that "from all the evidence" there existed good reason for raw measurement results to be "corrected/adjusted, including to make them better reflect the *professional opinion* of the analyst" (emphasis added). Given McIntyre had no professional qualifications or background, this submission was of little substance. When this was raised with the Viterra Parties' senior counsel, the court was told it was a generalised statement and was not referring to a particular analyst. Reliance was also placed on changes being within 2 standard deviations to give weight to the submission: but see pars 2264-2266 above. Further, it was suggested the analyst being referred to was "others" within the organisation who were required to make a decision when a result was beyond 2 standard deviations from the required specification: but see pars 2237-2239 above which explain why there was no scientific basis for a decision in these circumstances. Thus, when "all the evidence" was considered this contention must be rejected.

1402 See par 81 above.

on a scientific or technically accurate basis. This was also borne out by Stewart's evidence that it was often the undisclosed and undefined assessment of how the malt would be expected to perform that determined whether it would be shipped.[1403]

2277 Further, McIntyre's evidence included details of occasions where results did not exist and the reporting of results was a complete fabrication.[1404] Her evidence that this was not done for key parameters only diminished the significance of this evidence slightly. The fact that Joe White's practices "frequently" involved completely false reporting spoke volumes about the approach taken to reporting to customers.

2278 The primary purpose of the changes to "almost every Sign-Out Report"[1405] and the reporting of the results in accordance with those changes was to be able to report to Joe White's customers that the malt supplied complied with the customers' specifications, or was sufficiently compliant to satisfy the customer, which would not have been the case if the actual test results had been reported. The fact that on occasions there may have been other reasons for making changes[1406] did not alter the position that routinely Joe White was supplying customers with malt that did not comply with specifications, and failed to disclose that when misstating the "result" in the Certificates of Analysis.

2279 In relation to Testi, she gave clear evidence of concealment and deception in relation to the Reporting Practice. Her evidence was that Joe White engaged in conduct to provide a perception of compliance with customers' specifications. Further, her evidence demonstrated that the extent to which malt was shipped which did not comply with customers' specifications was significant (at least from 2010 to 2012).[1407]

2280 Stewart was called by the Viterra Parties. No doubt this was done, at least in part, by reason of an appreciation of the state of the evidence to that time concerning the Operational Practices, and the need to have a witness involved in this conduct to try

---

1403 See par 173 above.
1404 See par 78 above.
1405 See par 75 above.
1406 See, for example, pars 84-85 above; but also see pars 76-77, 86 above.
1407 See pars 242, 245, 279-280, 287-289, 407-409 above.

to justify meaningfully what had occurred. As explained at some length,[1408] Stewart himself effectively gave up on any attempt to justify some of the more egregious aspects of the Operational Practices.

2281 Further, Stewart's evidence demonstrated that any consciousness of the unsatisfactory nature of the Viterra Policies and the Reporting Practice, including the misstatement of results and the supply of malt that was out of specification but represented to be otherwise, was appreciated by him before Cargill took over control of Joe White.[1409] Furthermore, his evidence put it beyond argument that, at the very least in relation to reporting where the result was more than 2 standard deviations beyond the specification, there was no scientific or technical basis upon which such conduct could be justified.[1410]

2282 Stewart also gave evidence of preparing the Customer Review Spreadsheet. That document was unequivocal in recording that Joe White was unable to meet almost all of its customers' specifications, with the exception of 2 customers in relation to which they could be met "some of the time".[1411]

2283 Although the justification provided by Hughes in October 2013 for the Reporting Practice cannot be accepted, his reporting to Fitzgerald at that time as Joe White's chief executive officer confirmed that the adoption of the process for the preparation of Certificates of Analysis was routine.[1412] Indeed, the evidence made it plain that it was

---

1408 See, for example, pars 158-161, 167-186, 197-201, 220-224, 226-227, 234, 252-254, 272, 284-288, 290, 407-415, 605, 1043-1046, 1106-1118, 1155, 1210-1232, 1264, 1297-1304, 1343, 1352-1353, 1373, 1387-1389, 1429-1436, 1438-1441, 1566-1568, 1572, 1574, 1602-1604, 1700, 1706, 1709, 1768, 1834 above.

1409 See, for example, 158-161, 174-175, (cf 176), 1352-1353 above.

1410 See par 2238 above.

1411 See par 1226 above. The Viterra Parties submitted that the information contained in this part of the Customer Review Spreadsheet "simply" reinforced the importance of commercial maltsters adopting a reporting policy that accounted for the "accepted 2 standard deviations of variance". There was not a hint of this consideration in the Customer Review Spreadsheet, or the Key Recommendations Memorandum by which Stewart circulated it: see par 1210 above. On the contrary, if that were the mindset of the Joe White executives at the time then presumably column P would have been entitled, or a further column would have been entitled, with words to the effect "Able to achieve specification, including by applying the standard deviation buffer". The title of column P implicitly acknowledged that Joe White was not achieving specification. Further, given the manner in which the "[standard deviation] buffer" was utilised, there was no technical or scientific basis for its implementation: see, for example, pars 198, 208, 216, 286, 2240-2249 above.

1412 See par 1316 above. See also par 1280 and the reference to Hughes stating Joe White did it all the time

Hughes' position that it was entirely acceptable to ship malt which was out of specification,[1413] which was a position accepted, at least in practice, by Stewart. Further, each of Hughes, Youil, Stewart and Wicks made a series of observations in October 2013 which also demonstrated the Reporting Practice was routine and was engaged in to meet the ongoing difficulties of complying with customer specifications.[1414]

2284 In my view, this evidence alone established this aspect of Cargill Australia's claim. Although much of the evidence was general, its substance was clear and unequivocal.

2285 The Viterra Parties submitted that the allegation that Joe White supplied Certificates of Analysis that misstated that malt complied with contractual requirements and specifications was a serious allegation as it effectively alleged that the Joe White staff were routinely and deliberately misrepresenting facts with the intention of deceiving customers. In such circumstances, they contended the court was required, in accordance with section 140(2) of the *Evidence Act* and the principles derived from *Briginshaw v Briginshaw*,[1415] to feel an actual persuasion of the occurrence or existence of the relevant facts before they can be found. I am so persuaded. Further, the relevant critical witnesses each sought and obtained certificates under section 128 of the *Evidence Act*,[1416] which demonstrated their own appreciation of the seriousness of the relevant matters about which they gave evidence.[1417]

2286 Furthermore, contrary to the Viterra Parties' submission, it was not necessary for Cargill Australia to prove the exact analytical specifications required by each customer in order to establish its case.[1418] In different circumstances, this might have been

---

in every plant for all customers on an ongoing basis.

1413 See par 73 above.

1414 See pars 1106-1116, 1373(1), (2), (3), (4), (5), (7), (8), (9), (10), (23), (30) above.

1415 (1938) 60 CLR 336, 361.7-363.6 (Dixon J).

1416 See pars 178-180 above.

1417 See also pars 174, 1554-1555 above.

1418 For completeness, an allegation underlying this submission was sought to be made in the proposed amended defence by the Viterra Parties towards the end of the trial. After it became apparent from exchanges during argument that leave was not going to be granted, the Viterra Parties withdrew the amended application but maintained it was still open to them to make this submission in closing. At the time, I expressed the view that if an allegation of the nature that had been the subject of application for leave to amend were to be made, it needed to be the subject of a pleading. The Viterra Parties chose not to make any further application in this regard.

necessary. However, the clear evidence was that the effect of the changes made to Certificates of Analysis on many occasions, and routinely, had the result that parameters that would otherwise be out of specification were reported as being in specification.

X.10.2.3 Ability to rely upon the Laboratory Information System data

2287 Turning to another means by which the Cargill Parties sought either to establish or corroborate Cargill Australia's claim concerning the Reporting Practice, business records as recorded in the Laboratory Information System were relied upon in order to demonstrate the level and extent of the Reporting Practice. In seeking to rebut any such approach, the Viterra Parties submitted the data was not reliable and could not support any proper findings. On this matter, some general observations need to be made about the admissibility of business records.

2288 Under the hearsay rule, evidence of a previous representation is not admissible to prove an "asserted fact".[1419] A well-trodden exception to the hearsay rule is previous representations made or recorded in business records, which in the specified circumstances, result in the hearsay rule being inapplicable.[1420] Accordingly, if they are relevant,[1421] business records are ordinarily admissible. But even if that be the position, anyone seeking to oppose the tendering of business records may challenge the tender based on either the criteria in section 69 having not been met or, pursuant to section 135 of the *Evidence Act,* on the basis that the probative value of the evidence would be substantially outweighed by the danger that the evidence, relevantly, might be unfairly prejudicial to a party, or might be misleading or confusing.[1422]

2289 A large number of business records were tendered in this case. These included records containing information derived from the Laboratory Information System. The Viterra Parties made a number of specific challenges to the reliability of the data the Laboratory Information System contained. However, no application was made by the

---

1419 *Evidence Act*, s 59.
1420 *Evidence Act,* s 69.
1421 *Evidence Act*, s 55.
1422 Further, there is the ability to limit the use that may be made of any admitted business records under s 136 of the *Evidence Act*.

Viterra Parties to seek to establish that section 69 had not been satisfied, or that the relevant evidence should be excluded under section 135 of the *Evidence Act*.

2290 Further, speaking generally, the fact that business records may contain some inaccuracies or be incomplete does not result in those records being inadmissible or not being given any weight. Rather, it is a matter for the trial judge to assess the probative value of the evidence bearing in mind the possibility that the business records in question, like any business records, may be inaccurate or incomplete.[1423] Even if some inaccuracies or lack of completeness were identified, it is a matter of assessing the nature, extent and materiality of such matters in determining whether or not they throw sufficient doubt upon the overall accuracy of the business records so as to be inadequate to substantiate the claim being made.[1424]

2291 The Viterra Parties relied on a number of matters in seeking to establish that the data contained in the Laboratory Information System was not reliable.

2292 *First,* they pointed to some of McIntyre's evidence concerning how information was entered. This included that the information the Laboratory Information System contained was "not necessarily all the time" the original source record of the contractual specifications and was a tool used in the production of malt of suitable quality. Further, if a customer did not have a specification for a particular parameter, a target would be entered as the value in the specification column. Also, a figure might be included which was a "tighter" target than the customer specification.[1425] Furthermore, there were instances where the specification recorded did not match the specification in the customer contract.

2293 McIntyre gave evidence that there may have been instances where the records within the Laboratory Information System recorded "specifications" which were not the

---

1424 *North Sydney Leagues Club Ltd v Synergy Protection Agency Pty Ltd* (2012) 83 NSWLR 710, 725 [76] (Beazley JA, with whom Macfarlan and Whealy JJA agreed).

1425 See fn 227 above, though it is noted that the sole chain of correspondence referred to by the Viterra Parties in their closing submissions on this point included an email to the customer confirming that Joe White would adopt the tighter range with respect to the relevant parameter, being colour.

same as the "true contractual specification". When the global proposition was put to McIntyre that data in the Laboratory Information System might not be reliable to calculate the overall extent of non-conformance with customer specifications, McIntyre responded that potentially it would not be 100 percent accurate. In addition, McIntyre gave evidence with respect to 1 customer with 4 breweries that a specification was only entered in once for the 4 breweries as they were all part of the same customer group and it was not possible under the Laboratory Information System to enter specifications for 1 of the breweries separate from the others comprising the customer.

2294 The simple collective response to these points was that, to the extent that it might have been said that any of them gave rise to a real issue, none comprised a systemic or fundamental problem with the information contained in the Laboratory Information System. Further, there was no attempt by the Viterra Parties to demonstrate that any of the matters raised existed in sufficient numbers to raise any material issue about the overall accuracy of the data. In a case where no expense has been spared in seeking to defend the claims made, there can be little doubt that if it could have been demonstrated that these issues existed in significant numbers, then it would have been brought to the court's attention. Furthermore, in a system containing so much information, it would be surprising if some inaccuracies could not have been identified. Moreover, Stewart's evidence was that when he required details of customer specifications in performing his role at Joe White, he obtained the details from the Laboratory Information System. This demonstrated that in the relevant period, the Laboratory Information System was considered a reliable source of information.

2295 As to some of the specific issues raised, the 2 alternatives for when a target was included meant that it was not possible for a result to be within a target and outside the specification. In any event, little turns on this issue in circumstances where the instructions given to the information technology manager (who analysed the data for

the purposes of this proceeding)[1426] were that, if the word "target" appeared in the specification field,[1427] it was to be extracted from the data being used to analyse compliance with specifications.

2296 With respect to the point raised about specifications in the Laboratory Information System differing from the "true contractual specification", this might be explained by the evidence given by McIntyre concerning changes that were made to specifications after the contract had been entered into. Further, her evidence, which I accept, was that she was thorough in maintaining the details of the customers' specifications in the Laboratory Information System.[1428] But even if subsequent changes to what had been contained in a contract were not the explanation, again the Viterra Parties did not establish that the relevant entries were of such a size or volume to throw sufficient doubt upon the overall accuracy of the data contained in the Laboratory Information System.

2297 *Secondly,* the Viterra Parties referred to evidence of potentially incorrect information regarding specifications that needed to be verified with customers. In this regard, a single document was referred to, being "Viterra" minutes of a management review meeting held on 27 September 2013. These minutes referred to an order for malt and the potential for either the customer or the Laboratory Information System to be incorrect with respect to a specification.

2298 Under cross-examination, McIntyre said she could not remember specifically whether this type of topic had arisen previously. The Viterra Parties submitted that the court ought infer that this type of topic arose on earlier occasions. Given there were no other minutes put forward to reflect that this issue had been raised on any other occasion, and there was no evidence from any other witness that it might have been, such an inference could not be reasonably drawn based on McIntyre's lack of recollection. Further, the minutes tendered did not establish the Laboratory Information System

---

1426 See par 2311 below.

1427 See fn 227 above.

1428 See par 257 above. Her evidence in this regard was confined to customer specifications and did not touch upon barley varieties, in relation to which she gave different evidence about what was or was not recorded in the Laboratory Information System: see par 2429 below.

was incorrect, but equally entertained the real possibility that the customer's information was inaccurate.

2299 *Thirdly*, the Viterra Parties submitted that, even if specifications had been correctly transposed from contractual documents to the Laboratory Information System, it did not necessarily follow that Joe White was contractually required to meet those specifications. In support of this, reference was made to: (1) "best endeavours" obligations in some contracts (about which the Laboratory Information System made no distinction);[1429] (2) tolerance ranges for some specifications in some contracts (which were not recorded in the Laboratory Information System);[1430] (3) the contractual ability to provide malt that was out of specification subject to the provision of rebates (which was not recorded in the Laboratory Information System);[1431] and (4) deeming provisions in some contracts which required a customer to give notice that malt was out of specification within 30 days, otherwise it was deemed to be within specification (which was also not recorded in the Laboratory Information System).

2300 Yet again, no attempt was made by the Viterra Parties to analyse the extent to which these matters were relevant to the entries relied upon. This factor alone largely undermined any weight that might otherwise have been afforded to this submission.

2301 In any event, dealing with the points individually: (1) it was far from clear how the existence of a best endeavours clause would affect the accuracy or otherwise of the

---

1429 The Viterra Parties' submissions referred to 3 contracts all entered into on 12 March 2008 with related companies of the Thai Brewery Group, which all expired on 31 March 2013. Although the reference to these contracts in the submissions was preceded by "for example", during McIntyre's cross-examination she was asked whether she could recall any other contracts containing best endeavours clauses and she answered that she could not. Further, only 1 other contract with a best endeavours clause was identified, being with Kirin for the period from 29 April 2011 to 29 April 2014. There was no proper basis to infer that the 4 contracts identified were representative of a broader category of customer contracts in circumstances where none of the other contracts before the court contained such a clause. The number of orders that fell into this category was 219 of the total of 4,389 orders, representing just under 5 percent.

1430 The Viterra Parties' submissions referred to 5 contracts. Three of these were precisely the same contracts referred to with respect to best endeavours clauses. The other 2 contracts were for a domestic customer, Coopers. The data from domestic contracts was not relied upon as part of the statistical analysis performed.

1431 Only the 2 Coopers' contracts referred to in the preceding footnote were relied upon by the Viterra Parties to illustrate this point; but for completeness see also the reference to a customer whose identity was not disclosed in fn 624 above.

data recording the specifications or the accuracy of the reporting (albeit, it might have affected whether or not there was a breach of contract in a particular case);[1432] (2) the existence of tolerance ranges might have meant that a comparison between test results and the data which suggested a supply of malt out of specification was in fact within the relevant tolerance range, but there was no evidence to suggest this was the case or, in any event, that the issue went beyond 159 orders (being less than 4 percent of the total of 4,389) in relation to the Thai Brewery Group for the period from 1 January 2010 to 31 October 2013;[1433] (3) the provision for a rebate would not have meant that Joe White was contractually entitled to supply malt out of specification (there was no evidence of any rebates being paid, and thus this would give rise to the inference that it was likely malt was being reported as being within specification though not necessarily in fact within specification in light of the Reporting Practice);[1434] and (4) a deeming provision would clearly have meant that, absent a complaint, malt supplied would be deemed to comply with contractual specifications, but it did not follow from that that malt was not supplied out of specification (and for a period of 30 days would not have exposed Joe White to a claim based on malt supplied in breach of contract).[1435]

2302 In summary, while there was some substance to the points made by the Viterra Parties, none of them, either individually or collectively, provided a basis for the court to conclude that the data contained in the Laboratory Information System with respect to customer specifications was anything other than generally accurate and of probative value.

2303 *Fourthly,* it was submitted that Cargill failed to rely on evidence available to it that, it

---

1432 For completeness, there was no evidence to suggest what endeavours in fact had been used to supply the required barley varieties.

1433 In the Cargill Parties' closing submissions, 188 orders were referred to (representing approximately 4.3 percent of the total orders) based on information provided to the court on 5 September 2018. However, this information was superseded because of the consequences of a cyber attack and the provision of data from the Laboratory Information System by the Viterra Parties: see pars 2315-2316 below. On 15 August 2019, a revised table was provided by the Cargill Parties entitled "Joe White's contractual documents" which set out the contracts and numbers of orders relevant to the particular matters that had been raised by the Viterra Parties. This table was explained in court the following day.

1434 A total of 669 of the 4,359 orders related to contracts that had rebate or penalty clauses.

1435 A total of 277 of the 4,359 orders related to contracts that had deeming clauses.

was contended, was likely to be more reliable than the data in the Laboratory Information System. The Viterra Parties referred to evidence of McIntyre that a profile was created for each customer in the Administration System. They then noted that McIntyre did not disagree with a proposition put to her in cross-examination that the Administration System contained more detail about customer contracts than the Laboratory Information System.

2304 While this account of her evidence was accurate, she deposed that she believed some of the contracts were uploaded to the Administration System, but she was not sure because it was not her area of expertise. If any weight were to be given to such tentative evidence, it could only include a conclusion to the effect that the information concerning customer contracts on the Administration System might have been incomplete. Further, and in any event, the evidence of McIntyre demonstrated that she was diligent in her role of entering data into the Laboratory Information System. Furthermore, although it was properly accepted that the manual entry of test results into the Laboratory Information System meant it was possible that errors would be made,[1436] there was nothing to suggest that, if there were any such errors, they were significant in number. In the absence of any such evidence, there was no proper basis for the court to infer that the laboratory personnel did anything other than accurately record the test results.

2305 In conclusion, the court is satisfied the data contained in the Laboratory Information System comprised a repository of information that could be relied upon as accurately recording the affairs of the Joe White Business.

X.10.2.4 Further observations

2306 Before leaving this topic, there are 2 matters that should not be passed over in relation to the position previously adopted by the Viterra Parties.

2307 *First*, during the trial I sought clarification in relation to whether the Viterra Parties' position was that, in relation to the Cargill Parties seeking to prove their respective

1436 See par 262 above.

cases, they could not rely upon the data contained in the Laboratory Information System. The Viterra Parties' senior counsel[1437] replied that the data could be relied upon as a starting point as no one was disputing what the figures in the system were, but further stated that that was not sufficient to discharge the Cargill Parties' onus of proof. I then enquired as to whether the Viterra Parties' position was that the Cargill Parties could not rely upon the accuracy of what was contained in the Laboratory Information System, to which senior counsel replied that that was not the position. The court was informed that the Viterra Parties' position was that the Cargill Parties could rely upon the accuracy of the information as a starting point. In elaborating on what the Viterra Parties contended the Cargill Parties had to prove, it was stated that the Viterra Parties were not suggesting that the Cargill Parties could not rely upon the Laboratory Information System.

2308 However, the matter did not end there. The Viterra Parties' senior counsel then referred, as an example, to the absence of any evidence about the actual tests carried out which gave rise to the data, which it was said would have removed all doubt about the accuracy of the data. But when it was pointed out that such evidence did not exist anymore, the court was informed that this illustrated the problem the court was facing. After the manner in which section 69 of the *Evidence Act* operated was raised with senior counsel, the following exchange took place:

> Your Honour, I'm making this difficult. Can I say once and for all and then I'll remove that example. We are not saying that the data in the [Laboratory Information System] cannot be relied upon as a starting point. We are not saying that. We are not making a submission along those lines. … So my point is given the inferences that need to be drawn out of the reasons for the discrepancy, that is the reasons for the difference between that which was in the database and that which was represented in the Certificate of Analysis, given that discrepancy, the plaintiff has the onus of showing the reason for the discrepancy. That is, that it was not for correction of error, that it was not within 2 standard deviations, and it was not for the purpose of aligning the Joe White testing regime with the customers' testing regime. We say that's where the plaintiff has failed to establish its case …

Soon after, based on this exchange, the Cargill Parties informed the court that they understood nothing about the Laboratory Information System data was contested. No

---

1437 This was not lead senior counsel.

exception was taken to the Cargill Parties' stated understanding by the Viterra Parties at that time. However, it would appear that the position ultimately adopted by the Viterra Parties did not align with what the court was told well before closing submissions commenced concerning the approach that would be taken.

2309 *Secondly,* the Sellers warranted in the Acquisition Agreement that Joe White's "Records" (which included the Laboratory Information System)[1438] were complete and up-to-date in all material respects.[1439] For what it is worth, it would seem the Viterra Parties' position in closing submissions ran counter to this Warranty, but no issue was made of this at trial.

X.10.3 Background to statistical analysis of data relating to Certificates of Analysis produced and to barley varieties used in malt

2310 The evidence drawn from the statistical analysis strongly corroborated the findings already made concerning the Reporting Practice.

2311 Liam Ryan ("Ryan"),[1440] a director at KordaMentha Forensic, was engaged by Cargill as a non-independent expert. Ryan was instructed to produce 2 separate sets of analysis using data from the Laboratory Information System. The first related to the Reporting Practice and the second was concerned with the Varieties Practice.

2312 Nicholas Abbot ("Abbot"),[1441] an information technology manager at Cargill Australia at the time he gave his evidence, was responsible for extracting the data from the Laboratory Information System that was used by Ryan for his analyses.

2313 The Laboratory Information System contained information about Joe White's customer orders for malt, including: the malt parameter specifications; results of

---

1438 See par 1022 above.

1439 See par 1034 above, at cl 12(c).

1440 Ryan has been a director at KordaMetha Forensic since July 2018. Prior to his employment at KordaMetha he was a senior analyst at Deloitte Australia. He has a bachelor of commerce (accounting) and a bachelor of economics from La Trobe University.

1441 Abbot has been the information technology business relationship manager at Cargill Australia since 1 November 2013. Prior to the Acquisition, Abbot was employed by Joe White between September 2009 to 31 October 2013 as the malt senior system analyst: information technology – Australia/New Zealand.

testing; and test results reported to customers in the Certificates of Analysis. The Laboratory Information System also contained inventory information, including tonnage and the location of barley and malt, as well as information relating to blends, and varieties used in those blends.[1442]

2314 The process of extracting data from the Laboratory Information System could only be done by information technology personnel from Joe White or Cargill, and was done using compatible software connected to the database to write, and then run, queries. This process did not alter or change the underlying source data in the Laboratory Information System.

2315 As a result of a ransomware attack on 15 June 2017, Cargill lost access to the Laboratory Information System.[1443]

2316 On 6 September 2018, Abbot was provided with restored data from the Laboratory Information System.[1444] Abbot was instructed to extract 2 datasets from the restored data. The first extract contained data relating to Certificates of Analysis produced by Joe White ("the Parameters Data"); the second extract contained data relating to the barley varieties used by Joe White in specified malt orders ("the Barley Data").

2317 Ryan used these data extracts for his analyses. The first analysis ("the Parameters Analysis") required Ryan to arrange and analyse the Parameters Data over the period of 1 January 2010 to 31 October 2013. The second analysis ("the Barley Analysis") required Ryan to arrange and analyse the Barley Data over the same period.[1445]

2318 The Viterra Parties took issue with the Parameters Data and the Barley Data. The

---

1442 See further pars 255-262 above.

1443 As part of the attack, Cargill's information technology systems, including the Laboratory Information System and the data within, together with backups of the data, were maliciously encrypted and therefore inaccessible. Abbot initially gave evidence in mid August 2018, based on data which had been extracted before the ransomware attack. There were challenges as to the admissibility of this data and related evidence in light of Cargill's loss of the underlying data base.

1444 The data had been restored by McGrathNicol from a back-up tape not previously discovered. It was produced by Viterra at the direction of the court.

1445 On 26 September 2018, Gilbert + Tobin addressed a letter to Ryan, setting 1 January 2010 to 31 October as the relevant period for the Parameters Analysis. On 5 October 2018 Gilbert + Tobin addressed a letter to Ryan, setting 1 January 2010 to 31 October 2013 as the relevant period for the Barley Analysis.

Viterra Parties submitted that the extracts were selective and, for reasons they submitted were not adequately explained, they only contained Joe White's export orders of pale malt and pilsner malt, and they did not include domestic sales[1446] and non-pale or non-pilsner sales. Further, the dataset was about a third of the size of an earlier dataset put forward by the Cargill Parties to particularise Cargill Australia's claim.[1447]

2319 The Cargill Parties noted that the Viterra Parties did not challenge the accuracy of Ryan's work. Further, the Cargill Parties highlighted the fact that the Viterra Parties did not perform their own analysis of the data Ryan analysed or of the entirety of the raw data available to them from the Laboratory Information System. This was notwithstanding the Viterra Parties' objections regarding the analyses conducted by Ryan and an invitation from the court to provide a report.[1448]

X.10.4 Parameters Analysis

X.10.4.1 Instructions

2320 In September 2018, Ryan was instructed to address the following questions:

> What percentage of all Certificates of Analysis in the relevant period (if any) contained one or more parameter test results reported on the Certificate of Analysis (Reported) that:
>
> (a) did not match the test results recorded internally by Joe White (ie, the Recorded and the Reported results do not match);
>
> (b) did not match the Recorded test result, and:

1446 Domestic sales represented around 22 percent of Joe White's sales for the 2012 financial year.

1447 In contrast with the Parameters Data and Barley Data, which were contained in approximately 87,000 rows of a spreadsheet, the 2014 spreadsheet submitted by the Cargill Parties contained in excess of 230,000 rows of data.

1448 During the course of Ryan's cross-examination in November 2018, the Viterra Parties were informed by me that if they wanted to make something of the data, then they should provide the court with a report. Later the same day, I told the Viterra Parties that, in addition to the provision of a statement of agreed facts by the parties as directed, if the Viterra Parties wanted to put forward anything further based on the available data, including by enlisting the assistance of Ryan (who agreed to assist), then they could do so.

(i) were Reported on the Certificate of Analysis as being within the customer's Specification; but

(ii) the Recorded test result was not within the customer's Specification?

2321 To address the above questions, Ryan was provided with a data spreadsheet extracted from the Laboratory Information System, comprising the Parameters Data, which purported to contain: the malt parameters specified by customers; the test results recorded internally by Joe White; and the test results reported in the Certificates of Analysis throughout the relevant period. The spreadsheet contained 87,351 rows of data,[1449] corresponding to 4,359 order numbers.[1450]

2322 Ryan was given instructions with assumptions to follow while conducting his analysis, relevantly:

> *Non-numeric entries*
>
> A. Some of the parameters have specifications that are non-numeric, but the test result recorded by [Joe White] has a numeric value… For the purpose of comparing a non-numeric Specification with a numeric Recorded test result, you should make the following assumptions:
>
> …
>
> (b) For all parameters where the Specification is "NIL", a Recorded or Reported test result of "0" or "0.0" should be treated as within the Specification for that parameter.
>
> …
>
> *Null or blank test results*
>
> E. Some parameters record a NULL or blank entry in the Recorded column, but a specific number in the Specification and/or the Reported column.
>
> F. For those parameters, you should treat the NULL or blank entry as containing (a) a test result that is within the customer Specification; and (b) a test result that does not match the Reported column.

1449 Not including the header row.

1450 The documents tendered by the Cargill Parties as contractual documents which related to Ryan's analyses related to 3,656 of these 4,359 orders, representing approximately 84 percent of the total orders. For the remaining 703 orders, there were no written contracts tendered.

Decimal places

G. Some of the parameter test results for a specific order in the Recorded and Reported columns are not expressed in the same numeric format, but otherwise appear to be the same number. For example, row 3520 (when sorted by order number) contains the parameter 'Soluble Nitrogen %, Dry Basis'. The Recorded entry is 0.7216. The Reported entry is 0.72. It appears that the numbers are the same but the Recorded test result has been entered or displays four decimal places, and the Reported test result has been entered or displays two decimal places.

H. You should treat such test results in the following way:

(a) if the results in the Recorded or Reported columns have a different number of decimal places, but otherwise, save for fair rounding or the reduction of decimal places appear to be the same number, those results should be treated as matching.

(b) highlight (or otherwise identify) all rows in your spreadsheet which contain test results that are not expressed in the same numeric format but otherwise appear to be the same.

(c) in your summary, state what percentage of all Certificates of Analysis in the relevant period (if any) contained test results that included rows highlighted in this way.

…

Duplicate test results

K. For some orders, test results were conducted for the same parameter more than once.

L. You should treat these results in the following way:

(a) where there are duplicate test results within a single order, and one of the duplicate test results matches the customer Specification and the Reported result, you should treat the test results for that parameter as a match and disregard the non-matching test result/s for the purposes of calculating if the Recorded and Reported results match or are within Specification.

…

X.10.4.2 Findings

2323 The facts derived from Ryan's analysis were agreed upon by both parties and are attached as annexure D to these reasons. The relevant agreed facts included:

1. Of the 4,359 Certificates of Analysis included in the Parameters Data, 98.88% of those Certificates of Analysis (or 4,310) had one or more

parameters the subject of an Adjustment (ie the Recorded Analytical Test Result and Reported Analytical Result did not match).

…

3. Of the 4,359 Certificates of Analysis included in the Parameters Data, 88.05% of those Certificates of Analysis (or 3,838 orders) had one or more parameter results Reported that was the subject of an Adjustment that brought a Recorded Analytical Test Result that was outside Specification to a Reported Analytical Result that was within Specification.[1451]

…

5. 87.2% of all individual Recorded Analytical Test Results [being 87,351 results contained in the 4,359 Certificates of Analysis] contained in the Parameters Data are recorded as being within Specification or otherwise had a blank entry in the Recorded Analytical Test Result column (Column I).

….

8. 37.1% of all Adjustments recorded in the Parameters Data were such that the Recorded Analytical Test Result was outside Specification but the Reported Analytical Result was within Specification.

…

X.10.4.3 The Viterra Parties' submissions

2324 Essentially, the Viterra Parties' position was two-fold. It was submitted that the Cargill Parties did not prove that the malt supplied by Joe White routinely failed to meet customers' specifications, because: (1) there was insufficient evidence to prove the specifications; and (2) there was insufficient evidence to prove the failure to meet alleged specifications.

2325 Accordingly, it was submitted that the Cargill Parties failed to prove that Joe White routinely misstated the results to ensure Certificates of Analysis were within specification.

X.10.4.3.1 Insufficient evidence of specifications

2326 Turning to the first issue, the Viterra Parties submitted that the Cargill Parties did not prove that the Laboratory Information System reliably captured all of the customers' specifications and therefore did not establish that the specifications used in the Parameters Analysis were the specifications required by the customer, for 4

1451 88.05 percent equated to 1,210,608 tonnes, or 89.1 percent of the total tonnes for the 4,359 orders (agreed fact 4).

reasons.[1452]

2327 *First*, as already mentioned, the Parameters Data was extracted from the Laboratory Information System. There was evidence from Joe White's employees that the Laboratory Information System did not always record the specification in accordance with the customers' contracts.[1453]

2328 *Secondly*, concerns were raised at a management meeting in September 2013,[1454] that some of the specifications in the Laboratory Information System might have been incorrect.

2329 *Thirdly*, the Laboratory Information System did not capture some of the nuances in contractual obligations between Joe White and its customers.[1455] Therefore, it was submitted that there was insufficient evidence to establish that the Parameters Data contained the contractually required specifications.

2330 *Fourthly*, it was contended the Cargill Parties relied on Laboratory Information System data, as opposed to more detailed data that was available to them.[1456]

2331 Based on these submissions, the Viterra Parties submitted that the court should infer that the best evidence would not have assisted the Cargill Parties' case.

X.10.4.3.2 Insufficient evidence of failure to meet specifications

2332 Turning to the second issue, the Viterra Parties submitted that the Parameters Analysis did not prove a failure by Joe White to meet customer specifications, for the following reasons.

2333 *First*, it was contended that the assumptions underpinning the Parameters Analysis

---

1452 There was considerable overlap between these submissions and the Viterra Parties' submissions concerning the reliability of the Laboratory Information System data.

1453 The Viterra Parties relied on the fact that, under cross-examination, McIntyre gave evidence of various instances where values recorded in the Laboratory Information System were not the same as the customers' contractual specifications: see par 2293 above.

1454 The Viterra Parties submitted that the court could infer that this type of topic arose on earlier occasions in addition to the meeting in September: see par 2297 above.

1455 See par 2299 above.

1456 In cross-examination, McIntyre did not disagree that the Administration System, which recorded customer details, and was available to Joe White contained more detail: see par 2303 above.

submitted by the Cargill Parties were flawed. The Parameters Analysis was based on 2 assumptions: (1) the results recorded in Laboratory Information System were the actual and objective properties for that parameter; and (2) any difference, regardless of size, between the recorded result and the reported result for a particular parameter, meant that the Certificate of Analysis misreported the properties of malt with respect to that parameter.

2334 The Viterra Parties submitted that the mere fact that a test result was outside an alleged customer specification did not necessarily imply that the malt was actually outside the customer specification. Due to variability in malt, in order to determine if malt was outside customer specifications, it was necessary to take into account standard deviations.[1457] Accordingly, the Viterra Parties submitted that the above assumptions should be rejected as they failed to take into account variability in test results or the need to sometimes adjust results.

2335 *Secondly*, the Viterra Parties questioned the accuracy of results recorded in the Laboratory Information System. Specifically, the Parameters Data included statistical outliers and possible errors that they contended should have been excluded as they had not been verified.[1458] Further, in cross-examination Testi acknowledged the possibility of errors in the Laboratory Information System, and the absence of a discretion when entering data with respect to outliers or unexpected results.

2336 *Thirdly*, there was evidence that Joe White adjusted recorded test results to align the reported results with what Joe White expected its customers to achieve when they tested the malt. The Viterra Parties contended that adjustments to test results for this purpose were not improper and did not amount to misreporting.[1459]

1457 In cross-examination, De Samblanx agreed that in order to determine whether a shipment was more likely than not to be within specification, based on the test results recorded in the Laboratory Information System, it would be necessary to look at the extent of deviation from the specification: see pars 1652-1653 above. Further, evidence was led by the Viterra Parties that it is generally accepted that a result within 2 standard deviations was considered statistically within specification.

1458 Verification of the data would involve using corroborating data to establish the accuracy of the outliers.

1459 The Viterra Parties submitted that adjusting results to reflect anticipated customer results was not improper because: (1) it recognised that customers were conducting tests and would reject malt

2337 The Viterra Parties acknowledged that 98.88 percent of orders had been subject to adjustment and 88.05 percent of orders contained parameters recorded as outside specification but reported as within specification.

2338 However, the Viterra Parties emphasised that 62.9 percent of all individual parameter adjustments did not have the effect of adjusting a recorded result to bring it within specification. Further, they submitted that the court could not be satisfied that the purpose of adjusting the remaining 37.1 percent was to report malt within specification which was out of specification, as opposed to simply being an "occasional" adjustment to reflect the results that Joe White expected its customers to achieve in their testing.

2339 *Fourthly*, 87.2 percent (or, depending on approach, 79.6 percent)[1460] of all original individual test results were already within customer specification before any adjustments were applied and therefore, it was submitted that the adjustments alleged were not routine behaviour.

2340 *Fifthly*, the Viterra Parties put forward that the lack of evidence of customer complaints contradicted the Cargill Parties' allegations of routine non-compliance and should lead to the inference that the delivered malt met customer specifications.

X.10.4.3.3 Insufficient evidence of misstatement of test results

2341 In light of the above, the Viterra Parties submitted that the Cargill Parties' failure to prove both the customer specifications and the failure to meet those specifications should lead the court to conclude that the Cargill Parties did not establish that Joe White was routinely misstating test results, by reporting that malt was within customer specifications, when it was not.

---

produced that was outside specification; (2) Joe White's procedure was aimed at producing malt that satisfied customer testing processes; and (3) those adjustments would have the effect of making the results more relevant to the customer.

1460 See item 5 of annexure D. The instructions for the Parameters Analysis were to exclude entries that did not contain original test results, assuming that those entries would have returned results that were not within specification. Under these instructions, 79.6 percent of original tests were within customer specification prior to any adjustment. Alternatively, if these entries were included, assuming that they would have returned results within specification, 87.2 percent of original tests were within customer specification prior to any adjustments.

2342 Further, the Viterra Parties submitted that the Cargill Parties failed to lead evidence in relation to what Joe White's obligations were with respect to the Certificates of Analysis. Accordingly, it should be inferred that Joe White's customers did not expect the Certificate of Analysis to be a record of raw test results.

2343 Furthermore, the Viterra Parties submitted that in light of expert evidence to the contrary,[1461] the evidence of subjective concerns of Joe White's staff did not assist the Cargill Parties' case.[1462]

2344 Moreover, similar to paragraph 2340 above, the Viterra Parties put forward that in circumstances where a customer has not complained, it must be inferred that the malt was fit for that customer's purposes and therefore specifications were met, at least to the customer's satisfaction.

2345 Finally, it was submitted, that to the extent that there was evidence of customer complaints, any discounts or compensation provided to customers would have been reflected in the financial records that were disclosed to the Cargill Parties.[1463]

X.10.4.4 The Cargill's Parties' submissions

2346 The Cargill Parties made submissions about business records generally. As the question of whether the data in the Laboratory Information System could be relied upon has already been decided in the Cargill Parties' favour,[1464] it is unnecessary to address these.

X.10.4.4.1 Variability of results

2347 The Cargill Parties submitted that the Parameters Analysis appropriately treated small differences between customer specifications and results as non-conformance because even small variances from customer specifications could have had a great impact on the quality of malt.[1465] Further, regardless of the materiality of the adjustments, any adjustments absent disclosure deprived Joe White's customers of the

---

1461 Compare issues 9 above and 13 below.
1462 See par 180 above.
1463 The Viterra Parties denied that any compensation was paid.
1464 See pars 2287-2309 above.
1465 The uncontested evidence of Testi was that variance from particular specifications for parameters such as moisture or wort betaglucan could have quite serious repercussions.

opportunity to make informed decisions regarding the formulation of the end product. Furthermore, the Parameters Analysis did not treat all small differences as non-conformance. Ryan's instructions included treating small differences as matching where such differences arose from an inconsistent use of decimal places in the data.[1466]

X.10.4.4.2 Recorded results within specification

2348 The Cargill Parties submitted that the Viterra Parties' reliance on the fact that 87.2 percent of individual test results were within specification before an adjustment was applied was misconceived.[1467] It was submitted that the appropriate way to consider the data was on an order by order basis because a single falsified result within an order amounted to a misrepresentation that tainted the whole of the Certificate of Analysis.

2349 In contrast with the Viterra Parties' conclusions from the Parameters Analysis, the Cargill Parties submitted that 98.8 percent of all Certificates of Analysis contained 1 or more parameter results which reported results that did not match recorded results. The practical effect of this was that Joe White was providing adjusted Certificates of Analysis in almost all instances.

X.10.4.4.3 Adjustments made to bring a result within specification

2350 The Cargill Parties submitted that the Viterra Parties' proposition that only 12.6 percent of individual test results had the effect of bringing a result from outside specification to a result within specification was disingenuous.[1468] When the 12.6 percent was broken down, it represented 10,971 individual parameters spread over 3,838 separate orders and covered 53 different customers.

2351 Similar to paragraph 2348 above, the Cargill Parties rejected the Viterra Parties' reframing of the Parameters Analysis at an individual test level, submitting that the relevant consideration was that 88.05 percent of all Certificates of Analysis reported 1 or more parameters as being within specification where the recorded results were

---

1466 See par 2322 above.

1467 See par 2339 above.

1468 The figure of 12.6 percent was put to Ryan during his cross-examination, in which Ryan agreed that it was only about 12.6 percent of the time that a parameter with a recorded result out of specification was adjusted so that the reported result was in specification.

outside specification. Further, the Cargill Parties did not agree with the Viterra Parties' emphasis on the fact that only 37.1 percent of parameters that were adjusted had the effect of bringing a result from outside specification to within specification, and contended the submission missed the point. Moreover, the Cargill Parties rejected the Viterra Parties' proposition that the inverse meant that 62.9 percent of adjustments did not have the effect of bringing a result recorded outside specification to within specification given that the figure of 62.9 percent did not account for blank results.

2352 The Cargill Parties submitted that beyond the 37.1 percent, there were further instances of Joe White adjusting results:

(1) At times a recorded result would be outside specification and an adjustment would have the effect of bringing it closer to specification, albeit, the result would remain outside specification.

(2) At times a recorded result that was already within specification would be adjusted to bring it closer to the customer's designated specification or closer to the pre-shipment result.

(3) McIntyre gave evidence that there were instances where Joe White adjusted a parameter that was not necessarily outside specification, in order to bolster the believability of an interrelated misreported parameter.[1469]

2353 The Cargill Parties submitted that the fact that some adjustments were not made for the purposes of bringing a result within specification should not excuse the practice of reporting false results to customers.

X.10.4.4.4 Duplicate test results

2354 The Cargill Parties submitted that little weight should be given to any issues regarding duplicate results as Ryan had been instructed to exclude duplicates in most

1469 See pars 77-78 above.

circumstances,[1470] and there were very few orders containing duplicates in the Parameters Data.[1471]

X.10.4.4.5 Significance of contractual compliance

2355 The Cargill Parties submitted that Certificates of Analysis were representations by Joe White to customers about the properties of the malt it provided and sometimes the barley variety or varieties used in the blend.

2356 The Cargill Parties rejected the Viterra Parties' submission that Joe White's customers were not concerned with strict compliance, on the basis that the evidence did not support this contention. Whilst Stewart originally gave evidence that customers "had no problem with the malt they were sent", in cross-examination, he subsequently retreated from this position, acknowledging the importance of specifications to customers.[1472] Further, the Cargill Parties put evidence before Stewart of customer complaints regarding discrepancies in the specifications reported in the Certificates of Analysis and the customers' internal testing.[1473]

2357 The Cargill Parties submitted that Stewart accepted that a Certificate of Analysis contained a statement to the customer that the malt complied with the specifications in their contracts. Further, it was submitted that Stewart agreed that pencilling results would amount to deception, irrespective of the range of deviation. Furthermore, it was submitted that Stewart conceded that he was uncomfortable with sending incorrect Certificates of Analysis to customers. Accordingly, it was submitted that customer specifications were important and Stewart understood this.[1474]

2358 In addition to Stewart's evidence, further evidence of the importance of contractual compliance to brewers was adduced. Such evidence included statements from

---

1470 See par 2322 above.
1471 76 orders contained duplicate test results.
1472 See, for example, par 1834 above.
1473 In August 2010 Boon Rawd, and in November 2010 Oriental Brewery, raised issues about the difference between their internal test results and those reported on their respective Certificates of Analysis: see par 155 and fn 670 above.
1474 See generally pars 168-177, 407-415 above.

industry experts,[1475] and evidence of customer complaints from the period after Cargill Australia acquired Joe White.[1476] It was submitted that customer complaints received in the period after Joe White ceased adjusting results and started to disclose to customers its inability to meet requirements demonstrated that compliance with contractual specifications was important to customers.

2359 Before addressing these submissions, it is convenient to refer to further work performed by Ryan subsequently.

X.10.5 Deviation Analysis

X.10.5.1 Instructions

2360 In June 2019, Ryan was instructed to undertake a further analysis to ascertain the extent to which the adjustments identified in the Parameters Analysis were within or beyond 2 standard deviations of customers' specifications ("the Deviation Analysis").[1477] To perform this analysis, Ryan was supplied with a table entitled "MAPS Standard Deviation" listing the standard deviation for a range of parameters.

2361 Ryan was instructed to rely on the following relevant assumptions in conducting his analysis:

> 3. For each parameter in Column G, if that parameter appears on the list provided at (c) above[1478] and using the standard deviation table, identify the figure that represents **two standard deviations** for each parameter in the standard deviation table.
> 4. If there is a parameter listed in Column G and it is listed on the table provided at (c) above with a standard deviation of "0", please assume the deviation is zero for your analysis.
> 5. If there is a parameter listed in Column G which does not appear on the table provided at (c) above then for the purpose of this analysis please do not include

---

1475 Evidence was given by industry experts Hertrich and French: see issue 13 below. See also par 18 above.

1476 For example, Heineken made numerous complaints in the period between November 2013 and March 2014 (and beyond) about Joe White's inability to meet specifications: see, for example, par 1572 above. Additional examples demonstrating the importance of compliance to customers were adduced, including correspondence from Boon Rawd, Oriental Brewery, SABECO and Sapporo.

1477 On 21 June 2019, Gilbert + Tobin sent a letter to Ryan, setting 18 February 2011 (the date the Viterra Certificate of Analysis Procedure was introduced) to 31 October 2013 (the date of Completion) as the relevant period for the Deviation Analysis.

1478 This was a reference to a document prepared by Gilbert + Tobin which linked the names of the analytical parameters in the standard deviation table with the names of the analytical parameters in column G.

that parameter in your analysis and answers to the questions below.

(Emphasis in original.)

X.10.5.2 Findings

2362 The relevant agreed facts drawn from this analysis were:[1479]

> 29. Of the 3,070 Certificates of Analysis included in the Parameters Data during the Relevant Period,[1480] 42.90% of those Certificates of Analysis (or 1,317) had one or more Affected Results (ie the Recorded Analytical Test Result was outside Specification by more than two Standard Deviations and the Reported Analytical Result was within Specification).
>
> 30. The 1,317 Certificates of Analysis included in the Parameters Data during the Relevant Period which had one or more Affected Results equate to 508,338 tonnes or 52.01% of the total tonnage for the 3,070 orders during the Relevant Period.
>
> 31. The 3,070 Certificates of Analysis included in the Parameters Data during the Relevant Period comprise 70.43% of the 4,359 Certificates of Analysis included in the Parameters Data.
>
> 32. The 3,070 Certificates of Analysis included in the Parameters Data during the Relevant Period comprise 71.94% of the total tonnage included in the Parameters Data.
>
> …
>
> 34. 3.52% (or 2,132) of the 60,645 individual entries contained in the Parameters Data during the Relevant Period were Affected Results (including parameters that [Ryan] was instructed to exclude).
>
> …
>
> 39. The sum of the number of entries in Items 36-38 above, being the total number of Affected Results for those three parameters during the Relevant Period,[1481] is 894, comprising 41.93% of the total number of Affected Results during the Relevant Period at Items 34 and 35.

(Original footnotes omitted.)

X.10.5.3 The Viterra Parties' submissions

2363 The Viterra Parties did not accept that the Deviation Analysis demonstrated Joe White routinely supplied malt that did not comply with customer specifications.

2364 They maintained that it was not "wrongful" to report test results as within specification where the recorded test results were outside specification by more than

---

1479 See annexure D for full list of agreed facts.

1480 See fn 1477 above.

1481 The 3 parameters were "1,000 Corn Weight g Dry Basis", "Soluble Protein %, Dry Basis, Congress" and "Total Protein %, Dry Basis": see further fn 1484 below.

2 standard deviations ("Plus 2 Affected Results"). They submitted that, even if Plus 2 Affected Results were wrongful, the frequency of the practice did not suggest that a bona fide purchaser would have necessarily walked away from the Acquisition.

2365 The Viterra Parties further submitted that the Deviation Analysis was based on instructions that maximised the frequency of results displaying adjustments beyond 2 standard deviations, by unfairly assuming a standard deviation of 0 for particular parameters.[1482]

2366 Further, it was submitted that the occurrence of a test result being adjusted beyond 2 standard deviations, to be brought within specification, was less than 5 percent. In accordance with the principles of materiality set by the Accounting Standards Board, this might be presumed to be non-material, unless there was evidence, or convincing argument, to the contrary.

X.10.5.3.1 Frequency of Plus 2 Affected Results

2367 The Viterra Parties proposed that the data should be considered at an individual parameter result level, rather than at a Certificate of Analysis level. As the findings showed, if the data was viewed at the Certificate of Analysis level (contrary to the Viterra Parties' contention), the results demonstrated that 1,317, or 42.90 percent, of the 3,070 Certificates of Analysis contained 1 or more Plus 2 Affected Results.

2368 The proposed alternative was to view the data in respect of the 60,645 individual tests; then 3.52 percent were Plus 2 Affected Results.[1483] If this approach were accepted, then the Viterra Parties submitted that it did not amount to establishing that Joe White routinely adjusted results, and therefore demonstrated that Joe White's financial and operational performance was not substantially underpinned by the Operational Practices.

2369 Further, it was submitted the mere fact that adjustments were occurring did not

---

1482 See par 2361 above, assumption 4.

1483 If the parameters that Ryan had been instructed to exclude, by reason of the letters of instruction dated 18 June 2019 and 21 June 2019, were excluded from the total measurements, the proportion of Plus 2 Affected Results changed to 4.01 percent: see annexure D to these reasons, item 35. This exercise was conducted in the relevant spreadsheet by the court book operator during the trial at the direction of the Viterra Parties.

necessarily lead to the conclusion that the adjustments were false or incorrect. Adjustments greater than 2 standard deviations could have been made to correct for error, including for the purpose of managing variance between Joe White test results and customer test results.

X.10.5.3.2 Treatment of individual parameters

2370 The Viterra Parties submitted that the instructions given to Ryan were unsatisfactory, contending that the Cargill Parties had artificially cut the Parameters Data to best support their case.

2371 To illustrate this they referred, on the 1 hand, to 41.93 percent of the 2,132 Plus 2 Affected Results being in respect of 3 parameters.[1484] Ryan's instructions were to apply a standard deviation of 0 to these 3 parameters. Therefore, any adjustment made, no matter how small, to a test for 1 of these parameters resulted in that test being classified as a Plus 2 Affected Result.

2372 On the other hand, an analysis of many of the "commercially significant" parameters revealed that the proportion of Plus 2 Affected Results was low. For example only 1.1 percent of moisture tests were Plus 2 Affected Results.

X.10.5.3.3 Standard deviation of 0

2373 The Viterra Parties submitted that no evidence was provided explaining the allocation of a standard deviation of 0 for specific parameters.[1485]

2374 Further, in some instances where a parameter was assigned a standard deviation of 0, it had interrelated parameters that were assigned non-0 standard deviations. Given the relationship between interrelated parameters, it would be expected that the proportion of Plus 2 Affected Results would be similar. Thus, it was submitted Plus 2 Affected Results for protein ought to have been similar to the related parameters of moisture and the Kolbach Index.[1486] The Deviation Analysis showed variation between the proportions of Plus 2 Affected Results in interrelated parameters. The

---

1484 Of the 2,132 Plus 2 Affected Results, 197 were for 1000 corn weight g, dry basis; 204 were for soluble protein %, dry basis, congress; and 492 were for total protein %, dry basis.

1485 See par 2361 above, assumption 4.

1486 See fn 671 above.

Viterra Parties submitted that this outcome suggested that there was an incongruency between the parameters with a standard deviation of 0 and the expected results.

2375 Furthermore, standard deviations are a quantification of measurement uncertainty. It was submitted that all parameters have a degree of measurement uncertainty, so all parameters should have a standard deviation that is not 0.

2376 Moreover, the Viterra Parties submitted that some customer contracts included tolerance ranges with reference to standard deviations for the protein parameter, which was treated as 0 in Ryan's analysis.

2377 By excluding the parameters which were given a standard deviation of 0, the agreed facts show the Deviation Analysis results would change, as follows:

> 44. … 25.31% of Certificates of Analysis included in the Parameters Data during the Relevant Period had one or more [Plus 2] Affected Results …
>
> 45. … 1.66% (or 1,007) of the 60,645 individual entries contained in the Parameters Data during the Relevant Period were [Plus 2] Affected Results …

2378 The Viterra Parties therefore submitted that the more appropriate figure for consideration was that 1.66 percent of the total measurements were Plus 2 Affected Results.[1487]

X.10.5.3.4 Inferences as a result of not adducing other evidence

2379 The Viterra Parties submitted that the Cargill Parties could have relied on other evidence to prove the extent to which Plus 2 Affected Results occurred.

2380 In cross-examination, Ryan acknowledged that he had previously considered the impact of standard deviation data in 2017. The spreadsheet Ryan used in 2017 was "similar" to a much larger dataset submitted by the Cargill Parties in 2014.[1488] The Viterra Parties submitted the court should infer from this that the original data would

---

1487 If the parameters that Ryan had been instructed to exclude and the parameters that had been allocated a standard deviation of zero were excluded from the total measurements, the proportion of Plus 2 Affected Results changed to 2.57 percent: see annexure D to these reasons, item 46. This exercise was conducted by the court book operator at the direction of the Viterra Parties.

1488 See fn 1447 above.

have produced less favourable results for the Cargill Parties.

2381 Further, Joe White kept a record of non-conforming shipment forms.[1489] These forms were attached to the Certificate of Analysis (for Joe White's internal record-keeping purposes only)[1490] when there were adjustments of more than 2 standard deviations.[1491] It was submitted that the court should infer that an analysis of these forms would not have been of assistance to the Cargill Parties.

X.10.5.4 The Cargill Parties' submissions

2382 The Cargill Parties submitted (as has been found)[1492] that the Viterra Certificate of Analysis Procedure did not contain a Decision Rule, but even if it did, it did not justify Joe White's routine adjustments of results in Certificates of Analysis without informing customers. Further, the Cargill Parties submitted (which has also been found)[1493] that Joe White did not consistently or accurately apply the standard deviations published in the Malt Proficiency Scheme, and therefore was not applying a Decision Rule based on the Malt Proficiency Scheme. And furthermore, they submitted that, even if Joe White was applying a Decision Rule on such a basis, between 25 to 42 percent of Certificates of Analysis contained Plus 2 Affected Results and accordingly, were not made pursuant to this alleged Decision Rule. Moreover, it was submitted if a parameter was not the subject of the Malt Proficiency Scheme it was not possible for the Decision Rule to apply as there could be no applicable standard deviation.

X.10.5.4.1 Malt Proficiency Scheme

2383 The Cargill Parties submitted for 2 different reasons it could be established that the internal standard deviation figures used by Joe White did not accurately or consistently reflect the monthly Malt Proficiency Scheme reports. *First*, between 1 January 2010 and 18 February 2011, there was no internal procedure or standard deviation table used by Joe White and therefore, it was submitted that there was no

---

1489 See par 407 above.
1490 See fn 190 above.
1491 See example at par 410 above.
1492 See par 2263 above.
1493 See pars 286, 2246 above.

Decision Rule in place and thus no justification for any adjustments throughout that period. *Secondly*, the Cargill Parties relied on the fact that, when an internal standard deviation table was circulated,[1494] it was not updated after its creation to reflect the monthly Malt Proficiency Scheme reports.[1495]

2384 Even if the figures had been appropriately updated, the Cargill Parties submitted that that would not have remedied the situation. They contended that the use of the Malt Proficiency Scheme data itself was inappropriate because the scheme was established for participating members to gauge and consider their own laboratory's performance against other participating laboratories in respect of a given test in a given date range. It was therefore submitted that the Malt Proficiency Scheme data did not provide Joe White with a basis for adjusting results.[1496]

2385 In addition, the Cargill Parties submitted that the defence pleaded based on a Decision Rule should also fail on the basis that the standard deviations from the Malt Proficiency Scheme were not applied by Joe White. It was submitted that the choice to select the standard deviation for proficiency assessment, over other options, should have been explained.[1497]

X.10.5.4.2 Standard deviation of 0

2386 The Cargill Parties submitted that the use of a standard deviation of 0 for particular parameters in the Deviation Analysis[1498] was justified on the basis that these parameters were not included in the Malt Proficiency Scheme, which was relied on by the Viterra Parties as the grounds for Joe White reporting results within 2 standard deviations.

2387 The Cargill Parties submitted that Joe White used data from the Malt Proficiency Scheme to identify the standard deviation applicable and made adjustments to its

---

1494 On 18 February 2011, Stewart circulated an internal standard deviation table to staff via email: see par 208 above.

1495 In September 2012, Sheehy sent an updated version to staff via email, which the Cargill Parties submitted was identical but for the addition of the words "As at 5th September 2012 based on MAPS round 186": see par 286 above.

1496 Compare Stewart's evidence: par 222 above. See also pars 2234-2247 above.

1497 See par 216 above.

1498 See par 2361 above, assumption 4.

results pursuant to that purported Decision Rule. Consequently, it was submitted that in the absence of a standard deviation for a parameter in the Malt Proficiency Scheme, Joe White would not have had a standard deviation to apply and, therefore, could not adjust that particular parameter pursuant to any Decision Rule.

2388 Further, the Cargill Parties submitted that Joe White was aware that there were no Malt Proficiency Scheme standard deviation values for some parameters given that there had been correspondence about such parameters between Stewart, Sheehy and Moller.[1499]

2389 Furthermore, the Cargill Parties pointed to an instance where adjustments were permitted by Joe White if Stewart gave written or verbal approval without any reference to the Malt Proficiency Scheme or any apparent objective criteria.[1500]

2390 As such, the Cargill Parties submitted that any adjustments made to parameters which were not in the Malt Proficiency Scheme would not have been pursuant to a Decision Rule, thus their allocation of a standard deviation of 0 in the Deviation Analysis was appropriate.

2391 Moreover, the Cargill Parties referred to the instruction to Ryan to exclude parameters, in favour of the Viterra Parties, in circumstances where it was unclear if a parameter was within the Malt Proficiency Scheme, due to difficulties in matching inconsistent naming conventions used between the Laboratory Information System and the Malt Proficiency Scheme.[1501]

X.10.5.4.3 Results of the Deviation Analysis

2392 By reference to the portion of malt orders that were shipped before the Viterra Certificate of Analysis Procedure became operative on 18 February 2011, the Cargill

---

1499 An email in November 2010 from Sheehy to Stewart and Moller noted that some parameters were not part of the Malt Proficiency Scheme: see fn 204 above.

1500 In an email concerning coloured malts, Sheehy informed Stewart, McIntyre and others that a non-conforming shipment form was not required for a non-conforming shipment to San Miguel but written or verbal approval was required from Stewart if anything was "deviating significantly from the customer specification": see par 407 above.

1501 See par 2361 above.

Parties submitted that adjustments made before this time could not have been pursuant to a Decision Rule. It was contended this necessarily meant that there could be no justification for adjustments to parameter results for approximately 30 percent of the orders.[1502]

2393 The Cargill Parties further submitted it was appropriate to consider the number of Certificates of Analysis affected, rather than the proportion of parameters with Plus 2 Affected Results. On this basis they contended the facts demonstrated that, of the Certificates of Analysis issued during the period when the Viterra Certificate of Analysis Procedure was operative, 42.9 percent of orders and 52.01 percent of total tonnes shipped contained at least 1 Plus 2 Affected Result.[1503]

2394 The Cargill Parties submitted that the Viterra Parties' focus on parameters rather than orders was an attempt to minimise the scale of the Operational Practices. Again, it was submitted that the data should be viewed in light of the 42.9 percent of orders that contained Plus 2 Affected Results, which were received by 93.5 percent of customers.

2395 The Cargill Parties submitted there was no proper basis to exclude the parameters that had been given a standard deviation of 0 in the Deviation Analysis, which would change the findings from 42.9 percent to 25.31 percent of orders containing at least 1 Plus 2 Affected Result.[1504]

2396 The Cargill Parties submitted the Viterra Parties had not put forward an industry accepted objective quantification of measurement uncertainty for the parameters which had been allocated a standard deviation of 0. In the absence of such, it was submitted any adjustments to these parameters could not have been made pursuant to the purported Decision Rule.

2397 Further, the Cargill Parties contended that, even if the court accepted that it was

---

1502 The Cargill Parties relied upon the fact that only 70.43 percent of orders contained in the Parameters Data were issued during the period in which the Viterra Certificate of Analysis Procedure was operative. See par 2362 above, agreed fact 31.

1503 Ibid, agreed facts 29 and 30.

1504 See par 2377 above.

appropriate to exclude the parameters allocated a standard deviation of 0, 25.31 percent was still a substantial proportion of orders.

X.10.5.4.4 Materiality

2398 The Cargill Parties submitted that it would be erroneous for Ryan to have considered materiality under the Australian Accounting Standards when performing his analysis. It was submitted that the standards relied on by the Viterra Parties were applicable to the preparation of financial reports only and there was no evidence that it was appropriate or proper to apply them in any other context. Further, it was not put to Ryan in cross-examination that the standards were relevant or applicable to his analysis.

2399 Even if the standards were applied, it was submitted that the percentage of misstated results found in the Deviation Analysis, both with or excluding the parameters allocated a standard deviation of 0, was greater than the materiality threshold, so that non-conformance was material.

X.10.6 Conclusions on Parameters Analysis and Deviation Analysis

2400 For the reasons stated,[1505] I am satisfied that the probative value and reliability of the data contained in the Laboratory Information System was such that it was able to be relied upon for the purpose of the analyses conducted.

2401 As is apparent from what is set out above, the relevant facts were not materially in dispute. The decision as to which conclusions ought to be drawn essentially amounts to determining the appropriate analysis of the facts as agreed.

2402 In my view, it is appropriate to commence the analysis by considering the Deviation Analysis. This is because on no proper view of the evidence could it be found that changing test results that were more than 2 standard deviations from the required specification was legitimate, justifiable or based upon any Decision Rule.[1506] Although

---

1505 See pars 2287-2309 above.

1506 In making this observation, the evidence of Stewart that some laboratories were 3 or 4 standard deviations off has not been ignored: see fn 194 above. There was no evidence to connect this very

the Viterra Parties did not concede this point, the evidence of both Stewart and Hibbert was clear, unequivocal and plainly correct.[1507]

2403 The fundamental difference in the submissions was whether the Plus 2 Affected Results ought to be considered in the context of the total number of parameters the subject of the analysis, or whether each Certificate of Analysis which included a Plus 2 Affected Result ought to be considered in the context of the total number of Certificates of Analysis.

2404 Of course, both must be considered but the Cargill Parties' submissions were far more compelling as to the relevant touchstone in determining the significance of the data. To misstate a single result in a Certificate of Analysis was to misstate the composition of the malt. In other words, if a Certificate of Analysis stated a parameter was within specification when that parameter was a Plus 2 Affected Result, the fact that other parameters were accurately recorded and stated, alternatively less materially inaccurately recorded and stated, did not alter the fact that the Certificate of Analysis misstated the results of the analytical testing of the malt.

2405 Another critical difference between the parties was whether or not the Deviation Analysis ought to include or exclude those parameters that Ryan was instructed to give a standard deviation of 0. Even if it were assumed for the purpose of this discussion that the analysis ought to exclude these parameters, a proportion of over a quarter of Certificates of Analysis having 1 or more Plus 2 Affected Results would still strongly corroborate the finding already made that Joe White routinely misstated test results.

2406 Based on this finding, it is not strictly necessary to determine whether or not these parameters ought be excluded. However, if it were necessary to decide, in my view the parameters given a standard deviation of 0 ought not be excluded. This is because

---

general statement to any adjustments to any of the Certificates of Analysis that were altered when results were beyond 2 standard deviations. A like observation may be made with respect to other very general attempts to justify the Operational Practices.

1507 See pars 2237-2239 above.

the rationale proffered by the Viterra Parties to seek to justify the extent to which there could be procedural pencilling of the test results was by reference to the Malt Proficiency Scheme.[1508] Absent any figure for any standard deviation of a parameter, there could have been no proper scientific or technical basis to alter the test results.[1509]

2407 Further, although it must be accepted that a level of uncertainty must always exist as a matter of practicality and logic, that circumstance did not provide a basis for inserting some unjustified figure to represent a standard deviation or 2 standard deviations or more. Any such figure would be entirely speculative. A similar observation may be made with respect to interrelated parameters. As for tolerance ranges, as has already been explained,[1510] the applicability of this issue was minimal.

2408 A further matter to support this conclusion was the situation that existed before 18 February 2011. Up until then, the Viterra Certificate of Analysis Procedure was not in place and, to use the words of Stewart, changes were made using an arbitrary approach.[1511] As Ryan's analysis used data dating back to 1 January 2010, it must follow that there could be no Decision Rule applicable to Certificates of Analysis issued before 18 February 2011 (as none existed). This applied to approximately 30 percent of the Certificates of Analysis containing a parameter with 1 or more Plus 2 Affected Results.[1512]

2409 The Viterra Parties' submissions as to the materiality or otherwise of particular parameters were not to the point. In most circumstances,[1513] the specifications were

---

1508 See par 2245 above.

1509 This conclusion was not affected by the evidence concerning different results in different customer laboratories. That evidence did not go to whether or not it was permissible to alter the particular parameters in question based on some generally accepted level of deviation. Further, there was nothing in the evidence to connect the possibility that results may have been altered to accord with anticipated results of the customer and any of the relevant parameters or their accompanying "standard deviations". Although such a connection must have been theoretically possible, in the absence of any probative evidence upon which to find such a connection (the Viterra Parties did not point to any specific evidence to suggest the connection), the finding made above on the balance of probabilities was not undermined by this possibility.

1510 See par 2301(2) above.

1511 See par 175 above.

1512 It must be noted that the period back to 1 January 2010 did not include the entirety of the 2010 financial year, which ended on 31 October 2010.

1513 There was evidence that Joe White provided Certificates of Analysis even when a customer did not require it.

being provided by Joe White because the customer required it to do so. The fact that some parameters may be perceived to be more or less important (either to Joe White or others) did not alter the requirement imposed on Joe White not to misstate what it was reporting to its customers and to conceal that fact.

2410 The conclusions set out above proceed on the basis that the Deviation Analysis was the appropriate analysis to consider. No doubt, the Cargill Parties had Ryan prepare the Deviation Analysis to meet the argument put by the Viterra Parties that any change to a test result that was within 2 standard deviations of the required specification was legitimate. However, the Cargill Parties also relied upon the broader analysis performed by Ryan, being the Parameters Analysis.

2411 It should be said for completeness that, in light of the findings made concerning the serious deficiencies with the Viterra Certificate Analysis Procedure (including the loosely-defined 2 standard deviation approach it prescribed and the imperfect manner in which it was implemented),[1514] the Cargill Parties were justified in relying upon the Parameters Analysis. Considering the matter on the basis of orders rather than individual parameters,[1515] if the Parameters Analysis were utilised, it established that nearly 99 percent of Certificates of Analysis contained a parameter where the test result did not match the reported result, of which approximately 88 percent had 1 or more results that were reported as being within specification when the test result was actually out of specification.[1516]

2412 Obviously, if this were the approach adopted, as I think it should be, it would strongly support a finding that Joe White routinely misstated the results of analytical testing on the malt supplied from the beginning of 2010 until 31 October 2013.

2413 In relation to the Viterra Parties' submission that there were other ways for Cargill Australia to prove this part of its case, it did not advance their position. The Cargill Parties relied upon the evidence of witnesses called at the trial to prove Cargill

---

1514 See, for example, the references in fn 1408 above.
1515 For the reasons discussed in par 2404 above.
1516 See par 2323 above.

Australia's claim regardless of any statistical analysis presented by Ryan. Further, there was no onus on Cargill Australia to prove its case more than once. It is a matter for a party as to how it chooses to prove its case. Of course, inferences might be drawn if certain evidence available is not relied upon. However, once the data from the Laboratory Information System was successfully tendered, the obvious means of Cargill Australia proving its claim was to rely upon such data. Effectively, Cargill Australia established this part of its claim relying upon 2 distinct approaches. There was no obligation upon it to put yet further evidence before the court in order to seek to establish even further means of proving its case.[1517]

2414 In light of the findings made, it is unnecessary to consider the applicability of the principles of materiality set by the Australian Accounting Standards Board. However, it must be noted that the relevant principles include a statement that materiality judgments can only be properly made by those who have the facts and that the percentages suggested for quantitative thresholds with respect to materiality were only provided as a guidance.[1518] Although it is unnecessary to make any finding, it should be noted that on the facts of this case where the test results were materially altered to report results being in specification when they were not, it was far from clear that a proportion of 5 percent of Certificates of Analysis, or for that matter results for individual parameters, would be considered immaterial.

X.10.7 The Varieties Practice

2415 The determination of this issue is relatively straightforward. Based on the Viterra Parties' admission, there was ultimately no issue that Joe White supplied the incorrect variety of barley on occasions without the approval of its customers.[1519] The real issue was whether it happened at a level to establish that it had occurred routinely during

---

1517 For completeness, for the same reason no inference adverse to Cargill Australia has been drawn on the narrowing of the data relied upon: see par 2318 above. In addition to this reason, the Viterra Parties had all of the larger dataset provided in 2014 available to them, but chose not to identify any material matter that arose from the alternate source of information: see also fn 1448 above.

1518 Australian Accounting Standards Board, *Accounting Standard AASB 1031 Materiality*, July 2004, 8-9 [15].

1519 See also fn 782 above.

the relevant period.

2416 Again, McIntyre was a critical witness. She gave uncontroverted evidence of a standard practice of reporting the barley variety or varieties required by the customer regardless of whether or not the required varieties were used.[1520] Further, the interviews conducted with some of the Joe White executives in October 2013 confirmed the existence of the Varieties Practice. Their accounts disclosed Joe White used barley varieties inconsistent with customer contracts on a significant level,[1521] and that there was an awareness that Joe White was breaching customers' contracts without informing them.[1522]

2417 Further, a review of Joe White's ability to fully meet customer requirements in October 2013 revealed not only an inability to do so, but that varieties of barley were being supplied to customers on a routine basis in breach of contract.[1523] This conclusion as to what the Customer Review Spreadsheet indicated on its face was not seriously disputed by the Viterra Parties; rather they sought to attack the reliability of the information it contained. The attack was not successful.[1524]

2418 The Viterra Parties submitted that, if the document was to be considered reliable, the issue was confined to a small number of customers and was therefore unlikely to have had a significant impact upon the Joe White Business. This submission did not reflect the evidence.[1525] Further, it was entirely contrary to Stewart's assessment at the time, which was that 6 months "for most" (and 12 months for "others") was required before Joe White would be in a position to achieve barley variety compliance.[1526] He gave unchallenged evidence that a 6 month transition period in which procurement and planning could take place was appropriate because an immediate change without

---

1520 See par 82 above.
1521 See pars 1281, 1286, 1373(10), (11), (16), (17), (18), (19), (20), (21), (22), (23), (24), (26) above.
1522 See, for example, par 1299 above.
1523 See pars 1211-1214, 1216, 1218, 1220-1223, 1429-1438 above.
1524 See pars 1430-1437 above.
1525 See pars 1220-1222 above.
1526 See par 1212 above; an assessment with which Hughes and Wicks expressly (and Youil implicitly) agreed: see par 1218 above. See also pars 1117-1118, 1126-1127 above.

advance preparation would have been disruptive to customer relationships and hard to manage.[1527] Wicks put it more bluntly. As Joe White's commercial general manager, he told Fitzgerald in late October 2013 that to attempt to supply barley varieties from 1 November 2013 in accordance with customer contracts would be commercial suicide and Joe White's brand would be decimated.[1528]

2419 Another document created by Stewart in October 2013 demonstrated that there were significant levels of non-compliance the previous month in the supply of malt with required barley varieties.[1529] There was nothing to suggest that the week chosen at random to demonstrate the magnitude of the issue to Fitzgerald was anything out of the ordinary.[1530] Other than to suggest some ambiguity existed on the face of the document, the Viterra Parties did not seek to challenge the accuracy of the information it contained. Even if it were accepted (contrary to my view)[1531] that there was some ambiguity, on any reading of the document it showed substantial non-compliance by Joe White with respect to required barley varieties. The fact that this was the position was confirmed by Stewart immediately after Cargill took control of Joe White.[1532]

2420 Although the significance of the existence of Hindmarsh barley in Joe White's inventory loomed larger in the conduct of this case than it should have, on this issue it did have some significance. Hindmarsh was never an approved malting variety, but was used on a continual and regular basis by Joe White up to 31 October 2013.[1533] This was a deliberate strategy for Joe White, which strategy had cost benefits and included an objective to rid itself of non-malting barley by gradually blending it with other barley over time.[1534] The data from the Laboratory Information System showed

---

1527 See also par 1768 above.
1528 See par 1307 above.
1529 See par 1387 above.
1530 See par 1335 above.
1531 See fn 835 above.
1532 See pars 1565-1566 above.
1533 In the Viterra Parties' closing written submissions it was stated that it was disclosed to Cargill that Joe White regularly purchased Hindmarsh: see par 2702 below. The Viterra Parties' senior counsel acknowledged that it followed from this that Joe White regularly used Hindmarsh in the production of malt.
1534 See par 130 above.

that Hindmarsh was used in 188 orders between 7 June 2010 and 31 October 2013 in supplying 32 customers. After November 2010, Joe White supplied malt made with 12,322 tonnes of Hindmarsh. In the 3 months leading up to Completion of the Acquisition Agreement, Joe White used more than 3,700 tonnes of Hindmarsh. In the absence of any evidence to suggest that any customer approved its malt being made with non-approved malting varieties,[1535] the use of this variety clearly fell within the description of the Varieties Practice.

2421 Further, the agreed position of the industry experts was that barley varieties not accredited as a malting variety should not be added to a blend without consultation with and agreement by the customer. Indeed, the experts specifically addressed the issue of Hindmarsh and the fact that it was not accredited and agreed that it should not have been used unless a customer had previously approved the use of a specific feed barley variety. In short, there was no evidence to suggest any justification for the unauthorised use of Hindmarsh as part of the Varieties Practice.

2422 A further matter raised by the Viterra Parties was the evidence concerning the barley standards published by Grain Trade Australia, which standards required that all malt grade barley varieties have a minimum varietal purity of 95 percent.[1536] The standards recognised that a load of barley may not consist of 100 percent of a specific variety and may be contaminated by the presence of another variety. There was also evidence from French that there was an unavoidable inclusion of admixture and that most breweries have a "maximum" tolerance of 5 percent of other varieties of malt. Based on these matters, the Viterra Parties submitted that the identification of barley varieties other than the required barley variety must be expected.

2423 These matters were not to the point. *First*, the standards are concerned with barley being delivered, not malt,[1537] and there was no evidence that Joe White recorded in its internal records anything other than the barley variety that was ordered by Joe White

---

1535 The evidence available suggested the opposite was the case in October 2013 (see par 1213 above), but direct evidence was lacking in relation to the position otherwise. That said, none of the customer contracts tendered expressly approved of the use of Hindmarsh.

1536 Jones gave evidence that barley was received by Joe White in accordance with this standard.

1537 Though, of course, the composition of the malt will be dictated by the barley used.

and purported to have been delivered to it. To be clear, Joe White made no allowance in its records for the fact that the barley may have only been 95 percent pure. *Secondly*, and further to the first point, the issue concerned the use of barley varieties actually recorded in Joe White's system as different varieties to the required varieties (or, if not knowingly misreporting the varieties, then simply writing down the variety or varieties specified by the customer without regard to Joe White's records and the varieties said to have been used).

2424 In short, this evidence relied upon by the Viterra Parties demonstrated that even if Joe White chose to use the correct varieties on all occasions, there was a likelihood that some small level of contamination from other barley varieties would have occurred. But this did not address the practice of Joe White choosing to use the incorrect variety or varieties and misstating or otherwise not disclosing the actual barley varieties that had been used. If anything, the existence of up to 5 percent impurity of barley varieties delivered had the potential to exacerbate the nature of the problem when barley varieties were blended as there was a likelihood that the amount of unauthorised barley used could be even greater than the percentage represented in Joe White's records.

2425 Before leaving this topic, it must be observed that the use of incorrect barley varieties was not because of some lax or sloppy work practices which meant that barley variety requirements were sometimes not met. Instead, the evidence reflected a brazen approach at times to the issue of non-compliance on occasions.[1538]

X.10.8 Barley Analysis

2426 The Cargill Parties also relied upon data in the Laboratory Information System to establish that the Varieties Practice was routinely engaged in by Joe White.

X.10.8.1 Instructions

2427 The Cargill Parties sought to have data in the Laboratory Information System analysed in order to compare the barley varieties specified by customers with barley varieties

---

1538 See, for example, pars 252-254, 1335-1336 above.

supplied. This data recorded the barley varieties used by Joe White in providing malt for customers as well as the barley varieties reported in the Certificates of Analysis. To this end, in October 2018 Ryan was instructed to address various matters concerning the accuracy and consistency of the information. The task he was instructed to undertake for each unique order was to calculate and identify, amongst other things: (1) whether all barley varieties reported on a Certificate of Analysis were a customer-required barley variety for the customer in question; (2) whether all barley varieties used were customer-required varieties; (3) whether all barley varieties used were reported in the Certificate of Analysis; (4) orders where at least 1 barley variety was a required barley variety for a particular customer and at least 1 variety was reported in the Certificate of Analysis; and (5) the total unique orders that fell within (4), but (a) at least 1 variety used did not match any variety reported in the Certificate of Analysis, and/or (b) at least 1 variety used did not match any of that customer's required barley varieties. Further, Ryan was instructed to prepare:[1539]

a. The total number of unique orders;[1540]

b. The total number of unique orders with at least one barley variety reported on the Certificate of Analysis;

c. The total number of unique orders with no barley variety reported on the Certificate of Analysis;

d. The total number of unique orders with at least one customer required barley variety;

e. The total number of unique orders with no customer required barley variety;

f. The total number of unique orders with at least one barley variety used in the blend;

g. The total number of unique orders with no barley variety used in the blend.

Ryan was then asked to prepare a summary of the total orders, and to identify, by

---

1539 Original instructions were contained in a letter from Gilbert + Tobin, sent to Ryan on 5 October 2018. On 9 October 2018, Gilbert + Tobin emailed Ryan to correct schedule E of the letter dated 5 October 2018. On 10 October 2018, Gilbert + Tobin again emailed Ryan to correct a cross-referencing error in paragraph 24 of the letter dated 5 October 2018. On 12 October 2018, Gilbert + Tobin sent an email to Ryan, attaching a letter, providing further instructions regarding the treatment of certain orders.

1540 Unique orders were obtained by removing duplicate order numbers.

both number and percentage, the results of his analysis in accordance with subparagraphs (a), (b), (c), (f) and (g) above.

2428 To address the above questions, Ryan was provided with the Barley Data, containing the barley varieties used to manufacture malt for customer orders and the varieties reported in Certificates of Analysis from 1 January 2010 to 31 October 2013. The 2 spreadsheets contained 52,970 rows of data corresponding to 4,352 unique order numbers.[1541]

2429 By way of background, the Cargill Parties referred to many customer contracts which contained terms specifying the barley varieties required to be used when making malt for that customer. McIntyre's evidence was that these were not always recorded in the Laboratory Information System. Accordingly, the barley varieties contained in contractual specifications were collated and given to Ryan for the purpose of the Barley Analysis.

2430 Some customers specified more than 1 barley variety and many orders were produced using more than 1 barley variety. Further, not every Certificate of Analysis reported a barley variety.[1542] Furthermore, not every customer order specified a barley variety.[1543] Moreover, it was not necessarily the case that the orders with no contractual barley requirements were the same as the orders where the Certificate of Analysis did not report a barley variety.[1544]

X.10.8.2 Findings

2431 The relevant agreed facts drawn from this analysis were:[1545]

> 10. Of the 2,753 unique orders with at least one Reported Variety on the Certificate of Analysis and at least one Customer Required Barley Variety, there were 2,695 (97.89%) orders where all Reported Varieties on a Certificate of Analysis were a Customer Required Barley Variety.
>
> 11. Of the 4,171 unique orders with at least one barley variety used in the

1541 The letter dated 5 October 2018 stated that there were 4,353 unique order numbers in the spreadsheet. However, 2 of the unique order numbers were duplicate orders.

1542 2,788 of the 4,352 orders were accompanied by a Certificate of Analysis that reported a barley variety.

1543 4,172 of the 4,352 orders specified at least 1 barley variety.

1544 2,753 of the 4,352 orders both specified a required barley variety and were accompanied by a Certificate of Analysis.

1545 For all agreed facts found, see annexure D to these reasons.

blend and at least one Customer Required Barley Variety, 3,236 or 77.58% of those orders, were orders where not all the barley varieties used in the blend were Customer Required Barley Varieties.

12. Of the 2,788 unique orders with at least one barley variety used in the blend and at least one Reported Variety on the Certificate of Analysis, there were 2,457 (88.13%) orders where not all barley varieties used on (sic) the blend were Reported Varieties on the Certificate of Analysis.[1546]

13. Of the 2,753 unique orders with:

- at least one barley variety used in the blend,
- at least one Reported Variety on the Certificate of Analysis; and
- at least one Customer Required Barley Variety,

there were 2,429 (88.23%) unique orders which had:

- at least one barley variety used in the blend that did not match any Reported Variety on the Certificate of Analysis; and/or
- at least one barley variety used in the blend that did not match any of that Customer's Required Barley Variety.

…

21. 56.34% of the Malt Blend Components recorded in the Barley Data have a Production Issue Quantity of "10" tonnes or less.[1547]

…

24. 50% of the orders recorded in the Parameters Data are for malt supplies of less than 225 tonnes, and 50% are for malt supplies of more than 225 tonnes.

X.10.8.3 The Viterra Parties' submissions

2432 The Viterra Parties submitted that the Cargill Parties failed to prove that the malt supplied by Joe White routinely failed to meet customer barley variety requirements for 2 key reasons: (1) the barley variety requirements were not all as alleged by the Cargill Parties; and (2) there was insufficient evidence of routine failure to meet the alleged barley variety requirements.

X.10.8.3.1 The barley variety requirements

2433 The Viterra Parties submitted that the barley varieties used in the Barley Analysis were not always proven to be barley variety requirements specified by Joe White's customers. They referred to some evidence given by Jones that Joe White's customers

---

1546 That is, the Certificate of Analysis reported the variety or varieties used inaccurately (regardless of what a supply contract may have stipulated).

1547 It was also reported that 45.2% of the malt blend components recorded in the Barley Data had a production issue quantity of 5 tonnes or less.

did not specify the grades of barley required. But as the Viterra Parties acknowledged, the grade of barley was a different issue to the variety of barley. The passage referred to also noted some but not all customers specified the required barley variety. This was common ground.

2434 Very helpfully, the Viterra Parties prepared a table (being schedule A to their written submissions) in which they provided their responses to Cargill Australia's narrative summary for barley varieties for Joe White customers who specified barley varieties.[1548] The Viterra Parties' table of 71 pages identified what was agreed and provided detailed responses to the matters they disputed. What follows provides only a very brief summary of the issues raised.

2435 The Viterra Parties submitted there were 8 circumstances when there was no contractual obligation to supply barley varieties, but they were treated by the Barley Analysis as barley variety specifications.

2436 *First,* some customers only specified "preferred varieties" of barley, which did not necessarily impose a contractual requirement on Joe White.

2437 *Secondly*, some contracts allowed for delivery of non-specified barley in particular circumstances and only required Joe White to use its best endeavours to use the specified variety.

2438 *Thirdly*, some customers merely requested a barley variety at a point in time, which did not necessarily amount to a contractual obligation.

2439 *Fourthly*, some customers accepted particular varieties at a point in time, which did not imply that those were the only varieties permitted by the customer, nor did that give rise to a contractual obligation.

2440 The Viterra Parties submitted the 2 preceding issues they had identified concerning barley varieties at a point in time affected a vast number of orders.

1548 This summary was schedule E to the Statement of Claim.

2441 *Fifthly*, miscellaneous documents relied on by the Cargill Parties did not reflect any agreement between Joe White and customers regarding barley varieties to be used.

2442 *Sixthly*, the Cargill Parties ignored that some contracts expressly allowed small quantities of other varieties in the malt.

2443 *Seventhly*, the Cargill Parties ignored the possibility of variations to contractual specifications.

2444 *Eighthly*, the Cargill Parties failed to adduce evidence linking particular contracts or documents with orders in the Barley Analysis.

X.10.8.3.2 Evidence of failure to meet alleged barley variety requirements

2445 As for the second key reason, the Viterra Parties contended that the Barley Analysis did not prove a failure by Joe White to meet barley variety requirements.

2446 It was submitted that the Cargill Parties did not adduce lay evidence that established a finding that barley variety specifications were not met.[1549] In the alleged absence of lay evidence, the Viterra Parties submitted that the Barley Analysis did not establish that barley variety specifications were not met for the following reasons.

2447 *First*, the Barley Analysis was based on inaccurate instructions that would have had an impact on the results.[1550]

1549 The Viterra Parties submitted the court ought to reject the evidence from Stewart that Joe White used unspecified varieties on the basis that Stewart had a limited knowledge of customer contracts, and did not give evidence in relation to the frequency of such a practice. Accordingly, it was submitted his account of Joe White using non-approved varieties did not constitute "conclusive" evidence of non-compliance with customer requirements. It was suggested that the appropriate witness to give evidence on the matter was Wicks, who was not called to give evidence. In seeking to diminish the significance of Stewart's evidence on this topic, the Viterra Parties did not address the fact that it was Stewart who was asked to prepare the Customer Review Spreadsheet in October 2013 when the issue of non-approved barley varieties was being addressed (see par 1211 above), or the fact that the information he compiled as recorded in the Key Recommendations Memorandum was agreed to by Hughes and Wicks: see par 1218 above.

1550 Examples cited by the Viterra Parties of suggested errors in the instructions included issues regarding Asia Pacific Breweries, which affected 36 percent of the orders in the dataset. Further, there was no evidence establishing all approved, preferred or required barley varieties for the period up to 1 November 2011. For the period following 1 November 2011, the Cargill Parties relied upon lists of the Heineken group's "preferred varieties" as requirements. In addition, Thai Beverages had a contractual obligation for Joe White to use "best endeavours" to supply the barley variety specified, however, this was treated as a strict requirement in the Barley Analysis.

2448 *Secondly*, the Barley Analysis treated an order as non-compliant with customer variety requirements regardless of the quantity of the non-compliant variety.

2449 It was submitted that the Barley Analysis did not account for the phenomenon of "funnelling", where small parts of malt from the previous batch in a particular silo would form part of the new batch in that same silo.[1551] Ryan was given no instructions in relation to funnelling and agreed under cross-examination that the Barley Analysis included accounting for any amount of non-approved Barley Variety as non-conforming no matter how small the quantity.[1552]

2450 It was further submitted that the fact that, for example, 50 percent of all orders were for malt supplies of more than 225 tonnes and 56.34 percent of malt blend components had a quantity of 10 tonnes or less, this demonstrated that the Barley Data recorded small quantities of malt that were part of larger orders.[1553]

2451 The Viterra Parties also relied on evidence of the unavoidable presence of small quantities of malt produced from other barley varieties.[1554]

2452 The Viterra Parties contended that small quantities of a non-approved variety would not have amounted to non-compliance with the barley varieties specified by Joe White's customers. They further submitted that customers would not have been concerned with small quantities of non-approved malt and would not have considered that it amounted to non-compliance with specification. Accordingly, it was submitted in these circumstances customers would not expect the presence of such varieties to be reported on their Certificates of Analysis.

X.10.8.4 The Cargill Parties' submissions

2453 The Cargill Parties submitted the Barley Analysis demonstrated that at all material times Joe White had a practice of routinely and systematically making malt for

---

1551 See pars 265-269 above.

1552 By way of example, an order for 193.18 tonnes was recorded as non-conforming because it contained 0.6919 tonnes of a non-approved variety.

1553 See annexure D to these reasons, items 20-25, for a full list of agreed quantities of malt blend components.

1554 See pars 2422-2423 above.

customers by using barley varieties that were not contractually specified.

X.10.8.4.1 Viterra's "no contractual obligation" submissions

2454 The Cargill Parties provided a detailed response to the 71 page table prepared by the Viterra Parties in relation to barley varieties as schedule A to their written submissions.[1555] By adding an extra column to the table, and inserting their responses the document became a 96 page document. Again, what follows only provides a very brief summary of the issues raised.

2455 *First,* the Cargill Parties took issue with the Viterra Parties' submission that there was no contractual requirement to provide "preferred varieties" in relation to Heineken.[1556] The Cargill Parties relied on evidence of a traffic light colouring system used to mark "preferred varieties", "no preference" varieties and "not permitted" varieties for Heineken orders. In addition to not permitted varieties being banned from use, there were restrictions on the use of no preference varieties, as they could not be used without upfront approval from Heineken. The necessary implication of which was submitted to be that the varieties labelled as "preferred varieties" were contractually required varieties unless Heineken expressly agreed to the contrary.

2456 *Secondly,* the Cargill Parties submitted that in contracts where best endeavour clauses existed, read in context those clauses did not relieve Joe White of the obligation to use contractually specified barley varieties or to accurately report what was in the Certificate of Analysis.[1557]

2457 *Thirdly,* the Cargill Parties disputed that the evidence they had relied upon only

---

1555 See par 2434 above.

1556 The majority of the preferred varieties argument related to Heineken. There was also reference to the preferred varieties of SAB Miller The Cargill Parties submitted that the preferred varieties argument only impacted 1 order for SAB Miller and therefore the materiality of the argument in relation to that customer was low.

1557 The Viterra Parties' submissions were made in relation to the best endeavours clauses contained in Thai Beverages contracts. The Cargill Parties relied on evidence of a clause in a Thai Beverages contract that contained a best endeavours obligation, and also stated that "[t]he variety of malting barleys being supplied should be stated on the 'Certificate of Analysis' (COA) for each consignment. Where variety blends are to be supplied in order to meet specification the variety percentage mix ratio should be stated on the [Certificate of Analysis]". Therefore, it was submitted that Joe White was not relieved of an obligation to accurately report barley varieties in the Certificate of Analysis.

showed varieties were used at particular points in time. Further, they took issue with the submission that there were a "vast number of orders" where reference to a variety at a point in time was incorrectly considered by the Cargill Parties as a contractual obligation.[1558]

2458 *Fourthly,* the Cargill Parties similarly took issue with the substantive submission,[1559] together with the contention that there were a "vast number of orders", where acceptance at a point in time was incorrectly considered by the Cargill Parties as a contractual obligation.[1560]

2459 *Fifthly,* the Cargill Parties challenged the submission that the Cargill Parties had relied on miscellaneous documents which provided no indication of an agreement as to the use of barley. The Cargill Parties contended that the Viterra Parties' submission should fail on the basis that they did not provide the court with the number of orders affected by the miscellaneous documents. Notwithstanding this, the Cargill Parties responded to this submission noting there was only a handful of instances where the Viterra Parties alleged that this had occurred.[1561]

2460 *Sixthly,* the Cargill Parties took issue with the Viterra Parties' submission that the Cargill Parties treated small quantities of non-approved barley varieties as a breach when small amounts of those varieties were permitted by the contracts. The Cargill Parties submitted that on the evidence Joe White was breaching contract terms which permitted a "small or a little" amount of non-conforming malt.[1562]

1558 The Cargill Parties dealt with the Viterra Parties' submissions on an individual entry basis, submitting that there were "less rather than more" occurrences where the Viterra Parties had alleged that such mischaracterisation had occurred. While not accepting the mischaracterisation had occurred, by reference to schedule A of the Viterra Parties' closing submissions, the Cargill Parties referred to their responses in part A [2(a)]-[2(b)], part B [3],[8], part D [7], part E [7], [14], [18], part F [5], part G [11]-[13], part I [5],[11],[18], part K [1]-[2], part M [1] (X2), [10], part O, [10] to demonstrate the limited impact of this point.

1559 See par 2439 above.

1560 The Cargill Parties relied on the same evidence for the third and fourth submissions: see fn 1558 above.

1561 Again, by reference to schedule A to the Viterra Parties' closing submissions, the Cargill Parties referred to the same documents identified by the Viterra Parties at part H [19], part M [6], part P [8(ii)].

1562 The Cargill Parties submitted that there were only 2 relevant customers to draw to the court's attention. An Asahi contract contained a clause that stated that "[l]ittle of the following should be contained in the malt, a malt variety which is not listed in the specification." Of the 8 orders for Asahi, the quantity

2461 *Seventhly,* the Cargill Parties submitted that it was unfair of the Viterra Parties to seek to make something of the fact that the Cargill Parties had ignored the possibility of variation to approved varieties unless a specific document had been identified to confirm it. It was submitted that, in circumstances where the records that the Cargill Parties relied upon were inherited from the Viterra Parties, any inadequacy of such records was not the fault of the Cargill Parties. Further, it was submitted that the Viterra Parties had not produced documents evidencing variations. Furthermore, the Cargill Parties submitted that their approach was to err in favour of the Viterra Parties when there was any uncertainty regarding contractual requirements of barley varieties. Moreover, it was submitted that the Viterra Parties had not submitted any impact, nor numbers, nor examples to substantiate their submission.

2462 *Eighthly,* the Cargill Parties rejected the submission that there was any linkage problem between the data extracted from the Laboratory Information System and the contracts. It was submitted that evidence from Jones and McIntyre established that the orders started in the Administration System and then were completed in the Laboratory Information System.[1563] Therefore, it was submitted that tendering additional information from the Administration System as a record of customer contracts was unnecessary.

X.10.8.4.2 Funnelling

2463 In response to the Viterra Parties' submissions that the Barley Analysis did not account for funnelling,[1564] the Cargill Parties submitted that any potential funnelling did not detract from the fact that Joe White had a practice of deliberately misreporting barley

---

of a non-approved barley variety used was between 38.57 percent and 51.66 percent. The other customer was Oriental Brewery.

1563 Referring to evidence from Jones and McIntyre, the Cargill Parties submitted that malt contracts were often long term, details of new customer contracts were entered into the Administration System and when new orders were placed under these contracts the pre-shipment team created a new sale which was populated by the Administration System and an order number was automatically generated by the Administration System. When an order was generated, it was pushed from the Administration System to the Laboratory Information System. Thereafter, the order remained in the Laboratory Information System and the details of the order were generated by the system or entered into the system.

1564 See pars 256, 265-269 above.

varieties.

2464 The Cargill Parties submitted that the practice of misreporting was evident given the fact that 77.58 percent of orders contained at least 1 variety that was not a customer required variety. Further, 88.23 percent of all orders with a barley variety reported in the Certificate of Analysis and a customer required variety listed, contained at least 1 barley variety used that did not match the reported variety or any of the customer's required varieties.[1565]

2465 The Cargill Parties submitted in the circumstances it was highly unlikely that funnelling had any significant effect on the figures above. A proposition put to Ryan by the Viterra Parties during cross-examination was referred to[1566] in submitting that funnelling only occurred in limited instances where a batch was almost drained and where that silo contained batches made from different barley varieties.

2466 Further, using the Barley Data, the Cargill Parties extracted the orders where there were 2 or more barley varieties, those being, it was submitted, the orders in which funnelling could have occurred. The Cargill Parties further excluded instances where the customer had not specified a barley variety. Of the remaining 29,711 individual batches of malt, 65 percent used a non-conforming variety. The Cargill Parties submitted this was a highly significant proportion.

2467 Based on this, the Cargill Parties submitted that it was more probable that the use of non-conforming barley varieties was a consequence of Joe White's practice of using the incorrect barley as opposed to funnelling.

2468 Notwithstanding, the Cargill Parties submitted that even if funnelling was caught in the Laboratory Information System, the Viterra Parties did not provide evidence to demonstrate the quantifiable effect of funnelling on customer orders. They also

---

1565 See par 2431 above.

1566 The proposition, based on McIntyre's evidence, was that when a batch was getting towards the bottom of a silo, some of the product sitting at the top of the silo (not forming part of the same batch) might pass through and mix with the batch at the bottom: see par 267 above.

referred to the "paucity" of evidence on this issue.[1567]

X.10.8.4.3 Recording of small non-conformances

2469 The Cargill Parties responded to the Viterra Parties' submissions about the treatment of small quantities of non-conforming malt by submitting the following.

2470 *First*, it was submitted that a single example offered by the Viterra Parties of a batch of non-conforming barley with a small production issue quantity used in an order was not able to assist the court to draw any reliable conclusions about the dataset as a whole.

2471 *Secondly*, the facts regarding the individual batches which contained small production issue quantities[1568] did not support the Viterra Parties' proposition that any non-approved barley varieties that were recorded as having been used in a batch, no matter how small, were treated as non-conformance in the Barley Analysis. It was submitted that the facts merely conveyed that some individual batches of malt which made up an order had small production quantities.

2472 It was submitted that the Viterra Parties did not adduce evidence from which the court could reasonably infer that any significant number of orders contained only a small number of non-conforming individual batches of malt. Nor had any evidence been adduced from which the court could reasonably infer that any significant number of orders contained a small number of non-conforming batches which comprised a relatively small production issue quantity.

1567 The Cargill Parties submitted that the 2 witnesses that addressed this matter were Jones and McIntyre. While Jones gave evidence that he was aware of the phenomenon, he said he never observed it directly and was unable to say whether use of varieties of less than 1 tonne in different batches was because of funnelling as he was not aware of the issue in enough detail to comment. Equally, when the topic of funnelling was raised with McIntyre she said it was not her area of expertise, though she gave evidence she had an understanding of the basics: see par 267 above. The Cargill Parties' submissions did not refer to Stewart's evidence on the topic (see par 268 above), but presumably that was because it was not adopted by the Viterra Parties when cross-examining Ryan approximately 6 weeks after Stewart had given this evidence. Rather, the Viterra Parties relied on McIntyre's evidence of how funnelling occurred in putting various propositions to Ryan: see fn 1566 above. Further, in the Viterra Parties' closing submissions on funnelling they also relied on McIntyre's evidence.

1568 See annexure D to these reasons, items 20-25, for a full list of agreed quantities of malt blend components.

2473 *Thirdly*, the Cargill Parties relied on the Barley Analysis to demonstrate that only 14.2 percent of the orders analysed contained only 1 batch of malt that contained a non-conforming variety.[1569] It was submitted that the majority of orders, more than 60 percent,[1570] contained 2 or more batches of malt which were comprised of non-conforming barley varieties.

X.10.9 Discussion and conclusions on Barley Analysis

2474 For reasons already explained,[1571] the evidence (without taking into account the evidence the subject of statistical analysis) established that Joe White routinely, and without informing customers, supplied malt contrary to the requirements of customers who specified the barley variety to be supplied. However, given the substantial body of material devoted to the Barley Analysis, it is appropriate to make findings regarding this part of the case.

2475 Reaching a conclusion on this particular matter has not been without its difficulties. Not all the underlying contracts were available to be tendered. Although the Cargill Parties were able to explain this and submitted it was not their fault (because the Viterra Parties, as the previous owners of the Joe White Business, were the source of the documentation), that did not avoid the simple proposition that it was for Cargill Australia to prove its case despite any absence of documents. Further, I have been mindful to ensure that the firm view I have formed on the evidence more generally with respect to the Varieties Practice has not affected the analysis of the evidence strictly related to the Barley Analysis.

2476 Furthermore, although a number of points made by the Viterra Parties plainly had merit, assessing the weight that ought to be given to some of the Viterra Parties' submissions has not been readily apparent when considering the validity of the Barley Analysis as a whole. In relation to numerous points, no attempt was made by the

---

1569 619 orders contained only 1 batch with a non-conforming variety, which Cargill divided by a total of 4,352 unique orders.

1570 2,617 orders contained 2 or more batches with a non-conforming variety, which Cargill divided by a total of 4,352 unique orders.

1571 See pars 2415-2425 above.

Viterra Parties to demonstrate how prevalent a particular issue was. Although, of course, the onus was on Cargill Australia to establish its case, in circumstances where Ryan was available and expressly agreed to conduct any further analysis the Viterra Parties might have sought to have undertaken,[1572] the absence of any attempt by them to ascertain or even approximate the extent of a particular issue must be taken into account in determining whether certain points made had the effect of undermining or seriously putting in issue the validity of the exercise undertaken in relation to the Barley Analysis.

2477 Turning to the substance of the matter, there were some points raised by the Viterra Parties that were more apparent than real. The first matter raised concerning "preferred varieties" focused on that wording rather than the substance of the Heineken contracts. The meaning of the term in the context of the relevant contracts was such that the preferred varieties were the required varieties unless Heineken agreed otherwise. As all but 1 order under this category fell into this contractual regime, the remaining order for SAB Miller could be of no consequence given the total number of orders the subject of the analysis.[1573]

2478 Further, the contracts requiring best endeavours did not relieve Joe White from its obligation to provide the specified barley variety if it was or ought to have been available, nor from its obligation to accurately report the barley varieties used. This point has been largely dealt with above in the context of considering the appropriateness of using data from the Laboratory Information System.[1574]

2479 Furthermore, the submission concerning possible variations lacked merit. Of course, it would be possible that variations to contracts occurred that were not the subject of evidence, but the case must be determined on the balance of probabilities on the evidence before the court. Given a number of Joe White employees were the subject of cross-examination, including by counsel instructed by the Third Party Individuals, little weight can properly be given to the mere possibility that there were a significant

1572 See fn 1448 above.
1573 See fn 1556 above.
1574 See par 2301 above.

number of material variations beyond those the subject of evidence.

2480 Finally, the Viterra Parties' submissions concerning the linking of the data in the Laboratory Information System to contractual details has already been rejected.[1575] That leaves the third, fourth, fifth and sixth points.[1576]

2481 Addressing the third, fourth and sixth points together, it is necessary to consider each of the differing arrangements between Joe White and its respective customers in order to determine whether or not Cargill Australia has established that those customers had required barley varieties as assumed by Ryan in the Barley Analysis.

2482 The first customers identified by the Viterra Parties were those associated with Asia Pacific Breweries.[1577] The Viterra Parties submitted the emails relied upon by Cargill Australia were evidence only of all varieties that were being used, rather than specifying required varieties. The emails were exchanged in 2009 and did not unequivocally state that the 2 varieties referred to, Gairdner and Stirling, were required varieties.[1578] The Cargill Parties relied upon these 2 varieties being referred to as varieties Joe White currently supplied to Asia Pacific Breweries, coupled with an expressed intention by Stewart to submit a strategy for 2 new barley varieties. Further, in a later email, copied to Hughes and others, Stewart referred to the need to be vigilant with Asia Pacific Breweries concerning barley varieties. In that same email, Stewart noted that Stirling was in short supply and that Gairdner could be used exclusively, but directed that none of Baudin, Hamelin, Vlamingh or Buloke varieties were to be used.

2483 Furthermore, the Customer Review Spreadsheet showed, as at October 2013, there were only 3 approved varieties for Asia Pacific Breweries, being Gairdner, Stirling and

---

1575 See pars 2292-2296 above.

1576 See pars 2438-2442 above.

1577 The Viterra Parties sought to raise an issue about the identity of companies within the group, but this has already been addressed: see fn 1008 above.

1578 The Viterra Parties also referred to a "Strategic Alliance Contract" signed on 24 November 2008 by Asia Pacific Breweries Ltd and Joe White provided for a 4 year term commencing 1 April 2010, which did not specify barley varieties.

Sloop.[1579]

2484 The Barley Analysis showed that Baudin was used for 165 orders, Hamelin was used for 31 orders, Vlamingh was used for 124 orders and Buloke was used for 229 orders. In addition, Hindmarsh was used for 12 orders.

2485 In my view, the evidence demonstrated that Asia Pacific Breweries had strict requirements concerning barley varieties. Further, the documents showed that Joe White fully appreciated this to be the position. No other possible explanation was proffered for Stewart directing that certain varieties were not permitted. On the best evidence, it was most likely that Asia Pacific Breweries' requirements were not adhered to in the manner set out in the previous paragraph.[1580]

2486 Next, the Viterra Parties noted that the email relied upon by Cargill Australia concerning Asahi (forming part of an email chain from January 2009) referred to the varieties of Gairdner and Baudin in the context of the use of gibberellic acid and did not indicate these varieties were actual requirements. In response, the Cargill Parties submitted the email demonstrated these 2 varieties were the required varieties because the customer had these 2 specific varieties malted in its possession in order to test the results of malt provided by Joe White. In addition, the Cargill Parties referred to the Customer Review Spreadsheet recording that, as at October 2013, these 2 varieties were the only approved varieties for Asahi.

2487 In my view, the emails referred to alone would not have established that Gairdner and Baudin were required varieties. However, the contents of those emails read in conjunction with the Customer Review Spreadsheet prepared a number of years later, together with the absence of any evidence of permitted use of other varieties,[1581] strongly suggested that these varieties were the required varieties throughout the

---

1579 But see also par 3665 below.

1580 On 1 view of the evidence, it was possible that Baudin and Vlamingh were preferred varieties: see par 3665 below.

1581 See par 2488 below.

relevant period.[1582] I so find.

2488 Also with respect to Asahi, the sixth point was enlivened. A contract was entered into with Joe White on 12 March 2010 that referred to a standard list specification annexed, but the standard list that was annexed did not identify any barley varieties. The contract contained a clause stating : "Little of the following should be contained in the malt: A malt variety which is not listed in the specification". The Viterra Parties submitted this clause also permitted the use of non-specified barley varieties.

2489 The Cargill Parties referred to subsequent correspondence related to purchase orders, but that correspondence also did not list required barley varieties.

2490 The Cargill Parties submitted there was no need for a list of the required barley varieties in the March 2010 contract because the arrangement concerning required barley varieties was already in place. Further, they submitted that even if (contrary to their principal contention) this clause permitted use of other varieties, it did not permit what had occurred, namely numerous orders being fulfilled with malt that contained substantial amounts of the barley variety Flagship (ranging between 33.35 and 51.66 percent).[1583]

2491 The Cargill Parties' position should be accepted. In addition to the Customer Review Spreadsheet indicating that as at October 2013 only Baudin and Gairdner were approved and the absence of evidence to suggest that that position had ever changed, no explanation was proffered by any party as to why Joe White grossly misreported the barley varieties being used. It is difficult to conceive of a plausible reason why this would have been done if there was no limitation on the malting barley varieties that could have been used in production. The obvious inference to be drawn was either that it was done to conceal that the required barley variety had not been used and a non-approved variety had been used instead, or no proper enquiries were made

---

1582 It should not go without comment that the email chain included an email from Stuart to the customer which stated that Joe White understood Asahi's strict policy relating to the addition of gibberellic acid and that Joe White was extremely embarrassed that it may have "inadvertently" supplied malt with an additional amount of gibberellic acid.

1583 The 8 orders in question were for volumes of malt ranging between 270 and 502 tonnes.

about the varieties used and the barley variety required by the contract was simply entered.[1584] Either inference supported the conclusion that there were varieties contractually required and that that requirement was being reported as being met when it was not being adhered to. Moreover, the quantities of Flagship supplied in the orders identified could not be described as "little"; to supply in such quantities (without any disclosure) was in breach of contract, and materially so.

2492 Next, the Viterra Parties challenged the contractual position with respect to Sapporo. There were only 31 orders the subject of the Barley Analysis referable to this customer. Further, none of those orders were accompanied by a Certificate of Analysis that misreported the variety used in the blend. Accordingly, whether or not Cargill Australia proved this aspect of the case (and, based on the matters raised by the Viterra Parties, I am not satisfied that it did), it did not affect the outcome of the Barley Analysis. Accordingly, it need not be considered further.

2493 Next, there were no contractual documents for the period 1 January 2011 to 31 March 2012 for Cargill Japan Ltd ("Cargill Japan").[1585] Cargill Australia assumed Gairdner was the required barley variety based on supply documentation that was available before and after this period, which specified Gairdner as the required variety. Further, they relied upon the Customer Review Spreadsheet which showed the only approved variety for Cargill Japan in October 2013 was Gairdner.

2494 Obviously, Cargill Australia could not produce Joe White documents that did not come into its possession upon the Acquisition. The absence of the contract having been explained on this basis, and the requirements of the supply of malt both before and after the existence of any contract covering the 15 month period, when considered in conjunction with the details contained in the Customer Review Spreadsheet, provided a solid basis for inferring that Gairdner was the required barley variety for Cargill Japan during this period. I so find.

1584 See McIntyre's evidence on this second possible inference at par 82 above.

1585 There was no issue raised at trial as to whether documents of Cargill Japan were in the power, possession or control of Cargill, Inc or Cargill Australia for the purposes of discovery obligations.

2495 Next, an issue arose with respect to Hite.[1586] The issue was similar to that addressed with respect to Cargill Japan. Contractual documents from February 2010 to January 2011 and from February 2011 to January 2012 specified Gairdner, and Gairdner or Buloke, respectively.[1587] Further, with respect to the first of these 2 periods, it appeared from correspondence that from 23 April 2010 this customer also approved Buloke as a required variety.[1588]

2496 Further, on 29 May 2012 emails were exchanged between Stewart and Hite in which it was stated that a shipment of malt using Buloke would be accepted, but it was requested that Gairdner be used for future orders. Stewart acceded to this request on the basis that Buloke would only be used in the future if Joe White gained permission. Finally, the Cargill Parties submitted that there was no evidence that Buloke or any other variety was approved after 29 May 2012, but this submission appeared to overlook the fact that the Customer Review Spreadsheet recorded both Gairdner and Buloke as approved varieties in October 2013. However, when such approval occurred was unclear. On 24 January 2013, a purchase order from Hite specified only Gairdner be used.

2497 The substantive dispute was confined to the period between 1 February 2012 and 23 January 2013 in relation to which no relevant documents were available to be

---

1586 The company in question was called Hitejinro, created as a result of the merger of Hite Brewery Co Ltd and Jinro Ltd, but was referred to in Joe White's records as Hite.

1587 With respect to the first of these, the Viterra Parties sought to make something of the fact that Hite had not signed the "Contract sheet". There was simply nothing in this point. The contract was signed by Wicks on behalf of Joe White and malt was supplied pursuant to it. Further, with respect to the second of these contracts, the Viterra Parties noted that the "Offer Sheet" had not been signed by Joe White. Again, the absence of such a signature did not halt the supply of malt by Joe White and there was no evidence of any counter-offer. In these circumstances, the only sensible inference was that the document as signed by the customer and in the possession of Joe White comprised the contract of supply.

1588 The Viterra Parties submitted it ought to be inferred that Buloke was approved from the commencement of the contract period rather than 23 April 2010, and that Hite had agreed to use varieties other than Gairdner from 26 November 2009 (when Gairdner was first identified in the contract sheet as the required variety). However, there was nothing in the relevant email to suggest that this was the position. If anything were to be inferred from the contents of the email on this issue, it was that Buloke was being tried for the first time.

tendered.[1589] Consistent with the reasoning given with respect to Cargill Japan,[1590] I find that Hite had required barley varieties limited to Gairdner and Buloke.

2498 Next, given the extent of the issues raised, it is necessary to consider the position of Nestlé from 2006 to 2013.

2499 On 31 July 2006, Nestlé provided a product specification to Joe White as the "approved supplier" for the period from "01/08/06– / / "; in other words, the period was open-ended. In identifying the barley variety as "30% Gairdner/70% Stirling", it was stated in the product specification that, amongst other things, the specific barley variety was to be selected following discussion. The clause continued: "Any changes of supply of each and every barley [variety] other than the approved variety listed below require prior approval and production trial".

2500 On 13 October 2009, Joe White's offer to supply malt to Nestlé was accepted. The offer was contained in an email which stated that both the terms and specifications, and the variety and specifications, were to be "as per current contract". Earlier in the email chain, Nestlé sought to clarify that the same malt would be delivered which was identified as "2 row Australian variety", to which Joe White responded that it would deliver the same varieties and production methods in accordance with the then current deliveries. Nowhere in the email chain were the actual varieties being used expressly identified.

2501 On 27 August 2010, a "2011 contract" for the sale of 2,000 tonnes of malt (to be shipped in the second half of 2010) was confirmed. The single page document stated the specification was to be "As per Nestlé Jurong Specification", and a description of the malt was "2 Row Australian Barley Brewing Malt". The parties were agreed that Jurong was the regional base within which the Nestlé's factory was located.

1589 In addition, the Viterra Parties also sought to raise an issue about whether a purchase order dated 24 January 2013 related to orders listed as the purchase order did not specify any delivery days and there was no evidence that Joe White agreed to supply the malt. Equally, there was no evidence to suggest that business with respect to Hite did not continue in the ordinary course during this period. In short, there was no basis to draw the inference that Joe White declined to supply the malt ordered.

1590 See pars 2493-2494 above.

2502 There were no other documents relevant to the issue of what, if any, barley varieties were required by Nestlé for deliveries from 1 August 2006 to 31 December 2010.

2503 On 24 March 2010, another "2011 contract", this time for the sale of 10,000 tonnes of malt (to be shipped over the 2011 calendar year), was confirmed. The details in relation to the specification and description were the same as those set out in the 27 August 2010 document.

2504 On 27 May 2011, a "2011/2012 contract" for a further 10,000 tonnes of malt (to be shipped from September 2011 to March 2012) was confirmed. Again, the details with respect to the specification and the description were the same.

2505 On 12 August 2011, another "2011/2012 contract" for 7,000 tonnes of malt (to be shipped from January 2012 to June 2012) was confirmed. Yet again, the same specification and description details were given.

2506 In addition to these contractual documents, the Cargill Parties tendered an email sent on 23 June 2011 by Nestlé to Stewart. That email recorded that, with respect to 2 shipments in that month, the barley varieties Gairdner (60 percent) and Stirling (40 percent) had been used. Each shipment was referred to by a number, and the email stated that Nestlé preferred the malt in the second shipment over the first shipment.

2507 Another email chain, in early 2012 and commenced by Nestlé, was concerned with the quality of malt to be supplied from the Sydney plant. In responding to the query, Stewart stated that Joe White was in the process of putting together a crop report for the 2011/2012 harvest. He suggested a malting-information session should be conducted in the upcoming months and enquired as to whether Nestlé was aware of how a second trial for Buloke had performed. He stated that Joe White had good volumes of Buloke barley and would be able to start supplying that variety if Nestlé desired. The response from Nestlé was that the performance of Buloke overall was better than the combination of 60 percent Gairdner and 40 percent Stirling. It was stated that the trials had yielded desirable results. After a number of further emails, it was agreed on 2 February 2012 that Nestlé would try 60 percent Buloke and 40

percent Gairdner "for a start".

2508 Finally, a purchasing specification issued by Nestlé, stated to be valid from 20 July 2012 (with no end date), was relied upon. The general description of the malted barley referred to 2 row and 6 row barley. Although particular barley varieties were not identified on the face of this document, it contained the following term:

> The specific barley variety is to be selected following discussion with the Maltster, Client and Nestec, to optimise the quality of the malted barley allowing for seasonal and varietal variability. Any changes of supply of each and every barley variety requires prior approval by Nestlé.

2509 No witness was taken to any of these documents in order to identify surrounding circumstances that might have shed light on their meaning or significance. The Viterra Parties submitted that the email of 23 June 2011 indicated nothing beyond the 2 varieties used. Similarly, they submitted that the emails exchanged in early 2012 demonstrated no more than the varieties that were used at that time, and were not evidence of barley varieties required throughout the entire period. In relation to the contractual documents, the Viterra Parties submitted the barley varieties were not identified,[1591] or were identified as something other than Gairdner and Stirling;[1592] and, in relation to the last of them, submitted it was not apparent that the specification applied to the orders particularised in the Barley Analysis.

2510 In my view, these documents demonstrated that Nestlé stipulated that barley varieties needed to be expressly approved before they could be used in malt supplied by Joe White. Further, it was apparent from this documentation, together with the Customer Review Spreadsheet which stipulated that the only approved varieties for Nestlé as at October 2013 were Buloke, Gairdner and Stirling, that up until February 2012 only Gairdner and Stirling were said to be used (and therefore were the only varieties approved); and after February 2012 Buloke was also the subject of approval and use. There was nothing in the evidence to suggest that "2 row Australian barley"[1593] was referring to some other variety of barley, or that such a term embraced barley varieties

---

1591 Including that there was no evidence of the "Nestlé Jurong Specification".

1592 This submission related to the references to "2 row" barley.

1593 Or for the limited period for which it applied, "6 row".

generally.

2511 The next customer relevant to this issue was Phoenix. The Cargill Parties relied on an email dated 25 August 2006 which referred to a trial of Gairdner and the desire that that variety would be approved over Schooner. Subsequent emails in 2009, 2011 and 2012 referred to either "known specification" or "same variety with same conditions as current contract" or "[specifications] as per current contract", without expressly specifying any particular variety. The assumption was made that Schooner was the only approved variety.

2512 The Customer Review Spreadsheet listed Schooner as the only approved variety. In circumstances where the first and last relevant documents both identified Schooner as the approved variety and the other documents made it clear that a specific variety was required, in the absence of any evidence to suggest any other variety was approved, the obvious inference was that Schooner was the required variety throughout. I so find.

2513 The next customers were collectively referred to as "San Miguel". In August 2005, Joe White and San Miguel entered into a "preferred supplier alliance"[1594] for a 5 year period commencing on 1 January 2007 "after the expiration of the previous agreement",[1595] with an option to a further 5 years. Pursuant to this, Joe White agreed to supply "high-quality malt to [San Miguel Corporation] for brewing and coloured malts".

2514 Further, it provided that specifications could be amended from time to time by mutual agreement having regard to brewing requirements, barley crop condition and the introduction of new barley varieties. Furthermore, Joe White agreed to give priority to San Miguel in the event of, amongst other things, a change in barley varieties. The document did not specify which barley variety or varieties were required by San

---

1594 The document recorded that it did not purport to be a definitive document but existed to provide a basis for the ongoing commercial relationship.

1595 The document recorded that Joe White had been a long-term supplier to San Miguel for a period of over 50 years.

Miguel.

2515 In 2007, Joe White and San Miguel Corporation agreed to "assign" the agreements between them to the "spin-off of the beer division", San Miguel Brewery. It was recorded that from 1 October 2007 San Miguel Brewery would be the counterparty "for all intents and purposes". The letter recording the agreement sought Joe White's consent to the "assignment" to San Miguel Brewery. Three months after the letter was sent, Wicks provided his signature on behalf of Joe White consenting to the "assignment".[1596]

2516 The Cargill Parties submitted that a spreadsheet purporting to record San Miguel's specifications from March 2007 (which recorded the varieties required as Stirling/Gairdner) was a specification document issued by San Miguel. The basis upon which this submission was put was not explained. On the face of the document, it could not be correct. The metadata indicated that it was created by McIntyre, and not until 12 December 2014.

2517 In July 2010, an email chain referred to Sloop having replaced Stirling and the shipment in question being a "36% Sloop/64% Gairdner" mix whereas San Miguel "*mostly* receive[d] a Stirling/Gairdner mix" (emphasis added).

2518 In June 2011, the contract with San Miguel was extended to supply 55,000 tonnes of malt in 2012. Around a year later, a further extension to take the contract to 2013 was agreed to.

2519 Based on these documents, it was assumed for the Barley Analysis, relying on the "Specification Document dated March 2007", that for the period from 1 January 2010 to 6 July 2010 Stirling and Gairdner were the required varieties, and that from this time until 31 March 2013 Stirling, Gairdner and Sloop were the required varieties. This

---

1596 The Viterra Parties noted the position adopted by the Third Party Individuals that the letter did not evidence the "assignment" itself. Of course, given that the agreement recorded that San Miguel Brewery Inc was to take over both the benefit and the burden of the existing agreement, what was agreed to was not an assignment but a novation. Further, there was no requirement for the novation to be in writing beyond what was recorded in the letter, if, after that time, the parties acted in accordance with what had been agreed.

assumption was flawed on its face as there was no specification document dated March 2007.[1597]

2520 Dealing with the period after 31 March 2013, the Cargill Parties referred to a document issued by San Miguel Brewery which expressly provided that the requirements included using Stirling, Gairdner and Sloop. The Viterra Parties did not accept these were required varieties because there was no evidence of when the document was provided by San Miguel, and the evidence of it first materialising was in an email circulated within Joe White on 5 November 2013, being after Completion. In response to this, the Cargill Parties referred to a later email dated 12 March 2014 from San Miguel attaching the material specifications for the next period that stated the approved varieties were Gairdner, Stirling, Sloop and Baudin (which did not align with the Customer Review Spreadsheet, which stated that as at October 2013, the varieties were Gairdner and Stirling, with Buloke pending). The Cargill Parties submitted that because the material specifications were sent to Joe White in response to a request by Joe White for the current specifications, they assumed they were updated at some time (without being able to specify when).

2521 As may be seen from what is set out above, there were numerous inconsistencies and gaps in the documents put forward with respect to San Miguel. With the exception of the position in October 2013 as recorded in the Customer Review Spreadsheet it was not possible to conclude with any certainty at any particular point in time which barley varieties were the required barley varieties. In these circumstances, Cargill Australia has not established the assumptions made by Ryan in relation to San Miguel.

2522 Finally, the position of Thai Duyen Trading and Transpo ("Thai Duyen") must be considered. On 20 July 2010, a sales contract between Thai Duyen and Joe White contained specifications which included the barley varieties Baudin, Gairdner and Schooner. The covering email attached the "signed copy of the contract". The subject of that email included "Extra 500Mt Australia Malt". Without any other corroborating evidence, the Viterra Parties submitted this subject heading implied there was a

1597 See par 2516 above.

previous contract for the relevant period which may have been subject to different terms and conditions. This submission was entirely speculative, and did not address the contents of the covering email.

2523 In addition, the Viterra Parties referred to an email dated 22 November 2013 from Wicks to McIntyre and others which referred to a "special" contract with Thai Duyen for 500 tonnes pursuant to which no specific variety was required. It was submitted this indicated that orders were "sometimes" received that did not require a variety. There was no evidence put forward by the Viterra Parties of this occurring on any other occasion. Further, McIntyre was cross-examined on the details of this email chain, which included an email from her in which she directed that if anyone heard of another contract "like this", then they should let her know. She accepted it was possible other such contracts could exist, but it was not put to her that they did, and nor did she give evidence to that effect.

2524 On 8 March 2011, a further sales contract between Joe White and Thai Duyen was entered into, which also stipulated that Baudin, Gairdner and Schooner were the specified varieties. This contract covered the period from April to December 2011. However, there were no contractual documents to cover the period from 1 January 2012 to 31 March 2013. Subsequently, a sales contract, again requiring the same barley varieties, provided the terms for malt delivered between April 2013 and December 2013. Based on the required barley varieties both before and after the period for which there was no contractual documents, Cargill Australia proceeded on the basis that Thai Duyen had required barley varieties of Baudin, Gairdner and Schooner from January 2012 to March 2013.

2525 Yet another sales contract was entered into between the parties on 17 May 2013, again stipulating the same barley varieties for the period up to December 2013. In relation to each of these contracts, the Viterra Parties referred to the 22 November 2013 email from Wicks and submitted that the barley varieties specified in these contracts were not established to be the required barley varieties.

2526 Although there was clearly evidence of 1 contract for 500 tonnes where a barley variety was not specified, and it was in the realm of possibility that there may have been another such contract, on the balance of probabilities I find that the weight of the evidence indicated that the required varieties of Thai Duyen were Baudin, Gairdner and Schooner.[1598] An apparent exception to such a requirement did not establish that these varieties were not otherwise required as specified.

2527 In summary, with respect to the third, fourth and sixth points, Cargill Australia has established the basis of the assumptions made by Ryan, with 2 exceptions. In relation to Sapporo, there was no misreporting and the Barley Analysis was not materially affected. The position with San Miguel was different, as it was assumed that varieties were misreported. However, only 29 orders (out of a total of 4,359 orders) were covered by the San Miguel contracts during the relevant date range of 5 February 2010 to 28 August 2013. Accordingly, excluding this small number of orders from the results was also not material.

2528 Finally, turning to the fifth point raised in relation to some miscellaneous documents,[1599] a limited number of documents need to be considered.

2529 The first document concerned an email dated 18 March 2010 from an agent of Kirin, Meidiya Company Ltd.[1600] Based on this email, it was assumed that there were 9 required barley varieties. The email asked for confirmation from Joe White in relation to a "Provisional Spec for 2009". It was stated that the specifications were the same as the 2008 crop specifications. The attachment was also marked provisional and, amongst other specifications, listed the 9 varieties of barley. The Viterra Parties submitted that not only was the document provisional, but there was no evidence that it reflected the final version or was otherwise agreed to by Joe White. They further submitted that the proposed specifications related only to the 2009 crop and the Barley Analysis did not indicate which crops were used for each order. They also adopted

---

1598 For completeness, it is noted that the Customer Review Spreadsheet only referred to Gairdner as an approved variety as at October 2013.

1599 See par 2441 above.

1600 In relation to Kirin for the period from 22 January 2010 to 30 January 2010, there were no documents which specified barley varieties and accordingly this period was not included in the Barley Analysis.

the position of the Third Party Individuals, namely that there were no contractual documents identified that established any requirement to comply with this provisional document.

2530 In response, the Cargill Parties submitted that there was no evidence that Joe White sought to negotiate alternative barley varieties or that the provisional specification was otherwise altered. Further, they submitted that it was irrelevant that the Barley Analysis did not specify what crops were used for each order in circumstances where later specifications, which were not provisional and governed the 2011 year, also identified the same 9 varieties.

2531 In my view, the appropriate inference to draw was that the 9 barley varieties specified were required barley varieties. Malt was supplied by Joe White during the relevant period and there were no documents put before the court to suggest that this occurred pursuant to any other arrangement. The continuity of the varieties specified throughout the successive periods without any exception or further explanation over a number of years strongly suggested an acceptance by Joe White of the requirements of the customer.[1601] Further, in circumstances where the barley varieties did not change, it was of little moment that crop years were not identified in the Barley Analysis.

2532 The second document was the spreadsheet concerning San Miguel. For the reasons already stated, this document did not establish the required varieties as had been assumed.[1602]

2533 The third and final document relied upon by the Viterra Parties on this point was a document headed "Sales Contract" dated 31 March 2011 between Thai Tan Trading and Transport and Joe White, which specified Gairdner, Buloke and Baudin. This and 2 other "Sales Contract" documents were forwarded under cover of an email which referred to them and noted some adjustments had been made by Thai Tan Trading

---

1601 The documents in question were not tendered until 7 September 2018. Accordingly, no inference is drawn from the fact that Joe White employees (who gave their evidence before the tender) were not cross-examined about this issue.

1602 See pars 2516, 2519 above.

and Transport. The covering email asked that the contracts be signed and the originals returned to the sender as soon as possible. All 3 of these documents need to be considered.

2534 The Viterra Parties submitted that there was no evidence that the sales contracts were signed or otherwise accepted by Joe White. Further, they referred to the last part of clause 3 of each document which referred to Gairdner, Baudin and Schooner, rather than Gairdner, Baudin and Buloke.

2535 There was no dispute that Joe White supplied this customer throughout the relevant period. In the absence of any other documents or other relevant evidence, the reasonable inference to draw was that the malt supplied was in fact supplied pursuant to these contracts (whether they were signed or not). However, given the uncertainty with respect to whether or not Schooner was also an approved variety, to the extent that it was assumed using Schooner was contrary to the customer's specifications, those orders needed to be excluded. It was common ground that this only amounted to 3 orders.

2536 Finally, it must be noted that the Viterra Parties' submissions did not purport to be exhaustive in identifying these 3 documents, as their identification was preceded by the words "for example". However, the Viterra Parties did not identify any further documents after the Cargill Parties submitted the point raised was very confined.

2537 In conclusion, the Cargill Parties have been largely successful in establishing the underlying assumptions made by Ryan with respect to the Barley Analysis were appropriate. Although some of the Viterra Parties' submissions have been accepted, the extent of that success has been minimal and the orders that ought to have been excluded as a result, both individually and collectively, were not so material as to undermine the conclusions reached as a result of the analysis.[1603]

2538 In relation to the Viterra Parties' remaining submissions concerned with suggesting

---

1603 There was a total of 32 orders that ought to have been excluded because of the Viterra Parties' successful submissions: see pars 2527, 2535 above. When these were considered in the context of 4,359 orders, they had very little impact on the overall results.

there was insufficient evidence of a failure to meet the alleged variety requirements, in substance most of the matters raised were a regurgitation of submissions already made. These have been addressed. Accordingly, they need not be considered individually, with the exception of the submissions concerned with non-compliance because of small amounts of non-approved barley varieties being included in a blend, coupled with the related topic of funnelling.

2539 The first observation to make in relation to this aspect of the case is that there was no issue that the data demonstrated that non-approved barley varieties were frequently used in batches of malt, which occurrences were recorded in the Laboratory Information System but were not reported to the customers.

2540 Further, for the position adopted by the Viterra Parties to be accepted, it would also have to be accepted that customers who specified required varieties would not have been concerned about, and therefore would not have treated as a breach of contract (or perhaps a breach about which they were willing to refrain from acting upon), the undisclosed supply of non-approved barley varieties in small quantities. In my view, this has not been established. Of the many contracts tendered, only 2 contracts were identified as permitting "little" or "MAX 5%" of a non-specified variety.[1604] The existence of such permissive terms in 2 supply contracts, but not in others, suggested that there was no customary position in relation to whether or not non-approved barley varieties were permitted to be used when a customer specified particular barley varieties and did not agree to any exceptions.

2541 This position was not affected by the barley standards published by Grain Trade Australia.[1605] The possibility of impurities in a particular barley variety (the details of which would not be known to the maltster, or ultimately the customer) was a separate issue to knowingly including amounts, no matter how small, of barley varieties that did not come within the customers' specifications.[1606]

1604 See pars 2488-2490 above. The other customer which allowed small amounts of barley varieties other than the specified varieties (ie "MAX 5%") was Oriental Brewery.

1605 See par 2422 above.

1606 See par 2423 above.

2542 Furthermore, the evidence of McIntyre to the effect that funnelling only occurred when a batch was nearing complete withdrawal from the bottom of a silo cannot be ignored.[1607] In short, there was no evidence that funnelling occurred at such a level so as to affect a large number of orders. Needless to say, when the batches included Hindmarsh, funnelling was no explanation for the unauthorised use of a non-malting variety.

2543 In conclusion, for the reasons set out above, the Cargill Parties have established that the assumptions made by Ryan for the purposes of the Barley Analysis (with some minor, non-material exceptions) were soundly based. Further, the results of the Barley Analysis demonstrated the extensive use of the Varieties Practice in the operation of the Joe White Business, or, at the very least, strongly corroborated the finding already made as to the Varieties Practice being engaged in routinely as part of the Joe White Business.

X.10.10 The Gibberellic Acid Practice

2544 The evidence showed that Joe White routinely used gibberellic acid when such use was prohibited. Whether it was used 20 percent of the time when it should not have been used,[1608] or some other proportion, the clear account given by Hughes as the chief executive officer of Joe White was that it happened routinely in all plants when it should not have.[1609] The evidence more generally demonstrated that the Gibberellic Acid Practice occurred routinely at all relevant times right up until 31 October 2013.[1610]

2545 The Viterra Parties submitted that the evidence did not establish this for 2 reasons: (1) the number of customer contracts that contained the prohibition was small; (2) the evidence was insufficient to prove a routine practice.

2546 Cargill Australia alleged that San Miguel, Asahi, Sapporo, SAB Miller, Kirin, Cargill Japan and Asia Pacific Breweries prohibited the adding of gibberellic acid. The Viterra

---

1607 See par 267 above.
1608 See pars 1308, 1373(29) above.
1609 See pars 1282, 1373(27) above.
1610 See pars 170, 272, 1129-1130, 1215, 1224-1225, 1254, 1258, 1263-1264, 1282, 1287, 1293, 1301-1302, 1308, (cf 1317-1318), 1373(27), (28), (29), (30), (31), (32), 1555-1556 above.

Parties only took issue with this in relation to San Miguel and, to a lesser extent, Sapporo.

2547 No witness gave evidence that San Miguel prohibited the use of gibberellic acid. In identifying customers that usually had such a requirement, Stewart made no reference to San Miguel.[1611] In seeking to establish such a requirement, Cargill Australia relied upon contractual documents, which included a general requirement that:

> Additives such as formaldehyde, potassium bromate, exogenous enzymes such as betaGlucanase, etc and sugar extracts such as glucose are not permitted.

2548 The Viterra Parties submitted that, although this clause was not exhaustive as to the prohibited additives, it would be expected that gibberellic acid would have been referred to if it was prohibited because of the high prevalence of its use within the industry. Further, they relied upon the fact that the Cargill Parties did not put to Stewart during his cross-examination that San Miguel prohibited the use of gibberellic acid. Furthermore, it was noted that after Completion, no dispensation was sought from San Miguel in relation to the use of gibberellic acid.[1612]

2549 In addition to these matters, the column in the Customer Review Spreadsheet concerned with whether or not a customer had an additive-free requirement noted that San Miguel did not have any such requirement.

2550 In the circumstances, in light of the lack of specificity of the contractual clause relied upon by Cargill Australia, coupled with the additional matters referred to above, I am not satisfied that at the relevant times San Miguel prohibited the use of gibberellic acid.

2551 As for Sapporo, the Viterra Parties referred to the particulars of the allegation in the Statement of Claim and that the express contractual term relied upon required that barley used meet Japanese regulations of agricultural chemical residues of barley. It

---

1611 See par 41 above.

1612 On 7 November 2013, Stewart provided an update of customer actions which included seeking dispensation for the use of gibberellic acid from Asia Pacific Breweries and Sapporo, but in relation to San Miguel only raised issues regarding barley varieties.

was submitted that there was no evidence that this relevantly prohibited gibberellic acid. They also relied upon the Customer Review Spreadsheet referring to "Sapporo 8,000mT" prohibiting the use of gibberellic acid, rather than Sapporo generally.

2552 Notwithstanding these matters, the evidence more generally indicated that Sapporo prohibited gibberellic acid. Even assuming the Customer Review Spreadsheet was unclear (which in my view it was not), Stewart's evidence was that all Japanese brewers Joe White supplied prohibited the use of gibberellic acid, including Sapporo. Further, after Completion Joe White was required to get dispensation from Sapporo in order to be able to supply malt with added gibberellic acid.[1613]

2553 In conclusion, Cargill Australia established that each of the customers it identified as prohibiting gibberellic acid in fact did so, except with respect to San Miguel.

2554 The Viterra Parties also contended that there was limited evidence of non-compliance with the gibberellic acid prohibitions. They referred to Stewart's evidence, including that most Joe White customers permitted the use of gibberellic acid, which use was common in the Australian malting industry. In addition, they referred to his evidence of approval by Wicks or Stuart being sought before a prohibited-use shipment could occur.[1614]

2555 Further, it was submitted that the Customer Review Spreadsheet demonstrated that

---

1613 Ibid. See also par 41 above. An email chain, spanning from 5 November 2013 until 20 February 2014, demonstrated a number of things including that in November 2013 Joe White required dispensation from Sapporo to use gibberellic acid, which was granted on that occasion. The email chain also showed that: Joe White could not meet Sapporo's specifications without the use of gibberellic acid; delays arose as a result; Sapporo's representative understood that Joe White had indicated it could manage malt within specification and meet the shipping schedules; Sapporo indicated it would not accept malt out of specification; shipment lots were put off by Sapporo; due to "barley quality restraints" Joe White advised that a shipment was postponed; "despite [Joe White's] best efforts" even with the addition of gibberellic acid the barley variety being used could not meet Sapporo's specifications and quality requirements with 3 options given, being Sapporo accept out-of-specification malt or negotiate a derogation on quality until April 2014 or urgently start a new trial of barley varieties Buloke and Scope; a malt lot was rejected and cancelled in January 2014 with malt supplied from France covering the reduced supply; by February 2014 Joe White was using new crop barley which was still low in vigour resulting in glucan being higher than specification; and Sapporo rejecting malt because it could not meet specification.

1614 See fn 794 above.

there were only 2 customers "at that time" affected by this issue.[1615] Similarly, they referred to Stewart's memorandum dated 24 October 2013 stating that the requirement to go additive free would give rise to an estimated loss of production in the order of 14,000 tonnes or 2.5 percent of total production.[1616] They submitted that these matters, together with the small number of documents relied upon and the absence of cross-examination of Stewart on the issue, had the consequence of Cargill Australia falling well short of proving a routine practice from January 2010 to October 2013 with respect to the Gibberellic Acid Practice.

2556 Joe White did not keep records of when it used gibberellic acid contrary to a customer's instruction. Therefore there was no basis for the Cargill Parties to have an analysis conducted like that done for the other practices comprising the Operational Practices. However, the Customer Review Spreadsheet shed considerable light on the prohibited use of gibberellic acid.[1617] Further, according to Hughes' notes of what was said on 15 October 2013, Joe White's position as at that time was that it was necessary to use gibberellic acid for customers that did not authorise it and that this was managed very carefully.[1618]

2557 Finally, in making these submissions, the Viterra Parties did not seek to address the statements made by the Joe White executives on 23 October 2013, as recorded in Lindner's notes. As those notes have been found to be reliable, these submissions were no answer to the clear statements made by those executives at that time.[1619] Further, the Defence included an allegation that invited the court to find that most international brewers did not allow the use of exogeneous gibberellic acid.[1620] There was no attempt to reconcile this positive allegation by the Viterra Parties with the

---

1615 Eden was asked to make the assumption that there were only 2 customers ("Sapporo and some part of [Asia Pacific Breweries]") when cross-examined on the topic of gibberellic acid. This assumption was not reflected by the facts.

1616 See par 1388 above.

1617 See par 1224 above.

1618 See par 1130 above.

1619 See, for example, pars 1282, 1287, 1293, 1301-1302, 1308, 1373(27), (29) above.

1620 This allegation was made in the context of alleging what Cargill knew or suspected before it entered into the Acquisition Agreement: see also par 819 above.

submission that only 2 customers were affected.[1621]

X.10.11 The recording and endorsing of the Reporting Practice

2558 As is apparent from what is set out above on this issue, there was no question that the Reporting Practice was recorded in and endorsed by the Viterra Certificate of Analysis Procedure and the Malt Blend Parameters Procedure. However, neither these documents nor any other Viterra or Joe White policy document recorded or endorsed the Varieties Practice or the Gibberellic Acid Practice.

2559 In relation to the Reporting Practice, the Viterra Parties submitted that there was nothing in the Viterra Policies concerning any routine conduct or practice. In making this submission, the earlier submissions concerning the alleged justifications were essentially repeated and the matter was taken no further. The short answer to this submission was that, from February 2011, the Viterra Policies were required to be adopted at all times, which necessarily made the Reporting Practice itself routine.[1622]

X.10.12 The substantial underpinning of Joe White's financial and operational performance by the Operational Practices and the supply of malt to customers that did not comply with their contracts

X.10.12.1 Some preliminary matters

2560 The Viterra Parties submitted that even if, contrary to their submissions, the Operational Practices were engaged in routinely, Cargill Australia failed to prove that they substantially underpinned Joe White's financial and operational performance for the 2010 financial year to part of the 2013 financial year. They submitted that the "paucity" of the evidence adduced was remarkable. In that regard, they referred to the fact that neither Argent nor Hughes was called to give evidence on this point.

2561 In relation to Argent, they submitted he could have given evidence of the particular

---

1621 See also par 2592 below as an example of the dealings done after 1 November 2013 in relation to gibberellic acid, which went beyond having to make arrangements with only 2 customers arising out of the Gibberellic Acid Practices.

1622 See, for example, pars 206, 210, 224, 271, 283 above.

factors that impacted Joe White's financial performance during the relevant period. The difficulty with this submission was there was no evidence to suggest Argent ever knew about the Operational Practices, let alone the extent to which they were implemented.[1623] In circumstances where Hughes chose to direct the Viterra Policies not be disclosed to customers and auditors, it seemed highly likely that Argent, as the financial controller, was not aware of them. In this regard, it was significant that in October 2013, when the existence of the Operational Practices became an issue, Argent was not 1 of the executives approached to explain the nature, extent or impact of the relevant conduct. In the absence of any evidence to suggest that Argent knew of the Viterra Policies before Completion, there was no basis to draw an inference that he was aware of them at any time before the Cargill 22 October Letter.[1624]

1623 In the Third Party Claim, the Viterra Parties alleged Argent's knowledge of the Viterra Practices was to be inferred from the fact that he was the financial controller of Joe White and that he was copied on an email sent by Hughes on 16 January 2013 (see par 375 above) that referred to Hindmarsh, which was not an approved barley variety.

1624 The Viterra Parties submitted that, as the "chief financial officer", Argent was the 1 person in the entire world that would be able to explain how elements of the accounts were made up and that it should not be accepted that he would not have been able to give evidence about the particular factors that impacted Joe White's financial results during the relevant period. The Viterra Parties said they relied upon the fact that Argent took on the task of verifying the figures that were contained in the Information Memorandum, as well as his contractual obligations more generally. When it was put to the Viterra Parties' senior counsel that the financial records of Joe White would not have disclosed the Viterra Policies or necessarily prompted Argent to ask questions about what procedures were adopted operationally in making each of the sales, the response was that the Viterra Parties did not know if this had occurred. Further, it was submitted that the "chief financial officer" should review the customer contracts. The difficulty with the Viterra Parties' position was that they were unable to point to anything which would have given Argent any notice of the existence of the Viterra Policies (or the Viterra Practices) in any such review. In circumstances where operational management positively decided to keep the Viterra Policies secret, and took steps to ensure that anyone reviewing Pulse or the Records System would not be put on notice that the Viterra Policies were actually being implemented in producing malt, there was simply no basis to infer that Argent knew about them, or that he failed in his duties for not knowing about them. For completeness, there was no evidence that Argent was kept across all the detail of the Malt Cost Reduction Transformation Project, but even if he was (or ought to have known of the detail), there was nothing on the face of the relevant documents which would have indicated to him (a person not familiar with the intricacies of malt production) that Joe White would not be complying with customers' contractual requirements and specifications. Further, the email sent by Hughes on 16 January 2013 (see par 375 above) did not amount to disclosure of the Viterra Practices or put Argent on notice that they existed. They were not referred to, and a mere reference to Hindmarsh in an attachment did not suggest non-compliance with customers' contracts or their specifications. Furthermore, Argent was not the chief financial officer; he was the financial controller of Viterra Ltd for Australia and New Zealand. There was no evidence that there was a position of chief financial officer of Joe White. In 2013, Rees was the chief financial officer of Viterra Ltd, having succeeded Ward Ast. Interestingly, in relation to Rees' knowledge, the Viterra Parties submitted that because Rees was chief financial officer and concerned with the relevant financial information, attribution of knowledge should be limited to this area for which Rees had responsibility.

2562 For reasons already given,[1625] in relation to Hughes no inference of the type suggested by the Viterra Parties will be drawn. If anything, in light of Stewart's evidence about Hughes telling him it was necessary to engage in such conduct because of the difficulty of complying with customers' specifications,[1626] if any inference were to be drawn the more likely inference would be that Hughes' evidence would have been that the Reporting Practice (at the very least) was an essential part of Joe White's operational and financial performance.

2563 In this context, the Viterra Parties made submissions in relation to the absence of any Joe White customers giving evidence. There is nothing further that needs to be added to what has already been said on this topic.[1627]

X.10.12.2 Linking the Operational Practices to the underpinning of the Joe White Business

2564 The Cargill Parties relied upon a substantial number of matters in responding to this issue. As most of the evidence they referred to is contained in the narrative set out above, it is only necessary to provide a summary of the various matters raised.

2565 The Cargill Parties referred to the high production and sales levels of Joe White before the Acquisition,[1628] and contrasted them with the less impressive levels achieved after the Acquisition when the Operational Practices were no longer conducted.[1629]

2566 Next, they referred to the Barley Analysis to demonstrate the number of Certificates of Analysis affected by the Varieties Practice and the number of orders that were the subject of incorrect barley varieties.[1630] The Cargill Parties also relied upon the more general evidence of McIntyre, Testi and Stewart in seeking to demonstrate the dependency of the Joe White Business on the Operational Practices.[1631]

2567 Next, they submitted that the Joe White Business was able to achieve efficiencies it

1631 See pars 74-86, 92-95, 159-161, 174-176 above.

otherwise would not have been able to obtain because it was able to ship malt that did not comply with customer requirements and specifications and, absent the Operational Practices, would have faced delays and disruptions. They contended that so much was demonstrated by what occurred after the Acquisition.[1632] In this regard, these efficiencies were achieved in part by the deliberate use of gibberellic acid when it was prohibited, which reduced production times by a full day.[1633]

2568 Also in relation to production, the Cargill Parties submitted Joe White was able to use cheaper barley, either because it used a greater level of off-grade barley or varieties other than the required barley,[1634] which allowed margins to be maximised. This was to be contrasted with operations after the Acquisition when, at times, premiums needed to be paid in order to secure the required barley.[1635]

2569 Next, it was submitted that Joe White was able to preserve customer perceptions of receiving high-quality malt that met customer specifications when in truth routinely the malt supplied did not; which again was exposed almost immediately after the Acquisition and beyond.[1636]

2570 The Cargill Parties submitted that the concealment of the Operational Practices meant the Joe White Business was not the subject of complaints, claims for discounts or rebates or rejections that it otherwise would have been if the true mode of operations had been disclosed.

2571 Next, the Cargill Parties referred to the positions adopted by the Joe White executives after the Cargill 22 October Letter had been sent. They submitted that what the executives reported made it plain that the Operational Practices substantially

---

1632 See, for example, pars 1574-1575, 1580, 1585, 1601-1606, 1622-1625, 1640, 1656-1661, 1677, 1682, 1706-1713, 1718-1719, 1728, 1739-1741, 1744-1745, 1747, 1785, 1793, 1797-1798 above. For completeness, also see pars 1596-1598, 1662, 1666-1669, 1675 above.

1633 See, for example, pars 1131, 1505, 1519, 1703, 1781 above.

1634 In this regard, reference was made to the changes made to the supply chain as part of the Malt Cost Reduction Transformation Project to enable the increased use of off-grade barley: see pars 135-141 above.

1635 See pars 1574, 1785 above.

1636 See, for example, pars 1580, 1797, 1813, 1827 above.

underpinned the Joe White Business and that it would not be able to perform at the same level if the Operational Practices immediately ceased.[1637]

2572 With respect to the impact of the cessation of the Operational Practices, the Cargill Parties also referred to the dynamic that up until the Acquisition approximately 90 percent of the Joe White Business came from 10 customers.[1638] Of those customers, it was noted that Asia Pacific Breweries, Oriental Brewery, SAB Miller, Boon Rawd, Hite, San Miguel, Beer Thai, SABECO and Nestlé were all adversely affected by the inability of Joe White to produce malt that complied with their specifications.[1639]

X.10.12.3 Addressing the Viterra Parties' contrary contentions

2573 The Viterra Parties put a series of submissions as to why they contended the financial and operational performance of Joe White was not substantially underpinned by the Operational Practices. To the extent that their submissions referred to general matters already considered above, they will not be repeated.

2574 The Viterra Parties referred to the fact that the use of off-grade barley did not equate to using barley varieties different to those required by customers or permitting barley to be supplied out of specification, and referred to some evidence that Joe White may have been capable of supplying compliant malt despite the use of off-grade barley. The only evidence identified was that of Jones, who gave evidence that it was his understanding that malt might be produced within specification depending on the quality of the off-grade, before noting he was giving evidence about something that was not within his role at Joe White.

2575 During closing submissions, the Viterra Parties were invited to provide any other relevant evidence on this point, but none was forthcoming. Further, the submission did not address the evidence of Stewart that the use of more off-grade barley would potentially decrease the quality of the malt, might limit Joe White's ability to meet its

---

1637 See, in particular, the items the subject of emphasis in annexure C to these reasons. See also pars 1210-1232, 1387-1389, 1567 above.

1638 See par 506 above.

1639 It was further noted that other customers, including Sapporo, Lotte, Orion Breweries, Phoenix and Long Fong Import Export Co Ltd were affected.

customers' requirements and would give rise to more pencilling of results because of the use of substandard barley.[1640] Further, his evidence was that the Malt Cost Reduction Transformation Project did in fact result in an increase in adjustments to Sign-Out Reports and the use of varieties not approved by customers.[1641]

2576 Suffice to say on this point, while it was plain that using limited amounts of off-grade barley did not necessarily mean that any particular batch of malt produced would be out of specification, the entrenched requirement of using substantial amounts of off-grade barley did adversely affect the ability of Joe White to produce malt in accordance with customer requirements and specifications.

2577 Next, the Viterra Parties observed that the Malt Cost Reduction Transformation Project still required Joe White to produce malt within "quality guidelines".[1642] To adopt an old saying, whilst it could not be said that Viterra was asking Joe White to produce "a silk purse from a sow's ear", the mere fact that there was a stated requirement to meet a certain standard could not take the matter very far if the underlying instructions meant such a requirement was not reasonably practicable on a consistent basis.

2578 Next, the Viterra Parties submitted the evidence did not establish that the Malt Cost Reduction Transformation Project had the effect of materially increasing the proportion of off-grade barley used by Joe White. They relied upon the evidence of Jones that only a small percentage of barley Viterra supplied to Joe White was off-grade. However, what Jones considered was a "small" percentage was not explored with him. Further, it was common ground that Joe White used, and Cargill was informed of the use of, up to 30 percent of off-grade barley in 2013.[1643] On any view, a utilisation rate of up to 30 percent could not be described as insignificant.

2579 With respect to the last point, the Viterra Parties also submitted that the Malt Cost

---

1640 See pars 145-146 above.

1641 See par 234 above.

1642 In fact, what the presentation given in May 2010 stated was that it was still a requirement to maintain quality to meet customer expectation: see par 131 above.

1643 See par 926 above.

Reduction Transformation Project did not actually deliver any material positive financial results to Joe White or Viterra.[1644] Assuming this to be correct,[1645] it could not alter the fact that Joe White was required to use off-grade barley on a systematic basis.

2580 Next, it was submitted the views expressed by the Joe White executives in October 2013 were assessments made and opinions expressed which were confined to the state of affairs at that point in time and were not referable to the period commencing January 2010. So much was correct insofar as the views were confined to how the Joe White Business was performing at that time. However, many of the comments were not so confined and were far more general as to the predicaments Joe White faced and the manner in which it dealt with them.[1646] Further, there was nothing to suggest that the manner in which the Joe White Business was being conducted in October 2013 differed materially from the way in which it was conducted after the introduction of the Malt Cost Reduction Transformation Project in 2010.[1647] If anything, Stewart's evidence was that in 2010 and early 2011, before the introduction of the Viterra Certificate of Analysis Procedure, the Joe White Business was conducted in a more arbitrary way with respect to reporting on compliance with customers' specifications.[1648]

2581 Next, the Viterra Parties submitted that to the extent the Joe White executives expressed views in October 2013 concerning estimated cost savings through using particular barley varieties, the responses were "often" either expressly confined to the use of lower-grade barley rather than non-approved varieties, or otherwise unclear. In this regard, reference was made to the estimate of $1.5 million per year in higher costs if the correct barley varieties were used.[1649] In oral closing submissions, the Viterra Parties appeared to step back slightly from this submission.[1650] In any event,

1644 See fn 121 above.
1645 Compare pars 187, 250 above.
1646 See annexure C to these reasons.
1647 See also par 1233 above.
1648 See pars 175, 197 above.
1649 See par 1281 above.
1650 See fn 783 above.

there was no reason to assume that Hughes, as a chief executive officer who was very hands-on,[1651] would not be able to give a reasonably accurate estimate as to the costs involved. Further, as this submission effectively acknowledged, some of the comments of the Joe White executives were very clear and directly acknowledged the use of non-approved varieties and the potential harm to the performance of the Joe White Business if only approved varieties were allowed to be used.[1652]

2582 Next, and further to the previous point, it was submitted that even if the position adopted by the executives in October 2013 concerning barley varieties was reliable, it was a short-term issue. There were obvious responses to this. *First*, the estimate of the period required to address the issue was 6 months for most customers and 12 months for others.[1653] In a business supplying product, it would be inappropriate to characterise disruption of 6 to 12 months, with any flow-on effects that such disruption may cause, as an insignificant issue. *Secondly,* as at October 2013, 6 months was only an estimate, and Joe White had not obtained approval of new varieties from all major customers, nor had all necessary trials been undertaken. *Thirdly,* it was far from clear how customers would react when informed that they were being supplied with the wrong barley varieties. *Fourthly*, the customers affected were major customers. In short, there was no certainty that it was a "short-term issue" that could be resolved without any ongoing repercussions for the Joe White Business. The loss of only 1 customer could have had very substantial consequences for the performance and profitability of the Joe White Business.

2583 Next, the Viterra Parties submitted that anything that occurred after 1 November 2013 was irrelevant because Cargill adopted its own procedures and policies in the conduct of the Joe White Business. It was submitted that, as the court was concerned with the operation and performance of the Joe White Business from January 2010 until October 2013, activities outside that timeframe were either irrelevant or should be given very little weight. On this basis, it was submitted that the court should not take into

1651 See par 47 above.
1652 See section E of annexure C to these reasons.
1653 See par 1212 above.

account levels of derogations, reduced production utilisation rates, reduced production and sales volumes, internal assessments by Joe White executives or Cargill executives regarding the causes of declines in performance, internal assessments regarding additional capital expenditure required to operate a full production capacity, or reductions in Unadjusted Earnings.

2584 This submission cannot be accepted. For example, the reaction of customers, upon learning of the Operational Practices and the inability of Joe White to supply malt within specification, immediately after 1 November 2013 was highly probative of how they would have reacted immediately before 1 November 2013. As time materially moved on, the relevant facts after 1 November 2013 must be carefully considered and assessed in order to determine what weight ought to be given to them. However, speaking generally, in the absence of any evidence to suggest customers would have reacted differently before 1 November 2013, some weight ought to be attributed to the reactions of Joe White's customers thereafter.

2585 Further, in the period immediately after Completion, the same Joe White executives continued to be involved in the operations. They were probably in the best position to assess why it was that Joe White was unable to perform at levels that it had done in the past.

2586 Furthermore, the disruption that occurred after 1 November 2013 was exactly what Stewart and Wicks had predicted in the event that there was a requirement to immediately desist with the Operational Practices upon Cargill taking over.[1654]

2587 Moreover, some observations ought to be made about the relevance of Cargill's approach from 1 November 2013.

2588 *First*, Cargill cannot be properly criticised for ceasing the Operational Practices. They were in breach of contract. The continued implementation of the Operational Practices would have been wrongful without informing Joe White's customers of their

---

1654 See pars 1210-1218, 2417 above, noting that both Hughes and Wicks agreed with Stewart's assessment of the extended transition period that was required.

existence.

2589 *Secondly*, it would be expected that if Cargill had informed all of Joe White's customers immediately on 1 November 2013 that Joe White was routinely breaching its supply contracts, that would have been highly disruptive to the Joe White Business.[1655]

2590 *Thirdly*, to the extent that Cargill's testing regime differed from Joe White's by seeking to rely (with each customer's agreement) upon the theoretical blend results rather than actual results, the evidence suggested that this could only have assisted Joe White. This was because, in contrast to requiring results of testing on the actual malt produced fall within customer specifications (usually in addition to requiring that the theoretical blend results that preceded the production also fell within specification), under the Cargill Blending and Certificate of Analysis Procedure only the first of these 2 analyses needed to produce satisfactory results (again, to emphasise the point, with the agreement of the customer). And yet, despite this apparent improved prospect of being able to report that malt was within specification, once Cargill took over there was an inability to repeatedly produce theoretical blend results that were within specification at acceptable levels.

2591 Next, the Viterra Parties referred to alleged problems arising from the unavailability of correct barley varieties after 1 November 2013, including the need to transport barley between Joe White's plants, to purchase some varieties at a premium and to sell some stock as feed barley or at a written down value. The Viterra Parties submitted that the particulars of these allegations in the Statement of Claim lacked sufficient particularity for them to be given any weight. There was no substance to this point. The particulars were not the subject of any strike-out application, and were plain in their terms.[1656] Further, evidence pertaining to these matters was put before the

---
