## Introduction

The WebEx User Guide (“the Guide”) outlines the steps and requirements to successfully join your WebEx hearing arranged by the Supreme Court of Victoria (“SCV”) or the Court of Appeal (“CoA”).

Prior to the hearing, if there is a deemed need, the Digital Litigation team may conduct a WebEx test with you to ensure any technological issues are addressed in advance. This will ultimately help the hearing run smoothly. You will be provided with instructions before the hearing regarding WebEx testing.

We recommend that you download the WebEx app and familiarise yourself with WebEx prior to the hearing. Below are useful links for your use and reference:

- [download WebEx meetings](#)

## Technology Prerequisites

### 1. Ensure your internet bandwidth meets the WebEx minimum requirement

For the best video experience in Cisco WebEx Video Platform meetings, Cisco recommends:

- each screen must have at least 2.0 Mbps bandwidth (bi-directional, i.e., sending and receiving).
- For example, 2Mbps equals one video, therefore if there are 3 participants your bandwidth should be 6Mbps.
- Sharing documents would require higher Mbps.

Use the following links to conduct the necessary tests:

- [Bandwidth test](#)
- [WebEx Network Test](#)
- [WebEx Bandwidth Reference](#)

### 2. Ensure your computer meets the following requirements

- **Personal Computers:** PCs must meet the following minimum requirements:
  - **CPU:** Quad-core processor (three or more meeting participants)
  - **RAM:** 8 GB RAM
- **Camera:** a high-definition video supported USB-based or embedded web camera. Click this [link](#) for further info available for video participants.
- **Browser Requirement:** click this [link](#) to find out the compatible web browsers with WebEx.

### 3. Computer audio requirements

- Laptop/PC with speaker and microphone.
- Most headphones and earphones will work with WebEx.

#### 4. Troubleshooting before testing

If you are participating in a virtual hearing in the office, please liaise with your IT Department at your work and share this document before the testing.

Complete a speed test with the provided [links](#) above. Once the speed test is conducted, you will need to check the download and upload:

- It needs to be at least 15 Mbps for download and 10Mbps upload.
- If this does not meet the requirements, you can use a 4G dongle and repeat the test.
- Below is an example of a result of a speed test:
